The Senator, who had sparred forcefully with the Administration over the 2<sup>nd</sup> amendment issues- and lost-looked forward to this evening's meetings. She believed that there just might be a chance to reverse the President's initiatives in this area and in many others. She honestly believed Curt could be a key to that opportunity. Turning to him and putting her arm through his, she said,

“Well, let’s be about it. I’m not hungry but will not presume to speak for Warren. Warren?”

Warren paused, thought about it for a second and then shook his head while replying.

“No, I’m with you, Susan. I can wait on food. Maybe later in the evening.”

The Senator then continued: “Okay, perhaps later or we can order something into the conference room or visit one of the restaurants. Lets be about what we came here for.”

With that, former FEMA Director, Curt Johnson led Senator Susan Crater, the Junior Senator from California and Warren Woodson, the 2<sup>nd</sup> largest individual contributor to the Democratic National Committee (DNC), towards the elevators and a quick ride to their second floor conference room. There, they spent the next three hours in discussion, followed by two hours over dinner, planning their strategy to have Curt Johnson and Susan Crater make a bid for the Democratic Presidential ticket. They would be attempting to unseat a popular and healthy President in wartime, something that had never been accomplished in the entire history of the United States of America. They believed that Warren could garner the political and financial backing of the DNC and that the name recognition of both the Senator and the former head of Weisskopf’s own FEMA would give them a chance. They also counted on the other Democratic candidates recognizing that they were the only viable option and then climbing on board their campaign very rapidly.

### **September 21, 16:39 EST**

#### **Alternate Research Laboratory**

#### **Center for Human Genome Research, Boston, Massachusetts**

Dr. Joseph Trevor hung up the phone and sat reflectively for a few moments. The call was perplexing on one hand, but it carried overtones of some very exciting possibilities on the other.

Although he was aware of Dr. Sandra McPherson’s research through her published works and her reputation, he had never met her personally. He had also never considered her line of research for collaboration since it entailed physiology rather than genetics, and her political and moral bent was very divergent from his own. She was a well-known liberal activist, particularly in favor of abortion whereas his own personal moral and religious beliefs were diametrically opposed to that. For that reason alone, her call was surprising to him.

On the other hand, their conversation had also raised some topics for future discussion and some avenues of investigation, which might offer exciting possibilities.

“Virtual microscopy?” he mused. “If in fact she had perfected techniques to extract additional detail from traditional microscopic studies, that would be something,” he thought. Might those same techniques be applicable to the atomic force microscopy and enhanced mass spectrometric analysis he had used in his own studies?

“Well, if they could that would be extraordinary . . . a real breakthrough,” he thought, “Yes that would be something indeed.”

Joseph Trevor was the Director of this Alternate Research Laboratory for the National Health Institute’s part of the Department of Energy Human Genome Project. It was a part of a multi-national effort to research the human genome and develop cures for all varieties of human genetic ailments. Dr. Trevor had been a rising star in the Pharmaceutical industry when he was selected to head this center. He had devoted his career to genetic research and his motivation of a personal desire to understand and ultimately cure the genetic ailment that afflicted his wife, and his grown daughter.

Last year, as a result of innovative work on his part and the insightful comments of his wife, he had used prototype atomic force microscopies and enhanced mass spectrometric analysis to isolate and research an underlying atomic level structure to DNA that later tests showed only existed in humans. After experimentation and studies conclusively proved that this structure enabled humans to think rationally and gave them their reasoning capabilities, the Dr. had presented his work to his superiors and to the scientific community. The National Health Institute and ultimately the National Academy of Sciences had verified his work and the Doctor had ultimately been recommended for and received a Nobel Prize earlier this year.

The resulting scientific uproar was continuing to this day.

“It will probably continue for decades,” was his opinion as he considered the way his discovery was reverberating through the scientific community.

It had opened up a wholly new field of study that promised to one-day dwarf the Genome Project itself, Dr. Trevor believed. But sadly, it had not advanced the research of the specific genetic disorders that were eluding Dr. Trevor’s efforts. Just the same, the Human Genome Project continued as one of the largest scientific undertakings ever attempted by mankind, and Dr. Trevor’s place in that study was secure. He would continue his efforts. But these underlying structures were orders of magnitude more complex than the human genome, and the resulting new field of study held almost unfathomable promise for the future.

In the process of accomplishing all of this, the Dr. Trevor had perfected the processes and procedures for the use of the prototype methodologies into main stream tools. There were already a lot of computational and computer-programming algorithms associated with the processes and procedures that Joseph had developed. But, if he understood it correctly, these virtual modeling

techniques that Sandra McPherson proposed would allow someone on the other side of the country who did not have the sophisticated equipment required to acquire the physical data, to study that data and research it as if though they did. It could just as easily allow someone on the other side of the world to do the same.

“The possibilities for enhancing, multiplying and ultimately completing research are almost incomprehensible,” he thought as he continued to reflect. “Why, we could set up virtual research centers where the bulk of the research was done and then use the existing equipment to feed them, focusing that equipment on simply acquiring data as rapidly as possible. And that would be an enormously good thing, despite what ever reservations I may have of Dr. McPherson’s personal beliefs and ideology.”

With those thoughts, Joseph determined in his mind that he would almost surely aggressively explore the proposal Dr. McPherson had made regarding their collaboration on the development of virtual modeling for his methodologies. But, before he finalized that decision, as was his custom, he would bounce the relevant portions of the thought process off of his wife, Elizabeth, for her input. Their late night discussions regarding the research that Joseph had completed through the years had been an inspiration to him that served as fuel for his creative drive. It had been especially true during the discovery of the “Human Reasoning Structures”, or HRS as they came to be known, that led to his Nobel Prize early this year. He would not abandon that source of inspiration and creativity now.

He picked up the phone and dialed his wife’s direct work number at Raythone Corporation in Salem, New Hampshire. She answered:

“Hello..... Elizabeth Trevor speaking.”

Hearing her standard response, he replied, “Hi, Liz, have you got a second?”

When she responded playfully that she had more than a second for him, he continued.

“Look, I’m going to take off a little early this afternoon and will probably beat you home. What do you say you leave dinner to me. I’ll make some Lasagna and it’ll be ready when you get there. I’m onto something new and I want to talk it through over dinner and afterward ... what do you say?”

Elizabeth did not hesitate.

“Sure sweetie, that sounds fine to me, you bake a mean Lasagna, and you know I’ve always got a listening ear whenever your involved. How about six thirty ? Okay, bye.”

## Chapter 22

*“The infidel will either bow to the Truth, or he shall bow to the sword.”—The Prophet*

**September 29, 23:02 PST**

**Hill overlooking A Canal Head Gates and Link River Dam**

**Klamath Lake, OR**

The men watched over their two charges very carefully. The weather was cool but dry, the air crystal clear with not a cloud in the sky. Off to the west and south was the Link River Dam, a relatively small structure that held back the immense expanse of Klamath Lake and generated electricity critical to northern California. To the north were the A Canal head gates that allowed irrigation water to feed the entire Klamath basin, which stretched into northern California down past Tule Lake. The variety of crops being produced in that basin, as was the case with every major agricultural valley in the western United States and throughout the rest of country, was now critical to America's ability to remain agriculturally independent during the war.

After two years of that war, America had re-established its agricultural prowess. From the Rio Grande to Florida, from the Central Valley of California to the Midwest and throughout the Intermountain West, vegetables, fruits, grains, feed and crops of every variety imaginable were being produced in record quantities. The American farmer was literally feeding the allied world, and had risen to that challenge after overcoming significant difficulty in getting both land and machinery back into production. As with America's industrial and manufacturing base, throughout the 1990's and into the 21<sup>st</sup> century much of America's commercial agricultural production had been “outsourced” to take advantage of the lower costs available in the world market. Now the folly of the magnitude and extent to which those practices had been applied was finally being overcome ... and the ultimate cost had been paid in lost lives and lost territory. Few people were as aware of these facts as they related to agriculture as were the men of the local Home Guard unit who were on watch this night above the A-Canal head gates and Link River Dam near Klamath Falls. They had experienced first hand the effects of being “completely idled” in the summer of 2001 and had already known what it took to get back into production in terms of money, effort and commitment long before this war ever began.

On top of the ridge, Stan, Darren, Jake and Joseph scanned the area around each structure carefully with their night vision equipment. Stan and Darren were watching the head gates, Jake and Joseph were watching the dam. Closer to each structure, patrols consisting of two men each were roving. Darren's younger brother, John and another local man, William, were near the head gates while another two men were patrolling close to the dam. Each of the groups had radios that allowed them to communicate with one another and with the Klamath County Sheriff's department. All of these men, and the other patrols out this evening around Klamath County were a part of America's Homeland Defense, Home Guard. All were armed with M-14 rifles and all had undergone training to allow them to conduct the surveillance of the county's critical infrastructure. Those duties did not include full police powers. They were simply watching over the infrastructure and reporting suspicious activity to the local Sheriff's dispatch. They were only empowered to interdict and use their weapons in the case of imminent attack or life threatening danger. In over two years of patrolling, there had never been so much as a suspicious report out of the teams here above the Lake ... but that was about to change.

“Well Stan, another evening watching over the source of our livelihoods.

“4 AM is not going to come soon enough for me,” remarked Darren as he watched the north edge of the lake leading to the head gates and then turned to the lake shore to the south of the gates.

Stan was also looking forward to 4 AM as he scanned along the canal itself leading away from the head gates. He thought it was strange how things had changed since the momentous events at the head gates in the summer of 2001. Back then, the government had not trusted these same men to so much as set foot on the ground around the very head gates that they were now protecting with loaded weapons. Thinking back to that water rights confrontation with Federal authorities, in which he and Darren and every other man on watch had been involved in, Stan said,

“Darren, we've been watching over these head gates our entire lives ... even when it wasn't popular. I guess we'll get through this evening, just like all the others, now that it is.”

Darren considered his friend's words as he scanned the area below them on the hillside. What Stan said was true. As farmers here in the basin, they had watched over, paid for and been concerned with the welfare and operation of these head gates their entire lives ... and their fathers before them, and theirs before them. The Reclamation Act creating the lake had been passed and implemented in the very early years of the twentieth century, in 1902 to be exact. The dam and head gates had been built and large scale irrigation implemented to compliment and vastly increase what was already in place at that time. Under the original terms of the Act, the farmers who were invited and enticed to come to this arid country were to pay monthly usage fees until they paid off the construction project.

After that time the entire irrigation project, including the head gates, was to have been privatized. In order to get people to come to the Klamath Basin over the years, the government had allowed them to homestead the land and had written the water rights into the agreement. The water rights associated with the reservoir attached to the land as an appurtenance. It was a good deal and through the first half of the century many farming families had taken up the challenge, overcome the obstacles and established profitable working farms in the Klamath Basin. Many of them were veterans whose land and water rights were signed by the President's of the United States at the time.

Ultimately, over fifteen hundred farming families worked in the Klamath Basin, families just like Darren's, Joseph's, Stan's and the others watching over the dam and head gates this night. The construction costs had been paid off in the forties, but the government had not lived up to its end of the bargain. For several decades, discussion and legal wrangling had held up the privatization. The farmers continued farming and producing, secure in the belief that the government would honor their rights and ultimately make good on the promise. But the farmers were mistaken.

In the nineteen seventies, another Act of congress was passed that would ultimately bring the farmers in the Klamath Basin into headlong conflict with their own government and into the national spotlight. This was the Endangered Species Act. Originally intended to be directed at saving entire species like the Bald Eagle, and originally meant to work hand-in-hand with conservation efforts of local governments, the bureaucracy and agencies surrounding that Act became disproportional to the Act's intended purpose. By the early nineteen nineties, when the Act was supposed to sunset, the budgets, special interest groups, and politics associated with what had been intended as a good faith effort to save endangered species, had taken on a life of its own. By that date, private citizen property rights and other civil rights were regularly being infringed in favor of the political ambitions and whims of those pushing a now radical environmental agenda. They used the hundreds of millions of dollars wrapped up in the Endangered Species Act and the agencies and organizations surrounding it, and the resulting power of the Federal government to implement that agenda. They also used the power of Non-Governmental Organizations (NGO's) for the U.N. to accomplish the same goals. That agenda and those politics came to a head in the early spring and summer of 2001 in the Klamath Basin when they ran headlong into the farmers here. Farmers like Darren and Stan and these others. Darren remembered it well. It had very nearly destroyed him and his family and their livelihood.

An environmental group in the urban areas along the coast filed suite in Federal Court demanding that the water levels of Klamath Lake be held artificially high throughout the summer to protect the supposedly endangered sucker fish residing in Klamath Lake. A Federal Judge, appointed by the administration that had been in power in Washington DC during most of the nineties had agreed with what were later proven to be flawed scientific findings and ordered the Department of Interior to carry out the court's ruling. Rather than refuse to carry out the Judge's order and force a constitutional crisis over a ruling that would endanger the livelihood and security of over fifteen hundred law abiding families in the basin, the new administration had ordered the Department of Reclamation to carry out the Judge's order. In April of that year, the water was turned off, all of it ... no irrigation water flowed in the Klamath Basin.

The local farmers were flabbergasted, and devastated. The sucker fish were not endangered and everyone living in the intermountain west knew it. In most areas there were infestations of these bottom feeding fish, commonly referred to as "trash fish". They had to be literally exterminated in many areas to ensure that other fish, like trout, could subsist in various watersheds. In addition, the sucker fish in the Klamath Lake itself were in no danger. The science was flawed and the farmers knew it. They knew that if the Klamath Lake were drained to mud that year ... which had never happened ... that the sucker fish who were capable of burrowing into the wet mud, would be back the following year as soon as the snow melt filled up the lake. So the farmers protested.

In May of that year, over 20,000 people flocked to the small town of Klamath Falls along with all of the politicians and administrators to hear the farmer's case. The crowd was made up of farming families, various agricultural organizations and concerned citizens from every state of the union. After the speeches, people from every state of the union filled buckets from Klamath Lake and symbolically dumped them into the irrigation canal on the down stream side of the closed head gates. After many promises from politicians and administrators, everyone went their way confident that the politicians now saw the folly of the situation and would reverse it. The protesters called themselves the Bucket Brigade, but they all underestimated the power and influence that the environmental special interests groups had on many of their elected and appointed officials. May and then June passed with no change ... no water ... no crops ... and no income.

Facing certain failure and bankruptcy, a number of the farmers finally acted in early July. Someone manually opened one of the head gates in the first days of that month. The U.S. government ordered the Bureau of Reclamation to close the gates. On July 4<sup>th</sup>, a group of people protesting that closure opened the gates again. The government then sent armed U.S. Marshals to help the Bureau of Reclamation close the gates again, and ensure they stayed closed. On July 13<sup>th</sup> a crowd of over two hundred farmers and their supporters opened the head gates again, despite the presence of the

Marshals. This time they vowed to stay there and keep them opened. As the group sang gospel hymns, the two U.S. Marshals withdrew to call in reinforcements.

Darren remembered well the events that followed. He and most of these others on watch had been present. That night of July 13, 2001 most of the farmers and their supporters went home to sleep, feeling they would even have more support the following day. About a dozen farmers spent the night by the head gates and they were joined there in the middle of the night by a few others who had heard of their stand and came to supporters. One of those supporters was from an agricultural valley in southwestern Idaho who had been involved on behalf of the farmers on the internet and had written a petition on their behalf. He immediately warned the farmers that the federal officials would not take the event laying down and that the farmers should immediately call back all those who had gone home to sleep. But the farmers were convinced that it would take the government longer to react and they decided to wait for the morning and the help they knew would assemble then. They were wrong.

Early the next morning of July 14<sup>th</sup>, 2001 about 6:30 AM, a force of fifty or more armed law enforcement officers, including federal law enforcement who approached the gates from the back side of the facility, took the head gates back from the farmers and closed them down at gun point. What followed caused Darren's heart to swell with pride to this day. Pride in the people in the area and from all over the country who rallied to the farmers' aid.

Later that morning hundreds of people had come, with more arriving every hour. The law enforcement officers watching the now-closed head gates were surrounded and were held in their "compound". For the next four weeks the farmers harassed, outsmarted and literally went around the federal officers who were under siege as they "protected" the gates. Frequent choruses of "*Let the Water Flow*" were intermingled with patriotic songs, speeches and prayer. Local people donated food and drink for all of those keeping the vigil.

Ultimately, using irrigation pipe and pumps set into the lake itself, water was pumped around the federal authorities. The entire operation of setting up the pipe and pumps was done under the cover of a diversion where several farm animals were released into the grounds surrounding the head gates and the authorities guarding them. While the agents chased sheep and donkeys, the farmers laid pipe and primed pumps. When water started pumping into the canal, the surprise on the agents faces was obvious, and the entire crowd began the loud chant, "*Let the Water Flow*", "*Let the Water Flow*".

Once those pumps and pipes were in place, they came under twenty-four hour a day watch by the farmers and their hundreds of supporters. That watch was accomplished in a fashion that Darren now realized actually fore-shadowed the Home Guard activities he was now currently involved with.

The result of the pumping operation was a token amount of water, but the point made was not lost on anyone there or on other farmers throughout the west watching events unfold. Plans were discussed to dig a new canal around the head gates, or to place several 36' siphon pipes around the head gates to move the water in the necessary quantities for irrigation.

Helpers organized relief convoys of large trucks from Northwestern Montana, from Northern California and from Nevada. These convoys stopped in every major city and town as they made their way to Klamath. Salt Lake City, UT, Sacramento, CA, Boise, ID, and many other cities hosted stops. Tons of supplies and hundred of thousands of dollars were gathered to help the farmers who were standing up to an atrocious and unconstitutional action by their own government. The relief effort was a success and enough material was gathered, along with the farmers own efforts, to get them through the next winter to the next growing season.

Although tempers flared and harsh words were spoken, somehow violence was avoided. The Federal government looked for a way to gracefully extract themselves from the growing political crisis. When the terrorist attacks of September 11, 2001 occurred, the farmers who were manning their vigil offered a compromise to the government. They would stand down, remove the "siege" of the head gates and allow these federal officers to be deployed to where they were surely more desperately needed. The farming season was a loss, but the farmers now had enough to get through the winter. They indicated to the government that some arrangement and satisfactory resolution must be in place by January 2002, or the farmers would take back the head gates by force if necessary.

The Federal Government was grateful and ultimately corrected the immediate problem. The National Academy of Sciences was commissioned to review the science that had led to the Judge's ruling in the first place. They found the science flawed and the head gates were re-opened the next April ... and the farmers enjoyed normal irrigation for a normal season. Darren would never forget those events, or the people involved in helping them get through them.

"Stan, what ever became of that fellow from Idaho that showed up here and helped us those weeks during the stand at the head gates?"

Stan, while continuing to monitor the area along the canal, had also been reminiscing. The events of the summer of 2001 were still fresh in his mind, even though many years had now passed.

"Well, he went back to the Payette River valley over there in Idaho and spread the good word. He wrote a book about the whole thing in 2005 called, "The Stand at Klamath Falls – How rural western farmers stood up against entrenched environmentalism and agencies of the federal government and won," and it sold pretty well from what I gather.

"I'll tell you Darren, the farming communities all over the west, and all over the country learned from what we accomplished that summer. I do not believe the government will ever try that again, at least I hope not. I sure welcomed the efforts of that fellow, both as he stood right here with us and as he spread the word on those two Internet sites, SierraLines.com and the IndependentRepublic.com. Without those tens of thousands of people hearing about what was going on and contacting their own representatives and the White House like they did, I'm not sure it would have turned out like it did."

Darren agreed ... it had been amazing to see the people come to help and then to see their influence spread to hundreds of thousands before the major media ever really picked up the story.

"Well, old JT Samson sure took off from there didn't he?"

"I mean he came here and spoke at one of the rallies ... he was the editor of that online news source, SierraLines ... but look at him now."

Stan knew exactly what Darren was talking about. JT had come and worked with that fellow from Idaho and spoke to the crowd. It had been an inspiring speech and he had published the things that were going on here just as they occurred.

"I suppose his honesty served him well...it always does you know."

"That report he made about President Weisskopf's campaign comments during the election really got things rolling for him, and then he was right there on that ship when the Chinese attacked our ships headed for Korea. I will never forget, if I live to be a hundred years old, those images he sent back from that battle in the Pacific. That carrier splitting in two and going down like that was the most traumatic and graphic thing I have ever seen ... including the pictures of the towers from 9-11."

"Anyhow it's been kind of neat knowing a guy like that and seeing him make good and be in a real position to ... wait ... I've got something here."

Darren turned and looked at his friend as he stopped talking and concentrated on something down near the canal, to the east of the head gates.

"What is it Stan?"

"About two hundred yards to the east of the head gates, moving along the canal itself, down in the ditch ... two or three guys ... they're moving carefully towards the head gates."

Darren turned his attention to the same spot and saw the movement. There were three individuals, only their upper bodies occasionally visible as they moved towards the head gates.

"I got 'em. Go ahead and call it in Stan, I'll keep them in view."

Stan keyed his lapel mounted mic and called in the report.

"Klamath dispatch, this is A Canal, I have three individuals moving towards the head gates."

In the Klamath county Sheriff's office the dispatch officer immediately responded.

"A Canal, what is the disposition of your roving patrol? Are the suspects armed?"

At that very moment, Darren noticed that two of the individuals were armed with rifles of some sort and that the rifles were unslung and being carried by the suspects.

"Stan, these guys are armed with some kind of rifles... you'd better call that in too."

Stan wasted no time responding to dispatch.

"Two suspects are armed with rifles dispatch. Patrol is in a position to interdict."

"A Canal, I am patching you through direct to Sheriff Eslinger, go ahead Sheriff."

There was a brief pause and the Sheriff came on the channel.

"Who have we got there? Stan, is that you?"

Stan had met and gotten to know the Sheriff personally during the confrontation with the Federal authorities back in 2001. The Sheriff had ultimately asked the federal officers to leave and allow the local people to mediate. The Federal officers had refused and had not left until the agreement had been reached after the September 11<sup>th</sup> terrorist attacks of that year. But, in standing with the farmers, the Sheriff had endeared himself to them and many of them had supported him strongly ever since.

"Tim, this is Stan. We have a situation developing here, how long before units can respond?"

The Sheriff responded from his own vehicle that was in transit to the area and would arrive within ten minutes. He had one vehicle closer.

"I'm in route but about ten minutes out, I have another unit that'll be there a couple of minutes earlier, and then another in route behind me. We'll have six deputies there inside of twelve minutes."

Stan thought quickly, analyzing the distances and the rate at which the intruders were moving. The deputies would be too late.

"Tim, these guys are going to be on the head gates in five minutes. Look, we have loud speakers up here and I can get Darren's brother and Will in position to help interdict. We could try and warn them off just before you guys arrive, otherwise they are going to be right on top of those head gates."

Tim Eslinger trusted these farmers and their instincts. He had seen them in action before and had determined at that time to stand by them. He would do the same tonight.

"Okay Stan, maybe you can get one of the guys spotting for the dam to assist and go ahead and warn these people off ... we'll monitor and be there quickly. Eslinger out."

**September 29, 23:06 PST**  
**Ridge two miles to the West of the Dam**  
**Klamath Lake, OR**

The increased activity on the hill overlooking the head gates and the dam had been noticed by another set of eyes that were observing through their own night vision device. Michael Lee and his security man were watching the carefully planned drama unfold from just inside the timber line on the higher ridge to the west of the dam.

Michael was the leader of this assault. He had entered the United States in the early nineteen nineties with paperwork indicating that he was a dissident who had escaped from the Chinese occupation in Tibet into Thailand. He had worked in a Eugene Chinese Café ever since. In reality, he was another Chinese sleeper agent, trained by the PLA and sent to America over fifteen years ago. He had scoped out the Link River Dam on several occasions and knew that the electrical production resulting from the station below the dam and from other stations along the Klamath River were critical to California energy requirements. It was for that very reason that this operation was being conducted tonight, and that ten other similar operations were being conducted from Klamath Lake south, all along the Sierra Nevada mountain range at other electrical production and routing facilities.

Michael had seen the farmer's protests at the head gates in 2001 and taken great interest in them. He had marveled at how the farmers had stood up to their own government and at how the American Federal government had ultimately turned the issue around. He understood that there were significant political considerations in that decision, but was also aware of the many armed citizens in the United States and the raw power they represented. He knew the government could afford to push the armed citizens of America only so far and he believed that a fear of that power had kept the government from using brute force against those farmers in 2001. The vigor with which those farmers had laid siege to and defended their rights in regards to those head gates along with the development of these home guard units is what led Michael to planning tonight's mission in the manner that he had.

He had three of his team members currently approaching the head gates from the east as a diversion. Their orders were to briefly exchange fire with the patrol watching the head gate and then fall back. Michael would then activate the major assault on the dam itself as he watched things unfold from this position and as more of the county's personnel were sucked into the diversion.

"Just like the overall operations in this entire war. The Americans are so predictable ... so easy to pull into a diversion. Sun Tsu's methods are timeless."

As Michael watched, he saw an individual on the hill raise a mega-phone to his mouth and speak. He caught the words even at this distance as the wind carried them to him.

*"You there, to the east of the head gates along the canal. Stop and lay down your weapons, this is the Klamath County Sheriff's department."*

As the amplified voice carried to his three men, Michael swung his binoculars to their position just in time to see them take cover and open fire on the hilltop. The flashes of their weapons were clearly visible and the individuals on the hilltop immediately began to return fire. In addition, much closer to the three men, more fire was directed at them from the two man patrol closer to the head gates. One of Michael's men went down and he was helped by one of the others while the third individual provided cover fire and all three began to withdraw.

Within a few minutes a Sheriff's Office vehicle slid to a stop near the head gates and two deputies got out and began to advance on the retreating intruders, who were being slowed down by their wounded friend. Michael silently swore to himself and activated his own radio, quickly clicking the transmitter once, followed by three quick clicks ... a code that had been committed to memory by all of the operatives over several years.

As Michael watched, he saw his man helping the wounded one stop, embrace his friend briefly and then pull his silenced pistol from the belt around his waste and fire two rounds into the head of the wounded man. When complete, the other two began withdrawing more quickly, covering each other as they attempted to reach their extraction point where their escape vehicle was waiting.

As Michael watched, two other Sheriff's vehicles arrived and four more deputies got out, armed with rifles. They began making flanking movements on his remaining two personnel be converging on them along the berm that followed the canal. A helicopter could be heard approaching. Michael turned his attention back to the hilltop position overlooking the dam ... only one individual was left there, and he was watching the drama to his north and east as it played out. It was time to activate the primary assault on the dam. Michael clicked that code on the channel his entire team was monitoring.

**September 29, 23:19 PST**  
**Near Link River Dam**  
**Klamath Lake, OR**

Eight men, in two teams of four, who had carefully made their way to within two hundred yards of the dam, now rose and moved quickly towards the dam. Within two minutes they were noticed by

the roving patrol that was operating on the eastern side of the dam. Upon seeing their approach, the patrol immediately radioed their observations to the team overlooking the dam.

Joseph, who had been monitoring the chase and encirclement of the intruders down beyond the head gates, received the frantic report from the patrol near the dam. Quickly turning around, he focused on the area indicated by the patrol and immediately saw the eight heavily burdened intruders advancing on the dam, now only sixty yards in front of them. He immediately contacted dispatch.

"Klamath dispatch ... Tim ... we have eight heavily armed individuals approaching the dam from the west. The patrol is in position to the east of the dam to take them under fire, but there are too many of them. I can help out with fire from up here, but they are right on top of the dam now. We need help over here real quick."

The Sheriff, seeing that his deputies and most of the Home Guard units had been drawn out of position, immediately recognized what was happening.

"Joseph, you warn those folks off with mega-phone immediately and open fire the minute they make any move directly toward the dam, I'm going to call in help."

As Joseph spoke through his mega-phone the intruders immediately opened fire on him. As this occurred, the Sheriff contacted the state dispatcher for Homeland Defense for Southern Oregon.

"Homeland dispatch, this is Sheriff Eslinger in Klamath. We have a major situation here escalating out of control. Two teams of terrorists are assaulting the Klamath Lake dam and the A Canal head gates. The head gate assault is clearly a diversion and a much larger and more heavily armed unit is now assaulting the dam. We require immediate assistance. Home Guard unit designated Klamath Dam can assist with location and disposition of terrorist units."

By this time, after two years of terror attacks on U.S. soil, the Homeland Security apparatus within the United States was a well-honed mechanism. Within thirty seconds of the Sheriff's report, a request was forwarded to the Oregon National Guard. Two F-15E Strike Eagle aircraft that were on alert status at the National Guard Air Force base just outside of Klamath were contacted by their command. Thirty seconds later they were rocketing down the runway on afterburner in a full military thrust take-off. They would arrive over the dam in less than three minutes.

In the time since Joseph had made his request, a hot and one-sided firefight broke out near the dam. The two members of the roving patrol opened fire on the approaching intruders. But the intruders used their cover well and only two of them were hit. They responded with overwhelming automatic weapons fire at the muzzle flashes of the patrol, severally wounding one and killing the other. Joseph provided fire from the hilltop where he was joined by the other team members, Jake, Darren, and Stan. Under intense fire themselves from four of the terrorists, they returned fire with their M-14 rifles. With the heavy counter fire from the terrorists, their efforts were ineffective and two of the intruders quickly began setting charges all along the bottom face of the dam.

As they were doing so, the roar of the F-15E Strike Eagle's approach came thundering towards them. Joseph provided precise information regarding the location of the terrorists, but the F-15Es were unable to engage them for fear of damaging or destroying the dam themselves. As this news was relayed across the communication network, several things happened almost simultaneously.

First, another one of the terrorists was hit by fire from the Home Guard units on the hilltop. Immediately thereafter, Joseph was wounded in the upper thigh and fell, damaging his radio. As the placement of the explosive charges was completed, all of the terrorists began to withdraw and one of them launched a shoulder-fired surface-to-air missile at the loitering F-15Es.

While the F-15Es broke off to avoid the first missile, another shoulder-fired missile was launched from the higher ridge to the west where Michael's was coordinating the overall assault. One of the F-15Es was hit in an engine that immediately caught fire. That aircraft broke off completely and began to make its way back to the airfield, trailing smoke as it struggled forward on the remaining engine. The other F-15E diverted far to the south before evading the missile that had targeted it and then turned back towards the action, seriously peeved and looking for immediate pay back.

After Joseph was hit, Jake took charge and was monitoring the retreating terrorists and reporting on their position and disposition using Stan's radio.

"Klamath dispatch, this is Klamath Dam. Both of our patrol members are down, Joseph has been wounded up here on the hill. We need emergency medical attention.

"Shoulder fired missiles have been launched at Air Guard aircraft from the vicinity of the dam and by another group of individuals on the higher ridge to the west. One of the aircraft was hit and has broken off in the direction of the base. The other appears to be circling back.

"I am observing the terrorists. Wait one ... they've stopped. Oh no, he's blowing the dam."

As Jake finished the statement, there were several very bright flashes along the entire length of the dam. These were followed by the tremendous sound of explosions as debris flew high into the air. As that smoking debris fell to earth, it was clear that the dam had been breached and a wall of water filled with twisting, rolling wreckage washed down the river channel.

After briefly observing the result of their work, the terrorists turned to make their way up the hill to the timberline. As they began to separate, two thunderous explosions occurred amongst them, obliterating sight of them with the fire, smoke and debris from the blasts. Before the debris had fallen

to the earth the surviving F-15E screamed by to the east, having successfully launched two JDAM munitions on the terrorist location. When the dust began to clear, it was obvious from Jake's position that all of those terrorists had been killed.

By the time the F-15E turned back to target the terrorists on the higher ridge, no indication of them could be found. Michael had retreated into the dense timber immediately after his own security man had fired the second air to air missile. The two of them would be the only terrorists to escape.

**September 30, 06:17 PST**

**Outside the Sheriff's Office**

**Klamath Falls, OR**

Stan and Darren climbed into their pickup truck for the half-hour drive home.

"Long night, huh?" asked Darren as he settled into the passenger seat.

Stan, who was extremely tired, responded as he turned the ignition key and revved the engine. He turned on the headlights.

"It sure was. Those federal boys were sure full of lots of questions. Seems like they'll be debriefing all of us and asking more question for the next week. I want to get home, get a little sleep and then try and help out with Larry's family. Man, am I ever going to miss him.

"You know another thing, I'm glad the media isn't here in force yet. You can bet they will be later today. I'll be glad to be out in the basin getting things ready for winter when they start digging around. Maybe we ought to get with old JT Samson and let him tell the story."

Darren thought about the long winter ahead and the coming spring. They were going to need water for the crops.

"That sounds like a great idea, he'll be sure to get the word out. Let's get the old Bucket Brigade back together and in action. We can call everybody in the irrigation district and get word to all of our friends who helped back in 2001. We're going to need to get that dam rebuilt as quickly as possible so we can have irrigation water flowing come April.

"I figure if we have enough volunteers, we can get 'er done by then and to hell with these terrorists or anyone else who tries to shut that water off ... we have food and crops to be growin', Darren remarked as he turned to Stan, winked his eye and finished by saying,

"We got to *Let the Water Flow.*"

**Politburo**

**Beijing, China**

Jien Zenim read again the headlines from the western news source, a WNN affiliate.

*Massive Terrorist Attacks Against Electrical Grid in the Western United States  
Over Twenty-Two Million without electricity, hundreds dead.*

The openness of the western press never ceased to amaze the leader of the People's Republic of China and the head of the massive coalition that was having so much success against the west in the current struggle. The western news sources, particularly those headed by his special friend and confidant, David Krenshaw, provided almost as good a Battle Damage Assessment (BDA) as any professional military team he could put on the ground over there.

Even with a team on the ground, the communication back could take days, perhaps weeks, and was fraught with danger. With access to the free press in the west, Jien and the entire Coalition of Asian States and Greater Islamic Republic leadership could have critical information within a few hours of implementing major assaults, sometimes as it happened.

Apparently the vaunted and much touted Home Guard Units were fairly effective. Only three of six dams targeted in the latest operation had been breached according to the Generals in charge of intelligence. But, with that shock to the electrical grid, and with the several other large transmission lines and sub-stations destroyed in the attacks, apparently significant portions of America's electrical grid on the west coast had failed. This had cascaded into the intermountain west where several other million residents and business were without electricity.

"Hopefully it will be weeks before they can repair the damage ... and our people will continue to "pop-up" and harass them," Zenim thought as he finished reading the article for the third time.

The leader of the People's Republic of China had no allusions as he considered the success of the latest operation. The harassment that his sleeper cells and the various Islamic and Hispanic units within the CONUS were causing could only harass and impede America's production efforts. That is exactly what they were meant to do, as well as demoralize the American population. Without the current means to directly attack their cities and manufacturing plants, outside of the attacks being directed against the Gulf Coast from Panama, the Red Chinese and their allies had resorted to asymmetrical methods of attacking America's heartland. To a significant degree, those efforts were proving successful and yielding the desired results.

But not to the full extent the Chinese President wanted. Zenim knew that with the advent of the Home Guard units and the "Arm America Now" initiatives of the American President, that such

efforts would diminish in effectiveness. There were simply too many common citizens armed and they were apt to be in a position to interdict and impede attacks before they reached their targets or accomplished their goals. This most recent assault had once again proven this, despite some measure of success. Zenim knew that without such efforts, those attacks would have been much more successful and much more devastating to America's production efforts.

The Chinese planners had hoped to put America much more off balance and to cause much greater disruption ... he could only hope and trust that they were causing enough disruption to allow the CAS to accomplish their goals. He was positive that those asymmetrical efforts could cause enough disruption. He believed and had planned for years that such disruption, coupled with the impact of military operations like Hung-Lu-Dong, would lead America and her allies to sue for peace. Such a peace must then inevitably recognize and accept the new order of things, an order that left the Coalition of Asian States the undisputed power in all of Asia, standing on an equal footing economically and militarily with America and the European Union in the rest of the world.

"If they will not recognize that order of things ... they will cease to exist as a viable force themselves in world affairs," Jien thought.

Folding the paper he had been reading, he sat it on the conference table and prepared to lead the Politburo in a discussion of the final planning and implementation of Phase Two of Hung-Lu-Dung now scheduled for March of next year.

**October 3, 22:48 PST**

**Maximum Security Block, Solitary Confinement**

**Federal Detention Center, Outside of Portland, OR**

Manuel was a beaten man, and he knew it. He wasn't sure if his captors were entirely aware of it yet and he was continuing to try and keep it from them. But he knew it, and he hoped he would find release before they could take full advantage of it.

He longed to see his wife and children again, he hoped that Miguel had been able to escape and take Manuel's family with him. He was certain Miguel had escaped. He knew the man too well. As soon as those all-points-bulletins and pictures went out, particularly on the television like they had in New Mexico where Manuel had been captured, he was certain that Miguel had immediately left the country for his secure Hacienda in Mexico.

Manuel had held out as long as he could, carefully withholding names and relationships, despite the drugs, just as he had been trained to do so long ago. But he was much older now, and the training was like a dream, long in the past. He had ultimately given up Miguel's name and how they were tied together, along with almost every operation and every other name he held in his mind. The super fire they had set in Colorado, the attacks on power line transmission towers, substations, transformers and switches. All the planning of those missions with Miguel that he could remember. But it had all been meted out carefully, begrudgingly, as he had been trained. There was one name he had not divulged and there was one operation he had been involved with he would not detail. Hector and the attack on Foothill Mall in Colorado were going to remain safe with him...at least that was what Manuel thought.

In his confined world, it had taken months to give up the information he had divulged. Months of drugging, months of food deprivation, months of solitary confinement and even some rough physical handling by his FBI, military and Homeland Security captors. Actually, he was surprised that the physical handling had not been more severe, certainly in his own country it would have been. But apparently the Americans relied on their own methods, sprinkled with just a dose of physical abuse to keep the prisoner off guard. Manuel was sure it was also to try and maintain some semblance of their vaunted "civil" rights.

Manuel supposed that the Americans had learned, in the pressure and urgency of these current circumstances, where the war was also being waged on their own soil, that such notions sometimes took a back seat to expediency and survival. Manuel knew for him that it always did.

"Well, if my efforts have helped these Americans to learn to be more pragmatic," he thought, "Then that is something to be regretted."

As far as Manuel was concerned, the longer they remained soft and sacrificed pragmatism and their lives for principle, even when dealing with their abject enemies, the better.

Still, he missed his wife and three children. He knew he would never see them again and *that* was something he certainly did regret. He would hold out as long as he could and hopefully expire before they got those last two bits of information from him. But he was tired, and spent...truly defeated.

What Manuel did not know was that his captors had known of his relationship to Miguel's long before Manuel had broken and given it to them. In fact, they had gauged and fine-tuned their methods as a result of what it took to get that very information out of him, and how long it took them to do it. The psychologists working with the team had been there the entire time, profiling, analyzing and predicting. Now they indicated that Manuel was almost certainly still holding back even more critical data, 95% sure of it is what they indicated.

Director Andy Syke watched Manuel through the digital feed connected to the micro-camera located in the left cinder block wall of Manuel's cell. It was an oversized cell where he could be held

and interrogated without the necessity of moving him. He knew that the fatigue and the haggard look on Manuel's features were not a sham, not any more. He also suspected that the psychologists were right and that was more information to be coaxed and milked out of this prisoner. To date, Manuel had been a veritable treasure chest of information, but he had not given it up easily. The details of the planning of the super fire this man's team had set last year in southern Colorado along a one hundred and fifty-mile front were staggering. In the end, almost fifteen hundred people had been killed in the resulting firestorm amongst the towns and recreation areas that had been ravaged. More than two hundred thousand others were made homeless. Over three million acres of land had burned in southern and central Colorado, literally gutting the center of the state and some of the most scenic landscape in all of North America.

"This guy is a monster who needs to be executed as soon as possible," thought the Director, "but we have to be sure that we squeeze every single drop of information out him before we do, and that is *exactly* what we are going to do."

There were several micro-cameras on each wall and on the ceiling of Manuel's cell. Perpetual light, concrete floor, hard mattress cot built as a protrusion out of the wall with soft, curved edges and a simple bodily waste hole in the floor at the bottom of a slightly sloped tiled area were all that existed in the room. All of his water and food were delivered to the cell and had to be ingested without the use of utensils. Nothing hard, sharp or of a nature that could be used for suicidal tendencies was provided, though the psychologists indicated that he was not the type, only an 8% chance. But Director Syke took nothing for granted and left nothing to chance. In the current environment, Manuel, an enemy combatant, could be held indefinitely, without a lawyer and only with a Federal Judge's assent to his internment per the wartime legislative acts and executive orders. In the end, Syke knew that it would take only that Judge's assent and the sign-off of several individuals like himself to terminate this non-citizen, enemy combatant after a military style tribunal when the time finally came.

Andy Syke had been in the FBI for over twenty-four years, through the good and the bad. He was the top FBI official in this region and had come right up through the ranks as a field officer. He viewed himself as a loyal American and had never conceived the day where these types of procedures were enacted in the United States of America. But, with thousands of Americans dying at the hands of aliens like this Manuel Mendoza, the rules had changed for any enemy combatant that was not a U.S. citizen. America itself was a war zone, and for the enemy, particularly those dressed as civilians, it was being treated that way. Therefore, though the job before him was distasteful, it was something that had to be done for the security of the nation, and he would do it without batting an eye.

He had personally taken charge of this prisoner and his interrogation and internment when he had been transferred to this facility a few weeks after his capture. Andy had one senior detective, two case officers and three psychologists permanently assigned. Other agencies, including Homeland Security, the CIA and the Defense Department were routinely assigning people to work with him, as more information became available.

As he watched Manuel lying there now, he looked at his watch.

"Five minutes to Eleven," he thought. "Another five minutes and we'll find out just what else it is you are holding back you miserable SOB."

**October 3, 23:00 PST**

### **Maximum Security Block, Solitary Confinement**

### **Federal Detention Center, Outside of Portland, OR**

From almost out of nowhere, a door opened and several people walked into the cell. Somehow, three sides of his cell were accessible to the outside corridors or offices, and he never knew which side his captors, his enemies, would enter from. The doors were almost seamless and could not be seen to the naked eye until they literally swung or slid open.

A special team of four armed guards, looking like the epitome of U.S. Marine Gunnery Sergeants, a spectacled man and the senior detective all entered the room. Two of the guards came over and pulled Manuel over to the chair they had brought with them and secured him to it using the straps that were attached for that purpose. The other two guards had already secured the feet of the chair to the floor, screwing large bolts into threaded holes in the floor after uncovering them.

Once he was restrained, the detective approached.

"Well Manuel, how are you today?"

Though in a drug stupor, Manuel looked as firmly as he could into Detective Rollinson's eyes and replied in his Spanish accent.

"Detective, cut this small talk, okay? We've been through too many of these "discussions" over the months for it to have any meaning. Why don't you just get to the point."

Luis Rollinson had a begrudging respect for this man. He had worked him, stressed him and broken him down for several months and he could appreciate Manuel's remaining spirit. But none of that softened him or deterred him in the least from his duty.

"The point is simple, Manuel, how are you doing?"

Manuel lowered and shook his head slowly for a moment in silence. Then, lifting it once again so he could stare at the detective, he spoke with sarcasm in his voice.

"Well, I'm hungry, I am cold, there's too much light in this room, I can't get a decent night's sleep. I have no privacy and you people don't even knock before entering. By the way, where's the Director, I thought today it would be his turn."

That Manuel made light of the situation was one thing, but that his comments about his own conditions were all negative told the detective volumes. In fact, it was something that the spectacled man and his colleagues, the other psychologists, had told the detective to watch for specifically.

"Well, Manuel, Director Syke couldn't be here today, he's enjoying an outing with his wife and three children, the two boys and one girl."

At this statement, Manuel's head jerked up and a look of unadulterated hatred filled his eyes as he looked at the detective. Manuel had three children, two boys and one girl, and he had always enjoyed taking them on outings when he was at home. He knew that this reference was not an accident, and he also knew it was getting to him.

"You miss them don't you, Manuel? Well I have a surprise for you."

Turning to one of the husky guards, the detective motioned to him while speaking.

"Bring the kids in."

As Manuel watched, astonishingly his three children were marched into the room. There was Antonio, fourteen years old, tall and slender. Next was his only daughter, Bertrice, sixteen years old with beautiful long dark hair, then there was his oldest, Victor, seventeen and very muscular. All three were dressed in prison garb, and all three looked much to thin too Manuel with red and haggard eyes.

"What the hell is this? Why do you have them here? Antonio, Bertrice, Victor, tell these gringos nothing. No matter what they do to me, tell them nothing!"

His daughter broke down and began crying.

"Father, what have they done to you? You're so thin and weak." As she said this she tried to move towards him but the guards held her back as she continued sobbing.

"Father, tell these men to let us go. They have said such horrible things about you..."

"Shut up!" yelled Luis, cutting off Bertrice.

"This is not about doing things to you Manuel. Now I want you to listen very carefully. We must know the name of Miguel's control and we must know it today. Also, we must know the details of the attack early last year on the Foothill Mall in Denver. We know you were involved some way in that, Manuel, and we need the information.

"I'll give you one minute to start talking. Master Sergeant, line them up."

As Manuel watched, two of the large guards took his children and lined them up against the far wall. Detective Rollinson walked over to the leader of the detail and extracted the service pistol from the man's holster and jerked back the receiver, loading a bullet.

"Fifty seconds, Manuel."

Manuel couldn't believe it, no, he wouldn't believe it. The Americans would never do such a thing. They may have been hardened in the course of this war, and they may well have a few rogues in their Special Forces overseas. Manuel had heard some stories coming out of Central America years ago, and had also heard talk about events in South East Asia that caused him to wonder.

Manuel knew that if the Americans ever did allow such things to occur, that it was all under very deep cover, conducted by agencies whose names simply did not exist, far away, somewhere off-shore far from the prying eyes of their press and their citizens...but this? No, it was not possible. He actually smiled as he contemplated their bluff and how he would embarrass them by calling it. He was angered as he saw the fear in his children's eyes and the small puddle of urine that was forming under his youngest son's feet who was first in line.

"You can go straight to hell, I don't know what you are talking about and I wish to God I could spend just two minutes with you alone for the fear you are causing my children."

Detective Rollinson looked at him coldly.

"Your call."

With that, and to Manuel's utter shock and to the horror of the children, Detective Luis Rollinson walked over to Antonio, stopped three feet from him, took careful aim with the nine millimeter pistol, and shot him right in the middle of the forehead.

*BLAM!*

A small red hole appeared immediately in Antonio's head as his eyes rolled back and he was thrown violently against the wall, a wall now covered with blood, bone fragments and brain tissue. Then he slid slowly and lifelessly to the floor.

For just a second Manuel stared in pure disbelief...then he wretched terribly onto the floor...and then he began cursing and screaming, straining at his straps as his other two children also screamed and cried and had to be physically restrained and held in place by the guards. Detective Rollinson came up to within two feet of Manuel's face and spoke to him.

"Okay tough guy, now you have two kids left and one more minute to think about it. Who is Miguel's control and what do you know about that attack on that mall?"

Manuel bowed his head. He looked up with tears streaming down his face at the pathetic and terrorized figures of his two remaining children. He looked at the still form of Antonio.

"It feels a little different on this side of the fence doesn't it you miserable bastard?" asked Detective Rollinson, "You've got thirty seconds."

Manuel was finished. He broke down and begged the American to spare his other two children. He then spent the next forty-five minutes revealing every detail he knew about Hector Ortiz and the intricacies of FTA Trucking, the front company Hector had set up and run for so many years, smuggling weapons and terrorists into the United States. He also revealed all the details of last year's attack on Foothill Mall, including his own part in it, everything he knew about the attack's funding and how the remaining team members had been evacuated by helicopters that had been painted like those belonging to the local News Channels. During the confession, Manuel's other two children were led weeping from the room, with a promise that they would not be harmed.

Director Syke watched the entire affair. The methods were distasteful, and many would claim that they were out and out illegal and as bad as the enemy's actions. But Director Syke knew that it was the enemy that had started the terror, and he also knew that these methods had produced the desired results. What had happened here in this cell tonight would probably save hundreds, even thousands, of American lives, and they would allow the United States government to execute justice against some of its worst enemies. What Andy Syke didn't know at the time was that the information he had just heard would have even more far reaching consequences than he imagined, not only at home here in the CONUS, but abroad as well.

When Manuel was done talking and when Detective Rollinson was sure he had heard enough, he instructed the leader of the guard detail to carefully unstrap Manuel from the chair and let him spend a moment with his dead son.

Manuel, a completely broken man, knelt down and crawled over to the still form of his son. When he reached him, he carefully began to take his bloody head into his arms. As he began to do so, he saw his son's eyelid flutter briefly and for a moment he had a wild hope that somehow Antonio might still be alive.

But that hope was short lived. Oh, in fact both of his "son's" eyes opened alright, to the further astonishment of Manuel. Then to Manuel's shocked amazement, his son stood up. As he did so, he peeled off a complete head mask that extended well below his neck, turning it inside out and showing it to Manuel. From his position on his knees on the floor, Manuel looked up into the eyes of someone who was clearly not his son, someone who was much older.

"Masks Manuel... small explosive charges filled with the right ingredients," the operative said as he pointed out the location of the squib device on the inside of the mask where the tissue pack surrounding the small charge had been situated so as to look natural, another device on the front to produce the desired result, and a lot of practice and good timing.

"You saw what you expected to see ... thanks for all of the info."

Then, the U.S. operative, who had trained constantly for over eight weeks to fulfill the role he had just acted out with the others, stepped over Manuel and left the room. Manuel just sat there in utter bewilderment, shaking his head and trying to comprehend the enormity of the ruse.

Detective Rollinson and his team retrieved the chair and also began exiting the room. Before he left, the Detective stopped for a moment and looked back over his shoulder at Manuel and said.

"Be seeing you around... Amigo."

### **October 12, 06:35 Local Time**

#### **Viper Flight, 5000 Feet**

#### **East of Alice Springs, Australia**

Lt. Billy Simmons carefully took stock of his situation as he made his way back to the forward base from which he had taken off earlier that morning.

"Another twenty miles should do it. You copy that Roger?... Roger?" he called to his electronics and weapons officer in the back seat as he made his way to the east.

There was no response from Roger Farnsworth, there hadn't been any some time. Billy was very worried about him and could hear the air whistling through the holes in the canopy...bullet holes.

It had started like every other flight he had been making for the last three months since arriving here near the front lines in central Australia. In for planning and briefing at around 3 AM to get final intelligence. Out on the flight line for a final run down and checkout of their aircraft before 4 AM. Then, airborne by 4:30 AM for the fifteen minute flight to the lines just west of Alice Springs and support of the American and Australian troops there holding out against the almost continuous massed attacks being conducted against them.

"And they aren't just massed infantry attacks like they had been to begin with either," thought Billie as he reflected on the fighting. "There are a lot of mechanized and armor units joining in now."

"And that's not all, several times we've been driven from the sky by those older MIGS and attack helicopters when our CAP couldn't hold their numbers back."

He'd usually fly between four and six missions per day. Coming back, getting the aircraft fueled, repaired and checked out while he and his rear-seat got the latest intelligence and any new orders from HQ before mounting up again. So, up at 2:30 AM, continuous combat sorties until well after dark, finally finishing the planning for the next day and hitting the rack after 10 PM.

"Well, time really *flies* when you're busy," he whispered to himself, "18 or 19 hours a day. But I never thought it would come to this, particularly not after those first few weeks."

To begin with the missions had been an exercise in prosecuting an extremely "target rich" environment. Billy could hardly believe how many Chinese, Indian and Indonesian troops were there day in and day out, making their way towards the Allied defensive positions to attack. The Marine attack helicopters had simply slaughtered as many as they could with whatever ammunition they carried. They had wondered at the futility of it on their enemy's part. From the front lines, when they were back at base, they had heard the stories from the Marines on the ground about how the enemy dead were stacking up in front of the American lines. They had made jokes about it.

In those first weeks the enemy did have some aircraft coverage with mobile anti-aircraft batteries and a few shoulder-fired missiles. But the aircraft were no match for the American F-15 CAP and the weapons did not have the range his own missiles had. The American helicopters could just stand off and utilize their longer-range munitions to target enemy vehicles and positions before moving in with their chin mounted chain guns to clean up.

But the enemy kept coming.

On the rare occasions back then, when the enemy fielded longer-range weapons, the AH-1Z Viper's maneuverability and counter systems proved more than adequate. In those days there had also been plenty of the very accurate and very potent higher tech munitions, both Hellfire missiles and the hypervelocity Quick-shot missiles. But as time went on, and weeks turned to months, those munitions became less and less available. Two weeks ago those higher tech munitions had run out altogether. Now it was simple line-of-site rocket pods and straight ammo for their 20 mm chain gun.

And the enemy kept coming.

"Thank God there are still plenty of Sidewinders left," he thought. "Even if they aren't those AIM-9X missiles we had to begin with, they are keeping us alive... at least they were until today."

Today had been completely different. Today things had broken down from the very beginning.

Over a period of the last ten days, the entire chain of command had noticed and spoken of the increasing number of higher sophistication aircraft, vehicles and missiles being brought to bear by the enemy. The problem was that this was occurring precisely at the time when the allies were running short on their best munitions. Rarely did they conduct a mission now when there weren't several enemy fighters breaking through to harass the American attack helicopter supporting the allied positions. Rarely were they not dodging accurate and much more sophisticated shoulder or vehicle fired ground to air missiles. Rarely were they able to attack without giving wide birth to enemy ZSU-23 radar guided anti-aircraft vehicles supporting the enemy columns. With excellent low-level radar, with wide engagement angles and with a high rate of fire—800 to 1000 rounds per minute for each of its four barrels—the ZSU-23 was a very dangerous threat. Until destroyed, they were deadly against any allied attack helicopters.

"And today, there were simply too many for us, or for our JSF compadres to destroy."

Before they ever arrived at the operations area, the warning had come over the command frequency regarding enemy fighters already breaking through the CAP. Those enemy fighters today were not the vintage aircraft of the last few weeks. Oh, make no mistake, those vintage MIGS could mix it up well with the Viper's alright, but usually there were enough F-35 Joint Strike Fighters (JSF) flying support missions to help out and only a few of the Marine helicopters had been lost to them.

But today, the command circuit had warned right up front that the fighters breaking through were SU-30 and J-10 high performance fighters. The F-15s and F-35's had not been able to hold them back and so they had ravaged the Viper's before they ever reached their area of operations. What had been an entire squadron of twelve AH-1Z Vipers had been reduced to a single flight of four aircraft.

Those four had been ordered to proceed forward and support the beleaguered US Marine, US Army and Australian forces on the front lines. There, just west of Alice Springs they were facing the largest attack yet. In the early morning light, Billy had seen the tremendous volume of fire emanating from both sides as the enemy forces advanced towards the allied lines. He did not believe the advancing forces would be held back today.

He was right.

He had emptied all of his rocket pods and the last of his chain gun ammunition when he and his wingman had strayed into the range of four ZSU-23's defending an enemy mechanized battalion on the flank of the units Billy had been attacking. Apparently all four units had waited for an order to fire in unison. When they did, Billy's wingman was targeted first and took the brunt of the attack. Billy would never forget the brief warning over their local frequency from his wingman and the urgency and anxiety he had heard in it. He would also never forget how quickly that Viper had come completely apart under the intense gunfire.

"In less than a second, they were gone," he soberly reflected.

What had been the magnificent form of the most modern, most deadly attack helicopter on earth, an AH-1Z Viper, had in less than a second taken on the form of an exploding cloud of debris. From that cloud had emerged a severed main rotor, a shattered engine, thousands of raining pieces of burning metal and plastic...and the bodies of two American pilots that were literally blown to pieces. A cloud of smoking, raining, ruined metal, plastic, wiring and flesh.

Billy had reacted immediately, instinctively responding to his training and peeling off to the side away from the firing. His quickness and superb flying had saved his aircraft, but it had not been quick enough to avoid being hit as well. One stream of 23mm shells had cut right across the top of his canopy, angling down and behind him. Amidst the sound of shattering canopy and instruments, he could not shake from his mind the rapid succession of three dull thuds he had heard behind him as he passed out of the stream of fire. He had not been able to raise Roger on their internal communication system since. He had also not been able to raise any other Viper on their squadron frequency.

Now, less than twenty miles from his base, he was returning, the sole survivor of the entire squadron. From the frantic reports and calls for support coming from the front, Billy hoped he would have time to rearm and form up with other Viper units and continue to support the allied lines.

It was a vain hope.

A few minutes later when Billy flew over the ridge eight miles from base, he was shocked to see explosions and several smoke plumes rising over it in the distance. The base command frequency frantically responded to his inquiries and requests for clearance, letting him know that a ballistic missile attack had reduced the majority of the base to burning and smoldering ruins. There were very few serviceable areas for him to land, and very few operational aircraft of any type were left. Upon landing, he learned that the allied defensive lines around Alice Springs were being over-run at that very moment and a general withdrawal had been ordered for all allied units. Billy's new orders were to immediately take on as much fuel as possible and join the remaining flyable units in a retreat far to the East to regroup, re-provision and continue the fight.

The enemy was coming, and nobody was joking about it any more.

### **October 13, 22:55 Local Time**

#### **Flag Conference Room, U.S.S. Ronald Reagan**

#### **CTF 77, 300 nm off the Eastern Coast of Australia**

The Commander in Chief of all Allied forces in the Pacific, CINCPAC, listened as the full bird Colonel gave the intelligence briefing regarding the overall status on the ground in Australia. Ben Ryan listened closely and soberly to this briefing. In addition to himself as CINCPAC and his staff, all of the highest ranking allied commanders here in the Australian Theater of Operation were in attendance. The new Commander of CTF 77 (who also served as the U.S.S. Kitty Hawk carrier strike group commander) and the Commander of the U.S.S. Ronald Reagan carrier strike group were in attendance. The Commander in Chief of Allied ground forces in Australia and the Commander of all allied ground based air forces in the Theater were both in attendance. Finally, the commanders of the Australian and New Zealand air, ground and naval forces were also in attendance. All had flown out to the U.S.S. Ronald Reagan for this pivotal meeting.

"Therefore, what has occurred is a general breakthrough at Alice Springs. The defensive lines, after holding out for several months, and after inflicting untold casualties on our enemies, have broken down completely. The withdrawal is orderly, but it is complete and rushed.

"In addition. We are experiencing steady losses along the Northwestern Coast and the Southern Coast as the enemy Army Groups in those areas continue to push forward. A large contingent in each case broke off from those groups and began angling inland day before yesterday. It is clear their movement was timed in anticipation of this breakthrough and they are trying to envelop our retreating forces from Alice Springs.

"We are harassing the flanks of these forces, but we do not have sufficient forces to interdict them without seriously risking our efforts along the coastal areas themselves. The overall strategic result of these actions can be displayed as follows."

The Colonel motioned to an aide and the screen towards the front of the conference room lit up with a strategic map of the Australian continent. Two large red arrows, pointing to the Southeast emanated from the Alice Springs area. Two more large red arrows, one along the Northeast coast and another along the Southern coast pointed towards the far southeast coast of Australia. Two other smaller red arrows, diverging from the coastal lines, pointed towards the area between Alice Springs and the Southeast corner of the continent. There were small semi-circular blue positions marked on the map in front of the red arrows along the coast. In the mountains around Sydney in the far southeast were several more blue semi-circular markings. Out in front of those two large red arrows now to the east of Alice Springs were several smaller blue arrows pointing away, back towards semi-circular positions between their current location and Sydney.

"We are at a critical juncture here. If these defensive units now retreating from Alice Springs take up their planned fall back positions, they will be pinched in place there and most probably enveloped and destroyed. If they escape that trap and fall back towards the initial primary defenses

well out from Sydney and Melbourne, the enemy will have the option of using those two pincer forces to flank our positions on the coast.”

Admiral Ryan interjected at this point.

“Colonel, please indicate the size and composition of those enemy forces you have indicated on the map that are engaged in their offensive.”

The Colonel did not hesitate, having the facts and figured already in mind.

“Admiral, we estimate something on the order of 550,000 troops in each major arrow, and 225,000 troops in the smaller pincer movements. Over two million, five hundred and fifty thousand troops supported by armor and air.

“And those numbers are growing. Let me share these pictures with you.”

An aide handed out copies of photographs to those gathered in the conference room.

“I apologize for not having this up on the screen in digital format, but there wasn't time.

“What you are looking at are three major staging areas along the Australian coast far to the west. They are marked on the map on the screen by the three large circles along the western, southwestern and northwestern coast.”

The commanders saw huge areas of massed shipping, some unloading at docks, other unloading on shore. The numbers of ships in each case were phenomenal, ranging in size from the smallest ocean going vessels, up to the newer large amphibious ships being produced by the PLAN. The Australian Naval commander was the first to respond.

“For all the world this looks like three D-day sized efforts...they must be bringing in literally millions of men and their materiel.”

The Colonel continued.

“Before I continue, let me inform you. These photographs were purchased in blood from coast watchers still active behind enemy lines. Satellite imagery is now virtually non-existent. Newer Chinese anti-aircraft batteries are proving extremely capable and we are unable to mount even SR-77 or HR-7 reconnaissance safely. This is classified information for which you all hold the appropriate level of security, but we lost an HR-7 aircraft and its pilot last week over the Northwestern staging area. The aircraft was lost before it could transmit to one of our Global Inspector UAVs that was holding position 250 miles to the west.

“But, the point is, the enemy is bringing in staggering amounts of men and materiel. We actually estimate it now at something on the order of an additional three million men and growing, which they have already shown they are willing to lose in horrendous numbers to gain ground. In the Alice Springs area, we estimate that over 215,000 enemy combatants were killed in a twelve-week period. We lost close to 12,000 killed and 24,000 wounded...but in the end, the enemy occupied the ground.

“Finally, to close, they have set up blocking naval groups to prevent our forces from reaching their beach and dock areas. I have marked those suspected vicinities on the map in red cross hatch, here, here and here.”

As he said this, the Colonel pointed to three areas with his pointer. One was just off the Northwest coast of Australia, one was off the Southeast coast of Australia, and the last was off operating somewhere in the straits between New Guinea and Guadalcanal. After pointing out each of these areas on the map displayed on the screen, the Colonel completed his briefing.

“Each of these two northern groups consists of at least three of the Chinese Beijing class aircraft carriers, and the one of the Northwest coast also includes the Shi Liang and her heir escorts. The one to the Southeast is an Indian group consisting of their carriers Vikrant and Vikramaditya and their escorts. All of them are being supported by significant ground based strike aircraft. We estimate that at least three regiments of Backfire bombers, two regiments of Blinder bombers and two regiment of Bear bombers are now located within support distance of these naval groups.

“They are operating out of airfields in Australia and New Guinea. All have the capability of launching supersonic, sea-skimming cruise missiles...or the "Killer Whale" supercavitating weapons. We estimate that these regiments are being supported by three regiments of SU-24 Fencer strike aircraft and many squadrons of SU-30, J-10 and Mig-29 fighter aircraft, which are also flying support for their ground forces.

“This concludes the strategic briefing. I have specific tactical information for each of your areas of operation based on strategic assets, local HUMINT and on your own intelligence reports.”

As the Colonel took his seat, Ben Ryan stood up and walked to the podium at the front of the room next to the display screen. He had already reviewed with several of the U.S. commanders present, what his recommendation was going to be. He wanted consensus from the combat force commanders in the room, and particularly from the military leaders of Australia and New Zealand.

“Gentlemen, let me be blunt. Tactically, I see no alternative but to have our forces fall back to the major defenses extending 150 miles out from Sydney and Melbourne.”

At this statement the Australian military leaders interrupted with pleas and arguments to the contrary. Admiral Ryan did not give them time to swell into the chorus they might otherwise have done. Slamming his fist down loudly in the conference table next to him he shouted.

"I *WILL* have your attention. This is *NOT* some kind of press briefing and your gentlemen are *NOT* civilian reporters. This is a military environment and by God it will be treated as one or I will have you removed from the room! Is that understood?"

The room got deathly quiet and the Admiral continued.

"I know the situation is critical and deadly. I also know we must do all in our power to maintain a strong military presence here on the continent or things will get much worse for everyone involved.

"Now, I am not proposing giving up, and I am not proposing that we operate in purely a defensive mode. To the contrary I want all commanders to look for opportunities to counterattack and draw the enemy into large ambushes. In particular I want to look for specific opportunities to have the enemy mass his large forces for more of these large breakthroughs. Here is why."

Turning to one of his aides, the Admiral motioned and then continued.

"Commander, please escort all aides and staff out of the room, then hand out the packets to the commanders. I would ask that each of you receiving these packets begin to read and then hold your comments for a few minutes. The rest of you are dismissed. Tactical intelligence will be presented to you in the officers mess which has been set up for that purpose and where you will find information regarding the overall tactical plans waiting for you. Please begin preliminary planning based on those plans and your commanders will join you in a few minutes."

An aide to Admiral Ryan escorted the staff members and aides from the room and then began handing out red folders marked TOP SECRET to each of the commanders. As they opened them and began reading there were many wide eyes and audible intakes of breath. By the time the meeting of those commanders adjourned, the Admiral had his consensus on the strategic recommendations that now had to be communicated to Washington in the form of an urgent request.

**October 13, 18:23 EST**

**Situation Room, The White House  
Washington, DC**

The information packets regarding the current tactical situation in Australia had been distributed and read. The members of the National Security team were sobered by it. All of them, even those without a military background, could see where the situation was leading. Australia was on the verge of collapse and defeat. In a matter of weeks, a one hundred and fifty mile radius circular region, armed to the teeth, would be all that was left of free Australia. Very soon, Sydney and Melbourne would be subjected to brutal bombardment. How long could they hold out?

Every member of the team sat in serious reflection. From the Vice President, to the Chairman of the Joint Chiefs, including the Secretary of Defense, the Secretary of State, the Director of the CIA, the National Security Advisor, each and every one of them rolled the situation over and over in their minds. They each kept coming to the same awful conclusion.

After letting the team digest and contemplate the information and its implications for a few minutes, the President spoke.

"I don't need to lay out what the information in those packet means. We have in fact discussed this possibility on a number of occasions and what we would do about it if it came to pass. Those plans are well laid and well advanced and will make New Zealand an impenetrable fortress for liberty from which to mount our counter offensive if required.

"What I do want to discuss this evening is a recommendation I have received from our Commander in Chief in the Pacific, Admiral Ben Ryan. Now if you will, please open the second folder there in front of you, also labeled TOP SECRET, the one I asked you each to wait to open until we had finished with the first. Please hold your comments and questions until after everyone has completed and until after I say a thing or two."

In a virtual repeat of events the day before in the Flag Conference room aboard the U.S.S. Ronald Reagan, as the various members of the National Security team read the recommendations from CINCPAC, there were many wide eyes, audible intakes of breath and whispered oaths from all around the room.

"As you can see, the Admiral is requesting National Command Authorization for tactical nuclear strikes against the three staging areas our enemies have established along the western coast of Australia. He is also asking for permission to conduct tactical strikes against the three major naval battle groups that the enemy has deployed around Australia and against six major airfields in Australia and New Guinea.

"He feels, and justifiably so, that such strikes will break the back of the enemy offensive in Australia and allow him to launch major counterattacks against the front line elements of the remaining invasion forces. He feels that without their logistical, naval and air support, he will be able to isolate them and crush the head of the snake in Australia whose body will have already been destroyed by these strikes."

The President stopped for a moment and briefly reflected. He knew that militarily this plan could be made to work and that the enemy could be defeated in place in Australia. But a lot depended on

what the enemy had brought to Australia with them. The Chinese had tactical nuclear weapon capability. The Indians did as well. Through the former Pakistan, so did the GIR.

What and how much had they brought to Australia? While the President knew that American forces could certainly defeat them there with more numerous and more capable weapons... would it destroy Australia to do so? What type of strategic response would such a move invoke?

They would be crossing a critical line to unilaterally do this, even though they could stop the major enemy advance there. What would be the political fall out in terms of impact to the momentum they were attaining in persuading more and more nations to actively join in the fight against the new Axis of the CAS, the GIR and the CSAS?

With these thoughts fresh on his mind, he continued.

"I am inclined and believe from a pure military standpoint that this plan would work and we could in fact defeat these huge enemy forces in and around Australia."

When he said this, the Secretary of State, Fred Reissing, a staunch defender of the President and all of his policies, and a good friend, interrupted and said,

"Mr. President, you can't be seriously considering this. Are you actually proposing unilateral first use of nuclear weapons? It would destroy our coalition and allow the enemy to paint us with a brush so black as to justify their use of those same weapons whenever, wherever."

The President trusted his Secretary of State. He also respected him. He had expected that there would be interruptions, strong emotions and abject opposition to any contemplation of this path. But the President also could see ahead and knew that their enemies, with their overwhelming number, *must* be stopped somehow. If they weren't, he was certain that sooner or later they would be fighting those overwhelming numbers on American soil. Keeping the many foreign terror and sleeper cell attacks under control was a continuing problem, though great progress in that regard had been made. But tens of thousands of American citizens had died in the process, and they were continuing to die as new cells popped up and went about their murderous work.

"Fred, I am serious about considering it. Deadly serious and just as serious as Harry Truman was at the end of World War II.

"I believe we are looking at a situation that could be orders of magnitude worse than World War II in terms of human life, particularly American life, if we do not end this thing as quickly as possible. If we have the means, and if we honestly believe we can get away with it victoriously, I believe in the long run it will be far better.

"But I have not said I would do so unilaterally, particularly on Australian territory, and I have not indicated that strategically it would be best. I have simply said that there locally, tactically I believe we could use it to win. I want to explore the costs of that tactical win first, and then also explore all of other areas I just mentioned before any decision is made."

The President turned to his Secretary of Defense, George Crowler. Crowler had been, until last year, the Chief of Naval Operations. But after the death of the former Secretary of Defense, Timothy Hattering, in the surprise Chinese attacks nineteen months ago, Crowler had been nominated and approved as the new SECDEF. Addressing him, and expanding his gaze to take in the Chairman of the Joint Chiefs of Staff for the military, General Jeremy Stone, the President said,

"George, what do you and General Stone have to say regarding the tactical situation in Australia as it relates to the request from Admiral Ryan? What has China, India and Indonesia brought to Australia that they can use to counter with in terms of tactical nuclear capability?"

"After we discuss that aspect and assess the risks, I would like John to take us through the strategic situation. What do the Chinese have strategically to hit us with, either in Australia, New Zealand or here, and what have we got to protect against it. Specifically, what is the status and strength of our TMD defenses with the Aegis cruisers. How many do we have deployed and where?"

"Finally, Fred, you take us through the diplomatic impact. What nations would this be likely to adversely effect and what is the impact of lessening their resolve, or losing it. Speak directly to the Australian government's response as well.

"Let's proceed. George?"

For the next two hours the discussions continued. The tactical nuclear capability of the Chinese and Indians was discussed in detail and the likelihood of their having that capability in Australia. It was determined that while their capability was much less advanced and precise than America's, they had likely brought many weapons with them to Australia for use should they be attacked. It was considered unlikely that they would use them first in an offensive capacity. The range of their weapons were considered to be anywhere from 300 to 1500 kilometers with anywhere from a 1/4 to a 2 mile center of probability impact point. Such a capability would be very effective against cities or large stationary bases but not very effective against mobile military forces in the field. But, in the numbers they would likely employ, they would create a lot of severe, long term damage to Australia and once started, the allies would have to rain down many warheads of their own on the enemy forces to ultimately defeat them. It was considered likely that the price of stopping the enemy in Australia would be the destruction of all of the most habitable parts of Australia itself.

From a strategic standpoint, it was known that the Chinese had significantly improved their capabilities and their number of strategic warheads. They were thought to have upwards of one hundred warheads that could reach America, all of them in the far-western part of the nation. Hawaii and the west-coast cities would all be at risk. The United States had deployed five cruisers along the west coast with TMD capability. Similar to the two deployed near the nation's capitol, these warships had their magazines filled with a double load of the TMD enhanced standard missile. Twenty-four in each vertical launch cell making for 48 TMD missiles on each vessel. The range of these missiles was in excess of 150 miles to altitudes in excess of 200,000 ft. One such vessel was located each in San Diego, Los Angeles, San Francisco, Portland and Seattle. There was another vessel similarly armed in Hawaii and three were in the Australian area, one each with the U.S.S. Ronald Reagan and U.S.S. Kitty Hawk groups and one off the coast near Sydney. During this portion of the discussion, Vice President John Bowers made the following ominous statement.

"Mr. President, if the Chinese went all out and targeted all of their missiles at our west-coast cities, they would launch approximately twenty at each. In such an environment, we cannot guarantee that a single Aegis vessel equipped for TMD would get them all. We could lose anywhere from one to five cities in such an attack."

Before the Vice President could continue, the President responded just as ominously.

"For the which the Chinese would lose fifty of their major cities as we responded in an overwhelming fashion. The war would be over on that day...but we would be decades recovering.

"Which reminds me, John, where are we on the land-based variety of the TMD. We had talked earlier this year about appropriations for developing and deploying the basic launch cells and Aegis acquisition, control and guidance in land facilities. How has that proceeded?"

The Vice President took a moment to brief the President and the entire team on the project.

"We appropriated funds early this year for development and then deployment in the first ten major interior cities and our major military installations. The testing of the first operational site was completed two weeks ago and was an unqualified success. That was in Chicago where we now have three vertical launch cells deployed. We have also discreetly deployed six cells around the capitol to augment the two Aegis vessels on the Potomac. We will have similar operational deployments in and around San Diego, Minneapolis, Dallas, Atlanta, Denver and Los Angeles by the end of this year. After that we will deploy in Cincinnati, San Francisco, Phoenix, Seattle, St. Louis, Salt Lake City and Memphis. We will proceed from there with another twenty cities, the rest of the west coast metropolitan areas. All of that will be completed by the end of next year.

"Our major SAC and ICBM facilities will be protected this year, all of our other major strategic bases in the CONUS will be protected by the end of next year."

Clearly the President and everyone in the room was relieved to hear this news. After a moment or two of discussion regarding it, the meeting returned to its principal topic. John Bowers finished off his discussion with one of the most telling considerations. Nuclear weapons, even those that are not very accurate are very effective against massed, stationary targets. The Vice President, seconded by the Director of the CIA, felt very strongly that if the nuclear genie were let out of the bottle, that the GIR would use every nuclear weapon at their disposal. They would target, and they would likely convince India and China to also target the most massed concentration of allied military personnel and civilians in existence at the current time, Israel. At the same time, attacks on other headquarter facilities and bases overseas could be expected with similar attacks against the CONUS.

"Mr. President, depending on the number of missiles, I do not believe that our two TMD capable Aegis cruisers off the coast of Israel would be able to take them out. If they couldn't, the losses would be monumental, despite whatever retaliation we rained down on the enemy afterward."

After the Vice President sat down, Fred Reissinger led the discussion regarding international fallout. It was felt that many of the European nations currently wavering in their involvement, mainly France, would be pushed completely out of participation. It was also felt that Germany, Italy and perhaps Brazil would be weakened in their resolve and support of the United States as a result. Finally, it was believed that the government of Australia would rather go into exile with a later opportunity of liberating their country rather than see it destroyed by nuclear fire and fallout.

A candid conversation between President Weisskopf and his counterpart in Australia late that night proved this to be the exact case. After all was said and done, it was felt that the cost in terms of lives and expense of using the weapons first, would outweigh the cost of winning the war quickly. Even if it took much longer, and even if significant ground was lost in the mean time, a conventional victory was preferred.

The policy that the administration settled on was that the United States would retaliate in kind and overwhelmingly if attacked in such a fashion, but would not instigate initial use. This policy was made official and confidentially communicated to the heads of state of America's most trusted allies, which included the United Kingdom, Brazil, Germany, Australia and Canada. All of them breathed a collective sigh of relief.

It was a policy that America itself would violate within the year, but in a way that none of them could have foreseen at the time.

**October 14, 23:12 Local Time****Admiral's Quarters, U.S.S. Ronald Reagan****320 nm East of Sydney, Australia**

"Who is it," Admiral Ryan asked at the knock on his door.

"Admiral, sir, flash traffic from the NCA, marked your eyes only," was the reply.

The Admiral stepped out and took the flash priority message from the young officer. He retired with it back into his quarters where he opened it and quickly read its contents. After reading it a second time, he leaned back in his chair, sighed loudly and exhaled a long breath.

NCA DENIES REQUEST. OVERALL COSTS TOO HIGH. COORDINATE WITH YOUR CHAIN OF COMMAND. YOU ARE AUTHORIZED TO DEFEND YOUR FORCES AGAINST WMD ATTACK AND RESPOND IN KIND, OVERWHELMINGLY, IF SO ATTACKED.

HOLD OUT AS LONG AS POSSIBLE. INFLICT MAXIMUM CASUALTIES ON THE ENEMY. IMPLEMENT OPLAN NZ-AUTUMN AS MEASURE OF LAST RESORT.

SIGNED, WEISSKOPF.

"So. He honestly believes that we will ultimately stop these animals and throw them back conventionally...just not here. Well, I hope and pray he's right."

After a hasty conference with his leading commanders, informing them of the decision, the Admiral filed the communication in his secure, TOP SECRET cabinet and went to bed. It had been a long 48 hours. He would share the info with his entire staff in the morning and proceed according to the orders of his overall Commander in Chief. Right now he needed four hours of sleep.

**October 17, 16:35 CST****Main Joint Strike Fighter Production Facility****Parking Lot 3D, Fort Worth, Texas**

The whistle announcing the end of the shift had sounded almost five minutes ago and the number of people reaching their cars out in this part of the parking lot was beginning to increase rapidly. Jess watched them as they approached, scanning their faces, looking for the figure and shape of the one he knew so well. He was impatient.

Leaning against his rental car, his field of vision was directed past that old 1995, F-250 4X4 pickup truck that he knew so well towards the main manufacturing facility. He had parked his rental car in the next furthest row out from the plant and a few spaces down from where he had found the pickup. It gave him a position with a clear view of the workers as they approached from the plant. He had gained access into the parking lot through the gate with his military pass and a quick call to the guard's management, who had been told by their own superiors to expect him.

"Sometimes having friends in high places comes in handy," he thought as he continued to watch. "This was one of the more pleasant times and greasing these skids had been a pure joy."

While watching the people approach, and get into their vehicles, he reflected.

He had left Israel in the middle of September and been flown in a military C-17 transport directly to a NATO air base near Anzio, Italy. While there he had been asked to stick around a few days and brief visiting general officers and political figures on conditions in Israel. After that, he had been flown to the CONUS, landing at Andrews AFB near Washington, DC. where he had been assigned temporary duty to the Pentagon to assist and consult with the Army's planning department. That duty had lasted over two weeks and he had gotten more and more impatient as time passed, but had fulfilled his duty admirably just the same. The stakes were too high to consider anything different. His experiences while on the ground amongst the Israeli Defense Forces were invaluable to the Pentagon planners as they tried to anticipate and prepare for the major engagement that everyone knew was coming there. Ensuring that the United Kingdom troops and Israeli troops could hold up their end of the defense was one of the major concerns of the planners, in addition to ensuring that the U.S. Forces had more than enough supplies and materiel.

Jess wondered when the major fight would come. The massing of forces and the density of them there, on both sides, was simply phenomenal. It was also very troubling. When the fighting finally broke out in earnest, it was going to be a pure slaughter house all around. No way of avoiding it that he could see. Maneuver warfare in that environment would be difficult and the advantage would be with their enemies who had more room to do so. The victory would go to the side that could do it the best and slaughter the most while doing so.

But those thoughts were not foremost on his mind right now. He had anticipated getting home and being well into his sixty day leave at this point. All of that had been pushed back thirty days now by the assignments he had received between Israel and here. He was concerned that once the major engagement began, he would be immediately called back there because of his experience in the area, and that would cut short the time he had to spend with his wife, Cindy. Maximizing that time and their enjoyment of it was the foremost thought on his mind.

"But it could happen any day and my leave would be canceled," he thought as he pulled his collar up a little against the brisk north wind and hunkered down closer to the rental car. "I bet dollars to doughnuts they won't need a month to get me back over there when the time comes either."

It was a cold wind too. Here near the JSF assembly plant, which was in the same general vicinity as the Regional Joint Reserve Base that Jess was so familiar with from his long years of National Guard duty, the wind cut like a knife. It was blowing across what had once been a large prairie surrounded by low hills. That prairie was now filled with manufacturing facilities, an airfield and the military training facilities of the Joint Reserve Base. But the buildings were quite a distance away and out here in this parking lot, there was little to shield one from the wind...accept the cars themselves. While it was relatively rare for such a powerful cold front to come down through this part of Texas so early in the fall, it was not heard of.

"Temperature must be in the 40's," Jess thought. "Probably be down in the low 30's later."

As he thought this, his gaze over the hood of the car caught sight of a familiar form in the distance. Yes, there just coming out of the gate and entering the parking lot. He would recognize that figure and that walk anywhere. She was just saying goodbye to a group of other women who were now separating and making their way to their own vehicles.

Here she came and she had not seen him yet.

He pulled the dozen roses closer to him and sank down behind his rental car. At the rate she was approaching, he should be able to jump up on a ten count...no, he'd give it fifteen just to be sure.

"One, two, three, four, five, six, seven," he counted to himself. He could hear her footsteps now, getting closer. He tried to imagine her as she got close to the car and began getting the set of keys from her purse.

"Eight, nine, ten," he continued as the steps clearly sounded next to the pickup.

"She should be stopping now," he thought. But the footsteps kept coming!

"What the," he thought as he considered peering around the edge of the car. Could he have been wrong? No, couldn't be, he would recognize her anywhere he told himself

"Maybe she just has to put something in the back of the truck," he thought to himself as he continued counting. "Thirteen, fourteen ..."

Then her voice sounded, and much closer than he would have had expected.

"Jess Simmons, you come out from behind that car this instant before I hit you with my purse!"

**BUSTED!**

He stood up. There she was, as beautiful and as attractive to his tired eyes as ever, standing not eight feet from him on the other side of his rental car.

They stared at each other for a full three seconds. Then, he dropped his flowers and she let the purse slip from her shoulder to the ground as they both rushed around the car and into each other's arms. The flowers could wait, explanations could wait, talk could wait...everything on earth could wait as far as they were concerned. For the next five minutes they were completely lost to the world, oblivious to it as they simply held one another, basking in the warmth of the embrace and their joy there in the brisk north wind in Fort Worth, Texas.

## Chapter 23

*"Never, never, never ... never, never give up!"—Winston Churchill*

**October 25, 07:35 Local Time**

**Jungles of Central Columbia**

**400 miles Northwest of Bogota, Columbia**

The dripping was constant, in fact, it was not really a dripping at all, more like a steady showering here under the canopy. The heavier rain could be heard striking the canopy above in wind-swept torrents, providing a constant background roaring that eddied with the wind up above. But here under the canopy, there was very little wind, just the dense humidity, the constant roar, the very close quarters in the thick undergrowth and the constant, showering from the canopy above.

It wasn't that the Captain didn't have prior experience in jungle operations. To the contrary, he had operated in Southeast Asia on many occasions where the jungle was just as thick as this. He had also operated in African jungles where large carnivores could ruin an operation as surely as the enemy...and where those same animals could also eat you alive if you weren't careful. But somehow, those jungles were different. The humidity here seemed denser. The sounds of the jungle were somehow more muted to his keen ears. There was just a different *feeling* about the jungles here in South America. He had heard that it was worse right along the Amazon, where the Brazilians were fighting Argentine and Chinese infiltrators and insurgents.

"This Amazon basin is so vast," he thought. "A resourceful enemy could hide in there for years."

He wondered if he would be assigned to any operations over there in the future.

"Who knows? Can't be any worse than the deserts and mountains of Iraq. At least there is plenty of cover here and you don't feel so exposed, even if my Farsi and Arabic is better than my Spanish," he continued to himself. "But right now I have my hands full right here thank you very much."

*snap*

The Captain quickly turned his head and peered carefully out of the blind he had set up fifty feet from the trail and looked through the trees and foliage to a point sixty feet up the trail from his position. The other five members of his team did the same all along a circular portion of the trail where they had set up their ambush. All together he had eight members in the team, himself, three former U.S. Navy Seals, three members of the elite Colombian Special Forces and a local guide.

The point man had signaled to them six minutes ago that the enemy was approaching along the trail. A simple, almost inaudible *click* over the channel they were all monitoring had told them. About twenty seconds later a double *click* had informed them that the last man in the enemy group had passed and that their target was amongst them. Now those enemy personnel were approaching, entering the trap the Captain had set for them.

Each team member had carefully laid out a field of fire that overlapped those next to him but did not endanger other members on the other side of the semi-circle from them. Anyone fully entering the ambush would be subject to a deadly crossfire. On either end, to prevent anyone attempting to escape, deadly Claymore mines had been set up. Captain Riley Adams was in the center of the line, with the guide. One of his men was to the left, followed by one of the Colombians. To the right were the other two Colombians. In addition to the former SEAL who had warned them of the enemy group's approach, another one of Riley's team was further down the trail to warn of any approaching danger from that direction. The trail itself wound around a large rock outcropping here, with flat terrain off the trail and extremely dense undergrowth. There would be no place for the enemy to escape.

As the Captain contemplated this and went over the fields of fire in his mind, he caught sight of a slight movement on the trail. There, just coming around the bend, was the point man for the enemy. He was good, moving slowly and close to the earth, scanning the trail and to either side of it for the slightest thing out of place. He could see that this was a choke point and he held his hand up in a fist to tell those behind him to wait. The slight man moved forward a few steps, and then stepped off the trail and disappeared into the underbrush to Adam's right.

"He should pass right between the two Colombians," Riley thought. "Come on, come on...nothing to see here."

A few seconds later the enemy point man returned to the trail and continued on past the Captain. Several other members of the enemy patrol now began to appear in single file along the trail. Then, perhaps thirty feet past Adams, the point man again stopped and made the fist sign and disappeared again into the underbrush out of Riley's view, very close to the team member to Adam's left.

The Captain could see the other enemy soldiers more clearly now. Five or six men approximately fifteen feet apart and disappearing around the curve in the trail. He estimated that most of the enemy personnel were already in the trap, but not far enough for his liking. Just then, there was a slight rustling in the brush to his left, a muted *thunk* followed immediately by a relatively loud gasp.

Riley immediately looked up the trail. The next enemy in line had definitely heard something and now lifted his hand in a fist. While the others knelt down and took cover, he quickly moved forward, looked into the brush where his point man had left the trail. He saw something that startled him and was quickly turning around when ...

*Plunk, Plunk, Plunk*

The three-round burst from the silenced M-5 impacted the second enemy soldier, spun him around and flung him to the ground.

Captain Adams quickly clicked his transmitter three times to indicate that the team should open fire, brought his weapon to bear and began firing himself. As he did so, he cut down the second enemy soldier in line and then quickly exited the back of his firing position keeping several large trees between himself and the enemy. He and the guide then moved through the trees parallel to the trail firing at other figures on the trail in support of their other team members.

With the three clicks of the radio, the entire area had erupted in the muted sounds of the team's silenced weapons overshadowed by the loud *CRACKS* of the enemy's AK-74's, punctuated by several full auto bursts. From well up the trail Riley heard the sound of Chief Watson's FAL, cracking over and over again as rounds continued to fly through the undergrowth near him. Then there were several *BOOMS* as the Claymores were ignited. After that, there were only two or three more muted firings from the silenced M-5's. Then it was over.

"Well, Felipe, that was some kind of mess, huh?" Adams said as he turned back to his guide.

But the guide was not standing behind him anymore. Hurrying a few steps back through the foliage the Captain could see one of Felipe's booted legs sticking out of the brush. Rushing over to his side, he found Felipe lying on his side, a lot of blood pooling under his head. Adams reached down to Felipe's neck and checked for a pulse...there was none. Turning Felipe over he immediately found out why. An AK-74 round had punched a hole right through Felipe's glasses and entered his brain through his right eye. They'd have to be their own guides now.

Taking further stock of the situation, Adams found that one of his Colombian team members had been killed and another wounded. The wounded soldier was nicked fairly badly on the arm, but could walk fine. All eight of the enemy soldiers were dead, including the principle objective of the mission.

There, laid out on the trail, was Jose dePastoral, the head of security for the entire, now united, Colombian Drug Cartel that had allied itself with the Panamanians and the Chinese. Over the last year, this man and his followers had assisted, guided and conducted many operations against the Colombian government as it tried to resist the joint Chinese and Panamanian invasion of their country. Many peasants in outlying areas had been butchered. A number of mid-level government officials had been assassinated. On three occasions, battalion sized raids deep into Colombia had been conducted. This man had been the mastermind of it all, and he was now very well terminated. Riley had been specifically brought in and assigned the task of tracking this man down and eliminating him. It had taken months to accomplish that task.

After a number of pictures were taken and all the documents, weapons and anything else of value was stripped from the enemy, Riley Adams allowed his two remaining Colombians to do the honors to Jose while the Americans buried the others deeply, well off the trail. When the Americans returned, they saw the body of Jose, against a tree next to the trail. The body had been driven into that tree with six bayonets retrieved from the enemy dead. It was placed in such a position that anyone passing down the trail would have to notice it and the fact that it had no head.

On a wooden pike that the Colombians had fashioned and planted in the ground directly in the middle of the trail and in front of the body, the eyes in Jose dePastoral's decapitated head gazed sightlessly back up the trail. A small wooden sign that had been brought along for this very purpose was affixed to the wooden staff below Jose's head. In Spanish, it simply said.

*Jose dePastoral.*

*Thus ends an enemy to the Columbian people and a collaborator  
and supporter of Communists and Criminals. All who pass here take note.*

**October 25, 21:02 Local Time**

**Jungles of Central Columbia**

**385 miles Northwest of Bogota, Columbia**

They had put fifteen miles between themselves and the site of the ambush. After going almost a mile down the trail in the opposite direction from which the enemy had come, the team had taken off across country. They had climbed over one small ridge, down into the next drainage, and then up the next ridge, which they followed for three miles. Now, on the far side of that ridge, in a sheltered outcropping of rock, the team set up camp for the night. If things went well, they would be extracted late tomorrow afternoon by a specially configured AV-22, outfitted for CIA operations.

As camp was being set up and security established for the night, Captain Adams took out his ruggedized, special operations palm computer that had been built in American specifically for operations like this one. It was a newer piece of equipment, deployed within the last six months and

built specifically to allow for quick, almost impossible to trace communications in a world that did not have ready access to satellite communications.

Riley entered the message he intended to transmit, reporting on the successful operation and their plans for extraction. Once entered, that message was encrypted and compressed. He then attached the device to a 10 meter short wave radio carried by one of his team members. The device downloaded the message into random access memory (RAM) on the radio and then transmitted the compressed file in less than one half second on the appropriate frequency before shutting off.

The team then waited for one half an hour and turned the radio back on. Within three minutes, a response had been received and the radio was again switched off.

Riley Adams then downloaded the message onto his palm device and processed it through the decompression and decryption algorithms. When the message was available, the Captain read it... and then read it again. Then, quickly turning to the men, he issued his commands.

"Alright guys, mount up," he said to the five remaining team members. "We've just been congratulated and as a reward we've been ordered to make for an alternate extraction point tonight."

Only two of the team members had actually been looking at their team leader when he started talking, but all of them had been listening. When he commanded them to "mount up" and then spoke of an alternate extraction point tonight, they all turned their heads in his direction and listened intently. Their weariness was evident, as was their dislike for the orders. But the Captain knew they would professionally and without fail follow orders ... and that is exactly what they did.

"We're going to be pulled out of the alternate location at 2 AM and we have almost ten miles of tough humping to get there.

"Let's go!"

The six men quickly broke camp and prepared to move. As they did, Captain Adams reviewed in his mind the words of the message he had just received.

**COPIED YOUR LAST. NEG ON TOMORROW PM EXTRACTION. PROCEED THIS PM TO THE FOLLOWING COORDINATES FOR A 0200 ALTERNATE EXTRACTION. URGENT NEW OPERATIONAL ORDERS. MAKE ALL DUE HASTE. COORDINATES FOLLOW.**

**November 2, 21:40 PDT**

### **Personal Study**

#### **Pacific Heights Subdivision, Palo Alto, California**

Sandra was extremely excited. Her efforts with Dr. Trevor had paid off over the last six weeks. She had finally convinced him to share with her the methods, procedures and complexities of his use of atomic force microscopies and enhanced mass spectrometric analysis. She could tell he had misgivings, but she also sensed that he was an honest man who was willing to give any other scientist the benefit of the doubt, even if he disagreed with some of their own personal views. If he thought the effort was focused on the advancement of the sciences and the benefit of mankind, and if he felt the methods were legal and moral, he would share.

After making all of this clear, after satisfying himself that it was the case, and after working out the details of their collaborative agreement, he had forwarded the data and the procedures to her. Now, after more weeks of intensive study and programming she had successfully developed the initial algorithms to emulate those techniques in a virtual model similar to her earlier efforts with older, slower and less resolute technology. The net result was that she was finally prepared to apply the new computational, processing and graphical power to the task at hand.

In addition to the latest methodologies and procedures, Dr. Trevor had also supplied her with the initial data samples that he had used to conduct the research that had ultimately led to the discovery of the Human Reasoning Structures, which she had examined and studied thoroughly. She had the data representing the tissue specimens and she had the outcome of his initial efforts with the atomic microscopies and enhanced spectrum analysis. She also had her new algorithms compiled, installed and ready to apply to the initial data. Hopefully, the algorithms would run and produce a viable result that she could then compare to the physical data resulting from Dr. Trevors initial studies. By comparing the outcome of her virtual analysis with the actual physical outcome she would be able to gauge precisely whether her modeling techniques had been successful, and she would be able to iterate the process in order to fine-tune the algorithms to maximize her success.

"Now, we'll just feed the data into the algorithms and see what they produce," she thought as she used the touch screen menu she had created and touched the "LOAD DATA" option.

She made her way through the various menu selections for the tissue type, the magnitude and type of analysis and the specific algorithms to be employed. Ultimately there would be several options for each selection based on the analysis selected. Tonight, with this initial test, there was only one algorithm and one level of analysis. Once she had made the appropriate selections and had actually loaded the test data into memory, she was finally ready to proceed.

"Nothing left now but to process," she said to herself as she placed her finger on the screen and pressed the "PROCESS" button.

She was using one of the new 25 GHz machines loaded with Thirty-two gigabytes of Random Access Memory (RAM) and 2 Gb of graphics memory for the 34 inch flat panel color display ... a real screamer. Nonetheless, given the amount of data being processed the machine labored through her algorithms for thirty seconds. At the end of that time a flashing PROCESSING COMPLETE message was displayed on the screen and a new menu option became active, DISPLAY RESULTS.

Saundra touched the DISPLAY RESULTS button and then picked the GRAPHICAL option so she could see the result on her flat panel display as they would appear under a microscope image generator. This took several more seconds to process graphically and then ...

She couldn't recognize a thing.

Something had gone wrong. Where had she made the mistake? This display was just so much gibberish compared to the results Dr. Trevor had obtained from his physical analysis.

Then it hit her. The resolution was all wrong. Working quickly she checked the resolution of the data provided by Dr. Trevor and zoomed the screen image to the proper setting to match.

And there it was. In fact, due to enhancements she had made in the algorithms based on the later research that Dr. Trevor had done, as well as the findings of the National Academy of Sciences ... her image was much more accurate and revealing than those initial findings Trevor had produced.

"My goodness ... this is very, very nice. This is absolutely exciting!" she muttered out loud as she panned around the image, comparing it to the one derived from the actual physical studies.

"I'll have to add a resolution setting option into the setup menu," she said to herself,

"I just can't believe I didn't provide for that from the start. I guess I was in such a hurry to get going that I just forgot and let it default to the highest resolution. Well, now that I know, it won't happen again," she continued.

"Now for the nitty-gritty of comparing the empirical data."

For the next three hours Saundra worked comparing data and fine tuning her set up and modeling algorithms. Then, well after midnight, she composed an email to Dr. Trevor and added and encrypted attachment that contained the results of her last iteration with the algorithms. She had no doubts that Dr. Trevor would be extremely impressed.

"He'll probably want some kind of live demo, either online or in person," she thought.

"But that's okay, we can give that to him any time now."

She was sure that once Trevor had verified the accuracy and reality of what she had produced with this experiment and demonstration that he would move rapidly within his own circles to establish the funding to completely productize the results for his own area of research. By agreement, that funding would include a percentage that would in turn pay for Saundra's further development of the algorithms and modeling into other fields of study, particularly her own.

"Now that I have successfully proven the concept, I am absolutely confident that it is just a matter of time before we experience the breakthroughs in fetal tissue research we have been looking for all of these years," she thought to herself as she finished composing the email to Dr. Trevor.

... and she was right, there would be a breakthrough ... but not the variety she expected.

**November 8, 14:40 EDT**  
**Director's Conference Room**  
**FBI Headquarters, Washington, DC**

"Okay, let's have a final review of the principle timeline and schedule for Operation Alvarez, both Plans A and B. I want to brief the President and both of the security teams this evening. This is a major counter-terrorist operation and is going to have significant impact on the overall war effort.

"Gerald, start with the domestic operations and proceed to the planned operations in Mexico, particularly on the status of the Mexican government's disposition as it pertains to the raids and our current surveillance on the targets. Then review the physical plans for the raids and the financial components in each area. I'll need a write up on your review after the meeting."

The FBI Director, Doyle Maxwell, sat down while the Senior Agent in Charge of the operation, Gerald Ludlow, proceeded. Operation Alvarez had been long in planning and represented a tremendous opportunity for Federal Law Enforcement, operating in conjunction with the Office of Homeland Security and with NORCOM of the Defense Department, to completely shut down and destroy one of the largest terror networks operating within the United States. It was a network that had been directly responsible for the deaths of thousands of Americans and the injury of thousands more...not to mention property damage valued in the billions...over the last two and one-half years.

FTA Trucking had been recognized as one of the darlings of the North American Free Trade Agreement (NAFTA) in the 1990's. The company was headquartered in Mexico City, but its North American Operations were headquartered in Dallas, Texas. The company had grown to a fleet of hundreds of new, big rig trucks and had employed thousands. Delivering materiel up and down the Interstate 35 corridor, which had been dubbed the NAFTA Highway, the company had been an overnight success because its new trucks met American safety guidelines (without the licensing fees) and because it boasted a driver training and safety program second to none. It had quickly expanded its operations to the Interstate 25, Interstate 15 and Interstate 5 corridors in New Mexico, Colorado, Utah, and California respectively.

The President of the parent company, Hector Ortiz, had wooed Congressmen and State Governors in the years leading up to and following the passage of NAFTA by the U.S. Congress. His political influence was well known and he was a well-spoken and very dynamic individual. His success had spurred others to look more favorably on NAFTA at a time when many Americans, particularly in the agricultural and trucking industry, were castigating the legislation for what they pointed out were its unfair provisions for foreign trucking and foreign agriculture. In effect they said, it provided legitimacy to and fostered the low wage practices of foreign governments at the expense of their own people and at the expense of American jobs. Those concerns had fallen on deaf ears at a time when American politicians and CEO's were anxious to defend the legislation because of the better earnings it would bring their multi-national corporations, the catering it provided to special interest groups (not to mention the votes those groups might provide) and because many of them felt that the global economy called for and demanded such practices.

All of those issues aside, as it turned out, Hector Ortiz was also a master terrorist who had ties to international terrorism and communism. Behind his global free market façade was a devoted Marxist and proponent for the Aztlan movement to carve out a new Spanish-speaking nation from portions of northern Mexico and the southwestern United States. In this regard, FTA Trucking was not only profitable or him personally, but also fit exactly into what he had planned politically and ideologically.

Each year Ortiz funneled many hundreds of terrorists and tons of weapons and explosives into the United States for use during what he viewed as the inevitable conflict. His clandestine ties to foreign governments led to the development of numerous operational plans long years in advance of the outbreak of hostilities. He had installed one of his foremost allies and proponents, Miguel Santos, as the President of the U.S. Operations for FTA and they had prepared carefully for events in conjunction with the eventual conflict they hoped to be a part of. With the Chinese attack against America, that opportunity had come. The FBI's latest data indicated that teams recruited, financed and supported by FTA Trucking had been involved with terrorist attacks against American infrastructure and civilians from the outset of hostilities, continuing right up to the current time.

Only the quick thinking and actions of ranchers and farmers in northern New Mexico had allowed for the ultimate break in the case. During and after the setting of the "super fire" in southern Colorado, ranchers had seen and identified the team leader of the terrorist cell that had set that blaze. Later, when that team leader had come into the small town of Lumberton, New Mexico, to buy supplies for the ranch where he and his team had taken refuge as "migrant" workers, ranchers in the town had recognized him from TV reports and had captured and held him for authorities. A raid on the ranch had captured or killed the rest of that team. In this way, Manuel Mendoza, one of the most experienced and dangerous team leaders in Miguel's and Hector's employ had been captured. Over the ensuing months his long interrogation had paid off and resulted in the identification of numerous terror cells being run by FTA, including the direct involvement of the top man, Hector Ortiz.

Miguel Santos, had long since escaped from the United States and fled to a hacienda he owned in southern Mexico. CIA and special forces operative had gathered enough intelligence on his operations there to show that he was continuing to train and support ongoing terror activities in the United States. Hector Ortiz was apparently unaware of the intelligence the American authorities now had tying him directly to Manuel's and Miguel's activities. He was secure in his continued position at the helm of FTA and felt he had put the stigma of his U.S. Operation's President having been associated with terrorism behind him, all the while continuing those very terrorist operations himself.

Now, the FBI, Homeland Security, NORCOMM and the President of the United States himself, were all anxiously waiting for Hector to make his next scheduled trip down to Dallas to review his U.S. operations. That trip was scheduled for November 12<sup>th</sup> and Alvarez called for him to be taken into custody on American soil as he sat in conference with his U.S. executive staff. Operation Alvarez would also involve a special forces raid into Mexico to take Miguel Santos into custody in conjunction with several other raids within the borders of the United States to capture or destroy other known cells. All of these raids would occur the night of November 12<sup>th</sup> as Hector himself was taken into custody.

The problem with the plan from the outset had been concern over Mexican approval and assistance. Several within the task force had advocated simply doing the job and not being concerned over Mexican approval. The concern for them was that the Mexican government was corrupt and possibly in league with many of the terrorists themselves. Although Director Maxwell understood and sympathized with this notion at a practical and tactical level, he also understood the political reality. The United States could not afford to have other allies react adversely to any blatant violation of sovereignty. Despite Mexico's potential corruption, the camp favoring gaining approval, pointed out that the nation was an effective buffer against the hundreds of thousands of Chinese troops now moving north into Costa Rica in Central America. America would need the support of every nation in the area to defeat and push back the Chinese and retake the Panama Canal. But the Director knew this was true of Mexico only in so far that the corruption did not extend to the point of collusion with China. There were many in the administration who had grave concerns over just that issue.

The President himself had ultimately made the decision. Weeks ago he determined that he would personally speak with Presidente Conejo of Mexico and ask his approval for operations directed at a significant terror cell within Mexico's borders. The Mexican President had tentatively agreed with President Weisskopf's request, but wanted more information ... more specifics. When the President had indicated that such intelligence would not be possible until just hours before the operation, the Mexican President had voiced his displeasure. When President Weisskopf had held firm, Conejo had indicated that his Internal Security Minister, Minister Madera, would work out the details with the designated American officials. Doyle Maxwell had been assigned the task of coordination with the Mexican authorities and was now waiting for Agent Gerald Ludlow to inform the entire team of the final results of that effort. As the Director finished his own personal review of the situation in his mind, Ludlow was just reviewing the most recent, and what would turn out to be the last, communication with Minister Madera in that regard.

"As to approval and coordination with Mexican authorities, I am sorry to have to report that there has been a complete breakdown in that regard. Minister Madera informed me as of two hours ago that the Mexican government could not possibly approve of any American penetration of its borders unless the operation was planned with Mexican security forces at least seventy-two hours prior to the raid, with Mexican forces actively involved in the assault and with full disclosure of targets and evidence to Mexican local and federal officials in advance of that final planning. I am afraid we will have to ask the President to approve Plan B as regards the assault itself."

**November 8, 21:30 EDT**

**Situation Room, The White House**

**Washington, DC**

"Mr. President, there can be no doubt. Two minutes after completing his call to Agent Ludlow, Madera walked over to Conejo's office and was granted immediate access. That meeting lasted seventeen minutes.

"Madera then left that meeting, returned to his office and placed the call to Santos directly, the transcript of which you have before you. Even though the call was placed on a highly encrypted cellular phone which we could not directly intercept, one of our operatives in the Executive Offices of the Mexican government was able to tape Madera's side of the conversation and our special forces people operating outside of the hacienda in southern Mexico caught Santos' side of the conversation as he spoke on the putting green outside of his home. We have both sides of the conversation.

"Madera made six other calls from within his office on the same phone. He was warning what we believe to be several drug and terror cells-and in most cases they overlap-of a significant "gringo" operation directed at entities unknown and that they should all consider either beefing up their security or moving their operations as soon as possible.

“With respect to Santos, it is clear that he is not sure if he is the target or not. But he is very likely to take some action in the event he is a target and in the event that the timetable is eminent. We have to believe that Ortiz has been similarly warned, though we have no record of it.”

President Weisskopf considered the words of his CIA Director as he watched the other members of the team in the room with him. He felt a growing anger towards those in power south of the American border. The Director of the FBI, his Homeland Security Director, the Commander of NORCOMM, the Vice President of the United States, the National Security Advisor, the Secretary of Defense, the Secretary of State and the Chairman of the Joint Chiefs were all present. He could tell from their posture and from the looks on their faces that each of them were contemplating this revelation and the national security issues it raised along the same lines as he was

Turning to his NSA, the President asked,

“Well, Bill, do we have any indication that Santos is moving?”

Bill Hendrickson had checked the latest real time images coming in from the Global Inspector UAV loitering high above Santos’ hacienda before coming to the meeting. Built of radar absorbing materiel and designed to reflect any radar waves away from the radar’s receiver, the newest Global Inspector UAV aircraft could remain on station for days, even weeks at a time without detection over a nation with the capabilities of Mexico. The People’s Republic was turning out to be a different matter of late, but Mexico simply had no way of detecting the aircraft, short of Mexican defense aircraft happening upon it. That was not going to happen because the Mexican government would give no overt indication of support to the likes of Santos.

“Sir, as of twenty hundred hours there was no indication of any move. Santos, his principle lieutenants and his family are all at the compound and we have seen no indication of planning, either from overhead, or as I understand it from Director Ballard, from our assets on the ground.

“Robert, jump in here and correct me if I am wrong.”

The Director of the Central Intelligence Agency quickly answered.

“No, Bill, you are completely correct. No indication from the ground that Santos is planning a move. Of course, we might not get much indication, he may just hop in a vehicle and drive away.”

As everyone reflected on that very real possibility, Bill Hendrickson continued.

“This afternoon we did see that they brought in more personnel and they are mounting some fairly sophisticated man portable surface to air missiles along with heavy caliber weapons. At any one time we are estimating now that Santos has what amounts to a full Company of irregular forces within his compound and two or three platoon strength patrols outside of the perimeter at all times.”

The President took all of this in and then turned to FBI Director, Doyle Maxwell.

“Well, Doyle, as the individual in charge of the overall operation, what are your recommendations considering everything we have heard?”

Doyle had already thought through all of this. He and Special Agent Ludlow and the entire planning team had discussed it in depth and, short of surprising revelations in this meeting, had already decided upon their recommendation. He spoke without hesitation.

“Mr. President, I recommend we initiate Plan B and proceed with Operation Alvarez. We simply MUST put these terrorists and enemies out of business. There is no telling what further intelligence we may acquire when we do, and we must make an example of these individuals who have caused the death and destruction to so many of our citizens and their property. While I would like the support and coordination of the Mexican officials and forces, I know we can accomplish all of our aims, including those within Mexico without it.”

The President was satisfied with Director Maxwell’s response. It was exactly the way he felt.

“Alright then, you have my NCA approval. Initiate Plan B of Alvarez as it has been developed. Fred, I would like to meet with you afterwards to develop a very direct and to the point communiqué to President Conejo and his government. I would like that communiqué delivered to them just as the operation starts, while our people are in the process of making their assaults, arrests and confiscations.

“I want it to be clear to Conejo, and by extension and by copy, to any other governments on the sidelines in this conflict or contemplating any type of support for our enemies. In the words of the former President Bush ... *you are either with us, or you are with the terrorists!*

“Make it clear to President Conejo, that while we regret and do not relish this violation of his space, that we will do so now ... and do so again ... in order to protect ourselves from our enemies finding any sanctuary or harbor any place in his nation. Our communiqué must make that last part very plain to him ... *any place in his nation ... any place!*

“Indicate that in this regard we want to give him one last chance to grant us permission while we are doing it ... and that we expect Minister Madera to be apprehended, held and turned over to our forces for trial. Share with him the transcript of this phone conversation as evidence and our concerns about such corruption and leanings reaching to the highest levels of President Conejo's government.”

**November 12, 22:15 CDT**  
**Executive Conference Room, FTA Trucking**  
**Dallas, TX**

Hector listened closely as the meeting proceeded. Operations were going well, both commercially and the more clandestine variety. Many of the directors and managers present were not involved in the latter and their reports were solely what they purported to be, reviews of FTA trucking operations along the various Interstate Highway corridors in the United States.

But several of the higher level directors and the vice presidents of U.S. operations, gave their reports in an elaborate code, the same type of code that had served Hector and Miguel so well over the years. Those reports had a double meaning of not only operational status for the commercial business, but also the operational status of the next wave of attacks and disruptions by operatives FTA had placed all across the central and western United States.

"Times are difficult," he thought.

"None of the operations go cleanly any more ... few of the participants escape to fight another day. The Americans under Weisskopf have certainly not responded as many we hoped."

Hector was referring specifically to the Homeland Security Department and their way it had been altered under Weisskopf. It had gone from a behemoth department encompassing many of America's Federal Law enforcement agencies and attempting to force that federal bureaucracy down to the local level in an effort to "secure" America, to a Department that coordinated and assisted the rapidly growing efforts of those localities themselves. President Weisskopf's "Home Guard" initiatives in conjunction with the Firearms Restoration Act had galvanized the American citizenry themselves to provide their own security. This had been the single most effective measure the American's had taken in fighting Hector's operations, and other like it...and Hector knew it all too well. Manuel was in custody, maybe dead. Miguel was in hiding in southern Mexico.

"Simply put, too many of them are armed," Hector thought as the meeting continued.

"And now they are organized to use those arms. How do you fight and infiltrate when there are more than eighty million armed and prepared citizens in your way?"

Despite this, Hector viewed his efforts as a success. Even though the Americans were stepping up their efforts and were tightening their security and improving their interdiction and investigations, they had been hurt. For the last two and a half years America's ability to mobilize had been hampered and retarded by his own efforts, by the efforts of the many Islamic fundamentalists within America willing to practice Jihad and by the large number of Chinese operatives who had infiltrated the United States. The magnitude and effectiveness of this last group was even surprising Hector. It was turning out that the Chinese had a network within America that was more effective and more numerous than his own and the Islamics combined.

"I believe it will be enough. With the Chinese forces making such substantial gains in the Pacific and Australia assisted by the Indians, with the Chinese gains in Central and South America, and with the Islamic gains in the Mid East, Africa and even Europe ... I don't think the Americans will be able to overcome their losses.

"If things go as hoped, the general military fighting should be here in America soon, and so it is time for me to gracefully step back and let that occur."

Hector had no allusions. He knew that in addition to the potential for large military operations coming to America, there was the more eminent threat of the American security and law enforcement organizations catching up to him. Manuel's capture and detention, Miguel having to flee...all of that represented a series of events leading ever closer to Hector himself. He had been warned by his own sources and confidants in the Mexican government several days ago, before that fool Madera had contacted him, that a U.S. intelligence operation was imminent. The threat was vague, but Hector was not willing to take too many chances.

In the end, he had decided that it was more risky to break his announced schedule and not appear at this meeting than it would be to go ahead and keep the appointment. His arrival at DFW airport had been nervous, but uneventful as nothing untoward had occurred. He had breathed much easier as he had traveled here to the intersection of I-635 and Central Expressway for the meeting. Apparently, the alert was going to prove to be another false alarm. Besides, he had important news to announce that would facilitate a graceful and fully legal exit for himself and his trusted lieutenants.

FTA Trucking was being sold. A group of wholly uninvolved investors representing a number of independent American trucking firms had formed an investment consortium and had tendered an offer. After significant confidential negotiating, Hector and his team in Mexico City had secured a profitable deal and had approved it. He would announce it to the executives here at the end of the meeting tonight, and to the press tomorrow. Then, on the 15<sup>th</sup> he would travel back to Mexico City and plan for the future he felt was within his grasp. His mentors, in the Caribbean, in South America, and in Asia, had assured him that Aztlán would be one of the results of their victory, and that he, Hector Ortiz, would figure heavily into the creation and governing of that new nation.

But his mentors were wrong.

As Hector contemplated these satisfying and self-congratulatory thoughts, a small red light on the executive console in front of him began to flash. Almost simultaneously, a soft but insistent vibration from his personal, encrypted security cell phone began demanding his attention.

Hector's blood ran cold. There was only one reason for that light to start flashing and the vibrations from his cell phone only confirmed it. Hector glanced around the room as he rose and excused himself to enter the executive washroom off of the conference room. As he did so, and as the meeting continued behind him, he noticed the Vice President of Operations excusing himself from across the room and walking towards the washroom himself.

Hector could not, he would not wait. He had not survived this long by being lax, or charitable. As he entered the washroom he quickly activated a concealed, triple dead-bolt lock. From a hidden compartment he withdrew a Glock 9mm pistol and then reached under the counter, slid a covering off a concealed indentation, and then flipped the switch it revealed. As the doorknob to the washroom turned from the outside, first tentatively and then more and more urgently ... even frantically, Hector stepped into the concealed corridor that had been revealed with the flip of the switch and allowed the door that revealed it to close behind him..

Ten seconds after Hector stepped into the hidden corridor, the double doors to the executive conference room to FTA trucking flew open from the outside and fifteen heavily armed members of a Joint Terrorism Task Force burst into the room and began detaining everyone there.

Hector never heard the commotion back in the conference room. He had already climbed down two ladders and was approaching a landing that would take him into the fire exit corridor two floors below the offices he had just exited. As he prepared to enter the security code into the digital pad attached to the hidden door, Hector found he no longer had control of his fingers ... or his arms ... or his legs. Although completely conscience, Hector dropped the Glock and fell to the steel grated floor of the landing, twisting as he did so until his face was directed back in the direction from which he had come. As he watched in an uncomfortably detached way, two sets of boots approached from around the corner of the landing and two sets of strong hands lifted him up.

Once standing ... or more correctly, once being held in a standing position, what he saw shocked him. Four men, dressed in full chemical protective garb approached him while two other men, similarly garbed, held him up. One of the four had picked up and was placing a small cylinder into a protective sleeve of some type. Another of the four approached and spoke directly to him.

"Hector Ortiz, I am Special Agent Ludlow of the FBI and the Region VI Joint Terrorism Task Force. I know you can hear and understand me.

"You are experiencing the effects of a non-lethal nerve agent that has rendered you incapacitated. I am placing you under arrest for murder and terrorist acts against the United States of America, and for conspiracy to commit terrorist acts and murder against the government and people of the United States of America, among a number of other federal and various local charges."

With that, the agent himself entered the code on the digital pad and the door opened to a stairwell full of more armed men who carried Hector back into the normal areas of the building. He was taken to an elevator and down to the basement of the building where a waiting unmarked FBI SUV would transport him to Federal detention and interrogation.

### **November 12, that same time**

#### **Main Entry Hall**

#### **Santos Hacienda, Southern Mexico**

Sporadic firing was still coming from the fields and forests outside of the compound, but here inside the compound, and particularly inside of the main building, all was now quiet.

Riley Adams led the assault on the compound and was surprised everything had gone so well.

"This is one of those few occasions where everything went according to plan, even after the firing started," he thought to himself.

Sniper teams had taken out the surface to air missile teams that were identified in real time by the Global Inspector UAV overhead. They did this as the specially configured SPECOPS aircraft approached up the valley from the east. Those first two aircraft, specially outfitted AC-130H Specter aircraft escorted by F-15C Eagles far overhead, carried two specially configured electronic counter measure pods and two large gas canister pods, one of each under each wing. One of the counter measure pods was a standard jamming pod that jammed every available radio and communication frequency that could possibly be used by the security forces at the hacienda. The other pod was a Electro-Magnetic Pulse (EMP) generator that would fry every unhardened electronic device in its path for a half mile wide. The two planes together generated a path of electronic destruction a mile wide as they approached the hacienda and everything from radios to radar to motor vehicles to electric shavers had their electronics fried and simply stopped working as the aircraft approached and then flew overhead. As they passed over, they released a non-lethal nerve gas from their canisters. It was odorless and tasteless, just like the gas used to capture Hector Ortiz. It reacted with the human nervous system upon contact with any exposed skin. Earlier less developed forms had proven

dangerous to certain age and health demographic groups, as the Russians had found out when they used their own such an agent to break up a Chechen Terror attack in Moscow in the fall of 2002.

"The stuff we use today is sure a lot more effective," thought Captain Riley as he contemplated its effects here this evening.

Because the gas had been delivered by air in a "crop dusting" fashion, it had dispersed unevenly and not all of Miguel's men had been incapacitated, particularly those indoors at the time. But it had played havoc on the large numbers of men patrolling in and near to the hacienda and had made the Special Forces insertion much easier and not nearly so "hot" as it otherwise could have been.

Two hundred Special Forces troops had come in behind the AC-130H gun ships that were by then orbiting in protective mode over the battle area. The troops arrived in eight AV-22 transport aircraft and landed to the east, south and north of the facility. Some sporadic gunfire greeted them, but it was quickly quelled by the AC-130 gunships and by sniper teams pre-positioned in the hills around the facility. The force had quickly rolled over the hacienda perimeter with little resistance.

A brief and fierce firefight had erupted as Miguel's forces contested the American's assault on the main building and its adjoining recreation room which was doubling as the communications center. Those ten minutes of heavy fighting had resulted in two American deaths this night, and most of the six casualties. By comparison, the enemy had suffered thirty-seven dead and over forty wounded, and over one hundred others who were incapacitated taken into custody. Some sporadic fighting was still going on in the surrounding hills and jungles as stragglers tried to escape.

As Captain Riley contemplated all of this, one of his Lieutenants and a senior NCO entered the room with several people in chains and with bags over their heads.

"What have you got for me Lieutenant?" Adams asked as they approached and the NCO instructed the captives to lie down on the floor.

The Lieutenant, once he was sure the captives were completely secure, turned to his Riley.

"Sir, I believe we have the Avocado himself here along with three of his security team.

"Sergeant Hollister is holding Mrs. Avocado and her three kids in a back room for extraction and delivery as planned. Originally there were eight members of the security team...but they resisted."

Satisfied that the Lieutenant had made a positive ID before reporting, Riley walked over to where the captives were lying. Once the Avocado was pointed out to him, Adams approached and knelt down next to him and spoke into his ear.

"Miguel, I know you understand everything I am saying to you. I am the officer in charge of the American forces who have taken you prisoner. You and the surviving members of your forces are going to be extradited back to the United States where you will stand trial for murder, terrorist acts against the United States and for conspiracy to commit murder and terrorist acts against the people and government of the United States.

"Your wife and children will be interrogated and held pending the outcome of tribunals concerning their disposition. It is fairly safe to say that you will never see any of them again in this life... and, unless my surmise is wrong, it is unlikely that you will be seeing them afterward either.

"Lieutenant, get these vermin out of here."

**November 29, 4:30 PM**

**Steps of the Capitol Building**

**Washington, DC**

The media was here in all its splendor. In fact, there was David Krenshaw of WNN preparing to start his own coverage.

"Amazing that he would be out here personally," thought Curt.

"That guy never misses an opportunity to be in front of a camera for a major event."

Of course, all of this was carefully choreographed. David Krenshaw, as a powerful member of the Council of International Relations, was very supportive of this effort. Off the record, there had already been several very positive discussions and Curt felt he could count on WNN coverage in the best possible light. As he considered this, Curt Johnson tried to imagine the road ahead. Here he was, with an extremely liberal Senator from California, about to announce their bid for the Presidency of the United States. It would be an effort to accomplish something that had never been done before, unseating a sitting U.S. President in the middle of an ongoing war.

"... and a very popular President at that," thought Johnson as he continued thinking of the course that lay before him.

Things had moved quickly since that meeting in Dallas. Warren Woodson had effectively lobbied the DNC and other major contributors to the Democratic party. They all viewed Johnson as an outsider, which he was, and a moderate at best ... but they all knew that nothing else would have a chance of challenging President Weisskopf and his current popularity. The fact that Susan Crater would be on the ticket to balance it and hold the base was what pushed the idea over the top.

Most of the major party leadership simply went along because it was the least politically dangerous. Very few of them felt that the ticket had a snow balls chance of seriously challenging the President and they viewed this as a way of advancing a place holder for the party until more favorable

conditions presented themselves. At that time they could advance the real party agenda with their major candidates who would have no political baggage left over from this failed campaign.

Curt knew all of this, and he was fine with it. From his perspective, this was not about either political party. He did not view himself as a politician, but he had some strong beliefs about what this President was establishing as a result of the war time conditions. Certainly his feelings about the 2<sup>nd</sup> amendment and the roll back of what he viewed as “sensible” controls on public ownership and use of firearms was at the forefront of that. But he knew that was not all.

In fact, Curt Johnson also had serious concerns and disagreement on immigration and detention policies that were ongoing in the nation right now. He felt that there must certainly be a way to control their borders without the gross infringement on what he deemed as the civil rights of the these “immigrants” desiring entry into the country. He felt that the President and his administration were appealing to, and taking advantage of, the fears and anxieties that the war was necessarily producing to advance a very bigoted policy that would ultimately lead to long term stagnation ... and he was not afraid to say so on this topic, or any of the other several major issues he intended to raise ... and if his brief and informal discussions with David Krenshaw were any indication, as evidenced by his presence here, Curt felt he was attracting some powerful allies to his cause.

Curt Johnson, despite his tendencies towards lesser government and moderate positions, firmly believed that the immigration issue was an important one to tens of millions of citizens of recent foreign decent, and he was perfectly prepared to allow the party handlers to make as much political hay out of that as possible. He knew the effort would be hard, he knew that there was likely very little chance that he would succeed, but he felt strongly that he had to make the effort. The embarrassment and the stigma surrounding his resignation and discharge from the Weisskopf administration only further fueled his commitment to get these issues squarely in the public eye in order to foster healthy debate regarding them and hopefully, to have them propel him into the Presidency.

Very soon now, the head of the DNC would stand up to the podium and announce the candidacy of Curt Johnson and Susan Crater for the Presidency of the United States and the party leadership’s full support of that campaign. The plan that they had developed over the last weeks called for little Democratic opposition in the primaries in order to best prepare for the national election next November. Curt’s thoughts in this regard were interrupted as Susan and her husband arrived and took their seats next to Curt and his wife.

Curt stood and warmly shook both of their hands, a move that cameramen from four networks caught from various angles and that would lead into the news stories that would on the evening news.

“Glad you could make it,” Curt joked, “Are you ready for the games to begin?”

Susan Crater contemplated for a moment and then replied as she sat down.

“About as ready as one can be Curt.

“We have a long road in front of us, but I believe it will end up being an historic one.”

... and historic it would be, but not in the way either Curt or Susan contemplated.

**December 5, 1:47 PM**

**Outside the State Capitol Building**

**Sacramento, California**

As the crowd pressed to get as close to the President’s path as the security detail would allow, Secret Service and other law enforcement agency snipers manned the tops of every building within a mile of the President. Above them all, specially configured and outfitted helicopters buzzed over the area while Air Force fighter jets and surveillance aircraft circled at higher altitudes. If the President insisted on these regular visits around the country to bolster the moral of the populace, then those tasked with his security and protection would spare no effort or cost to ensure he did so safely.

As the President approached his motorcade, the reporters jostled for position and called out questions to get the President’s attention.

“Mr. President, Mr. President,” the yelled.

One in particular, JT Samson of SierraLines, was able to get his entire question heard above all of the rest in a brief lull as the President approached his vehicle.

“Mr. President, what is your response to the announcement of the candidacy of Curt Johnson and Senator Crater ... it’s been almost a week?”

The President paused and turned to the crowd and the reporters.

“No direct response is necessary. Their announcement speaks for itself. This is a part of our great Republic and the institutions that define it. I welcome an exercise of that process that leads to the fundamental right of American citizens to choose their leaders ... it is, after all, the same process that placed me in the position of responsibility that I now hold.

“I will say this, and you reporters can record it as a policy announcement.

“I will not be campaigning per se in this election. The responsibility that I have in the current circumstances prevent me from even thinking of taking the time to do so. As a nation, as a people ... as a culture ... we face perhaps the greatest challenge and mortal threat in our history. The people of this great nation have seen me in action over the last three years ... in times that have tried us all.

"I will continue doing my job and let the people decide this issue on that basis. I am sure the party will do its share of campaigning. The necessary paperwork will be filed for both the primaries and the national election when that time comes. But neither myself or anyone in my administration will take the time, the money or the effort to hit the campaign trail. We will let our conscientious efforts to fulfill our duty be our campaign. Thank you."

With that, and as JT Samson hurriedly scribbled down his own thoughts on the President's comments, which would be up on his main page at SierraLines on the internet within fifteen minutes, the President waived to the crowd and slipped into the limousine that would take him to Air Force One and his flight back across the country to Washington, DC.

### **December through February in Asia and the Pacific**

As the western nations prepared to celebrate the Holiday season, events in the Pacific Ocean muted the joyous occasions surrounding the birth of the Spiritual King of Christendom and the ringing in of a new year. Australia was on the verge of collapse with heavy fighting raging around Sydney. The allies were preparing a massive Dunkirk-type evacuation in case the outer ring of defenses fell, and that fall appeared imminent.

Admiral Ryan, the overall commander of U.S. and Allied forces in and around Australia continued to attempt to draw the Chinese and their allies into a decisive sea battle that would favor the allies. But the Coalition of Asian State naval forces were content to guard the sea lanes to their Australian staging areas as their ground forces continued to make progress in the southeast and as they consolidated their positions throughout the continent. The result were several sharp but minor naval engagements, but no decisive battle. As February approached its end, Admiral Ryan was preparing a bold plan to force the issue.

Elsewhere in the western Pacific and Asia, the Coalition of Asian States reigned. All nations had fallen before them from Japan across the ocean and across Asia to the other side of India. The line of advance in the Pacific itself extended well out towards Wake Island and encompassed all of the Solomon Islands down to the southeast coast of Australia. There was still guerilla warfare being waged in areas of the Philippines, in Thailand and behind the lines in Australia, but without support and re-supply, the efforts, while bothersome to CAS troops, were inconsequential to the larger effort.

Lu Pham, the research and development genius responsible for the Chinese LRASD weaponry, and his family enjoyed relative peace, outside of only occasional air raids by allied aircraft and cruise missiles. Lu Pham's team of engineers continued to produce innovative advances for the LRASD weaponry that blunted allied attempts to negate the tremendous advantage these weapons were giving CAS and GIR forces. These new innovations were immediately tested and deployed upon the literally hundreds of conversion ships that the Chinese continued to build. Lu Pham's good friend, Sung Hsu, continued to rise in prominence in the military shipbuilding industry and was contributing extensively to the manufacturing innovations that were allowing the Chinese, through their large shipbuilding conglomerate, COSCO, to meet the war demands of their nation. Hundreds of Chinese ships, with thousands of the latest revisions of the LRASD, Killer Whale weaponry, continued to be one of the key factors allowing the CAS and GIR to continue their expansion without fear of what advantages that the U.S. Navy and her allies could otherwise bring to bear.

However, the latest American innovations in the form of the Submerged Threat Close in Weapons System (SUBT CIWS) was about to make its debut in the Pacific Ocean. The U.S.S. Shanksville had taken longer to finish its shakedown and trials because of several problems with some of its new systems. Some of those problems included timing and effectiveness of the CSUBT CIWS. But the American developers and weapons engineers believed they had corrected those issues and the Shanksville along with several escorts employing the same defenses would be entering combat theaters of operation in March and April. Soon thereafter, increasing numbers of retrofitted ships would also be coming out of dry docks throughout the CONUS and from the larger repair and dry-dock facilities in the various theaters of operations.

At the end of February, the only areas free of the CAS rule in all of the western Pacific and Asia were those areas of Russia and Siberia that had entered into the economic pact with the CAS and the GIR to exploit Siberian resources. This arrangement had proven immensely profitable to Russia and critical to the war effort for the CAS and GIR. Now, as Spring approached, the continuation of Phase II of the CAS war plan entitled Hung-Lu-Dong turned its attention to the north in preparation for the even more ambitious Phase III, as Jien Zenim had long since envisioned and planned.

### **December through February in The Middle East**

The GIR continued to consolidate and build up its positions around Israel through the opening days of the year, according to Imam Hassan Sayeed's overall direction implemented by his theater CINC, General Talabari. Outside of an area bounded by southern Lebanon to the Golan Heights, extending on the east side of Jordan down past the Dead Sea to the Red Sea and then encompassing the entire Sinai peninsula over to positions along the now closed Suez Canal, the entire Middle East was controlled by the GIR. GIR forces continued to flood into those areas surrounding Israel in

preparation for what everyone knew would certainly be one of the most intense, concentrated and viscous battles in history. The lives of many millions hung in the balance.

While the GIR was consolidating and reinforcing, the allies were doing the same. At great cost, the sea and air lanes across the Mediterranean Sea were kept open into Israel and a river of men and materiel continued to flow into the small nation. While this was happening, the GIR had increased their numbers of Chinese LRASD "Killer Whale" devices and were launching them literally from anything that could carry them into the Sea. Trawlers, cargo ships and all sorts of combatants were modified to carry the various versions of the weaponry. Many of these would then make a suicidal dash into the sea to launch them.

The U. S. Navy and her allies were literally sinking any unknown vessel on contact to avoid the horrific results of a successful launch of these weapons. Ultimately, as a result of the relative short ranges involved all along the eastern Mediterranean coast, the GIR successfully developed coastal launchers for the weapons and employed them successfully. On January 12<sup>th</sup>, the U.S.S. Kearsage and the HMS Pendleton Amphibious assault ships were both sunk along with two of their escorts as they approached the Israeli coast by LRASD weapons launched from shore installations to the north.

Elsewhere, the GIR consolidated its strong positions in northern Africa and all along the Nile River down into Ethiopia and Kenya which had both officially joined the GIR in December. From the Horn of Africa, extending over 300 miles inland up to the Mediterranean and extending westward along the Mediterranean to just south of Gibraltar, the GIR controlled all of Northern Africa. Well over one billion Muslims now practiced their faith under the great Imam's political, religious and social order ... an order he fully intended to export to as many infidel nations as Allah would grant.

The only positive response, outside of the continued successful defense of Israel, that the allies were able to accomplish was the landing of significant forces in Nigeria in an effort to establish a strong presence and base of operations in Africa. Brazil, local nations, and small contingents from several European nations had committed forces to this task and a force of several hundred thousand was now safely ashore. Their hope was to move north and east in an effort to bring pressure on and hopefully out flank the massive GIR forces preparing to attack Israel from Egypt.

### **December through February in Central and South America**

War continued to rage in Central and South America. Venezuela, Panama and Argentina, supported by increasing numbers of Chinese, continued to attempt to advance throughout the region. To the north they were advancing into Costa Rica and Nicaragua. In the center they were advancing into Colombia. To the south they were fighting and attempting to advance into Brazil from Argentina. More and more Chinese forces were arriving by submarine, by aircraft, and by the Chinese surface combatant or commercial cargo ships that got through American and allied patrols.

In Costa Rica American forces fell back in a begrudging retreat. San Jose fell and the allied defense strategy called for a fall back into Nicaragua to defensive positions in the hills above the coastal low lands as far north as Managua. Corporal Hernando Rodriguez and the U.S. Army Company that he was a part of had been moved into position along these defensive lines and he was awaiting his first real ground combat there. The retreating American, Costa Rican and Nicaraguan forces were falling back towards them and would take up positions along the line with the larger American forces of which Rodriguez was a part. As March approached, he shared his thoughts, anxieties, aspirations and hopes with his wife Maria and his parents back in Florida by mail. He also made sure that Maria understood that she must pass his love and thoughts to his new son, Felipe, who had been born in March of that year in his absence.

In South America, Panamanian and Chinese forces advanced into Columbia from the north as Brazilian, American and Columbian forces fought them. Due to the nature of the two pronged attack by the Chinese and Coalition of South American States (CSAS) forces, the fall of Columbia was a very real prospect early that year. A beleaguered allied supply system was strained, but as demands for more call-ups and volunteers went out, the Brazilian and American public responded and more forces were trained and deployed into the fight.

The entire circumstance in Colombia and further north in Costa Rica was exasperated by the continued warfare along Brazil's southern border with Argentina. The battles had sea-sawed back and forth between Mercedes, Argentina and Santa Maria, Brazil for over a year, with neither side making any significant progress. The entire countryside in that part of the continent was turned into a blasted and ruined wilderness as both forces continued to surge back and forth over the same devastated terrain, seeking an advantage to allow them to break through and defeat their enemy. But despite the bloody stalemate, the Argentine forces were accomplishing their mission. That mission was simply to hold and occupy as many Brazilian forces as possible in order to keep them from other theaters of combat. If the Argentine forces could achieve a breakthrough and cause more harm to Brazil, that would be viewed as a significant bonus. In a circumstance where Brazil normally would have had no problem defeating Argentine incursions, the Chinese and CSAS planners knew that the Brazilians would be unable to bring sufficient force to bear because of their commitments elsewhere. In fact it was hoped that the Brazilians would be forced to lessen their commitments in those other areas as a

result of the threat in the south, and that hope was bearing fruit. In Africa, the planned expeditionary force of 250,000 Brazilians assembling in Nigeria to prepare for northward movement against the GIR had already been reduced to 200,000 to allow more forces to be thrown into the fight with Argentina.

### **December through February in Europe**

Europe was continuing to mobilize for war. The dream of a European Union was finally realized as the result of the abject threat from GIR forces attacking from Greece into Bulgaria and from GIR armies approaching Ukraine. Due to the fact that Italy, Germany and particularly the United Kingdom had been involved with the warfare from the outset, they carried considerably more weight with the EU. France, which was now involved in a complete mobilization but which had dragged its feet through the earlier days of the fighting, was relegated to a much more minor position in the developing hierarchy and power structures of the new European Union. This structure, with the three aforementioned nations filling most of the powerful positions on the various economic, military and social committees, was formerly adopted by the last holdout nations in late December.

The Euro, now adopted by the entire continent, including the United Kingdom, was doing quite well given the circumstances ... better than anyone had imagined. Funding for production and power facilities, particularly alternative energy facilities was not an issue within the European Union. The Continent's major concern was fuel and, taking their lead from energy policies in the United States, all oil fields were being exploited, both on land and in the North Sea as environmental issues were placed completely on the back burner in the face of the mortal threat.

The large Unified European Defense Force was already in place to attempt to block the GIR thrust coming across the top of the Black Sea. This force was bolstered by twenty divisions of French, Dutch and Scandinavian forces that arrived to reinforce them. The GIR forces they faced, who were technically already in Europe, were receiving large numbers of reinforcements daily funneled through Georgia, Armenia and up the open road the Russian Federation had allowed them.

Those GIR forces were continually harassed and picked at as they passed through the Armenian region by the partisan and guerilla network that was growing there under the direction of Captain Luke Hanson. Captain Hanson had become of a local hero in the entire region as his forces continued to harass the GIR forces stationed there, as well as those passing through. He was also considered a hero and an extremely valuable asset by the his entire command structure. His band of fighters would figure heavily into future events, particularly as the CIA Director prepared Riley Adams for insertion into the area for his upcoming mission.

Despite the harassment, over a million GIR personnel had passed through Georgia and Armenia and had moved north of the Black Sea where they were poised for the invasion of free Europe in earnest. Abduhl Selim, now an experienced Captain in the GIR forces, was with this group. He continued to climb through the ranks and had been recognized all the way up to the upper echelon of commanders in the GIR army who had awarded Abduhl with the GIR Order of the Imam medal for his role in preventing a large riot from escalating in Russian territory as GIR forces paused at a large supply depot to re-supply.

While waiting there, GIR forces were accosted by a large crowd of angry Russian citizens who were members of the Russian Orthodox Church from a nearby city. Only Selim's quick thinking and absolute control over his soldiers had prevented that major riot from turning into a massacre of Russian civilians that could have had drastic results to Russian/GIR relations at the most critical time.

The Order of the Imam medal was the equivalent to America's Silver Star, just one level below the GIR's Mahdi Award, which was the equivalent of the Medal of Honor. It had been awarded on the basis of Selim, while under direct fire himself, personally maneuvering through all of his personnel and holding them in check, taking the minimal action necessary to extract his more powerful force from the area when most commanders would have overwhelmed their attackers. General Talabari had presented the award to Selim himself and become somewhat enamored with the young Captain and his history. He ordered his staff to research the complete story of Selim and prepare a summary of his accomplishments and experience for presentation to him in March. General Talabari was already formulating plans for the young Captain, but he wanted to be thorough.

To the south in Europe, another European force of German, French, Italian, Spanish, Czech and Austrian forces were moving across the Balkans to the aide of the Bulgarians, Romanians and Yugoslavs who were being pushed back by the powerful invading forces of the GIR and Greece.

The biggest concern in Europe continued to be the disposition of Russian forces. There was great concern with the continuing bonanza that the Russians were experiencing out of Siberia, and with the relationship that Russia already had with the CAS and GIR in that regard, that it would not take too much for the Russians to form a military alliance with Europe's enemies and add their great weight to the invasions that were already occurring. This concern stretched across the Atlantic and was a major focus of the Weisskopf administration. The Americans were working closely with the various representatives of the European Union to keep Russia neutral at the worst, or to turn them completely away from the CAS and GIR at the best and have them enter the war on the side of the allies, thereby cutting off the wealth of resources those enemies were extracting out of Siberia.

## December through February in The United States

The United States was rapidly increasing its production capabilities as it moved closer and closer to complete energy independence, a goal the Weisskopf administration intended to achieve by the end of that year. Rich new oil fields in the Gulf of Mexico, off the west coast and particularly in Alaska had been developed and were in full production. These oil fields would reduce American dependence by over 50% once they were fully operational.

Huge tracts of the American southwest had been set aside for and developed into solar and wind energy fields. From Texas to southern California, twenty-five separate mega-facilities had been created. Although each had a primary focus of either wind or solar electrical generation, each was also a hybrid system utilizing the secondary source, either wind or solar, to compliment the primary. Most facilities covered several hundred acres at a minimum and were placed in remote areas with strictly enforced ground and air approach security zones. These federal and state efforts in the southwest when coupled with the individual efforts of corporations and individuals across the nation were reducing America's energy independence by another 30%.

Finally, from an energy perspective, the Nuclear Regulatory Commission had been revamped and redirected by initiatives and Executive Orders from the Weisskopf administration. This was resulting in the building of several dozen new nuclear plants all across America by large Architectural, Engineering and Construction (AEC) firms. For decades these companies had not been able to afford to build nuclear plants in America as a result of successful efforts by environmental and other lobbying groups in establishing policy that called for any nuclear plant to have to meet the latest nuclear code while the plant was being built, as opposed to locking in the code (outside of any major safety discoveries) when the plant construction was started. That policy had killed the nuclear plant industry in America because no AEC firm could afford to build such a plant when there was the potential for a complete retrofit to new code at anytime during the construction, including only months or weeks before the plant was complete. The risk of such costly retrofits, and the eventual retrofits themselves, drove costs up so far that it was not economically feasible to consider building new nuclear plants in America after the late 1970's and early 1980's.

So, the AEC firms in America had been building safe nuclear plants, the safest in the world, for nations outside the United States for all of those years since. Many of those plants, in fact the majority of them, were now benefiting America's enemies. Under the Weisskopf administration, Executive Orders were signed, legislation was adopted and policies were changed so that nuclear plant construction once again conformed to the nuclear building codes in existence at the start of the project. Immediately upon the institution of these policies and regulations, dozens of plants were started in the continental United States and they were all now almost finished due to the emphasis on completion, the huge work force available for construction, and because the focus was clearing red tape for the construction rather than creating it. These plants would reduce the dependence on foreign oil in America by another 25% themselves, meaning that once all three of these three areas were implemented, America would be energy independent.

Despite periodic missile attacks from the Gulf of Mexico and on occasion from area off the Pacific Coast, several dozen new shipyards had also been completed and they were now pumping out new cargo ships, new tankers, new support and auxiliary ships, new destroyers, new frigates, new cruisers, new amphibious assault ships (which were serving a dual role as troop carriers and sea control ships) and new full deck carriers. The rates weren't what the President had called for yet, but production was picking up and new flotillas, new task forces and new fleets were forming up as quickly as they could be built and as quickly as they could be outfitted and manned. Unfortunately, there was a great need for them as so many ships were falling victim to the LRASD devices being employed by the enemies of the United States. President Weisskopf and his administration had successfully lobbied the congress to provide the funding to meet the challenge. America was not going to hold back because of a fear of losses. The survival of the nation was depending upon America's willingness and ability rise above the adversity and President Weisskopf was determined to help the nation do just that...regardless of cost.

Terrorist attacks still occurred on a regular basis targeting infrastructure around the nation. But the numbers and effectiveness were dropping off as the borders were now fully secured, as the Home Guard Units became more and more effective, and as existing terrorists were killed off in a war of attrition. Most Americans recognized the success and progress in this area, but they knew that the fight was far from over as most felt that there were many cells of terrorist still within the borders who had not been activated. The citizens were also increasingly concerned about enemy forces and their progress in Central America. In addition, more and more analysts, editors and members of the common public recognized the tenseness in relations with Mexico and were more and more concerned with the potential for Mexican collusion with their enemies. Federal and State forces all along the border were bolstered as a result.

During this period of time, Leon Campbell enjoyed his recuperation with his family in the Boise, Idaho area. He spent many hours with his brother, Alan, talking with him, encouraging him and

preparing him for service to his nation. Leon was interviewed regularly by local and national news and talk shows and became quite the spokesman for vigilance amongst the citizenry in support of the war effort. In early January, he began working in recruitment. He was a natural at it, and a national icon that drew young men to the service of their country. He was stateside and he was safe...but it was not something Leon was comfortable or satisfied with. He wanted to be back out in the action.

Colonel Jess Simmons was surprised that he was allowed to stay in Texas much longer than expected, allowing him many weeks of quality time with his wife. He also spent a lot of time at the Joint Reserve Base in Ft. Worth, training and schooling units that were slated for transfer to Israel. In addition, he was able to spend several weekends on his ranch near Montague, Texas, repairing fence lines, clearing brush and doing general maintenance work that was needed as a result of his long absence. All too quickly the time passed and the inevitable call came. In mid-February, Jess bid Cindy farewell as he shipped out for Israel. As he thought of her working back in the aircraft plant there in Ft. Worth, his heart swelled with love and with pride. He was so blessed to have had the time with her, but he regretted that he had been unable to see his son while he had been at home.

Billy Simmons, who had received a battlefield commission to the rank of Captain, was still fighting in Australia and any leaves he got were very short and taken in-theater, usually right there near Sydney, or occasionally in New Zealand. Jess was immensely proud of his son and naturally concerned for his welfare. But he knew that the dangers, the risks and the severity of the situation all came with the territory. As Colonel Simmons contemplated his son's situation before trying to catch a few hours sleep on the long flight across the Atlantic, he knew there was the real possibility that he would never have the opportunity in his life to meet his son face to face again.

In Florida, Maria Rodriguez was busily raising her young son, Felipe. He was only a few months old, but as he learned to crawl and became aware of his surroundings, Maria could see so much of his father in him. She spent a lot of time with Hernando's parents and they talked for many long hours about the future when Hernando returned from the war. None of them could hide their fear and anxiety regarding Hernando. So many right there in south Florida and all around the nation were dealing with the loss of loved ones.

The fear was not relegated to losses on the battlefield in some distant country either. Maria and the Rodriguez's were also concerned for the safety and welfare of one another, particularly young Felipe. Terror attacks continued within the borders of the United States. Mr. Rodriguez had joined a local Home Guard unit and faithfully fulfilled his watch duty each week. He had learned to shoot and regularly took his wife and Maria out to the range so they would be prepared as well. Maria carried a small automatic pistol with her wherever she went and was proficient in its use. She was proud of that fact and shared it with Hernando, who also swelled with pride at how his wife was responding. He was comforted to know that she and her family had taken measures to provide for their own personal defense, while he was away helping provide for the national defense.

Maria was also proud of her father-in-law. Mr. Rodriguez took his Home Guard duty seriously, as did millions of other Americans. He trained as hard as he could and was religiously punctual for his four, six hour watch duties each week. They had all learned, all over the country, by hard experience what a lack of vigilance could mean. It was written in the blood of tens of thousands who had died and scores of thousands who had been injured or wounded ... and they knew it was not over. For his part, Mr. Rodriguez wrote regularly to his son and shared in writing with him the experiences of their mutual service to their country. The feelings this engendered between father and son, between wife and husband, between extended family members were extraordinary. It was a phenomena that was sweeping the country and binding the nation together to unitedly face the mortal threat as men and women serving directly in the armed services became brothers and sisters in arms to their many family members and friends who were also serving at home.

In Boston, Dr. Joseph Trevor had received and reviewed Sandra McPherson's work. He was extremely impressed and excited about the prospects this software would enable for continued advances in genome research and particularly for further advancement and understanding of the Human Reasoning Structures he had discovered. As Sandra had thought, Dr. Trevor wanted to personally see a demonstration of the prototype software she had created. Dr. Trevor made the trip out to California in early December with his wife Elizabeth who had gotten the time off from her work to do so. The result were even more compelling than the initial test. Sandra had continued to modify and improve the algorithms and her persistence and talent paid off. While there, Joseph learned to use the software himself and was able to replicate the results against another sample of data he had brought with him to California, hoping for just that opportunity.

As a result, when he returned to Boston in mid-January, Joseph was able to quickly convince his own superiors of the importance of funding the development of software modeling in a major way. He used the demonstration software right there in the conference room to help convince them, and they were completely convinced.

As Dr. McPherson began receiving funds to further develop the software package and extend its functionality in late January, she worked with her friends in Europe to prepare the initial samples of fetal tissue from which she would develop the data she would then use in California. By late February

the preparations were complete, the tissue had been gathered, the data had been created and she was anxiously anticipating its arrival so she could apply her newly-developed virtual atomic microscopy software to model it and try to unlock its secrets..

As the primary season approached for the presidential election, Curt Johnson and Susan Crater doubled their efforts to position themselves for the eventual campaign against President Weisskopf. Even with the full support of the DNC, there were a number of other candidates attempting to mount credible local challenges to their nomination to lead the Democratic party. Johnson and Crater largely ignored those challenges, preferring to spend the time developing and pointing out the differences between their ideas and plans and those of the President's administration. They felt that with all of the bad news on the war front, that they had a good chance of discrediting the President and undermining his popularity. But they also knew they had to be very careful in doing so to ensure that they did not offend the citizenry at a time when so many Americans were paying the ultimate price.

For his part, President Weisskopf was unerringly true to the position statement he had given outside of the state house in Sacramento, CA, regarding the election. He did not campaign and he did not mention his challengers. Many in the press and amongst the opposite party tried to point out that his many trips across America to inspire and bolster the public from a moral and a production perspective were, in effect, what they called *stealth campaigning* ... but the charge never stuck in the minds of the people, despite efforts to the contrary. President Weisskopf in public and in his security, economic and social meetings never mentioned the election or the positions of his challengers. He simply continued his monumental personal efforts on the war front. His party, his supporters ... and increasingly larger numbers of the common citizenry ... loved it and took up the same sentiment. For the first time in history, as a presidential primary season approached, there were no challengers on the Republican party's primary ballots in any of the fifty states for the office of Presidency.

One of the most critical and time consuming tasks for the President, and one of the most frustrating, was what the President considered the strategic issues of the war to date. That was the diplomatic efforts associated with influencing the Russian Federation. On many occasions the President and his staff, particularly the State Department, despaired over the seemingly nonchalant attitude of the Russian President. The President couldn't count the times that he had personally spoken with President Vladimir Putin and urged him to consider moving away from the ideological and economic ties Russia was embracing with the CAS and GIR. The trouble was, Weisskopf genuinely liked Putin and could not understand how he could be so blind to the historical precedence for his own nation, not to mention the clear and present danger to American and the rest of the allies.

Ultimately, Weisskopf surmised that the Russian President wasn't oblivious to the dangers at all. He determined that Putin simply felt that he had the situation under control, figuring that neither the West or the East was in a position to risk having Russia become their enemy. Weisskopf came to the conclusion that Putin's reasoning provided that as long as the two gargantuan cultures of West and East were embroiled in mortal and resource depleting combat, that the Russian Federation could therefore simply remain above the fray. As time went on Weisskopf wondered if the Russian was right, whether he was actually going to be able to maintain such a position throughout the war.

Weisskopf knew that if the positions were reversed, he could not coddle such danger. He could not cozy up to such risk in the hope that the untrustworthy and monstrously evil of the CAS and GIR would be satisfied only with America and Europe ... he felt certain that they would not and that it would be better to stand united than to stand alone. He spared no effort in sharing this sentiment with President Putin, but he was disappointed by the continued assurances from Putin that the American was not to worry, the he, Putin, had everything under control. Unknown to both leaders, the ultimate disposition of Russia in World War III was about to be decided for her, and it was not a decision that either man could control.

## Chapter 24

*“Our Constitution was made only for a moral and religious people. It is wholly inadequate for the government of any other” –John Adams*

### **March 12, 12:35 Local Time Outside of the Presidential Offices New Delhi, India**

Minister Buhpendra Gavanker sat patiently awaiting his meeting with the President.

“Perhaps now I will learn what this emergency is all about,” he thought, “they had to bring me all the way here from Siberia and I had to attend the meeting personally to know.”

He'd been called back to the capitol here in New Delhi two days ago from his posting in Gavank, Siberia. It had been unplanned and very urgent. He would not soon forget the flash dispatch he had received or the fact that an Indian military aircraft was within twenty minutes of arriving for him when he had received the message. An Indian officer, a Colonel, had arrived with the transport and he had been whisked away with only an hour to pack.

As he had been leaving for the airport, he could still hear General Nosik's parting jab.

“Well Bu, I suppose you must come to expect these things now that you are an official *minister*. You will find that the higher up that food chain you climb, the more immediate and firm the claim your bosses will have upon you!”

This from a Russian General who had recently been promoted to the commander in chief of all Russian security forces in Siberia had laughed heartily as he slapped Buhpendra on the back.

“That Andrei,” thought the Minister, “he certainly has a sense of humor, but he also knows how to use it to cause one to think. I really do wonder sometimes if this Minister title they have hung on me will be worth it in the end. It certainly has helped with the handling of requisitions and getting a response from the Siberian officials, but the General certainly has a point.”

As he concluded his thoughts, an aide came out of the President's office and invited Buhpendra to come in for his meeting with the President. When he stepped into the room, the President rose from behind his desk and came around to greet him.

“Come in, come in, Minister Gavanker, so good to finally meet you. Please,” he said as he put his arm around Buhpendra's shoulder, “have a seat.”

Buhpendra noticed that there were four other people in the room. There was a high ranking General officer in the Indian Army, another officer of similar rank in the Indian Air Force, the Defense Minister and the Foreign Minister, Rahmish Patel, all attending this meeting with the President, and waiting on him! The Foreign Minister, in Buhpendra's estimation, was a very capable diplomat and administrator. He pushed very hard for India's best interests, but he was also extremely ambitious. After a few introductions and pleasantries, the President began the meeting.

“We are sorry for the urgent nature of this meeting Buhpendra, but as you will find, it was completely necessary.

“As you know, your efforts in Siberia as a part of the Siberian Economic Development Treaty on behalf of India have been very much appreciated by all of us here in New Delhi. In fact, they have been very critical to our economic progress and to the improving conditions and well being of our citizens throughout the nation. We commend you for that service and promoted you to the Minister representing India to Siberia as a result of it. We want to continue to emphasize the critical nature of your assignment and work there.

“It is our of a recognition of the critical nature of your work there, and due to significant developments associated with it, that we called this meeting. Before I allow the Foreign Minister and the other gentlemen here in this meeting to continue, let me preface their remarks with the following.

“Everything that will be discussed today is classified Top Secret. Given the nature of the new developments that we are about to share with you, I want to ensure that everyone in this room, including yourself, Minister Gavanker, understands the gravity of the situation. Our national security is directly dependent on our recognition of this and on our commitment to it. Do you understand?”

Buhpendra was taken back by this language. He wondered what on earth could have developed that could evoke such a prelude. He thought it must have something to do with the war effort, something he was unaware of. Perhaps some rare elements had been discovered that he was unaware of, probably associated with the nuclear program. No matter, he was a loyal Indian and completely understood his duty and intended to fulfill it.

“Yes, Mr. President, I understand and will comply completely with any security requirements. What are the developments of which you speak and how can I be of service?”

The President turned to Foreign Minister Patel and said,

“Rahmish, please fill Minister Gavanker in on the diplomatic essence of the developments. When you are complete, we'll have the Defense Minister and the General's continue.”

**March 12, Two hours later**  
**Outside the Presidential Offices**  
**New Delhi, India**

Buhpendra was shocked. Despite the explanations, assurances and plans that had been rehearsed to him in the President's office, he continued to ask himself.

"An independent Siberia? An official announcement tomorrow morning? Troops and materiel to support the independence already in place from both India and China?"

Gavanker was not a military man, but he had a keen mind and that mind had already put together the essence of the puzzle.

"They knew all along. It must have been the plan from the beginning and Andrei was right. Andrei! How will he react to this?"

Buhpendra already knew the answer to that question.

"He will fight."

The Siberian Economic Development Treaty had been signed by The Russian Federation, India and the People's of Republic of China over two and one-half years ago. Since that time, the GIR had been brought into the fold. All were exploiting the vast resources of Siberia, trading materiel resources for hard currency. India and China, the principle members of the Coalition of Asian States (CAS) and the Greater Islamic Republic (GIR) were receiving tremendous amounts of natural resources in exchange for the hard currency that the Russian Federation desperately needed. China and India alone had sent hundreds of thousands of workers into Siberia to discover and exploit the minerals, lumber, hydro-electric, petroleum and other resources so abundantly available there.

Andrei Nosik, the Russian General in charge of security for the various sites inside of Siberia, had been very distrustful of the entire affair from the beginning. As the Colonel in charge of securing the "sites", he had noted that most of the workers were young men. It was not lost on him that their discipline and their immediate supervisors resembled something much more akin to military units than they did work crews. But he had been over-ruled by his Moscow superiors, and he had done the best with the forces he had been supplied.

His ability to "make due" had not been lost on his superiors. He was promoted first to the General in command of a major region of Siberia, and ultimately, in the last few months, to command all Siberian security forces for the Russian Federation. That latest promotion had forestalled his planned retirement, a retirement that Buhpendra knew the General had been looking forward to.

Now, given his continuing regular and insistent communiqés back to Moscow requesting more resource, his superiors recognized those concerns for what they were...loyalty to the Rodina, to the Motherland. And, although those same superiors did little to respond to the requests, they nonetheless remained confident that Nosik's prior experiences in Afghanistan and in Eastern Europe would allow him to fulfill his assignment, even if he felt he was undermined. Still, the General was constantly commenting, that he didn't feel he had enough. That he would make such comments to Buhpendra, was a testament to the friendship that had developed over the last thirty months between them.

"Now it is clear that he was right all along," thought the Minister.

But Minister Buhpendra Gavanker, soon to be the Indian Ambassador to Siberia, would not let that friendship stand in the way of his duty. If the Siberians desired independence, and if his nation was going to recognize and support it, his duty was clear, despite whatever feelings he may have towards Andrei personally and despite whatever action Andrei would take opposing it.

"And he most assuredly will take action," concluded Buhpendra.

His conviction regarding this had been candidly communicated to the President, the Foreign Minister, the Defense Minister and the Indian Generals. In response to this conviction, the Defense Minister and the Generals informed him that operational plans already accounted for it.

85,000 of the Indian "workers" in Siberia had been soldiers all along. Their small arms, mortars and machineguns were already cached in the wilderness outside of patrol perimeters that the Russian security forces had established. Perimeters that Nosik had briefed the Indians on regularly and that had been included as a matter of course in Gavanker's reports back to New Delhi. The non-commissioned officers (NCOs) and officers were already there acting as supervisors just as the Russian General had feared all along. The same was true for 150,000 of the Chinese workers. When coupled with the 50,000 troops the Siberians would muster, close to 300,000 troops would be deployed in Siberia in the next few days in support of independence. Taking into consideration the element of surprise they hoped to maintain, it was felt that these forces would be more than sufficient to deal with the Russian security force of 35,00-40,000 under General Nosik.

Within two weeks, China, India and the GIR planned to insert well over 500,000 more troops into Siberia, moving along the western Siberian border with Russia in support of the new Siberian government. They would be moved in from the border areas of those nations with other internal forces already en route to take their place on the border. The same iteration would be accelerated and occur ten times over the next two and one half months as over five million GIR, Chinese and Indian troops were committed to what each was now designating as Barbarosa East in their own languages.

But Ambassador Gavanker was not yet aware of the full extent of the operation. He would return to the Siberian capitol within a few days, after the Russian security forces had been withdrawn, defeated, or completely driven from the Capitol. The Russian forces at the work sites, particularly at Gavanker where General Nosik's headquarters were located, would not be given any such opportunity. The military's operational plans called for their positions to be completely over-run in a surprise attack the next morning just before the Siberian official announcement in the Capitol.

**March 13, 04:15 Local Time**

**Private Quarters, CINC**

**Russian Security Forces HQ, Gavank, Siberia**

*THUD*

The sound immediately awakened him from a deep sleep as his phone began to ring. As a result of his prior combat experience in Afghanistan, he recognized what was happening...heavy mortar fire.

"One, two, three, four ..." he counted, waiting for the sound he knew was coming as his phone continued to ring and as more and more *THUDS* sounded.

*BOOM!*

"Less than 1500 meters," he thought. Quickly picking up the phone he answered, "Nosik."

The intensity in the voice of the duty officer told him as much about the current situation as the sounds coming from outside, where more *THUDS* were mixing in now with the sound of small arms and machinegun fire.

"General, we are under attack. Overwhelming numbers of enemy personnel of unknown origin are breaching our perimeter on the east and south. There is significant suppressing fire also coming from the north and west."

The east and south were the directions to the large Indian dormitory and housing units.

"Order all units to execute defense plan Zebra immediately. Have my staff meet me at point Kilo in five minutes," the General said as he hung up the phone and his security detachment began pounding on his door.

Defense plan Zebra was the contingency plan that the General had his staff work up for the potential of hostilities between his forces and the on-site Indian workers. There were almost six thousand of his personnel at Gavank and over forty thousand workers. These numbers, particularly if there were any quantity of arms supplied to the workers, made the outcome a foregone conclusion.

"Given the sounds of those mortars, machineguns and small arms, I would say the workers are well armed," the General surmised as he quickly prepared to leave.

The plan called for several large transport aircraft, several fighter aircraft, half a dozen attack aircraft and four attack helicopters to be on an alert-five status twenty-four hours a day. It also called for the collapsing of the perimeter of the base to right around the airfield in a holding action. The plan utilized a number of his tanks and Infantry Fighting Vehicles (IFV) to immediately extend security out along the take-off flight path of departing aircraft to protect against anti-aircraft fire. Over the last twenty-four months, since he instituted these procedures, it had been difficult to maintain the readiness of these forces to the degree the General wanted. But he had persevered.

"This morning we shall see if it pays off," thought the General as he picked up his own personal sidearm and the fully loaded AK-74 he kept in his personal quarters. Upon doing so, he opened the door and his security team quickly hustled him towards the alternate command center at Point Kilo.

**March 13, Seven Minutes later**

**Alternate Command Post, Point Kilo**

**Russian Security Forces HQ, Gavank, Siberia**

"Kalinkov, what is the situation," the General demanded as their impromptu meeting got underway. He could not help but notice that several members of his staff had not arrived. He concluded, correctly, that they never would.

The commander of the base's security forces, Colonel Kalinkov responded.

"General, we have fallen back to the planned security lines established for defense plan Zebra. The rest of the base has been over-run. The 1<sup>st</sup> and 3<sup>rd</sup> Companies are intact and engaged along the perimeter but all other commands are completely disorganized. We are currently forming up another Company from existing combat units and ..."

The General interrupted.

"As of this minute, all remaining personnel on this base *ARE* combat units. Do you understand?"

As the security force commander soberly nodded, the General continued.

"Good, form up as many companies as possible from the available personnel. Arm them all and put seasoned officers or NCOs over them. I want to provide a defense in depth as we evacuate to our contingency site. We must get as many aircraft as possible into the air to accomplish that purpose. What is the contingency location for today, and has Moscow been informed?"

The General's chief of staff checked his notes and responded.

“General, the contingency base for today is fire base Lima. Preparation there have been complete for three months and our personnel report that the base is secure.

“As to communications with Moscow, our long range communications were taken out in the initial attack by sappers. Our aircraft in the air are attempting to communicate as we speak, relaying the message to any friendly unit they can speak to.”

General Nosik was pleased to hear about the contingency base, but knew that communicating this attack, which he suspected was wide spread, was critical. He also knew that they would have to fight hard to get his command and the assets on this base relocated to the contingency site.

“Alright. What about communication with our other forces? Also, what is the status of our aircraft and the perimeter now. Colonel?”

Colonel Kalinkov had been speaking with his own staff as the Chief of Staff had been talking.

“General, we lost communications with all other bases when the sapper took out our communication facilities. They took out both the primary and the secondary equipment. When our initial aircraft took off, they ran into significant surface to air attacks. Our armor had deployed, but several surface-to-air missiles were launched from prepared positions before we could respond. We lost three of the attack aircraft and two of the helicopters. The remaining airborne aircraft are now punishing the enemy, both those trying to storm our perimeter to the east and south, and those suppressing us to the west and north.

“General, one of the fighters flying CAP briefly made contact with our forces at the Cobalt operation. They indicated that Chinese workers were over-running their position and that Colonel Propov had been killed while trying to make his way from his quarters to the command post...we then lost all communications with our forces there.”

Andrei Nosik was deeply effected by the loss of Colonel Propov. He had been a good soldier and a good friend. He would take time later to properly mourn him, and to avenge him. He also contemplated how closely he had surely come to death this morning as well. Surely the enemy had targeted him immediately. Only their prior planning, his quick instincts, and the professionalism of his security team, mixed in with a healthy dose of luck, had saved him.

“Each of you understands and knows your duty. We will proceed with Zebra as planned. Get as many aircraft loaded and airborne as possible. Form a phalanx with the remaining armor, IFV's, trucks and other vehicles carrying the rest of the personnel. Once the aircraft are away, that mechanized battalion will brake out and make its way by the route proscribed to Lima.

“I want my staff and their security team to get on the first transport out and set up the command HQ at Kilo. I will follow on the last transport with my own security detachment.”

Turning to Colonel Kalinkov, the General said,

“Petri, you will be lead the remaining forces. Take charge of the column and make your way to Lima. I am counting on you to get that armor and the remaining personnel there. There will be constant air support for you just as long as we have fuel, ammunition and aircraft. I promise you that.

“Does everyone understand? Good, carry on.”

As the General and his own security detachment left the alternate command post and made their way towards their designated aircraft, the General noticed the rapid flashing of massed mortar fire and small arms fire lighting up the very early morning night sky around him. Though the front lines were several thousand meters away, the flashing recalled to his memory the dream, no the nightmare, he had on so many occasions almost a year ago. The dream of a constant flashing, lighting up the night sky. In that respect the dream and this reality were similar, but this reality was definitely not that dream. The flashing was not nearly as frequent and the sound was wrong. In that nightmare the flashing made for one perpetual light show, lighting up the surrounding landscape as if though it were day, with only a minor flickering effect, so numerous were the guns firings. In that dream the sound was clearly that of a constant, almost incomprehensible, deafening artillery attack, large artillery along a front that measured in the scores of miles. Here, the light was more of a constant strobe of light, with dark periods in between and the sound was an almost continuous, hollow and muted *THUDDING* of many, many mortar tubes being fired.

“Well, this mortar fire may not be heavy artillery, but it will certainly kill all of us here unless we hurry. Still, I wonder what the meaning of that other dream is ... if it has any meaning at all,” thought the General as he hurried along.

He would find out soon enough.

**March 13, 03:57**

**Presidential Situation and Planning Center**

**The Kremlin, Moscow, Russia**

“Mr. President, reports are sparse and communications with all of our facilities in Siberia are out, but here is what we know.

“Approximately three hours ago we received a transmission from one of our AWACS aircraft to the east of Moscow indicating that they had just received a relayed transmission from fighter aircraft stationed in the Urals who had received the message from other aircraft further to their east. The

original transmission was received on a secure frequency normally used by our defensive CAP aircraft throughout the Rodina, including those in Siberia. Let me read the printed dictation of that transmission.

*"Any Russian Federation aircraft on this frequency, this is an emergency transmission relayed from CINCSIB, I repeat this is an emergency transmission relayed from CINCSIB. OPLAN Zebra has been executed. I repeat OPLAN Zebra executed. Heavy fighting at Gavank. Other facilities reporting .... [rest of transmission garbled]"*

"Mr. President, that was all of the transmission that was relayed."

President Vladimir Putin took only a moment to consider the report. Looking around the room at his hastily gathered security council, he asked.

"Someone quickly fill me in on the essence of OPLAN Zebra."

The Defense Minister responded.

"Mr. President, OPLAN Zebra is a contingency plan that General Andrei Nosik, the Commander in Chief of our defense forces in Siberia, set in motion. It was based on his continuing concerns regarding the numbers and disposition of Indian and Chinese workers ..."

The President interrupted testily.

"Yes, yes. We are all aware of the General's concerns. They have been voiced to us over and over again and right now I do not have the time or the demeanor to listen to them again. Just let me know the essence of this plan."

Winning at the impatience of his President, the Defense Minister continued.

"Basically, Zebra calls for a rapid withdrawal of the General's command headquarters in the event his position was in danger of being over-run by an attack of the Indian workers at Gavank. The overall operation calls for similar withdrawals at the other facilities so that Russian Siberian Defense forces can regroup and then counterattack."

The President turned to the Commander in Chief of the Russian Army.

"General, what are your thoughts regarding this. What is your understanding of its disposition?"

Without hesitation the General replied.

"Mr. President, we had urged against it and refused the funding as a result of this administration's policy to allow no overt military operations by our Security Forces in the region that would either destabilize or threaten the Economic Development treaty. Apparently the General implemented it on his own with whatever resources he could scrape together."

The President, never in a good mood so early in the morning, was growing fouler.

"Am I completely surrounded by people who have a capacity to only state the obvious? General, I am aware of this administration's policies. I am asking you what the current disposition is. What is the likelihood that this has happened, that Chinese and Indian workers have attacked our Security Forces causing General Nosik to implement this plan of his?"

Again, the general responded to his President without hesitation, and with complete professionalism, in spite of the rebuke.

"Mr. President, we have not been able to confirm this report directly. Even though this is the case, given our inability to communicate with any of the facilities in Siberia over the last several hours, including those forces stationed at the capitol, I believe there is an increasing likelihood that it has occurred. I would recommend that we begin to ..."

As the General got to this point in his reply, the President's Chief of Staff interrupted him.

"Excuse me General, but Mr. President, I have just been informed that WNN is carrying a live broadcast of an important announcement by the Governor of Siberia."

Motioning to an aide, the Chief of Staff indicated that he should turn the announcement on.

"Please, everyone hold for a moment while we watch this on the screen."

As the screen at the front of the room came to life, an image of the Siberian Governor appeared sitting at his desk in his office. There was a banner along the top of the screen indicating that the program was a special, breaking WNN report. As the sound became audible, the Siberian Governor was already speaking.

*"... and so, on this date, March 13, the Parliament of Siberia has voted unanimously to declare independence from the Russian Federation. We bid our friends in Russia a profound thanks for our efforts together over the last decades. We trust that we can continue in friendship as we go forward.*

*"We have press and diplomatic packages available. The official diplomatic packages have already shipped by courier to the major nations of the world, including Moscow and including the United Nations, documenting how we propose Siberian independence and sovereignty move forward.*

*"There will be announcements from Beijing, New Delhi, Tehran and Tokyo this morning recognizing our independence. We expect announcements later in the day from other areas of the world, including Argentina, Malaysia, Singapore, and Greece.*

*"As to the disposition of the current Siberian Economic Development Treaty, we will propose a staged transition over the next two years where the hard currency is shared between ourselves and the Russian Federation. This would start at 80% to the Russian Federation and 20% to Siberia, transitioning every eight months by 20% such that at the end of two years, the percentages reverse to*

*80% to Siberia and 20% to the Russian Federation. These percentages would then remain in place for a twenty-year period, or until such time as the treaty is dissolved by the participating parties ...”*

President Vladimir Putin could not believe his ears. The treachery was appalling, the ruination of his own carefully laid plans for Russian neutrality in the current war and the resulting prosperity while the world languished burned him to the core. It was clear that China and India had carefully prepared this day for several years. The whole world had anticipated what the Chinese and her allies would attempt something spectacular on the second anniversary of their attack on America.

“Well, now we here in Russia are experiencing it ourselves,” the President thought.

“Just like they did in attacking the Americans,” thought the President.

“I should have listened to Weisskopf when I had the chance.

“Turn that damned thing off!

“Call the parliament into emergency session and schedule an address by me to them for early this afternoon. I want articles of war prepared and discussed.

“General, you must confirm or dispel the reports of these military attacks, however you have to do it, and have it done in the next hour. Report back to me directly.”

Turning to his Chief of Staff and his Foreign Minister, the President continued, “Get a draft statement put together that the Russian Federation categorically rejects Siberian independence and that the fool in Siberia has twenty-four hours to retract. Get that communiqué transmitted this morning

“Also, get the President of the United States, the Prime Minister of the United Kingdom, the Chancellor of Germany, the President of the European Union and the President of Brazil on a secure communication line for me, in that order. If China, India and the Islamics want war...it is war we shall give them, such a war as they have never conceived.”

President Putin would find out soon enough that speaking such words was going to be much easier than turning them into reality. In fact, he would find that it was going to be far more difficult and far more costly than he could possibly imagine, for his nation and for himself personally.

**March 15, 08:25**

### **Situation Room**

#### **The White House, Washington DC**

Bill Hendrickson, the National Security Advisor to the President of the United States, completed his briefing to the National Security team with these words.

“Based on everything that the Russians have shared with us, and based on our own intelligence sources and those of our allies as I have described them, the Russians are looking at a situation very comparable to the German Operation “Barbarosa” launched against them in the spring of 1941.

“That is to say, they have been taken completely by surprise and have lost significant assets all across Siberia, both tactical and strategic assets, including many of their deployed ICBM's across the Siberian frontier. Although many of these were destroyed by Russian forces defending them, we have to deal with the reality that the Chinese have undoubtedly increased the size of their nuclear option significantly as a result of the last two days fighting.

“When it come to the number of Chinese and Indian troops involved, our best estimates indicate that in addition to the two to three hundred thousands troops the Chinese and Indians already have in Siberia, there are many hundreds of thousands more troops pouring across the borders into Siberia as we speak. They appear to be developing a large pincer movement against retreating Russian forces. We expect that within two weeks the CAS forces will cross the Siberian frontier into Russia proper. Within four to six weeks more, the Chinese and Indians force will be approaching the Ural mountain range from the East. The Russians have that long to develop their defenses.”

President Weisskopf took this in. He had to ask the pointed question.

“Bill, in light of all this, what is our best determination, will the Russians go nuclear?”

Hendrickson had given considerable thought to this since news of the Siberian declaration of independence and the resulting fighting between Russian troops on the one side and Siberian, Chinese and Indian troops on the other had been announced. He had consulted the top strategic thinkers within the U.S. think tanks and war colleges and had spoken with several allies, particularly the United Kingdom, Israel and France, who had significant nuclear arsenals of their own. They had all agreed on one thing, the Russians could go nuclear at any time ... they certainly would go nuclear if the Chinese broke through the Urals.

“Mr. President, our best estimate, or forecast, is that the Russian command authority would almost certainly utilize their strategic deterrent, their long-range nuclear weapons, if the Chinese and Indian forces break through the defenses in the Urals. They may employ tactical assets before that, as enemy forces approach their positions ... it will depend on the strength and depth of the Russian positions and the composition of the enemy. It will also depend on the numbers and capabilities of the Chinese systems. The Chinese have not threatened us with such resources to date because I honestly believe that they are not concerned about unilateral or pre-emptive use of nuclear weapons by us first. They may do so with the Russians because they, like ourselves, will be uncertain what the Russians

are going to do, how they are going to respond. This is the consensus of both our own strategists as well as those of our major allies”

President Weisskopf considered all of this. Everyone of them in this room had been anticipating, and preparing for another “*anniversary special*” from the Chinese like last year on American soil. Apparently, the Chinese and their allies had arranged something completely different this year, but something equally audacious and threatening in overall strategic terms.

“I tried to warn Puten ... I wish he would have listened ... I’ll bet he wishes he would have listened now,” mused the President as he turned to his Secretary of State.

“Fred, I spoke to Puten yesterday. I want to speak to him again today. Our own hands are full, but perhaps we can get a battery or two of our AEGIS Theater ABM assets prepared to deploy around Moscow and other sensitive areas to help augment their own systems. In addition, if we can get the EU to commit significant forces to Russia’s aid, perhaps we can forestall the use of nuclear weapons.”

Before Fred Reissinger could answer, John Bowers, the Vice President interjected.

“Mr. President, pardon my interruption, but would it be possible to hold on the offer of AEGIS technology? Russia has stood by while the rest of us have gone through hell in this war. I am certain, that short of this invasion, they would probably continue to do so. I believe our developing alliance with them is one of convenience and we should be reluctant to place such technology in their hands.”

The President listened intently, and then responded.

“John, your concerns and suggestions are duly noted. We are facing a scenario that could get completely out of hand quickly. While I have no doubts as to who would win a full scale nuclear exchange pitting ourselves, Russia, the UK, France and Israel against the CAS and the GIR, the resulting victory would be so horrific that I must seek victory conventionally if at all possible. Those enemy nations have hundreds and hundreds of weapons between them.

“Make no mistake, if they attack us in such a fashion, we will respond overwhelmingly. I am afraid if Russia and China get into it, that there is very little hope for it not to quickly extend to us. My hope is to avoid that eventuality. The Chinese must know that the Russians are protected and that use of these weapons against them will be completely one sided.

“I have no intention of giving this technology to the Russians. I am thinking more along the lines of deploying our own people and equipment to operate the weapons. That would be an ironclad part of the agreement. The Russians would give only the final fire authorization.”

John replied.

“My concern is not so much China as it is Russia. I know the Chinese will not use their weapons first in the current circumstances. They have no reason to, they are progressing on all fronts without them. My concern is that the Russians will unilaterally use them to break up the huge CAS advance and that this action will cause the Chinese, Indians and GIR to respond with everything they have in the hopes of overwhelming the Russian defenses. In such a scenario, it would actually be better for the Russians to be more vulnerable than less.”

Heads around the table were nodding as the President reflected upon his Vice President’s words. Turning, the President faced Admiral Crowler, his Secretary of Defense.

“George, what do you think?”

Admiral Crowler, who had been very involved with the development of the theater ballistic missile defense capability of the AEGIS system while he served as the Chief of Naval Operations, gave a very direct and to the point response to his President.

“Mr. President, I have to concur with the Vice President. With the magnitude of the conventional forces coming at them, the Russians will be more apt to use their nuclear weapons first if they feel their shield is solid.”

The President concurred.

“I have to agree as well. Are there any feelings to the contrary?”

After pausing a few seconds to give others time to voice a dissenting opinion, and upon receiving none, the President continued.

“Okay, so be it, No AEGIS systems at this time for the Russians. Thanks for the input John.

“Fred, still get me in touch with Puten this morning as soon as possible. We will discuss other support efforts that are more conventionally oriented, perhaps consider a couple of J-STAR aircraft and their crews and support elements as force multipliers to help blunt the CAS onslaught if the communications to Russian equipment can be worked out. If not, we may have to divert some equipment of our own. I will also propose and explore the EU support with Puten and begin working that at the highest levels. Fred, you will need to be prepared with your staff,” and turning to the Secretary of Defense, the President continued, “and George you will need to prepare your people to work out the details with the Russian and EU staffs to implement it once agreement is reached.”

**March 21, 16:07**  
**COSTIND Headquarters**  
**Beijing, China**

General Hunbaio reviewed the information he had just received over the secure telecommunications channel from Mongolia. The entire communiqué provided information that was both exciting and disconcerting at the same time. Next to his nation's development of strategic nuclear arms, the LRASD weaponry and the Anti-Ballistic missile defense, this information dealt with what the General considered the fourth most important military research and development program his nation had embarked upon in the last twenty years.

The good news was that final field tests at the research facility and range located in the vast wastes of Mongolia had proven successful. The bad news was that an American enemy agent had been discovered who had access to the development program and test results and it was not known what, if anything, the agent had been able to communicate. They would have to assume that he had been able to communicate everything he knew.

"And to think I took that traitor under my own arm and promoted him," thought the General.

Dr. Li Zedong had been the Director of quality assurance on the program. His background and allegiance had been thoroughly checked out.

"Or so we thought," reflected Hunbaio.

"Li Zedong's roots went right back to the organizer and founder of the people's revolution. He was a great-grandson of the Mao. How could he betray his people and heritage? When and where had the Americans gotten to him?"

As he asked himself this question, the General already knew the answer. It had to have occurred while Li was attending the prestigious Ivy League college in America. Nothing else made sense. He had come home and played his part to the tee, climbing the ladder within the party and within Hunbaio's own R&D organization. For the last ten years, Li had capably overseen the QA efforts of several highly sensitive projects within COSTIND, the Chinese national science and technology development effort for the Chinese military over which General Hunbaio presided. Just before the start of the war, Dr. Zedong's career progress had culminated in his being promoted to head the QA effort for this very project, and he had done an admirable job.

When discovered two weeks ago gathering and recording highly sensitive information for which he did not have a need to know, the Dr. had immediately activated a small cyanide capsule ingeniously built into his college graduation ring which had injected the poison into his blood stream and caused his death within a few minutes. Upon analysis, there was little doubt that the device, along with three others found in the Dr.'s other possessions, had come from America.

"Well, no true spy is ever obvious," thought the General as he contemplated the potential harm to the new program. "It would be foolish to think that the Americans have not had any success in infiltrating us. We certainly have infiltrated them."

"Besides, even if the Americans know about it, there is now very little they can do. They have already invested their billions and fielded their systems, it will not be possible for them to undo all of that development and deployment any time soon ... and it will not be possible for them to counter what we have developed with any presently known technology. It will take them months to determine the major characteristics of the *ta shih* system and much longer to discover all of its capabilities.

"... and they will only learn those capabilities as they lose their vaunted stealth aircraft."

General Hunbaio's prognosis was based on his knowledge of the entire process that had led up to the recent successful test of the new Chinese stealth detection system. It was an advanced hybrid system, tied together and controlled by the latest supercomputing technology based on the most advanced micro-circuitry.

"It was amazing what a rapid boost in research and development we got at COSTIND during all of those years when our factories produced the tens of millions of personal computers for the west," thought the General.

"We benefited richly as their computing, memory and micro-technologies continued to advance, and continued to be outsourced to our manufacturing plants...and then as the Americans actually outsourced the development of that technology to our labs to save even more money. Well, they aren't saving money anymore, and they are losing far more than their highly valued dollars. Not only did we benefit from their technology...we took it and ran with it ourselves to develop even more advanced systems to our own purposes.

"What fools the west had been...and how wise we have been," he concluded to himself as he continued to reflect on the magnitude of what they had developed.

The *ta shih* system consisted of sophisticated passive electronic sensing equipment coupled to the latest bi-static and multi-static radar technologies which were proving more and more capable of detecting and tracking American stealth aircraft...but were not proving capable of acquiring and then achieving a strong lock on the later models. So, although the older stealth aircraft, like the American F-117A stealth fighter, could be acquired and locked on with just the passive electronic sensing and

static radar technology, the newer and more exotic stealth aircraft, like the B-2 bomber, the JSF, the F-22 and particularly the SR-77 and HR-7 reconnaissance aircraft required something more. And that's where the most important component of the *ta shih* system came in, the component it was named for.

This integral and most remarkable development in the new Chinese stealth detection system was a *ta shih* scalar radar, which was a combined electro-gravitational field emitter and detector based on the revolutionary physics of scalar electromagnetism. The scalar radar device could detect and track scalar waves generated by objects as they flew through the air and interacted with the various electrical, magnetic and gravitational fields they encountered. Since conventional stealth technology was based on vector field principles, the scalar detectors would simply side-step the American technology. Based on the latest test by the Chinese research and development team in Mongolia, the General was convinced that they were now prepared to produce these detectors for battlefield use.

Basing their work on initial theories established in the United States and Russia in the 1980s, the Chinese researched, developed and perfected magnetic pole and field technology over a twenty-five year period to the point of practical application in this area. By utilizing exceptionally strong magnetic poles to enfold energy and then coupling that with strong magnetic fields from powerful superconducting magnets, spacetime in specified regions could be ever so slightly bent and altered to allow enough of a vertical projection of the scalar wave so that it could be detected.

In order for the system to work properly, it had to prevent the detection of superfluous "normal" radiation that might otherwise impede detection. This was accomplished by encasing and shielding the superconducting magnets and poles associated with the system in an advanced, grounded Faraday cage. By doing this any superfluous waves generated by other radiation was grounded in the shield, while scalar waves readily penetrated it undiminished. In other words, the Faraday cage striped away the ordinary waves, allowing only the scalar waves to penetrate for detection.

In essence, the *ta shih* system became the ultimate detector for any body moving through spacetime. But it had been tuned specifically for detecting aircraft and missiles in general, and stealth aircraft in particular. The range of the scalar wave detection component of the system was limited when compared to normal radar systems, so the hybrid system used the longer range detection capabilities of the passive electrical sensing, bi-static radar and multi-static radar as a trigger. Once a likely stealth target was detected by those systems, the scalar wave detector could then be focused and tuned on those targets to effect definitive identification, acquisition and targeting.

The entire system was digitally tied to miniaturized, high speed super computers with significant arrayed processing capabilities, which analyzed the detected scalar waves in conjunction with the electronic intercepts and radar data to determine, with a great degree of accuracy, what type of stealth aircraft was involved. The system then controlled the intercept of the target with whatever weapons system was slaved to it. These systems could be anything from ZU-23 anti-aircraft guns up to and including the new KS-3 anti-ballistic missile systems.

The testing in the Mongolian high deserts had proven the system's effectiveness using all of these various weapon types against all models and types of stealth technology the Americans were known or thought to be using. This included radar reflection shape technology, radar absorbing structural technology, coatings...and even the newer, more exotic ionization fields and special electronic charging systems that the Americans were employing on their newer aircraft.

"No, now there will simply be no place for them to hide," surmised the General.

"Anytime they approach our forces, we shall shine the light of *ta shih* on them and illuminate them as the daylight illuminates the earth."

**March 21, that same time**

**COSTIND Headquarters**

**Beijing, China**

Now General Hunbaio reflected back to the earlier days of his own long standing involvement with the program. Back to the days when the initial theories utilizing passive electronic detection, bi-static and multi-static radar detection had been advanced in the early 1990's. From there they had progressed to the point where rudimentary systems for those technologies had been developed by late 1998. The earliest systems was unwieldy and unsuited for the control of anything but directed anti-aircraft projectile fire and older anti-aircraft missile technology at the time.

Then, an opportunity had presented itself when the United States announced its intention of using air power to force Serbia to bend to international pressure regarding its Kosovo province in late 1998 and early 1999. The Chinese had secretly contacted the Serbs and gained permission to conduct live-fire, combat tests of the rudimentary system during the resulting conflict. The systems were slaved to Serbian SA-3 anti-aircraft missiles for the tests. The General himself had flown to Belgrade with a hand-picked team and witnessed the precision and apparent invulnerability of the U.S. led air assault. He had personally supervised the installation of those initial stealth detection systems and then monitored their use throughout the entire eleven week allied bombing campaign.

Over two dozen missiles were fired in the first few weeks of the war at contacts identified by the equipment as American F-117 stealth fighters. In those first weeks there were no hits, but they did

achieve several close intercepts. The Americans must have been concerned with those intercepts because they started flying their stealth fighters at higher altitudes to avoid them. Then, on March 28, 1999, there had been success that had rocked the world's military analysts.

On that night, an F-117 stealth fighter was detected at a 5,000 meter altitude in an attack profile over Serbia. Three SA-3 missiles had been launched and one of them set off its proximity fuse and exploded just a few meters below and to the left of the aircraft. The force of the explosion and the resulting shrapnel damaged the aircraft so severely that it crashed into a farmer's field. For the first time a vaunted American stealth aircraft had been downed in combat...and the Chinese were the ones who accomplished it. The General would never forget the adulation and excitement. He would never forget his own feelings as he contemplated the shock and surprise the Americans must have felt.

Although the pilot ejected safely and was successfully rescued by a massive U.S. and NATO search and rescue effort, the stealth aircraft had come down in the farmer's field relatively intact. Then, to the amazement of the Serbs and the Chinese, and later to the amazement of the American high command itself, local American forces had not destroyed the aircraft wreckage as it lay there in the field. Unbelievably, an absolute intelligence coup had been left in that farmer's field and the Chinese and Serbs took full advantage of it.

As he contemplated this, the General side tracked for a moment in his thoughts.

"Funny how the American press never asked about the pilot of that aircraft," the General mused.

"He was not the pilot whose name was stenciled on the aircraft itself and the Americans did not use their amazing rescue mission they had mounted for any PR purposes."

The General had found those two pieces of information particularly odd given the American president who had been in power at the time. Utterly predictable and easily handled by the Chinese intelligence services, that President had always made abject use of any operation that he could to make himself look good. That he had not done so with this particular event had been a topic of much discussion and analysis in the People's Republic of China intelligence circles.

Ultimately Chinese intelligence had concluded that the reason the pilot's name and story were never forthcoming was because the pilot himself had not been American. The PRC came to the determination that the Americans had allowed German pilots to be trained in the use of their aircraft and then used in the air over Serbia. Since Germany occupied over half of the air base near Alamogordo, New Mexico where the F-117's were based, and where several wings of German Tornado and RF-4E reconnaissance aircraft were also based for training purposes... at one of the most sensitive American air bases in the country...it would have been easy for this cross training to occur had it been found to be advantageous and so ordered by that particular administration. In the war in Kosovo, such a circumstance would have been very "politically correct" to help ensure German support. That particular American President and his entire administration had been caught up in political correctness to the point that they most definitely would have allowed such an operational initiative to become reality, irrespective of the security and intelligence risks, if they thought it would buy them something...in this case that German support in Europe.

This conclusion was supported all the more in Hunbaio's mind as a result of his other successes with the Americans at the time. It had been his idea to have a beautiful Chinese woman, who was a Colonel in the Chinese intelligence services, pose as the head of the People's Republic commercial aircraft industry and visit Washington, DC, on multiple occasions during those years on what were deemed trade missions. As a result, she had been able to gain direct access to the American President and his top economic advisors.

The American President's weaknesses in this regard were well known. After the meetings with the beautiful Chinese "*executive*" in the White House, the President had ordered the transfer of all reviews of dual-use technology away from the U.S. Defense Department to the much less secure Commerce Department to "speed up the process and cut through red tape". What had resulted was the transfer of significant aircraft, missile and rocket staging technology to the People's Republic that was directly applied to military research and development applications under COSTIND. It was a tremendous coup for the People's Republic in general and for Hunbaio personally. It had continued unabated for almost eight years.

But all of that had been in addition to the matter at hand at the time in Serbia. The General knew that what had really mattered at the time was the fact that the Chinese equipment had locked on to and downed an American stealth fighter. It also mattered that the wreckage had been recovered so surprisingly intact.

The Serbs had gathered that wreckage that night and into the next day. By previous agreement, the Serbs allowed the Chinese technicians to pour over the wreckage and analyze it first and to retain up to two hundred pounds of the wreckage material of their choice. The resulting data had been an intelligence and technological bonanza for the Chinese. It was also materiel that the Serbs would make good use of over the next several months as several other interested nations also would be given the opportunity to review and analyze the wreckage...of course at a significant cost in terms of hard capitol and future commitments.

But General Hunbaio and his nation had been the ones to benefit the most. Having obtained the desired amount of physical material, the Chinese had prepared a detailed analysis and report and were prepared to ship the data along with the physical materiel back to China in early May. Apparently the American CIA had gotten wind of the Chinese involvement and convinced the American government to act. On May 8<sup>th</sup>, 1999, the United States had used the much more advanced B-2 stealth bomber, which was impervious to the level of the technology the Chinese employed to bring down the F-117 stealth fighter, and dropped several large, guided munitions on the Chinese embassy where the data and materiel was located, destroying it and killing several of the General's best people.

To the American's chagrin, the data had previously been electronically transferred in a raw and preliminary form, which allowed the detailed reports to be reconstructed. In addition, thirty-three pounds of the most valuable stealth wreckage material was recovered from the ruins of the embassy and shipped back to China. But the General's personnel were much more difficult to replace, both technically and emotionally.

In the end, the press had never known the real reasons behind that strike on the Chinese embassy or the intricacies and import of the F-117 incident. Although the two governments never formally or informally discussed it, neither side had ever forgotten it.

From that day on, the General had vowed to bring the stealth detection program to fruition until he could reliably acquire and shoot down any American stealth aircraft. It had taken several years of testing, additional espionage work and significant technological breakthroughs in research and development to accomplish it. Now, the technology appeared well tuned to all of the various stealth materiel the Americans employed and the various methods that were utilizing to try and shield it. The COSTIND engineers had done their duty and the PRC now had the infrastructure in place to continue the development so as to counter the sure American response. What was left was to get the weapons system produced on a massive scale and end the Americans advantage in this area once and for all, like they had already accomplished on the high seas.

**April 2, 03:07 local time**

**145,000 feet over Eastern Siberia**

**Approaching Mongolia**

The approach had come in right over the North Pole. Taking off out of Alaska, separation from the SR-77 Pervador aircraft south of the Arctic Circle at the southern edge of the ice cap on the Asian side and final refueling before ingress just north of the Siberian coast. Now it was time to turn to the south east, kick the PDW engines of his HR-7 Thunder Dart in and scream across Mongolia before turning back towards the Arctic Ocean and a refuel before heading "to the house".

Colonel Mendenhall had made many reconnaissance flights over enemy territory in the last two years. From China to India to portions of the Mid-East, there was not a place on earth America's high-altitude, high-performance, exotic stealth reconnaissance aircraft could not penetrate with impunity. The need for them to do so had become even more pronounced as a result of the "space wars" that were continuing in this conflict where each side was regularly downing the other's reconnaissance satellites. So more pilots were trained to fly the SR-77 and HR-7 combo and the program was extended to both the U.S. Navy and the U.S. Air Force.

Still, "Mac" Mendenhall was the most experienced hyper-velocity reconnaissance pilot America had. He was now also a squadron leader and had been given the lead role in developing the training program for newer pilots. In fact, this mission was to be his last combat operation so he could focus more on that training. If the truth be known, his superiors had hoped he would assign one of his other pilots to this flight, but "Mac" was simply not able to turn down such an important mission.

There were also dangers. The most critical of these were the latest KS-2+ missiles the Chinese had employed on the mainland two years ago, and which they were proliferating to all of their allies as a result of the war. But, although the Chinese had surprised him and his superiors with their ability to reach the altitudes he operated at, they had rarely had enough notification to come close to a physical intercept at the speeds of the HR-7 aircraft, and they had never been able to get a solid "lock-on" to the stealthy aircraft's airframe.

On one occasion, when the Chinese had made first use of the KS-2+ missiles, they had actually achieved a lock-on, but that had been a thermal lock based on Mac's ignition of his afterburners at the time after being surprised that the missiles had reached his altitude. America had since learned that those missile's seeker heads and the software behind them were not capable of a solid lock-on based upon radar. Since that time, the NRO and other military reconnaissance pilots flying these aircraft had remained much more cool and no aircraft had been lost.

"There are rumors through intelligence channels of an even more advanced missile," Mendenhall thought as he approached his next navigation point, "I'll have to keep that in mind."

Today the mission was taking the Colonel back over enemy held territory on the mainland of Asia, over Chinese owned Mongolia. The mission profile called for the flight to pass within forty kilometers of a research facility on the high plains of central Mongolia and to capture thermal and electro-magnetic readings across the spectrum as well as visual imagery of the facility. This data

would be transferred directly to higher altitude drone aircraft operating over the Arctic Ocean which would in turn relay the data to an AWACS aircraft operating near the pole. From there the data would be transferred back to the States and received in real time back at the NRO headquarters in Chantilly, VA and at the situation room in the White House.

“Concern for what is going on at that research facility looks like it reaches all the way to the top of the food chain,” thought the Colonel as he prepared to activate his sensor package.

**April 2, 03:10 local time**

***Ta Shih* Enhanced KS-3 Missile Battery**

**PRC COSTIND Research Facility, Central Mongolia**

Captain Hu Ziyang recognized the approach profile of the incoming enemy aircraft. He had dealt with them before. In fact, it was as a result of those earlier encounters that he had been promoted and assigned the task of protecting this critical research facility from enemy air attack. His standard radar was registering the intermittent, hyper-velocity contact typical of an American high-altitude, hyper-velocity stealth mission. Other than the intermittent contact though, that equipment was unable to lock-on. If the approach profile came close enough, he knew he could launch his un-enhanced KS-2+ and newer KS-3 missiles and hope for an infra-red intercept, but that was literally a long shot. But tonight, the Captain knew he would not have to rely on that.

“No, tonight, my elusive American friend, we are going to bring you down hard,” thought the Captain as he waited for the intermittent contact to come within range of his *ta shih* sensors.

As the contact came within 200km, the Captain ordered his two enhanced KS-3 batteries to activate their *ta shih* detectors and within two seconds he had his answer.

“Captain, the system has identified the aircraft as an American stealth reconnaissance aircraft closing on a bearing of 282 degrees, altitude 45,000 meters, speed mach 4.2 We have a solid lock.”

**April 2, 03:11 local time**

**160,000 feet over Central Mongolia**

**Approaching PRC COSTIND Research Facility**

“Mac” Mendenhall had already activated his sensor package and was just beginning his turn. The data was already being recorded, encrypted and communicated in bursts to the circling drone aircraft that were flying at an altitude almost twice that of his own well to his north over the Arctic Ocean. At the speed of light, they were transmitting the mission data back to North America, the NRO and the White House.

Mac had also noticed the various conventional radar bands that were trying to get a lock on his aircraft and was flying secure in the knowledge that they could not do so. He knew that at any moment the Chinese would launch their high performance missiles at him in an effort to get an infra-red intercept, but he also knew how to handle that and avoid the lock-on if he simply kept his cool.

What Mac hadn’t noticed, because his equipment had no way of sensing it, was that the Chinese *ta shih* detectors associated with the two enhanced KS-3 missile sites had already locked on to him. When their missile launches were monitored by his aircraft, it came as no particular surprise to him. What would come as a surprise to the Colonel, and to every American who was monitoring the engagement, or who would later see the data, was what followed those missile launches.

**MISSILE LAUNCH, MISSILE LAUNCH, MISSILE LAUNCH**

The flashing of the red warning light and the accompanying incessant words in his headset, though of no great surprise, did get the adrenaline flowing and cause the Colonel to focus on his defensive systems while the sensor package continued its automated sequence of recording, encrypting and broadcasting.

Within thirty seconds all of that changed as both surprise and immediate, mortal danger overshadowed past experiences and as the Colonel’s training kicked in to compensate.

The KS-3 missile was a significant enhancement over its KS-2+ forerunner. Capable of engaging targets at up to 70,000 meters in altitude (210,000+ feet), and capable of a maximum speed of Mach 10, the KS-3 missile was designed to intercept incoming ballistic missiles. In the conventional mode, using normal radar, the missile had a maximum range of 500 km (over 300 miles). In the *ta shih* enhanced mode, all of its performance criteria remained the same, except for the range. Since the current *ta shih* detectors only had a range of 200 km the stealth directed range was limited to that distance.

As Mac Mendenhall approached at mach 4.2 and closed to within 175 km of the facility he realized that the four missiles rising to meet him were accelerating more quickly and to higher speeds than anything he had experienced before. Quicker and faster than anything he had ever been briefed on. When those same missiles passed through 130,000 feet and showed no deceleration at all, but continued to accelerate past mach 7, Mac knew he was in trouble, and he knew that he was facing a radically more dangerous Chinese threat. Every instinct told him, and he wasted no time responding.

“Hightower, Hightower. Aborting approach and performing an emergency egress to vector ...”

Those words were the last words Colonel Mac Mendenahall would ever utter. At that instant, as he concentrated fully on his egress and defensive measures, and just as the Colonel desperately activated his ejection module, two missiles slammed into his aircraft at a speed in excess of mach 8 resulting in a massive explosion and a total disintegration of Mac's aircraft.

**April 2, 03:15 local time**

***Ta Shih* Enhanced KS-3 Missile Battery**

**PRC COSTIND Research Facility, Central Mongolia**

It was over. The Captain could scarcely believe it.

Where there had been a solid return from the approaching and then rapidly turning American reconnaissance aircraft, there had appeared the plotted tracks of the missiles converging, a brief expansion of the contact return ... and now nothing. The system stated simply.

**CONTACT DESTROYED**

The American had really had no chance. Had he immediately turned to egress at maximum thrust the moment his own systems detected the KS-3 missile launches he might have gotten away. But, clearly the American thought that these missiles, although faster, would not be able to lock on to him, or even reach him since he was flying at a higher altitude than the KS-2+ missiles were capable. So, he had flown on, and in so doing, he had sealed his own fate.

Two of the missiles had struck right after one another as the American accelerated to mach 5.3 and turned away. There had appeared to be a separation of some type just before impact that could have been an ejection of some sort, but the expanding explosion had engulfed it all. Nothing of any measurable size coming out of that explosion had been detected by the sensors, either the *ta shih* or conventional radar.

"And no wonder," thought Captain Hu, "any debris or ejection module, hitting the air stream at mach five would be pulverized into nothing but the smallest of fragment, metal, plastic ... or flesh."

**April 8, 18:37 local time**

**U.S.S. Tarawa Flight Deck**

**Off the Coast of Sydney, Australia**

Captain Simmons had seen a lot of death and destruction over the last several months, more than he would have dreamed possible. As the allies retreated across Australia and finally been confined to the southeast corner of the continent immediately surrounding Sidney and Melbourne, he had dealt out his share of that death and destruction on the advancing hordes of Chinese, Indonesian and Indian soldiers. In the process Billy had two helicopters shot out from under him and lost three rear-seaters.

As many combat veterans experience, Billy had become reluctant to get to know those he flew and fought with too well ... the pain of the loss just keeps on mounting, the personal sacrifice, though hidden, just keeps on building. Still, that personal sacrifices was not enough. The collective sacrifices of all of the allied forces and the Australian civilian population were not enough ... in fact, they had been woefully inadequate in the face of what they were fighting.

Billy had watched first hundreds of thousands and then several million Australian civilians herded like cattle in advance of the enemy onslaught, terrorized by the rumors and accounts of what was happening to their countrymen and their property falling under the CAS and GIR rule. There was little doubt that the accounts were true ... the world had seen abject evidence of it on WNN and other networks over and over again. But none of what Billy had personally witnessed up to this point compared to what he was witnessing now.

The enemy numbers were overwhelming. A breach had occurred and spread on three fronts. Melbourne had fallen almost three weeks earlier with great destruction and a tremendous loss of life. Billy could scarcely bear to think about what his eyes had witnessed, the death and misery of so many women and children. There had been a resulting huge influx of civilian refugees into the Sydney area, many of them injured, most all of them completely possession-less except what they had been able to carry on their backs.

Now, Sidney was imminently threatened in a similar manner, except that it would be far worse.

"Now there's no place left for them to run," Billy said to himself.

Allied forces were now embroiled in an overall evacuation effort that made Dunkirk in World War II pale in comparison. Operation Plan NZ-AUTUMN was in full gear and one and one half million Australian, American, United Kingdom, Canadian, Brazilian and other allied troops were being withdrawn in the face of an enemy force that had swelled to over four million front line combatants. In the face of those numbers, over five million Australian citizens also desperately wanted out.

"But most of those will never make it," Billy realized as he contemplated the horror that would ensue in those final hours.

"It'll be a miracle if most of the allied military forces get out, much less the civ's," he thought."

Seeing to it that such a miracle occurred was what Billy and all of his compatriots were focused on twenty-four hours a day.

The Allied naval force off of Australia had grown to be the largest naval force the allies were employing anywhere in the world. The U.S. now had a large deck carrier force of four carriers in the waters between New Zealand and Australia, the U.S.S. *Shanksville* having arrived in theater within the last week with her battle group. That total force was shielded by no less than six Aegis cruisers and fourteen Arleigh Burke Aegis destroyers, complimented by eight attack submarines. Each carrier carried an air wing consisting of 24 F/A-18E Super Hornets, 18 F/A-18F two-seater Super Hornets, 12 F/A-35C Joint Strike Fighters, 10 HV-22 ASW Ospreys, 4 E/A-18 EW Growlers, 4 E2C AEW Hawkeyes and 4 SH-60F Seahawk aircraft. Over three hundred aircraft on the large carrier task force alone that was defending the sea lanes and trying to hold back the advancing enemy forces. The ground based air component of the allied efforts had dwindled to less than one hundred aircraft as the large enemy forces came closer and as those aircraft that could still take off and land from increasingly threatened airfields were forced to retreat to New Zealand so they could fight another day.

Closer in to the coast, the allies were employing seven Sea Control Carriers to augment defensive duties and to punish the advancing enemy further. Two Tarawa class and two Wasp class were employing air wings of 8 AH-1Z Super Cobra, 4 AV-22 Osprey, 4 EC-22 Ospreys for AWACS, and 18 A/F-35B VTOL Joint Strike Fighters in the Sea Control mode. The HMS *Illustrious* and the completely repaired HMS *Ocean* were both employing mixed, sea control air wings for the United Kingdom, eighteen aircraft on the *Illustrious* and twelve on the *Ocean*. Finally, the newly commissioned HMCS *White Horse*, the Canadians new carrier was also operating close to the Australian coast with an air wing of 10 Joint Strike Fighters and 8 ASW helicopters.

With all of the escort ships, with the support, replenishment, ammunition and other logistical ships and the naval amphibious ships, the allies had well over 250 military vessels operating off of Australia in support of the evacuation. Added to this were the over 1000 Australian and New Zealand commercial and private vessels that had volunteered to help evacuate the beleaguered continent.

As he climbed out of the cockpit and as he and his companion made their way across the flight deck towards a debriefing and then a quick four hours of sleep, Captain Simmons contemplated the mission he had just completed.

"All ordinance expended, almost all of our fuel ... seeing Terry and Mike go down in that fire ball ... Lord God Almighty, when will it end? Will it ever end?" he thought.

"... and the poor civilians."

Billy had been operating about thirty five miles inland just to the west of the Great Divide Range, where the front lines of battle were now located. The suburbs of Sydney were being hit and hit hard. Seeing the homes and business of civilians going up in flames while those very people ran to the east for their lives, into a more and more cramped space, had broken Billy's heart again and again ... and strengthened his resolve.

"These monsters must be stopped... this scene cannot, it *must not* come to my home in America," he had thought as flew over the scenes of destruction and engaged the advancing enemy.

"I pray to God that we can somehow stop it for these fine people here ... and if not, that enough of us can survive to one day come back here and set things aright, to retake these lands for their rightful owners," he completed.

As he formed those thoughts, and concentrated on avoiding enemy flak, the very idea of surviving was driven home to him as his wingmen, Terry and Mike had been killed in a blinding explosion to his right. Billy saw a nearby ZU-23 radar guided anti-aircraft emplacement that had remained passive until the American helicopters were right on top of it had been the cause of his friend's deaths. Billy had banked back around behind an oak covered hillock, locked up the target and destroyed it with his last Hellfire missile. Soon thereafter he had expended the last of his other munitions and broke off and returned to the Tarawa. He was grateful to return to the ship alive and well, but sorry he didn't have an endless supply of fuel, munitions ... and wing men ... so he could constantly take the fight to the enemy. He was driven to do so, as were so many of his compatriots, because he couldn't help but see his own family and friends in the people here in Australia whose world and very lives were falling apart in fiery destruction and death right before his eyes.

To the east of the mountains, the allies maintained air-superiority, so once Billie flew his AH-1Z across the mountain range he was in relative safety. But over the advancing battlefield the enemy was employing hundreds of older technology aircraft and scores of their newer ones to good effect in preventing the allies from dominating the air. In fact, the only place the allies were able to maintain total air dominance was immediately over the coast and over the fleets. From Billy's perspective, while the enemy was losing many aircraft, they seemed more than willing to do so because it was allowing their ground forces, which were nonetheless being terribly savaged by western standards, to continue to advance without being decimated to the point of stalling.

The naval situation was good here locally for the allies and this was what was allowing them to continue the evacuation in the face of the enemy advance. But there were some very serious issues. Indian and Chinese attack aircraft in the form of Backfire and Blinder bombers were a constant threat for cruise missile and especially LRASD, "Killer Whale", attacks. The recent arrival of the HMCS *White Horse* was a perfect example. That ship replaced the Japanese Maritime Self Defense Force

Osumi class Amphibious Assault vessel, the JMSDF Motobu, when it was sunk three weeks ago by two LRASD weapons launched from a group of TU-22M Backfire bombers that penetrated the defensive zone in the western sector below Melbourne. The Japanese forces in exile were bravely taking up their part of the fight here in Australia and their sacrifices and efforts were an inspiration to all. But the sinking of one of their few remaining capital ships was a terrible blow. It had happened during the unbelievably hectic period of time surrounding the fall of Melbourne. Several escort ships, including a U.S. Burke class destroyer had been sunk in that same attack that day.

In addition, many "picket" destroyers and frigates were continuing to be sunk by similar attacks as the enemy continued to advance. The allies expected a mammoth air attack to accompany the final push by the enemy over the Great Divide Range. That push could occur at almost anytime. In addition, reconnaissance and intelligence reports indicated that the Chinese and Indians had increased their naval presence to the west of Melbourne and well north of Sidney. It was thought that the Chinese now had three separate task forces consisting of three Beijing Class carriers in each task force to the north and that the Indians had all four of their carriers to the west. It was apparent to everyone, that in addition to the major ground and air battle associated with the assault on Sydney, that a major sea battle was going to develop as well. Billy could only hope that they were prepared for it.

**April 10, 21:50 EDT**

**Trevor Residence**

**Nashua, New Hampshire**

Elizabeth could tell when her husband was concerned and this evening it seemed far worse than anything she had seen in years. He was moody, he was somber and he was pre-occupied ... traits he rarely displayed when they were together at home. It had been building for days and even the Annual Conference of their Church a few days ago had not dispelled it.

What was even more telling was that he had not shared it with her, which meant it was very bad.

Well, from long experience, whether dealing with ideas that had his mind pre-occupied, concerns over their daughter, concern over her or the occasional problem where his fretting was causing him to "go it alone", Elizabeth Trevor knew how to deftly raise the topic with him and draw him out. She also knew, from that same long experience, when to do so.

Now was the time.

"Joe," she said.

When he looked up from the papers he was intently studying, she continued.

"You know, I was told once," referring to a saying of Joe's that he had shared with her on so many occasions, "that a heavy load is more safely supported on two columns than it is on one alone."

For a moment his brow furrowed. He looked on the verge of saying that it was nothing she need concern herself over and he could handle it. Wisely, Elizabeth said no more, she just continued to look into his eyes conveying nothing more than her love for him and desire to be there for him. After a moment, the furrow disappeared, he sighed slightly and a smile slowly spread across his face. As he held his arm out and they clasped hands between their two recliner chairs he began.

"You're right honey ... and thanks for reminding me. Sometimes the hardest advise any of us have taking is our own.

"I do need to share this with you and get your advise and council. I should have done it several days ago. I had hoped that the church conference might convey an answer to me ... but I was so preoccupied that I am afraid I didn't listen too well."

Joseph Trevor stopped speaking for a moment. The weight bore down on him.

"How could I have been such a fool," he thought.

"How could I have been so easily taken in and taken advantage of," he continued in his mind.

Almost eight months ago Dr. Saundra Eleanor McPherson had approached him about using his own research to develop virtual modeling techniques using high speed and high capacity computers to perform the same functions he accomplished with physical data and advanced microscopies. The same techniques that had led to the discovery of the HRS that had led to his own Nobel prize. Dr. McPherson was brilliant and driven, but she and Joseph differed radically on philosophical and moral issue and he knew it. Still, in the hopes of pure scientific advancement, he had set that aside.

Last week he had discovered exactly what her intentions were with the methods he had allowed her to develop and it had hit him like a freight train.

"Honey, it's Saundra McPherson and this whole virtual modeling idea that she talked me into helping her develop."

Elizabeth didn't understand. She had traveled with Joseph regarding this. She had met Saundra and she had thought that despite the philosophical differences that an accord had been reached and that things were progressing nicely.

"I don't understand Joseph. I thought she was having great success and that it was going to lead right to where you hoped it would."

Now his shoulders slumped slightly as he responded.

“That’s just it . . . it is! All of that, and the success ends up to be the lure that she laid out there for me and I snapped it up and swallowed it whole. It is successful. The funding has paid off and will allow the technique to be proliferated into many fields of study.”

Elizabeth listened. As Joseph explained the good fortune, his countenance continued to fall.

“Then what could possibly be the matter?” she asked.

Joe could see that he was confusing her and that the time had come to open his heart and share the thing that had him so perplexed and so distraught.

“The matter is that she is going to use this technology that I have helped her to develop to further the study of fetal tissue . . . directly from aborted little babies . . . children of God!”

Elizabeth was shocked.

“Joseph, she can’t do that. It’s illegal. What on earth are you talking about?”

So Joseph explained it. He shared with his wife how a colleague had called him from the west coast and discreetly informed him regarding his own concerns and presumptions regarding some of the “side” work Dr. McPherson was involved in. That friend was an alumni of Stanford where Sandra worked, was very conservative, was pro-life and also set on the advisory board at the University that oversaw dispersal and oversight of donations to the University, himself having been a frequent large donor in years gone by.

The information his friend had provided had led Joseph to ultimately discover the trade, or communication of fetal tissue data that was going on between universities and research facilities in Europe and some researchers in America, where the physical tissue could not be had. When finding that Sandra was in the middle of this, and in fact was one of the principle facilitators here in America, it had become all too clear what she intended with the virtual modeling techniques for the research processes that he, Dr. Joseph Trevor had developed.

“Honey, she is going to use those techniques . . . my methods . . . to facilitate much more thorough and detailed studies of European fetal tissue. It will create a virtual business of that study here in the United States, deftly and completely circumventing the law!”

Now Elizabeth understood and she got up from the chair and took Joseph in her arms.

“What a horrible thing for her to do,” she thought realizing how Joseph was punishing himself for Sandra’s decision.

“Honey, you can’t hold yourself responsible. Sandra is the one making these decisions, not you. What she has done is a result of her own free agency. She will ultimately be accountable for it and in the mean time, her own methods will allow for other good research to be done that otherwise could not have occurred.

“God uses everything for His purposes in the end, you know this. The scriptures tell us that there must be opposition in all things to try us and to allow us to progress. That is what this is. Please listen to me and stop punishing yourself. Please put this in God’s hands.

“He also tells us that all things work for the good of them that love the Lord. Sweetheart, I know that you do and I know that it will work for the good.”

His wife’s voice and reassurance was exactly the balm that Joseph needed. It was if though a healing ointment had been spread across his soul. He could recognize the confirmation in his spirit of the truth of what she was saying and he accepted it. He would let events take their course and stop brow beating himself over something that had occurred due to the manipulations of another.

Oh, he was still not happy with Dr. McPherson in the least and he was determined to call her and give he a piece of his mind and then break off his relationship with her entirely. Then, he was going to call the U.S. Attorney General’s office and see if there was some loop hole or some provision in the law that could stop her from continuing with what he felt was her grizzly research.

But the course of history had already been set and there was nothing Joseph Trevor could do at this point to alter it. The research would proceed and it would produce results, consequences and a legacy in its own due time . . . and it was not far off either.

**April 14, 02:08 local time**

**145,000 ft. Over the Black Sea**

**145 miles off the Coast of Georgia**

This would be the first combat operational use of the HAHVIC. It was a device that had been developed especially for the SR-77 Pervador for use by American special forces when two to four operatives simply had to get somewhere in the world in the quickest time possible. The device had been rigorously tested in the American west and then over areas of the Pacific Ocean off the American west coast, but it had never been used in a combat zone and it was the first time that Captain Riley Adams had ever occupied one . . . and he’d been sitting in this one for well over six hours now.

“Oh well, things could be worse,” he thought. The device was fully pressurized and contained its own oxygen supply. It was also outfitted with a communications package, with drinking water and with a waste pouch and it had a lumbar supported and cushioned couch to sit in. All of those were comforts that Special Forces members like himself rarely had the luxury of, so he couldn’t complain.

But the thought of moving through space at a speed in excess of four times the speed of sound in one of these things was unnerving, especially when your speeding toward your enemy at that rate with no control except for computer calibrated trajectories. It wouldn't be until after he passed through 1000 feet that he would disembark from the capsule with his parasail and his weapons. Then the Captain would feel in control again. He knew that the Master Sergeant that was making the insertion with him felt the same way, in fact, if anything, the Master Sergeant would be even more antsy than Captain Adams. He also knew that they both would professionally do what had to be done to "Charlie Mike", and continue the mission.

HAHVIC stood for High Altitude, Hyper-velocity Insertion Capsule. It was a small, aerodynamically shaped flying wing made entirely of composite stealth material that could hold one man and his gear. Each SR-77 could carry up to four of the devices, two in each of its large instrumentation bays if needed. In this case, two HAHVIC's were being carried in two bays while the other two bays were devoted to a normal mix of reconnaissance and electronic warfare instrumentation. Conceptually, launched from a stealth reconnaissance aircraft at extremely high altitude and gliding down to low altitude before the operative exited the capsule at less than 1000 feet, the insertion would be wholly undetectable by any enemy force.

But that concept and theory had been shot full of holes just over a week ago with the loss of Mac Mendhall and his HR-7 Thunder Dart over Mongolia. The pilot and his RIO had been briefed along with the Captain and the Master Sergeant regarding the ramifications. Intelligence and the entire command chain was almost positive that the devices used in Mongolia were prototypes and could not possibly have been deployed yet on this side of the world.

"Almost positive are the operative words there," thought Riley Adams as he was informed over the communications channel that they were only sixty seconds from release.

"Of course those guys who are *almost positive* that it couldn't possibly be deployed here are not the ones strapped into this baby making the decent into Indian country.

"Oh well, that's why we get the big bucks, hah!" concluded Adams as he mentally counted down the seconds and did one final radio check with the sergeant.

"You ready Master Sergeant?"

The Master Sergeant, who was an eighteen year veteran and had been expecting one final check from his commanding officer, responded immediately.

"Yes sir, as ready as I can be...and ready to get down on the ground, Captain."

"I roger that. Well, here we go in three, two, one ... separation!"

Both men heard and felt the *CLICK* of separation and then the almost complete quiet associated with an un-powered, faster than sound transit through the high altitude air. Neither men saw the SR-77 that had released them bank to the left and back out over the Black Sea on its way to more friendly skies. Those skies were a long way away at this stage of the conflict and there was no margin for loitering to see how the special forces personnel fared.

Captain Riley and his Master Sergeant were now two American Special Forces personnel being inserted deep into enemy territory on the highly classified and critical mission that they had been assigned personally by the Director of the Central Intelligence Agency, Robert Ballard. They would ultimately exit their HAHVICs at low altitude and the insertion devices would then impact the water and sink beneath the waves of the Black Sea. After separation, the two operatives would parasail into the water two miles off of a remote portion of the Georgian coast. There they would use the small inflatable raft that the Master Sergeant carried and paddle to the designated spot on shore where they were scheduled to meet up with Captain Luke Hanson and his partisan force of resistance fighters.

Captain Hanson and his force had been mounting resistance efforts behind enemy lines in Turkey, the former Iraq, Armenia and now Georgia for over two years. Back then, Hanson, the commander of the security forces at the U.S. Air Force base at Incirlik, had been cut off while performing a diversion for retreating American forces when the air base had been overrun by GIR forces. His efforts behind enemy lines for all of this time were the things legends were made of and Riley Adams was anxious to meet and get to know the man.

"Well, I'll soon have that opportunity," thought Captain Adams as his parasail successfully deployed and he scanned the coastline and the water below him. He could see the Master Sergeant about fifty yards off to his left doing the same.

"Our orders are to take whatever time and whatever measures necessary to carry out this mission. And that's exactly what is going to happen," he thought.

**April 17, 09:18 MDT**

**Greyhound Bus Station**

**West Bannock Street, Boise, Idaho**

Geneva watched as her two sons prepared to get on the bus. They'd be leaving in less than fifteen minutes. She reflected back on both of their lives, their upbringing, the death of their father back in Chicago so many years ago, the feelings she had as both Leon and Greg had drifted into the gang culture and then the almost rapturous feelings that had come as her oldest, Leon, had pulled

himself up out of that environment and brought the whole family with him. Those had been glorious days of new friends and new opportunities as they had moved out west here to Boise, Idaho where Leon started college with a scholarship at Boise State University. Then the war had intervened and Leon and his friend, Billy Simmons, had joined the U.S. Marines together and gone off to fight. Alan, who was benefiting from the fine example of an older brother and who, thankfully, was mature enough to emulate it, had joined the local Home Guard unit and followed in his brother's footsteps.

Then had come the news of Leon's severe injury and the weeks waiting on word of his arrival back home. Then the months of waiting by his bed side in San Antonio, Texas until he had finally come out of the coma to discover he was a hero who had been awarded the medal of honor.

For Geneva, the tale Leon told of meeting his father while he was in that coma would stay with her until the day she died. It reaffirmed her faith and even now, brought tears to her eyes to think about it. Leon had described physical characteristics and mannerisms about his father that Geneva believed he couldn't possibly have remembered from his youth. They had spoken of it on many occasions and she had reviewed it in her mind over and over again. Geneva was sure that the tale would live in the family for generations, bolstering their faith.

"The kind of faith makes strong families," she thought as she contemplated it again.

Next to Leon's miraculous recovery itself, Geneva was certain that the story of his meeting with his father was the next most important thing to come out of Leon's whole ordeal. In fact, she was certain that his survival and the telling of that tale were fused together and, along with whatever else was in store for Leon's life, that it was a principle reason for his survival.

"Like the good Lord sending us all a message from over Jordan," she surmised.

"And it's a message I'm gonna spread ... and hold in my heart 'til I see you again, Jerome."

After Leon's release, he had been sent home with significant leave to ensure his complete recuperation and recovery. There was a promise from the military, from the President right on down that Leon would be able to stay stateside if he so desired to help in the immense and ongoing job of recruitment, and in January he had embarked on that assignment.

But he never became comfortable with it. He was bound and determined to get back into action and ultimately, despite her own misgivings, he had received his orders and now here he was shipping out to the west coast for deployment into the Pacific Theater of Operations somewhere.

... and Alan was going with him.

Leon and Alan had been thicker than thieves the last six months and as a result of that influence, Alan had decided to join the Marines and follow in the footsteps of his brother. He was now shipping out to the same Marine Recruit Training Depot in San Diego where Leon had done his basic training.

Geneva Campbell was a loving mother. She was the epitome of the great tradition of strong and loving mothers in the sub-culture that had produced her in America. Resolute, strong willed, strict and as unflinching as limestone when she had to be, but understanding and loving to her own and anyone who helped her own. No one came between Geneva Campbell and her sons ... no one. She was also a proud American and recognized the opportunity that was latent in the liberties and freedoms in America and that her traditional Christian faith and values made possible for anyone who would use those values to take advantage of the opportunity America offered.

She had passed these principles on to her sons, and like many parents, was gratified and somewhat surprised when she found that those teachings had taken root and born good fruit. Her sons had made good use of what she passed on and she was grateful beyond measure to her Maker for it ... and to her deceased husband, Jerome Campbell, even if he was not here physically to see it now. He had been a hard working, good man, husband and father.

As a result of Leon's experience, she knew that he knew ... and that he was proud of his sons.

"Oh, Jerome, we got lots to be grateful for now don't we?" she asked silently as she gave Alan a hug and gazed heavenward within his strong grasp.

"Just look at my young men!" she said out loud.

"So strong, so brave ... and headed so far away!"

"Momma, don't you worry yourself now. We're gonna be alright. Besides, those NCOs that slapped Leon around and finally made a man of him are about to find out what a real Campbell man is made of!" Alan said to try and comfort his mother as the two of them finished their embrace.

Geneva knew that this strong talk was Alan's way of masking his apprehension. Despite his experiences on the street in Chicago, despite his experiences in the Home Guard here in Idaho, Alan had never really been away from home. As Alan stepped back to make room for his brother, Leon slugged his younger brother in the arm before putting his arms around his mother.

"Listen to the little big man would you now," he said.

"You better listen up good on this bus ride bro, and maybe, just maybe I'll tell you the secret of how to get through the mess you've gotten yourself into. You have no idea ... and I'll tell you what, the recruiter sure didn't let you in on it either," he added with a laugh.

Turning his attention to his mother, Leon leaned back a little and looked into her eyes.

“Mom, we're countin' on you to hold down the fort here ... and to keep sending those letters. Never think for a minute that they are wasted, even if we can't write back as much as we would like. Those letters are like sweet water to a man dieing of thirst. They are like gold to a pauper.”

Then he squeezed her a little harder, leaned closer and whispered in her ear.

“God bless you mom. We're not nearly as tough as we let on.”

Then, as Geneva waived to them both, Leon and Alan Campbell both got on the bus with the other passengers. Two minutes later, as Alan looked out the window at his waiving mother, the bus driver got into the idling bus, closed the door, and they drove away.

## Chapter 25

*"If you dig deeply, there is no telling what truth you might discover ... but only if your heart and mind are willing to accept it." Unknown Colonial American Pastor*

**April 19, 15:31 EST**  
**WNN Corporate Office Suite**  
**New York City, USA**

David Krenshaw rapidly opened the package he had just received by special courier service from Europe. Inside he found the digital video disk he had been promised. He carefully took it out of its package, walked over his digital music and video center, and inserted the disk into his "special" video player which was located in a second stack of equipment below the equipment normally used for executive meetings held in his office. Walking back past the plush leather chairs in front of his desk, he retrieved the remote from a digitally locked safe drawer in his desk. As he did so, he touched the intercom button on his desk and spoke to his administrative assistant.

"Jackie, hold all of my calls and any interruptions for the next twenty minutes please."

She responded immediately.

"But Mr. Krenshaw, the President of ABS has already scheduled a call with you at three-forty five, that's only thirteen or fourteen minutes from now."

David appreciated his assistant's reminder. She had been with him for several years and knew that he was a stickler about his scheduling, particularly about never missing anything of the slightest importance. But he also knew she could handle either stalling, or rescheduling the call, however important it seemed. He simply had to make it clear to her.

"Yes, I know Jackie, but something critical has come up and I am absolutely not to be disturbed for the next thirty minutes. See if Thomas can either hold for a few minutes (and David relished the thought of the President of ABS holding on the line for him) or reschedule."

Jackie wasted no more of her bosses time.

"Yes sir Mr. Krenshaw, I'll take care of it."

Freed from any further disturbances or encumbrances, David sat down in his favorite chair to watch the video. He used the remote control he had retrieved to activate the special set of equipment. The controller had been programmed to respond only to his right index finger activation. Once activated, David carefully entered the thirty-two digit shipping code followed by his own twelve digit PIN. He got it right on the first attempt and the disk immediately activated and began to display on his 72" flat screen monitor that was the centerpiece of David's high-tech and very expensive executive video display and conferencing center.

Twenty-five minutes later, David turned off the equipment and began copying the video disk onto standard WNN video media. As the disk copied, he used the intercom again contact Jackie.

"Jackie, cancel the rest of my afternoon and have both the National and the World-Wide News producers meet me here in my office in the next five minutes, say right at four o'clock. I have just been informed of a breaking story that simply must make tonight's national and international news.

"As they say ... stop the presses."

As Jackie made the arrangements, David leaned back and muttered to himself.

"I can just here it now ...

"Another startling breakthrough by the leader in World Wide News, WNN, and the leading news executive on the planet, David Krenshaw!

"Connections and networking ... the world turns on connections and networking and I don't mean the World-Wide-Web."

**April 19, that same time**

**Four blocks away, direct line of sight**

**Top Floor Edmonds Mercantile Center, FBI Observation Room**

The entire leadership for the Joint Terrorism Task Force Team assigned to the WNN investigation was present as they monitored David Krenshaw's office activities this afternoon. The courier package had been monitored since it had left Hamburg, Germany and had triggered the increased interest and surveillance. The package itself had been held long enough in customs at JFK to make a complete copy of the contents, which had consisted only of the video disk, while the courier himself was held and a replacement used for the delivery. Now, using the latest laser technology, the latest phone tap technology and the latest micro-electronics, the team was privy to almost everything David was saying, or even muttering to himself, as well as the inputs he made on his controller.

Director Andy Syke, after his tremendous success with Manuel Mendoza and the entire Hector Ortiz affair, had been transferred at the direction of the Director of the FBI to become the Agent in Charge of the Krenshaw investigation. Agent Ludlow, who had masterminded and led the Operation Alvarez portion of the Hector Gonzalez affair and who had personally taken Hector Gonzalez into

custody, was serving as Director Syke's second in command of the investigation. The Director of the FBI, the Director of Homeland Security, the Director of the Central Intelligence Agency and the President of the United States were all very pleased with this arrangement and were hopeful of rapid progress in the case involving David Krenshaw. The case, involving such a prominent individual in the media and one so politically influential due to his position with the Council on International Relations, had to be handled delicately. The leadership who were aware of the operation felt that this team, with their success and handling of the Gonzalez affair, were just the ones to get the job done.

Director Syke spoke up as Krenshaw was heard addressing the producers in his office.

"Have we gotten any further with that copy of the video. From the audio in Krenshaw's office it's clearly something dealing with ongoing action in Australia?"

After conferring briefly by cell phone with one of the analysts who was working with the disk and after carefully reviewing Krenshaw's activation of the original on his equipment in his office, Ludlow responded.

"Well, we haven't broken the encryption yet, not even close. But we know that Krenshaw apparently used the shipping code as one part of the key, coupled with his own identification code to activate it. We are trying to determine what routine on the disk accepts this code so we can activate our own. The audio track we picked up from his office is going to help because we now know what the audio is supposed to sound like.

"Hopefully, that will help us figure out the encryption methodology used in the video. But it's going to take time."

As Syke took this in, one of the agents who was monitoring the conversation going on in Krenshaw's office interjected.

"Director Syke, Agent Ludlow, I don't think we're going to have to worry about what the video portrays. Apparently the producers at WNN have just determined, based on Krenshaw's direction, to go with the video, unedited, on the 5 PM news. In less than an hour we'll be able to see all of it."

As Andy took this in, he turned to Ludlow.

"Gerald, you stick it out here, I'm going back to the office. On the way, I'll get the Director on the line and recommend he advise the President and his National Security team to watch this broadcast. From the sounds of that tape, it's going to be critical."

**April 19, 17:01 EST**

**WNN Evening News**

**Lead Story, Special Report from Australia**

On millions of television sets and computer screens around America and all over the world, a somber faced David Krenshaw appeared announcing the lead story.

"Ladies and Gentlemen, this is David Krenshaw with WNN. Tonight's news leads with events from Australia. What you are about to see is graphic and represents the continued horror of the war raging around the globe. Viewer discretion is advised.

"We present it this evening unedited and in its entirety. I have personally made this decision as the Chief Executive Officer of WNN News because it is information we at WNN believe needs to be seen and heard by all of our viewers. This news is less than 24 hours old, comes directly from Sydney, Australia and it is not information that is being communicated or shared at this time by our elected officials to the public at large.

"We therefore, at WNN have elected to share it with you now."

With that opening statement, the view faded to a view of a harbor with dense clouds of smoke billowing from fires too numerous to count in a business district on the opposite side of the harbor from the camera's location. As the camera panned to the right, a bridge came into view which was instantly recognized as the Sydney Harbor Bridge ... except that the magnificent steel arch was broken about one-third of the way across from each of the beautiful, twin-tower supports and a mass of tangled steel hung down from each side. Fully one-third of the bridge was gone, evidently lying in the water as black smoke rose from the ruined ends of the bridge on each side. Panning back to the left, across the channel, the camera focused in on the fiercely burning ruins of the Sydney Opera House where it sat on its familiar spit of land jutting out into the harbor. The familiar Government House was completely destroyed and burning in the background, whose smoke was rising into the air to join the pall of smoke rising from the countless other fires behind it.

Zooming back out, and continuing to pan to the left, an entire squadron of SU-24 Fencer attack aircraft could be seen as they screeched deafeningly overhead and turned to wheel over Darling Point before turning back toward the harbor. To the right of the point, up near what many would recognize as Centennial Park, the Australian Stock exchange lay in a smoldering ruin, bombed out and burning.

The camera quickly came around to show the inlet to the harbor and the Pacific Ocean beyond it. The bay in that direction was thick with the wakes of many small craft and several larger vessels making for the harbor entrance and the open sea. It was upon these vessels that the SU-24 Fencer squadron focused its attention. No allied aircraft were seen in the immediate vicinity. Heavy anti-aircraft fire was rising from several of the vessels and the smoke from their firing and the paths of the

tracer shells could clearly be seen, the tracer fire stitching patterns in the air, reaching heavenward hoping to cross paths with the wildly twisting and turning aircraft that had just passed over. Several smoke trails, evidently left by weapons launched from the aircraft, trailed down into the water. Five of these ended in the smoking wreckage of small to medium sized boats, blown apart upon impact. Many human bodies clad in civilian and military clothing, some of them thrashing madly in the water, could be seen around the wrecked boats. Other smoke trails, along with the expanding radius of the wash produced by dropped bombs, ended in the water where they had missed their targets.

In the center of the remaining vessels was a larger ship. Its silhouette marked it as an Oliver Hazard Perry class guided missile frigate. It was numbered 06, the HMAS Newcastle, one of six such vessels that the Australian government had bought from the United States over the years to bolster their sea power. The Newcastle was the one of two of those vessels that had been license built in Australia and launched in the early 1990's. It was the newest of its class.

The frigate was heroically trying to escort the retreating smaller vessels out to sea to rendezvous with the shrinking protection of allied fleets further off the coast that were withdrawing. While the SU-24s turned and gained altitude for another pass, and while the camera recorded the events, two Standard missiles were launched from the frigate's single-arm MK 13 Mod. 4 launcher located forward on the ship. The first missile targeted the trailing SU-24 and struck it directly between its two brightly burning engines that were clearly operating in an after-burner mode. In the resulting explosion, that aircraft came completely apart and the burning, flying wreckage fell down like hail stones into the harbor in front of the retreating ships, making many splashes on the face of an otherwise calm harbor surface. The second anti-aircraft missile launched by the Newcastle was decayer away from its target by defensive chaff that the aircraft ejected and that missile exploded in the middle of it as the target SU-24 turned away and made good its escape.

Immediately after this occurred, approaching the frigate from the shoreline to the left and apparently launched from somewhere in the vicinity of the Observatory on the same side of the harbor, three large missiles were seen flying low to the harbor at astonishing speed. A buzzing sound was immediately heard across the water, mixed in with the other sounds of combat and a cloud of smoke arose from the aft end of the Newcastle above the helicopter hangar where the ship's single Phalanx CIWS attempted to engage the approaching missiles. On full auto mode, the CIWS engaged the lead missile ... and the stream of 20 mm depleted uranium bullets destroyed it in a blinding explosion that thundered across the harbor several hundred yards away from the vessel. The fire and debris from that explosion rained into the water in a stream of small geysers advancing on the ship, but that ended well short of it.

Like a robot, the Newcastle's CIWS mechanically jerked to a new firing position on a bearing to engage the next missile. Another buzzing noise from the ensuing firing sounded as once again a cloud of smoke erupted around it. But the other missile was too close. An instant before it reached the frigate, fire from the CIWS intercepted it and it exploded, but the missile's momentum carried the debris and explosion right into the forecabin of the ship and engulfed it with fire, causing immediate secondary explosions.

Then the third missile hit the frigate just below the 76 mm gun that was located amidships. That missile disappeared on that side of the ship, just below the gun. For a split second the audience, wrapped up in the drama, thought that perhaps the missile was somehow a dud. But that was a complete misconception. The missile penetrated into the magazine area well below the gun mount and detonated amongst the stored ammunition, causing a simultaneous catastrophic explosion that literally broke the back of the frigate. As horrified viewers watched, within seconds, the ship, amidst thick smoke and fierce fires, broke in two and the two different ends drifted rapidly apart, the momentum of the ship still carrying the larger, burning bow forward while the aft end skewed off to the starboard side.

The camera zoomed in on the bow end, where fires from the initial missile hit were raging from just forward of the missile mount all the way back past the superstructure, which was now canting off at an angle as that portion of the ship began to list. Behind the superstructure, more fire and smoke were pouring from the obscene maw of the rent in the ship where it had broken in two. The only place life was evident was well in front of the missile mount, far forward on the frigate where sailors were coming up from below decks through a hatch and rapidly diving overboard in an attempt to escape the doomed vessel. Within a few minutes, the forward two thirds of the ship rolled over and sank as the SU-24s returned and savaged the remaining smaller vessels.

As the camera zoomed back out, it focused on the horizon, well out to sea, where another, even larger drama was being played out. Well out on the horizon, an American Amphibious Assault ship was fighting for its life. It was the U.S.S. Tarawa.

Apparently the cameraman had an exceptionally good telephoto lens. From a distance of well over twenty miles, the picture zoomed in to where the Tarawa was clearly visible on the screen along with several other ship in the background and two smaller escorting warships in front of it. Streaming towards this formation were scores of smaller vessels, filled with soldiers and civilians that had escaped Sydney Harbor just before the final advance of the enemy.

Many contrails could be seen far above the ships, twisting, turning ... several of them ending in black puffs of smoke from destroyed aircraft. It was impossible to determine which nationalities those aircraft were from, but it was obvious that a fierce air battle was raging above the formation of ships. As the camera recorded it, two F/A-35B Joint Strike Fighters lifted off vertically from the Tarawa and rocketed into the sky, having just reloaded their armaments and fuel to contend with CAS and GIR aircraft over the formation.

Suddenly, streaming into the foreground of the picture several miles from the ships, more than thirty large jet aircraft came into view, their black exhaust trails clearly visible behind them as they approached the ships at high speed and at an altitude just feet above the wave tops. Most of the aircraft were TU-22M Backfire bombers, but several appeared to be TU-22 Blinder bombers as well. Later, close inspection of their weaving, bobbing approach would reveal them to be a mixture of Indian and Chinese naval strike aircraft.

Clearly visible underneath each aircraft were very long and very large cylindrical objects that resembled nothing short of huge torpedoes, the air launched version of the Chinese "Killer Whale" weapons. As they flew on, David Krenshaw interrupted the audio portion of the program.

"Ladies and gentlemen, what you are seeing is the first known video recording of an attack upon allied shipping by the new, air launched version of the so-called "Killer Whale" weapons that CAS and GIR forces employ. This variant has been used before, particularly in the Indian Ocean, when the U.S.S. Enterprise was attacked and sunk. Along with the other versions of these fearsome weapons, they have sunk many allied vessels, including at least three other American super aircraft carriers. Again, viewer caution and discretion is advised, what you are about to witness is graphic."

From the escort ships and from the Tarawa itself a tremendous volley of Standard, Sea-Sparrow and rolling-airframe missiles rose to meet the new threat, almost completely obscuring the ships in the resulting clouds of exhaust smoke. Just as the aircraft launched their deadly payload, the wall of missiles from the defending ships reached the aircraft and more than half of them dropped into the ocean as exploding, burning masses of twisted and ruined metal. Several of those explosions also destroyed the LRASD weapons that their aircraft had just launched. But twelve of the weapons cleared their launching aircraft and quickly dropped into the sea while the aircraft themselves turned away, seeking to avoid the next volley of missiles that had already been launched by the ships.

To the astonished gaze of those viewing the evening news program on WNN, the Killer Whale weapons traversed the distance to the nearest escorting ships at unbelievable speed. The electrical circuitry, memory and micro processors in several of these weapons selected a shallow run against the escorting vessels which made their wakes clearly visible to all watching. The other weapons disappeared from view, their circuitry selecting a deep attack profile against the Tarawa.

One of the escorting vessels was the DDG 109, U.S.S. Stump, a newer Block III Arleigh Burke class AEGIS destroyer that had deployed to Australia with the new aircraft carrier, the U.S.S. Shanksville. The Stump carried the new SUBT CIWS and was positioned out in front of the U.S.S. Tarawa precisely for the purpose of defending her and the other ships against "Killer Whale" attacks. As the shallow running weapons, whose blinding approach remained clearly visible to the camera, came near the Stump, first one and then two more huge explosions and water spouts erupted in front of her. Then several other similar eruptions were seen off to her port and starboard sides and between her and the Tarawa as the water from the first explosions fell back into the sea and as the four SUBT CIWS turrets the Stump carried efficiently accomplished the work they were designed for.

But it wasn't enough. One of the shallow running weapons targeting the other escort vessel and another targeting the Tarawa passed out of the Stump's engagement envelope and continued on towards their targets. First the modern Australian Anzac Frigate, the FF 157 Perth, was struck by the weapon targeting it. To the horror of those watching, that lithe, fast and clean-cut frigate literally disappeared in the resulting explosion which was briefly seen to visibly lift the Perth's mid section out of the water where it visibly sagged and broke before being obscured by the water, smoke, debris and fire of the conflagration.

The other shallow running weapon rapidly approached the Tarawa running less than twenty feet below the surface. It was engaged by ASW helicopters that were hovering near the Tarawa for the express purpose of engaging "Killer Whale" weapons that got past the Stump or otherwise came close to the large capitol ship. The Mk-50 Barracuda torpedoes these aircraft carried had been upgraded with the latest SUBT mod software for engaging LRASD weaponry and the two SH-60 Seahawk helicopters dropped two torpedoes each to counter the oncoming weapon. The first helicopter's interception was too late and the torpedoes simply missed the fast moving threat. The second two torpedoes, dropped by the Seahawk closest to the Tarawa were more successful. One of them detonated almost directly in the path of the Chinese weapon and collapsed its cavity only one hundred and fifty yards from the ship. Traveling at a speed of 500 knots when it hit the collapsing cavity, the LRASD tore itself apart and exploded. But, its momentum still carried it forward and the larger pieces of debris from the weapon covered the distance to the Tarawa in just over a second, impacting the side of the vessel and puncturing it in several places, causing the entire ship to roll over to port and starting fires below decks.

As the Tarawa righted itself, citizens of the allied nations all over the world breathed a collective sigh of relief at the apparent salvation of the big ship. But they were shocked back to reality ten seconds later after the Tarawa stabilized when the remaining three deep running weapons arrived. The defensive threat officers and sailors on the various ships in the fleet, including on board the Tarawa itself, had not suffered from any illusions regarding their safety. They had been faithfully tracking these other weapons by sonar and informing their superiors of their status as they approached the Tarawa from deep below the ship.

Just before those weapons arrived, urgent, terse orders were issued and four Marine aircraft lifted off of the flight deck of the Tarawa. One was an MV-22 Osprey transport aircraft that had only recently landed with a full load of evacuees. Another was a huge CH-53D Sea Stallion helicopter also fully loaded with evacuees. Finally, two AZ-1H Viper attack helicopters were ordered to lift off from their launch positions on the deck in an attempt to escape the looming destruction. Before any of them got fully away, three massive explosions shot up through the ship, exploding in gouts of flame and debris right up through the flight deck. The entire ship literally "bounded" several feet up in the water and then quickly settled back, dropping noticeably deeper before a huge, three-headed mushroom cloud of dense smoke engulfed the entire ship with all of the aircraft remaining on deck, its 1100 crew members, the 1800 embarked Marines, the almost 1000 evacuees that were crowded on deck and all four of the aircraft attempting to escape.

As a stunned world-wide audience watched, the MV-22 Osprey aircraft and the CH-53D heavy lift helicopter escaping the doomed Tarawa cleared the cloud of smoke and debris and haltingly flew off to the east, making their way away from the stricken ship and toward the Amphibious Dock Ship, the LPD 18, New Orleans, five miles to the east where they would disembark their passengers.

Of the two Super Cobra attack helicopters attempting to escape, one of them never cleared the smoke and debris, crashing instead back to the heaving and ruined deck of the Tarawa. The other Viper cart wheeled out of the smoke toward the camera and valiantly tried to right itself before slamming into the sea, its blades hitting the ocean first causing the entire aircraft to pitch violently into the sea where the helicopter disintegrated in a shower of water and debris. It would later be confirmed that Captain Billy Simmons was piloting that last AZ-1H and he would be listed as Missing in Action.

**April 19, 17:15 EST**

### **Situation Room**

#### **The White House, Washington, DC**

Once again, for the umpteenth time in this cataclysmic nightmare of a war, the President and his advisors sat in stunned shock. Oh, they had known about the horrific withdrawal from Sydney Harbor and the terrible losses associated with it, including the loss of the Tarawa where initial assessments indicated that as many as 2,900 lives had been lost. All of this had been reported to them the day before as the battle was occurring. All of it would later be termed, "The Battle of Sydney Harbor", and would mark another very low point in the war against the advancing GIR and CAS juggernaut.

But it had not gone all bad, despite the destruction they witnessed on the film.. What the film didn't show was that the advancing enemy forces had been punished terribly as they came past the Dividing Range into the city of Sydney. The film also didn't show that most of the allied military forces had escaped thanks to the monumentally heroic and tireless efforts of many commanders on the scene like those of Billy Simmons and the commander of the ill-fated Newcastle. In that sense, the withdrawal was miraculous because the rapidity of the final breakthrough had caught the allies off guard and they were forced to improvise under the harshest of conditions to complete the monumental evacuation several days ahead of schedule. In a feat that had no equal in the history of warfare, they had achieved their own victory of sorts in retreat by preserving the large allied forces to fight again.

But that would now be much more difficult to appreciate, and would take more time to do so, in the face of the graphic evidence of the allied forces in full flight and the destruction and punishment that they suffered in front of a world-wide audience. No amount of words or explanation would convince anyone at the time that what they were seeing with their own eyes was anything but what it was, a terrible defeat and abject retreat of allied forces ... not to mention the terrible consequences for the million of Australian citizens who had not been able to get away.

As the conversation rose in pitch during the vivid footage of the destruction of the Tarawa and immediately following it, the President interjected.

"Okay folks, I know this is very difficult, but I don't need to remind you of the importance of staying focused."

Quickly addressing the Secretary of Defense and the Chairman of the Joint Chiefs of Staff, President Weisskopf added.

"George and General Stone, make sure that copies of this get over to the analysts as soon as possible. Unless I miss my mark, there's a treasure trove of information here on the enemy's weapons systems, their tactics and their disposition ... also regarding future planning on our own part to improve our own tactics. It makes me wonder why the enemy let this footage out.

"I mean, outside of the clear propaganda effort, there's just so much information contained here. What do you think got in their minds George?"

George Crowler, glad to divert his mind from the horror, responded as the view on the screen from the news report shifted back to the shoreline in Sydney harbor.

"Sir, I ... please pardon me ... I'm at a loss of words ... perhaps they feel the propaganda issue outweighs those considerations. We are going to suffer in the eyes of the world, and in our own eyes as a result of this. Or, maybe they calculated that we already knew enough about their weapons and so they had little to lose versus what they gain by showing our withdrawal in this manner.

"I'm just not sure what it is, but we will definitely have this footage analyzed in minute detail, particularly the "Killer Whale" attack on the Tarawa ..."

And here the Secretary of Defense again wavered as his voice broke and then paused for a moment, the graphic loss of so many of the lives of his countrymen was simply too much to take in without emotions coming to the fore. After a second, when he composed himself, he continued.

"... God rest all of their souls.

"Mr. President, there is no doubt that, that portion of this footage could be very valuable in assessing the effectiveness of the SUBT CIWS and improving it. On first glance, although the single destroyer was overwhelmed, I would say the system performed very well. If we'd had two SUBT CIWS armed vessels there, the outcome would have been entirely different."

The Vice President, John Bowers, interjected at this point.

"Secretary Crowler, how long before we have enough ships that are so armed to allow us to protect every capitol ship with two vessels?"

After brief consideration, the Secretary of Defense responded.

"We have four other vessels, all of them from the Shanksville battle group, there in the Theater now. We have all four of those covering the big carriers and only spared the one for the forces off Sydney. All of the new destroyers and frigates are coming equipped with SUBT CIWS. I expect in four to six months, depending on attrition rates, that we will have all of the carriers and all of the larger amphibious ships adequately protected."

John Bowers wanted to hurry because the WNN presentation was now focusing in on something happening on the beach next to Sydney harbor, and he certainly did not want to offend the sense of reverence that was settling over the group associated with the loss of the Tarawa ... he felt it himself and honored it. But he had to ask a final, penetrating question.

"But Admiral, just how effective is the SUBT CIWS against the type of attack profiles that actually destroyed the Tarawa?"

"From what we witnessed, the Stump and her new system performed admirably against the weapons attacking her head on, running shallow. But I believe those final weapons came from directly beneath the Tarawa which implies they dove very deep ... how does SUBT CIWS perform against that type of attack profile?"

The former Admiral knew exactly what the Vice President and former National Security Advisor was driving at. The developers knew of the deep attack profile. The one thing they agreed on was that unless another vessel armed with SUBT CIWS was in the very near vicinity of the targeted ship, that the only SUBT CIWS system capable of intercepting that attack profile by the LRASD was the SUBT CIWS located on the targeted ship itself.

... and in this case ... and for the next many months, in most cases, the capitol ships were not armed with any such weapon.

"Mr. Vice President, unless the targeted ship is armed with SUBT CIWS herself, or unless an escort that is armed with SUBT CIWS is in the immediate vicinity, it is unlikely that an intercept of that profile can be made."

**April 19, 17:20 EST**

**WNN Evening News**

**Special Report from Australia**

She had run out onto the beach from some sheltering scrub bush on the hillside leading up from the sand. She looked to be about five feet five inches tall, in her late twenties, shapely, and was pulling a young boy along while carrying another even younger child. The older child appeared to be six or seven years old and was carrying a small, stuffed Panda Bear, while the smaller, younger child whom the mother was carrying could not have been more than three. Up until recently, she had probably been the housewife of some aspiring young professional in the Sydney area. Now, her husband, and her former life were nowhere to be seen. Somewhere in the background, the monotonous sound of an amplified, flat Chinese accented voice was heard repeating something over and over again in English.

From the camera's vantage point the viewers could see an overturned raft on the shore that was the object of the young woman's attention. She was running directly toward it. When she reached it she briefly let go of her older son's hand and turned the rubber raft over and pushed it into the water. It floated well, appearing to have no leaks, and she rapidly put her younger child and then the boy that

she had been pulling along into the raft. Quickly climbing on board herself, she turned the front of the raft out to open water and then moved to the back of the raft and began frantically pulling a starter cord for the outboard engine that was attached there.

Apparently the young woman had waited in the brush for some time until she thought no Chinese patrols were near by, and until the horrible activity in the harbor died down. When it finally died down and the SU-24 aircraft had departed, the young woman had made her move. But she hadn't waited long enough.

As she continued to pull the cord, a patrol of eight Chinese soldiers was seen coming into the picture along the bluff overlooking the beach. All of them were armed with AK-74 assault rifles. Their officer yelled something to his men in Chinese and pointed towards the raft with the woman in it. As the camera zoomed in on them, half of the men immediately scrambled down a path that led to the shore. As they did so, the engine on the raft caught and started up. The scene was close enough to the camera that the sputtering of the outboard engine could be heard in the distance over the background noise of sporadic gun fire and the monotonous repeated message. When the engine started, the woman immediately moved the raft away from shore and began to build speed, moving as quickly out into the harbor as she could. She could be seen first urging, and then pushing her children down onto the floor of the raft, as she frantically tried to put as much distance between herself and the shore as possible.

As this was happening, the four Chinese soldiers advanced right up to the water's edge where the raft had been a few seconds earlier. Gesturing with their arms and their weapons, the microphone on the camera picked up the distant shouting of Chinese commands to stop and return to shore. The woman, unable to understand any Chinese, but comprehending exactly what the Chinese demanded, leaned down lower in the raft and began weaving it back and forth as it continued out into the harbor.

Looking to their platoon leader on the bluff for guidance, the four soldiers were instructed to stop the woman immediately by whatever means possible. Turning and raising their rifles to their shoulders, all four soldiers opened fire on the woman and her two children who were now almost 75 yards offshore. Dozens of bullets hit around the raft, kicking up water all around it and puncturing it in several places. The woman was hit at least three times and she slumped over the side of the raft and then slowly sank into the water. The raft, rapidly losing air and having lost all forward momentum, slowly folded in two and sank beneath the surface of the water without any sign of the two children. After a few seconds a child's stuffed Panda Bear rose to the surface and floated all alone there.

After waiting and watching a little while longer, the Chinese soldiers made their way back up to the bluff and joined their comrades to continue their patrol. With the silencing of the raft's engine, and in between the continuing sound of sporadic gun fire, the words:

**This has been a WNN Special News Presentation**

appeared on the screen, superimposed over the picture. As they did, and as the background image slowly faded from view, for a moment the words of the monotonous Chinese accented message could be clearly heard...they translated into the following:

*"The interim Governor of New South Wales greets all citizens. We seek no further conflict, only union under the umbrella of the Three Wisdoms. Please lay down your arms. Do not resist. Do not attempt to leave. All must work together for the collective good. You are in no danger and you will not be harmed, I repeat you will not be harmed."*

**April 20, 23:05 EST**

**"Up to Date" with Melvin Baker**

**WNN Late Night Talk**

Curt Johnson leaned into the camera as he spoke, having just received the perfect cue from the famous late-night talk show host after initial pleasantries had been exchanged.

"Mel, let me tell you, what we witnessed yesterday on that WNN Special News Report was an example of exactly what I have been talking about.

"We are embroiled in a cataclysmic war. It is going to take the collective efforts of us all to win this struggle and win the peace. We simply cannot expect to do that if the administration continues to withhold critical information regarding the conduct of this war from the American people.

"Under a Johnson-Crater administration the public would never have to be subject to the shock of such a revelation unless it was an equal shock to myself and my administration. That is because we would level with and inform the populace of such horrors immediately, instead of hoping to water down or somehow spin the events to our own advantage."

With practiced ease, the host of the show continued the interview. In his mind, it was noteworthy and very newsworthy that the opposition candidate was so willing to go after the popular President Weisskopf ... not to mention the clear indication that executives at WNN were very much behind the Johnson-Crater ticket.

So, irrespective of his own personal good feelings for the President and his intention to vote for him, the potential for advancement on the shirt-tails of David Krenshaw was just too much of an enticement to not go along with the scheduling of Johnson this evening, and the general outline of the interview that was giving him ample opportunity to state his case with only the most modest of tough questioning. Just the same, Baker did word the next question with more dramatic flair and more punctuation than either Johnson or the producer intended.

"Come now Curt, are you telling me that in your own capacity as the former head of the Federal Emergency Management Agency that you would immediately divulge potentially panic-causing or morale-destroying information in a political effort to somehow justify full disclosure. Wouldn't there be potential public safety and national security issues you would have to take into consideration?"

Curt Johnson was surprised at the turn in the questioning and at the tone in Baker's voice. It was not supposed to go this way.

"What I would do or advise as an appointed Federal official and what I would do as an elected servant of the people may differ Mel. I would certainly take into account the advice of those close to me, but what I am saying here is that my inclination would be to be open and forthright with the people about such critical issues. I do not believe the current administration has such an inclination."

Melvin Baker thought to himself that Curt Johnson had handled that fairly well, although he felt himself that President Weisskopf had in fact been as forthcoming and as open with the people of the United States, and the world for that matter, as possible during the course of the war. But, Baker was not willing to push the issue any further, so he moved to the next area that the producers had outlined.

"I am sure that there are those representing the current administration who might differ with that analysis, but that is the subject for another interview."

"Let me ask this. What are your views on the rumors and leaks we are hearing that the administration takes issue with WNN's decision to broadcast the information last night, and on the persistent idea that somehow WNN is obtaining information in this regard from avenues that are inappropriate or even potentially illegal?"

Curt breathed a sigh of relief. This was more like it.

"I view such reports of leaks as ridiculous and potentially dangerous. This administration has shown, through the course of the current crisis, and perhaps under cover of the crisis, a tendency to blatantly apply its own interpretation and view of the constitution to whatever situation arises. It is well known that my split occurred over just such an issue regarding the second amendment."

"Regardless of how popular it might seem at the time, regardless of how loud the chorus of cheering this administration gets from its own constituency and regardless of how willing most Americans may be to ignore such activities in the face of what they consider to be a greater threat, I believe this tendency of the current administration is reckless and dangerous in and of itself."

"Any view to silence the press at a time like this simply because you do not agree with it is something I lump in that same category."

Melvin Baker would not take issue with Johnson's comments regarding the leaks and rumors. But his comments regarding the 2<sup>nd</sup> amendment issues hit a nerve with him, so he countered.

"But Curt, the 2<sup>nd</sup> amendment issues you speak of seem to be working very well. Terrorist attacks are down. Citizen lives are being saved. Common citizens are patrolling their own streets and protecting their local infrastructure. The relief experienced by state and federal agencies have allowed them to concentrate much more on our borders and on fighting the war. There are, as you realize, many who believe that this condition is much closer to how the Constitution was intended."

"I must admit, in purely a ideological and technical sense, that those arguing for the President's perspective seem to have a point."

Curt's eye's flashed at this. It was a sore point for him and again Baker's tone was not what he had been led to expect. He silently cursed himself for harping on the 2<sup>nd</sup> amendment issues and allowing the interview to be sidetracked. What he really wanted to focus on was the potential conflict the administration was moving towards with WNN and his developing ally, David Krenshaw. He and his running mate, Susan Crater, felt that there was significant political capital to be exploited there, particularly with Krenshaw's growing influence on the Council for International Relations.

So, Curt decided to back down a bit, all the while vowing that he would not soon forget what he considered to be Baker's ambush.

"Mel, you certainly have a point on the effectiveness of those measures in the current environment. But that environment will not always be present. In addition, let me add this. We live in a different world than that which existed at the founding of this nation. It is a more dangerous world, it is a world where communications are faster ... I personally do not believe, and there are many who agree with me, that we can rely on the original interpretation of things to be our irrefutable guide. The Constitution in my estimation is a living document and must be considered equally in light of current circumstances, using the principles to guide us. It should be viewed that way."

"But, let's focus on the events at hand. My main contention was in answer to your original question regarding issues relating to potential suppression of the press. The current administration is barking up the wrong tree if they try and make an issue of WNN's reporting in my opinion. As

horrific as the data in the news special was, it was information that the American public needed to see. It was information they had a right to see.”

**May 8, 11:35 local time**

**COSCO Headquarters Research Facility**

**Beijing, PRC**

Lu contemplated the task before him as he listened to the summation of the current strategic picture in what was now being termed the *Historical People's Struggle*.

With the fall of Australia a balance had been reached in the region while the CAS and GIR allies consolidated their gains and strove to defend that which they had just conquered and occupied. It was a daunting task with such a huge land mass and there were already many reports of armed resistance cropping up in the great Australian “outback”. But Lu was certain that between the Chinese, Indonesian and Indian masses that were now immigrating to the continent, that the relative few numbers of former Australians would quickly find themselves in a completely untenable situation. The current leadership believed this would be the case in no more than twenty-four months, with a requirement for relatively large numbers of military occupation until then.

In the mean time, America and her allies were gathering more and more strength around New Zealand, apparently dedicated to an eventual liberation of Australia. To that end they continued to gather more and more troops, more and more aircraft, more and more ships and massive amounts of supplies and materiel on both Islands.

... and this is where Lu Pham's task came in.

The principle thing preventing the Americans and their allies from moving to re-establish superiority in the waters off Australia with their more capable naval vessels and naval aircraft, indeed, one of the principle things that had driven them from those waters only two weeks ago were Lu Pham's “Killer Whale” LRASD weapons. It was critical in the overall planning for the next several months, both in the waters around New Zealand and in the even more audacious plans of the CAS high command, that this condition remain true. That the Americans be held off by the thought of great loss to themselves and their valuable capitol ships. In order to do this, the technology edge in this area would have to remain firmly on the side of China, India and the GIR.

But a new element had been introduced that could threaten that state of affairs.

As the briefing droned on, Lu revisited in his mind what he knew of the new American ship, the Arleigh Burke class destroyer caught on film, that had defended the hapless Tarawa.

“We now know that that single ship successfully intercepted six devices, all of which were running in the shallow, terminal attack configuration. All of them moving through the water on full rocket power. All of them destroyed before they could reach either that ship, or the Tarawa beyond it.

“Very impressive, much more so than most of our leaders care to contemplate at this point.”

Lu Pham knew that the deeper attack profiles had passed under or around the American defensive ship. But he also knew that this vessel had been too far away from the Tarawa to defend her in the terminal phase of those devices' attack, when they were coming up from directly beneath the target. Lu Pham surmised that had the American defensive ship been very close to the Tarawa, or had the Tarawa employed the same defensive weapon system carried on that destroyer, that the outcome may have been vastly different.

Lu knew also that the Americans would be aware of this as well.

“Which opens up the possibility that in the near future, all outcomes may be entirely different from those we have enjoyed to date,” Lu thought.

So this then defined the task at hand for Lu and his engineering team back in Tianjin. They simply must determine the nature of the new American defensive system and then develop the technology, the hardware and the procedures to defeat it.

As Lu stood to leave the briefing that had just finished and break for lunch before his next set of meetings, he was certain that he knew the basic nature of the American defensive system. Nothing else could explain its ability to intercept those fast moving Killer Whales with such efficiency. It had to be the initial production version of a system that he knew the Americans began developing back in the late 1990s and early 2000s.

“So now they have their own super-cavitating technology deployed,” Lu thought to himself as he walked out into the cool spring air.

“And they have fine tuned it to destroy our Killer Whales.”

Later that day in technical sessions addressing just these types of concerns, and then that night as he continued to theorize, calculate and formulate a strategy, Lu developed the kernel of a plan to counter the new American technology. In so doing, and in the days and weeks ahead, he would have to depend on others to estimate the American production capabilities in deploying these new weapons. Timing and numbers would be critical to \countering these systems in combat environments.

It was an estimate that the Chinese would significantly under-rate. That miscalculation would ultimately make a difference in a number of yet-to-be-fought sea battles. Battles that would be critical for America and her allies in their plans for the southwest Pacific and later for the central Pacific. But

in the tradition and teachings of Sun Tsu, those battles would conform to the Chinese strategy best described by the statement, "*all warfare is deception*" and would only be feints, as large and pivotal as they might otherwise seem.

In the critical, truly pivotal issues defined by the overall, audacious plan established by Jien Zenim for the latter phases of Hung-Lu-Dung, the difference, one way or another, would come from a wholly unexpected and unplanned for direction that would catch both adversaries by surprise.

### **May 8, that same time**

#### **Politburo Luncheon**

#### **New Politburo Facilities, Beijing, PRC**

The new hardened site for the Politburo facility was host to the executive council of that body today. The Chinese President was addressing the small, central leadership group for the entire Chinese politburo. The ten individuals sitting before him were all extremely capable, fiercely dedicated and they had all been handpicked by Zenim. Compromises that had been earlier forced upon him through alliances with various faction within the overall Chinese communist system had been overcome as a result of the success of his plans leading up to the current conflict and the unprecedented successes since the outbreak of hostilities with America. The influence, prestige and power that Jien personally accumulated as a result of those successes had ensured that there would be no more compromises.

"Mao himself never exerted such complete domination," Jien thought to himself as he prepared for the next part of his presentation.

"... or such accurate and successful foresight."

Jien Zenim did not think these thoughts in a boastful or vain glorious attempt to bolster confidence in himself. From his perspective, it was simply a statement of fact...facts he felt that history was already punctuating for him. Unlike most highly intelligent, charismatic, confident, manipulative, absolute tyrants, Jien knew he could and would make mistakes. He also felt certain that he had garnered more than enough political and ideological capital within the system he knew so well, to weather the turmoil from any conceivable mistake he might make at this stage of his planning. Even though he recognized that he might make the occasional mistake...he was just like all the other highly intelligent, charismatic, confident, manipulative, absolute tyrants in believing that ultimately, there was absolutely no possible way that he could fail in his overall designs.

Now addressing the Chinese leaders before him as they ate lunch in the very well apportioned and adorned executive luncheon suite over one hundred feet under ground, Jien began speaking.

"My friends, my purpose in addressing you this afternoon is simply to apprise you of the status of the current situation as regards operational plans for Hung-Lu-Dung.

"As you know, the first Phase of that plan was implemented last year on the anniversary of the start of our overall operations against America and her allies. Phase one unleashed our clandestine operatives throughout America in concert with our allies, who had already been weakening and undermining our enemy's ability to ramp their war mobilization to a full war-time footing.

"The first phase was, as you know, extremely successful and continues today.

"Phase two was the military expansion of our sphere of influence well out into the central Pacific ocean and to cover all of the Australia continent. As you know, we successfully completed this portion of the operation just two weeks ago with the final expulsion of hostile forces from the Sydney area. We and our allies are now in the process of consolidating those gains and continuing to settle our loyal citizens in those vast new lands.

"We started Phase Three of the plan with the liberation of Siberia and her vast resources

"Soon we will embark on the most important portion of Phase Three of the plan. It is the most ambitious portion and is what we all will bring the quickest end to the current hostilities. Although we have achieved all of our tactical goals that will allow for the long term viability of our system here in Asia, until we force the Americans to the negotiating table and until they recognize and accept the new world order brought about by the acceptance of the Three Wisdoms by the greater people's of Asia and those of the Mid East and Africa, there can be no peace. Simply stated, without acceptance on their part, the Americans and many of their South American and European allies will perpetually remain a threat to our long term viability. Therefore the importance of dealing with them now, while we are fully mobilized to do so. Therefore the importance of Phase Three of Hung-Lu-Dung."

As Jien Zenim continued with his presentation, he could see that all members of this elite, central group were in full agreement with what he had just said. He had little doubt that it would be any other way, but Jen had learned over several decades of hard experience to constantly place before his compatriots the focal issues of their cause and then read their reactions to it. In this case, as he had anticipated, there was 100% agreement and complete dedication. Jien knew it would have to be this way. What lay before them was not only capable of producing the most ambitious gains, it also held the risk for the most severe losses.

"When has it ever been any different throughout history?" Jien asked himself.

Answering himself he thought,

"It has never been any different."

He then continued his presentation.

"Our forces are now on the move in Siberia and are approaching the frontier separating the new nation from Russia proper. The Russian forces have not been able to adequately regroup or reinforce themselves to hope to stop our three pronged advance.

"There is a growing danger that the Russians will attempt to use their nuclear weapons to halt our advance either at the border or as those forces approach the Ural mountains. In an effort to forestall and prevent this, we have arranged both a communiqué and a demonstration. It will be a demonstration that will not be lost on the United States or their other allies.

"Our forces are also on the move elsewhere in Siberia to consolidate the rest of that nation and territories all the way to the Bearing Sea. In conjunction with those efforts, we are moving several army groups to the east and several large naval task forces are moving along the coast in support.

"In the central Pacific our forces are also on the move. We have the largest naval forces ever assembled by the People's Republic of China departing as we speak from the Yellow and Japan Sea to advance on the Central Pacific atoll of Midway. This force is significantly larger than that force holding the Americans at bay off of Australia and we believe that our enemies are wholly unaware of its composition or even presence. We have redoubled our anti-satellite efforts in support of this and are screening well in advance of the force for American submarines with picket vessels carrying our Killer Whale weapons.

"As you know, the efforts in the Pacific, aimed at New Zealand and at Midway, in conjunction with our efforts in eastern Siberia, are all aimed at one central, overriding goal. That goal is the ..."

**May 10, 04:35 local time**

**Personal Quarters**

**Central Command Headquarters, Tel Aviv, Israel**

The incessant buzzing brought him to a state of almost instant wakefulness, despite the deep sleep he had been experiencing. In an environment where all out war was possible at any time, and where feinting and skirmishing was going on continually, hesitation regarding ones readiness to fight was simply not an option if one had any hope or plan of survival.

Colonel Jess Simmons picked up the phone and answered.

"Simmons."

On the other end of the line, Jess instantly recognized the voice of his commanding officer.

"Jess, this is Donovan. Why don't you come over to my quarters pronto, I just received some news on that issue you've been wondering about."

*CLICK*

Jess hung up the phone. He didn't want to go. He could tell from the tenseness in his log time friend and mentor's voice that the news was not good, and he didn't think he could bear to hear it. But he had a duty, a duty to his wife and son to both hear it and to pass it on. It was a duty, like the one he owed this nation that he would not and could not shirk.

Three minutes later, after he knocked on the door, the General let him in and asked him to sit.

Jess refused the seat.

"I prefer to hear this standing General. What have you heard?"

General Donovan did not relish his own duty in this affair. He had known Jess for over fifteen years and knew his family well. His own son was a design engineer for Loral and was currently working on advanced guidance research and development. Although not in the armed forces, his plant had been the target of a terrorist attack eight months ago and the General remembered well his own anxieties waiting to hear word regarding his son. In that case the word had been positive. That wasn't the case here. He did not relish passing on the information he had come by, but like Colonel Simmons, the General understood his duty to his friend despite the difficulty of it.

"Jess, I just got a flash message from my friend and contact on Admiral Ryan's staff. He's been reviewing the reports from the Tarawa and talked to a number of eye witnesses. The official word on Billy is in, he's officially MIA, but it doesn't look very good.

"Apparently Billy was on deck at the time of the attack and was ordered to take off just before the explosions. I know you have seen the films. From everything we can gather, that last helicopter that went into the ocean was piloted by Billy. I'm sorry Jess ... I don't know what to say. Our forces were not able to remain in the area for long ... but the SAR team did not find him ... there were hundreds in the water ... they did everything they could."

Jess had expected this, but that expectation and his altogether weak and ineffectual efforts to prepare for it were eclipsed by the stone cold knowledge he was being presented with. He had somehow known it his gut when he viewed the film ... despite his assurances to Cindy to the contrary. His calls home had been necessarily brief, but given the circumstances General Donovan had arranged it ... now he would have to arrange one more.

Haltingly, with tears welling up in his eyes as he reflected on his son's last moments ... as he reflected on his son's entire life ... Jess made his request.

"General, I need to call Cindy. I don't want her to find out about this in the normal fashion."

The General had already anticipated this.

"I've already made sure that the Marines will hold off until they get the word. I've also already gotten approval for the call Jess. You can make it whenever you're ready."

Jess looked at his watch. It read 04:45.

"Give me a little while alone back in my quarters General. I'm going to need to somehow get myself together for this and there's only one person I can talk to right now to have a hope of doing that ... if I ever can. I'll meet you at oh six hundred to make the call. I want to speak to Cindy sometime later this morning. ... I pray that God will help me say what needs to be said."

General Donovan put his arm around his friend's shoulder and held him briefly. His heart and soul went out to him, but he knew Jess Simmons and he knew he would do what was necessary, both for his family and for his nation. Then, he followed him out of the room and patted his shoulder as Jess slowly made his way up the hall.

"God bless you and yours Colonel Jess Simmons," he said to himself as Jess turned the corner.

"My prayer is that you get back to see your wife yourself ... I believe it is going to require His help in making that possible for any of us."

**May 14, 19:16 PST**

### **Personal Study**

#### **Pacific Heights Subdivision, Palo Alto, California**

Finally, she was going to make use of what her own wits, good fortune, dedication and commitment had afforded her. Dr. Sandra Eleanor McPherson had finally received the attachment from Europe and downloaded it to her own workstation. It had taken her four weeks to get this email, four weeks of living hell with the U.S. Department of Justice and the U.S. Commerce Department. Four weeks where everything ... her position at the University, her reputation, her livelihood and her very freedom had been in jeopardy. But now all of that was over.

All of those difficulties had not come as any surprise. After that last holier-than-thou, self-righteous call from Dr. Trevor, it was plain there would be serious trouble. He had as much as promised her to do all in his power to stop what she was doing and to contact whatever government officials necessary to do so. And he had.

The next day she had gotten two relevant calls, first from the Dean, and then from the Chancellor. Both of them expressed to her in no uncertain terms their shock and dismay over the calls they had received from governmental officials detailing the nature of Sandra's true work. Things had gone badly that day and well into the next with the school officials until her Department Head and mentor had been brought into the picture and he had defended her. But that did not clear up the issue or help her begin her new line of research, and it certainly did not help allay the governmental agencies that had suddenly taken an interest in what she was doing.

Her email access had been completely blocked as well as any internet access. Sandra did not know how it was accomplished, but that block had extended beyond her own university terminal and her personal computer at home. None of the access accounts, even the anonymous ones she had set up, would work from any terminal, on or off campus. It was frustrating and maddening. The government indicated it was only in effect until they had completed their investigation and determined what charges to file. Even if they never filed charges, Sandra knew that an investigation like this could be drawn out almost indefinitely.

Ultimately, as a result of the influence of her Department Head and in the face of what they viewed as the abject censorship of her internet access, the leadership at the University had sided with her and brought to bear their significant legal resource to fight for her. Their efforts on her behalf brought increasing support as word spread to other Universities and as the ACLU became involved.

But the government tenaciously held its ground. Apparently Dr. Trevor's world view on this issue was shared by the appointed governmental officials at the Department of Justice and the Department of Commerce, as well as the Federal Communications Commission that all became involved. They blocked every effort, even local and state court orders to restore her access, even after it became clear to all involved that Sandra had exploited a clear loop hole in the law and that her efforts in this regard were perfectly "legal".

The issue was a fast burner, even drawing the attention of the Democratic Presidential ticket of Johnson and Crater. Senator Susan Crater was particularly helpful to Sandra in getting fast track visibility to the issue at the Federal level. Finally, a Judge in the 9<sup>th</sup> Circuit, which circuit had historically been very favorable to all abortion rights issues, issued an order ordering the governmental agencies to restore email and internet access and to allow the relevant attachments to go through. That court order was affirmed by a committee of judges on the 9<sup>th</sup> Circuit. The government agencies backed down, but promised to appeal the ruling to the supreme court as soon as possible.

Upon hearing the good news of the court decision only two days ago, Sandra had made contact with her research friends in Europe and asked them to send copies of the data she required through several avenues, not trusting the government to completely step out of the picture and let the data get to her. It proved necessary that she do so.

As she suspected, the three emails sent directly to her with the attachments all had difficulties. One was stopped by a Federal server indicating that some form of a malicious virus had infected it and that the attachment had to be quarantined and deleted. Another of the three emails simply never arrived. The third was the worst. It apparently arrived safely with the attachment which Sandra immediately accessed to download over her home network to her research workstation. As she was doing so, the computer screen on both her home computer and the research station went completely blue, flashed three times and then displayed the message,

*"All your data and disk drives are belong to us. You are infected with a series virus."*

Sandra immediately tried to turn off her machine. She tried to use the "Begin Menu" to shut down and then she tried to apply the "control-alt-delete" keys to force a shut down. But nothing worked. Finally, in frustration, she simply pulled the power cord out of the wall and the computers turned off. But then they would not boot up again. She called a University technician who came and looked at the machines and determined that a new virus, which they immediately reported to the anti-virus vendors, the maker of the operating system, and to the Federal Government, had infected her machines through the email. They informed her that they would have to reformat both machines before she could use them, and it was likely that the Federal government would block US access for the email account that had sent the offending email.

Sandra had been devastated, and she was angry. She called the head of her department to inform him of what happened and to request his help in explaining this to their lawyer and filing suit against the government. But that's when her fortunes changed. She found that the additional measures she had taken to have the attachments delivered had worked. At least one of them had. One of the people, to whom she had requested her friends in Europe send the attachment, was the department head himself. When she called him, and before she could go into detail regarding her troubles, he informed her that he had just that afternoon received the attachment and had the data downloaded to his own workstation and burned onto one of the new high capacity DVD disks.

Now, here she was with the data downloaded to her workstation and the virtual modeling software loaded and prepared to accept the data and analyze it.

As she prepared to launch the program, she reflected on all that had transpired. It seemed that her entire life had been preparing her for this moment. Her childhood and upbringing. Her activism and schooling. Her love for Stephen and the heartbreak of losing him. Her commitment to AIDS research and the use of fetal tissue to advance that research. Her development of virtual modeling and her involvement with Dr. Trevor, irrespective of the hard feelings and bad ending to that involvement. To Sandra, all of that was secondary to the reality of her work and what she now felt was the very real prospect of a breakthrough that would save lives ... perhaps millions of lives while bringing to Sandra the gratification and recognition she craved.

She was honest enough with herself to recognize those cravings and needs. Still, she also honestly felt that she had them for the right reasons, a realistic chance to help so many others.

### **May 14, that same time**

#### **Master Bedroom**

#### **Trevor Residence , Nashua, New Hampshire**

It was after 10:00 PM and the Trevors were preparing to retire for the evening. Elizabeth had had a particularly grueling day at work and Joseph, despite extremely good progress at the lab, was continuing to fret and worry over his involvement with Sandra McPherson's research. Even though it had been her manipulations and her ideas that had led to it, and even though they had already discussed this and resolved it, Joseph just couldn't square himself with or accept the fact that his own research was providing her the opportunity to make progress in the field of fetal tissue research.

As was their habit and in keeping with their religious convictions, they knelt down beside their bed and prayed together every evening. They took turns vocalizing their prayers and tonight was Elizabeth's turn. Despite her own fatigue, she sensed the continued apprehension in her husband. It had not helped that yesterday they had found out that with all legal avenues exhausted, the federal government had abandoned all efforts to block Dr. McPherson's access to her email and the internet and that the fetal data was again flowing. Elizabeth knew that this was what was troubling Joseph the most, because they both knew that Dr. McPherson would soon apply the fruits of her efforts with Joseph to that very data ... perhaps as early as this very night. With all of this in mind, she bowed her head as she held her husband's hand and began to pray out loud.

"Father in Heaven, Joseph and I approach Thee this evening on bended knee with gratitude in our hearts for our continued blessings. We are grateful in this time of turmoil and conflict for our safety and for that of our daughter. We are grateful for our health and for the relative peace we enjoy in this land despite the conflicts raging all around us and despite those instances of violence and conflict amongst us. Preserve us Dear God, through Thy Hand.

"Father, we thank Thee for our knowledge of Thee and Thy Plan for our salvation through Thy Son, Jesus Christ. We thank Thee most especially for His sacrifice and the principles He taught that have guided us through our lives.

“We come before Thee now, seeking Thy continued blessings. Bless our leaders, the leaders of our nation in these terrible times, and the leaders of our church, to have Thy Spirit to guide and direct them. Bless us, if it be Thy will with continued freedom and liberty and with the strength to live our lives deserving of such blessings.

“Finally, Father, I ask Thee, in all humility, and on his behalf, to bless my husband Joseph. Please, please ease His mind over the issue of the research being conducted by Dr. McPherson wherein she obtained the knowledge and methods that Thou imparted to Joseph that led to such great discoveries regarding our physical nature and its tie to what we believe is our intellect, our spirit, and our soul. We know that this knowledge came from Thee Father, and we pray now that Thou wilt use it for good, even in the hands of such an one as Dr. McPherson.

“Bless her Father, to see the Light of Truth, that this knowledge from Thee will somehow guide her to Thee and Thy Truth. Bless Joseph to trust in Thy Arm over this issue so his mind might be eased, so he can place this burden on the capable shoulders of Thy Son and so he can continue his own work. Now, bless us to sleep well, safely and soundly if it by Thy will, in the name of thy Son, Jesus Christ ... Amen.”

As Elizabeth finished the prayer and lifted her eyes to look over to her husband, she saw that he continued to bow his head for a few seconds. The feeling of peace and assurance that filled the room was almost palatable, it was a feeling that for a brief moment, surpassed all understanding.

When Joseph looked up, tears were streaming down his face. He reached over and hugged his wife as he whispered into her ear.

“Thank you Liz, thank you so much for your faith...I believe I will sleep well tonight.”

**May 14, 19:22 PST**

**Personal Study, that same moment**

**Pacific Heights Subdivision, Palo Alto, California**

Saundra pressed the “PROCESS” button.

The processor had to labor hard over this full size, data set for somewhat longer than any of the tests that Saundra had performed before. Instead of a mere thirty seconds, the computer labored through her algorithms for ninety-six seconds before flashing the COMPLETE message.

Barely able to contain herself, Saundra pressed the DISPLAY RESULTS button, requesting that the computer ANIMATE those results on her flat screen monitor.

And then, within a few more seconds, displayed in a detail never before beheld by the human eye, was an enhanced, atomic microscope of the fetal tissue samples she had received from Europe.

Saundra was amazed at the richness and the detail. She could already tell that her research efforts would be enhanced by orders of magnitude. There were the nerve paths and synaptic tissue of this particular sample that she had hoped would be revealed. She could already see a clear, new anomaly all along those synaptic paths and she picked a command to enhance and zoom in on one of them.

What she saw briefly confused her. There, teaming in their numbers by the thousands ... perhaps by the tens of thousands ... were unknown and apparently now dormant constructs of some type or another. Something clearly biological in nature but something entirely new to her research.

“Could it happen this fast?” she thought, “just like that?”

As thoughts of the magnificent breakthrough she had hoped for tumbled through her mind, she noticed that there was something vaguely familiar about these structures. For the moment it alluded her, but no, she was sure she had seen them before. They were somehow familiar to her, just not something she had ever considered or contemplated seeing here.

Then it hit her. It hit her deep in the pit of her stomach like a ton of bricks. A sickening feeling rose up in her esophagus until she could almost taste it and she felt she would retch from the poignancy of it. It constricted her throat and made it difficult for her to breathe, it dried out her mouth and made it almost impossible to speak.

“It’s not possible,” she feebly thought to herself.

Quickly checking the attachment, she reviewed the data four different times. It was clearly marked. It all checked out, over and over again. It had been sent from Germany and was the early neural tissue from a fetus just a few weeks old, like she requested.

Almost in a panic now, she picked up her phone and had it speed dial an international number. It was a direct number to the personal residence of one of the research team leaders she worked with in Germany. It was the team leader who had prepared and sent the data sample that she had requested after the lifting of the block on her email.

The phone rang once, twice, three times. She was afraid the answering machine would pick up when finally a sleepy voice came on the line.

“Hallo, Franz heir ... Wer ist da?”

For a second or two Saundra could still not speak, the shock of the recognition was still too fresh and she could not find the words.

“Hallo? Wer ist denn da?”

“Wass ist los mit Ihnen denn, wissen Sie nicht wie Frueh es ist?”

Only the obvious consternation and frustration in Franz's voice and the sure knowledge that he was about to attribute the call as some kind of a crank and hang up finally loosened Sandra's tongue and allowed her to speak.

"Franz ... this is ... this is Sandra in the, the United States."

Upon hearing Sandra's voice and its uncertain quality, Franz was filled with apprehension. He immediately slipped into English.

"Dr. McPherson? Why are you calling at this hour? Is everything ok? You don't sound well."

As Sandra continued to recover her voice, she assured Franz that she was fine and explained away the quality of her voice as a result of being tired. She certainly didn't want to reveal to Franz what she had seen, or cause him concern. She then proceeded to confirm with him his sending of the data and its specific labeling.

Everything checked out, but Sandra was still not satisfied.

"Franz I know this is going to sound strange, but can you send the sample again, like tonight?"

"Send it right now to my personal email addresses and please encode into the header something that only the two of us would know. Say, for example the name of that Gasthaus in Karlsruhe where we ate so many times three years ago and my favorite dish on their menu."

Franz was befuddled by the request but assumed that it had to have something to do with Sandra's difficulties with her own government. He assured her that he would immediately get up, encode and encrypt the file and then send it as she had requested.

Twenty minutes later a tone from Sandra's computer indicated that new email had been received. Sandra immediately checked her inbox and found the email from Franz, along with the attachment. She opened it and decoded it to find the name of Weinerwald in the header as the Gasthaus in Karlsruhe and the name of Haenchen Tirole as the cuisine that she had acquired such a taste for. She then loaded the data onto her workstation and reprocessed the data.

Before the night was through, she had reprocessed that data and the data from the earlier email seven different times and viewed them and compared them from every magnification and every angle possible. She applied all of the filters and enhancements she had built into the software to analyze the virtual microscopies she was receiving. All of them, every one, told her the same thing.

"It simply cannot be," she thought as she leaned back and closed her eyes in exhaustion.

No sooner had she closed them, than those eyes flew open again, her mind not willing to accept the implications of what she had seen. It was physically causing her to shake now, and mentally causing her entire world view and her position in her universe to falter and collapse around her.

Although at one level, the level where she was comfortable in her universe, she could not conceive of what she had experienced ... at a deeper level, where Sandra's ultimately pragmatic and honest core resided, she could not deny what her own eyes, and creation had told her.

No matter how she arranged it. No matter how she analyzed it. No matter what filters she applied and what spin she tried to arrange ... she knew that what she was seeing could not be faked and had not been tampered with, as much as she would prefer that to be the case. She was the only one she knew of with this particular expertise and she had guarded the capability well.

No, every time the sample data from the fetal tissue was run through the tool of her own creation, the painstakingly developed and tested virtual modeling system, the results were the same. There, in their tens of thousands up and down the synaptic paths of the neural fetal tissue were dormant but very real Human Reasoning Structures. The same structures that Joseph Trevor had discovered the year before. The structures that provided humans with the very essence of their humanity, their reasoning ability. Those structures now told her that the same capability resided in this fetus before it had been turned into a research sample.

"My God, they really *are* alive," she whispered to herself.

That realization seared into the very essence of her consciousness like a white-hot knife. That fiercely burning sensation, along with the exhaustion from the all-night research, caused Sandra to finally step back from her computer and drop onto her couch in a wracking and soul searching sleep.

Despite all else, Sandra McPherson, in her heart and soul, was an honest person who was committed to the truth as she saw it. She had now seen a truth, with her own eyes, one she had never contemplated before. As a result, she would now take up that truth just as seriously and pursue it just as rigorously as she had pursued the opposite position before this new revelation.

That is why, when Sandra McPherson awakened from the sleep which this truth and its impact had caused to come upon her, she would awaken a changed person with a new mission in life.

## Chapter 26

*"... and their hosts were as the sands on the sea shore." Biblical Prophet*

**June 12, 03:18 local time**

**Central Pacific Ocean**

**925 km WSW of Midway Atoll, Flag Bridge, PLAN 004 Sun Tsu**

Admiral Yao Hsu was once again steaming towards a violent confrontation with the U.S. Navy. As the overall task force commander for this critical phase of operation Hung-Lu-Dong, the Admiral knew full well that it called for an all out frontal attack against the strength of the U.S. Navy around Midway Atoll. It was an island that his superiors expected him to occupy, a task that the Admiral was expected to accomplish using the largest naval force that the People's Republic of China had committed to the seas in its history.

"... and once again, my action is but a feint in the overall scheme of things, regardless of the size of the force committed," thought the Admiral as he gazed out the window through the darkness and the sheets of rain sweeping across the deck from the squall they were passing through.

Midway Atoll was a position of obvious strategic importance to both sides. As an actual extension of the Hawaiian Islands situated halfway between the North American and the Asian continents, for the Americans, the atoll was a strategically important, central Pacific logistics and defense point that guarded the approaches to Hawaii and ultimately to the west coast of the United States itself. To the Chinese, it was a position from which attacks could be staged and planned against Hawaii, and from which the approaches towards the Asian mainland could be defended.

The attack on Midway Atoll was planned to be a two-pronged, joint CAS affair. From the west, Admiral Yao was advancing with the largest element that included two of China's larger carriers, including the latest, the Sun Tsu, where he maintained his task force command staff. Hsu's main assault task force also included three of the smaller, Beijing class conversion carriers, six of China's tactical assault vessels, ten of the large amphibious assault ships, eight Lanzhou class Aegis-like destroyers, eight LSM carriers and forty other modern destroyer and frigate escort vessels. Two hundred and fifty kilometers behind the main assault group was a large provisioning group consisting of two more Beijing class carriers, eight destroyer and frigates, and twenty-four oilers, ammunition ships, cargo and various other supply ships necessary for the ultimate occupation of Midway.

Admiral Yao was commanding over one hundred and ten PLAN vessels in his main Task Force and he was bringing over one hundred thousand Chinese troops crammed into the amphibious vessels and transports he had with him, not to mention the tens of thousands of Chinese sailors and aviators manning the ships. It was his intent to engage the Americans first, head-on and destroy them. Both their naval vessels and their forces on Midway.

Coming from due south of Midway Atoll was the other prong of the CAS attack. Four more carriers, two Chinese and two Indian, advancing with twenty Indian and Chinese escort vessels and another contingent of amphibious and transport ships. Most of the war vessels had been pulled away from duty around Australia as newly commissioned and shaken down vessels arrived from China and India to take their place. As planned, this southern task force was drawing off a large component of the American forces defending New Zealand who had to make sure that their bases and supplies on New Zealand were not flanked.

"A well thought out and executed plan," though Hsu.

"If this task force can engage and defeat the American forces in place around Midway, we will then turn south and drive a pincer onto the advancing American task force from New Zealand ... and then on to New Zealand itself!" concluded the Admiral as he set his jaw, nodded his head and turned to make his way to the combat information center.

When the Admiral and his aide entered the CIC and were recognized, he instructed everyone to carry on while he stopped briefly to contemplate the cool efficiency with which the personnel here went about their business. They did so in a very modern and sophisticated environment. From the operators sitting in front of their Multi-Function Displays monitoring the myriad varieties of sensing devices and weapons systems, to the duty officers standing behind them, observing and helping, to the higher ranking officers observing the overall large plasma screen war board which depicted the current disposition of forces. All of the equipment was the latest, most advanced technology. It was all shock hardened for combat and backed up in quintuplet to ensure battle efficiency and survival. All of the personnel were exquisitely trained and utterly committed to their nation's cause.

Not only did this equipment allow for the command and control of the 67,000 ton carrier, Sun Tsu, and its weapons systems ... it was also data linked to all of the other vessels in the task force capable of advanced, digital control. Those vessels included all of the Mao and Beijing class carriers, all of the Amphibious and Tactical Assault ships, all of the Hangzhou, Lanzhou, Shenyang, and Guangzhou destroyers, and the Ma'anshan class frigates.

That control extended to acquisition and targeting functions for virtually all of those ships' weapons systems, with digital control capable of being switched to a single designated lead vessel, or to a network of multiple vessels using sophisticated algorithms to establish primary, secondary and auxiliary lead or command control. All of this took into account numerous battle conditions including weather, threat level, threat axis and damage assessment. Many Chinese officers felt that their system was the equal, and in fact superior, to the vaunted American AEGIS system. A good number of those officer had personally seen the AEGIS system in action in training exercises the Americans had so foolishly allowed them to be a part of on those very AEGIS vessels back in the 1990s and early 2000s. Much had been observed, much had been learned. All of it had been put to good use and had gone into the innovation and technical progress that had resulted in China over the years. But in the last two years of all out war, it had advanced at a fevered pitch.

"And it had done so at great cost," thought the Admiral as he watched the personnel on the Sun Tsu go through their assigned tasks with a professionalism and coolness that belied the nature of the conditions they would soon be facing.

Those costs had included the initial large deck Chinese carrier, the PLAN Mao, which Admiral Yao had commanded and which had been destroyed in the Battle of the Southwest Pacific. There, as here, the Admiral's part had been of secondary consequence to the overall goals established by the party leaders and military high command back in Beijing. Despite the loss of the Mao, the Shanghai and most of their escorts in that battle, those goals had been achieved and the Americans had been driven back 1500 kilometers as a result of the losses they sustained in and around Guam at that time.

"So much equipment, so many men lost to the sea," thought the Admiral.

But the production capability of the People's Republic, and now the entire Coalition of Asian states, was outstripping the losses. Chinese and allied factories, already newer than most of their western counterparts and originally developed to feed the material desires of the west, had been quickly transformed into full war time mobilization. Many, many more such factories had been and were being built . . . all over Asia and the sub-continent, and in the island chains. They were now also being built in Western Australia and would soon be built in the newly vanquished eastern Australian.

For air operations, SU-35 fighter/bombers, J-10 fighters, improved versions of the TU-22M bomber, KS-2+ and the newer, anti-ballistic capable KS-3 missile systems and anti-satellite weaponry were being produced in tremendous quantities. For ground action new main battle tanks, multiple rocket launchers, trucks, vehicles and all of the varieties of weapons and ammunition were being produced by factories that only three years ago produced teddy bears, tennis shoes, automobiles and pick-up trucks for the people who were now the very object of the weaponry.

Perhaps most telling of all was the naval production which was allowing China and the CAS to project their rapidly developing power. The transformation of COCSO and now the Korean, Japanese and other commercial shipbuilding operations throughout Asia was allowing for the manufacture of naval vessels and their weaponry at astonishing rates. Beijing class carriers were sliding off the ways now at a rate of two every three months. The newer, big-deck carriers like the Sun Tsu upon which the Admiral now stood, were coming out at the rate of one every four months. The Amphibious Assault and Tactical Assault vessels were both being produced now at a rate of one every month, and the newer class destroyers were each being produced at a rate that exceeded one every month.

As impressive as those figures were regarding the production rate of the vessels themselves, the key to the CAS and the GIR success remained the production rate and the innovation of the LRASD weaponry, and now the newer KS-3 anti-ballistic missiles and *ta shih* detectors for acquiring and targeting America's stealth aircraft. All of the Admiral's major combatants carried the LRASD, Killer Whales. Several of the newer ships, including both Mao class carriers, two of the new Lanzhou and Shenyang destroyers and two of his Tactical assault vessels had been equipped with the latest KS-3 missiles and the *ta shih* system before they departed on this mission. The Admiral was hoping that the additional protection afforded by these systems would be enough to counter what he was sure would be massive American air attacks aimed at thwarting his mission and destroying his command.

But, as innovative and important as these last two systems were (the ABM missiles and the anti-stealth systems), the largest single contributor to the current and ongoing success in this war remained the LRASD weaponry. In that regard, Admiral Yao Hsu had met Admiral Lu Pham on numerous occasions. Although Lu Pham, in keeping with his Vietnamese heritage, was a slight man, there was an intensity in his eyes that could not be missed or ignored. Yao knew that the success that China and her allies had experienced must be credited to that man's genius. Nothing else that the Admiral could think of, and he had spent many long months and years contemplating it, would have allowed his nation's forces to meet and turn back the prowess of the U.S. Navy as they had done thus far.

"It's amazing that Pham and his comrades at COSTIND are keeping out in front of the Americans," thought the Admiral as he considered the technological battle that had been raging over those very weapons. Particularly as he considered the new variant that his vessels carried on this mission that even now allowed him to know much more about his enemy than he could otherwise have known. The reconnaissance variant that was coated in sonar absorbing material, dove deeper than any other LRASD or American submarine available. It carried advanced ELF and VLF

technology for communications and traded all of its rocket fuel for conventional fuel to enhance its range and loitering capabilities. Several of these devices were already out around Midway, communicating the size and disposition of American warships in the area back to the Admiral.

"No, it is little wonder that Lu Pham and COSTIND stay ahead of the Americans. We have planned and prepared for these events for many years, even decades ... and the Americans have only in the last two years recognized their vulnerability ... and they are having a difficult time coming to terms with it," surmised the Admiral as he finally walked down into the CIC towards the knot of officers which included the Captain of the Sun Tsu.

"Perhaps they will come to terms with it, and with us, after we take Midway from them and after the other, even more ambitious goals of Hung-Lu-Dong are realized further to the north."

**June 13, 16:18 local time**

**GIR 1<sup>st</sup> Army Group**

**65 Kilometers South of Kharkov, The Russian Federation**

General Talabari reviewed in his mind the current planning and operations for the 1<sup>st</sup> and 3<sup>rd</sup> GIR army groups in Europe. This group, now numbering close to one million men, would continue moving north towards Kharkov and eventually Moscow. That movement would ultimately form a great pincer in conjunction with the larger Indian and Chinese forces now approaching the Ural mountains from the east. The Indians, numbering over one and one-half million near Magnitogorsk to the south and a growing Chinese force swelling to two million men approaching Tagil to the north.

In the end, it was planned that over six million GIR, Indian and Chinese men and all of their implements of war would converge on Moscow late this fall, just before winter set in. The General believed that it could be done, but he, along with all of the other commanders on both sides of the conflict were waiting for what they all believed would be the inevitable use of nuclear weapons by the Russians as they continued to lose ground. The general actually had expected it to occur earlier, but clearly, first the terse messages from Tehran, New Delhi, and Beijing to the effect that any use by Russia would be countered by all three nations, and then the demonstration that the Chinese had arranged had forestalled their use to date.

That demonstration had been ingenious and the General was still trying to discover how the Chinese had arranged it. Apparently, Chinese operatives had infiltrated, or more likely, bought their way into the Russian strategic force structure to the point of actually controlling some of the silos. Almost a month ago, immediately after the communiqué that Beijing had sent to Moscow regarding retaliation for the use of nuclear weapons, the Chinese had sent a second, back-channel message to both Moscow and Washington informing them to make sure they had reconnaissance and surveillance assets observing the Russian airspace at a particular time and place.

Twenty-two hours later, the Chinese operatives inside Russia seized one of the silos they had worked at for several years had launched two missiles at the advancing Chinese forces three hundred kilometers to the east of Tagil. The missiles arced into their ballistic trajectories, the warheads at their apogee reaching the fringes of space. Then, as each warhead released four re-entry vehicles (or RV's as they were referred to) separately targeting different portions of the Chinese advance, thirty-two anti-ballistic missiles (ABMs) had soared from the Chinese forces and successfully shot down all eight warheads, destroying them before those nuclear warheads could reach their targets and unleash the hell of nuclear fire upon them.

Washington and Moscow, who had indeed gotten surveillance and reconnaissance assets in place to observe the exchange, had been shocked into silence, even as they stood down from their highest levels of nuclear alert and readiness. In addition, within a few short hours WNN had also somehow received stunning images of the intercepts and broadcast them world-wide. The impact on public thinking and on planning within the military circles of the allied nations was still being felt. Talabari still wondered, as he was sure the Americans and Russians did, whether or not the warheads had been active, and whether or not the ABMs had been given data that would allow them to more easily intercept the incoming missiles.

"One thing was for sure," thought the General, "those missile's trajectories, speed and separation had not been *faked* and yet each of them had been successfully intercepted"

It was a fact that was not lost on anyone and it made the General all the more glad that each of his own advancing divisions included several batteries of the new Chinese KS-3 missiles and their launchers, as did all of the Indian and the Chinese forces. Given their performance over the Ural mountains last month, the General was satisfied that even when the Russians did go nuclear out of desperation, that most of his own forces and those of his allies would survive to finish the struggle.

"What I wouldn't have given to be a fly on the wall in the American's vaunted situation room underneath their "White House," mused the General as the topic of the briefing turned to the 2<sup>nd</sup> GIR Army group that had defeated both Albanian and Bulgarian armies and was now advancing further into Serbia and attacking Romania.

As that discussion progressed, the General couldn't help but think of the young man he had promoted to Colonel in May and transferred out of Russia and into Bulgaria to command one of the

spearhead battalions as it entered Romania. Abduhl Selim had first come to the General's direct attention when he had reviewed and approved the young Captain's award for the Order of the Imam for his role in quelling that nasty Russian riot almost a year ago. The young man had almost single handedly kept a bad situation from turning into a disaster that could have resulted in drastic impacts to the overall war plan. If the Russians had closed their borders and asked the transiting GIR forces to leave at that time, the entire current set of events would have been drastically altered, and not in favor of the GIR or its allies.

After the presentation of the medal, the General's staff had done a thorough study of the young man's exploits throughout the war. It had been a fascinating tale, one that the General felt was only exceeded by the story of the Imam's military exploits themselves. Such an individual as this young Selim deserved the chance for promotion. The fighting men would love it ... in fact they did love it because most of them saw in the Selim a regular individual like themselves who was making good. On top of that, his accomplishments under fire and his willingness to sacrifice for his own men made him a natural leader, one the common soldiers were more than willing to follow, and an individual, if he survived, whom Talabari would be proud to promote and mentor.

"Well, that will take whatever course Allah wills," thought the General as his attention turned back to other matters. Perhaps soon, the General would take the young Colonel on a trip to meet the Imam himself, just before Talabari returned to the 4<sup>th</sup> and 7<sup>th</sup> GIR Army groups and their Chinese, Algerian and Libyan allies surrounding Israel for preparations for the final push to the sea there.

In the mean time, the memory of the successful Chinese intercept of the Russian ballistic missiles and the likely reaction of Americans to it, once again filled his mind.

"The Americans, who thought they were so far ahead in ABM technology, and who must have been secure in their thinking that when the time came they could rely on their own missiles reaching targets while they themselves erected a shield against the missiles of others, must have literally soiled their pants! ... or at the least almost burst a capillary or two when they realized what had happened." ... and they very nearly had.

**June 15, 21:45 CST**  
**Ferguson Ranch**  
**Bowie, TX**

Cindy Simmons sat in her parents living room contemplating her life. She had asked for and received time off from work down at the aircraft plant so she could just get away. Her foreman and several layers of management above her sympathized with and understood her loss. They were more than willing to grant, and even to encourage her request. A couple of them knew first hand what she was going through. Although Billy was still officially listed as MIA, both Jess and those officers who had come to talk to her personally had made it clear that he was presumed dead.

Cindy did not want to believe it. She could not get out of her mind how proud she had been, or how good it had been when Billy had visited her prior to shipping out ... for the last time. He had come to Ft. Worth and visited her at her apartment near the plant. He had asked all about her work and told her how proud he was of her for what she was doing to support the war effort and in particular how much her specific efforts on the JSF meant to the Marines with whom he served. It had seemed like such a short visit at the time and it really had not been that very long ago.

Now he was gone, most probably to never return again.

"Oh," she thought, "if only we somehow knew for sure. If only we could lay him to rest here near to home."

She and Billy had spent one weekend up on the ranch near Montague and they had walked along Clear Creek where Billy had grown up hunting squirrels and rabbits with his dog. She could still almost here his answer, echoing faintly from far off in the woods along the creek, as she would call him home to dinner or to accomplish some chore. He had always come as quickly as he could, not wanting his mother to worry or have to wait needlessly. If only she could simply call him home now. If only he could hear her, surely he would hurry back again.

"But he sure loved that place," she continued in her mind. "Just like his father."

Now Cindy was here alone, at her parents ranch near Bowie, Texas, almost twenty miles from their own ranch over southeast of Montague. Her parents had gone into Bowie earlier in the evening and asked her to come along, but she had politely refused, preferring to be at her own childhood home, by herself. They understood and knew she needed more time alone so they did not press the issue. They would probably be back about 11 PM and so she still had another hour and fifteen minutes or so to reflect and to continue her grieving process.

As much as she wanted to hold out hope for her son's return, Jess had been painfully honest and direct in his last phone call...and she knew that it agonized him greatly to do so ... to have to recognize and communicate to her something that he himself did not want to be true. She loved Jess for that, and she was so frightened that she would some day receive similar word about him. Right now she did not know how she could ever handle that ... she was still not sure how she was going to handle or get past Billy's loss. But she knew that it was something she had to come to terms with ...

and it meant she was going to have to reach deep down into her faith, a faith in God she had come by early in life within the walls of this very house. That was a big part of the reason she would be spending the next two weeks here. She wanted to reaffirm and punctuate her faith in the face of Billy's tragedy and to be prepared in case another one followed.

One thing she knew, America's enemies were still on the advance and the war was far from over. So much ground had been lost, and was still being lost. Somehow it would all have to be made up, somehow it would have to be turned around. Cindy knew that the currency for turning it around were going to be great quantities of faith, hard work, commitment ... and ultimately lives. Lives like Billy's...and perhaps...no she didn't want to contemplate that right now.

There had already been so much horror...so many men and women in the service of the nation who would not be coming home...so many other men and women who had been killed or maimed right here in the United States by their enemies. The more she thought on this, the more her spirits were buttressed concerning her own need to strengthen herself and move forward ... and the more firm her conviction was that sacrifices like Billy's were something that were a dreadful necessity, however painful. There would be many more such sacrifices by countless other young men and women and by countless other families before all of their safety, liberty and way of life was once more secure. As this thought took hold, she realized that she would some day be proud of Billy's sacrifice, even if the pain never completely went away. She also realized that her commitment to helping in the effort to protect, defend and preserve their liberties was unflinching, it simply had to be.

Then the phone rang.

**June 15, that same time**

**Trevor Residence**

**Nashua, NH**

Brrrrrrrr

The muted sound of the phone ringing on the other end of the line sounded for the second time in Elizabeth's ear. She was sure she had dialed the number that her friend Cindy had given her correctly. She hoped there had not been some mistake.

Brrrrrrrr

"Come on, Cindy, pick it up," she said to herself

Brrr ...

In the middle of that fourth ring, Elizabeth heard the voice of her friend.

"Ferguson residence."

Elizabeth breathed a sigh of relief and answered.

"Cindy, this is Liz, it sounds like you got to your parents alright. I just wanted to call and make sure you were there safe and check up on you."

Elizabeth Trevor could still hear the pain in her friend's voice as she responded, but she could also detect a note of gratitude to be talking to a close friend.

"Thanks Liz.

"Yes, I got here alright and am finding comfort visiting with my folks. They are out right now so I've had some time alone ... and that's good too. It's been letting me reflect ..."

Elizabeth knew what her friend was reflecting on and decided to try to get Cindy's mind on other things, and to find a way to share with her the news of her own, in the hopes it would lift her spirits.

"Cindy, don't you worry. You take all the time you need. Just know that Joe and I are with you in spirit and are here for you no matter what. Anything you need, just ask it.

"My plans for travel are the same. I'll be flying out next Saturday and renting a car in Dallas for the drive over. Are you sure it's going to be alright with your parents?"

"Are you sure you're okay with it?"

Elizabeth hoped that Cindy was still comfortable with the plans they had made last week after Cindy had informed her that she would be staying with her folks. She felt Cindy could use the company of a friend as she grieved her son, and Elizabeth had convinced Joe that it was right.

Not that it had taken much convincing. Joe was as shocked and saddened by the news of Billy's apparent death as Elizabeth was. It was hard to believe that that tow-headed boy was gone. He had always been the apple of both of his parents' eye and there had been a few years, when the Trevors still lived in the Dallas-Ft. Worth area that they had held out hopes that Billy and their own daughter would some day get together.

Despite the fact that the former condition had never materialized, both families had remained close, especially Cindy and Elizabeth. For all of these reasons, Joe was quick to support his wife's plans for helping and comforting their old friends 100%.

"Liz, my folks are very comfortable with it and we are all looking forward to your visit. I am particularly looking forward to it and thank you and God for it. You are a true friend Liz, a girl couldn't find a better one."

Elizabeth rejoiced within herself at those words. That was exactly the sentiment she was hoping for, and it allowed her to gently move the conversation in the direction she had hoped.

“Oh, Cindy, thank you so much for that ... but I'm the one who should be grateful.

“... and I have some news I wanted to share with you.

“Do you remember our discussions about the essence of Joe's Nobel Prize and the Human Reasoning Structures he was led to discover and research?”

Cindy didn't need to even think, of course she knew.

“Of course Liz, the entire country, the entire free world knows about that.”

Elizabeth continued.

“Well, do you also remember the deal Joe struck with the researcher from California to develop a method to virtually model his research methodologies and the trepidation he felt when he discovered that she was using his work in her fetal tissue studies?”

Cindy had to think a moment on that one. In the midst of her own circumstances, it was not something she had at the very front of her mind. On reflection though, she did recall Elizabeth speaking of it and she remembered Elizabeth's and her own sorrow and disgust at Joe's research being used in such a way.

“Yes, Liz. I remember it. How could she lead Joe on like that and use his methods to advance such research?”

“But I also remember your faith in that matter and your willingness, once it had happened to leave it in God's hands. I know that must have been almost impossible for Joe, but it was a great example to me, I will tell you.”

Elizabeth, wasted no time in continuing. She felt like she was literally bursting at the seams to share what had recently happened, and she could think of no better person to share it with than Cindy. Joe had felt the same and agreed to it.

“Exactly Cindy.

“Well, you will never guess what has happened ...”

From there Elizabeth Trevor brought her good friend up to speed on the amazing set of circumstances that had been developing since Sandra McPherson's discovery of the Human Reasoning Structure within the fetal tissue she had examined on May 14<sup>th</sup>.

The next day, May 15<sup>th</sup>, exactly one month ago, Sandra had placed a telephone call to an at-first reluctant and distrustful Joseph Trevor. It had taken a second phone call and a transmission, first by email, and then a large set of data by file transfer protocol (FTP) before Joe's reluctance and distrust turned first to astonishment and then to utter excitement.

For the last four weeks, Joseph and Sandra, with help from Elizabeth, had worked many, many extra hours researching and detailing the existence of HRS within fetal tissue of all types. The samples came from Europe and Sandra processed them through her virtual modeling algorithms. It was a difficult task for Joseph, knowing what those physical samples in Europe represented, and wanting to end once and for all their harvest. But both he and Elizabeth saw the real potential in achieving just that as they established beyond doubt the reasoning capability of the child in the womb.

Sandra did most of the actual set-up and detailing, while Joseph analyzed the results and put together the logical thesis that would establish the premise, that the human embryo, even at the earliest stages of development, contained human reasoning structures underlying the DNA, which formed the basis for comprehension and awareness and intelligence. A level of intelligence that was clearly far beyond what modern social and medical science had ever been previously willing to accept.

Cindy recognized the implications immediately.

“Dear Lord, Liz, do you know what this has to mean?”

Elizabeth Trevor, her husband and even Sandra McPherson ... perhaps it was better said, especially Sandra McPherson, knew exactly what it meant. They had been laboring for the last several weeks to punctuate it and announce it to an unsuspecting world.

“We do Cindy, and you hit the nail on the head. It is Dear Lord. He has opened a door here and done it through a miraculous means that none of us could have ever foreseen or suspected.

“We plan to present detailed proof of all of this to the National Academy of Sciences, the American Medical Association and the entire world within the next three to four weeks. Isn't it just amazing how God's Hand works in all things?”

Cindy could see it clearly, not only in this astounding story, but also in what she and Jess were experiencing. It was amazing how God worked in people's lives ... even her own. Throughout this discussion, and even in her thoughts preceding Elizabeth's phone call, she could see, despite her pain and anxiety that would never really go away, that God had not forsaken her, that His hand was in the events of the day, all the way from the earth-shattering world-wide events, down to her very own, very personal ones. It was a knowledge and an understanding ... an entire way of thinking, that was about to be revitalized throughout much of America and the free world. It was an understanding and moral re-awakening they were all going to need to see them through the coming events.

**June 16, 19:31 local time**  
**Forward Observation Post**

**Allied Lines, Near Chiriqui Grande, Panama**

Hernando Rodríguez watched the sloping ground to his front. Using his special thermal vision equipment here in the hot and moist environment of central America, Hernando had finally grown use to the humidity and learned to ignore the sweat dripping from his face as he carried out his duties.

"At least the lenses on these optics don't sweat like we do," thought the Corporal as he observed several individuals moving up a trail towards the town he knew was over the rise to his front and left.

"I've got three individuals, range five hundred and fifty yards, moving up the small trail to our left towards town," Hernando reported to his platoon leader.

"They look like civilians, one young boy and two girls. I have a positive ID on non-combatants."

This evening, Hernando's duties included keeping watch well in advance of the new American position near the Panamanian coast here south and west of Chiriqui Grande.

Hernando knew he was living out one of the few positive campaigns of this war to date as American and allied forces pushed the joint Chinese and Panamanian forces south out of Nicaragua and Costa Rica. A decisive battle had been fought south of Managua in which the Chinese were finally stopped in their northward advance. As those large forces were held in place and as they wore themselves out on the well entrenched allied defenses that stretched from Granada on the north end of Lago de Nicaragua to the Pacific Ocean, a strong American force consisting of three infantry and two armored divisions had used the relatively safe waters of the Caribbean Sea to land near Colorado, Costa Rica and the mouth of the San Juan River.

That amphibious assault had been executed perfectly and without substantial sea or land based loss. Those forces, assisted by several air borne reserve battalions deploying directly from the United States, had pushed rapidly up the San Juan River to the southern end of Lago de Nicaragua, sweeping aside enemy garrison and defense units as they came. The Chinese and Panamanian main thrust on Managua, driving up the west coast of Nicaragua, had been enveloped by the movement.

Hernando remembered the general order for attack when the encircling forces got into position.

"How could anyone ever forget such an experience," he wondered. He knew he never would.

The enemy force had still been very substantial, numerically larger than the combined attacking allied forces. But they had been caught out of position, with many logistical supplies and support units mauled in their rear by the advancing American armor in that quarter. In addition, the Chinese units in particular were only supported by what provisions had been brought in-theater by a long and exposed supply line across the entire Pacific. Though the LRASD Killer Whale weaponry still made interdiction of that supply line difficult far out at sea, once that supply line approached closer in to Central America, things changed substantially in favor of the allies.

A growing number of American and other allied patrol and strike aircraft were being positioned at bases throughout El Salvador and Nicaragua for precisely this purpose. Specifically new P-8A Maritime Surveillance Aircraft, which was the jet powered replacement for the P-3C Orion, and specially configured B-1B bombers, operating in a maritime strike role, were finding and sinking more and more Chinese shipping in the eastern Pacific. Those aircraft were rolling off newly constructed American manufacturing lines, which were less and less hampered by terror attacks within the continental United States itself. As more and more of these aircraft, and the shorter range but more numerous F-15E and Joint Strike Aircraft were positioned in El Salvador and Nicaragua, the flow of supplies originating out of the far east was reduced to a trickle.

Hernando remembered many occasions witnessing the outbound and return flights of these aircraft, particularly the sleek B-1B bombers carrying so many ALCMs (Air Launched Cruise Missiles) underneath their fuselage on the outbound trips. On the return trips, if they had been successful, the pilots would wag their wings at friendly positions as they flew over. There were many occasions where a lot of "wing wagging" was going on, to exultant cheers from troops on the ground.

All of this had played into the encircling attack on the enemy thrust into Nicaragua.

The enemy had fought hard. Hernando counted it as major miracle that he had come through the many skirmishes and major battles that had followed, when so many men he had known had either been wounded or killed. Ultimately as air superiority and then air dominance was achieved, and as American M1-A2 Abrams tanks (themselves recently coming off new production lines in Ohio, Tennessee, Texas and Arizona) overcame enemy armor, a route and then a slaughter had ensued. Although many of the Panamanians surrendered, most of the Chinese would not. As their perimeter shrank, being aggressively pushed by allied forces on both sides, a large remaining contingent of over 10,000 Chinese soldiers had made a last-ditch, all-out attack in an effort to break out of the trap.

Although Hernando's unit had been on the peripheral of that attack, he had witnessed first-hand its ferocity and horror. The enemy push had carried through allied lines for over ten miles, over-running several positions where American and allied troops were butchered where they lay. The doomed Chinese counter attack broke through the first ring of encircling allied infantry and cavalry forces. But in so doing, the Chinese advance sealed its own fate as it was flanked by units like

Hernando's that closed the gap behind, while advancing Armor units met it head-on and swarming aircraft rained down fire from above. In the end, less than 200 Chinese troops survived, all wounded.

Thus was the northward advance of Chinese power in Central America thrown back.

Now, for the last three months, allied forces, principally American, had advanced through Costa Rica, retaking the capitol of San Jose in mid-May and reaching the Panamanian border just two weeks later near the first of June. At that point, Chinese and Panamanian reserve units had arrived in force and blunted the allied advance and ultimately halted it in a bloody stalemate on either sides of the slopes of Volcan Baru near the border of Panama and Costa Rica.

As that was occurring, Hernando and large numbers of veteran troops who had been given some R&R (Rest and Relaxation) were moved from their rear areas over to the east coast on the Caribbean Sea near Limon, Costa Rica. There a large armada of allied amphibious shipping met them, including two of the new Hampton Roads Class Sea Control Carriers that were now coming off American shipbuilding yards, several Aegis class destroyers, the large Brazilian carrier, the Sao Paulo, and her escorts. The troops had embarked on the numerous amphibious ships and sailed south where a forced landing had been made three days ago at Chiriqui Grande here in Panama.

It had not been an easy landing. Here, nearer to more Chinese and Panamanian assets and supplies, the air battle had been fierce and opposing fire had been heavy as the ships came closer to the harbor. As American aircraft from the carriers, and land based aircraft out of Costa Rica, Nicaragua and the United States pounded the enemy, the enemy countered with surprises of its own.

Over one dozen land launched Killer Whales were sent out towards the fleet from concealed mobile launchers along the coast. Escorting vessels, particular Halsey class frigates, that carried the reactive defenses against LRASD weaponry, were caught out of position. They had been stationed to the seaward side of the armada, particularly on the southern side, to protect against expected air launched and ship launched varieties of the weapon. Only two of these devices were successfully interdicted. Those particular two sensed and targeted the Sao Paulo which was further out to sea and in a position where her American and Brazilian escort's reactive defenses could work as designed. But, closer in to shore, three large amphibious assault vessels, three destroyers and one of the new Sea Control carriers were violently and suddenly sunk with a tremendous loss of life, in excess of nine thousand five hundred personnel.

It had been a critical and harsh blow, but not a fatal one to the allied landing plans as they pressed home the assault and as American aircraft used precision-guided weaponry to take out the land-based LRASD launchers. The actual shore-based defense fortification that the Chinese and Panamanians had prepared were incomplete and though the landing was opposed and the fighting fierce, allied forces ultimately defeated the defenders and established a significant beachhead that first day.

Now, two days later, Hernando was with his platoon near the Panamanian town of Bajo Boquete. That town would be his Division's objective at first light tomorrow morning after a night of scouting and surveillance. Intelligence indicated that enemy forces in strength, positioned in front of allied forces further to the north and west, were reacting quickly to this new force in their rear. They were expected to wheel around and try and break out of the developing trap to avoid another situation like the enemy had experienced in Nicaragua. In addition, more enemy troops, including two divisions of Venezuelan regulars, were advancing from the south in the vicinity of the Panamanian town of David.

It looked like all of these forces would converge in the vicinity of Bajo Boquete late tomorrow. Allied air would punish all of the enemy units as they progressed, but as Hernando had experienced over the last two days, this far south air dominance was not a guarantee and so the enemy could be expected to arrive in force. In addition, American armor would be pressing the enemy forces expected to retreat from the Volcan Baru area, reducing their numbers and effectiveness appreciably. But in any case, the allied forces Hernando was a part of would be acting as the anvil in the hammer-anvil scenario that was developing, just as they had planned to do.

So, as he watched, Hernando prepared himself emotionally for what he expected to be a terrible battle the next day. As he did so he prayed that he might survive to see his wife and young son back in Florida ... and that if not, that his parents and Maria's parents would take good care of his small family and teach his son, Felipe about him.

Unknown to Hernando, his prayer would be answered much sooner than he expected, in fact this very night, although not in a way he anticipated. As he was watching and praying in his forward position, a runner from his company commander was already hurrying toward him with new orders.

Corporal Hernando Rodriguez, soon to be Sergeant Hernando Rodriguez, was being urgently recalled to the United States in answer to his recent application to Army Ranger training. But those orders also had to do with the preparation for a specific new American campaign. It was to be a campaign that would require as many Cuban-born American soldiers as could be readily assembled, and Hernando was to be one of them.

**June 19, 09:15 local time**  
**Joint Session, Brazilian Parliament**  
**Brasilia, Brazil**

President Alfonzo Hermosa, who was now being called the “Panther of Brazil” in the press and by his own countrymen, looked into the hundreds of assembled face as he sat in his cushioned chair and prepared to deliver this special, state of the nation address.

It had been over two years ago that he had stood at this same podium and urged the lawmakers sitting before him to declare war on the People's Republic of China after the horrific impact of a large portion of the International Space Station in Rio de Janeiro. That impact had killed tens of thousands of Brazilians and had been the result of Red China's deliberate targeting of the civilian space station in its war with America. It had been something that President Hermosa could not explain away in an effort to avoid conflict. It had been something the Brazilian people would never forget ... or ever forgive, and something for which they demanded retribution.

Now, over two years later, he was invoking a special session of the parliament to update them on the overall strategic picture and on recent developments.

Many of those developments were good here locally. In addition to the success against Panamanian, Venezuelan and Chinese troops in Panama, the President could report that the Argentines spearhead which had broken through Brazilian defenses in March had finally been thrown back in southern Brazil. The Argentines had clearly been pushing towards Porto Alegre on the Atlantic coast to open up another COSAS base on the eastern coast of South America to compliment their efforts out of Venezuela. But that advance had been stopped 75 kilometers to the east of Santa Maria and had been thrown back at great cost to the west of Santa Maria all the way to the Argentine border. That had been over four weeks earlier.

Now, the President could report that Brazilian forces had broken through the Argentine defenses in two critical places. While large Brazilian forces had held down the center of the line at Sao Borja, large reserve forces near Posadas to the north and at de los Libres to the south had attacked and broken through. They were now in the process of enveloping the defending Argentine forces who were retreating in a route back towards Corrientes on the Parana River in Argentina.

Efforts in Venezuela had also progressed well, although without the major gains and breakthroughs. Brazilian and American special forces were making steady headway down the upper Orinoco River along the Columbian border towards Puerto Ayacucho where large Venezuelan forces were massing to try and cut them off. As this was occurring, a successful amphibious operation had been conducted just south of Trinidad and seven divisions of regular Brazilian forces augmented by Canadian and exiled Australian forces were now advancing up the lower Orinoco River towards Ciudad Guayana. The President was confident that the allied forces would ultimately join up there and cut off all of southern Venezuela and its natural recourses from enemy use.

But that was where any good news ended.

In Columbia itself, the capitol of Bogata had fallen and now COSAS and CAS forces controlled a line that extended along the northern Andes mountains, entering southern Columbia and becoming the Cordillera and Riental ranges extending north and east into Venezuela, circling up to the Caribbean Sea to the south of Caracas, through San Juan and to the coast at Barcelona. Everything to the north and west of that line up into Panama was now firmly in the hands of the enemy. In the fighting that had resulted in those boundaries, over 3,000 American and 20,000 Brazilian troops had been cut off and captured. Intelligence, what little there was, indicated that their fate was not good.

As in North Korea and elsewhere in the warfare, soldiers and officers who were thought to have any useful intelligence were led away and never heard from again. The rest of the troops were pressed into forced labor operations that few survived. The few escapees that made it out painted the same grim picture all over the world, and it was no different here in South America. Of course, the fate of any female troops who were captured was markedly worse.

Further abroad, two major disasters had occurred. The first had been in Australia where American, Canadian, Australian, English and Brazilian forces had been driven from that continent. The outcome could have been much worse but for the heroic and miraculous evacuation that had saved the bulk of remaining force to fight another day. Almost 100,000 Brazilian troops, out of an original force of over 150,000, were now being re-provisioned and trained in New Zealand for the defense of that Island fortress and an eventual offensive back into Australia.

The second had been the failure of the Brazilian expeditionary forces originating out of Nigeria in Africa to advance north and eastward far enough to put the desired pressure on GIR and Chinese forces continuing to besiege Israel. Nigeria, Ghana, the Ivory Coast and Gabon had all entered the war firmly on the side of the allies and offered their ports and their forces to ensure continued freedom and self determination in Africa. This was a welcome counter to the juggernaut of GIR nations, bolstered by hundreds of thousands of Chinese troops, that stretched from Morocco through Algeria to Tunisia, Libya, Chad, Sudan and Ethiopia.

To stand against those millions, the better part of them now gathering in Egypt to assault Israel, the allies had been able to field a mixed force of over 500,000 that had staged in Nigeria and then advanced into Chad near lake Chad. That force had included almost 200,000 Brazilian troops, 150,000 Nigerian troops and 50,000 troops from each of the Ivory Coast, Ghana and Gabon nations. Those forces had crossed Nigeria unopposed and entered Chad near Lake Chad, crossing the Chari River and attacking the capitol of Chad, N'Djamena. That city had fallen quickly and the force had advanced north and eastward quickly across the relatively flat savanna.

But as the force approached the more mountainous north eastern regions of the country in late April, they had been met by a combined GIR and Chinese force of over 750,000 troops that had been detached to halt their advance. The resulting battles between those two forces continued to this day. On two separate occasions, the flanks of the allied expeditionary force had been badly mauled, causing them to fall back. At the current time, American, English and Canadian forces numbering 200,000 were reinforcing the beleaguered expeditionary force and were preparing a counter-attack from their prepared positions around Abeche, Chad.

"So, to a certain extent, they have accomplished their mission because three quarters of a million troops had to be detached to stop them," thought the President as his introduction ended and has he stepped up to the podium.

"But we need those forces to break through and advance on the rear areas of the larger enemy forces surrounding Israel for them to have had the overall desired effect."

As President Alfonzo Hermosa placed his hands on either side of the podium and leaned into the microphone, he began to speak.

"My fellow countrymen. My fellow elected leaders. Today I bring you a report on the state of our nation in these trying times. They are times of war, war like we have never known before, and despite two former world wars, war like this earth has never known before.

"God grant that it will soon end in victory for liberty. But, as that has not yet occurred, it falls to me to report on the state of events as they relate to our nation and to our people. Let me start by announcing some very good news ..."

As the President spoke, little did he realize that over 2000 miles away, events were unfolding that would directly and permanently impact his life and the life of every member of parliament listening to him...events that would also introduce another new and dangerous escalation to the overall conflict.

### **June 19, that same time**

#### **30° East Latitude, 15° South Longitude**

#### **94 Class, PLAN 603 Ying, South Atlantic Ocean**

The third of the new Chinese ballistic missile submarines maintained a quiet, steady depth of 100 meters in the South Atlantic ocean with no headway, over 1600 kilometers off the Brazilian coast and over 3200 kilometers to the east of Brasilia, where President Hermosa was just starting his address. The first in the class, the PLAN 601 Zenim, had been destroyed by an American attack submarine in the South China Sea over a year ago. The second in class, PLAN 602, was currently operating in conjunction with the large CAS forces advancing on Midway.

Captain Xian Qian knew that his vessel, the Ying, was on as critical and as far reaching a mission as its sister ship. Here in the command spaces, he was going through the final launch sequence for ten of his twenty-four JL-3 intercontinental ballistic missiles.

Captain Xian knew that he had to "shoot and scoot", as the Americans would say, because the ballistic tracks of those missiles would lead any enemy acquisition radars or satellites, if the Americans had any up ... which the Captain had been assured they would not ... right back to this launch point. The Captain was sure, that with a successful fulfillment of his mission, that there would be an immediate and wide ranging search for his vessel.

This launch position had been chosen as the best trade off for distance to target and expected enemy response time. On one hand, the Chinese did not want the Brazilians to have sufficient warning time to be able to avoid the impact of the missiles. On the other hand, they wanted to provide Captain Xian with every reasonable opportunity to make good his escape with his highly trained crew and very critical military assets in the Ying.

"5 ... 4 ... 3 ... 2 ... 1 ... Launch One, Launch One, Launch One," the missile launch officer announced loudly, but with professionalism.

The shudder of the resulting launch could be felt throughout the boat as the modified JL-3 missile cleared the vessels and rocketed towards the surface.

Within fifteen seconds a second missile was launched, then a third and fourth and so on until all ten had been launched and were in the air within two and a half minutes of the first launch.

"Make your depth 300 meters, course 78 degrees, all ahead full," ordered the Captain after the final missile had cleared the vessel.

As the Ying turned away and dove deeper into the depths of the Atlantic, the Captain held tightly to the stabilizing bar to either side of his Captain's chair and began counting off the seconds to himself and mentally tracking the progress of the missiles.

**June 19, 09:20 local time**  
**Joint Session, Brazilian Parliament**  
**Brasilia, Brazil**

With no warning, the head of President Hermosa's security detail rushed into the Parliament chambers and grabbed the President by the arm and began pulling him un-ceremoniously towards the exit as more security personnel fanned out around him, guns drawn.

There was immediate pandemonium in the chamber as the President's speech was so dramatically cut short and as elected officials stood and looked around them, wondering what was going on. Some began to shout questions as others began streaming towards the exits themselves. All of it was caught on film.

Just as the President's security detail reached the entrance immediately below and to the right of the podium, there was an immense shudder, followed by a tremendous explosion. Debris and smoke blasted into the chamber, blowing the doors from the opposite side of the room into the chamber along with the bodies and body parts of those who had been escaping in that direction. The pandemonium became terror as surviving legislators, their aides and officials scrambled away from the growing fire on that side of the building.

Ten seconds later, before the President's detail could get him out of the building, another blast occurred, this one not one hundred meters from the President himself. The resulting blast knocked down and dazed the entire detail, with several presidential aides and security personnel pinned under debris. The President himself was down and semi-conscious. He was just coming to his senses, trying to order his thoughts regarding the source and extent of the attack when the third missile struck only twenty feet from where he lay. The last thing President Hermosa saw in life was the rapid, almost instantaneous advance of a firewall resulting from the missile strike whose concussion had just exploded his ear drums. None of the President's detail survived.

For the next two minutes, every ten seconds, more blasts occurred in and all around the parliament building, laying the entire structure and surrounding buildings to waste. Combined with the 500 kilogram warhead of high explosives, the immense speed of the warheads created, through kinetic energy, a literal hell on earth that washed over the entire area.

In the end, only fifty survivors emerged from the complex, where only a few minutes earlier over 1000 legislators, military leaders, newsmen, administrative personnel and security personnel had been gathered to hear the state of the nation address.

**June 19, 19:30 EST**  
**Nation-Wide Address from the Oval Office**  
**The White House, Washington, DC**

"My fellow Americans, it is with great sadness that I address you this evening.

"Tonight we mark another causality in the terrible war that we are engaged in. It is a war against the most vile tyranny perhaps ever witnessed on the face of the earth. With velvet words our enemies attempt to hide and cover their horrid deeds where hundreds of millions are being robbed of their belongings, starved, enslaved and killed.

"Earlier today, our enemies struck again.

"During a speech to a joint session of his parliament, President Alfonso Hermosa was killed by an enemy missile attack on the Brazilian capitol of Brasilia. The attack targeted specifically the parliament complex during his speech. This was no coincidence or accident.

"The missiles were intercontinental ballistic missiles launched from an enemy submarine some 1000 miles off of Brazil's coast. All of us went through some very tense moment until those missiles impacted and revealed that they were conventional warheads of high explosive materiel. For a few moments, we had to presume that we were under nuclear attack. It was a very close thing and this is something I want to emphasize to each of our citizens and to the entire free world. Our enemies do not care the risks they take to inflict their tyranny on us all. It is something for which we must all be prepared and aware of in our continued fight.

"President Alfonso Hermosa was a patriot to his country and a friend to ours. He was a friend to liberty loving people everywhere and he will be sorely missed."

After the address, the President went immediately to the situation room where his entire national security team was gathered, short the Vice President, the Secretary of Defense and the head of FEMA. The executive leadership of the United States in all three branches was taking great pains to never be gathered in one place at one time. There were always enough leadership from the Senate, the House of Representatives, the Supreme Court and the Executive branch dispersed so they could pick up the pieces and continue should a decapitation strike like that executed against Brazil penetrate their defenses and succeed.

As the President sat down at the table, flanked on either side by close advisors, he opened the meeting, turning to his Secretary of State.

"Fred, give us brief rundown on conditions in Brazil."

Secretary of State Reissinger, who had been in touch with the American Ambassador to Brazil throughout the day, immediately proceeded.

"Mr. President, it is only by a miracle of circumstances that Ambassador Charles was not at the Brazilian parliament and himself a casualty. He indicates that the Vice President of Brazil, Henrietta Maldenado, has already been sworn in and is meeting with the military leadership this evening.

"For anyone not knowing this stalwart lady, the name Margaret Thatcher will probably inspire the closest match as to her capabilities and demeanor. The CAS and GIR have not done themselves any favors here. Brazil, if anything will be more committed and tenacious after this attack."

The President replied.

"Thanks Fred, please set up and schedule a conference call between myself and President Maldenado as soon as possible. I'll want to pass on our condolences and our unwavering support.

"Now, as to other issues, despite the advances and success we have had in Central America, and here on our own shores with our counter terrorism efforts...and in apparently holding the GIR at arms length around Israel, we continue to face mountains of bad news.

"General, please, once more, let's confirm these facts. We no longer have an advantage with stealth, we no longer have the advantage of having the only viable ballistic missile defense, our naval power continues to be largely negated and our advantage in space with satellites and surveillance remains virtually negated. Am I missing anything here?"

General Stone, the Chairman of the Joint Chiefs of Staff, paused briefly as he prepared to answer his commander in chief. The Chinese, with the massive infusion of cash and technology during the 1990's and early 2000's, and with the massive resources now available to them as a result of their conquests, had accomplished what no one would have believed possible. They had caught up with the United States in several critical areas, areas critical for the United States force projection and its ability to bring advanced technological weapons systems to bear against the massive numbers of the PLA.

"Mr. President, what you have stated is essentially true.

"The Chinese have developed a stealth acquisition and targeting capability and are deploying it around their critical infrastructure. We must assume, as they produce more of the devices and technology, that they will put them in the field and export them to their allies. We were made aware of this from one of our most valuable intelligence assets just before the device went operational. Director Ballard has already briefed us on all of that. Since that time, in several operations into the PRC with our stealth aircraft, we have lost several of them to this new system. One of our most capable HR-7, Thunder Darts conducting surveillance over the research facility itself, and two B-2 bombers a few days later trying to destroy that same facility.

"There is no doubt that they have an operational anti-stealth capability. We know from earlier efforts on their part and our experiences with it, that they have been pursuing this for some years.

"As to their anti-ballistic missile capabilities, the demonstration that the Chinese provided to the Russians, which we all monitored, speaks for itself. The Chinese ballistic missile defense rivals our own. In one key area they are ahead of us. Our platforms are sea-borne and stationary. There's are land-mobile. We must also assume that they either already have, or soon will have these systems available on their capitol ships.

"Finally, today's attack on Brazil punctuates the parity the Chinese have gained in space. Their ability to knock down our satellites, with the exception of two newer gyro-synchronous units watching the CONUS, were apt demonstrations of what they can do when we can't watch.

"In this case, even if we had watched, short of two or three AEGIS TBM units around Brasilia, we would not have been able to prevent it."

As General Stone said this, the National Security Advisor, Bill Hendrickson, interjected.

"Well, General, we would have at least given President Hermosa more time to exit the facility if we had been able to monitor the Atlantic with satellite surveillance, and why not put two or three TBM units there. We have considered offering it to the Russians, why not to all of our allies?"

Bill said this as he turned to the Secretary of State, Fred Reissinger, addressing the last point to him. That resulted in a fifteen minute discussion by the Security Council regarding this very point. In the end, it was decided to do exactly that. Every allied capitol that desired one would now receive three AEGIS TBM ground units, manned by American personnel, where immediate facility security would be provided by US forces and overall security would be provided by and coordinated by the host nation. In light of the new threat, they decided to offer the same thing to the defense of Moscow, reversing their earlier decision.

After reaching this decision, the President turned back to his NSA.

"Bill, what of the Chinese use of conventional ballistic missiles from their submarines? How long can they sustain such operations and will they do so with their land based weapons."

This question had provided Bill Hendrickson with a quandary. He had thought about it, analyzed it, talked it up amongst the military war college people, the think tanks and the NRO personnel all day.

"Mr. President, it was a surprise ... another surprise from the Chinese. We of course have converted and put to good use several of our own SSBNs, turning four older Ohio Class SSBNs into SSGNs using an insert that holds four cruise missiles for each former nuclear missile.

“This gives us an enormous amount of cruise missile from each vessel, but the cruise missiles are much slower and have less range than these ICBM’s.

“What the Chinese have done is convert actual ICBM’s into conventional attack missiles ... missiles with very long range, with very high accuracy and with hypersonic speeds. We have not considered this because of cost, and particularly now with the PRC TBM capability.

“Apparently the Chinese do not have the same concerns. We must assume that if they will do it with their submarine launched missiles, that they will do the same with their land launched ones. They are clearly attempting to use their assets to maximum effect with playing to our strength, which is of course our nuclear capability.”

As the President contemplated this reply, an aide entered the room and whispered something to the Director of Homeland Security, Stewart Langstrom, who in turn had a brief conversation with the Attorney General of the United States, Dean Byron Hull.

As they finished, Stewart addressed the group.

“WNN is being visited as we speak, David Krenshaw will be in custody within the hour.”

A somber group of faces greeted this news. All of them were happy to hear it. All of them were also concerned at how the news might be used by the political opposition at a time that was increasingly desperate for American and allied forces. All of them knew, from their briefings, that it had to be done. David Krenshaw was considered by this group as one of the most dangerous, most damaging and highly placed traitors in the history of the nation. Now that his personal connections to the Red Chinese were confirmed, his slant on the news and efforts in the CIR on behalf of his mentors in Red China had caused untold damage to the allied cause, and cost untold lives.

The President had ordered that the indictments against Krenshaw be unsealed, but that any actual evidence remain sealed until the trial itself. Many here at the table had opposed this because the indictment itself would reveal too much on how the data had been gathered, both technologically and from a human intelligence standpoint. But the President had been firm, sensing the political firestorm that might ensue if such a high profile figure, one who was courting very powerful national and international figures both politically and on the vaunted Council on International Relations, was whisked away and held essentially incognito under the various national security and counter terrorism acts currently in place, without any indication as to the charges and evidence against him.

Those acts allowed the President to arrest and hold any suspected terrorist or anyone who was viewed as a risk to national security in just such a fashion...and only the prosecutors and the judge were required to be privy to the charges and the testimony and the evidence. Not even the defense attorney, if the defendant could obtain one, was allowed access under those special circumstances.

President Weisskopf did not agree with those provisions of those Acts of Congress. They had been passed before his time in the wake of the 9-11 attacks and during the War on Terrorism that had followed. They were still in place, and although he had carried much influence in advancing legislation that was rooted in traditional American values and intent, he had not been able to dislodge those particular provisions of those acts. He had to admit, as much as he hated it, he had also found it necessary to approve their use against such enemies as Manuel Mendoza and Hector Ortiz. But those had been foreigners, living in this country. Spies whom the President considered should be summarily executed ... and if he had his way, they would be.

“But I will not approve those measures against U.S. citizens under anything but martial law conditions, even one so brazen as Krenshaw,” thought the President.

“We’ll hold him and we’ll apply a lot of the provisions that are appropriate. But release the grand jury indictments and allow his defense council some access.”

After looking around the room, he continued.

“This is great news and we should all stay up to date and informed. Dean and Stewart, are you going ahead with the press conference regarding this?”

The Attorney General and Director of the Department of Homeland Security both indicated that they were scheduled to be on the air at 10:30 PM Eastern Time, in time for the late local news from the Central to the Pacific Time Zones and in a broadcast that would be carried live on every major network, including WNN. Dean Byron Hull responded.

“All of the other network CEO’s are appalled at the overwhelming evidence in the indictment we have shown them and are cooperating. The WNN executives were standoffish at first, but after seeing the indictment they’ve come around. We’ll lay out a lot of the case in our press conference.”

Norm Weisskopf was satisfied. His one concern had been that WNN would continue to spin things after Krenshaw was taken into custody, that Krenshaw had somehow built up an entire team of enemy sympathizers within the network. Hopefully, it was turning out that this was not the case.

“Great. Get Mr. Krenshaw arraigned and held without bail as soon as possible. I want the government to go for the maximum penalty in this. David Krenshaw needs to be made an example of, justice calls for it and our enemies must see what becomes of their efforts in this regard.”

The maximum penalty under the anti-terror laws for the crimes of treason, abetting enemies and conspiracy during a time of war that Krenshaw was charged with was death.

“Now, General Stone, before we close and give Stewart time to complete his preparations for this evening's press conference, please lay out for everyone the current timing and disposition of our upcoming operations in the Caribbean ...”

**June 22, 23:52 local time**

**PLAN Amphibious Assault Ship Chongqing  
800 km West of Midway Atoll, Central Pacific Ocean**

Kao Pham once more prepared himself mentally and physically for combat. This would be his third major engagement, the first two having occurred off of Taiwan and off of Australia. Each of those experiences had provided a mad adrenaline rush, helping him perform his duty despite the fear and the terror at the death and destruction in modern combat. Each wave of an enemy attack produced the same results and Kao was amazed and thankful that he had survived to date. He had witnessed many of his comrades die as other ships were ravaged and sunk right before his eyes.

Kao was now a senior NCO and the team leader for an entire battery of KS-2+ AAW missiles onboard the Amphibious Assault ship to which he was assigned. The KS-2+ was a significant improvement over the original KS-2 missiles that his vessel had carried upon her commissioning and initial combat. But as significant and as advanced as those new KS-2+ missiles were, he was even more excited about the training he would receive and the alterations that would be made to the Chongqing when they next visited port. The ship would be receiving both the new anti-stealth, *ta shih*, acquisition and targeting systems, and the new KS-3 missiles and the associated electronics to control them. A full section of their AAW missiles, one fourth of the total, would now be the KS-3 ABM variety. This was great news as far as Kao was concerned and he could hardly wait to learn how to use and maintain the new technology.

“Besides, that visit will be in the Tianjin shipyards and perhaps I will have some liberty to visit Dad and Mom,” he thought as he monitored the activities of the four personnel under his direction.

Kao knew that several of the capitol vessels in this fleet already carried the *ta shih* detectors and KS-3 missiles. He knew specifically that both of the large deck carriers had been outfitted with the provisions for them during their construction, the COSTIND developers being far enough along with each at the time to include them during the initial build.

Kao was anxious to see them in operation and particularly thankful for the added protection they would offer the entire fleet. He had seen what American technology was capable of and he wanted as much defense against it as possible. These new systems offered a significant boost to what stood between him, his ship and his comrades and the weapons of the enemy vessels and aircraft.

“And we will not have long to wait for the Americans to start that destruction,” thought Kao.

“Soon, it will start,” he thought as he glanced at his watch and prepared for his own forces' assault. It was 23:59:53. Zero hour for the attack was 00:00:00.

## Chapter 27

# The Battle for Midway Atoll and the Invasion of Alaska

**June 23, 00:12 local time**

**Bomb Shelter Facility Z-23B**

**7<sup>th</sup> Marine Division, Midway Atoll**

To call Midway an "Island" is really a misnomer. It's actually an atoll consisting of two major islands, Sand Island and Eastern Island, within its sheltering coral reef, on the south side of the lagoon. Sand Island, the larger of the two is about a mile and a half long and one mile wide. Eastern Island, is about a mile and a quarter long and three quarters of a mile wide. All told there are only two and a half square miles of livable space on the two islands combined. Not a very large place, but as World War II demonstrated, and now as World War III was demonstrating again, a very critical strategic location in the Pacific Ocean over which great battles had been, and now would be fought.

Leon had just settled into his position in the bomb shelter facility when the impacts began. They had received very little notice, only three or four minutes before the attack. He knew that there were many personnel who probably didn't get to their shelters in time and then there were those who were on duty in their prepared positions who had to weather the storm there.

Patriot missile batteries and the single land-based TBM Aegis site on the islands provided a measure of relief, acting as a second line of defense behind the two TBM provisioned Aegis cruisers that were stationed with the fleet protecting the two islands. Still, with the hundreds of missiles the Chinese had launched, more than 50% of them got through ... and the follow-on second wave of missiles were barely touched by the few remain missiles in the TBM and Aegis vertical launch cells.

The pounding went on for what seemed like an eternity. Leon could hear the explosions above him, he could *feel* the impacts through the structures around him. On numerous occasions he felt the impact through his feet, the reverberations seeming to bounce off the rock beneath him to reflect back up into the facility. What Leon didn't know at the time was that those impacts were coming from numerous ICBM missiles that had been converted to conventional munitions that were raining down with the other ballistic and cruise missile assault on the island.

Those missiles had specifically targeted the older bunkers that the Americans had built on the islands in years past. Tonight, there were very few Americans taking refuge in those bunkers. Leon didn't know it yet, but the efforts ordered by General Atkins that so many of the Marines and GI's had literally cursed while they fulfilled them, had saved hundreds of lives ... perhaps thousands. The General, already a veteran of several other campaigns in the Pacific and recently promoted to command the land based defenses of Midway, had learned his lessons well. He knew that the Chinese had already "zeroed in" the location of most American facilities over the years leading up to the war. He had no intention of letting them take advantage of that information.

Upon taking command, he had ordered the entire contingent of fifteen thousand ground based combat troops (an extremely tight fit on the two islands) to immediately put in motion his plans for constructing new bomb shelters, command and control and even storage facilities for both Sand and Eastern Islands. Although not all of them had been completed, and quite a few personnel had been forced to take refuge in, or fulfill their assignments in older facilities ... enough had been completed to house the majority of off duty personnel where they would be preserved to help defend Midway should the Chinese get through the defenses surrounding the atoll.

Later that morning they would all see how effective the General's foresight had been in the twisted and smoldering wreckage of those older facilities, and in the high casualty rates coming out of them. The remarks and attitude regarding General Atkins, from his lowliest foot soldiers through to his entire command staff were elevated to a level of profound respect, almost reverence, for those soldiers fighting on Midway... regardless of what exact words were used in expressing it.

But not all facilities could be relocated or rebuilt. The main airfield, many of the above ground facilities that serviced it and most of the defensive positions, were well known to the Chinese, irrespective of earlier intelligence. Bunker busting ICBM warheads made of hardened metal and very little physical explosive were raining down on the airfield and those positions. Their impact were like miniature meteorites and the resulting energy transfers as those warheads penetrated rock, concrete and steel, were massive. From the horrendous sound to the massive reverberations that were being transferred through the walls of the facilities where other personnel had taken refuge, and being transferred through the ground itself, everyone knew that Midway was taking a beating.

"Well, I can sure see the difference between the Indians and the Chinese on how they assault an Island," Leon thought as he sat there with his comrades.

"The Indians took their time over weeks to build up to the assault, where the Chinese are definitely into shock warfare," he concluded.

And he was right.

The Chinese had timed their assault to allow for the massive missile attack leading up through the very early morning hours. There was a planned thirty minute lull in the bombardment at 0300 hours in the hopes of drawing the American repair crews and new shifts out to repair the damage, and it worked perfectly. The resulting death and destruction of the next barrage made significant inroads into the lives saved by General Atkins construction efforts. Many personnel were caught in the open as both missiles and aircraft broke through American defenses in the follow-on attack.

**June 23, 02:58 local time**

**58 Miles off Midway Atoll**

**Combat Information Center, U.S.S. George Washington**

Admiral Larsen was the commander of all naval forces tasked with the defense of Midway. He commanded a formidable task force, but he knew he also faced a very formidable enemy, as this morning was already demonstrating.

"One thing we can thank our lucky stars for," thought the Admiral, "is that the SUBT CIWS have been deployed in this task force."

The U.S.S. George Washington was the first carrier to be retrofitted with the system. Similarly, the U.S.S. Bataan was the first Amphibious assault ship to be so retrofitted. Along with the George Washington and the Bataan, the Admiral also had several Aegis class destroyers that mounted the SUBT CIWS. All told, the Admiral had a total of seven vessels mounting the new weapons system and he hoped and prayed it would be enough.

Along with the U.S.S. George Washington battle group, the Admiral had the U.S.S. Theodore Roosevelt battle group and two Amphibious assault ships that had been converted to the role of Sea Control carriers. One of these was the U.S.S. Bataan and the other was the U.S.S. Wasp. Each of his large carriers were carrying an air wing that was comprised of a slightly different mix than those on the carriers that were defending New Zealand. His air wings consisted of a higher number of FA-18/F aircraft capable of either air superiority or attack and maritime strike roles. The Admiral expected to apply them with extreme prejudice if he got the chance...and he would get that chance.

The sea control carriers, on the other hand, carried more aircraft with which to defend the fleet, and the admiral planned to use them in that role, providing CAPs as part of the inner ring. Comprising air wings of 4 AV-22 Osprey, 2 E-22C Osprey AWACS aircraft and 18 A/F-35B VTOL Joint Strike Fighters, the Admiral felt he could maintain a very strong inner ring CAP of between fifteen and twenty aircraft at all time. The larger carriers would provide the barrier CAP missions necessary.

All told, when combined with the ASW helicopters deployed on many of his escorts, the Admiral's order of battle consisted of over 172 combat aircraft suitable for air defense and strike roles and over 75 aircraft for support and ASW warfare. In addition, he was supported by the over 100 U.S. Air Force aircraft at Henderson Field on Midway itself. There, he had a mixture of F-22, F-15C, F-15E, F-35A and Air Force AEW, ECM and refueling aircraft.

The large displays in the CIC were being fed by both the Navy's multiple E-2C Hawkeye and the new vertical takeoff E-22C AWACS. The Air Force's E-3 Sentry aircraft currently monitoring the air space over and around Midway Atoll was also feeding into the system. These aircraft were directing the air defenses which were now up in the air over the battle groups and the island, and that were stationed out along the principle threat axis represented by the attacking missile tracks.

"I hope and pray it is enough," the Admiral thought as he watched the threat "board" displayed on the largest screen at the front of the room. There, he could plainly see the diminishing number of vampire returns emanating from off to their west. Although many of the lower speed and lower level cruise missiles had come in from several directions, and although the ICBM tracks were clearly from greater distances, the shorter range ballistic missiles were easily tracked, with fair precision, back to their launch points. Those points were clustered in two principle areas a good four hundred miles further to their west and southwest. His air defense aircraft were up along both of those lines. His strike packages were just launching now to seek them out. But he knew he could very likely expect company of his own behind these missile barrages.

Turning to address the commander of the George Washington, the Admiral said, "Captain Bastian, what is the latest on the operational status of the SUBT CIWS on the George Washington?"

"Green board, ready for action sir," the Captain replied.

"Good, between the George Washington, the Bataan and the Burke's, we're going to have to be ready to ward off a heavy Killer Whale attack at some point. The tide of this entire battle, and perhaps the war is going to turn on that."

As the Admiral watched the radar returns indicate many new bogeys approaching from the west behind the last missiles, he was not yet aware that he was entirely correct in his assumptions regarding the battle for Midway, but incorrect regarding the overall war effort.

The overall war would hinge on other, even more significant developments taking shape well over two thousand miles to his north.

## **June 23, that same time**

### **100 Kilometers Northeast of Uelkat**

#### **Eastern Siberia near the Bering Strait**

"The weather in this forsaken country is cold even in the middle of summer," thought General Wu Tsing as he entered the command facility that had been set up near a small inlet along the Gulf of Anadyr. With a howling wind of over 40 knots, a temperature in the mid thirties and thick cloud cover that was spitting sleet and snow, the current weather system was exactly what the operation needed for cover. The forecasters were expecting heavier showers later in the day that would continue through the next several days, both here and moving east over the Bering Strait into western Alaska.

"The cold, clouds and snow may be uncomfortable, but it is exactly what we have hoped for ... and as cold as it may get, it cannot begin to cool the fire that is burning within our forces," General Wu concluded to himself as his intelligence officer started the meeting.

The General and his forces were poised in eastern Siberia to strike to their east. They were there as a direct result of the Siberian Economic Development Treaty that the Russian Federation had signed with the Coalition of Asian States well over three years earlier.

One of the largest Chinese work sites resulting from the treaty had been a rich Coal and Iron Ore deposit to the west of Markovo in a remote area of eastern Siberia. The deposits were huge, but access was extremely limited. Russian and Chinese engineers devised a plan to build a large railway and superhighway directly to the area to allow for the traffic into the site required to transport the materiel away from the facility and back to China in the quantities envisioned.

It had been a difficult project from the start.

The plans called for a four lane highway and a two line railway to run from the port facilities at Magadan eastward to Yamsk and then northward along the Kolyma Mountains to Gizhiga on the Gulf of Shelekhov. From there the road would make its way through the extremely rugged wilderness around the Omolon and Fenskina Rivers, using tunnels, steep grades, and huge excavations to reach the final destination of Markovo.

It had also been an ambitious project.

When complete, it would be one of the longest superhighways in the world. It would definitely be the most remote. Over 1000 miles through steep mountains, forests, rugged coasts and along wild rivers that experienced the coldest winter weather on the planet. Twenty thousand Chinese workers were brought in to complete the work which the Russians estimated would take over five years.

When the war with the United States began only a year after work had begun, progress on the project had been made halfway up the rugged Siberian coast to Gizhiga, further than anyone would have estimated. By the time Siberia declared its independence in March of this year and fighting broke out in the western part of the country between Russian and Chinese forces, the Chinese workers had surprised everyone by being within 80 kilometers of Markovo.

There had been some set backs during the recent fighting. Russian units operating off of the Kamchatka peninsula had destroyed a number of bridges and tunnels along the roadway in late April before Chinese forces defeated the Russians at Petropavlovsk. With that defeat, the repairs had quickly been made and the road completed to the work site. Iron Ore and Coal production was increased immediately to full capacity and tremendous volumes of the raw resources began to be trucked and trained back to the port at Magadan. From there it was loaded onto COSCO cargo ships and transported across the Sea of Okhotsk to Manchuria and the Chinese mainland.

But the long railway and highway had never been intended for natural resources. It had been a nice bonus to actually find a rich deposit of Ore and Coal there in the eastern Siberian wilderness, a bonus the Chinese were exploiting to the max. But, some form of deposit would have been announced in any case to warrant building the roadway that was to serve an even more critical purpose in the overall Chinese war plans...the movement of large military forces into far eastern Siberia...right up against the Bering Strait across from Alaska for the invasion of the United States of America, and more particularly, for the capture of the vast American oil reserves in the Alaskan National Wildlife Refuge and at Prudhoe Bay.

This is what made the General so confident and bolstered the morale of the large forces under his command. They had followed their high command's instructions precisely according to the direction of the Politburo and Jien Zenim. They had completed the railway and highway and had painstakingly and secretly moved men and materiel in tremendous quantities to Markovo. They had staged them there in large, deep granite caves in the mountains which had been excavated during the mining operations as the roadway was being built.

Although the initial mining operations and the road building had been closely watched by the United States, the military buildup that followed had gone entirely unobserved as a result of the successful satellite warfare the Chinese waged against the Americans. The few satellites that were launched now had very short lives and they were directed at other areas thought to be more critical.

As a result of this, the most critical time for maintaining the operational security came when moving the massive force further to the east towards Alaska. The closer they came to the Bering

Strait, the more chance for discovery by American aircraft patrolling the far eastern portions of Siberia to ensure there was no danger to the continental United States lurking there.

In order to make sure the Americans did not discover the very plan that they were patrolling against, the Chinese had to implement the last portion of their grand strategy carefully and with significant deception. The road and railway had been extended down the Anadyr River and to the northeast of Uelkat onto the Chukchi Peninsula, to the location where the General was now located.

During that extension and the troop movements that had followed, there had been many air raid warnings as American aircraft extended their patrols from both Elmendorf Air Force base near Anchorage and Eielson Air Force Base near Fairbanks out across the Bering Straits and over the Chukchi Peninsula in Siberia. As a result of careful Chinese planning and deceptions, none of those patrols had ventured far enough to the west to discover the large forces massing near Uelkat.

This was accomplished through well planned engagements and feints as more Chinese fighter aircraft were moved into the area. These aircraft began to challenge the American incursions. But they did it with patience and in a manner that matched what their intelligence had informed them was what the Americans expected to see. Intelligence wanted to ensure that the intercepts were carefully scripted as a back-water, non-important area of operations. That intelligence had been accurate. The Chinese showed the Americans exactly what they expected to see and no more.

In the ensuing engagements, the more modern SU-33 and J-10 aircraft were held back. The Chinese used only the older, vintage J-7 and F-1 aircraft to challenge the Americans. These engagements invariably resulted in lopsided American victories with the Chinese aircraft scurrying back to the west out of fuel range of the Americans, as they were expected to do. The Americans duly noted the increased Chinese air patrols, but reported that there was no need for concern because the enemy was at the end of their fuel range and must be coming from much further away.

But all of that was changing this morning. Here and along the roadway back towards Markovo over 750,000 Chinese troops and their equipment were now poised, along with over six hundred high performance combat aircraft and five hundred transport aircraft. They were finally prepared to cross the Bering Strait onto the continental United States...a feat no invading army had been able to do since the British had burned Washington, including the original White House, in the War of 1812.

Tsing contemplated all of this in the first few moments of the briefing as he watched the threat displays in his command center facility fifty feet below the ground near Uelkat. What those boards showed him was an advancing line of over one hundred high performance SU-33, J-10 and F-5 aircraft now engaging an American patrol of six F-15 aircraft over the Bering Strait, well to the west of Nome, Alaska. The Americans were being swept aside.

Six more American aircraft that had escaped the ballistic missile barrage that pounded Eielson Air Base were advancing rapidly towards the scene of the lopsided fight. But as the personnel in the command facility watched, they began to turn away and vector to the south and east before engaging. Pointing to the clear indication of this on the display, the General got everyone's attention.

"Do you see how the follow-on American aircraft are turning away comrades?"

"They see the futility of trying to prevent what is currently happening and they are wisely trying to save those resources to fight us later, when they can better consolidate their efforts."

As the personnel nodded and the intelligence officer continued the briefing, their attention was turned to the rapid advance of the next wave of ballistic missiles now well in front of the fighter sweep. That second ballistic missile barrage, like the one currently going on against Midway, was a mixture of hundreds of shorter range ballistic missile mixed in with over two dozen conventionally armed ICBM's fired from their bases in Mongolia and Tibet. Those missiles were targeting the runways and infrastructure at both Elmendorf and Eielson Air Force bases, and all of the major infrastructure and airfields around Nome and the Seward Peninsula.

Behind the initial fighter sweep were over two hundred attack aircraft streaking toward military and infrastructure targets in Nome and all along the Seward Peninsula and the western Alaskan coast as far east as the Yukon River where its flow turned south near Koyukuk. Behind these attack aircraft and escorted by yet more Chinese fighter aircraft, were over four hundred transport aircraft and helicopters of all types progressing towards their landing zones. The largest portion of these would be landing in and around Nome. But a sizable portion would be landing at Koyuk on the coast of the Norton Sound and then making their way by helicopter to Koyukuk to secure that position on the Yukon River. All in all over fifty thousand Chinese troops were involved in the initial assault.

At this point, the sound of the intelligence officer's voice interrupted the General's thoughts.

"General, all reports indicate that the Americans have been caught totally by surprise.

"Their civilian leadership and their military leadership are focusing on our advance on Midway.

"Local forces in western Alaska are clearly unaware of and unprepared for the extent of our assault. We expect to achieve all of today's objectives on or ahead of schedule."

**June 23, 03:25 local time**

**Alternate Command Facility, Elmendorf Air Force Base**

**Anchorage, Alaska**

The American Air Force General slammed his hand down on the table... *WHAM.*

Putting his face within inches of the Captain in charge of the surviving communications facilities, he raised his voice several decibel levels.

"I don't care what you have to do, Captain. You get me a communication link back to the world and you *DO IT NOW!* Set up a relay if you have to with the remaining aircraft we have in the air...or use the commercial aircraft out of the Anchorage. I don't care how you do it, but I want to be talking directly to NORCOMM CINC inside of the next thirty minutes.

*"DO YOU UNDERTSAND ME?"*

Lt. General Paul Stokes was emotionally involved...in fact, he was *very* emotionally involved. He knew it, his gathering staff knew it and he didn't have the time or the inclination to eliminate the emotion from his voice at the moment. There was simply too much happening and too much at stake.

The 11<sup>th</sup> Air Force command was a shambles. Every runway had been holed...several times. Most critical facilities had been hit, some of them, like the Headquarters facility, had been completely destroyed in an instant, and many aircraft had been destroyed in place. The Major General who was the overall commander of the 11<sup>th</sup> Air Force was dead, along with many of the Air Wing commanders and other leadership. Lt. General Stokes, the deputy commander was now in charge and he simply had to get word of the full extent of the tragedy back to the NORCOMM and the Pentagon.

"Oh, they'll be figuring it out for themselves from those initial reports that went out before communications were cut off," he thought.

"But they have no idea of the full extent of things."

General Stokes, however, did have a good idea of the full extent of things.

The four ready alert birds that had gotten off the ground before the airfield had been shut down were now flying a beefed up escort for the single E-3 Sentry early warning radar and communications aircraft that was in the air. That Sentry had made a quick retreat back towards Anchorage when it was clear how overwhelming the attack coming out of Siberia was. The ballistic tracks had heralded the attack, but they were followed very quickly by the many, many bandits that the Sentry had observed, thirty of which had been vectoring directly towards the Sentry itself.

All six of the F-15 patrol aircraft the E-3 had been controlling over the Bering Strait had been shot down in the first five minutes of the battle as they valiantly placed themselves between the attacking enemy and the E-3 aircraft in order to buy the time for the E-3 to retreat back to the east. Their fight had resulted in shooting down eleven enemy aircraft, sacrificing themselves in the process. The Sentry had not picked up any emergency transponders from those six aircraft.

The follow-on six F-16 aircraft out of Eielson Air Base had turned away when they were ordered to provide cover for the E-3. Those six aircraft, along with the four ready alert F-15s from Elmendorf attempted to create a strong barrier CAP between the Sentry and the Chinese who were going about their business all along the western coast and along the Seward Peninsula.

Whenever the E-3 tried to push its radar coverage further west, to get a better look at the Nome area, the enemy immediately dispatched twenty or more aircraft to intercept and a lopsided dogfight ensued. That had happened twice and each time the Sentry and its escorts had been forced to retreat, not being able to afford the loss of more fighters which would risk the loss of the E-3 itself. Already two of the F-16 aircraft and one of the F-15s had been lost.

Now, following Lt. General Stokes' orders, the E-3 was holding station halfway between Anchorage and Nome with its seven remaining escorts positioned between itself and the enemy at what was thought to be the extent of the enemy's fuel range. For now, General Stokes was content to allow the E-3 to provide a good picture of the enemy's furthest line of advance. But he knew that as soon as the Chinese could land and refuel aircraft on this side of the Straits, that they would push their own air coverage ever further towards Anchorage.

The two attempts that the Sentry and its accompanying fighters had made to get a closer look at Nome had been sufficient to show the General that the Chinese were embarked on a full scale invasion of western Alaska. The many fast moving aircraft and the hundreds of larger, slower moving transport aircraft could only mean one thing, a huge air assault was occurring with thousands of Chinese troops, perhaps tens of thousands, who were landing and occupying American soil.

The General had already spoken briefly with the commanding General of all ground forces in Alaska and with the Governor. A full mobilization of the entire Alaskan National Guard and every able-bodied individual had been ordered and was being announced on the Emergency Broadcast System, along with a complete military emergency declaration for the entire state. The Governor and the land force commander were trying to contact their Canadian counterparts over in the Yukon and Northwest Territory provinces of Canada to apprise them of the situation and to try and begin planning some form of joint, coordinated mobilization.

The U.S. Army had a total of two divisions of regular Army and National Guard troops in Alaska most of them deployed in a position to protect the oil reserves. But General Stokes, based on what he had seen, was convinced that it was going to take many, many more divisions to halt the Chinese incursion and then throw it back across the Bering Straits into Siberia. The Alaskan Governor had ultimately arranged a conference call to Washington using an un-secure land line so General Stokes could report his assessment, but before it could go through, the line had gone dead.

Now General Stokes and the Governor and other high ranking political and military leaders in Alaska were trying to patch communication avenue together to get the word out. Stokes had convinced them all that this was the first phase in an even larger invasion across the Bering Strait and that it was going to take a massive mobilization here in Alaska and throughout the United States and Canada to contain it. Those conclusions simply had to get back to NORCOMM, the Pentagon and to the White House as quickly as possible.

### **June 23, that same time**

#### **Urkut Residence**

#### **Nome, Alaska**

Unknown to Lt. General Stokes and the other 11<sup>th</sup> Air Force officers struggling to rebuild communications in Anchorage, a very complete and compelling report of what was happening in western Alaska had already been viewed by hundreds of thousands of Americans in the lower forty-eight states, and it had been viewed in real time. It would ultimately be viewed by millions and it would have the very effect that Stokes was hoping to create on the political and military leadership of the United States, and upon the people.

Stacey Urkut was a fifty-seven year old widow living outside of Nome on social security and on the savings she and her late husband had been able to stash away from twenty-five years of married life and his career in fishing. It wasn't much, but it allowed her to live comfortably here in her native homeland in a cabin located on a mountainside on the Seward peninsula near Nome.

At a little after midnight, Stacey had been jolted awake by a terrible rattling of her entire house. At first she had thought that there had been an earthquake and she had immediately gotten out of bed and frantically thrown on some clothing to escape outside. While she was in the process of doing that, there was a tremendous explosion in the distance, followed in quick succession by three more.

"What on earth?" she had asked herself as she went to the window and pulled up the heavy winter shades and looked outside.

What greeted her eyes was a cloudy, very early morning in the land of the midnight sun. The cloud ceiling was fairly low, but looking towards the coast she could see a tremendous fire and pillar of black smoke rising into those clouds from the petroleum storage facilities on the outskirts of Nome. As she watched, she saw a brief streak of light in the clouds and a trail of smoke plummeting out of the clouds at blinding speed. The smoke trail pointed like an arrow into the center of town in the vicinity of town hall. It hit with a bright flash and she first saw ... and then heard and felt the resulting explosion as its concussion was transferred to her through the air, and through the ground.

While she continued watching in horror, other streaks flashed in the clouds and trails of smoke rained down on and around Nome, each resulting in a similar bright flash and explosion. Soon the sound was like continuous claps of thunder, building to a rolling wave of rumblings, punctuated by the tremendous crashes and rattling of hits closer to her home.

Stacey wasted no more time. She had a feeling she knew exactly what was happening. She went and got her digital camera and began to take pictures through her window of what she was witnessing. While she did so, she turned her personal computer on and waited for it to boot up. When it did, she quickly went through the practiced motions of dialing up to the internet and then logging on to her favorite site on the web, the Independent Republic.

On Independent Republic, which was a conservative news and discussion forum site, Stacey was known as Orka107. She had been a member of the web site for over seven years and had followed every major news story that had been reported on it. The discussions, or "threads" as they were called, allowed users of the forum to look at, analyze, and discuss breaking news and the events of the day from every conceivable angle, posting their thoughts and comments individually to each thread. With over 250,000 registered users on the Independent Republic, all of whom were eager to read and analyze the breaking news of the day, the site had developed into a literal information treasure trove whose members kept a window to Independent Republic active on their computer at their homes, in their offices, and on their laptops virtually all day long.

As a result of so many registered users and the even greater numbers of unregistered users (called "lurkers" on Independent Republic), all being online at any one time, a good number of the breaking news stories on the forum were in essence eyewitness, live accounts of events as they occurred. Many of these eyewitness reports were often posted before the major news services were even aware of their existence.

Stacey remembered several threads that she had personally been involved with where Independent Republic users had been on hand when very notable events had occurred, reporting on

them as they happened. She remembered how caught up she and tens of thousands of others had been when reading about the Klamath Basin Water Crisis throughout the summer of 2001, or the horrific eyewitness accounts of the horrible attacks on the morning of September, 11<sup>th</sup> of 2001, or the many eyewitness accounts of the Chinese attacks on America and the terror attacks within America that had occurred since. All of these, and many more, had been reported as they happened by users of Independent Republic. Stacey had never imagined that she would one day be making such a report herself, but today was the day and she was being thrust into that role by events beyond her control. But she knew from those other experiences exactly what she needed to do.

JT Sampson, the respected conservative editor and owner of the online SierraLines news service, also knew what he had to do as he read the initial accounts being posted by the user named Orka107. He had good relations with many of the users of Independent Republic, and had used their eyewitness reports on many occasions to develop his own breaking news. The courtesy extended both ways as many of JT's subscribers, who were also registered users of Independent Republic, or "IR" as it was known by its users, would post JT's editorials and breaking stories back on Independent Republic for analysis and discussion. Upon reading Orka107's first thread, he called for all of his workers to hold the presses (so to speak) and began reformatting the main page to his SierraLines site.

As that happened, Stacey Urkut continued to do exactly what she had seen done in the past. She continued making the eyewitness accounts that JT and so many others were already reading. They were vivid and emotional on-scene reports, complete with color pictures that she was uploading from her digital camera, of what she saw...and those reports continued to flow from her keyboard as the very early morning hours progressed in Alaska.

Her reports would ultimately do more to arouse the American populace against the Chinese invasion than any other effort the American government or press would make. For over three hours, as the land line she was using miraculously held, her threads were picked up in the Breaking News section of the Independent Republic and viewed by more and more peoples. Those initial thousands became first tens of thousands, then hundreds of thousands, and ultimately millions as the vivid JPEG images and riveting written accounts that accompanied them were emailed to the entire address books of everyone who was seeing them. The major media outlets began picking up the story but were unable to use their normal means to make reports. Their only alternative was to use the materiel being posted on the Independent Republic and then comment on it.

Ultimately the event would be recorded as the single most viewed story in the history of world-wide internet media, so quickly did word of it travel by email and by phone that summer morning.

Stacey recorded the massive missile barrage directed at Nome and its infrastructure, the hundreds of missile impacts and the resulting damage and fierce fires. From her vantage point well up on one the mountain overlooking Nome, she also recorded the follow-on, high performance attack aircraft as they swooped in unopposed at low altitude to bomb and strafe Nome's small airport, the police station and many other facilities. The obvious carnage and destruction was appalling, but it was also engrossing and compelling and few of those watching could away.

Users of Independent Republic discussed the lack of air cover over the Bering Strait and how this could have occurred. Immediately, many theories sprung up in the ad-hoc think tank that the Independent Republic had become over the years. These theories were always wide ranging...and in this case they ranged from a world-wide plot involving the American government to allow the United States to be over-run, to reports of perceived ineptitude of the current administration supposedly witnessed by the continuing string of military set backs, to the actual truth that a normally sufficient combat air patrol had been overcome by the overwhelming numbers of a massive Chinese surprise attack which had been masked by the lack of satellite coverage and the weather.

Whatever the reasons, more and more Americans were turning off the initial reports of the attack that were appearing on network TV and the radio, and turning on their computers as the emails and phone calls raced around the nation. There, on their computer screens, they watched in real time the horrific, world-shattering events unfold as Orka107 reported it on the Independent Republic web site the fateful morning of June 23<sup>rd</sup>...America was being invaded, and everything had changed again!

The owner of Independent Republic, Rob Jamison, himself having seen the initial reports on his forum-and himself a veteran-recognized immediately the significance of the reports and spent the morning valiantly working to ensure that the site could keep up with the tremendous growth in volume without crashing. He also answered the many phone calls coming in from news services asking him to share copyright or at least allow reprints of the data appearing on the Independent Republic. Within thirty minutes, Jamison had to stop answering the phone because the calls became too numerous and because his servers were in danger of overloading. He simply had to devote his full time and energies to keeping his system up and running.

Ultimately only one set of threads was allowed to run on Independent Republic that morning. All other stories, all other threads, all other services were put on hold and all traffic and resources were routed entirely to the several threads that Orka107 posted. It allowed the site to weather the bandwidth storm and it ultimately allowed the literally millions of Americans to watch the destruction and then the invasion of Nome, Alaska by the Chinese as it happened.

JT Sampson, having completely revamped his main page within the first fifteen minutes, mirrored all of the reports onto his news service site as the exclusive front page story, crediting Orka107 and the Independent Republic. Hundreds of thousands of more viewers saw the story there and they too passed it on to their friends and relatives who in turn passed it on to their friends and relatives in a cyber chain that spanned the continent ... and ultimately the free world.

Finally, towards 3 AM in Nome, the final comments from Orka107 were posted that morning. The last pictures she uploaded showed hundreds and hundreds of parachutes dropping out of the clouds into and around Nome...some of them landing uncomfortably close to Stacey's own cabin. Seeing this, many individuals posting on IR frantically told her to hurry and make her escape.

Those last images also showed dozens and dozens of transport helicopters hovering over and landing in the town and many attack helicopters, some of them strafing groups of individuals who were firing rifles at them, others launching massive multiple rocket attacks on unseen targets. As these last images of actual fighting between American citizens and Chinese invaders appeared in the final thread that she posted that morning, Orka107's last comments accompanied them.

*"Well my fellow cybIR friends, this will be my last thread and last post. There's no time for more and as you can see, I have to be going.*

*"It's really happened. As you can see from all of my pictures and comments this morning, and against all odds, the United States of America has been invaded. Tears are streaming down my cheeks as I write this. There are no words to adequately describe how this feels.*

*"Just for the record, let me say this so my friends here on IR can all know who I really am. At times likes these, psuedo-names aren't important anymore. My real name is Stacey Urkut. I am a native American woman who is 57 years old. The area around Nome has been home to me and my family for my entire life and for generations before me.*

*"I may be older ... I may be a woman ... but I was taught by my father a long time ago about freedom and about faith ... the same freedom so many have taken for granted for so long ... the same faith that so many have lost. Perhaps I took those teachings for granted myself ... I don't really know and there's no sense fretting over it now.*

*"You see, the time for talking is past. The time for senseless squabbling and worrying over meaningless issues like which mindless sitcom is the best or whose fashion reflects the best "look" of the current day ... all of that is past. For us here in Alaska, all that is left is to fight ... for our lives, for our homes and for our liberty.*

*"You know, there was something else I was taught by my father and uncles ... and that was how to shoot. Several of you have known me here on IR for years. You have seen my threads on the 2<sup>nd</sup> amendment threads of the old Winchester Model 1892 44-40 that my father left me and my dear husband, Tony, some time ago when my father died. Well, Tony is gone now too and I guess it's time to get that old 44-40 down from its place over the fireplace, get the shells Tony stored in the closet and step outside and try to make my way over to my nephew's trapping cabin. Please pray for me and don't hold it against me if along the way I use my Winchester to engage in very brief, very animated and very direct conversations with any of these Chinese visitors I happen to run across along the way.*

*"Farewell my friends, remember us all in your thoughts and prayers*

**June 23, 8:32 EST**

**Situation Room, The White House**

**Washington, DC**

President Weisskopf and his staff were silent as they too read the last comments Stacey Urkut posted on the Independent Republic that morning. The President's Chief of Staff had been contacted by his own wife one hour into the crisis while the technicians at the White House and the Pentagon were trying to re-establish communications with the 11<sup>th</sup> Air Force in Anchorage. Apparently the Chief of Staff's wife had gotten an email from her mother, who had received a phone call from a close friend who had in turn received a bulk email from a brother. And so it went.

The result had been that the Chief of Staff had entered the Situation Room and quickly displayed the appropriate thread on the screen. For the last two hours, interspersed with continuing situation reports regarding both the Midway and Alaska situations from his military, National Security and Homeland Security advisors, the President and much of his cabinet had watched and read the reports coming directly from Nome over the internet.

"That's one courageous woman," the President commented after a few seconds.

"Whatever else happens, I want to make sure she is awarded a Medal of Freedom for her reports and actions this day ... and God willing, I'd like to meet her after this is all over and find out how those *conversations* went.

"But, my God! How did the Chinese pull this off without our knowing something! Admiral Crowler, what is going on up there with the 11<sup>th</sup> Air Force?"

Secretary of Defense Crowler looked down for a moment, and then responded.

“Mr. President, without satellite coverage and with the Chinese anti-stealth capabilities, we have had to pick and choose very carefully where and when we utilize those very expensive and very important resources. It doesn't help one iota in the current circumstances ... but it is still the truth.

“General Layton maintained what we all perceived as a very strong CAP up over the Bering Strait twenty-four hours a day and seven days a week. Clearly, the Chinese have hidden a massive build-up in eastern Siberia from us, one we did not expect given all of their other offensives, particularly the one currently directed at Midway.

“When they came, we weren't ready for it.

“Now, General Layton is dead, the CAP was swept from the sky and Lt. General Stokes has got his hands full. That's the best I can report now of the cuff, Mr. President.”

The President was sobered by those comments. He had not known until this moment that General Layton had been confirmed dead.

“Thanks, George, I was not aware that General Layton's death had been confirmed. Please pass my personal condolences on to his wife and family. We've been caught with our pants down and we're going to have to be more vigilant and maintain stronger security everywhere.”

Turning his attention to the entire group, the President then continued.

“Alright folks, we have these two new monumental threats to face and we are going to have to quickly find a way to contain them and turn them around. Let's start with the latest info that we have from the commanders in the field. Secretary Crowler, General Stone, what else do we have?”

The Secretary of Defense looked over briefly and expectantly to General Jeremy Stone, the Chairman of the Joint Chiefs of Staff, who quickly nodded back to him.

“Mr. President, I'll let Jeremy fill us in on the latest communications. General Stone, go ahead.”

The General placed both of his hands on the surface in front of him and then looked around the table. When coming to and meeting the President's gaze, he took a deep breath and began.

“Well, the action is continuing in both places. We have now been able to get relayed transmissions from Alaska, and we are in direct communication with Midway Atoll.

“The Chinese are making two major offensive pushes to the east. As you know, one of them is at Midway Atoll that we have been expecting for some time. The other in western Alaska, as Secretary Crowler just mentioned, has taken us by surprise.

“Both represent, of course, critical threats to us. Midway would give the Chinese a strong position to defend against our approaches towards their massive gains throughout the Pacific and Asia. It also would give them an ideal place from which to attack and perhaps invade Hawaii.

“Alaska is an even greater threat if what we believe is happening is actually occurring. From the pictures and reports from this woman in Nome, and based on the initial assessment from General Stokes in Anchorage, I believe we are facing that greater threat ... a massive invasion of Alaska that can have but one aim, and that is the capture or destruction of our oil reserves in the Arctic.”

With this statement, several of the cabinet members moaned or otherwise made disconcerting noises around the table. As the General continued to pause, discussions began to pick up amongst the various cabinet members. The President interrupted it all by raising his hand, palm forward, and indicating that everyone should give him their attention.

Turning to his Chief of Staff, the President said, “Talbot, get the Secretary of Energy over here as quickly as possible.”

Then, turning back to the General, the President continued.

“I am not sure of the exact numbers as of today, but in our efforts over the last three and one half years to become energy independent, I believe that the North Slope Reserves in the ANWR and around Prudhoe Bay make up about 20% of our current oil production. We've been able to lower the totals because of the increases we have made elsewhere, like in the new oil production off of the Pacific Coast and in our substantial increases in domestic Nuclear Power as a result of the Nuclear Regulatory legislation we got passed.

“Talbot, make sure that Secretary Collier brings those figures with him along with a complete estimate of production rates, forecasts and any other data related to overall production and consumption rates of oil.

“Okay General, please continue, we'll review our oil situation when Secretary Collier gets here.”

The General continued, going into detail regarding the current force structure in Alaska and around Midway Atoll. From the latest reports, the assault on Midway was continuing. An initial cruise missile attack launched by Chinese strike aircraft against Admiral Larsen's combined naval task force off Midway had succeeded in sinking two frigates, one Burke destroyer and damaging the U.S.S. Wasp and one of the Sea Control carriers operating with the Admiral's Task Force.

“The hit on the Wasp was not mortal, but it produced many casualties and its flight operations are currently on hold until repairs can be made...but she is not in danger of sinking and they feel she will hold station just fine and be flight operational within ten to twelve hours.”

The U.S. counter strike sent out against the Chinese task force had not fared well. The Chinese had apparently held back the majority of their air superiority fighters and met the U.S. Naval aircraft over 100 miles to the east of the Chinese main force. The resulting dog fight had caused many of the

A/F-18F aircraft to eject their attack stores into the sea so they could defend themselves. As a result, the attack had not been able to be pressed home against the Chinese fleet. Fifteen American aircraft had been lost in the fighting along with over thirty Chinese fighters. As of last report, the two forces were continuing to probe for each other's exact location so they could launch more effective strikes.

In Alaska, not much more could be said than what they had already seen. General Stokes was requesting immediate reinforcement, both for his air forces and his ground security forces. Fighter wings and bomber wings from Seattle, Idaho, Montana and from North Dakota were already in the air over Canada en route to Elmendorf and Eielson Air Bases. Military and commercial air transport aircraft were already staging to fly reserve troops up to Alaska based on the major call ups that the President had just signed in the last hour.

The President would be making a national address to the nation at noon and there would be more call ups announced then, along with a clear explanation of the gravity of the situation.

At the conclusion of General Stone's remarks, the President asked.

"Jeremy, straight up...in Alaska...can we stop them?"

The General, as the President knew he would, responded directly, forthrightly and to the point.

"Stop them? Yes, Mr. President, we can stop them, and we will stop them.

"...but my guess is that it will be somewhere around Fairbanks, or perhaps even Anchorage.

Depending on how well the enemy has planned and what type of transport he is bringing into Alaska, I think there is little chance that we can amass enough forces in time to save Prudhoe Bay or the ANWR oil facilities.

"Personally, I do not think we can count on this enemy not planning all of this very well in advance. I believe now that our oil is, and always has been, their main goal. They just masked it from us extremely well. We will do everything in our power to protect that oil and its production facilities, or to deny it to the enemy."

**June 23, 12:37 local time**

**TU-22M Reconnaissance Regiment**

**250 miles Southwest of Midway Atoll**

Colonel Win Chang checked his instrumentation and his heading. He was the commander of this entire regiment of TU-22M Backfire strike aircraft...except today they had no weapons whatsoever to *strike* with. Particularly no LRASD devices.

Each of his thirty-six aircraft had been loaded up with the most advanced detection and ECM equipment his nation had to offer and they had also been loaded up with extra fuel. In place of real weapons, they had all carried extra fuel stores which they had ejected from their aircraft as they passed the general area of the two Chinese fleets. They also carried very convincing decoy Yakhont missiles that would draw American missile fire.

Only a few minutes earlier, one of the aircraft in the northern most formation had detected the telltale signs of American transmissions and Aegis radar signatures. The Colonel had communicated to the entire Regiment what their orders would be for the final phase of today's mission. The entire Regiment turned to the north. Based on the triangulation he had received from the surveillance version of the LRASD devices that had been seeded in the waters around Midway by the Chinese fleet, the Colonel had a fair idea where the main American formations had to be located.

The Colonel had already rejected two earlier Aegis radar detections by his aircraft as decoys. He was convinced that those two readings were nothing more than the Americans trying to draw him and his comrades into attacking smaller Surface Action Groups (SAG) that the surveillance units had already located. But the Colonel was committed to not wasting the LRASD devices and Yakhont missiles from the other Chinese forces on decoys today.

"No my American friends, that hole in the water to the north where we are getting the least Aegis signature is where I believe you are, and now we are going to put that premise to the test."

The Colonel's plan called for thirty of his thirty-six aircraft to go to afterburner and attain their top speed of just under Mach-2. They would then approach the potential location of the American fleet at high altitude and with all of their countermeasures active. With full counter measures and with their high speed, the Colonel was hoping he would find the Americans and be able to conclusively report their position back to the Chinese fleet and to the other six aircraft that would not be taking part in the mock frontal assault on the Americans. At the same time, when he found the Americans all thirty of his aircraft would launch their decoys, thereby capturing the full attention of the American task force.

It was time to go to full afterburner ... now!

While all of this was happening, the other six aircraft had already gone to extremely low altitude, less than 100 feet above the waves, and were circling the perceived American position towards specific coordinates on their digital terrain maps.

**June 23, five minute later**  
**CIC, U.S.S. George Washington**  
**100 miles West of Midway Atoll**

"I have multiple bandits to our south approaching at high speed and high altitude. They just went active with counter measures. Vectoring Reaper Flights One and Two to intercept."

Upon hearing the report from the air defensive officer on the E-2C aircraft to the south, the Captain of the George Washington took it in calmly, but the calm was an outward expression born of long experience and years of training. He and the entire Task Force had been expecting the attack at any time ... but nothing wrenched your gut like the hard cold reality of having it happen.

"Launch the ready alert birds.

"CAG, get me more birds on the deck and ready to go.

"Commander, inform Admiral Larsen and ask him join us here."

As Captain Bastian was issuing orders, the officer in the E-2C spoke again through the speakers.

"I have multiple separations, I repeat, multiple separations from the bandits.

"Vampire, vampire, vampire! Count now up to thirty-seven and climbing."

Bastian, who had been a consummate student of the after action reports of the other engagements with the Chinese throughout the war, quickly issued more orders.

"Overseer-3, continue to vector Reaper One and Two at the enemy aircraft. I repeat, have them go to afterburner and engage those aircraft and drop as many of them as possible. Have both outer ring and inner ring missile defenses go to auto free fire.

"Stay on your toes people, this is where they normally start throwing those Killer Whales at us. Make sure every threat axis is covered by Doppler radar right down to the waves. I don't want any other aircraft penetrating at low levels anywhere close to this task force!"

The Captain was wise in his preparations and he was correct in his assumptions. This was the time that the Chinese normally pressed home their LRASD attacks with either low flying aircraft or with surface units that had launched an earlier, coordinated attack.

But today, there were no low flying aircraft. The TU-22M simply did not have the range to carry the heavy LRASD all the way to Midway Atoll, perform an attack and then return to base, the nearest of which was far to the west at Wake Island.

Just the same, Captain Bastian was right. This *was* the time the Chinese always pressed home their LRASD attacks on American fleets...and today would be no different.

**June 23, 12:37 that same time**  
**TU-22M Reconnaissance Aircraft**  
**150 miles west of Midway Atoll**

As soon as Colonel Chang's aircraft had picked up definite readings indicating the American main task force, they communicated the location of that grouping to the six lower altitude aircraft by digital, encrypted data link. They also communicated it back to the main Chinese fleet.

The six lower level aircraft were anywhere from fifty to seventy five miles out from the outer ring of escort vessels that were protecting the main American task force. Each one had come within one to two miles of the specific coordinates they had been ordered to proceed towards. After receiving the location of the American task force, each aircraft's electronics officer quickly programmed that location into a special encryption and translation algorithm that communicated the information to three small devices each aircraft was carrying under its fuselage. Once the information was downloaded into these devices, each device was released from the aircraft at three second intervals as the aircraft circled the position they had been sent to. After this was accomplished, the aircraft turned away to return to base.

Each device dropped by the aircraft deployed a small parachute and quickly dropped the 100 feet into the water. Upon landing in the water, each deployed a ten meter long, thin antennae into the ocean and transmitted the coordinates of the American task force in a low power transmission that was detectable no further than three miles from the transmitting device.

In each of the six positions where these TU-22M aircraft had dropped transmission devices, eight loitering LRASD devices picked up the transmissions, processed the data and turned on their conventional propulsion. They then dove to a five hundred meter depth and proceeded toward the projected intercept points for the American task force between fifty and seventy-five miles away. Quickly reaching their cruising speed of fifty knots, forty-eight LRASD devices were inbound to the American task force.

**June 23, ten minutes later**  
**CIC, U.S.S. George Washington**  
**100 miles West of Midway Atoll**

Admiral Larsen was perplexed by the seemingly ineffective and disjointed nature of the Chinese attack. Something just wasn't right. Turing to the Captain of the George Washington, he motioned for him to follow and they stepped outside of the CIC

"Ken, let's talk for just a minute.

"What do you make of what we just witnessed over the last ten minutes?"

Ken Bastian, relieved that none of the sixty cruise missiles that the enemy had launched had reached his ship, and particularly relieved that there had been no coordinated Killer Whale attack, took a minute to digest the Admiral's question.

"Well, Admiral, I believe it was an attack that was poorly executed by the enemy. I kept waiting for the other shoe to fall ... but it never did"

Nodding, the Admiral responded.

"Exactly Ken, the other shoe never did fall. Why?"

"When have you known, or read in the course of this war of the Chinese conducting such a miserable attack? Do you honestly believe that in an operation like this they would be so inept?"

The Captain, who had read every after action report of every sea battle during the course of the war knew the answer.

"The answer is that they never have Admiral. I can't explain it.

"All of those cruise missiles they fired were duds ... every one. They did not travel more than ten miles before each and every one of them dropped into the ocean and those Backfires turned tail and ran...and I am glad they did. We downed sixteen of those TU-22M's without loss.

"So, although I can't explain it, I'm grateful it turned out that way."

The Admiral appreciated the Captain's relief, but he sensed ... no, he *knew* that something was wrong. Then it started to come to him.

"But Ken, what if that was exactly what was supposed to happen?"

"What if those were not real cruise missiles and that whole thing was not a real attack...what then? What does that tell you?"

Both men stared at each other for a second with dawning realization.

"Well, it would mean that they meant for our attention to be focused on those TU-22Ms and the missiles they were launching at us, while they ..."

... and then the Captain rushed back into the CIC with the Admiral hard on his heels.

As they came into the room, the Admiral began issuing orders.

"Captain, Commander, I want all of the SUBT CIWS capable vessels to quickly close up tight around the George Washington, the Wasp, the Roosevelt and the Bataan. Formation Charlie. Get the Perry's and the Ospreys in position. We can expect a Killer Whale attack at any time."

"Maintain General quarters and threat condition Zebra on all vessels."

### **June 23, twenty-five minutes later**

#### **U.S. Naval Task Force**

#### **100 miles West of Midway Atoll**

It took a good twenty-five minutes for the SUBT CIWS capable Burke destroyers in the formations to dash over to the capitol ships and surround them according to their new orders. Within that circle of capitol ships, the Washington and the Bataan, with their own SUBT CIWS were on the major threat axis while the Roosevelt and the Wasp were shielded by them and two "goal tender" SUBT CIWS capable Burke destroyers also positioned within the inner circle. The four capitol ships were all running approximately one quarter of a mile apart while the ring of destroyers set up another half mile beyond that. Outside of that, the four Halsey frigates in the formation were setting up to run along both of the major threat axis and evenly spaced between the two. HV-22 Osprey aircraft roamed the area out near the Halsey frigates, some flying close to the waves, others at higher altitudes watching the surface of the Ocean for the signs of the approach of rocket powered LRASD weapons.

Just as the formation was completing its moves, the threat rang out from the co-pilot of an Osprey aircraft not six miles outside of the circle of defending Burke destroyers.

"Contact, contact, contact. Fast mover coming in at 273 degrees, speed accelerating past 200 knots! ... Now another ... and another."

Suddenly, throughout the combat information centers on board all of the ships in the task force, the same dreaded sounds, the same clear indication became apparent, Killer Whale devices were coming at the ships from six separate azimuths, and they were coming hard.

Many of the Osprey aircraft were not in position to intercept the Chinese weapons. Three of the aircraft did make successful intercept with their specially configured and reprogrammed Mk-50 torpedoes. In one tragic engagement, an Osprey swooped fairly low and dropped its weapon directly in front of a Killer Whale that was running fairly close to the surface. Upon impact of the Mk-50 with the water, somehow the mammoth warhead on the Chinese weapon exploded and the blast and rising water reached out and impacted the tail of the Osprey before it could completely clear the blast radius. The impact damaged the tail severely and the aircraft flew on for several hundred yards with the entire tail assembly canted at a slight but noticeable angle to the left of the aircraft. Then the tail simply fell off the stricken aircraft which plunged into the ocean, killing all on board.

Now, forty-five Chinese weapons were penetrating the ring of four Halsey Class frigates surrounding the task force. Only two were in a position to intercept any of the devices, and only one

of those had its towed, reactive explosive system fully deployed. That frigate was positioned in front of half of one of the Chinese LRASD groups and exploded four of the weapons in a awesome cascade of four powerful explosions that severed the remainder of the towed defensive cable. The second FFG in position to intercept any devices was able to detonate two more Killer Whales before being struck itself by a third, which hit it forward, directly under its missile launcher. The impact detonated the missile magazine and the entire forward portion of the FFG was blown off causing the frigate to immediately slow in the water and settle quickly by its now a jagged and ruined bow. Within ten minutes that vessel would sink with the loss of over 150 personnel.

At this point, throughout the task force, cries of "Vampire, vampire, vampire" rang out from controllers in AWACS aircraft, from fighters in the CAP, and from the Combat Information Centers of the various ships. Upon determining the American task force position, the Chinese had executed another cruise missile attack and now over eighty Yahkont and Sunburn missiles were approaching.

But thirty-nine LRASD weapons also remained and were now approaching the inner circle of escorts, and this is where the latest advances in American technology paid off.

Five of the escorts in the inner ring were Arleigh Burke destroyers that had been retrofitted to the latest Block III designation, which, among other things, included the new SUBT CIWS system. Three of these vessels had been evenly distributed about the circle, particularly running in a line to protect the U.S.S. Theodore Roosevelt and the damaged U.S.S. Wasp, both of which did not themselves have the SUBT CIWS system. Within the inner circle itself, the Roosevelt was running abreast of the Bataan (which did have the system) and the Wasp was running abreast of the George Washington. In between both was another of the Block III Burkes, serving as a "goal tender".

As the devices approached the inner circle, they chose their targets. Twenty-four of the remaining devices chose the larger ships in the inner circle to attack. Eight each on the larger carriers and four each on the smaller, Sea Control carriers. All of these had already gone deep to their attack depth of 800 meters from which they would rise at a steep angles to attack the capitol ships from underneath. The other fifteen devices chose various escorts running in the inner ring.

At the command of Admiral Larsen, the AEGIS system which could now control all of the standard anti-aircraft missiles on the various ships as well as the newer SUBT CIWS systems, was turned on to full-automatic, free-fire mode ... or "God" mode as it was known in the fleet. As the missiles screamed in at low level and as the Killer Whales thundered towards their targets from beneath the surface, the AEGIS system began to methodically pick off missiles and Killer Whales.

The robotic like firings of the SUBT CIWS began to take effect on the advancing sub surface weapons while entire magazines of vertical launch cells were emptied at oncoming missiles. First one, then two, three, four, and five Killer Whales were destroyed with deadly precision and with telling, tremendous, geyser-like detonations that raised tons of water into the air around and through the inner circle. At the same time, first a Spruance class destroyer and then an Aegis cruiser were impacted by Chinese sub-surface weapons, breaking both of their backs and dooming both ships.

The Aegis cruiser, having just emptied more than half of its AAW missiles at approaching cruise missiles, was much more top-heavy than the Spruance destroyer. Its ends severed cleanly and they both folded high into the air and then slipped beneath the waves in a matter of only fifty seconds. Over 300 sailors were lost. The Spruance destroyer did not break entirely apart but it settled into the water and took twenty-five minutes to sink with a loss of 125 personnel.

With six Aegis destroyers and two remaining Aegis cruisers, the American task force still had over 900 missiles to fire at the approaching Chinese cruise missiles, not to mention the total of 64 Sea Sparrow and 128 RAM missiles on the carriers. Nonetheless, the Russian engineers that had designed the Yahkont and Sunburn missiles, and the Chinese developers who had license built them and improved them, had built every conceivable bit of technology into them to avoid the capabilities of the American Aegis system. From low level, supersonic flight, to the latest ECM technology to high speed "jinks" in their flight pattern as the approached the American ships, these missiles were sophisticated and hard to hit and were designed specifically to penetrate Aegis defenses and hit American carriers. And they were designed well.

Still, the overwhelming number of anti-aircraft missiles the U.S. warships were able to launch, and the fact that the Americans had "bunched" their ships fairly close together for this engagement, told on the outcome. Only twelve of eighty missiles got through the Aegis ring. Seven of these were downed by a combination of Phalanx CIWS and RAM missile systems on the targeted ships. Five missiles did impact on U.S. ships in the heat of the battle. Another Halsey FFG was hit and went dead in the water, smoke pouring from a large rent right at the waterline amidships that killed thirty-three. The single Block IIA Burke Destroyer in the formation was hit by two missiles above the water line rendering its bridge a mass of tangled, smoldering and ruined steel and its helicopter hanger blown into a worthless pile of fiercely burning wreckage. Ninety-five more personnel were killed.

The last two missiles penetrated the inner ring and impacted on the U.S.S. Theodore Roosevelt. One missile punching a hole in the side of the big carrier just forward of and below the starboard, forward elevator and the other penetrating the flight deck and exploding in the hangar spaces toward the aft portion of the ship. Smoke billowed out of the penetrations as secondary explosions went off,

particularly in the hangar spaces where several aircraft were being worked on. Large fire containment doors already in place as a result of the Zebra condition contained the fires in the hangar and the carrier continued on, losing no headway but having to shut down all air operations. The explosions and resulting fires snuffed out the lives of over two hundred American sailors.

As this was happening, the last seven LRASD weapons targeting escorts were destroyed and the capital ships inside of the ring began to deal with the twenty-four devices rising from the deep. The sixteen available SUBT CIWS turrets available on the two carriers and the two destroyers performed perfectly. Very quickly, sixteen of the twenty-four weapons were destroyed without causing any damage to any of the vessels. But eight weapons barreled on. Four of these were destroyed as they targeted the Washington and the Roosevelt. One of those targeting the Roosevelt was destroyed a mere one hundred feet short of the stern of the vessel. The resulting explosion did not penetrate the thick steel underneath the ship, but it did buckle several of the large, lower plates on the carrier, and warped one of her propeller shafts. She slowed significantly as a result.

Three more devices were destroyed by the U.S.S. Bataan and its "goal keeper" as they rose in a terminal attack phase against the big Amphibious ship turned Sea Control Carrier. Significant damage was reported as the last weapon, knocked off course by the detonation of the two in front of it, veered off course and actually broached the surface of the water seventy-five feet off the starboard side of the ship and exploded there. The blast killed ten men on deck and caused a secondary explosion in the hangar spaces through the elevator opening on that side. That fire burned for over an hour, destroying three F-35C aircraft and two helicopters and killing twenty personnel.

The very last device came up beneath the already damaged Wasp. Despite all efforts, this device was not intercepted and punched right through the stern docking well and exploded there. The aft portion of the hangar deck was destroyed and the aft flight deck was actually lifted and broken by the force of the explosion. Luckily, because the majority of the force of the explosion was expended in the already open and floodable docking well, the ship was in no immediate danger of sinking. But large fires burned out of control and there was a significant loss of life, over 400 all told.

**June 23, 14:00 local time**  
**CIC, U.S.S. George Washington**  
**100 miles West of Midway Atoll**

The attack was over. No more incoming enemy devices. Time to count the cost and move on. "Time to *Charlie Mike* as the grunts say," thought Admiral Larsen as he rolled over in his mind the reports that were still pouring in.

The United States Navy had lost three escort ships, one of them a very critical Aegis cruiser. They had suffered severe damage to a Sea Control carrier another frigate and an Aegis destroyer, and suffered moderate damage to the Theodore Roosevelt. Significant losses to be sure, but far removed from the horrendous catastrophes that such large Killer Whale attacks had produced in the past.

With over 1350 personnel known killed at the present time, the positive aspects of the engagement were hard to see at the moment for most individuals, but Admiral Larsen was one who grasped them immediately, and saw that his ability to strike back had not been significantly compromised. He still had two super carriers that would be capable of launching full strike packages within the hour, he still had several destroyers and two cruisers capable of launching major cruise missile attacks and he had an island full of aircraft capable of attacking the Chinese as well.

Of great import was another recent development. During the battle, one of the Global Surveyor surveillance aircraft had located the Chinese fleet and communicated its exact position back to American forces on Midway and here in the waters west of the island. It was still shadowing the force and had not been detected. The Admiral was anxious to take advantage of that information.

He had already ordered a large strike at sea package to be prepared on board both the George Washington and the Roosevelt and he ordered those strike packages to be launched as soon as possible. In addition, his staff had coordinated with the Air Fore commander on Midway and a large strike force had already launched from the island. Over 200 American aircraft were going to be visiting the Chinese and they would be accompanied by a cruise missile strike from his ships that would number close to two hundred missiles as well.

"The Chinese have no idea what they have created here today with the losses they have inflicted on us," thought the Admiral as he monitored the preparation of the strike.

"But they're going to find out, they are surely going to find out."

**June 23, 15:52 local time**  
**Admiral's Cabin, PLAN Sun Tsu**  
**500 miles West Southwest of Midway Atoll**

Yao Hsu read the reports on his computer screen as he took a few moments to wash his face and freshen up. He had been up for over thirty-six hours straight and was very tired. He hoped to be able to catch a few hours sleep now as surveillance revealed to them the damage they had inflicted on the Americans and as they prepared for their next attack.

Over the last hour, four aircraft had attempted to penetrate the American Task Force defenses which had turned to the northeast trailing heavy smoke. Although none of those aircraft had gotten near enough to positively identify the remaining American ships and thus discover their current disposition and capabilities, the Admiral was convinced from the digital images he had seen that his attack had damaged them severely. He believed this because of the number of LRASD weapons he had been able to maneuver close enough to attack them, and because of the amount of smoke they were trailing and that still hung in the air at the site of the attack.

Nonetheless, that the Americans were still capable of continuing operations was clear due to the fact that none of his surveillance aircraft had been able to get close enough to make a positive count. The Americans still had far too many patrol and defensive aircraft in the air. Three of his surveillance aircraft would not be returning. This left enough doubt in Yao's mind to keep him very wary. He would not underestimate the Americans...except that he already had.

With his UNREP group approaching, Hsu had given orders much earlier in the day to split his forces and send one group after the remaining American vessels and have the larger group now focus on the island itself. He was in the group that would track down and kill the remaining American naval vessels. He was bringing the Sun Tsu, three of the Beijing Class carriers, four Tactical Assault ships, six destroyers and eight frigates with him. The other large deck carrier, the Zenim, and the other two Beijing class carriers would proceed on with the bulk of the fleet including the rest of the Tactical Assault ships, the escorts, the many Amphibious ships and the provisioning vessels towards a major assault on Midway Atoll tomorrow morning.

The Admiral hoped to catch the American vessels before that, perhaps late today if things went as he hoped. He had a large CAP consisting of over thirty SU-33 aircraft up at all times, his LRASD devices had been reloaded on the decks of each ship and he knew where his enemy was. He was ready to track them down and eliminate them. The strike packages were being prepared on all four carriers and as soon as it was complete he would order the launch. In the mean time, he was hoping to get some sleep.

It was a hope the Admiral would not realize.

**June 23, 15:58 local time**

**Admiral's Cabin, PLAN Sun Tsu**

**500 miles West Southwest of Midway Atoll**

Admiral Hsu had no sooner closed his eyes and fallen into a deep sleep than the electronic buzzer went off next to his bed and the simulated klaxon sound began sounding throughout the ship calling the personnel to battle stations.

The Admiral jerked up in his bunk to a sitting position, grabbed the hand set and spoke.

"This is Admiral Yao, what is it?"

His chief of staff immediately answered.

"Admiral, I am on the bridge. One of our CAP aircraft just shot down one of the American high-flying, prop driven surveillance aircraft twenty-three miles to our northwest. We are also detecting many approaching aircraft and missiles.

"The Captain has ordered the entire fleet to the highest threat condition and asks if you will please come to the bridge immediately."

As the Admiral rapidly got up and made his way towards the bridge, American aircraft and missiles rapidly made their way towards his formation.

The thirty SU-33 aircraft that were flying a formidable CAP for the Chinese task force were met by a joint command of over fifty American air superiority fighters, F-18E and F-15C aircraft, loaded with AMRAAM and AIM-9X missiles. As a huge dogfight developed, another one hundred and fifty American aircraft approached and began launching missiles from altitudes between seven thousand and fifteen thousand feet. Far below them, nearly two hundred ship and air-launched Tomahawk cruise missiles approached on the deck, a mere fifty feet above the water.

The first missiles launched by the aircraft were the American HARM, high speed, anti-radar missiles. These approached at speeds in excess of Mach-2 and began impacting before the Admiral ever reached the bridge. Although the impacts were not huge explosions, the Admiral could still feel the four impacts that hit his flagship... and he knew full well what those impacts meant.

"Report," he ordered as he stepped onto the bridge.

The Captain of the Sun Tsu, who had vehemently disagreed with the Admiral's decision to split the force earlier in the day, and who was just preparing to make his way to the Combat Information Center on the ship, indicated that the duty officer should deliver the report to the Admiral.

"Sir, the Americans are approaching in force. Our CAP is engaging a much larger contingent of American aircraft and they are currently involved in a major dogfight well to our east.

"More American attack aircraft have launched high speed missiles at us. Over 100 missiles were launched and we successfully downed fifty-eight of them. The other forty-two have impacted our vessels and severely hampered our radar acquisition and guidance. We have reverted to back-up

systems, but another eighty-five American missiles were just launched. These are slower, cruise missiles.”

The duty officer stopped for just a moment and listened to the earphone lodged in his ear.

“Hold one moment Admiral,” he said, and then continued.

“Sir, we are now picking up many more missiles, approaching at very low levels twenty-five miles to our southeast. They appear to be more American cruise missiles. The count is now up to over ninety in that group.”

The Admiral took all of this in and knew that they were in desperate trouble. He glanced over at the Captain and saw the accusatory fire burning in his eyes. He noted that something would have to be done about this man's clear impertinence after the engagement, but it would clearly have to wait.

“Captain, accompany me to the Combat Information Center where we will wage this battle.”

### **June 23, 16:03 local time**

#### **Combat Information Center. PLAN Sun Tsu 500 miles West Southwest of Midway Atoll**

Admiral Yao Hsu and the Captain arrived in the Combat Information Center just in time to see the wave of bright green “Vs” on the main board begin impacting the escort vessels in their task force. Two large group of vampires, as the enemy missiles were universally known, were spread out on fronts over two miles wide and several missiles deep and they were now entering the formation. All told, over two hundred and fifty cruise missiles had been launched at the Chinese task force.

Chinese anti-air missile defenses, severely hampered by the earlier anti-radar missile attack and by the heavy jamming coming from no less than four E/A-18 Growler aircraft accompanying the American strike, were able to account for only thirty-five of the attacking cruise missiles. This left over two hundred and twenty missiles approaching the close in weapons systems of the Chinese task force. It was a number that completely saturated the Chinese defenses.

Now, survival for the various Chinese ships depended entirely on the number of missiles targeting each vessel. There were eight capitol ships, six large destroyers and eight frigates in the formation. The Sun Tsu was targeted by over forty cruise missiles. Two of the Beijing class carriers were targeted by twenty-five missiles each. Some how the third Beijing class carrier was targeted by only eight missiles. Each of the Tactical Assault ships were targeted by twenty-three, nineteen, twenty-one and six missiles respectively. A total of 167 missiles targeting the capitol ships. Each of the destroyers were targeted by no less than eight missiles and each frigate had between two and six missiles targeting them.

The results were catastrophic for the Chinese task force.

Admiral Yao Hsu and the Captain died together in the Combat Information Center of the Sun Tsu. After three jolting hits that almost knocked them off their feet, the Captain glared angrily at the Admiral right up until the end when one of the Tomahawk missiles penetrated directly into those spaces and exploded, killing every man there. In all, twenty-seven missiles impacted the Sun Tsu, setting off many secondary explosions above and below decks as the weapons on the strike package that was being prepared were set off. The Sun Tsu was left a wrecked, fiercely burning, smoking and holed hulk that would sink within thirty minutes of the last impact with tremendous loss of life.

In the end, when the American aircraft turned away, all of the Chinese ships had been hit and many were burning and settling in the water. One of the Beijing carriers was relatively unharmed and continued to recover surviving Chinese aircraft and launch new SU-33s to maintain some vigil over the ruined task force.

That carrier, one of the Tactical Assault vessels, two destroyers and three frigates were the only vessels that were capable of sailing away from the scene of the massacre. Those ships began making their best speed to the west, seeking out cloud cover, leaving thousands of Chinese sailors in the water to fend for themselves. Three Chinese carriers, three large Tactical Assault ships, six destroyers and five frigates would sink before the sun set, taking over 20,000 Chinese sailors with them.

### **June 24, 06:45 local time**

#### **Midway Atoll, Defensive Perimeter 7<sup>th</sup> Marine Division, Sand Island**

Leon sat in his concrete reinforced and armored position on Sand Island looking out to sea.

He hoped he wouldn't see anything untoward out there. After his experiences on Diego Garcia, seeing enemy ships out there on the horizon near an island he was defending was something he hoped never to witness again. He knew what it would mean. It would mean that his own naval forces and air forces had been driven from the area and he certainly didn't want that to happen.

And so far, here on Midway Atoll, it hadn't.

But today was another day and they had been told to expect imminent enemy action. So far those predictions had been right on the money. Already this morning one wave of Chinese aircraft had broken through American air defenses and bombed the runway and some of the storage and repair installations near the air field. Dark smoke was still rising from over that way.

One flight of those sleek, camouflage gray enemy aircraft had come in just over tree top level and at high speed, right over Leon's position. He and his security personnel and a number of the other Marines with them had stepped out of their emplacement and opened fire. From off to his left, a stinger-missile team had launched their missile and brought one of the aircraft down. Unfortunately, that aircraft had gone into a flat spin after being hit by the missile and had crashed into a company of Marines in an adjoining position, killing fifteen good soldiers and horribly burning eight more.

Now, they had just been warned that another missile attack was coming in and Leon hunkered down to prepare for the impacts. When they came, it was much worse than the day before when he had been much safer in the bomb shelter. The noise, the overpressure and the jolting were all orders of magnitude greater. One near miss dug a hole ten feet deep into the ground one hundred feet from Leon's position and showered their position with dirt, debris and worse. The position over there, with five more good Marines in it, not greatly different from Leon's position, had simply vanished from the face of the earth except for the smoldering hole, the dirt, the debris and the coppery smelling pieces of flesh that came raining down.

After the barrage ended, the Captain came around and spoke to each position in hushed tones.

"Okay, men, stay hunkered down.

"The enemy is out there. G2 says that they are making a run for the island and that they have massive numbers of transports full of battle hardened troops. Our fly boys and our navy boys are meeting them now. If they get past them, it'll be our turn.

"Stay on your toes . . . stay ready!"

As the sun climbed higher, Leon looked again out to sea. This time, way off to the southwest, low on the horizon, he could now see smoke . . . and lots of it, where there had been none before. He could not see the masts or the silhouettes of the ships, but he knew they were out there, and a lot of them. There was a big battle going on out there away over the horizon, probably more than fifty miles away. He felt a chill go up and down his spine. If the airfield had been sufficiently damaged and if the Navy was taking a beating, he might be fighting Chinese soldiers right here on Midway very soon.

But the ships never came in view. The smoke low to the horizon increased, hung there for about three hours and then slowly dissipated. Before it did, there had been one more, much lighter missile barrage which caused them all to keep their heads down for a good fifteen or twenty minutes. After that . . . nothing. No more Chinese aircraft penetrated to the island or were seen.

The Marine 7<sup>th</sup> Division didn't know it at the time, but by noon of June 24th, the second battle for Midway Atoll was over and it ended with the same outcome as the first one in World War II.

The larger Chinese task force had made a run for the island, a disastrous run. No one knew why the Chinese task force commander had ordered the assault in the face of the catastrophic losses associated with Admiral Yao Hsu's group the day before, but he had. It would later be shown that he had received confirmation of Hsu's losses and that he must have known that the American naval task force had not been seriously damaged by Chinese attacks. But he ordered the assault on Midway anyway. For whatever reason, when it was all over, two more Beijing class carriers were sunk along with five large transports full of Chinese troops, two Tactical Assault ships, four supply ships, eight destroyers and twelve frigates. A horrendous 58,000 Chinese personnel were lost at sea.

One of the famous quotes that would forever be attached to the second battle of Midway was made by an American naval aviator as he returned to the U.S.S. George Washington and was asked by his air group commander for a battle assessment. He had simply responded.

"It was like shooting bobbing apples floating all alone in a tub."

For the Americans, there had also been more losses.

In the fighting on the 24<sup>th</sup> another Frigate and destroyer were sunk by loitering Killer Whale devices whose path that SAG crossed. Chinese aircraft not only wreaked some havoc on the island and its airfield, they also caught several transports on the far side of the island as they were making their way toward Midway with provisions. Defended by only one destroyer and one frigate, the Chinese focused on the transports and sunk two of them, along with the armor, provisions and other equipment they carried.

Then, after the bulk of the fighting was completed and the remaining Chinese forces had withdrawn, very early on the morning of the 25<sup>th</sup>, while fire fighting crews and repair crews continued to work feverishly on the U.S.S. Wasp, tragedy struck. At 03:21 a tremendous explosion rocked the ship. Whether it came from some internal source to the Wasp or as a result of undetected enemy action was never known. Within five minutes it was clear to the Captain of the ship what had to be done. He ordered "Abandon Ship" and the remaining personnel quickly made their way into life rafts or onto the waiting frigate and destroyer that were standing by to assist. At 05:45 the Wasp sunk and another three hundred personnel went down with her.

**June 26, 02:12 local time**

**Rendezvous Point Xia**

**1780 Kilometers Northwest of Midway Atoll**

The ships rendezvoused in the dark, quietly and with precision, despite events of the last few days. The remainder of Admiral Yao Hsu's task force and the remainder of the larger force that attacked the island, when combined, was still a potent group. One large Mao class carrier, two Beijing class carriers, six Amphibious Assault ships, two Tactical assault ships six destroyers, ten frigates and a multitude of smaller transports and supply ships had survived the mauling around Midway.

After several hours of running together while the commanders held a serious and direct conference, the force began to split apart again. Both Beijing class carriers, all five of the Amphibious Assault ships, both Tactical Assault ships, most of the other transports and supply ships, three destroyers and four frigates formed up and turned to the north.

The Zenim and the other vessels turned back to the west.

As Kao Pham stood on the deck of the PLAN Tactical Assault ship, Chongqing, and watched the large carrier, Zenim, and its escorts depart, a sense of the magnitude of the conflict he was involved with struck him. He had been so proud. Despite the losses he had witnessed before Midway, he had felt that the PLAN was invincible, that although there might be minor set backs and losses, that nothing, not even the vaunted U.S. Navy could stand in their way.

Now he knew better.

Off of Midway, in the final run in towards the island and almost within site of their objective, Koa Pham had witnessed death and destruction on a scale he had never conceived.

"So many bodies in the water," he thought as he took a final drag of the cigarette that he had been smoking while he thought about these things.

"Our ship had simply pushed them aside or crushed over them as we retreated, both the living and the dead," he concluded as he flicked the cigarette butt over the side.

Now, as he sped north with this smaller, but still powerful task force of the Chinese Navy, spirits began to lift. Once under way there had been a general announcement that they were going to assist in what would always be remembered as one of the greatest achievements of the People's Republic. They had been told that the action they had just been involved with was a grand feint, a grand deception and that the principle goals were in fact being achieved and that they were now to be a part of that.

This lifted Kao's spirits greatly, but as he made his way back inside the ship and towards his birth, he couldn't help but wonder what type of plans required a deception on such a horrific and terrible scale and just how many such "victories" his nation could sustain.

**June 26, 09:45 local time**

**PLA Northern Group, 1<sup>st</sup> and 3<sup>rd</sup> Armies**

**Field Command Headquarters, Nome, Alaska**

General Wu Tsing read the "eyes only" dispatch with mixed feelings.

Things off of Midway had gone badly. So many ships and personnel lost in such a short time. Admiral Yao Hsu dead, lost with his flagship. The materiel objective of that feint wholly unachieved. The worst single day defeat that the People's Republic of China had suffered in its entire history.

The Admiral had to agree with the assessment of his high command. Despite the losses, despite the numbers of casualties, the operation had been a success. The occupation of Midway Atoll had only been a secondary, though highly desirable, goal. The primary goal had been to distract the Americans so that this operation could make a successful beginning. In that, the attack on Midway had achieved stunning success.

"And now, with the additional naval resources coming this way and the additional troops and transports, that success will only be enhanced," thought the General as he once again reviewed those specific new components of his command.

The entire Seward Peninsula had been secured. Over 150,000 Chinese troops were now ashore here in Alaska and more were landing every hour. Significant number of ballistic missile launchers were arriving too, with which the General continued to harass and plague the U.S. airfields outside of Fairbanks and Anchorage. The buildup was going better than expected, he was ahead of schedule.

The remaining population in Nome and other small towns had been pacified. In some instances this had taken extreme measures as Chinese troops broke into every house and relieved the citizens of every firearm the soldiers could find. Many Americans would only give those firearms up to the occupiers after they had been killed and their cold fingers pried from around the stocks and trigger guards. The General and his advisors marveled at this because it occurred amongst all age groups, genders and ethnicities here, where they died quickly against overwhelming odds. Just the same, the population was relatively small and the Chinese occupation forces were growing rapidly.

Except for a few citizens in the towns and outside of some continued minor sniping from local hunters and trappers, and by a few of what the General had learned were called "Home Guard" units, there was no organized American resistance. That was true all the way over to the Yukon River

where Chinese forces were already making their initial advances to the east. He had established his furthest advance in strength at Kokrines along the Yukon River and had positioned an observation post, portable radar and anti-aircraft emplacement on Wolf mountain overlooking the entire Yukon Valley there. His engineers had indicated that a good spot for their first major inland airfield would be at Ruby, a few miles to the west of Kokrines.

The U.S. Air Force was beginning to push back as more of their F-15 and F-16 aircraft arrived from the lower American states and pushed at Tsing's combat patrols near the Kuskowim Mountains between Nome and Anchorage. But, with the capture of the small, undefended U.S. airfield at Cape Romanzov and the stationing of J-10 and SU-35 aircraft there ... and with the airfield extension here in Nome estimated to be completed by the 29<sup>th</sup> ... the General was certain he would be able to contain the American air force. Then, he could extend his own patrols by basing an entire wing of his best fighters right here in Nome along with AEW and refueling aircraft, and then later in Ruby. After that, he would push those American aircraft all the way back to Anchorage and Fairbanks ... and beyond.

"And that goal will be helped significantly by those two Beijing class carriers and their air wings when they arrive," thought the General.

"Once they get here, we'll station one here off of Nome and another further up the Norton Sound near Koyuk. That should allow them to be mutually supportive and that should further secure our airspace both here over Nome and out over the Yukon," the General concluded, quite pleased with himself and the current status of the overall operation.

The more General Wu Tsing thought about it, the more positive he became about his prospects. Alaska and Canada lay open before him. He felt that some of his enemy's most strategic resources at Prudhoe Bay and in the ANWR were easily within his grasp. The battle for Midway Atoll was now over, having accomplished its strategic objectives despite the losses ... and the battle for Alaska was just beginning, and from the General's perspective, it had gotten off to a most excellent start.

## Chapter 28

*"... fire on the Red Coats from behind every bush, from behind every tree." Colonial Militia Officer*

### July - September in Alaska

After the massive viewing on the Internet of the attack on Nome, Alaska by the Red Chinese, President Weisskopf's sobering address to the nation the afternoon of June 23<sup>rd</sup> galvanized an already sobered and fully mobilized America. That afternoon was the highest single day in history for signups for the Armed services, and the next day broke the record again. The United States, that already had over six million active duty personnel in the armed forces engaged in World War III, found those numbers growing rapidly. By the end of July, an additional million Americans had signed up for military service. Another two million older or otherwise not qualified individuals joined Home Guard Units all over the nation, bringing the Home Guard numbers up to almost ten million individuals.

Imminent American military plans in the Caribbean were put on hold as the forces that were being gathered for that operation, were rushed north to the defense of Alaska. In addition, as quickly as they could become trained and ready, the new combat enlistees were formed up, mixed in with seasoned NCOs and officers, and also sent north. Most of these new forces were focused in the Anchorage area to prepare the main defenses, although a full division, along with Canadian reserves were targeted at reinforcing the ANWR and Prudhoe Bay.

But it takes time to train, equip and supply sufficient forces to hold back the size of invasion the Chinese had unleashed, and time was something that Fairbanks, Alaska, Prudhoe Bay and the ANWR did not have. General Tsing pushed relentlessly forward along the Yukon River. By the first of July, his naval assets off of Nome had grown considerably and consisted of no less than four Beijing class carriers and many destroyer and frigate escorts. The airfield in Nome was completed to his satisfaction and hundreds of aircraft began ferrying into Alaska to contend with the growing numbers of American aircraft at Elmendorf and Eielson Air Force Bases. These former air bases were under relentless ballistic missile attack from Red Chinese launchers that were also being brought into Alaska and from the Tactical Assault Ships off of the Alaskan coast.

On July 10<sup>th</sup> three Aegis Burke destroyers and one Aegis cruiser arrived off of Anchorage and added significantly to the air defense of Elmendorf. From that day forward, air operations began to improve significantly around Anchorage and the numbers of American aircraft on that airfield began to grow steadily without the threat of constant destruction. But several hundred miles to the north, at Fairbanks, it was a different story.

Efforts to build a land based set of Aegis cells there were conducted in vain. The rain of Chinese ballistic missiles continued unabated and destroyed construction and repair efforts before they could make the progress necessary. Two Patriot missile batteries did help somewhat, but as Chinese forces in great strength continued to progress up the Yukon, and then turned southeast on the Tanama River towards Fairbanks, it became apparent that a general evacuation of Eielson Air Force Base and of Fairbanks itself would be required, or all of the men and materiel there would either be captured or destroyed in place. On July 21<sup>st</sup> the general evacuation order was given and a hurried evacuation occurred just in advance of the Chinese forces. On July 25<sup>th</sup>, Fairbanks, Alaska fell to the Chinese.

While this was happening, United States Army forces in the ANWR, at Prudhoe Bay and over towards Barrow, Alaska had been reinforced by air, but that air route now had to extend north through Canada and approach these areas from the east. By the time Fairbanks fell, the Chinese had completed a substantial airfield at Ruby, Alaska and their coverage to the north was sufficient to cut off any further reinforcements. In addition, their forces continued to advance further up the Yukon River to the vicinity of Stevens Village, Alaska where a vigorous defense by a mixture of Regular Army units, the Alaska National Guard and several thousand citizens organized into militia units called up by the Governor, temporarily halted the Chinese advance.

At that point, in late July, the three divisions that the Americans fielded along and to the north of the Brooks Range and along the pipeline at defensible positions, was faced by over twenty divisions of Chinese troops now pouring into the north from their staging areas in eastern Siberia. With strong airfields at Nome, Ruby, Cape Romanzof and Cape Newenham (which like Cape Romanzof was captured intact in June), the Chinese air force in the area exerted air superiority over an area ranging from Fairbanks, north to Prudhoe Bay and all points west of that line back to the Bering Straits.

Conditions for American citizens in these occupied areas became unbearable. To the surprise of General Tsing, only about 25% of the population was pacified, giving up and trying to maintain some semblance of life in the occupied territory. They were treated, for all intent and purposes, like indentured servants at best, but more commonly like chattel. What surprised the General was the resistance of the rest of the people. Initially he had thought he had suppressed them with brutal examples...what he now found was that many had fallen back into wilderness and outlying areas where they grouped together and began conducting insurgent operations.

Most of them were well armed and fought with their personal firearms, against all odds and to the death. Although the Chinese knew that Americans living in Alaska tended to be much more independent and self sustaining, this was not what he had personally envisioned or been briefed to expect. Apparently the Americans inhabiting Alaska were much more hearty and independent than the Chinese intelligence had been willing to give them credit for. Logistics issues to the front became an issue despite the overwhelming numbers of Chinese troops. Many truck drivers and supply depot maintainers fell victim to what the Americans called the Rule of 308 and Proposition 223. Although his forces ruthlessly hunted down, killed and made an example of any Americans sniping or attacking his forces, and although the General gave a general order allowing his commanders to use their own discretion in reprisals against the local population, rather than decreasing, the incidents increased with more and more American resistance fighters joining the small insurgent groups.

One of the most notorious of the resistance groups was headed by a figure that became known to Chinese intelligence as the Orka, a woman associated with the initial ad-hoc transmission of their assault on Nome to the American populace over the internet. This group's efforts had already taken on an almost legendary nature in the weeks after the invasion. Chinese forces were especially anxious to capture or kill and make an example of this particular resistance leader.

Several major incidents involving full convoys of Chinese supply materiel and entire patrols of Chinese troops were mauled in hit and run attacks by the Orka. The General's intelligence indicated that the group numbered no more than twenty individuals, that it operated in a complete "live off of the land" mode and that it was extremely familiar with the terrain from the Seward Peninsula all the way along the northern side of the Yukon River to Wolf Mountain. Apparently most of its members were what were termed "Native American Eskimos", people the Chinese had believed might even welcome them. In an effort to promote such an open-arms attitude, the Chinese were advertising reparations and significant bonuses to any Native American if they would turn on what the Chinese were calling their long-time "oppressors", the government of the United States. Apparently that ploy was not working according to intelligence projections either. In fact, the General's radar and anti-aircraft facilities on Wolf mountain had to be significantly reinforced after an incident where the radar and anti-air battery were crippled by one of the attacks from this group.

Despite this, the hundreds of thousands of Chinese troops continued in their advance. On August 4<sup>th</sup>, the Chinese broke through American defenses at a strategic pass near Ambler, Alaska and poured onto the Tundra north of the Brooks Range. The fall of Barrow, Alaska was imminent and Prudhoe Bay was sure to follow. America's Arctic Oil Reserves were now clearly about to fall into the hands of the Chinese, who at this point began going to great lengths to avoid their destruction.

In what later became one of the most controversial decisions of the Weisskopf administration during the war, it was decided on August 13<sup>th</sup> American forces would destroy American oil production facilities at Prudhoe Bay, in the ANWR, and at strategic pumping stations along the pipeline to the south of the Brooks Range to keep them from falling into the hands of the enemy. The most controversial part of the decision was the manner in which it was carried out.

In an apparent route, the American forces made a hasty and quick withdrawal from all defensive lines on the evening of August 15<sup>th</sup> and throughout the 16<sup>th</sup>. They retreated right past the oil production and storage facilities and left many of them completely intact. Although cautious at first, the Chinese rushed into the areas on the 17<sup>th</sup> and 18<sup>th</sup> and took control of them and began checking for sabotage while assessing requirement to put the facilities into production. To their surprise, they found the facilities largely intact and by the 19<sup>th</sup> had ferried more and more personnel, many of them very highly trained technicians, into the area to defend and then begin operating them.

Then, on the afternoon of August 20<sup>th</sup>, at four critical drilling and extraction sites around Prudhoe Bay, at eight similar places in the ANWR, and at six pumping stations along the pipeline, small, buried nuclear demolition devices were detonated by the Americans. The resulting explosions, completely destroyed all of the facilities, including the equipment, the drill holes themselves, the pipeline operations and well over ten thousand Chinese personnel in all.

This was the first military use of nuclear weapons in World War III... it would not be the last.

The Chinese upper command critically analyzed General Tsing's instant request for a nuclear counter strike on Anchorage and rejected it. Getting the oil for themselves would have been a significant bonus, but the principle goal for the operation was to occupy those Alaskan areas and stop the oil production for America and then keep it out of their hands. Those goals had been accomplished, and now enhanced by the American's own sabotage. General Tsing's request was denied and the Chinese troops were ordered to continue towards the goal of taking Anchorage and extending their control towards Dawson in the Klondike Region of the Yukon in Canada. By September 1<sup>st</sup>, the Chinese were turning south in an effort to completely eject U.S. forces from Alaska.

### **July - September in the lower 48 United States**

News of first the fall of Fairbanks and then the fall of Prudhoe Bay and the ANWR oil field hit Americans hard. The President announced to the nation what he had done on August 21<sup>st</sup> regarding the American sabotage and destruction of their own oil fields with demolition nuclear devices. The

opposition party, pushing for their own Presidential aspirations in November and having won their primaries with the full support of their party apparatus made a tremendous issue of this event.

Curt Johnson, and the former Senator, Susan Crater, made all of the talk show circuits. They attacked President Weisskopf on his decision to unilaterally utilize nuclear demolition packages to destroy the oil facilities and the pipeline after a hasty retreat. They indicated that this fit a pattern of escalation in the warfare that had already cost American greatly, citing how the initial escalation in space by the United States had, in their view, led to the loss of America's satellite advantage and the horrific tragedy with the Space Station impact in San Paulo, Brazil. They also attacked the Weisskopf administration on its recent arrest, incarceration and charges filed against David Krenshaw, the CNN executive who had given so much support to their own campaign. They demanded that the administration stop hiding behind current "anti-terror" laws and reveal more fully the exact nature of the evidence against Krenshaw or release him from "detention". Their veiled claims that the arrest was politically motivated came through loud and clear in their appearances as they prepared for what they viewed to be a now serious challenge for the Presidency in the imminent elections of November.

In the face of this, President Weisskopf remained undeterred and unruffled. He had not campaigned at all for the primaries held during the Spring and Summer and had won them all overwhelmingly. No other GOP contender entered any race. It was a unique circumstance in American political history. In addition, the President's response to the allegations was simply to refer all questions to his Attorney General. Attorney General Hull, in his turn referred the reporters to the grand jury indictment and billing. His standard response to the media went like this,

*"David Krenshaw is being tried as an American citizen under various anti-terror and trading with enemy provision in our current law. He is not in "detention", he is being held over for trial, without bail and has been indicted by a Grand Jury. You all have copies of that indictment. The evidence will be presented at trial and made available to the press where the American public will see the massive, overwhelming evidence against this man, who had the American people's trust and abused it to his own, and to our enemy's ends at the cost of American lives. The government will seek the maximum penalty allowed by law in this case. Thank you."*

The trial for David Krenshaw was scheduled to be held in early October.

While all of these momentous events were transpiring, another, ultimately equally momentous set of events was also progressing. Dr. Joseph Trevor, assisted by his wife Elizabeth (after her return from visiting and comforting Cindy Simmons) and in conjunction with the work and findings of Dr. Sandra McPherson, had painstakingly reviewed the initial findings of the National Academy of Sciences. As Joseph had expected, that body was reluctant to run with their initial findings and had asked for more detailed analysis, while starting a detailed study of their own.

Joseph sensed a stalling tactic and was determined to not allow that to happen. During July and August, he took a leave of absence and worked with his wife and Sandra to put together an iron-clad proof of the procedures and methodologies that had led McPherson to the discovery of the Human Reasoning Structures in her fetal samples from Europe. As much as he detested it, he worked with her as she acquired more virtual samples and built a rock solid case for their findings. For her part, Dr. McPherson was driven to prove that these structures in fact proved that the human fetus was, at the very earliest stages of development, endowed with the ability to reason and therefore categorically must not be subjected to "termination" according to the current abortion laws.

The President became aware of the study in late July and was intrigued by it, as well as troubled by what the implications implied that his nation had done, under the color of law, for several decades. His Secretary of Health, Education and Welfare, herself a strong pro-life advocate, had recognized immediately the implications of Dr. Trevor's and Dr. McPherson's work and had brought the matter to the President's attention. The President issued a policy statement instructing the executive branch to support the study and the effort to reach a meaningful and provable conclusion if at all possible.

Susan Crater was very vocal in her own opposition to the President's new policy statement upon hearing of it. Having benefited from a political career that rode the wave of all of the social issues, and her pro-abortion stance particularly, she was incensed by what she termed as "voodoo-science" and actively campaigned on the issue against the President. Curt Johnson, himself pro-life, but willing to compromise on the issue in certain areas to try and attain consensus, was not as active as his running mate on this issue, choosing instead focus his remarks on the national security issues.

Ultimately, the National Academy of Sciences re-examined the issue at the President's request in the third week of August. On August 29<sup>th</sup> a short, to the point but very well documented finding was published. It stated, unequivocally what was obvious from the their own data, and from that amassed by Doctors Trevor and McPherson. The human fetus, at a very early stage in its development, was capable of rudimentary reasoning and was therefore a human, endowed with the ability to perceive and be aware of its surroundings and react intelligently thereto. The triggering mechanism was conception and from that point it must be considered an individual.

This finding reverberated around the nation...and around the world. It was destined to radically alter the view of the fetus, and turn honest, compassionate and thinking people everywhere back to an earlier day, when common sense dictated that a fetus was in fact a living, human baby. In an

unprecedented announcement, the new Chief Justice of the U.S. Supreme Court, Thomas Clarendon, announced on September 7<sup>th</sup> that after review, the Supreme Court of the United States would re-open and re-hear the famous 1973 Roe v. Wade ruling based on this new evidence.

With all of these momentous occurrences, every day life in the United States, supplying the needs of the war effort, ground on. Factories, shipyards, production facilities, Nuclear Power Plants, research parks, agriculture, forestry, mining, additional petroleum drilling and processing and all of the other necessary elements for continued viability of the United States in these harsh times continued to be built up and come online at a rate that astonished the world. All of the new factories, machinery and facilities were ultra-modern, extremely efficient and built, defended and operated with pride. Production levels, particularly in the energy sector, surpassed not only requirements as they existed before the invasion of Alaska, but quickly rose to compensate for those losses as well.

Department of Homeland Security Home Guard units operating at the county level had now been engrained into American society. The awful specter of terror attacks drove the American consciousness to embrace and whole heartedly support the defense they provided. Terror attacks, which had been common place earlier, now were dropping off at a significant rate. Much of America had become an armed camp, but it was also a polite camp and the overall crime rates around the entire nation were drastically reduced as well.

America's borders continued to be rigorously controlled. Immigration policy had been revitalized to define what legal immigration consisted of, what commitments and promises were required of would-be citizens, what time frames would be applied in a trial mode for them and what was expected of them once they became citizens. Education regarding the history and meaning of American liberty and self-sufficiency, the English language, oaths to the Constitution, no social leeching, and the qualities of thrift and hard work were re-enthroned as the guiding principles. Regardless of perceived hardship or other political status, the conditions governing these principles had to be satisfied or citizenship would be denied. A significant sub-set of the same guidelines applied to any visa applications outside of temporary, vacation visas, which then were only permitted for individuals from proven friendly nations and only after a significant background check in conjunction with the nation's security apparatus.

The population in the detention camps in various parts of the country was decreasing. As the individuals were processed, those coming from non-aggressor nations who did not meet the new standards for citizenship application or visa application, or who did not pass background checks, were returned to their homelands. Those who did meet the requirements and who passed the background checks were released into the new programs and went about their life.

Those individuals from aggressor nations were detained. If they were known belligerents, they were held in strict confinement under maximum security and prosecuted for their crimes. If they were not known belligerents, they were simply held over and put to work, to be held until the end of the conflict when they would be returned to their homelands.

By the middle of September, the number of those being detained had dropped from a high of over 630,000 the prior year, down to under 500,000. It was expected that the number would drop below by another hundred thousand by the middle the next year and continue to decline thereafter. Despite the objection and legal wrangling of some organizations, the vast majority of Americans approved of the measures and the they had been implemented. As a result, very few politicians were willing to oppose or contradict the immigration or detention programs for fear of their political life.

### **July - September in the Pacific**

The Chinese, the Indians and the GIR (through its member state in Indonesia) continued to consolidate their vast gains in the Pacific. Although resistance in Australia continued, it had reduced significantly. The reason for this was the same as it had been in Japan and the Philippines. The CAS and the GIR were importing large populations into the conquered nations and literally transforming them. Former owners of lands, housing, factories or shops were displaced by new Chinese, Indian or Indonesian owners. The former inhabitant could either work for the new owners for a pittance, or they could starve. Little or no mercy was shown to those who voiced opposition to this...or their families...and in these nations, different than what was being experienced in Alaska, the inhabitants had largely been disarmed by their own governments long before the enemy invaders ever set foot on their lands. Most people simply had no means for effectual resistance.

In this way, the possibility for large scale resistance was remote to begin with, and it faded with each passing month as the numbers of those who would resist with whatever they had, became a smaller and smaller portion of the whole living in the occupied lands. In Australia, the effect was telling as the conquering nations demonstrated a direct willingness to turn the entire continent into a vast *lebensraum* for their populations, splitting up the continent into three autonomous regions that were immediately recognized and accepted into the CAS.

Now, along a vast line, stretching from Australia and Tasmania northward to Wake Island and then on up to Alaska, the high tide of the CAS and GIR was upon the world. To the west of that line, complete control was exerted by the CAS and the GIR nations. The new factories of all of the Asian

Tigers coupled with the vast manufacturing capabilities of China, created a huge war machine that showed no signs of slowing down, despite the recent horrendous losses around the American island of Midway. The economic condition became self sustaining as the agricultural, energy, military and textile needs of each area were met by the whole.

In terms of military manufacturing, the production rates for new systems was exceeding the loss rate, with the exception of the brief spike associated with those tremendous losses off of Midway. The export business to the various nations within the CAS and to the member states of the GIR was huge as KS-3, anti-stealth, anti-satellite, LRASD, fighters, naval vessels and all manner of armored vehicles were sent in copious numbers to the various theaters of operation throughout the Pacific, in Asia, in the Mid East, in Africa, in Europe, in Central and South America and now in North America.

For their part, the allies, principally the United States, Canada, the United Kingdom and the governments in exile of Taiwan, Japan and Australia sought to contain the burgeoning beast that their enemies had become. The buildup in the Pacific for this containment now focused on three areas where men and materiel were gathering in large numbers and where the full extent of allied efforts were applied in defending those build ups until they were strong enough to go on the offensive and counter attack. Those areas included Midway Atoll, New Zealand and in the Samoan Islands.

### **July - September in Africa and The Middle East**

Warfare in Africa, outside of that directly associated with the Middle East lines around Israel, was relegated to the Allied attempt to put pressure on those very same lines. The large Brazilian expeditionary force that had embarked from Nigeria with several allied African nations, continued to be bogged down in Chad. Allied reinforcement forces consisting of American, Canadian and some British troops, served mostly to maintain those lines, and halted the lost ground resulting from the joint GIR and Chinese counter attacks.

Northern Africa was firmly in the hands of the GIR. No further allied attempt, particularly out of southern Europe was made to open up a front on the north African coast. The allies simply had their hands too full in other areas and were going to have to win victories in those areas before they could turn their attention back to North Africa. This made maritime transport across the Mediterranean very hazardous as GIR aircraft patrolling out of Libya, Morocco and other points along the north African coast, constantly harassed the convoys with cruise missiles and the increasing numbers of LRASD systems being exported to them from China and India.

The Middle East was dominated by the GIR. The Muslim world had been united under the great Imam, Hasan Sayeed. The only area of the Middle East not under GIR control remained right around Israel from the Sinai Peninsula on the south past the Golan Heights and into Lebanon on the north. From the Mediterranean on the west to a line approximately twenty-five kilometers along and to the east of the Jordan River in portions of Jordan. That condition could not continue to hold indefinitely as both sides had continued to mass more and more men and materiel in the area and as clashes grew more frequent and more violent.

General Talabari was almost prepared to unleash his overall plan for the defeat of the state of Israel and their American and English protectors. He had gathered not only a sufficient force to attack the teeth of the allied technology, but also a tremendous reserve to throw in as a second wave once the allied high technology war shots were exhausted. The General was planning on an Allied counter attack into the teeth of that second wave once they thought they had decimated the initial attack. It was a high stakes gamble, a poker game where the ante and bets would be measured in mounds of human bodies and rivers of human blood. By September 1<sup>st</sup>, General Talabari was preparing to travel to Damascus for the final planning stages before the great attack.

The General had one stopover to make in Georgia to meet with the commander of occupation forces there and where he intended to meet with the newly promoted Colonel, Abduhl Selim, who had distinguished himself again over the last several months in fighting in the underbelly of Europe. Talabari's plan was to then bring Selim to Damascus with him. There the young Colonel would receive a command in the reserve force that would ultimately deliver the coup de grace to Israel. It would also allow the General to mentor the Colonel further up the chain of command and present him directly to the Imam after that victory as one of the trusted inner circle to help maintain the peace in the great possessions of the GIR after the conflict was won.

But the General's plan presupposed the abject defeat of the allies in the region who were preparing for the monumental confrontation themselves, with anything but defeat on their mind. Americans like Colonel Jess Simmons and General Olson worked feverishly with their Israeli, British and other allied counterparts to develop a defense and counterattack strategy that would allow them to fight their way out of the box they were enclosed in, and in so doing defeat the massive GIR and Chinese forces that were surrounding them.

There wasn't an easy answer. The allied commanders decided that head to head, they were outnumbered by more than a two to one margin, and that if they reserves the GIR was bringing up were factored into the equation, that the margin was more like three to one. They severely

underestimated the GIR and Chinese reserves that were being amassed. With those reserves, the margin was going to actually be closer to four to one.

At the start of September, the GIR forces were constantly harassing and probing the allied lines. The regimental, divisional and Army Group commanders were awaiting the arrival of General Talabari and his final orders to implement the great attack. But when the final battle broke out, as is often the case in war, it would not start according to the grand designs that either side was busily and painstakingly putting into place. It would start as a result of one of those quirks of the battlefield that neither side can predict, but that often brings both sides together at a time and a place not planned for by either side, but to which both sides must conform simply because they are left with no other choice.

### **July - September in Europe**

Europe was in turmoil. Millions of refugees were streaming north and west away from the large GIR army group that was making gains in both Romania and Serbia. The principle European powers had finally amassed a force of almost three million men in that portion of Europe and set up strong defenses along the Carpathian Mountains and the Transylvanian Alps in Romania, and along a line of the Danube, the Sava and the Bosna Rivers in Serbia. It was at these defenses that the GIR forces were finally slowed and stopped in September, after all of Bulgaria, Albania, and parts of Romania and Serbia had already fallen to the GIR.

Further north, and even more critical situation was developing. German, Polish, Finnish and Swedish troops who had come to the aide of Russia had been defeated in the Urals and pushed back towards Moscow by the larger Chinese and Indian forces that were now pouring out of Siberia and through the Ural Mountains towards Moscow. To the west of the Urals both Perm, and Ufa fell to the joint Chinese/Indian advance despite Russian making the second battlefield use nuclear weapons in the war to halt them outside of Perm. But the effort failed as most missiles were shot down and due to brilliant maneuvering by CAS forces which avoided allied strikes to large troop concentrations. Within six weeks, the next line of defenses at the confluence of the Volga and Karma Rivers also fell as over four million Chinese and two million Indian troops amassed for the push on Moscow. Those forces were about to be joined by over a million and a half troops under the GIR banner that were advancing steadily from the south. This was the GIR Army group that had been circumventing the Black Sea and then turned north when hostilities initiated with Russia. The French, Italian, Spanish and German forces attempting to halt their advance had been routed at Volograd and again at Saratov.

Now, a great GIR and CAS pincer consisting of over seven million men and their equipment was closing on Gorkiy. Twice more the Russians had attempted to use tactical nuclear missiles to halt the advance, but the new Chinese KS-3 ballistic missile defense had proven too effective. Of over twenty missiles fired, only two had penetrated the Chinese defenses and exploded. As mentioned earlier, one of these had been on the outskirts of Perm, near Lysva, just to the west of the Urals. In that attack, one Russian medium range nuclear missile out of a flight of eight that had been launched from the vicinity of Kirov, had avoided interception and exploded two thousand feet over the battlefield. In the resulting explosion, due to the maneuvering and disposition of CAS forces, only 15,000 Chinese troops had been killed as well as 2,000 Russian soldiers who were too close to their enemies. Tragically, an even greater death toll had been inflicted on the civilian population, citizens of the very nation that had fired the missile.

The other detonation had occurred just before the battle of Saratov, when another Russian missile had penetrated the enemy ABM defenses and detonated upon an advancing division of GIR troops. There, over 20,000 GIR troops had perished, opening up a gap in the attacking GIR formations. Before Russian and other European forces could take advantage of it, the GIR reserve forces had filled their gap and continued relentlessly on and taken Saratov.

To date, neither the Chinese or the GIR had retaliated with nuclear weapons of their own. In a conference held in the spring in Mashhad in the former Iran, and in anticipation of this very stage of their Russian offensive, Jien Zenim, Hasan Sayeed and KP Narayannen had discussed in great detail the conditions warranting nuclear release by their forces. They had decided not to respond in kind as long as their forces were advancing and not decimated by any tactical attack. They made this decision in order to prevent a full scale exchange with the Russians aimed at their own homelands, which would ultimately involve the United States, England and France as well, and in a bid to prevent playing to that overwhelming strength that the west had. Instead, they decided to continue to use their greatest advantage, and that was simply an overwhelming number of men at arms streaming into Europe and around the rest of the world out of China, India and the Islamic countries, protected by their KS-3 systems that were now being massed produced in both China and India.

As September began, Europe had gathered over five million men, more than half of them Russian, to the defense of Moscow. Many of these were the armies that had been falling back in front of the advancing enemy. Over three million more were the reserve forces that the allied nations had rushed to the area after Gorkiy fell. Included in the mix were over 75,000 Americans who were operating the various high tech equipment, aircraft, Aegis missile batteries, and strategic defense lines along with their allies.

The Russians leadership had lobbied the allies for, and won the appointment of General Andrei Nosik to be in charge of all allied ground force in the defense of the Russian capitol. His brilliant fall back defenses in Siberia, in the Urals and then at Gorkiy, where he had commanded vastly outnumbered forces against overwhelming enemy forces had won him the respect and confidence of his superiors, and particularly the Russian President, Vladimir Putin. The Russian president now wished he had listened to General Nosik's requests while he commanded the Russian security forces in Siberia, before hostilities began, instead of the tired old general's in the Kremlin who had been advising him. As a result of not doing that, he was now faced with the imminent destruction of his capitol, and perhaps his nation. President Putin had tried every means at his disposal, short of a complete, all-out nuclear attack on Beijing, New Delhi and Tehran. He knew what such an attack would mean, but he had already decided, that if he were fated to be remembered as the person who lost the entire Rodina, it would not occur without his enemies experiencing a similar loss

### **July - September in Central and South America**

The fighting in Argentina and Venezuela had once again ground down to slugfests between those nations and Brazil. Brazilian troops had advanced into the north central part of Argentina with their spearhead clearly pointing south at Buenos Aires. But the Argentine resistance had become firm along the Parana River near the cities of Santa Fe and Parana, and the advance had ground to a halt. More and more men and equipment from both nations were being thrown into the maw of that battle as counter attacks raged back and forth.

The Brazilians made overtures to Uruguay in an effort to open another front to threaten the Argentine capitol, but to no avail. Despite overtures from Brasilia and Washington, DC, the Uruguay government remained firm in its insistence on neutrality. By the end of August, the new Brazilian President, Henrietta Maldonado, was faced with the momentous decision of considering marching her armies through Uruguay without their permission.

Further north, in Venezuela, the Chinese were able to bring in an additional 65,000 men on transports that, with the aide of LRASD weaponry, had run the American attack submarine blockade the U.S. Navy was maintaining off the Columbian and Panamanian west coasts. Twelve large transports were sunk, costing the Chinese almost 20,000 of their reinforcements. But the cost had been extreme to the Americans as nine Los Angeles class attack submarines were lost in the exchange. Despite this, thirty five large transports and their escorts and support vessels made it through to deliver those 65,000 troops into Columbia, who then advanced rapidly into Venezuela along the coastal mountains and to the north into the southern portions of Panama being held by the CSAS and their Chinese allies.

Further north, the situation was not as negative for the allies. American forces, supported by their allies, continued to advance in Panama. Despite large Chinese, Panamanian, and Venezuelan counter attacks, by the end of August the American led forces had advanced to within thirty miles of the Canal Zone. The American government was intent on not only recapturing the canal, but upon making an extended area around it into a new Canal Zone that would be considered from thenceforth not only an American protectorate, but officially an American territory. There was no intent of ever forgetting the mistakes of the past that had led to such a dire strategic situation that so adversely impacted America's ability to re-supply or move its forces between the Atlantic and Pacific Oceans.

Realizing America's intent, the Chinese forces currently defending the canal had very specific orders for its sabotage and demolition if and when the American forces broke through. In an operational plan reminiscent of the American's own, special forces and special demolition charges had already been set in place. The Panamanian government, who considered themselves the closest of Chinese allies, did not have the slightest idea as to what lengths the Chinese were willing to go to ensure that the Americans could not benefit from a re-opened Panama Canal.

### **September 2, 13:35 WST**

#### **Control Facility**

#### **Joint Services Firing Range, Central Nevada**

Captain Percy Thiebolt reviewed the latest results of the test exercise he was in charge of conducting and analyzing. The results were positive and beyond his expectations. The last pass of the new oversized stealth cruise missile and its munitions had proven 100% effective against infantry, 94% effective against soft vehicles and an astounding 87% effective against heavy armor.

"God knows we need this," thought the Captain as he wrote his initial assessment to his superiors, "now if its durability will be equally effective in the robust environment we've specified."

The new missile, to be designated the AGM-999 and code named Hail Storm, was a large cruise missile designed to be stealthy, with added enhancements that hopefully reduced its signature in the new anti-stealth environment that the Chinese had produced. In this regard, the capabilities were new and untested. They were based on projections and analysis of the Chinese anti-stealth emitters, not on hard facts. The allies had not captured any of those devices yet, so the capabilities of the AGM-999 would be based purely on what was projected from electronic emissions and capabilities of the enemy systems that had been observed through battlefield contact and after action reports.

The missile was also designed to be intelligent, with a loiter capability and sensor suite that rivaled much larger aircraft. New fuel enhancements, larger fuel capability and advances in micro-technologies had made this possible over the last four years since the beginning of the war.

Of even more import was the munitions the AGM-999 could carry and how they were activated. The munitions were small caliber, high density projectiles for the most part, but could be augmented with various types of bomblets and sub-munitions. All of these were carried in three pods in the oversized wasp shaped belly of the missile and all of them were fired completely electronically by 100% solid-state components. There were no moving parts.

This technology, although initially developed in Australia in the late 1990's and early 2000's, had been shared with the United States and ultimately perfected by joint studies. In the 2006 time frame, initial, prototype weapon systems had been tested, but these were rudimentary handguns and small machine guns that operated as proof of concept. The most advanced breakthroughs and developments had been completed here in the desert southwest of the United States during the long battle for Australia. The advanced state of the development and its readiness for combat production were still a complete secret from outside world.

Pure electronic firing and solid state components allowed for tremendous variance in rates of fire, angles of fire, muzzle velocity and almost any other ballistic characteristic associated with the munitions. The AGM-999, with all three of its pods filled with .177 caliber, depleted uranium pellets, carried an astonishing 30,000 rounds per missile that could be fired from the three "guns" at variable rates according to the type and density of the targets. All 30,000 rounds could be fired in a few seconds if desired, or they could be fired at varying rates at individual targets, or groups of targets with the appropriate dispersal patterns and angles of fire. The anti-personnel and anti-armor bomblets could be handled the same.

"But that might not be necessary", thought the Captain.

After much testing, Captain Thiebolt had determined that ten of the depleted uranium pellets, fired at hypervelocity speeds, were sufficient to penetrate the upper armor of a T-80 tank, the final pellet pushing through enough of the molten armor to the inside of the personnel compartment to kill everyone within it. Five pellets similarly targeted at the engine compartment would penetrate through and destroy the engine, stopping the tank in its tracks. In fact, the effectiveness against armor and personnel of the pellets themselves was so high, that Thiebolt was inclined to recommend cancellation of any further anti-armor or anti-personnel bomblet tests.

"These depleted uranium pellets, are doing just fine themselves," the Captain concluded to himself as he concluded the recommendation regarding the munitions packages. Turning to one of his staff, he gave orders.

"Sergeant, make sure these reports I have just uploaded to the server are not only delivered electronically, but also by secure pouch to the General and his staff.

"They'll want to act on this immediately.

... and the Captain was right. Based on his report and recommendations, and the follow-on recommendations made by his superiors, the missile air frames, which were already being produced, would be rushed into full production along with the solid state firing pods, the artificial intelligence components for sensing and guidance, and the enhanced Tomahawk missile engines that would power them. At a production rate of 100 missiles per week, the first four hundred missiles would all see action across the globe in the six weeks it would take to produce and deploy them.

**September 12, 19:59 EST**

**Interrogation Room 23B**

**Federal Detention Facility, Reston, VA**

As David Krenshaw walked out of the interrogation room that he had spent the last six hours in, he was flanked by two husky guards and the FBI agent that led the way. He was being taken, as usual, directly back to his cell.

Since he had been taken into custody in June, almost three months ago, David had only had one opportunity to speak to his wife ... that was in mid-July ... and only a single two-hour conference with his lawyer, which had occurred near the first of August. That conference had not boded well from David's perspective. Under the various provisions of the anti-terror legislation that had been passed, and under the older Emergency War Powers and Trading with the Enemy Acts, and based on the charges against him his lawyer explained that he was lucky to have had the one chance to meet.

"But what about my rights as a U.S. citizen?" David had exclaimed as his counsel recited the various provisions of those Acts under which David was being charged.

"David," his lawyer had replied, "given the provisions of these acts and given the charges against you, this could very easily be the only time we get to talk. In fact, we are lucky to have had even a single meeting. My understanding is that it was only as a result of the President's insistence that we are meeting at all, so he could point to you being provided access to your counsel, despite the current law. You're going to have to get control of your emotions right now and spend the time we do have as productively as possible if I am going to be able to do anything for you.

“Understand this, the Weisskopf Administration is out for blood ... and I am not using that term metaphorically. They intend to show that your actions cost American soldiers and other personnel their lives in a time of war. They intend to seek the death penalty, David, and based on the report from the Grand Jury, they have the evidence to push for it.”

That pronouncement had sobered David up and the remaining time had been spent answering questions and discussing exactly what his counsel wanted discussed. That had been almost six weeks ago and since that time David had not seen or heard from his lawyer again, despite his many requests to do so made to the Special Agent in Charge (SAC), Director Andy Syke.

But the FBI agent in charge, and his interrogators were not in a deal making mood. Oh, they held out to him some sliver of hope that he might avoid the death penalty if he would cooperate, but that was as far as they would go. This had incensed David, and he had resolved to take a tough stance and tell them nothing. But as days turned to weeks, and weeks to months, without any further improvement or progress ... David had ultimately given in. His tough act was only skin deep, as his interrogators and jailers sensed it would be. By the 6<sup>th</sup> of September, David freely signed a full confession and quickly began to tell the FBI personnel everything he could remember, dating from his involvement prior to the election of President Weisskopf, right up to when he was taken into custody.

Unknown to David, those revelations only served to strengthen the government's case against him, and as the full extent of his treason became apparent, it only hardened the resolve of those tasked with trying him to push forward for the death penalty. With the confession in hand, and with mounds of evidence available, the Attorney General was able to get a trial date established for the second week in October. David Krenshaw would not have to wait too much longer for his fate.

**September 28, 21:36EST**

### **Oval Office**

#### **The White House, Washington, DC**

The President watched as Curt Johnson entered the oval office and sat down. No one else was in the room, though the Secret Service tapes were rolling.

“Curt, thank you for coming by. I know it is out of the ordinary and I know you are very busy here with only a few more weeks left in your campaign.”

Curt Johnson was not in a mood for small talk.

“You're right Mr. President, so why don't we cut to the chase and get down to brass tacks. That campaign is still one, despite the odds, where I fully intend to unseat you as the President of this nation and return some sanity to world affairs.”

President Weisskopf considered this reply. It said a lot regarding what he had to present to Curt Johnson, why he had asked to meet with him here in the first place.

“Well, yes, Curt, I know you are serious about that, but it is precisely for that reason I have asked you here. There are serious things to discuss, and given our former relationship, I did not feel comfortable with anyone else sharing this data with you.

“You are aware of our case against David Krenshaw?”

Curt leaned back in his chair and gaped at the President.

“Am I aware of it? What kind of question is that? Of course I am aware of it ... and I am aware of your administrations manipulations in that regard as they reflect upon my candidacy.

“You guys are way out in right field here Mr. President. You have taken into custody a media mogul, one who has openly criticized your policies, one who is a leading figure on the Council of International Relations, and one who has counseled my campaign, the campaign of your opponent.

“I'd say from all appearances that you are trying to shut down honest dissent and debate on the issues, and it is apparent Mr. President ... apparent to me, to my campaign and to the public. It is an issue we are gaining traction with and one I will not back away from!”

The President had vowed he would not get emotionally involved in what he knew was going to be a difficult discussion. He was getting perilously close to breaking that vow.

“Curt, pardon my directness, but would you just shut the hell up for a minute and give me the opportunity to tell you why I asked you over here?”

“I didn't have to do this you know. My advisors insisted that I just let the information go public as the trial approached, but I couldn't do that. Despite what you may think of me, and despite our current differences, I believe you are an honest man, Curt. It's why I selected you to begin with and felt you were doing a good job up until the time we parted over fundamental issues regarding the second amendment and how it applies to honest citizens of this nation.

“But rehashing that argument is not why I asked you here today.

“Curt, David Krenshaw has signed a confession and come completely clean. He has been operating in this nation, since before my own election, at the instigation of, and for pay from the People's Republic of China in general, and for Jien Zenim specifically. I wanted you to know it ... and to be able to react to it before ...

Curt Johnson stood up, visibly shaking.

“What is this? You expect me to believe that?”

“You take a man into custody, hold him incognito for months, giving him only one chance to see his own lawyer ... and then you come up with this cock and bull story?”

“How strong a dose of *truth serum* did your people have to give him, Mr. President?”

The President tried to interject.

“Curt, it's not just the confession, it's the mounds of hard evidence ...”

But his opponent would have nothing to do with it.

“Well, I'm not buying it ... and I tell you what I am going to do Mr. President, I am going to thank you for this info and I am going run with it. Right to the press and right to the people.”

The President was resigned now to failing with the intent of this meeting. He had hoped that Curt, whom he still believed was a loyal American, would seek to find a way to work with the administration to find ways to avoid anything that would in any way benefit their enemies.

Now, too late, the President could see that his own advisors had been correct. Curt Johnson was too caught up in the campaign and in his own anger, to consider the truth of what the President had just communicated to him. The hard cold proof that the administration had would have to hit him full force in the side of the head before any significant dent could be made in Johnson's attitude or opinion.

“Curt, I'm sorry you see it that way. Let me just say this ... the proof we have is incontrovertible, you are only going to hurt yourself, the nation ...”

But Curt Johnson, already on his feet, was moving for the door.

“We're done, Mr. President. Time will tell what impact the shenanigans your administration is engaged in are going to have on the election ... but I can promise you, I believe they will be historic in nature given the gravity of the situation.”

As he slammed the Oval Office door behind him and as the President's advisors entered the room shaking their heads, Curt Johnson had no way of knowing that his last utterance had been more prophetic than he could have guessed possible.

**October 4, 23:35 local time**

**COSCO Research and Development Laboratories**

**Tianjin Shipyard Facility, The People Republic of China**

Admiral Lu Pham checked his figures again for the fifth time. It was painstaking work and the computers could churn out the calculations much quicker, but the Admiral had grown up in the old school of mental calculations and slide rules and still preferred, on anything critical that he was personally involved with, to check and recheck the figures himself. And the results kept coming out the same ... unsatisfactorily.

“Well, it's late and I am just going to burn myself out if I keep raking my mind over this now.

“I suppose it's time to bow to the inevitable this evening and apply the tried and true principle of critical thinking that lets my sub-conscious mind grapple with the problem while directing conscious thought elsewhere. I'm just going to have to sleep on it.” the Admiral thought.

“But by all accounts, that one weapon did breach the surface and rose in the air before exploding.

“There must be way to get them to do it within current design constraints! And to control it,” he concluded as he reflected on the intelligence reports he had received.

From loose lipped American sailors who wrote and emailed their friends and relatives, and from the American press who picked up the story, accounts of the Battle of Midway II, as it was being referred to, made reference to just such an event in conjunction with the damage sustained by the U.S.S. Bataan. That Sea Control Carrier had apparently sustained its worst damage when one of the LRASD devices somehow malfunctioned or was otherwise forced into the maneuver.

The report had immediately mystified and then intrigued Lu Pham, the principle architect of the LRASD weapons. The system had never been designed for such a maneuver, but if such maneuvers could be programmed into the weapons ... terminal maneuvers ... then that would be something. It could be something that could swing the technology back in favor of the PLAN and once again provide a lynch pin for the Chinese success in the Pacific against the U.S. Navy.

Their weight and speed was the major obstacle. A broach would have to occur at just the right angle, just the right speed to ensure that the weapon came out of the water in a stable fashion, out of range of the new American super-cavitating defensive weapons, but close enough to avoid the American Phalanx CIWS reaction time ... and shallow enough so as not to rise too high into the air. It would require a complete rework of the guidance algorithms and their artificial intelligence acquisition and decision matrices. It would also require the installation of control surfaces that could be deployed when the weapon became airborne.

But getting the current design to maintain stable, airborne flight was the first obstacle, and it was an obstacle the Admiral was still grappling with. As he documented his calculations and jotted down final notes, he had one more thought of where he might turn for additional thinking.

“Sung Hsu!” realized the Admiral, “He would be a natural for this type of problem.

“Perhaps I will call him tonight ... no, it will wait until the morning. I'll call him then, after I have had the chance to sleep on it.”

**October, 12, 18:55 EST**  
**Supreme Court of the United States**  
**Washington, DC**

Chief Justice Thomas Clarendon considered the amount of time that it had taken the court to arrive at this momentous decision. Many in the press, using their judicial analysts and experts, had predicted that it would take weeks, perhaps months, for the court to rule on this issue. They had been wrong. In fact, no one, including the justices themselves, would have dared contemplate or imagine a five-day hearing, analysis and ruling. But after only four full days of very strong opinions from lawyers representing both sides of the issue, and the compelling scientific evidence ...

“No, not just evidence,” thought the Chief Justice, “proof.”

... after those compelling scientific proofs associated with the Human Reasoning Structures and the testimony of Dr.'s Trevor and McPherson and so many others, the Justices had held a late-night conference together on the 11<sup>th</sup> and determined that they were each ready to render their decision the next day, today.

Now, October 12<sup>th</sup>, would be a date that would be remembered long into history. The opinions were in and had been tallied. There would be no dissenting opinion, the decision was unanimous and it would be earth shattering. *Roe V. Wade* would be overturned ... and not just overturned, it would be completely reversed in a way far beyond expectation.

Constitutionally, it was clear that the fetus, at a very early stage of development, was in fact human and capable of awareness and independent thought processes. It was therefore to be afforded protection under the constitution to *life*.

It was now left to Chief Justice Clarendon, the first black Chief Justice in the history of the United States and who himself had narrowly been nominated to the Supreme Court after a bitter, partisan process many years earlier, to announce the opinion of the court. He was prepared to do so and he had stayed up most of the night writing his own opinion, re-writing it, reflecting upon it and ultimately completing it in anticipation of this moment. He was now prepared to give it.

The cameras were set up by the hundreds. The press, the leaders of every major lobby group on both sides of the issue, agency heads, heads of governments from all over the free world, and tens of millions of citizens were now focused on what Chief Justice Clarendon would announce and say over the next few minutes. It was an event, despite the ongoing ravages of war and the immediate compelling issues associated with it, that had captured the attention and the imagination of most Americans, in deed, of most of the free world. All were spell bound as to how the Supreme Court of the United States would rule on this issue. When it came, it was astonishingly to the point and short.

“Ladies and gentlemen, the decision of the Supreme Court of the United States of America with regards to the matter now before the court, the re-hearing of the *Roe V. Wade* ruling originally decided in 1973 is as follows:

“The human fetus, as a result of scientific proofs regarding the Human Reasoning Structures and their existence within the fetus, has been shown scientifically to be a living, thinking human. Based on this new evidence, the court finds unanimously that no individual, has the right to willfully terminate or cause injury to that human growing and developing within the womb. *Roe V. Wade* is therefore unalterably over-turned based on this new evidence.

“Further, the court finds that the constitutional protection of *life* must be extended to the fetus, as it is extended to any other under-age child. The parent or other legal guardian shall be responsible for the health and welfare of that child like they would for any other.

“This is the unanimous legal finding and decision of this court, there is no dissenting opinion.

“Now, in addition to the official, legal decision this court has just made, let me take the unprecedented step of adding a few of my own comments as a purely personal note. I want to ensure that it is understood by all, that what I am about to say represents my own personal feelings and is not representative of any legal finding of this court. I do so because this ruling represents an unprecedented occurrence, and it speaks to an issue that has divided us as a free people, and stained our national consciousness for far too long.

“For the last many years, this nation, through its legal process, has embarked on a course where we ruled legally that innocent human life, as has been shown in the recent months, could be systematically killed. I stand before you today, as do we all, in abject shame for that decision and the holocaust it has now been shown to have produced. It is to the credit of every member of this court, regardless of what side of the issue that they had taken before, that when presented with this clear scientific evidence, every member ruled appropriately and quickly on what could only be the single legal ruling possible. No partisan political interpretation existed in this court today.

“Would to God that we had all listened to our heart and to our conscience long before today and used our common sense to have risen above the partisan politics of the era and so ruled much earlier. There is no telling what expertise, what significance, what developments, what future we have denied ourselves because of the death of all of these tens of millions who might otherwise have lived to endow and bless us with their presence...with their life. Perhaps now, we will experience some of

those things we denied ourselves, and perhaps now, at long last, we will embrace and protect the life developing amongst us and somehow atone for our collective actions, albeit belatedly.

“Thank you, that completes the courts ruling and my own remarks.”

### **October 13-16, 18:55 EST**

#### **Across the United States**

#### **After the Supreme Court Ruling**

All over the nation the reaction came in on the ruling.

From the many Christians conservatives who had been working and praying for years for just such a ruling, to the libertarians who quickly proposed a new platform plank taking into consideration the right to life of the now proven, reasoning fetus, to those individuals whose financial and intellectual well being had been vested in the abortion industry and the philosophy that demanded that a fetus be considered nothing more than a mass of tissue, reaction varied from quiet acceptance to protests against the ruling and counter-protests to those protests.

Many in the leadership of the National Endowment for Woman (NEW) vowed that they would conduct nation-wide civil disobedience and continue the practice of abortion in clinics where any doctor and their staffs would stand firm. The American Civil Liberties Union vowed to support this attempt and to make what they termed a principled stand for the rights of women to continue to do with their bodies as they pleased, despite the overwhelming scientific evidence that another human body existed within them, a body that was living and thinking.

In the end, the civil disobedience and the protests fizzled. The vast majority of Americans, even the more liberally minded, accepted the scientific evidence at its face value, and distanced themselves strongly from the radical supporters of abortion. Now that the national consciousness was awake to the fact that living human babies, capable of thought and reason, had been killed by the millions, a revival of sorts began sweeping the nation. No more than a dozen doctors and their staffs across the nation responded to the calls by the NEW and the ALCU organizations. Those that did were subjected to massive counter protests organized in large part by the Independent Republic and other online internet organizations that immediately pointed out the location of these clinics and organized massive “save the children” protests.

Those “save the children” protests, organized by the Independent Republic Network, a confederation of Independent Republic chapters across the nation, caught the imagination of the American people and the rising revival spirit that was sweeping the nation. In every case, a handful of twenty or thirty protestors for abortion were confronted by thousands of protestors there to “save the children”. The few doctors who had entertained thoughts of continuing the practice in some type of twisted protest for the rights of woman, as they prepared to terminate the life of now proven reasoning babies, quickly saw that any attempt on their part to do so would not only lead to potential jail time... it would lead to financial ruin as well. As a result, with no doctors or their staffs willing to take up the cause, the civil disobedience ended within three days, before it ever actually got started.

Elizabeth Trevor sat in contemplative silence on the evening of October 16<sup>th</sup> as she and her husband, Joseph, prepared for bed. Dr. Joseph Trevor and his entire family had been subjected to intense media exposure as a result of the initial announcement regarding the HRS found in the fetal tissue and the fast track to the National Academy of Sciences and the Supreme Court. Elizabeth knew that the coverage had produced far more pressure and scrutiny than he had received in the run-up to his Nobel Prize due to the initial discovery of the Human Reasoning Structures.

“Joe, can you believe what’s happened? The change for the good?”

“I simply marvel that two and a half years ago you were led to discover those intricate, Godly structures at the root of our humanity ... and now look where it’s led, and by what means!”

Joseph laid down in bed next to his wife. They had just finished their evening prayers together, where they both had uttered heartfelt and humble thanksgiving for the events of the last week.

“No, I really can’t believe it ... and yet it is so.

“But honey, don’t pile the credit on me, you were right there in the mix of all of this. If it hadn’t been for your intuitive ... no, no, your inspired comments that turned my attention about the HRS towards the nervous system and the brain ... I am not sure I would have ever chanced upon the discoveries that I did.”

Elizabeth knew her husband too well. He was modest, but he was driven. There was no doubt in her mind that he would have ultimately ended up there in any case, with or without her input.

“Joe, you ended up there because it was where you were supposed to end up. Whether it had been my input, or some other, the Lord was behind this, I am certain of that. Just look at Sandra and the change this has wrought in her ... who would have believed it?”

There was no need to answer that question. Neither of them would have believed it unless they had witnessed it themselves. Both of them viewed the change wrought in Sandra McPherson as representative of the change they hoped, and believed they were seeing in their nation. With those thoughts in mind, they both reflected on it all as they drifted off to sleep.

**October 24, 03:55 local time**

**Federal Court**

**Annandale, Virginia**

“Ladies and gentlemen of the Jury,” the Judge enquired, “Have you reached a verdict?”

Standing up at the Judges request, the foreman of the jury, a middle aged and balding white gentlemen replied, “We have your honor.”

The Judge replied in the time honored phraseology typical of the American legal system, “How find you on the first count of Treason against the United States, with special circumstances?”

The foreman stood up a little taller, straight backed and stared evenly at the Judge, “Your honor, we find the defendant guilty as charged!”

The courtroom erupted into bedlam as reporters rushed out of the courtroom and immediately began talking into their cell phones, or microphones. The special circumstances condition, which indicated that his actions had led directly to the deaths of American personnel and/or citizens, carried with it only two possible sentences, life in prison without the possibility of parole, or death.

*BANG, BANG, BANG*

The Judge's gavel came crashing down, demanding and receiving an instant reprieve to the noise. “I *WILL* have order in this court. Bailiff, remove anyone from this chamber who does not sit down and become quiet within the next five seconds.”

The Judge then continued through the list of charges, to which the foreman of the jury answered the same on every count, “Guilty as charged.”

The trial of David Krenshaw had lasted for just ten days. In that time the Government had produced an avalanche of evidence...witnesses, the defendants own testimony and several declassified electronic intercepts and surveillance images that firmly established that David Krenshaw, President of WNN Worldwide News and a leading member of the Council on International Relations, had consorted with the enemy and provided materiel, data and intelligence assistance to them as they waged unrestricted warfare on the United States of America and her citizens.

The evidence was overwhelming. The defense argument that much of the data was privileged or protected by 1<sup>st</sup> amendment rights was ineffective in the face of the defendant's own sworn and written testimony. It was clear to all, in the court room and out, that David Krenshaw, for several years, had sold his country and his fellow citizens out for his own materiel, professional and political ambitions, and that he had done so both before and after the onset of hostilities. The final charge of conspiracy to influence the political process was terribly damaging to the opposition party.

The defense lawyer, and the political mechanism that surrounded Curt Johnson and the former Senator Crater, tried to make the case that the current administration was deliberately pursuing a path with David Krenshaw's prosecution that itself was motivated by political gain. But the President's continuing refusal to so much as campaign for either his party's nomination or the eminent national election belied their arguments. No one, outside of those closest to Krenshaw and those close to the opposition ticket, was buying it, in the court room or out. Curt Johnson's own insistence on pursuing this path, long after the evidence dictated otherwise, was his own undoing.

In the end, David Krenshaw was found guilty on all counts. His sentencing hearing was put off until late November, but the overwhelming majority of American citizens, feeling deeply the betrayal of this media figurehead that so many of them had come to trust, were in favor of the maximum penalty. The Administration was pushing for that penalty, and this particular Judge was known for being extremely hard on crime.

The Attorney General of the United States said it best, a week later in an interview.

“Mr. Krenshaw rose to some of the highest positions possible in our free and moral society. As a result of his love for himself, his ambition, his commitment to enemies of this nation and his corruption ... as a result of his perusal of all of these things above his commitment to his fellow citizens and the liberty that availed him of the very opportunities he enjoyed ... he threw it all away.

“And not only did he throw it all away for himself ... his actions led to the deaths of countless American service personnel and citizens. For all of these reasons, David Krenshaw, as great a traitor as this nation has ever known ... and it has known a few, has been given the guilty sentence he so richly deserves and it is this administration's absolute hope, that he will be sentenced to die for those crimes. An ignoble and dishonorable end to an ignoble, dishonorable, and traitorous life.

“I would to God that we could bring forward evidence and proof for all of those who have so abjectly sold out our nation and led it to the precarious and dangerous circumstance we are currently in, where so many of our people and servants have died defending this Republic. If we could, we would, and they would receive the same treatment as Mr. Krenshaw. As it is, we do have the evidence of Mr. Krenshaw deeds and it has been presented and ruled upon by a jury of his peers according to the Constitution. We shall now await the sentencing along with the rest of the nation.”

As Americans shook their heads in disbelief and contempt, and went on their way, it was clear that the name of David Krenshaw, a man that had benefited so much from the liberty that America afforded, would eclipse the name of Benedict Arnold as the greatest traitor in the nation's history.

# **DRAGON'S FURY**

**WORLD WAR  
AGAINST AMERICA  
AND THE WEST**

## **YEAR FIVE**

**J E F F  
H E A D**

[www.dragonsfuryseries.com](http://www.dragonsfuryseries.com)

**November 3, 10:34 local time**  
**Executive Ruling Counsel Conference**  
**Politburo, Beijing, China**

Jien Zenim reflected on the last four years as he reviewed the American election returns.

As was the case four years ago, the elections were not going as he had hoped, or planned. The difference this time was that the results were not unexpected. Despite his planning and hopes, the American President, Norm Weisskopf, had performed admirably as an opponent and had rallied his people. It was not surprising that he was winning so handily, much more handily even than before when he had defeated the wife of the former President.

"Ah for those days again," thought Zenim, "when a corrupt and weak administration in America had been so easily influenced and turned to our purposes."

"But the 1990's are gone, and in truth, they have given rise to the current state of world affairs. Affairs that are coming closer and closer to the realization of our goals."

Looking to his aide and beckoning for some more of the English Earl Grey tea that President Jien Zenim enjoyed, he asked his chief of staff for an update on the returns.

"r. President, we are understandably several hours behind the American tallies, but at last count it was clear that Weisskopf will win in a landslide.

"n fact, unless trends dramatically reverse themselves, President Weisskopf seems destined to win all fifty states and every one of their electoral votes. It will be a first in their history."

Jien Zenim thanked his chief of staff and indicated that he had heard enough.

Clearly, the trial and impending sentencing of that lackey Krenshaw had pushed the American public completely over the edge politically, as if they hadn't been close enough already. The Chinese President had no allusions. Using David Krenshaw as he had done had always contained the inherent risk that the weak man would be caught and would cave into pressure ... as he had done. But the benefits over the last few years had outweighed the risks, as evidenced by the success of Zenim's master plan in confederation with the Indians and the Islamics. People like Krenshaw and the other decadent and naïve people in America that the Chinese had co-opted over the years by the thousands were ultimately and entirely expendable, Zenim would shed no tears over their ilk. They were simply tools and means to an end, to be discarded or disposed of when they had fulfilled their usefulness.

"How did Lenin put it?" the President asked himself, "Yes, that's it, that's it entirely, *useful idiots*. Useful idiots and nothing more."

Turing to the other members of the executive counsel on the politburo, Zenim simply announced.

"Well, it seems we are destined to continue facing this Weisskopf for a little while longer.

"He is definitely a worthy adversary, but his re-election will not amount to anything of serious consequence. Our forces and our allies continue to push forward. That is the harsh reality with which he and his allied leaders must deal, and ultimately come to grips with.

"Despite the minor set backs we are experiencing in Central America near the Panama canal, and the great sacrifice near Midway Atoll, those forces have done their duty. The object of that duty now lies within our grasp. Over the next weeks we will see America's puppet regime in Israel fall and be decimated, we will see the Russian capitol fall and all of Europe will be at our feet, and we will see the consolidation of all of North America's most strategic oil reserves and the fall of the entire American state of Alaska. Those are defeats that will break the will and the back of the enemy ... they will have no choice but to sue for peace ... and it will be peace on the terms we have worked for, for so long."

"So, let the American President have his day, it shall be followed by many long nights."

As he stopped speaking and began to sip his tea while he observed the various members of the executive counsel, the Chinese President had no idea that several thousand miles away, in an area already long occupied by his allied forces, an event was about to occur that would pull one of the lynchpins out of his carefully laid plans which to date had been so successful.

**November 6, 15:22 local time**  
**Occupation Commander's Luncheon**  
**Old Parliament Conference Facility, Tbilisi, Georgia**

General Talabari scanned the crowd of upturned faces he had just addressed. It had been a rousing reception, luncheon and speech. The commander of the occupation forces here in Georgia had specifically requested that the legendary and heroic General stay over an extra night and address his command staff. General Talabari had agreed and had also taken the opportunity to finally arrange for the young Colonel, Abduhl Selim, to leave his command in Romania and join him here and travel on with him to Damascus. But the trip had been delayed by meetings with the Imam in Tehran and by a desire for a final visit to the commanding general near Moscow before that great assault began. What had been initially planned for September, had slipped into November and the General was now anxious to be about the long awaited task of destroying Israel and her allies there defending her.

In that vein, it was also time for Colonel Abduhl Selim to take on the heavy responsibility of a major command in a major engagement and prove his worth. If it went as General Talabari expected, and as he had briefed the great Imam, then Colonel Selim would soon become General Selim and would be in the eye of the leading military, political and religious leaders of the entire GIR ... and he would be the ally of and beholden to General Talabari for it all.

But others had been privy to the General's travel plans, and they too had been forced to delay and change their plans as a result of the changes to the General's. Now, like the General, their plans were ready to implement here today, well before the General could implement his own.

As General Talabari stepped down from the podium, his security detail fanned out in front of him to hold back the crowd of officers who wanted to shake the hand of the great man. As was his custom, the General began to grasp the hands of a few of those well wishers as he passed through the crowd.

Cries of "*Allah Mak!*" and "*Allah Ahkbar!*" rang out as he passed by, grasping hands and speaking briefly with his well wishers.

One compelling hand reached out from the crowd to grasp the General's. The man offering it was flanked by two others, also reaching out to the general, but also blocking the security detail from interfering with the first. That first man was dressed as a full Colonel of the occupation forces.

The General turned to the man to take his hand. In the instant he grasped it, he looked into the eyes of the man standing there and recognition flooded into his mind as he attempted to pull his hand back. As he began to do so, the man shaking his hand mouthed the following words to the General.

"Allah Mak, General, God is great indeed. This is for Will!"

Captain Riley Adams, dark skinned and fluent in the Farsi and Arabic languages, knew that Talabari had recognized him, and that was exactly what he wanted. As soon as he saw that recognition in the General's eyes, Adams activated the small compressed air, dart gun hidden in his sleeve and there was the slightest, almost inaudible *psst* as the small dart, tipped with a powerful nerve agent, shot out from its concealed position and impacted the General under his outstretched arm. No one in the crowd, including the nearest security personnel, heard it, the noise of their approval of the General was simply too loud.

Adams let go of the General's hand and the General was immediately rendered speechless and began to slow in his step, turning his head slowly from side to side. The security personnel were just noticing that something might be wrong. As they did, Riley Adams and his two partisan compatriots pulled back into the crowd and were slowly making their way toward a nearby exit.

General Talabari took three steps, attempting to turn his head and say something to someone, to anyone to warn them, and then he collapsed. As he lay there on the floor, with a gathering crowd of security personnel and then medical personnel, all he could do was think.

"I knew this day would come," he thought, "The Americans would never forget such a betrayal."

He was slowly drifting away, thinking back on that day outside of Irbil, when he had been the assassin ... but the assassin of a close friend and compatriot. He remembered pointing the gun at CIA agent Will Peterson who was unsuspecting and had been acting under direct Presidential Order to interdict Hasan Sayeed that day, just as the world war was starting. He remembered firing that round into the back of Peterson's head and the course it had set him upon. It was a course that led right here, to Tbilisi, Georgia, laying on this floor slowly losing feeling in all of his appendages.

"Adams ... that was Adams," he thought. "How did he get here ... how did he know?"

"What was that he said, God is great ... it was for Will ... Will, a good soldier ..."

As the numbness spread into his torso and reached his heart, the General simply stopped breathing and died there while his attendants frantically tried to revive him.

As they did so, one of those next to him stood up and slowly scanned the crowd and the room. It was a crowd that was shocked into silence, looking around, wondering what terrible thing had come to pass. Colonel Abduhl Selim sensed what had happened. He did not believe this was natural. He was looking for anything odd, anyone moving quickly away. But his search was in vain. Riley Adams was too wise to call attention to himself. Their plan had worked without a flaw. They had moved slowly and naturally, and had already exited the building

...and before the surrounding area could be locked down, there were several diversionary explosions and the sound of small arms fire. The NCO that Adams had infiltrated the country with was doing his part with several more partisans. Adams and the two men who had helped him used that diversion to escape. Within ten minutes, all fighting had stopped completely.

Back in the parliament building General Talabari was dead, but his plans for the attack on Israel would survive him, as would his plans for Abduhl Selim. Both of those plans would be set in motion within two weeks of his death. The two sets of plans, one very large and far reaching in nature and the other much more individually oriented, would achieve astonishingly dissimilar results.

## Chapter 29

### The Battles of Anchorage, Israel, and Moscow

**November 11, 03:55 local time**

**Fall back Defensive Lines**

**American Forces , Palmer, Alaska**

Hernando Rodriguez sat in his position, keen, observant and prepared to meet the enemy. He was positioned on a wooded hillside, in a reinforced, prepared position, ready to confront an enemy he knew would be coming, and they would be coming soon.

To date, the Americans and their Canadian allies had not been able to stop the Chinese juggernaut here in Alaska. Nome, Fairbanks, Prudhoe Bay, and Barrow had all fallen under Chinese control. Hundreds of thousands of additional Chinese troops were pouring into the country across the Bering Sea at Nome each week, and both the U.S. Navy and the U.S. Air Force had not been able to break through and seriously impede that flow of enemy men and materiel.

Once the Chinese had consolidated there positions in the oil fields to the north, despite the destruction wrought there by U.S. nuclear demolition devices, they had turned their full attention south and east. Two weeks ago, Whitehorse had fallen as the Chinese continued moving up the Yukon River valley and established a firm foothold in the Yukon Territory of Canada. They had extended that foothold into the Northwest Territories and were now moving south there too.

With the rapid advancement, General Tsing had moved his center of operations to Fairbanks where his engineers had repaired the airbase there, out of which they were now operating combat air patrol and attack sorties

But the largest Chinese thrust had been reserved for the American buildup in Anchorage and its threat to their expansion. Anchorage, where Elmendorf Air Base and the United States Army were a continuing, growing presence and threat. Over three hundred thousand American troops and four hundred high performance aircraft had now gathered there to defend the capitol and the last hope for maintaining a strong American foothold in Alaska from which to counterattack the Chinese and win back lost ground. Twenty-two U.S Navy warships, including the carrier, the U.S.S. Theodore Roosevelt, were now positioned in and around Cooke inlet to assist in air defense and suppressive fire missions. The Chinese knew that this threat had to be addressed now, that the more time they waited, the harder it would be...and they were steamrolling towards Anchorage just as quickly as they could.

American planners had hoped to be able to use the wall of the Alaskan Range to hold the Chinese back, but the defensive lines near Cantwell had been over-run despite inflicting heavy casualties on the enemy. The fall back positions at Curry where the Susitna River narrowed had fallen two days later, and now the Chinese advance forces were probing all around Palmer as they sought to bulldoze yet another American position ... Hernando's position.

Hernando had talked to some of the survivors of Cantwell. He knew what to expect. There would be a tremendous sustained artillery, air, and missile bombardment. That would be followed in short order, marching right behind that barrage, by hordes of Chinese troops...too many to kill with the amount of ammunition the defenders had at their disposal. Hernando remembered the description from one of the sergeants earlier this evening who had explained to them exactly what to expect.

"They'll come by waves of tens of thousands ...and they march right into direct fire while others probe the flanks.

"They pile up their own dead to fire from behind and then climb over the top and just keep coming, one pile of dead after another. I had heard stories about Chosin Reservoir in Korea, and this is exactly like that must have been.

"Just be ready, they'll be right behind the barrage. Take down as many as you can, and then withdraw in order, firing as you go. Do not expend all of your ammo before that order, you'll need it to cover your retreat."

Hernando new that the sergeant had related exactly what he had experienced ... but he and his compatriots, and their officers were dedicated to holding the line at all costs. Behind this position, the way to Anchorage would open. Defended, yes, but this was the best position for defense between here and Eklutna at the head of Cooke Inlet and at the door to Anchorage.

... as Hernando rolled these thoughts over in his mind, it started.

*SWOOSH ... WHAM!, WHAM! WHAM!*

The impacts came furiously, deafening, even with the ear protection he was wearing. It went on and on with the entire squad hunkered down in their bunker praying to avoid a direct hit.

After an hour of continuous, intense bombardment, Hernando began to notice an underlying, background noise, barely perceptible in the distance. Even as enemy aircraft engaged in vicious dogfights overhead with American F-15 and F-22 fighters, the noise of approaching mechanized infantry grew louder ... and intermingled with that sound, the sound of marching feet ... by the tens

of thousands ... no, by the hundreds of thousands that literally could be heard above the bombardment and above the mechanized vehicles that heralded them.

"Mother of God," Hernando uttered to himself, "How many of them can there be?"

He tried to look to his forward, using his night vision equipment but he was violently thrown to the back of the bunker by a near miss. As he shook off the effects of that concussion, he moved forward to his firing position again, urging his team members to do likewise, which they did with the practiced precision of professionals long used to combat.

What greeted them as they took up their positions was frightful. There, across the valley, coming over the far ridge, were hundreds and hundreds of Chinese infantry fighting vehicles, tanks and armored personnel carriers. Despite the fearful beating they were taking from American artillery and aircraft, they kept coming and the numbers were too great to hinder. Behind them, the ground was dark, literally moving with the enemy infantry.

... and then the Chinese yelled, and with a roar that drowned out all other sound, they charged from two kilometers away.

It was at this point that Hernando caught a glimpse of movement in the air, flying low over his position. When he looked up, he could just barely distinguish the form of extremely large cruise missiles, many cruise missiles, passing overhead. They were long, but they were only sleek on the front and tail ends. In the middle their wastes bulged as they sped low over the battlefield towards that onrushing mass of armor and men. They had been launched from over the Cooke Inlet some sixty miles away by ten refurbished B-52G's that had been brought out of mothballs over the last eight weeks specifically for this purpose.

Anti-aircraft missiles rose up from amongst the enemy as their *ta shih* detectors acquired contact with the missiles. Ground forces, seeing the approaching wave of American missiles began visually targeting them with small arms and other anti-aircraft fire. As the cruise missiles cleared Hernando's position a wall of missiles and tracer fire reached out towards the onrushing cruise missile barrage. As several explosions lit up the battlefield, many of the Chinese defensive missiles simply missed and passed right by the American missiles. A few were brought down by proximity explosions.

The bulk of the onrushing wave of American missiles approached the oncoming Chinese assault front unimpeded. Small bay doors opened on all of the lead cruise missiles and Hernando and his team members then witnessed the most awesome act of destruction ever perpetrated on any single battlefield in the course of this war, or any other in history. The electronic, sustained firing of hundreds of thousands of .177 caliber, depleted uranium pellets at hypervelocity speeds lit up the battlefield like the hand of God ... and the effects on the Chinese were the same.

From over fifty remaining AGM-999 missiles a literal hail storm of metal, on a front several miles wide, mowed into and across the attacking Chinese formations, leaving nothing but a gruesome tangled and grizzly mix of perforated IFV's and APC's, flesh-chopped up like so much hamburger, and immobile tanks...some of which continued to fire on the American positions. Those few, roughly twelve percent of the Chinese tanks, were no longer capable of movement, their engine compartments having been ruined by the impact of .177 depleted uranium pellets, just as the missiles had been programmed to do.

In less than forty seconds, the initial wave of Chinese troops, numbering more than one hundred thousand men, five hundred APC's and IFV's and over three hundred tanks, had been stopped dead ... literally dead, outside of Palmer, Alaska.

Ten minutes later, the slaughter was repeated as the second wave of Chinese troops and their equipment rushed into the same killing fields, and were assaulted by another wave of AGM-999 missiles that broke and destroyed another eighty thousand Chinese troops and their equipment. It was too much for any army to withstand without breaking. Although the full Chinese assault included more than five hundred thousand troops, the outright killing of over one third of them in a period of less than a half an hour devastated the assault entirely, routing the remaining attack force who began to fall back in a mad rush in the direction from whence they had come.

Had General Tsing understood that the United States had expended all of their AGM-999 missiles available to them in Alaska in those two monumental attacks outside of Palmer, he might have pressed on and yet won the day. But he could not have known that, and he dared not risk his remaining troops. As reports filtered back to him, from the observation of follow-on troops who witnessed the carnage, and from the absolute silence in communications from those first two waves, the General had no choice but to call for an immediate and complete withdrawal back towards the Alaskan Range and Cantwell, where he hoped to regroup and resume the attack later.

But the American commanders were too wise to allow that. When their own observation posts reported the success of the AGM-999 attack and the utter destruction of the enemy, an immediate all out assault and counterattack was ordered. Hernando and his squad, along with over fifty thousand American soldiers began the counter offensive and harried the Chinese rear all the way to Cantwell where they overran their defenses before they could be prepared.

Over the space of the next eight days, the attack evolved and expanded to include over two hundred and fifty thousand American and Canadian troops. That counter offensive broke through the

Alaskan Range and carried all the way to Fairbanks, which was recaptured from the Chinese in vicious fighting on November 21st as General Tsing evacuated his command post and fell back down the Yukon Valley towards Ruby, Alaska.

He left behind over eighty thousand Chinese troops in Canada who were now completely cut off from their supply lines and from any hope of relief in the Yukon and Northwest Territories. It also left an emboldened American Army preparing to attack north towards the Brooks Range and the ANWR, and to the west towards the Chinese positions now solidifying around Wolf Mountain and its shoulder on the Yukon River ... an American Army at that point that was about to receive another influx of AGM-999, Hail Storm missiles for use in their continuing counter offensive against the Chinese.

### **November 14, 19:28 local time**

#### **Joint U.S. and IDF forward position**

#### **Landing Zone Zulu, East of Damascus, Syria**

Colonel Jess Simmons guided his Comanche helicopter in for a quick, flared landing, all of its ordinance expended. For the last two days it had been like this, flying out into a target rich environment, expending all of his ordinance, and then returning to load up again and start all over.

He was reminded of the letters and conversations he had with his son, Billy while he had been defending Australia, and well before he had been lost off of the coast when his ship, the Tarawa, had been sunk. In those correspondences and conversations, Billy had told him of much the same experience, flying his U.S. Marine, AH-1Z Viper attack helicopter out into a target rich environment, expending all of his ordinance over and over again at the oncoming masses of enemy.

"Except in that case, the enemy in Australia had been attacking, and now here we have them on the run," reflected the Colonel as he silently contemplated current conditions versus those of six months ago when Australia fell, and his son with it ... and he again mourned that loss.

"Dear God, please keep Billy in the palm of Your hand, wherever his body lies, and help Cindy and I understand and accept Thy will," he pled as he unbuckled and prepared to exit the aircraft.

As U.S. Forces unleashed their AGM-999, Hail Storm missiles on the Chinese in Alaska, allied forces here in Israel were prompted, prematurely to do the same. A few hours after the attack in Alaska, and just hours before the late General Talabari's attack order could be implemented on November 13<sup>th</sup>, an argument between a Jordanian farmer and a roving Israeli patrol attracted the attention of a company size detachment of Syrian troops moving up towards their jump-off positions for the GIR major offensive planned for very early the next morning.

The Syrians attacked the much smaller group of Israelis and the Israelis called in air and additional ground support. Within thirty minutes a major battle was developing and support aircraft saw and witnessed the imminent GIR buildup. In a flash of inspiration, and in order to preempt the GIR attack, General Olsen recognized the GIR intentions and ordered the immediate implementation of the allied counterattack plan, which was set to spearhead right through the area in question. This committed the American, British and Israeli forces to a counter attack along a line that ran from east the Sea of Galilee up to the Golan heights.

Two waves of forty AGM-999 missiles each were immediately used to open up a gaping hole in the GIR defensive lines, which also decimated their forming attack formations. Over two hundred thousand enemy personnel were killed in a space of less than an hour. Many more were severely injured and disabled in their prepared positions. The resulting rent in GIR lines allowed the allied counter attack to pour through into the fiercely contested ground between Damascus and the Golan heights, where they were met by the huge reserves that General Talabari had gathered to meet the ultimately anticipated allied counter-attack. But that plan had contemplated the allies expending most of their high tech weaponry against the initial line of GIR forces, and then breaking out to contend on equal terms the larger, reserve GIR forces.

But the joint allied armies that had broken through the shattered GIR forces arrived with all of their high tech weaponry intact, thanks to the AGM-999 onslaught which chewed through the GIR lines. The sophisticated allied weaponry that General Talabari had hoped would be exhausted when the allies met the large reserve forces were still plentiful. Just the same, the GIR reserve forces were much larger than the allies had expected and they were prepared and eager to fight.

Led by an inspired and hard fighting Army group consisting of over twelve divisions, whose command had passed to the young Abduhl Selim when the other senior officers were all killed or disabled, the battle raged for over three days as GIR forces contested the allied push towards Damascus. But the superior acquisition, targeting and munitions technology enjoyed by the allies took its toll. Ultimately, when allied air superiority was achieved over the battle field early the third day, what had been a slow, grueling advance on the allies part became a breakthrough on the afternoon of the 15<sup>th</sup>. U.S., United Kingdom and Israeli forces pushed GIR forces back to, and then through Damascus where the fighting became a bitter, street to street conflict. General Olsen ordered the bulk of the allied forces to cut-off and bypass Damascus and prepare to assault defensive positions where the bulk of the GIR forces had fallen back to and east of the city.

This was because a general order had been given by the GIR high command for all other GIR forces in the area to fall back towards the defensive lines to the east of Damascus, while a sizable contingent was left in Damascus to draw the allies into an urban warfare scenario in the city. As the allies bypassed the city according to General Olsen's orders, the leading elements ran headlong into a large GIR force falling back from Lebanon. There were no more AGM-999 missiles available to stop these forces, which punched through the leading elements of the allied force and reinforced the GIR defensive positions. This developed into a confrontation east of Damascus on the night of November 17<sup>th</sup>, pitting superior allied artillery, close air support and armor against the larger numbers of GIR equipment and personnel, who were digging in and preparing for battle.

The last thirty AGM-999 missiles available in the Israeli theater to the allies, which had been held back as a reserve, were used late on the 15<sup>th</sup> to crush and destroy a counter offensive that GIR and Chinese forces had made along the Suez Canal. That enemy attack had utilized a direct assault into the higher fire power of the allied forces who were operating behind well prepared positions. After two days of violent struggle, the massive GIR numbers had broken through the Israeli and British defenses on the 15<sup>th</sup> and were in the process moving towards Gaza. This became a critical situation, with the danger of the allied offensive to the north and east being completely enveloped. The allies quickly made the decision to deploy the last of the AGM-999 missiles to halt that advance. Thinking, as a result of their breakthrough and steady advance on the 15<sup>th</sup>, that the allies were powerless to stop them, the GIR force were utterly devastated by those thirty missiles and their deadly Hail Storm munitions late that day. Another 200,000 GIR and Chinese forces pouring across the Sinai were destroyed and their follow on columns were forced into a state of confusion and disorder by the carnage. Reserve IDF divisions out of Israel and reinforcement American divisions from south of the Dead Sea, successfully halted the GIR counterattack. By the end of the 17<sup>th</sup>, allied forces to the south were very close to pushing the enemy back to the Suez canal.

As night fell on Damascus on November 17<sup>th</sup>, Colonel Simmons rested and contemplated the horrific fighting of the last five days that had accompanied the successful "break out" that allied forces had achieved. The carnage was incredible, the fighting had been fierce, but the Colonel was now secure in the knowledge, along with the other allied commanders, that the siege of Israel had been broken. The allies were finally in a position to take the offensive in the Mid East, albeit against a still large, determined, and resourceful foe.

**November 19, 9:28 local time**

**Russian High Command**

**HQ Command Facility, Defense of Moscow**

News of the tremendous allied victories in Alaska and around Israel had been received with much celebration and joy in Moscow. It instilled hope to the defending forces in the midst of the current crisis. They all now knew that the juggernaut that had been the GIR and CAS forces could be thrown back, and with tremendous loss. It helped to know, that the Americans had been able to deliver over eighty of their vaunted new weapon, the AGM-999, Hail Storm, missiles to Russia, flown in on the venerable B-52 bombers.

But, as others celebrated, General Andrei Nosik and his staff planned. He knew that here the AGM-999 capabilities would not take his enemy by surprise. He knew that the enemy had now had the time to analyze and understand the new threat and was bound to prepare for it. He would not underestimate them, not after being driven several thousand miles west by their armies, right here to the gates of Moscow.

No, he had to wisely apply his assets. He was still vastly outnumbered and at great risk. He also had to convince the Americans to let him use those AGM-999 missiles in the defense of his homeland as he saw fit. And he had a plan...it was a bold one, and also a risky one. But, under the circumstance the General viewed anything else as an even greater risk, and he wanted to maximize his ability to apply those deadly weapons the Americans had developed. He was sure that he had come up with a methodology to do just that and, based on his long experience with the Chinese, he was committing his entire defense plan to the surmise that the Chinese would respond to the new American threat accordingly in their assault on Moscow.

He was also thankful for the weather. An early winter storm had gripped the city and surrounding countryside in its clutches for the last three days with snow and bitter cold. That bad weather had allowed him to execute the initial stages of his plan under its cover. Now that weather pattern was forecast to break late this evening and he expected the enemy to attack very soon. From everything he had seen, very soon now he was going to find out if he was correct in his assumptions.

**November 20, 00:01 local time**

**Forward Russian Positions**

**Defense of Moscow**

Late that night the weather did clear, and the temperature fell. By midnight, under a dead calm, the temperature had dropped well below zero Celsius, and down into the low teens Fahrenheit. Very

early that morning, the morning of the 20<sup>th</sup>, when the enemy attack came, it came from artillery and missile launchers by the thousands on a twenty-five mile front to the east of Moscow, and on a fifteen mile front to the south. It was a bombardment and barrage, the likes of which had not been seen before in the history of war. Off to the east and south, the night sky literally lit up, brighter than during the day, and stayed lit, with a pulsating, reverberating kind of light that simply would not go away. Short seconds later, the entire terrain in front of, along and behind the allied lines also lit up ... with thousands and thousands of explosions. Deep, earth-penetrating blasts that shook the earth for miles, ground-level blasts and airbursts that racked the prepared defenses with shrapnel from above.

Electronically observing it from his deeply buried forward command post, General Andrei Nosik realized with a start and with perspiration beginning to run down his face that the memory of his dream had come fresh into his mind. Except this time, it was not a dream plaguing his sleep, it was harsh reality. For over two and a half years he had been filled with strong feelings of foreboding from that dream since he had first experienced in Siberia. He had done everything in his power to prepare his forces and his superiors for what that dream forebode ... and now, despite his every effort, here he was living it out.

He recognized the incessant flashing lights from his dream as the flash of this artillery and missile barrage ... and it was directed at his forces ... directed at him. Like in the dream, it went on and on, a constant reverberating light, but unlike the dream the constant roar of the explosions, although not completely audible, was rumbling through the structure all around him, conveyed through the earth ... reaching out, searching...wanting to destroy him and his forces.

And, like in the dream, he had already seen the masses streaming to the east to escape the tide of death and destruction. All across the *Rodina*, from Volgograd to Moscow to his own home city of St. Petersburg, millions of people, Russian people...refugees...streaming to the west by foot, on roads, following rivers, across country...any way they could. And no one to help them. In the past, it was at this point that he always woke up...in a cold sweat, shaking. Now, the cold sweat was continuing, and the shaking was all around him...but he was not waking up from this dream, it was harsh reality, and he was experiencing it...living it out.

They all knew what was coming next, and they had prepared as best they could for it. After over eight hours of incessant pounding, at 08:20 the enemy attacked, rolling in behind another barrage.

As that barrage lifted, from all across that front, not massed as they had been in Alaska, or cramped into static defensive positions as they had been in Israel, the enemy advanced, roaring with a yell that could be heard over the den of combat for miles. It was the most massive single assault in the history of mankind, over three million men and their materiel in the initial assault wave alone, all across the front. Too dispersed for the AGM-999 missiles to halt all along those two fronts...and now too close to the allied forces for nuclear weapons to be used.

"Perhaps that is where this leads," thought the General, "a final '*how I shall grapple with thee*', and then death to both sides."

But the General's plan now began to be executed. The largest barrage of cruise missiles in the history of warfare was now unleashed by Russia and her allies against the attacking force of the CAS and the GIR. They were not the unbelievably effective AGM-999 missiles of the Americans, but they were every other variety of land attack cruise missile available to the allies, from Russian, German, French, British and limited American stocks...and the enemy had to presume that they were the more deadly missiles. They came streaming across the battlefield by the hundreds, and then by the thousands. Anti-aircraft missiles rose in their thousands from the Chinese, Indian and GIR assaulting divisions and were very effective at knocking them out of the air in burning, crashing, exploding debris that impacted on both sides of the engagement. But with so many cruise missiles, hundreds and hundreds exploded amongst the enemy, making perceptible dents in their offensive, and even more importantly, channeling that offensive where General Nosik wanted it to go.

Andrei was implementing a plan that was meant to herd the masses of attacking enemy into two major channels, one here to the east of Moscow, and another to the south. Those channels represented two natural river drainages from which the enemy could approach Moscow. They were channels where he knew the enemy had severely damaged his forward and secondary lines of defense with their artillery and missile barrage and would pour through towards the city unimpeded. He knew this because in those positions, the lines had been vacated late last night under the cover of the inclement winter weather before the barrage began. Those defending forces had fallen back to the outer suburbs of Moscow proper and were waiting there now, the final defense if his plan failed, and a strong counter attack force if it succeeded.

On the enemy came, fierce defenses being waged against them in the areas not intentionally open to their advance. Along those lines approaching the channels to the right and left, the bulk of the massive conventional cruise missile barrage had been and were being expended. Chinese and GIR forces were rolling up against those lines and in some cases, invariably penetrating them because of the vastness of their numbers and the damage that had been done to those lines by the enemy barrage. In those cases, the General was hoping that his secondary lines and his reserves would be enough to

contain them and channel them into what they had to believe were their major breakthroughs along the two channels the General had prepared.

And it was working. Like flowing water seeks the easiest course, the advancing enemy hordes began to flow and then pour through the paths of least resistance.

By 11 AM, along those two channels, each no more than two miles wide, hundreds and hundreds of thousands of enemy troops were massed and approaching Moscow rapidly, almost unimpeded. To the east over one million, two hundred thousand Chinese and Indian troops were gathered in that channel on a two mile front and extending back over eight miles to the rear. To the south, over seven hundred thousand GIR troops had been funneled into a channel comprising a one and a half mile front and extending back almost nine miles. Each of these vast armies had over fifteen hundred APCs and IFV's and over six hundred main battle tanks. They were forces that would absolutely crush and pulverize the Russian capitol if they were able to reach it, and that was the risk General Kosik took.

Now, flying up the valleys, low to the ground, flying well under the massive aerial dogfights above the battlefield, came the eighty American AGM-999, Hail Storm missiles. There would be no second wave of missiles this day, all missiles available were being expended in this great gamble to halt the enemy offensive at the very door of Moscow.

To the east, fifty American missiles, carrying over 1,500,000 depleted uranium pellets assaulted the attacking enemy forces. Very few of them were intercepted by Chinese missiles as most of those defensive missiles were continuing to intercept the much greater numbers of conventional cruise missiles attacking the flanks of the enemy columns. Across that two mile front, the American missiles laid down a wall of hail and hell over three miles deep. Not enough to destroy the entire column by far, but more than enough to halt it, jamming it up against the absolute destruction to its front. Over 400,000 enemy soldiers and their equipment were destroyed in the space of less than ten minutes.

A virtual repeat of the same occurred to the south. There, the thirty American missiles laid down a complete suppressive wall all across the one and a half mile front and back into the enemy columns over two miles, killing and destroying another 280,000 of the enemy and creating a massive log-jam as the enemy to the rear ran up against the total destruction to their front.

It was the most massive destruction of men and materiel in the history of warfare and in the history of mankind...but it did not entirely halt or turn this battle. The enemy was simply too numerous and was still pressing forward with over a million men in their initial wave across the battlefield, and another three million in a secondary wave that would attack late that afternoon.

But the allied forces were not waiting for that.

As soon as the massive destruction to the front of those two channels was observed, General Nosik gave the order for his counter attack. Over one million allied troops and their own armor, fell in on the flanks of the two channels that had been created in their own lines. The forces that had been pulled back the night before then attacked all along the front of those same channels. The Chinese, Indian and GIR troops that had been channeled into those areas were now surrounded and being fired on from well planned and executed overlapping and mutually supporting firing positions.

It was a battle of epic proportions, literally millions of men and materiel engaged at one time in the killing fields to the east and south of Moscow. It was also turning into a slaughter of biblical proportions as the initial assault waves of the enemy forces were surrounded and on the verge of annihilation late that afternoon. That is when the second wave of the enemy attacked.

That attack was accompanied by an artillery and missile barrage almost as massive as the first. The CAS and GIR commanders had determined to let those barrages fall all across the front, and in particularly right on top of where the initial wave was still engaged with allied forces. It was the enemy's version of "*letting God sort it out*" and it worked to great effect. The portion of the enemy first assault wave captured in the two channels, now given up as a lost cause by their own commanders, was savaged and further destroyed by that barrage, but the allied forces out in the open fighting them were also terribly damaged.

General Nosik called up the last of his own reserves as the battle see-awed back and forth across over forty miles of front. It went on and on, first for days, and then for weeks. Casualties were massive, unheard of...literally numbering in the millions. In spite of the cold, disease broke out in ravaging waves as the dead remains of the unburied were scattered across the field of battle.

On the eighth of December, the Chinese and their allies made a massive feint to the north, and then punched directly into the city of Moscow from the east, penetrating over five miles into the city and coming within two miles of the Kremlin. The government had been evacuated two months earlier to St. Petersburg, but the possibility of losing the Kremlin was like a shot of adrenaline to the Russian morale, their troops fighting like mad men. Initial allied thoughts of abandoning the city and withdrawing to the east were rejected by the Russian high command.

The savagery of the resulting street to street fighting was unparalleled as the battle raged for days close to the historic seat of government. More reserves and volunteers were rushed in from throughout Europe. The intense fighting saved the Kremlin from capture, but much of it was destroyed in the artillery, armor, and air battles that accompanied the fighting. Ultimately, by December 14<sup>th</sup>, enemy forces were driven from the capitol in a massive counter attack of over one and

a half million men made possible by the arrival of over 450,000 French, Polish, Czechoslovakian and Finnish troops that were immediately thrown into the offensive.

During the fourth week of December, just before Christmas, enemy troops were conducting a general withdrawal to the east back towards Gorkiy and to the south towards Tambov where they intended to take up defensive positions. They carried with them the remains of several of the downed U.S. AGM-999 missiles that were to be rushed back to points far to the east and south for analysis. CAS and GIR engineers and planners were anxious to come up with new defenses and strategies for countering these weapons that had cost them so much, and halted and turned back the major offensive operations of their nations right at their zenith. Those defenses would not be long in coming.

For their part, the allies in Russia were content to snipe at their enemy's flanks during their withdrawal and keep close watch upon them. Allied forces were simply too spent to cope with the Russian winter while conducting a continuing offensive to push their enemies further to the east and south. They would have to first regroup and re-provision themselves with weapons, aircraft and ammunition of all types, including more AGM-999 missiles, before they could sustain further major offensive operations. Both sides had worn themselves out in the fighting around Moscow where over two and one half million military personnel had died, and another four million had been wounded in the course of six weeks of the most intense fighting the world had ever known...and those figures did not begin to account for the horrendous, unimaginable civilian casualties. It would take the entire next year to bury the dead and clean up the debris of war around Moscow.

Those same conditions would hold true in Israel and north of Anchorage, Alaska where service personnel and citizens would be finding small pieces of debris for years to come. In the three epic battles, Anchorage, Israel and Moscow, millions had died on both sides and millions more had been wounded. Over the space of six weeks, these pivotal battles had been fought and decided in three vastly separate places on the earth's surface. Their outcome would ultimately be pointed to as the pivotal moment in the history of all mankind. But as monumental as the battles were, the fighting and carnage was far from over and the ultimate outcome of the war was far from decided.

### **December 22, 02:20 Local Time**

#### **125 miles West of Juneau, Alaska**

#### **The Gulf of Alaska, The Pacific Ocean**

The four ships made their way northward, a convoy carrying men and supplies up to Anchorage for the war effort. There were two older naval transports, a newer Whidbey Island amphibious ship packed with men and supplies, and a single Arleigh Burke class Aegis destroyer outfitted with the new SUBT CIWS system.

As they progressed, they were constantly monitored by an E-3 Sentry aircraft out of Elmendorf Air Base and an E-2C AEW naval aircraft off of the Theodore Roosevelt. CAP aircraft from the base and carrier were in the air at all times. Further offshore, three Los Angeles class attack submarines, also outfitted with SUBT CIWS, monitored the approaches to Anchorage, and the inside passage.

With the recent victory near Anchorage and the continuing counter attack into the interior of Alaska, the commanders of the ships thought they were relatively safe... but they were wrong.

Suddenly, on the threat boards on the Aegis destroyer, the U.S.S. O'Kane, and aboard the U.S.S. Rushmore, warnings sounded and sonar operators picked up the unmistakable sound of rocket engines in the water resulting from the rapid approach of Killer Whales. It was quickly apparent that six were approaching, one for each of the transports, and two each for the O'Kane and the Rushmore.

The Captain of the O'Kane, had positioned himself perfectly to handle any attack from seaward, exactly from where these weapons were closing on his position. The Rushmore was directly to his left and only two hundred yards away. The transports were in a tight formation, behind the Rushmore, well within range of the destroyers SUBT CIWS. Though concerned upon receiving the reports of the enemy Killer Whale weapons, the captain knew he had the best defense possible and was confident his SUBT CIWS turrets would destroy the enemy weapons...but he was wrong again.

Eight hundred yards out from the O'Kane, just as the weapons were coming into effective SUBT CIWS range, the two weapons targeting the Burke class destroyer broached the surface, rising twenty feet into the air, continuing to approach the warship, but now increasing their speed to 700 knots. The forward Phalanx CIWS was immediately activated, but it took it over two seconds to power up, lock on and engage the first target. In that time the two weapons had closed over six hundred yards and were beginning to angle down towards the ship's waterline, only a second away from impact.

The Phalanx fired a one second burst which impacted and exploded the first weapons an instant before it impacted the ship. Then the second weapon impacted and dove halfway through the vessel before exploding below the bridge. The combined energy of both weapons wreaked horrific damage on the vessel and rolled it completely over on its side, where it capsized before being struck a glancing blow by a third weapon. That final glancing blow and explosion only hastened the O'Kane's sinking three minutes later.

Each of the older transports, now helpless against the weapons approaching them, were devastated by terrific explosions and loss of life. Both of them quickly settled into the cold waters of the Gulf of Alaska as the massive rents the weapons had opened up in them opened the ships to the sea and they both also sank.

The U.S.S. Rushmore was more fortunate. The two weapons attacking her flew through the wreckage of the O'Kane and one of them impacted that ship as it rolled over, causing that weapon to explode above her side. The second weapon continued on in towards the Rushmore, but was engaged by its Phalanx CIWS and one of its RAM missile launchers. These defenses intercepted the target, but not until it was close enough to the ship that the explosion and debris impacted the side of the vessel and caused significant damage and a substantial loss of life amongst the sailors and marines there. But unlike the other ships in the convoy, the Rushmore was not ripped open to the sea.

For over three hours helicopters from the Rushmore and others arriving from Juneau picked up survivors. Damage control crews extinguished the fires and made emergency repairs on the Rushmore. In the end over fifteen hundred American lives were lost, and another, new and perilous threat was revealed. Lu Pham and his engineers had opened another chapter in the sea war.

**December 24, 21:00 EDT**

**Presidential Christmas Address, The Oval Office**

**The White House, Washington, DC**

President Weisskopf looked directly into the camera. He knew he was looking out at well over two hundred million Americans this Christmas Eve. He hoped that what he had to say would be conveyed to the heart and soul of America to prepare the nation for the long road ahead.

"My fellow Americans. I greet you this Christmas Eve with the traditional spirit of the season, a spirit of brotherhood and joy, despite the monumental crisis that we face as a nation and as a people.

"Despite the travail, we have much to be grateful and thankful for this Christmas Eve my fellow Americans. Despite the best efforts of our enemies, and make no mistake, those efforts are directed at us with hate and ire...but despite those efforts, we still live in freedom and relative peace, and we are still the most prosperous nation on the face of the earth, one the entire free world now looks to for leadership and example.

"And around the world we are providing that example. Tonight I will speak to you of three monumental victories we have recently achieved. You may already have heard something of them.

"For over three years, our world has witnessed an outbreak of tyranny and war on a scale never before experienced. We have been set back on our heels for that entire time, riding from one major disappointment to another as we strove to hold out against the evil rising out of China, India, and the Greater Islamic Republic. Never has the world experienced an Axis of pure unmitigated terror and evil as has been perpetrated by the confederation of these nations. Scores of millions are dead, hundreds of millions are injured and experiencing unspeakable horror, *billions* have been subjugated.

Never before has so much of the world been brought under the domination and subjugation of such tyranny. From west of the Ural mountain in Russia stretching east across the Bering Straits into Alaska, from the Arctic Ocean across all of Asia and covering the entire continent of Australia. Across an increasing portion of the underbelly of Europe and all but the slightest slice of the Mid-East. Stretching over half of Africa and including large segments of Central and South America.

"My fellow citizens, at this zenith of their growth, these powers have brought into subjugation almost three fourths of the world's population, almost four billion souls.

"I do not mean to belabor this on this Holy evening where we honor the Prince of Peace. Indeed it is an evening that should be full of rest and contentment. But, in so much of our world, there is none.

"But, here, in America, we still have a measure of peace unknown to most of the world, despite the attacks and terror on our own soil. It is my intent, it is my unalterable commitment to see that the peace that we enjoy holds, and to see that it spreads abroad over the world to overshadow and extinguish the evil rule of tyrants that have waged war upon the peaceful nations of the earth. I know from my own experiences that this is a shared commitment I have with all of you, and I thank you from the bottom of my heart for that knowledge through you acts of compassion, patriotism, hard work and commitment. We must continue in that course and take heart from recent events.

"Now we have more reason to hope, a great hope that we can in fact begin extinguishing the darkness and the tyranny ... and we have it for two principle reasons. Let me speak to you somewhat about the first, which is the less important of the two, as important and necessary as they both are. The first reason is simply this...we have turned back what I consider to be the High Tide of these evil, aggressor regimes. Their evil, their hate, their compulsion and force of arms washed up hard against allied forces right here on our own soil in Alaska. It crashed hard against our own forces and those of our allies in Israel, the last free bastion in the Middle East ... and it crashed up mightily and with perhaps the greatest force against the gates of Moscow.

"My fellow citizens, in all three cases that evil tide crashed against the will, the bravery, the morality, and the liberty of free peoples...and it broke. In horrific circumstances and battles that no sane person ever wants to experience, the massed forces of tyranny...forces many times larger than

the combined might of our own and those who fought with us...forces that for the last three years have raged up and down in the world, seemingly unstoppable and unbeatable ... those forces crashed up against the forces of liberty and they were defeated...and they were defeated decisively.

"Make no mistake. This war is far from over. The *millions* who have died throwing this wretched tide back from its zenith at Anchorage, Israel and Moscow give us mute evidence at to what lies before us. The forces of evil will not go away quietly...they will rage on and fight hard to hold onto the lands and people they are exploiting, torturing, raping and pillaging. But, just as they found in these three places at the end of this year, they will ultimately be defeated decisively and absolutely.

"In closing, let me share with you exactly why the enemy will be defeated. It goes to that second reason for hope that I referred to...it goes to the basic differences between ourselves and our enemies. It is the difference between free choice and compulsion, morality and immorality, good and evil.

"What I am about to say may offend some, but it is the unvarnished truth, a truth that we have wandered away from over the course of many decades. That truth is this: our freedom is founded upon free choice and morality. Both are critical, both are absolute. This is something the founders of our Republic recognized, and I believe that they were inspired by God to do so. Yes, I said...*they were inspired by God*. I am not afraid to say that in these desperate times...and I hope that Americans of faith and goodwill will never be afraid to say those words again, ascribing our success as a people and a nation to where it rightly belongs. As an example of this, let me share with you my favorite quote from the founding fathers of this nation, a quote that strikes to the heart of what has made us strong. It is from John Adams and it goes like this.

*"We have no government armed with power capable of contending with human passions unbridled by morality and religion. Avarice, ambition, revenge, or gallantry, would break the strongest cords of our Constitution as a whale goes through a net. Our Constitution was made only for a moral and religious people. It is wholly inadequate for the government of any other."*

"Adams said that in October of 1798. He knew what he was talking about. The religion he spoke of was a frame of mind that recognized that our unalienable rights derive from God and that the people are the true stewards of the conditions that would allow for the equitable exercise of those rights. Police aren't the steward, armies aren't the steward, *government* is not the steward. We are. And we *must* choose good and moral lives, of our own free will, if we are to remain free.

"That morality, that goodness is rooted in religious principles, those time honored and time proven principles of doing unto others as you would have them do to you, of loving one another as you yourself love, of not tolerating evil, of trying to help others...of faith in God. My fellow Americans, this moral foundation is the great strength that holds our institutions of liberty together. We dare not forget it, regardless of what religious persuasion we embrace...even if we choose to embrace no particular religious persuasion.

"To forget it puts us on the path to losing our liberty...and in our day, we have come perilously close to doing just that. As a prosperous and successful people many abandoned those principles and the moral compass. The result in our day, as surely as the Civil War was the result of Americans of a by-gone era turning their back on those same principles, has seen us all placed in great peril.

"Over decades, we allowed ourselves to become morally indolent and subject to greed and immorality that placed us in the gravest danger this nation has ever faced. The external threat has only been an outgrowth of a more sinister internal disease. That inner disease culminated in its most direct manifestation when we, through our legal manipulations, permitted for decades the most atrocious holocaust the world has ever known. We destroyed over two generations of our most innocent and most precious humanity...our unborn. In our arrogance we called it legal and a free choice.

"Happily, thankfully, I believe we as a people have come to our collective senses. Providence has shown us the path and allowed us one last opportunity to throw off the sickness that had beset us. Thank God, my fellow Americans that we have risen to that occasion. Thank God we have firmly placed that horror behind us, and as a people turned back to the source and well spring of our liberty...our own free will choice to be moral and to extend that morality to all of the innocent.

"I stand before you this evening and say that our successes on the field of battle over the last few weeks are tied directly, inexorably to the earlier decision by our people, through our Constitutional processes, to reverse the greatest blot and stain that has ever existed on our national consciousness. Our founders taught us that among the unalienable rights that we all enjoy, that the first is the right to life. As a people, as a nation, we have remembered that benign truth. Let us never forget it again, let us never lose our morality in such a horrific way, because in our morality, we find our liberty.

"Therefore, acting in the capacity vested in me by the people as the President of these United States, I call on all Americans to observe tomorrow, December 25<sup>th</sup>, as a National Day of Prayer, Recompense, Thanksgiving and Atonement. May we always remember and hallow the monumental battles and sacrifices that have taken place this November and December near Anchorage, in Israel and on the outskirts of Moscow where the physical forces of evil were dealt such stunning blows.

"As much as we must remember those victories, let us remember even more the date of October 12<sup>th</sup>, Columbus day, a true day of self discovery, when an even more important focal point in the

history of our nation and our people was reached. Through the Supreme Court ruling of that day, the legal sanction of the evil growing in our own hearts was dealt an even more stunning blow.

“As a result. I now believe that Providence is once again smiling down on us and we can go forward in this monumental struggle with the inner strength necessary to prevail.

“Merry Christmas my fellow Americans, may God bless you all, and may He continue to bless America in these hours of our greatest peril. Goodnight.”

## Chapter 30

“... “Whether in chains or in laurels, liberty knows nothing but victories.” – Douglas McArthur

**March 21, 21:50 EST**

**Death Row**

**Federal Detention Facility, Reston, VA**

He couldn't get the words out of his mind, even though it had been more than five months.

*“Mr. Krenshaw rose to some of the highest positions possible in our free and moral society. As a result of his love for himself, his ambition, his commitment to enemies of this nation and his corruption ... as a result of his perusal of all of these things above his commitment to his fellow citizens and the liberty that availed him of the very opportunities he enjoyed ... he threw it all away.*

*“And not only did he throw it all away for himself ... his actions led to the deaths of countless American service personnel and citizens. For all of these reasons, David Krenshaw, as great a traitor as this nation has ever known ... and it has known a few, has been given the guilty sentence he so richly deserves and it is this administration's absolute hope, that he will be sentenced to die for those crimes. An ignoble and dishonorable end to an ignoble, dishonorable, and traitorous life.”*

When he'd heard those words, the enormity of his situation had finally struck home, deep into his heart and soul. Even more so than the words *“Guilty as charged,”* uttered by the foreman of the jury on that fateful day in October of last year. For some reason those words spoken by the Attorney General of the United States at a news conference after the announcement of the guilty verdict had finally made clear to him the full extent of his situation. Up until then, he had held out hope that somehow, someday, his allies and his wealth would retrieve him from the nightmare.

But they hadn't.

As much as he contemplated those words of the Attorney General, there were still other words, uttered a few weeks later, that were emblazoned even deeper in his mind. . .and they came back to him now. If the Attorney General's words had finally awakened him to the awful state of his circumstances, those later words punctuated with utter finality the consequences. They were the words of the judge at his sentencing hearing in late December.

*“Mr. Krenshaw, it is never easy or tasteful to sit in judgment of someone's life or liberty. But in this case the task has been rendered more palatable as a result of your heinous deeds. Your treasonous crimes caused or abetted the deaths of possibly tens of thousands of your countrymen, and helped lead this entire nation to as precarious a precipice as it has ever stood upon in its long history.*

*“If ever there were a reason for maintaining and administering the death penalty, this is it. Therefore, Mr. David Krenshaw, on Counts 1, 2, 3 and 6 the Court sentences you to death by lethal injection on March 21<sup>st</sup> of next year.*

*“On Count, 4 and 5, the Court sentences you to 20 years in federal prison on each count, the sentence on each count to run consecutively. That's a total of 40 years, but the death sentence I have just imposed renders moot any further explanation of the terms of these sentences.*

*“The Court also imposes upon you for each of the six counts a fine of \$1.5 million for the aggregate sum of \$9 million to be paid by your estate.*

*“The Court accepts the government's recommendation with respect to restitution, and orders restitution in the amount of \$40 million to be paid by your estate and maintained in trust for the expected civil suits that will arise out of your guilty verdict.*

*“These are the sentences that are imposed upon you by this court in accordance with the laws of the United States. They are a fair and just sentence that are commensurate with the nature and gravity of your crimes. I only wish to God that the victims of your crimes had been treated as fairly.*

*“We shall rise above the deeds of individuals of your ilk, Mr. Krenshaw, and your allies. Make no mistake about it, in the end, we will be triumphant. Let this sentence, and its swift execution, be a warning and testimonial to all enemies and traitors amongst us or in foreign places, American justice will not be denied...it will be served.”*

The finality of that sentence had been punctuated by the swift appeals process that was a result of the wartime conditions. Two appeals had been made. The last had gone to the Supreme Court only yesterday, and the high court had refused to even hear it. Now, here he sat, just over thirty minutes before the sentence was to be executed, and there was no one left to turn to. . .he was, in the end, alone.

His wife had divorced him less than two weeks after the trial and conviction, claiming ignorance (which was absolutely true), and demanding a generous support settlement from whatever remained of his estate. As beautiful as she was, as attached to him and his career as she had apparently been. . .despite the many years. . .now she was gone and did not so much as even send him a letter.

After being taken into custody, despite his efforts through back channels with his lawyer, he had never heard from or been contacted in any way by the agents of Jien Zenim, his great mentor. As much as he had done for the man, as supportive as he had been of what he still believed were the

man's long term views...never mind the fact that millions of dollars had been paid to him for that support...Zenim and his agents had not come to his aid, had not retrieved him from this hell.

He had been stripped of his vaunted position on the Council on International Relations, the CIR, and the people within those ranks, despite significant movement towards his line of reasoning regarding current world conditions, were also distancing themselves from him as quickly as they could. The prestige and power of that influential body derived from influential politicians from both sides of the aisle, leading media executives like himself, and leaders from every part of society all dedicated to their own vision of world governance. He had harbored such great hopes of directing all of that power and influence in support of Zenim's vision. And considering the numerous setbacks to American interests precipitated by the current administration's efforts to thwart Zenim, he had thought he was on the verge of realizing that goal. But that was before his arrest and trial. Now all of them were both unwilling and powerless to help him.

Finally, his former co-workers at WNN, had all distanced themselves from him as rapidly as possible. The place where he had risen to his pinnacle of influence and wealth was now a vacuum to him. None of them had talked to him, none of them had visited him...none of them *wanted* to. Despite all he had done for the individuals he had considered loyal to him, he found that the loyalty was only skin deep...in fact, no deeper than what loyalty he held for them. Now, to a person, they justifiably claimed that their former support of his ideas and policies had been purely innocent, and that they had been completely ignorant of his involvement with the enemies of America.

"They're all backpedaling. They're all abandoning my sinking ship, every one of them," he thought as he sat up on his cot and turned towards the small table holding his last meal.

David Krenshaw knew in his heart that, if the roles were reversed, he, too, would be abandoning this particular sinking ship. So it was hard for him to cast too many aspersions towards his former associates. He was at least honest enough with himself to recognize that truth about himself. But that knowledge did not lend any comfort to him...he was the one here in this cell.

In an effort to try to afford some measure of comfort in his last hours, a priest had been made available to him. But David's complete lack of remorse or repentance had left the priest no room to provide absolution. David had heatedly communicated to the priest that he was convinced that God, if he were even willing to admit His existence, was the one who had caused David to fall from his position of wealth and influence...had in fact turned His back on David.

In the end, despite his recognition of the awful conditions he found himself in, David was unwilling to feel, let alone accept, any responsibility for his own actions. It was all someone else's fault. It would always be someone else's fault to the very end.

Like so many totally irredeemable and depraved individuals, David was only interested in his own perspective and what was in it for him. Now, even when there was nothing left in it for him but the sharp end of a needle, everyone else was to blame...even, in David's mind, God.

He got up and stepped to the small table to eat. He tried not to view it as a last meal...tried to look upon it as nothing more than a late dinner. In an effort to maintain that perspective, he had even told his guards to select the dish for him when he had been given the opportunity for a last request...whatever they thought appropriate. Now, as he sat down he found that his efforts to treat the meal as any other dinner would also be denied him.

While removing the stainless steel cover from the plate holding the food, he smelled the entrée briefly before he saw it. Looking down, the recognition and the finality of this last meal...and the reasons for it...flooded his mind and he began to sob.

Chow Mein.

**March 21, 22:26 EST**

**Execution Chamber**

**Federal Detention Facility, Reston, VA**

Director Andy Syke, along with approximately twenty other individuals in the witnessing room, watched the small entourage as it made its way down the hall to his left and to the door of the small room with the single bed and medical equipment in it. Like the hallway, that room was separated from the witness room by a row of thick glass windows. Audio was channeled into the room through a speaker system built into the walls.

As he watched, Andy could see the warden, a priest, the doctor, and four prison officers...and there was David Krenshaw, supported between two of the officers, sobbing uncontrollably, being carried along, his feet dragging, his body limp as he was unable or unwilling to support himself.

"What a miserable excuse for a person," the Director thought.

The Director and FBI Agent in Charge (AIC) of the investigation and apprehension of Krenshaw had suspected all along that at his core, Krenshaw was cowardly and totally self-serving, not at all dedicated to the ideology of the cause that had bought and paid for him over the years. Now Sykes was himself witnessing the obvious verification of that suspicion.

Andy turned to Attorney General Hull, who was seated next to him and who had made a point of being present at the execution on behalf of the administration.

“Mr. Attorney General, in all my years I don’t believe I have ever seen such a miserable excuse for a human being. It almost makes one pity him.”

Dean Hull turned to the AIC who had been so instrumental in bringing Krenshaw to justice.

“Andy, you are right, Krenshaw is pitiful...but I have no doubts that his current *pain* is only because he was caught and is finally having to face the consequences of his actions.

“We can never afford to forget how many good, honorable Americans are dead because of the actions of that totally depraved and traitorous excuse of a human being. He was wholly without remorse throughout the time he was committing these crimes and throughout his trial. I cannot pity him in the least, and though I do not relish what we are about to witness, I am nonetheless gratified that such an individual as this will now have to account for the damage he has caused.”

Andy Syke agreed with the Attorney General and was anxious to punctuate that agreement.

“Well, I agree whole-heartedly with that. Perhaps pity was not a good word choice. We surely can’t afford to show him an ounce of it, irrespective of how sad an excuse for a person he is, and irrespective of what he looks like at this minute.

“One thing is for sure: he and his handlers did not show us any pity, nor would they have wasted it on us in the future if Krenshaw had been allowed to continue his agenda. Irrespective of his own weaknesses, our enemies used Krenshaw effectively against us, and I, for one, am glad he is soon to be permanently out of play. I just hope that any more like him are deterred by this administration of justice, or that we find them soon and administer a similar form of justice to them.”

The Attorney General nodded as Krenshaw was physically picked up and placed on the bed.

“Well said, Director, well said. Here we go.”

At this point Krenshaw, who had been limp and had required help from the guards, began to resist, kicking and flailing his arms and legs wildly in an effort to get off the bed. His incoherent yells and screams could be heard from the other room. The four large guards, one handling each appendage, held him firmly in place despite the struggle while the attending doctor fastened the restraints around his arms, legs, body and head.

Finally Krenshaw was completely restrained. The only indication of his continued struggle was his red face, and a few very restricted movements around the arm and leg restraints. He no longer yelled and an almost eerie, calm settled over the room.

Upon a nod from the warden, the doctor placed an IV tube into Krenshaw’s exposed arm and attached it to a drip that was wheeled over next to the bed. A small delay ensued as everyone waited for almost thirty seconds until the appointed time. At precisely 10:30 PM, after the warden had the exact time recorded, he nodded again to the doctor who then turned to the medical equipment and activated the drip, allowing the lethal fluid to begin flowing into David Krenshaw’s veins.

Within twenty seconds Krenshaw’s further struggling stopped. His eyes remained open and he continued to move his eyeballs around wildly for another minute as the drug continued to take effect. Then his eyes closed and he appeared to drift into a deep sleep. About two minutes later, his entire body experienced two quick spasms, followed by his breath coming short and very quickly for a few seconds. Then he lay completely still.

At precisely 10:36 PM the attending doctor examined him once more. When he was finished, he turned and looked to the warden and the witnesses and pronounced David Krenshaw officially dead.

As Andy Sykes and the Attorney General rose to leave the room, Andy distinctly heard the Attorney General, who himself had been a U.S. Army Ranger when younger, whisper:  
*“Sic Semper Tyrannis.”*

### **April 3, 02:37 EDT**

#### **Isolated Training Area**

#### **Eglin Air Force Base, Florida**

The two rotors were still turning as the eight man team came down the ramp out of the tail end of the modified Osprey aircraft and quickly made their way into the forest next to the small clearing. No sooner had they cleared the back ramp of the aircraft than the Osprey canted its rotors slightly forward, leaned that way and took off, leaving the men to their own devices.

None of the eight wore uniforms or any identifying insignia. All eight of them were using the latest generation night vision equipment and carrying MP5SD submachine guns and other equipment on their backs. They communicated through miniature radios that were fitted to small ear-pieces lodged in each of their right ears and to small microphones that wrapped around their face, positioned near their mouths. All of them were fluent in Spanish.

Despite the lack of official uniforms, if ever captured with the equipment that they carried, that equipment itself would identify who they fought for, whether they were personally identified or not. For this reason, most of their high-tech equipment, except for their miniature and very powerful digital radio, would be cached in a specific area about two miles from their landing zone for later use after they had met up with their point of contact (POC) on the ground. That contact was a long-time partisan and CIA operative who had been working for the United States government for many years.

The meeting with their POC and the expeditious caching of their equipment was what the soldiers were practicing this early morning in the Florida woods.

They had been practicing and training for the various aspects of their operation for over eight weeks. Eight grueling weeks of 14 to 16 hour days covering every conceivable aspect of their mission. From the insertion and meeting of their POC, to the caching, to every alternative for accomplishing their mission in advance of the major U.S. military operation that would follow. Tonight was the last practice run at the insertion. Four days from now, on April 7<sup>th</sup>, the practice would become reality.

Sergeant Hernando Rodriguez considered all of this as he led the team into the trees. Once completely under cover of the trees and in their shadows, Hernando used hand signals and instructed the others to quickly kneel down and take up defensive positions from which they could observe the small clearing they had just left, and from which they could watch for the signal indicating that their contact had seen them and all was safe.

After the intense fighting in Alaska over the last several months, Hernando had welcomed the call back to the lower forty-eight states. He knew it meant that he would be picking up where he had left off before being called north with so many others to fight the Red Chinese invasion across the Bering Strait in June of last year. That invasion had been spectacularly successful for the Chinese and ominous for America and her allies. Nome had fallen, Fairbanks had fallen, Prudhoe Bay and the American north slope oil fields had fallen, and then been destroyed by the Americans themselves using nuclear demolition devices. It had all finally been stopped right at the outskirts of Anchorage with the use of the new Hail Storm missiles that American forces had employed.

Although the Chinese had not been completely defeated in Alaska to date, they had now fallen back to a strong defensive position well to the east of Nome, which they continued to occupy. American and Canadian forces were now building up for the upcoming offensive in the spring. More AGM-999 Hail Storm missiles were being produced and stockpiled as rapidly as possible for use in that big attack that would hopefully eject the Chinese from North America for good.

Hernando had been called back south just ten weeks earlier, before the big offensive could begin. After an all too short two week leave to visit his wife and son in Miami, he had returned to Eglin Air Force Base to prepare for this mission with the 1<sup>st</sup> Special Forces Operations Detachment-Delta (SFOD-D) that he had been assigned to and training with before the fighting began in Alaska.

Along with the allied offensive in Alaska, the United States and its allies were also on the offensive in Israel, where American, British, and Israeli forces had used masterful strategy to advance well beyond Damascus on the north, and had retaken the Egyptian capital of Cairo and the Nile River valley in the west.

Similarly, near Moscow, Russian, European and American forces were going on the offensive this spring as well. As a result of all of this, allied prospects had dramatically shifted for the good, as they were moving forward, pushing back the Greater Islamic Republic (GIR) and Coalition of Asian States (CAS) forces in these critical areas around the globe. This included Hernando's upcoming operation where the U.S. leadership was now directing more resources and energies back towards what was viewed as unfinished business in the Caribbean.

The long-awaited move against Cuba was now in the final stages of preparation, and a critical part of its overall success would hinge on the success of this covert mission in which Hernando would take part, and in which he would personally play such a pivotal role. The invasion of Cuba was slated for April 14<sup>th</sup>, and its prospect of success would directly correlate with the successful completion of Hernando's mission starting on the 7<sup>th</sup>. Those parameters provided for the quickest victory with the least resistance.

Hernando was proud to have been selected for this pivotal role in the overall operation. Having successfully made the transition from the Ranger Regiment to the Delta Force, he was certain that the best of the best would be able to get the job done for the nation. He thanked God and his parents for his upbringing that had put him in such a position. He prayed he would do well, that he would make his wife and son, his parents, his superiors, his nation, and his God proud of him.

...and his prayers would soon be answered.

**April 5, 14:45 local time**

**Presidential Residence**

**Havana, Cuba**

Fifteen year old Ernesto Contrerez shut down his personal computer where he had been reviewing the latest data available to him on the war, and got up from his desk. He walked out of his personal, finely adorned bedroom into the large living room of the central air-conditioned mansion to watch his satellite TV in the hopes of catching a WNN report. As he did so, he reflected again on his position in Cuban society. At times like this, it never ceased to amaze him that he lived in such opulence, while so many of his countrymen lived in such poor conditions...even squalor.

His father lived with him here in this wing of the Presidential residence as they had done for several years. His father drew a fine wage from the state for just assenting to whatever it wanted with

respect to Ernesto. The two of them often found themselves trotted out before the local and international press, and displayed as a shining example of what the state and its glorious leader could accomplish for the individual.

But now in his twenties, Ernesto had formed definite opinions of his own in that regard. Like any young person, he was prone to question those in authority over him, particularly his parents, and he had a lot of questions for both his biological father and for the individual who acted as his father in fact, his *Padre*. Ernesto knew that the Cuban dictator viewed himself as the father of the entire nation, but he made sure that he kept both Ernesto and his father close to him in particular.

But these questions and thoughts were not something he dared raise openly with either his own father or his *Padre*. If nothing else, years of living in near proximity to the mechanisms of the state apparatus had taught him at an early age what he could safely explore openly and what he couldn't...and the questions he had regarding his own position in society, and how that society provided for him and for his countrymen, were definitely off limits.

In the end, Ernesto knew that his biological father was utterly bought and paid for by, and at the beck and call of, the leader of their nation and its apparatus. His dad had found himself in the right place at the right time over when events concerning Ernesto had unfolded on the international stage, and he had immediately moved to take advantage of them by being the absolute lackey of the state and demanding complete custody of Ernesto.

"I'm not sure that he had any viable choice," thought Ernesto as he reflected on those events.

"Not to have done so would have probably meant his death."

But as Ernesto thought about that, his recollection was drawn back to another individual, and the very real death that individual had experienced. His mother had died smuggling Ernesto out of Cuba in 1999 when he was only six years old.

"She had *given* her life for me on those waters and she had done so freely," Ernesto reflected, "and she had done it in an effort to deliver me out of this hellhole to what she was sure would be a better way of life, a life she felt God had led her to risk everything to obtain for her son."

Now, years later, Ernesto had never forgotten his mother, or her faith, even though his father and El Macho himself were sure that they had obliterated any capitalist or other American tendencies left over from those few months Ernesto had spent in America.

But they were wrong, utterly and completely wrong. Ernesto, while at the focal point of that international incident between Cuba and America, had not forgotten the experiences. He was, to this day, constantly comparing what he was being told by the state with what he had experienced in America...and what he was being told by the state was coming up very short. He thought back on it again as he sat down in the soft, deep cushions of the couch and turned on the television.

"So much freedom...how could they all be so free?" he thought.

"I can still remember it.

"So much love from my aunt, uncle and cousins. So much prayer to God on my behalf...prayers said openly and without fear.

"So much care from those who saved me from the sea. So much love from so many others--and they helped me in spite of their state apparatus at the time...and not to garner favors from it."

...and the food and material wealth those people had, he still marveled when he thought on it.

"So much to eat and so many comforts for everyone! How could it be...how could so many of them have such positive outlooks, even when their own government at the time was doing all it could to kiss up to El Macho?"

In his heart, Ernesto knew why.

"It is because they are truly free," he whispered to himself.

And so Ernesto had not forgotten. At first, upon being delivered back to Cuba, he had been too young to recognize the significance of those memories. He had nonetheless locked them away in a quiet, secret place within his mind.

As first the months, and then the years passed, he pulled them out to examine them often, sometimes late at night, sometimes when he pretended to be listening to his tutors and handlers, sometimes when he was taken to the estates out in the country to hunt or fish. He would review them over and over in his own mind, determined not to forget his mother or his relatives, or the things he had seen, heard and experienced in America. Now he had developed his own opinions about what it all really meant.

At the time of his mother's death, and his brief stay in America, the experience was a whirlwind, and he was so young. There was little time to reflect upon the deeper meaning of it all. Now he was older, and after considering the conditions around him from what he considered to be a much more mature and informed perspective, and after comparing them to the memories emblazoned in his heart and in his mind, those opinions had crystallized. He believed he understood why his mother was willing to pay the ultimate sacrifice to get him to the shores of America. And now he wanted, perhaps more than anything else, to repay her for that sacrifice.

Despite the inherent dangers of harboring such opinions, and the greater dangers of ever expressing them openly, Ernesto knew that life in Cuba was a lie. It was a lie that was being fed to the entire world to justify that which could not be justified...to support a decadent and perverse system.

It was a lie that to this day sullied the memory, the faith, and the sacrifice of his mother. It could not be allowed to stand, and Ernesto, emboldened by the determination and ideals of youth...and by his own faith in that same God his mother had relied upon...was resolved that he was going to do something about it, do something to turn it around and expose the truth.

...and he already knew who he could count on to help him accomplish it.

**April 8, 14:45 local time**

### **COSTIND Headquarters Facility**

#### **Beijing, China**

Admiral Lu Pham was genuinely gratified at the report he had just delivered to General Hunbaio, the head of the Chinese Commission of Science, Technology and Industry, and to Chin Zhongbaio, a ranking member of the Politburo and President of the Chinese Ocean-going Ship Company.

Lu had known both men for a long time now, ever since they had brought him from Vietnam to China to resurrect the supercavitating models and projections he had developed back in the 1970s as a young officer in the service of the fledgling North Vietnamese Navy. The Chinese had given him all the resource and authority required to bring those old models and designs into full, modernized production and had rejoiced with him when they had ultimately been successfully used to surprise the U.S. 7<sup>th</sup> Fleet over three years ago, at the onset of the World War they were now embroiled in. As a result, naval warfare and the historically U.S. advantages were drastically altered.

Despite that victory, and the others that followed, Lu had never underestimated the Americans. They had quickly developed their own defenses to what Lu had wrought. But their initial efforts had been ineffective in countering the LRASD weapons, or "Killer Whales,:" as they were now called.

"Until last summer," thought Lu.

That is when the Americans, with the advent of their SUB-CIWS, Submerged-threat Close In Weapons Systems, had very nearly overcome the Chinese edge.

Those new defensive weapons continued to be a very real concern for Lu and his engineers and developers...and for the entire Chinese military leadership. The Americans had drastically reduced the effectiveness of the supercavitating weapons by employing underwater supercavitating defenses against them. So successful had these systems been in defending American ships, that they indeed threatened to turn the tide of the naval warfare drastically back in favor of the Americans late last year.

But with the deployment of the latest Batch 4C upgrades to the LRASD weaponry, the Chinese had once again vaulted to what they felt was a secure position. That upgrade had been successfully developed in China and tested in the Yellow Sea in the fall of last year, and then had seen its first combat use in December. That relatively minor engagement had proven a complete success when a U.S. Navy Arleigh Burke Aegis destroyer, equipped with the new American SUB CIWS, had been sunk along with two of the three transports it had been escorting. Had there been more weapons available at the time, the entire convoy would have been sunk. If enough weapons could be deployed, the destruction of those forces off Anchorage was still possible, which would allow the PRC forces in Alaska to stop the American offensive and maintain a strong foothold in North America.

But large scale deployment was still a problem. The Chinese Navy had literally taken prototypes and used them in combat before full scale production procedures and practices had been developed. There simply had not been very many weapons, outside of what their R&D facilities could manually put together, until full scale production could be instituted, and that time was now very near.

The new upgrade was capable of being retro-fitted to any of the various LRASD configurations, allowing the weapon to approach their targets at supercavitating speeds and then rise out of the water like a missile when approaching the American SUB CIWS effective range. Then, the sea-skimming missile, approaching in excess of 600 knots, would skim the sea and impact low on the vessel within a matter of seconds of taking flight. And it would accomplish this, as had been shown in the case of the sunken Burke destroyer, more quickly than the American missile defenses could react against it.

As a result of Lu's and his team's innovations, soon the Chinese would begin to retrofit and upgrade about half of the shallow attack, the deep attack, the air-launched, and the intelligent loiter configurations of the LRASD weapons currently in inventory to the new terminal, sea skimming attack capability. The upgrades would begin rolling out to the Pacific next month, then the Indian Ocean, followed by the Mediterranean Sea and Atlantic Ocean.

It was the status of the weapons system themselves and their production roll-out schedule that Lu had just briefed his leadership on. They were very relieved to hear the positive report, and hopeful that the Allied offensives that were currently underway could be contained. These offensives were the allied follow up to the defeats that the CAS and the GIR had experienced late last year.

As he opened up his portion of the meeting for questions, Lu was secure in his own estimation that the CAS naval advantage, even if somewhat reduced, could now once again be firmly re-

established, allowing the Chinese and her allied forces to severely threaten and contain their enemy's offensives on the high seas.

**April 8, 18:37 local time**  
**COSTIND Headquarters Facility**  
**Beijing, China**

After the meeting, as he departed in his official state limousine for his ultimate report to Jien Zenim and the executive council of the Politburo, Chin Zhongbaio could not help but note that Lu had only indicated that these new innovations would allow the PRC to regain part of what it had lost with the advent of the American SUB CIWS weapons. He never indicated that a complete advantage over the Americans would be forthcoming.

"We will not enjoy the unmatched advantage we experienced for the last three years," he thought. "That complete advantage was precisely what allowed us to make the gains we enjoyed."

He mentally listed the nations and areas that had either surrendered to, or been defeated by, the CAS and come under their control as a direct result of China being able to negate the U.S. Naval advantage, and then drive the U.S. Navy east in the Pacific to Midway Atoll.

Japan, the Philippines, Formosa, Singapore, Thailand, Cambodia, Burma, Malaysia, New Guinea, Australia and many, many island chains. He mentally drew a line from the west of the Samoan Islands up south and then west of New Zealand and north to the vicinity of Midway Atoll, and then on up to the Alaskan Coast. All points to the west of that line were controlled and occupied by the Coalition of Asian States, principally China and India.

As a result of these tremendous gains, the list of nations who were official members of the CAS had continued to grow as more and more of them were officially pacified and brought into the coalition. China and India had been the initial members, followed by the entire GIR (which now included the entire Islamic world). Early on, Vietnam and Cambodia had joined, followed by the induction of first Japan and then the Philippines after their defeat and capitulation. Now Malaysia and New Guinea were official members and it was hoped that within the next eighteen months the entirety of the Australian continent, to be split up into three different *people's republics*, would also be sufficiently pacified to be inducted.

Chin knew that all of this was contingent on the PRC and the rest of the CAS holding their gains and keeping the Americans at bay. He hoped they would be able to do this. He knew that a continued massive influx of military personnel and civilians, particularly throughout mainland Asia, Japan, the Philippines, and Australia, would make it almost impossible for the Americans to ever roll back the clock, despite whatever gains, if any, they were able to make in the future.

"If the GIR forces in Europe, Africa and the Mid East can hold their ground, and if our own forces in Central and South America can continue to keep America and her allies tied up in those areas, then I know we shall prevail."

But Chin knew that those were going to be very tall orders for the GIR and the CAS, particularly now that America and her allies had the taste of victory in their mouths, and most particularly as the United States continued to churn out SUB CIWS equipped ships and the new AGM-999 Hail Storm missiles. This realization focused Chin on another key component that the PRC itself would have to focus on to assist with the overall CAS success.

"Our efforts within the United States are going to have to be stepped up. We have to curtail their production and break their spirit," he thought, and that was precisely how he would summarize his report to Jien Zenim and the executive council of the Politburo the next day.

**April 9, 23:37 local time**  
**35 km outside of Havana, Cuba**

Hernando Rodriguez considered what his point of contact had just shared with him. He had been in country for two days with his team. The insertion, caching of his weapons and contact with his POC had gone exactly as planned. Now, if the information he had just received was reliable, it would be a bonanza for American forces and allow him to completely and optimally fulfill his mission.

But the operation was risky.

Apparently, according to the POC, there was a relatively high level official in the Cuban government whom the point of contact had known for two decades and who regularly supplied data to him, which was then passed on to the CIA. That official had been hinting for the last five years that there was a potential to infiltrate the Cuban leader's direct, personal circle of influence. But that potential mole was so politically charged that the official had never been willing to be specific.

Until this week.

Now, the official had come forward and indicated that the potential mole wanted to contact the Americans and arrange for the capture or killing of the Cuban leader himself. What was more, the point of contact had determined who the mole was and the name was a shocker. The story of Ernesto Contrerez was something Hernando himself was personally familiar with. He remembered it almost as if it were yesterday. Hernando had been a teenager at the time and, being from the Little Havana

area, he had gone with his parents down to Ernesto's uncle's house to stand vigil on several occasions while Ernesto was staying there.

He had been there that fateful day when the INS, armed to the teeth like a bunch of Gestapo secret police, had stormed the house while their superiors continued negotiating with Ernesto's uncle's family for transfer of custody of Ernesto to the government so they could send him back to Cuba and his father. Hernando remembered the heavy handed tactics of those American officers-how they rifle butted their way into the house and held the family at gunpoint while absconding with Ernesto.

"I still can't believe any American administration, even one as corrupt and leftist as the one in Washington at that time, would send that little boy back to the tyranny of Cuba," Hernando thought.

But they had, and within a few months, the stories regarding Ernesto had faded from the public view, except within the Cuban community where his basic status was tracked through the Cuban grapevine as Ernesto was inducted into a life of propaganda and state-sponsored opulence.

"Now, here I am, contemplating contacting Ernesto to have him help my team capture the leader of Cuba and bring him to justice in America."

But Hernando was by now a wise and experienced combat soldier as well. One who had seen with his own eyes what the result could be if American forces were suckered in by an enemy ruse. He was concerned about the timing of Ernesto's desire. He was concerned about Ernesto's stability and commitment. It sounded too good to be true...just the sort of thing the secret police in Cuba would use to lure dissidents out into the open where they could be destroyed.

He'd have to call this one in to HQ using their encrypted and secure digital communications equipment tonight and then allow it to proceed through the proper channels. He wished he could do it this afternoon, but his orders were clear, even if time was becoming a more and more critical constraint. As he now saw it, there were two options: either take a chance on what appeared to be an almost perfect gift, or come up with another plan that would probably be equally dangerous.

Before calling in his report, he ended up sitting down with his second in command to pursue parallel options. He would work with three of the team members and pursue the planning necessary for utilizing the Ernesto Contrerez option. The other four team members would prepare another avenue for either capturing or neutralizing the Cuban leader before the invasion began.

Tonight he would propose to his superiors that they adopt this parallel approach as a part of the go forward plan. In this way, Hernando felt, after observing conditions here on the ground, that he could most productively and efficiently utilize his team to assure a successful mission.

**April 10, 9:12 EDT**

**Situation Room, the White House**

**Washington, D.C.**

The President was digitally conferenced into the meeting of his National Security team from Cincinnati. NORCOMM had made a very early morning call to the NSA, and the information from that call had quickly found its way to the President, who was on one of his ABE, visits in Ohio.

Those visits had started relatively early in the war when the terrorist attacks within the United States were at their height, and when allied military prospects were being dealt one terrible blow after another in the Pacific and the Mid East. Based on his wife Linda's suggestion, the President, the Vice President, the Director of Homeland Security, and the Attorney General began to make very public American Bolstering Effort (ABE) visits all over the nation. The effort had succeeded beyond expectation and continued to this day, despite the continued concerns of the Secret Service in terms of protecting the President and the other leaders.

Upon getting the information from Cuba, the President, at the suggestion of his National Security Advisor and with the full agreement of the Chairman of the Joint Chiefs of Staff, had called for a meeting of the entire National Security Team to discuss the matter and arrive at a decision. The meeting was now being squeezed in before his scheduled appearance in downtown Cincinnati this morning, where he would make a speech and dedicate a new electronics packaging plant.

Addressing the assembled members of his National Security team, the President began.

"All right, every one of you has a folder containing the same information I am looking at. We have a decision to make and I believe we need to arrive at it quickly.

"Our advance Delta team in Cuba appears to have a significant opportunity that may allow for the capture of the Cuban leader. Today, in this meeting, we need to determine if it is worth the risk. General Stone, the Vice President and I have already conferred and we are of one mind. What is your take? Is this just too good to be true, or is it a viable option?"

The Chairman of the Joint Chiefs had been contemplating this very question since early this morning when the information had become available to him. His own opinion was that the military had a job to do and they all knew the risks.

"Mr. President, the team leader over there is inclined to go for it and he has formulated a good fallback plan. We have granted him permission to prepare that plan and feel that the information is worth the risk. I will have to depend on others in State or in the CIA for an analysis of the young man,

Ernesto Contrerez, and his viability as a contact and concerning the possibility that his memories of our nation would lead him to this.

"I personally hope to God it is so. That would be a military, intelligence and PR bonanza all wrapped into one beautiful little package. I say we act on this and proceed."

Taking this in, the President then addressed his old friend, the Secretary of State.

"Fred, what are your thoughts?"

Fred Reissinger had his doubts. The set of circumstances was almost too good to be true. At the same time, he could see how Ernesto, despite the way the administration at the time had so roughly sent him back into the tyranny of Cuba, might well remember what he had seen and felt in Little Havana for all of those weeks back in 1999 and 2000.

"Mr. President, if this were to come off, it would be a diplomatic gold mine to use against our enemies and to influence more fence sitters. I agree with the General. I say we ask the team on the ground to use this boy to get the tyrant back here, where he can stand trial for his crimes."

Next, the President turned to the Director of the CIA, Robert Ballard, and to his National Security Advisor, Bill Hendrickson, who were sitting at the far end of the conference table.

"Well, Bob and Bill, the ball is in your court. What are your thoughts and recommendations?"

The CIA Director answered first.

"Mr. President, the government official with whom we have contact has been hinting at something like this for some time. We just were not aware of the specifics. I believe it is the real thing and that we should act on it.

"While it is true that such tactics are also used to draw our operatives out in the open, we feel that if this had been the case the information would have come to us some time ago in an effort to expose our current operative. Our recommendation is to give our team the green light and let their military command issue an execute order to them."

Bill Hendrickson, the president's National Security Advisor, took Director Ballard's last statement as his cue to speak.

"I concur, Mr. President. We are being presented with an excellent opportunity here, and if the man on the ground is comfortable with it and feels he is adequately covered with an alternate plan, I believe we should let him go for it."

The President paused for a few moments as he reflected on all of this. He remembered well the international incident and furor that had been caused by Ernesto's initial rescue, his stay in America with his relatives, and then the tragedy of the ruling that sent him back to Cuba, particularly the heavy-handed way in which that ruling was carried out.

He still cringed when he thought of officers sworn to protect and to serve, spiriting a young boy off at the point of a gun and returning that child to a life of tyranny. Well, now there was a chance to right that wrong while bringing justice to the criminal who had manipulated our own weak leaders at the time, and who had committed far worse acts of war against America since.

After a short pause, the President continued, "Any other comments on this matter?"

After a few more seconds during which there were no further responses, the President continued. "If not, then I am prepared to make a decision.

"General, you have permission to proceed. Give them the execute order. If Ernesto so desires, or if it is necessary to do so to protect him, have our people bring the boy back as well. Make sure they time the capture and in conjunction with our press briefing and with the invasion itself.

"It's time we cleaned up the entire mess that Cuba has represented for decades, and I believe that, with their dictator in chains awaiting trial for his terrorist crimes, the entire island will quickly celebrate the end of his regime and his control.

"There will be some hard days between now and then as we clean out his staunch supporters and adherents. But, based on everything I have heard and seen, I honestly believe that we will quickly see Cuba come around and enter the family of free nations once the regime is out of power.

"That is all."

**April 10, 22:50 EDT**

**Presidential Suite, the White House**

**Washington, D.C.**

Linda Weisskopf sat in the reading chair to the left of the bed and under the lamp, her copy of Jane Austen's *Pride and Prejudice* open in her lap. She was sleeping peacefully there when Norm came in and noticed her.

"How she loves Jane Austen," he thought as he marked the place and gently closed the book.

"She must have read *Pride and Prejudice* one hundred times in our married life," he thought.

"And when she finishes it, she'll read *Sense and Sensibility* again, too. Wonderful books...and a wonderful, dear woman. Thank God she has been with me all these years to help me through."

With these thoughts, the President, even though in his seventies, gently lifted her out of the chair and set her down in their bed. As he did so, her eyes fluttered open, became bright and looked into his.

"Hi there, handsome," she said.

“You be careful carrying me around...you’re not as spry as you used to be, even if you do keep working out and trying to fool yourself into thinking you are. How did your meeting go?”

The President sat down next to her and began to take his shoes off. As he did, he answered.

“Well, the operation will proceed in Cuba. The details are complete. The command staff is confident all the way up the line...including me...and our young men are champing at the bit.

“Let’s pray they can accomplish their mission successfully, and that it will have the desired impact. I know you will put in the good word with the Man upstairs to that effect, and that your communication with Him will probably have a lot more bearing than my own...but we’re doing the right thing and I honestly feel the tide has turned.

“Just lots of stormy water between here and that far, peaceful shore we’re trying to get to.”

Linda could hear the hope and confidence in her husband’s voice and she was so grateful for it. Grateful for him, for themselves, and most especially grateful that a glimmer of hope for her nation and the world was now shining.

She could also detect the weariness and fatigue in his voice.

He wasn’t as spry as he once was, and the pressure was wearing and telling on him. He hid it well from most, but he could not hide it from her.

“Norm, I am so grateful and I know you are the one who can captain this ship to that far shore. I know the good Lord is blessing you to see this through. But I have a concern.

“Now, I don’t want to sound like I am mothering you...but I am...just get enough rest. Listen to your body. You may be able to hide it from your advisors and those reporting to you, but you cannot hide it from me. I know how tired you are and I’m concerned.

“The Lord is using you. The nation needs you...I need you. Please don’t overdo it. What none of us need is for you to be down when we need you most. Promise me you’ll be more mindful, okay?”

Norm knew his wife was right. Like most men, even men in their seventies, he felt if he could just stay on his feet long enough he could take on all comers. But as a man of advanced years, and as a leader who had organized and carried out countless missions, he also knew that overstretching his logistical lines, even if they were his own personal ones, could lead to disaster for the overall mission.

“She would have been as good, if not better, a commander as I any day of the week,” he thought as he marveled at his wife’s natural insights.

She came by so many critical insights naturally when so many others had to learn them through the school of hard knocks and the great risks that went along with those hard knocks. And in this particular issue, she was right on the money. He was tired and fatigued, and he did need to step back a bit and allow some of his capable people to shoulder more of the load.

“Sweetheart, I promise. Just keep me pointed in the right direction, and through your council I’ll somehow find a way to stay on my feet.”

With that, he finished putting on his pajamas, climbed into bed next to her, and asked Linda to say a short prayer for the nation as he closed his eyes and listened to her sincere pleas.

*“Father, please continue to direct, and bless, our path as only You can, opening the doors that will lead us to victory over our enemies—those who would remove from man the blessings of liberty that are but a precious gift from You.*

*“Remind us to be humble, so that we might always seek to follow Your guidance, rather than relying on our own resources. For we know that our cause cannot succeed without Your Divine blessing and direction.*

*“Bless the men and women who are fighting. Bless those working here at home to support them...and, Father, bless the fathers and mothers.*

*“Encourage the fathers to be resolute, strong and virtuous—filled with integrity. Enable them to lead us down the path that You would have us travel, always looking to You as their unseen, but ever-present, compass.*

*“Bless this mission in Cuba that Norm has spoken of. May its success lead to peace and diminished need for conflict. We know that wars are a sad illustration of the fallen nature of man. But we also know that the preservation of God-given life and liberties sometimes renders them inevitable.*

*“Particularly now, Father, as our nation has recovered its senses regarding abortion, we pray that You would place it within the hearts of the mothers of this nation to provide their children—both those living, and those as yet unborn—with the unconditional love and nurturing that only a mother can provide...a love which is but a reflection of Thy own.*

*“In Jesus’ name, Amen.”*

When she finished she heard Norm breathing evenly. She loved this man, had loved him for decades, and walked the path of life with him through thick and thin. She had faith in him and knew that his goodness, his own faith, his courage, his commitment to clear moral principle, and his determination would carry him through. After satisfying herself that he was sleeping soundly, she pulled the covers up a little more over them both, closed her eyes, and drifted off to sleep herself.

...and her prayer was repeated all over the nation in countless households, and all over the world in foxholes and tents. Be it through some form of spiritual contact guided by the Almighty, or by the

sense of mutual sharing resulting from the bond forged in difficulties—however it came about—similar thoughts and pleadings were echoed over and over again, rising to Heaven as a chorus.

Maria Rodriguez in Miami held her son tightly and prayed for the safety of her husband Hernando, whom she knew would soon see more combat. Not far away, Hernando's parents offered similar prayers for their son and his young family, thanking God for the success the nation was experiencing in the conflict. They prayed for those Providential blessings to continue, if America would just stay humble before Him.

Cindy Simmons felt it in the depths of her soul in Texas as she prepared for bed after having returned to work at the aircraft plant in Ft. Worth. Still mourning the loss of her only son, Billy, in the fighting off the coast of Australia, she now shouldered the added weight of concern for the welfare of her husband. Colonel Jess Simmons had returned to combat in the Mid East, his location and health unknown to her. But she had replenished her faith and strength at her family's ranch and as she prepared for bed in her lonely apartment, she had the same prayer in her heart that Linda Weisskopf had uttered hundreds of miles away.

In the Boston area, at her home in Nashua, New Hampshire, Elizabeth Trevor slept soundly next to her husband, Dr. Joseph Trevor. The two of them had knelt next to their bed only an hour earlier, and Elizabeth had uttered a remarkably similar prayer, seeking God's continued blessings on the nation and thanking Him for the miracle that had led to the overturn of *Roe v. Wade* and abortion practice in the United States, and asking Him for continued success in the war effort and a cessation of the conflict as soon as victory over tyranny had been achieved.

In Boise, Idaho, as Geneva Campbell was finishing the dishes and preparing for bed, she uttered a prayer in her heart for her two boys, Leon and Alan, who were both off fighting. She asked the good Lord to keep them in the protective shadow of His hand, and to use them as instruments to spread the liberty and morality that America had re-discovered by defeating the tyranny that would deny and destroy it. She asked that her husband, Jerome, would know of her love and the love of his boys up in the heavenly realm that she knew he now occupied.

...and in California, Sandra McPherson, a recently converted agnostic, in her own way offered up her thanks and the pleadings of her heart to God. Although she was not a biological mother, she had nonetheless found motherhood in the work she had recently and fiercely dedicated herself to. After decades of fetal research, using the bodies of the unborn to attempt to find her own answers to life, through the help of Dr. Trevor and his Human Reasoning Structures (HRS)...and she now recognized, through the guidance of God...she had discovered life itself and found her salvation in it.

Sandra prayed in the humility of her at-long-last discovered faith, that God would hasten the end of the conflict on victorious terms for the right. Maybe she could not be a biological mother at this point in life, but she was determined, with God's help, to be a mother to as many as she could of the unborn who would now live, no matter what circumstance into which they were born.

All over the nation, and throughout the free world, similar prayers, aspirations, hope and faith were being offered up by more and more men and woman who saw clearly that the path to victory and to peace was as much a path of morality and faith as it was of production and force of arms

...and those prayers were finding place, and impacting world events. But as with any large ship whose rudder can be turned to guide it through the mortal perils of the sea, the helm of history would only turn ever so slowly...and it would still lead through many deep swells, heavy squalls, and dangerous gales: Dangerous conditions that would otherwise damage or even sink the ship if the helm was not maintained with strength, commitment, dedication, faith, hope, and virtue.

**April 12, 12:30 local time**

**Outside the Presidential Residence**

**Havana, Cuba**

The motorcade was ready to leave and travel out into the countryside outside of Havana to one of the many Presidential estates that were maintained for the rest, relaxation, and recreation of the El Presidente. Four security cars, two in front and two in back, would protect the President's vehicle which would be carrying the President, Ernesto, and Ernesto's father. Each car carried three elite and well armed security personnel.

An observation helicopter and two attack helicopters would cover the motorcade, with the attack helicopters covering the procession from several thousand feet in the air, and the observation helicopter in advance looking for any danger. Each helicopter was equipped with the latest FLIR equipment and the most advanced weapons the Cubans could obtain.

Finally, a flight of four MiG-29 aircraft, outfitted with the latest radar and air-to-air missiles, would be loitering over the vicinity of the motorcade and the Presidential group at all times. They would be controlled by one of the new Chinese AEW aircraft the Cubans had acquired before the war. They would be backed up by eight more MiG-29 aircraft on ready alert, four each at two airfields.

This was standard security procedure for the Cuban president, and was well known to American intelligence forces who monitored the whereabouts of the Cuban leader at all times.

In this case though, thanks to Ernesto and his complicit government official, the Americans also knew the exact itinerary of the Presidential procession and were prepared to intercept it.

"I wonder if Felix has already gotten the Americans inside the Estate?" Ernesto wondered as the car left the walled-in Presidential Residence and passed by the security station there.

Ernesto and his father were sitting behind the glassed-off driver's compartment facing the rear of the car, and directly across from the President, who was sipping on a glass of wine as they traveled.

The President sat the wine goblet down in a holder that was built into the leather armrest he was using. While he did so, he caught Ernesto's father's eye, winked, and then addressed Ernesto.

"Ernesto, have grown up quickly. Soon we will make use of the military training you are receiving from your tutors. My young friend, you are destined to be a leader in our People's Paradise, and only the best training and equipment will be available to you.

"What do you think of that? Are you ready to actually handle the equipment that you have only played with in computer simulations to date?"

Ernesto knew by long experience not to give anything away in his eyes or facial expressions. He noticed his dad looking at him. A casual observer might have mistaken the look for pride, but Ernesto knew better. It was a look of craving...for the wealth that would accrue to him if his son did well.

Ernesto answered honestly, never betraying the hidden truth in the words he now directed at the President, using the familiar nickname he had given him and which the leader loved to hear.

"Padre, the lessons have been good and I know I have done well. I defeat most of the tutors and many of the military war gamers when they go up against me on the computer.

"I am anxious to put into practice what I have learned. I will make Cuba proud of me, and I know even you will be surprised at how well I conduct operations once I have been given the chance."

The President laughed out loud.

"Ha! See Armijo, your son has great *cajones*, as a future leader should have. He is sure of himself and unafraid. You should take some notes!

"Ernesto, I have no doubts that you will make us all proud and surprise us all with your capabilities. We will start next month, and see how you handle the heat."

#### **April 12, that same time**

##### **Presidential Estate**

##### **40 km outside of Havana, Cuba**

Hernando reviewed the plan in his mind.

His team of four was already here, inside the estate. His three men were all dressed as employees of the estate, just as the governmental official had indicated and provided for. Each was well armed, having retrieved their MP5s and other weapons last night and smuggled them into the estate with the help of the official and their point of contact and his men.

Several of those men, another eight to be exact, were also inside the estate with him, posing as workers as well. All of them also carried weapons beneath their work clothes and would be tasked with handling the internal, close-in security that was permanently stationed on the estate grounds.

The government official assured them that the guards at the external security posts protecting the entries into the estate were all in on the plan and would pose no threat. They would not make any moves to assist the *gringos*, but they would also not help the government teams. Their aim would be directed high, above the heads of the Americans and the others when the firing broke out, and they would not move to assist the inner security team or those arriving with the President.

Hernando and his team were to deal with the twelve security personnel arriving with the President. A tall order, but they had the element of surprise, training and the weapons to accomplish it.

He was very concerned about those two attack helicopters and the four MIGs overhead...but he had been assured by his superiors that the Cuban air assets would be handled by the U.S. Air Force when the time came. He simply had to broadcast the execute order as soon as the motorcade arrived. That would be in another twenty-five minutes if everything went according to plan.

"The government official, our point of contact and his men, those guards on the perimeter, and Ernesto are risking everything," Hernando thought as he continued to review the plan.

"*El Presidente* must like this kid...either that or we're being set up," he thought.

"We'll know soon enough...may God guide me back to Maria safely," he concluded as he set out the serving plates, preparing to join the other workers to greet the President when he arrived.

#### **April 12, 12:55 local time**

##### **Presidential Estate**

##### **40 km outside of Havana, Cuba**

Ernesto watched the security guards closely as they passed through the outer gates. He knew there were four guards at each of the three entry gates, and that their barracks nearby housed the others who were off duty. He also knew that these external guards would not interfere.

As the motorcade entered the estate, he watched the ornate and plush grounds pass by as they drove the full kilometer up to the main buildings. The estate itself covered over twelve hundred acres

and was well tended. The grounds boasted acres of fruit trees, flower gardens, fountains, wooded groves, and open spaces. There were also three stocked fish ponds and a rifle range, as well as full sized polo and soccer fields.

As they came closer, the motorcade left the asphalt main road and was now entering the circular, marble drive that led to the main building proper. The marble made for a very smooth ride for the cars in the motorcade, and Ernesto noticed that everything had gotten deathly quiet inside their car.

"It's just my nerves we've driven up these drives dozens of times and it's always this quiet."

The quiet was broken by the President himself.

"Look, Ernesto, they have all the servants out to greet us. Pretend you are the reviewing officer when we get out and let me know what you think. Don't go easy on them. Also, are you ready to fish now, or do you want to eat first?" the President asked as the motorcade began to come to a stop.

Then Ernesto saw a peculiar look pass over the President's face. He had no way of knowing that the President had a sixth sense that had served him well over the years. Ever since the Cuban Revolution, the President had developed a knack of knowing when danger was present, and he paid heed to the instinctual warnings as religiously as any pious church parishioner listened to his priest.

Leaning forward rapidly, the President rapped hard on the window and shouted, "'Manuel, pronto, get us out of here *now!*'"

The driver turned and saw the look on his President's face and needed no more. He turned the wheel sharply and stepped on the gas.

Then the firing started outside of the car.

As it did, and just as the President began to sit back, a look of understanding and then unadulterated hatred passed over his features as he glanced quickly at Ernesto and his father.

### **April 12, that same time**

#### **Presidential Estate**

#### **40 km outside of Havana, Cuba**

Hernando was just about to give the signal to attack when the Presidential limo suddenly turned its wheels sharply and accelerated, grazing the car in front of it as it fishtailed.

Disregarding the need for hand motions, Hernando first sent the execute signal to the other allied forces monitoring his communications, and then he sent a rally signal to the other four team members who were positioned outside the estate providing additional security.

He then shouted in Spanish to all of his team around him.

"*Disparen!*"

The eight Cubans who were working for the point of contact were positioned near each of the eight guards of the Cuban internal security detachment. They immediately drew their weapons from under their clothing and fired on their assigned targets.

Seven of those security personnel went down immediately, at which time they were dispatched by a second shot to the head. Those seven insurgents then began running from their various positions towards the main building to take up covering fire positions in support of the Delta team.

One of the security detachment, being in a position to see the Presidential limo make its sudden move, was alerted and prepared when the posing worker began to draw his weapon. He used his submachine gun and killed the rebel before his weapon could be drawn. This Cuban security guard now ran to the sound of gunfire to enter the firefight on the side of the Cuban security detachment arriving with the President.

Back at the main building, as his Cuban allies were cutting down most of the internal security detachment, Sergeant Rodriguez and his men went into action.

Two of his men dropped to the earth and immediately pulled compact Rocket Propelled Grenade (RPG) launchers from behind bushes where they had been hidden and opened fire at the leading and trailing security cars.

Both cars had already come to a complete stop, and the three personnel were trying to pile out of them when the small rockets, meant to destroy armored personnel carriers, hit the cars and detonated. The resulting explosions and infernos completely destroyed the two cars, killed four of the six personnel outright, and severely wounded the other two, who were thrown several yards away from the carnage where they lay unconscious.

At the same instant, the Presidential limo, which had clipped the security car in front of it and fishtailed halfway around, came out of the fishtail just in time to slam sideways into the wreckage of the leading security vehicle that had just been destroyed by one of the RPGs. Pushing the wreckage several feet, the limo stopped when its engine stalled and would not restart.

All of the occupants were thrown violently up against that side of the car. Ernesto's father was knocked unconscious when the President was thrown into him, knocking his head hard up against the leaded glass. The President was stunned and began to disengage himself from the unconscious man, only to find himself facing Ernesto, who was fully conscious and who had pulled out the six inch switchblade knife that the President himself had given him three years earlier on his birthday, and which the President allowed him to carry wherever he went.

Meanwhile, the firefight outside the car intensified. One of the Americans with an RPG was able to fire a second round and take out the security car that had been trailing directly behind the Presidential limo. That car had stopped and its occupants had gotten out and opened fire at the team member nearest Hernando, stitching him across the chest and in the legs, mortally wounding him.

The impact of the RPG on their car killed all three of the Cuban security guards, and set off another large explosion as the gas tank detonated, too.

This left the last Cuban security car and the single remaining internal guard, all of whom had now had several seconds to take up positions away from the last car and fire on their attackers. They were trying desperately to defend the Presidential limo which was still stalled next to the wrecked and burning lead car.

Before fire could be effectively brought to bear on them, these four men had killed four of their Cuban attackers and wounded the Delta team member who was carrying the last RPG. But then the firepower of Hernando and his last team member and the four remaining Cubans was too much.

Caught between the remaining Americans and the insurgents, the Cuban security personnel found themselves trapped in a deadly crossfire. With three of their number down, the last man raised his hands, threw down his weapon, and surrendered. The entire firefight had lasted only two minutes.

As Hernando organized his remaining men to cover the stalled limo and extract its passengers, he heard the unmistakable sound of rotors approaching rapidly from the west. Looking in that direction, he saw the all too recognizable silhouette of a HIND-D helicopter coming their way, its weapons pods filled with rockets and guns.

"I thought the Air Force was supposed to take care of those guys," he commented to no one in particular, as he began issuing orders for the remaining men to take cover.

At a distance of a half mile, puffs from around the larger pods, and small amounts of smoke from the right side of the chin of the helicopter, announced that rockets and machine gun fire were being directed at them.

"Those idiots are going to kill their own President!" Hernando screamed in frustration as the helicopter made its first pass, explosions resounding and buffeting them on either side.

As the helicopter passed over, Hernando's men exited from their cover and fired at it from underneath, hoping to disable or destroy it. But there was no visible effect on this flying tank, and the chopper began circling around for another pass.

Then, from well up in the clouds, a very bright light quickly fell and rocketed directly for the HIND. Impacting directly behind the rotor, an American AMRAMM missile literally blew off the blades of the helicopter, which then fell like a duck shot out of the air, impacting with a deafening explosion in the countryside, a little over a quarter mile on the other side of the estate wall to the east.

A cheer went up from the remaining fighters as they now surrounded the limo and demanded in Spanish for the occupants to give themselves up and exit.

There was a muffled response from inside, and two of the men rushed over and pried open the left passenger door. Once it was completely open and covered by three of the fighters, a befuddled and ruffled Cuban President exited the vehicle holding his left arm tightly, which was bleeding heavily from a deep wound running from just below the shoulder almost to the elbow.

Then Ernesto exited the vehicle, holding his knife to his side and smiling broadly. Guessing that he was the leader by his demeanor and the way he carried himself, Ernesto approached Sergeant Rodriguez and spoke to him.

"I present to you El Presidente. My name is Ernesto Contrerez."

Hernando could still see the younger Ernesto in this young man, remembering him from the evenings when he and his parents would stand vigil outside Ernesto's uncle's house in 1999. After having two men secure the Cuban President and tend to his wound, the Sergeant turned to Ernesto.

"Ernesto, I am Sergeant Hernando Rodriguez, U.S. Army.

"An aircraft will be here very soon to take the President away. We have been asked to bring you with us, my friend, back to your relatives in Miami.

"Will you come?"

Ernesto considered this, smiling broadly. He had dreamed of this day. Then, thinking of his father, and the opportunity that true freedom might afford him, he answered the American.

"If you will get my father out of the limo...be careful...he is injured...and bring him with us, I will go with you."

Hernando did not have to think twice about it. He ordered two of the Cubans to bring Ernesto's father out of the limo, rig up a litter, and carry him the three hundred yards to where they had set up their extraction point.

As they did so, Hernando saw that his other four team members had successfully entered the estate and were approaching from the north. He also noticed through the breaks in the clouds above them, that lazy circular contrail patterns were being drawn on the canvas of the sky by circling fighter aircraft, F-15C Eagles and other aircraft of the U.S. Air Force.

"Those fly boys did take care of business," he thought.

“I just love it when a plan comes together,” he said to his unwounded companion as he nodded his head upward, and pointed to the contrails above.

And then another sound came to them as they stood there near the main building on the estate. It came low over the hills and over the estate walls to the north. It was the sound of an approaching Special Forces Osprey aircraft, just like the one that had inserted Hernando and his team into Cuba on the 7<sup>th</sup>, only five days ago. Approaching rapidly, it flared overhead and then descended vertically to the ground at the designated landing zone.

Within three minutes everyone was on board, including Hernando, the rest of his team members, the now deposed Cuban leader, Ernesto and his father, and the body of the dead American.

After all of them were on board, the Osprey took off and within five minutes was well out over the Caribbean, escorted by no less than fifteen American fighter aircraft, flying towards the United States, where the Attorney General and Homeland Security officials were waiting to arrest and detain the Cuban President for his crimes against the people of the United States.

**April 14, 8:05 EST**

**White House Press Room**

**Washington, D.C.**

The room was abuzz as reporters from all of the major news services rushed to file their reports regarding the extraordinary press briefing the President had just held. It had been a complete surprise because there had been absolutely no leaks or indication to them what was happening.

This was not too surprising because, particularly after the conclusion of the David Krenshaw affair, the Weisskopf administration had proven extremely adept at keeping stories and events very close to its chest without any leaks at all. There were just remarkably few opportunities for the press to utilize “unnamed sources within the administration” to get a leg up on any major story before it was officially announced.

What was surprising and, what now had the full attention of the press, was the subject matter of today’s briefing. The headlines would almost all be phrased in similar language.

### **CUBAN PRESIDENT CAPTURED BY AMERICAN SPECIAL FORCES**

### **PROOF OF CUBAN COMPLICITY IN U.S. TERROR ATTACKS LEADS TO CUBAN LEADER CAPTURE AND HOLD OVER FOR TRIAL**

### **U.S. FORCES INVADE CUBA**

The President had laid out in no uncertain terms that the United States viewed it as its right to apprehend and try anyone who was shown to be directly involved with, or behind, the types of attacks the Cuban leader had funded and helped plan on citizens of the United States. The case against the Cuban leader was ironclad in this regard. It was based on evidence gathered through the capture of Hector Ortiz and his associates, and the breaking up of their terrorist front company. That evidence included direct testimony, taped conversations, and direct money trails back to Cuban accounts.

The military part of the operation had commenced very early that morning, long before sunrise, and was proceeding as planned. In fact, the telling thing about the military operation was the much lighter than expected resistance. There was some heavy fighting in a number of places, but it was sporadic and concentrated only in the units that were most loyal to the communist regime.

Many landings associated with the ongoing invasion, both Amphibious and Air Assault, had been completely unopposed. The heaviest fighting was occurring between Cubans themselves, in the streets, at military bases, and around the Presidential facilities.

The principle reason for the internal fighting was that pictures of the Cuban President in shackles and standing before a U.S. magistrate, the same pictures that had been shared with the press and were also being broadcast to Cubans. This was being facilitated by powerful transmitters in southern Florida, and by using television stations in Cuba which had already been captured by either American forces or by Cuban insurgents.

The pictures were encouraging many Cubans to finally rise up, certain that their dictator’s power was finally broken, and that the regime would fall quickly with American forces pouring in while the remaining communist leaders were confused and clawing at one another’s throats.

There were American casualties, and it was expected that the number would mount over several weeks of hard fighting. But it was clear on the first day, from the outset, that the fighting would relatively quickly convert to a mop-up operation once the centers of resistance had been crushed.

Therefore, this morning’s announcement was unabashedly upbeat and extremely positive.

The President took several questions, the first of which was from JT Samson of SierraLines, who had been alerted to the news conference the day before and who was able to arrive in Washington to

attend it from his home in Nevada. JT had asked about the case against the Cuban President and how the international community might view apprehending a head of state on his own soil.

The President had responded directly.

“JT, we would never think of apprehending a citizen of another country, much less a head of state, in peacetime for non-terror or non-war related crimes.

“But this head of state, an absolute dictator I might add, has waged war on our people and has been the source of funding, and planning terror operations that have killed Americans by the thousands. By his own actions he has declared war on our nation and we are responding accordingly.

“As one of my predecessors stated, creating what has become known as the Bush Doctrine that has been followed by this administration in the prosecution of this war...*if you are not with us, you are with the terrorists.*

“This individual has been deeply in bed *with* terrorists who have wreaked havoc on our nation and killed thousands of our citizens. There is not a rock on this earth we would allow him or his ilk to hide under. The case against him is solid and unimpeachable. It will be proven in a court of law, using our own system which is the fairest, most impartial, and freest legal system in the world.

“We apologize to no one for apprehending and bringing to justice such an individual, and will go after any others on whom we have such evidence.”

This answer and the overall news of the conflict in Cuba, and the reasons for it, were being received very positively by the public. Allied nations understood and respected it. Some neutral nations protested...and enemy nations took note.

As the day wore on, the apparent success in Cuba was being attributed by many as an answer to the very prayers that they had been voicing to Heaven on behalf of the American cause, and that of her allies. As time wore on, those prayers seemed to be answered as the operation proved to be a resounding and quick victory and would lead to other important success in the Caribbean.

Unknown to the press, unknown to the individuals praying for success, and unknown to the President, events of the near future would sorely test and try their faith and courage.

## Chapter 31

*“Brave men who work while others sleep, who dare while others fly—they build a nation’s pillars deep, and lift them to the sky” – Ralph Waldo Emerson*

**April 18, 15:48 local time**

**Ruling Cleric Chamber**

**Islamic Leadership Complex, Tehran, GIR**

The meeting went on and on, as they always do. All of the Grand Ayatollahs, or Ayatollah Ol Osams, would be heard in full, along with the principle Mujtahids and a few of the Mullahs. All of the speakers had a lot on their mind, which translated into long discourses about every aspect of life in the Greater Islamic Republic, from the spiritual state of the people, to the encroachment of modern conveniences and technologies, to political affairs and finally, the current military situation.

Of significant import to everyone in attendance were the briefings on the current state of the three American and western offenses now taking place in Europe south of Moscow, in the Mid East, east of Damascus, and in central Alaska. In all three areas, Western allied forces capitalizing on their victories of last fall, were now advancing against GIR, Indian, and Chinese forces.

In addition to those briefings, however, were the myriad of other concerns that dealt with running a nation that had grown to the extent that the GIR had over the last four years. Numerous civil, religious, political and economic matters, indispensable to managing a vast people and geography, were raised with this group of men and had to be resolved by them.

As he listened, and irrespective of the length of the meeting and the drawn nature of parts of it, Hasan did take it all in...every bit of it. It was his *mission*, it was his *calling*, to listen to all of it, and in the end to pass judgment and give direction...but, as he did so, he also allowed his mind to wander somewhat. In this case, it was pondering the fate of General Jabal Talabari.

“He is sorely missed,” the great spiritual, military, and political leader of the Greater Islamic Republic thought to himself. “...not only as a brilliant strategist, but as a friend. According to Allah’s will, he was taken from us...and as much as I am sorry for it, in the end he reaped what he sowed.

“Allah provided him to us...and Allah allowed him to be taken from us in a like manner. Surely Allah’s will and infinite wisdom are often a mystery to us...but I can see His hand in Jabal’s untimely death and I accept it, knowing more avenues will be opened for our ultimate triumph in this conflict with western infidels. Then, and only then, can we ultimately turn our eyes to the east.

“But that is for another time,” thought Sayeed. “Now a permanent replacement for Jabal must be put in place...a stronger, more permanent and stable leader than the interim individual we have now. Someone like Jabal, who can anticipate the enemy, particularly the Americans, and throw back this offensive they have managed to conduct around Israel, and in so doing, give strength and faith to our allies who are experiencing similar American offensive operations this spring.”

In that moment, as he contemplated the matter during the overall meeting of the leaders of the great Islamic faith and Republic, the answer came to him regarding who the new overall commander of GIR forces in the Middle East and Europe should be. Allah was telling him to promote General Mahdavi Ardakani to that position.

Ardakani was a name that was already well known to all members of the leadership council...the military in particular. He was also much respected by the political and religious leaders as well. That knowledge and respect had resulted from his daring air campaigns and his great success in the war effort. He was also known to have complete and unwavering faith in the leadership, particularly Hasan Sayeed. Such passion for the cause, ability to implement its holy objectives, and resolute loyalty to its leadership, were absolute prerequisites in the person who would fill this vital position.

The General had pulled off and successfully implemented the planning for the first major victory against American forces in the air assault on their airbase at Incirlik, Turkey. He had done so in a manner that had taken the Americans completely by surprise, coordinating massive numbers of GIR aircraft from many different locations under the eyes of the American satellites.

That particular strategic success had been a respected achievement that many in the GIR now took for granted. Ever since the Chinese had successfully waged a satellite war against the West and fought them to a draw in that particular arena, many of these leaders had forgotten how great an advantage the Americans and the West had held. The successful Chinese satellite offensive had essentially deprived both sides of satellite surveillance, and leveled the playing field to the advantage of the GIR and the CAS and their numeric superiority.

But that more level playing field had not been in place when Ardakani had engineered his initial victory. It had been a stunning and surprising victory which had deprived the Americans of their vaunted air superiority over the skies of the so-called Kurdistan Republic. In so doing, Mahdavi Ardakani had shown his ability to overcome great odds, to mask his planning and movement from the

ever-watchful eyes of the American satellites, to be willing to suffer tremendous losses in the stubborn accomplishment of his goal, and to work successfully in a combined arms atmosphere.

The perfect coordination of Ardakani's air attacks against the Americans with the GIR ground force who attacked the Kurds at the time, had made the great victory over the United States and its surrogate forces in the northern areas of the former nation of Iraq possible. That victory had in turn allowed Hasan Sayeed to personally intercede and negotiate with the Kurds to bring that territory within the fold of the GIR.

No, Sayeed knew full well that the success against Incirlik had opened the door for the complete ascendancy of the Greater Islamic Republic. It had resulted in great respect and recognition for the GIR from around the world as unexpected victors over the United States, and the instrument of their shaming. Many Islamic nations had changed their stance regarding their eventual union with the GIR as a result of that single battle...all of which had ultimately led to a major war as the United States sought to re-exert its control in the region. In attempting to contain the GIR, they had played into the greater plan orchestrated by Jien Zenim of the People's Republic of China.

"How had Zenim put it?" thought Sayeed as he contemplated those events.

"Yes, indeed, Wheels within Wheels."

In the course of the war, General Ardakani had continued to show his abilities throughout the campaign in Saudi Arabia, Africa, Turkey, and into portions of Europe where he commanded all GIR air assets in those regions during the prosecutions of Sayeed's Holy War being waged against the unfaithful and the infidels. He had been one of Jabal Talabari's closest and most trusted confidants, and Jabal had continually referred to him as a very capable and loyal general, worthy of much more of Sayeed's attention than Ardakani himself had ever sought.

But, despite their knowledge of, and respect for, Ardakani, most of the military and political leadership felt that the natural successor to Talabari should be a ground force commander. In fact the interim commander was Talabari's former executive officer, General Ishmael Abin. A career professional, Abin had risen through the ranks over many years as first a field commander, and then a ranking staff member of first Iran's, and then the GIR's, large armies. As a result, he was well positioned politically with many on the leadership council for what both he and they viewed as an almost foregone conclusion that his interim advancement would be made permanent.

But Abin would find that he and his political supporters were all mistaken in that conclusion.

Abin was, in fact, a purely a political general, lacking the respect of the rank and file troops who served under him. And considering that he was also the source of endless intrigue and maneuvering by the command staff directly under him, an ineffective picture of political gamesmanship not well suited for the dangers and rigors of battle had taken shape in Sayeed's mind.

This picture left a bad taste in Sayeed's mouth. That type of leadership would not lead GIR forces to the victory that Hasan knew Allah expected of them. In fact, those qualities would be the very things that would keep Abin from ever being the type of innovative and direct leader that Sayeed required to contain the west's latest advance, and then ultimately push it back.

No, Abin would not be the man. Clearly, the position must go to Ardakani, who had the combat leadership skills and the respect of the soldiers who would be serving under him. In addition, Ardakani would respect Sayeed's own considerable battlefield experience rather than being intimidated by it...and he would listen to his Mahdi, as opposed to simply giving lip service to him.

Realizing this, Sayeed experienced another moment of certain intuitive knowledge and enlightenment regarding what one of those initial suggestions or recommendations would be: a recommendation for someone to fill a role on Ardakani's staff, the young Abduhl Selim. Selim's commission to Brigadier General had been approved a few short weeks ago by this very council.

"Twenty-two years of age and already a Brigadier General," thought Sayeed.

"It's amazing, like something you might read in an ancient history book...and his brilliant military advancement even eclipses my own. Allah be praised and bless us with many more of this young man's ilk," concluded Hasan as he reflected on the young man's unfolding legend. Abduhl would make an excellent staff officer whose ground force experience would greatly compliment Ardakani's strategic brilliance, and would do so in a manner not fettered with all of the politics, intrigue, or bias that the older generals would bring to the position.

As these convictions solidified in his heart, and as Sayeed uttered a prayer of thanksgiving for the direction he felt Allah had given him, he noticed that the discussion regarding the advisability of bringing in more Chinese technicians to assist in the set-up and operation of more *ta shih* detectors throughout the GIR had reached a point requiring his input. Just now the members of the council were turning to him to seek his advice and counsel on the matter.

"My brothers, I have spoken with General Hunbaio and President Zenim himself on this issue. They are well aware of our concerns regarding the potential influence of their technicians and their lifestyle on our people.

"But the fact is, we must have these systems set up and operating throughout our territory for our own self-defense. It is vital from that standpoint that we do so, and we must have some measure of

trust in our own people and their commitment to the faith, particularly at this juncture where Allah has granted us such great success in uniting all of Islam throughout the world.

“If we cannot have faith in our people to insulate themselves from the corrosive influence of these Chinese technicians. . . and I might add that their potential influence is much less worrisome than the influence we experienced when western technicians infested our lands. . . then we will tacitly admit our failure as their spiritual leaders. We will show by our own lack of faith, not only in them, but in our ability to teach them, that we ourselves have failed.”

As Hasan spoke, the vast majority of the leadership council nodded their heads in agreement to the obvious wisdom of their leader’s words. Once again, he cut through the political and religious bickering and positioning of so many on the council and got to the heart of the matter in such a way that the final decision was obvious to all. There would be no dissent or argument with their Mahdi.

“So,” he continued, “we will allow these foreigners inside our borders and the detector systems will be installed along with the newer missiles.

“For those with any lingering concerns about lasting impact, you may lay those concerns aside. I have received firm assurances from President Zenim that after the initial deployment, a training facility will be established outside of Tehran, where Chinese personnel will instruct our technicians in the full operational capabilities of the entire system, and the need for the Chinese technicians to travel about amongst our people will be phased out. They will be restricted after that date to the training facility and areas immediately around it, where we can better control this issue.

“In addition, we will begin license building the detectors and the missiles within the year such that we can quickly become self-sufficient not only in the maintenance of the defensive systems, but in its production as well. At that point, we will be in a position to phase out any long term involvement for Chinese technicians at the training facility as well.”

Having summed up the matter, Sayeed addressed his Foreign Minister and spoke to him directly.

“Minister Ujman, at the conclusion of our meetings have your diplomatic staff arrange the appropriate communiqués to expedite treaties with the People’s Republic of China to this effect.

“Now, let’s turn to the next agenda item. It is one where I beg your indulgence as I am compelled to become personally involved at the outset of the discussion.

“I have received direct guidance from Allah on the matter of General Talabari’s permanent replacement. General Abin will not be confirmed as the Commander in Chief of our forces in the Mid East and European areas of operation. I know this will be a disappointment to some of you who are advocating that he become the permanent Commander in Chief, but Allah’s will has been made clear to me in this regard. That position will go to one of Allah’s choosing, and we must set aside personal preferences and accede to his will.”

Turning to his own executive assistant, he said so that all could hear, “Ashmil, send an executive communication over my personal signature to General Mahdavi Ardakani summoning him here to Tehran to meet with me personally and with the executive council.”

As a number of the leadership council nodded in satisfaction and others whispered in surprise, Hasan Sayeed turned back to the assembled leadership council and concluded the matter.

“General Ardakani is to be promoted to Commander in Chief of our military operations in both the Mid Eastern and European Theaters. I expect each of you to hold this information in the strictest confidence until General Ardakani can be informed, and until the official announcement is made.

“I also expect you each to give him your full, unqualified support in the difficult task he has at hand of first containing the current western offensive, and then driving it back.

“In the meantime, General Abin will continue fulfilling his interim duties until General Ardakani determines how Abin can best serve in the new command. That is all on this matter. Let us move on to the next item on the agenda.”

**May 2, 10:25 local time**

**35 miles Northwest of Ruby, Alaska**

**On the northeast flank of Wolf Mountain**

The *thumping* was more distant now, muted and slowly moving further and further off to the west like some freak storm that had moved across the landscape from east to west. In these climes a storm moving in that particular manner, from east to west, was a rare meteorological event. But the military operations that heralded the almost continuous thunder-like thumping in this locale over the last four days was a very much longed for and welcomed event, and it had been progressively coming closer and closer during the last three weeks as the American offensive against the Chinese had progressed in this general direction.

Stacey Urkut—or the Orka, as she was known—and her fifteen compatriots, were situated in a large, concealed cave on the northeast side of Wolf Mountain. As the war front had moved their way, they had been forced to take up this position in order to remain out of sight of the large numbers of Chinese troops retreating to the west, and to keep from being inadvertently targeted by the American forces that were pushing them in that direction.

“Particularly from being targeted by those new missiles our boys are using,” thought Stacey. “Anyone targeted by those babies ends up as mincemeat,” she thought as her nephew came back to the HQ section of the cave to provide a reconnaissance report.

“Aunt Stacey, Danny made contact with an American patrol an hour ago a couple of miles to our south, near the old Forest Service road on the shoulder of the mountain over there. Apparently they have been briefed to be on the lookout for our group in particular.

“When their lieutenant heard that Danny was a part of the Orka group, he got on the line to a captain, who called up a colonel. That officer, a Colonel Kensington, is en route here to see you right now. They told us to watch for a Black Hawk helicopter escorted by at least two Apaches. They should be here in less than ten minutes.”

Stacey’s mind went into high gear as she took this in.

“Coming to see me?” she thought. The unlikelihood of this, at least in her own mind, invoked her more cautious side, which, on numerous occasions, had served them well...indeed, had been an almost pivotal factor...in their fights against the Chinese.

“Ted, now why on earth would a colonel in the U.S. Army who presently involved in a huge fight the Chinese be interested in spending time with me? And why, of all times, now?”

“Are you absolutely sure of this? Are you sure this isn’t some type of trick to draw us out? Did they absolutely require any specific information or intelligence?” she asked.

Ted respected his aunt’s concerns. He knew her instincts to be uncannily accurate, and he understood her reluctance to immediately jump on the information he had just shared with her. It would have been completely out of character for her to have unquestioningly run out into the open to meet whomever was coming. But he had been there himself when the word had.

“When Danny contacted me about this, I went and met the lieutenant myself, Aunt Stacey. It’s no trick. They told me that I was to inform you that the Colonel would be making an immediate visit and to have your command staff ready...I guess he thinks we are a little larger than we actually are.”

At that comment all of them smiled, the Chinese had been under the same mistaken impression.

“Well, we do have a great knowledge of the lay of the land, and we can point to where the Chinese will set up their defenses...but I imagine they have their own people telling that too.

“So, still, why me?” she asked as she made her way to the entrance of the cave.

As they stepped outside of the entrance which was sheltered by steep cliffs and completely obscured by thick forest and underbrush, the oncoming presence of Colonel Kensington was announced in dramatic fashion. A flight of four F-35 Joint Strike Fighters made a low, thunderous pass. At the same time, numerous contrails of higher level fighters could be seen at higher altitude.

“Colonel Kensington must be an important spoke in this wheel to warrant all of that protection,”

Stacey commented as they witnessed the awesome display of American power unfolding before them.

Seeing this demonstration of power almost immediately took Stacey and several of those standing with her back in time to when the Chinese had first attacked and then invaded America across the Bering Straits last year. They would have all liked to have seen a display of such power back then to combat and halt the invasion that had cost so many American lives.

Stacey remembered the assault on Nome, Alaska, her home. She had witnessed it with her own eyes, and she had been able to report on it in real time to an astonished America using the Independent Republic website on her internet connection before it went down. Those reports had ultimately been seen by millions and had made their way quickly to the White House situation room itself.

After that internet connection had gone down, Stacey had narrowly escaped the Chinese helicopter landings and advances as she made her way into the wilderness to the east and north where her native Americans and relatives lived and still embraced their families’ ancient historical traditions. She had always kept close to them and knew how they would react to this overt invasion from Asia.

Despite her fifty-seven years, she had been in excellent health and driven by a love for liberty and outrage at the attacks on her homeland. Before the Chinese were aware such movements had even been organized, she had gathered, organized, and led a band of resistance fighters against the Chinese.

It was a resistance effort that had been maintained under the harshest of conditions during the Chinese occupation, as the Chinese made every effort to hunt down and eradicate any and all who opposed them and did not accede to their rule. Stacey became well known amongst her followers, and ultimately amongst the Chinese. Her small group, mostly acting alone, but sometimes operating with other groups, particularly remnants of the Home Guard units in the area, wreaked fair havoc on the Chinese rear areas.

The Chinese responded by systematically destroying any resistance fighters they could corner, by cruelly and publicly executing any they captured, and by conducting large reprisal massacres of citizens in an attempt to reign in the resistance. But this only served to stiffen the resolve of those brave Americans, and the resistance doubled its efforts and continued to grow.

News of the exploits of these American resistance fighters, and particularly of the Orka, made its way to the “outside” and the lower forty-eight states as America frantically first prepared, and then actually deployed, large forces to counter the Chinese offensive and attempt to drive it back.

Unknown to Stacey, it was the result of her initial reports, and her continued resistance that brought the Colonel to the side of Wolf Mountain this morning. His interest in Stacey and her group was not only a matter of current military import—it was an issue of Executive Order.

**May 2, 10:34 local time**

**35 miles Northwest of Ruby, Alaska**

**500 feet above the northeast flank of Wolf Mountain**

Colonel Sanfred Kensington looked down into the empty clearing below the Black Hawk helicopter he had requisitioned for this mission. In addition to the crew of the Black Hawk, which included two door gunners, he had two liaison officers and a security team of four personnel with him.

Two Longbow Apache helicopters had taken up covering positions just to the north and south of the clearing as the Black Hawk approached from the northeast. Several F-35, Joint Strike Fighters were providing mid-level CAP while six F-15C fighters were covering higher altitudes.

Turning to the pilot he asked, “Well, Captain, where are they? Is this the right place?”

Although the Captain didn’t appreciate being questioned about whether he had piloted his aircraft to the right place, he understood that the Colonel was involved in a critical mission by order of the President, and that it was occurring during a critical phase of the offensive. In addition, it was a colonel that was asking, and not just any colonel either. Colonel Kensington was *the* point of the sword during the ongoing offensive against the Chinese, and his actions under fire had earned the respect of every man serving under his command.

“Colonel, our Apaches have members of the resistance group under observation using their thermal sensors. They are well back in the trees and now moving towards the clearing. You’ll see them in just a few seconds, sir.”

As the Black Hawk continued to descend towards the small clearing, which was over two hundred yards from the entrance to the cave that the resistance fighters had been using, three members of Stacey’s group did appear at the tree line and helped guide the helicopter to a safe landing.

While the security personnel fanned out in front of him, the Colonel exited the Black Hawk, stooping until he was well clear of the rotors. Coming towards him out of the trees, he saw a group of five persons, one of them clearly an older female whom he presumed was Stacy Urkut.

Approaching them, the Colonel offered his hand. “Stacey? My name is Colonel Kensington.”

Stacey nodded and gave the Colonel a surprisingly firm handshake. The Colonel continued.

“Mrs. Urkut, I am here on the express order of the President of the United States. You may not be aware of it, but your description and reporting during the opening hours of the invasion of Alaska at Nome last year, and your activities since that time, have attracted the attention and admiration, and rekindled the hopes, of all Americans.

“The President has instructed me to offer you immediate transport to Anchorage, and from there back to Washington, D.C. He wants to meet personally with you to extend the nation’s thanks for the heroic and patriotic heroism under fire that you and your compatriots have shown here.”

Stacey took a step back in stunned disbelief.

The President of the United States...Norm Weisskopf, wanted to meet with her and extend *his* thanks? It was almost impossible to comprehend as she responded.

“Colonel, I don’t know what to say. I owe the President and all of you thanks...we all do. We have been hoping and praying for your arrival and now here you are wanting to thank me?”

“I don’t know if I can accept such an offer. I have a group here that I’m working real well with and we still have a lot to do.”

The Colonel had only been here for a couple of minutes, but he was already seeing how this woman had been able to accomplish all that she had.

“Stacey, if I may call you by your first name, we have anticipated all of that. Two of my men here, Lieutenant Colonel Haverson and Sergeant Major Buehler, will work with your people and help organize and liaison their activities to maximum benefit for the ongoing offensive.”

Stacey interrupted, “Excuse me, Colonel, for interrupting, but I’d best make something clear right now. This is not any kind of a large group. There are fifteen of us. Never have been more than twenty-five. We’ve operated with a number of other small groups of similar or smaller size...but this is no company or battalion of individuals you are talking about here.”

Now it was the Colonel’s turn to be momentarily stunned. His own intelligence had indicated that there were several hundred individuals associated with this group alone, and that information was based predominantly on intercepts of Chinese traffic regarding their efforts to destroy them.

Despite the surprise, the Colonel barely missed a beat.

“That is all the more reason to acknowledge what you have accomplished...and with so few. Believe me, when word gets back to the command staff and the President, this additional information will serve to *underscore* your successes. It is also all the more reason for Lt. Colonel Haverson and Sgt. Major Buehler to learn more of your extremely efficient operations and then coordinate them, and their underlying strategies, with our forces.

"Mrs. Urkut, I know all of this is sudden, but I've got an anxious Captain back in that Black Hawk who is eager to take off, and we have these two fine officers here, and their support, who I promise you are all very capable soldiers. What do you say?"

Ted had been listening to the exchange and, despite experiencing feelings of inadequacy in the presence of the Colonel, he interjected, "Excuse me, Colonel...but Aunt Stacey, you ought to go with these folks. Not only do you deserve the honor of allowing the President to extend his appreciation for what you've done, but every American needs to know what's happened here and understand the hope we've rekindled—that *you* helped us rekindle—while we've been fighting these Chinese bastards."

The Colonel decided that his liking for Stacey Urkut's nephew was also growing by the minute...and he smiled at the comments. He wondered how many of the others in the group were "family." He marveled at their bravery and their accomplishments and was impressed with the nephew's encouragement of his aunt...and Colonel Henry Kensington was coming away with the distinct impression that what this young man had just said weighed more heavily with Stacey Urkut than all of words he had spoken, or the express order of the President himself.

...and he was right.

"Alright, Ted, you're right. I'll go. I'll tell our story, but that story has very little to do with me. Also, I respect greatly the office of the President and the man who is occupying it right now, so I guess I'd better not miss an appointment with him."

Turning to the others who had accompanied them out of the cave, and who had been listening attentively, she addressed them, with just a hint of tears beginning to glisten in her weary eyes.

"You guys take care, and make sure you keep these Army personnel safe and in line. There's a lot of country out there and you know it better than anyone else...and it's still crawling with chinks."

Then, her mind made up, she simply said. "Colonel, we'd best not keep your captain waiting."

**May 5, 19:50 local time**

**Outside of Mein Café**

**Beijing, China**

Chiang Pham was as happy as she had ever been at any time in her life. Despite the war and the hardships it was causing, despite the separation from her family since she had taken the computer analyst job here in Beijing, despite her concerns for her brother who was at sea...evenings like tonight somehow made it all worth it. Particularly evenings spent with Hua Jianying, whom she considered her best friend, and her suitor.

She had been seeing Hua for well over eight months now, and every day with him was like a new journey of discovery. They had spoken seriously of marriage several times in the last six weeks and had become officially engaged the day before yesterday. Their marriage date would be in the fall, in October if their families concurred, as Chiang was sure they would.

Tonight, over dinner, they had planned a trip to Tianjin to meet Chiang's parents, Lu and Song Pham, in order to officially announce their intentions. Chiang called her mother and father the night of their engagement to let them know in an informal manner between daughter and parents.

Chiang had already met Hua's parents here in Beijing and enjoyed their company immensely, particularly their warm acceptance of her despite her Vietnamese heritage. That heritage was something that caused many people to almost immediately look down upon her, as a result of an intercultural rejection of her heritage. This immediate personal rejection by people who knew nothing about her had come as a shock to her youthful and protected innocence when she first came to Beijing. But it was also something that she had never seen or felt a hint of with Hua or his family.

However, many of those who initially rejected her, soon found themselves reversing their stance once they found out who she was...or, more correctly, who her father was.

Her father, Lu Pham, was a People's hero and the inventor and perfecter of the *Killer Whale* weapon system which had so thoroughly defeated and embarrassed the U.S. Navy. Lu Pham was a name that everyone recognized and respected. When most people found out who her father was...and she always let them find this out on their own, never being one to brandish her father's name about...their attitudes invariably changed dramatically for the positive.

"Transparent, hypocrites," she thought to herself.

Chiang was always sadly amused by the change of heart, and the reason for it. Although she worked with some of those who had been initially negative towards her, she never forgot their initial and unwarranted condescension, and she vowed never to allow herself to trust any of those whose original opinion of her was based on other than her own personal character.

But none of that mattered when she was with Hua, her handsome suitor and a financial forecaster for the National Party Congress and himself a member of the Communist Party.

Hua's father had served in the Party Congress for over thirty years, and Hua was a rising political star himself within the party. He planned to campaign for the National People's Congress next year, and with his father's and his own party connections, he had no doubt that he would be elected. He ultimately hoped to be the youngest mayor of Beijing in the city's history...a position from which others had vaulted onto the stage of national and international prominence.

All of this fit very well into Chiang's plans for herself. She had made steady advancement in her programming analyst position for COSTIND, working on algorithms that were a secondary, backup system for the guidance of the *ta shih* anti-stealth system being employed by the People's Republic. In a little over two years she had advanced from an Analyst I position to Analyst III and had two younger programmers working under her supervision. She hoped one day to become a senior technical manager at COSTIND and continue to use her analytical skills on behalf of the People's Republic.

As she stared steadfastly up into Hua's eyes, standing there on the sidewalk in front of *Mein Café*, she could see their future reflected in those beautiful dark eyes—and in the smile he shared with her as they waited for the driver that Hua's father had allowed them to use this evening. It was a future that she was excited to share in detail with her family—it was all she had ever dreamed of and hoped for. She was sure that her mother and father, and her brother, would all share in her happiness.

**May 6, 08:40 local time**

**Staging Area, 7<sup>th</sup> Marine Division**

**Midway Atoll**

Leon was ecstatic.

"We're finally going to move off these islands!" he thought as the commanding general prepared to address them.

The rumor had been circulating for weeks. After almost a year on the islands, and a little over ten months since the tremendous battle to hold the island had been fought against the Chinese, apparently America was going to go on the offensive in this part of the world, too.

Where they were going was not known. Could it be "North, to Alaska"? Many of the soldiers surmised it would be and they would sing out the words, in tune with the famous Johnny Horton song.

Would they be going to New Zealand to prepare for the anticipated invasion of Australia? Many of them, including Leon, longed for that prospect, figuring that the retaking of Australia would be where the bulk of the action would be occurring.

Could it be elsewhere? None of the rank and file knew.

...but Sergeant Leon Campbell was looking forward to their new orders, wherever they might lead them, and irrespective of his own preferences.

Leon was something of a legend amongst his peers. A Medal of Honor recipient from earlier in the war, his exploits and actions under fire on the island of Diego Garcia in the Indian Ocean were well known to all. The fact that he had volunteered to come back into combat when everyone knew that he could have had his pick of plush recruitment jobs back in the states was something not lost on the soldiers here, particularly the other Marines of the 7<sup>th</sup> Division. His example and commitment to "fight his nation's battles," wherever they might be, was an encouragement and inspiration to them all.

This is not to say that Leon did not have his own preferences. He was hoping that the orders would send them to New Zealand to fight in Australia. His best friend, Billy Simmons, had been lost there when Sydney fell. Billy's body, along with thousands of others, had never been recovered.

To his family and friends, Billy was presumed dead, killed in action, there off the coast of Australia when a Killer Whale device had struck his amphibious assault ship. Billy's AH-1Z Viper attack helicopter had been one of the last aircraft to get off the deck of the doomed ship before it was hit, and Leon had seen the pictures of that very helicopter as it had emerged from the smoke surrounding the ship...and as it cart wheeled directly into the ocean.

"No one could have survived that crash," Leon thought.

As Leon was having these thoughts, the intelligence officer for the division got the attention of the officers and senior NCOs who were attending the briefing.

"Okay, men, the General has asked me to brief you on the upcoming operation before he speaks to you. I can't announce at this point what our objective is. That will be announced to your Company commanders once we embark...but I can say this.

"We are going to embark and arrive on station more quickly than any other large attack operation has in the history of combat. If you will all closely watch the following short video, you will understand why."

After making this statement, which got all of their attention, the Colonel had the lights dimmed, and a digital projector near the back of the large room began displaying a video clip on the far wall. What they all saw was astounding. It was something new and, as combat veterans and as Marines, they all recognized the import of it immediately.

The video lasted a good five minutes. There was absolute quiet in the room as these combat veterans watched the display of America's latest technological innovations as they would be applied to the fight. When it was over, the intelligence officer continued.

"What you have just seen is classified top secret and cannot leave this room. It has been shown to help you prepare your individual units for the operation, entitled Operation Lightning Bolt, which will begin in five days.

"I'll now turn the time over to General Atkins who will complete the briefing."

General Atkins approached the small podium. He could feel an almost palpable electric charge in the air. These Marines were ready to go on the offensive. They had taken the worst the enemy could deliver and they all sensed that now was the time for America to strike back.

And the general knew that America and her allies were striking back. Operations in Alaska and around Israel were going better than expected...and ahead of schedule. Now, here in the Pacific, the first part of a two-pronged offensive against the Coalition of Asian States in the Pacific would begin...and the troops of the 7<sup>th</sup> Marine Division were going to be the ones to kick it off.

"Gentlemen, I know you are all tired of waiting, so I am going to make this brief. It's time. We are going to strike where the enemy least expects it, and we are going to it with devastating effect!"

Immediate cheers filled the room, but quieted as the general held up his hands for silence.

"Each of your company commanders has a package indicating what your orders are as regards deployment in Operation Lightning Bolt, and preparation will begin tomorrow in anticipation of the arrival of the transportation you have just been privileged to review.

"Each of you should be prepared, as should the personnel whom you command, for this historic and critical mission. We will be supported by the U.S. Air Force and the U.S. Navy as they escort us to the objective and then provide air cover and support while we secure that objective. The Navy is using a new and unique method of pre-positioning materiel in theater which will augment and support our activities once we've attained our objective.

"Although that final objective is not mentioned in the orders being distributed to your company commanders, the nature of your role and the equipment you will require is spelled out in detail.

"Final mission planning and prep will occur en route, including secure video conferencing between separate units as we travel towards the objective. This will include a live feed from our Commander in Chief, President Weisskopf. That is all."

**May 12, 07:40 local time**

**The White House Situation Room**

**Washington, D.C.**

Norm Weisskopf considered the import of Operation Lightning Bolt as he watched the real time display on the screen at the far end of the room. He had given the final execute orders less than twelve hours ago, after the troops had all embarked and staged off to the west of Midway Atoll.

This operation was much different than the large offensive operations currently being conducted in Alaska and the Mid East...and different from the operation about to kick off in Europe to the south and east of Moscow.

In fact, this operation was meant to dovetail with the European Operation which was sure to attract significant attention from both the GIR and CAS high commands.

"And that is exactly what we want," thought the President.

"We're going to deliver a little Sun Tsu of our own."

But operations in the Mid-East and Europe were traditional offensive operations involving hundreds and hundreds of thousands of troops and their materiel, and the long lead time staging required to make those large operations possible. At least those types of lead times had traditionally been required. Operation Lightning Bolt was aimed not only at the CAS, it was aimed at breaking that mold and allowing large numbers of allied troops to very swiftly appear in the most unexpected places with all of their equipment and support.

This revolutionary operation and its import were readily apparent with but a glance at the real time images being displayed on the far wall of the situation room...and those remarkable images had everyone's rapt attention. Displayed on that wall were eight flights of four aircraft flying in formation less than 100 feet above the wave tops in the Western Pacific Ocean. They were simply the largest aircraft ever seen in any military operation.

Oh, several of those in the room had seen these aircraft as they were developed, manufactured, and tested...but seeing so many of them now in an actual operation was awe inspiring and simply dumbfounding. Propelled by four very large and very advanced turboprop engines on each wing, the transport aircraft were over three hundred feet long, and had a wing span that was in excess of five hundred feet! Each aircraft's body was easily fifty feet in diameter, flattened on the bottom to allow for water takeoffs and landings. They could also land on unimproved landing fields like a C-17, as long as there was sufficient clearance for their tremendous size.

As they watched, the picture zoomed out and revealed several escort aircraft flying along with these behemoths. It was then that the true size of the aircraft became apparent. A flight of four F-22 Raptor aircraft appeared as little more than a group of flies when compared to the monstrous transports they were escorting. To the left of the entire flight, and flying somewhat above them, a flight of four tanker aircraft could be seen coming into view. Despite the large size of the KC-10 tankers, the large C-90A transport aircraft easily dwarfed them, making them seem small and almost insignificant in comparison.

The President marveled at the coordination...it had every appearance and trapping of a very large and complicated naval transport operation, except it was flying in the air at well over 350 knots.

“And though the tankers look small and insignificant when compared to these super-transport,” thought the President, “In fact they are the life blood of the entire operation, just like a group of UNREP ships is to a naval operation.”

The pictures they were watching were being taken from well over one thousand feet above the aircraft, which continued flying less than one hundred feet above the surface of the ocean. What the pictures didn't show, but what something everyone in the room was well aware of, were the over two hundred other supporting aircraft that were escorting and supporting the entire operation: the largest single grouping of F-22 fighters in history and an equal number of F-15C and F-15E aircraft.

The President knew that the entire flight would be joined in a few moments, as they neared their destination, by Naval aircraft off of the USS Shanksville, which had been able to clandestinely position itself two hundred miles from the objective of Operation Lightning Bolt. The Shanksville was being escorted by the largest group of SUB CIWS equipped vessels yet assembled, and was also itself equipped with the Anti-Killer Whale being deployed by the U.S. Navy.

In addition, all four of the recently launched Alaska Class SSTN nuclear powered amphibious assault and transport submarines, which were carrying the remainder of the Task Forces supplies, were stationed offshore from the objective as well. They were being escorted by the U.S.S. Jimmy Carter and the U.S.S. Connecticut, which were both still impervious to Killer Whale detection.

Although the SSTNs were capable of self-defense and equally quiet, the two Sea Wolf class, with their larger weapons load, their proven track record regarding the LRASD devices and their remarkable speed, would provide the most capable defense possible for these new underwater behemoths in America's growing arsenal, being dutifully stockpiled in the defense of liberty.

This first combat deployment of the SSTN class involved every ship of that class that had been built to date. Still undetected and now just off the objective, the design had achieved the intended level of stealth and quiet despite their mammoth underwater displacement of over 40,000 tons!

This awesome show of force amazed the President, despite his involvement in its planning and production over the last three years. The development of these two systems, one airborne, the other a subsurface naval system, had been two of America's most closely guarded secrets as the war progressed, and in face of the almost constant barrage of bad news.

The entire concept of “Rapid Deployment” had been studied for years at the Pentagon and within the prestigious U.S. military war colleges. Things had come a long way from the very traditional methods of World War II and the Korean War. Beginning in the Vietnam War, large numbers of men were moved by jet airliner aircraft, allowing them to arrive quickly in theater. But the problem remained of having them meet up expeditiously with their heavy equipment. Faster transport vessels were designed and built which doubled the speed and capacity of older ships. Still, time requirements were viewed as too great for the literal mountains of heavy materiel required for a large, modern army.

Pre-deployment and staging philosophies were developed and instituted in the 1980s, which significantly improved the situation. Mountains of materiel were strategically placed around the globe by the U.S. Military at defensible bases calculated to be near any conceivable major trouble spots. But the strategic positioning still did not reduce the time requirements to anything approaching the “rapid” deployment desired and envisioned. In 1991, Operation Desert Storm, an operation which the President himself had led and with which he had therefore been intimately familiar, had still required six months to build the necessary force and logistical support to allow for the defeat of the Iraqi armies that had invaded Kuwait, and were positioned in southern Iraq.

Twelve years later, in 2003, when the United States again fought Iraq in Operation Iraqi Freedom, logistics, technology, and operations had improved to the point where a smaller force could be more rapidly deployed to accomplish the larger mission of invading all of Iraq, and occupying it while supporting the Iraqi people in the election of a regime that everyone had hoped would prove friendly to the West. Despite the improvements, that buildup had required over four months.

Many of those newer pre-deployment methodologies had been dealt devastating blows at the beginning of World War III by resourceful and committed GIR and CAS forces who overran many of the pre-positioned staging areas, and who developed weaponry that had countered the critical advantages of nuclear powered aircraft carriers and submarines upon which the ability to execute those rapid deployment philosophies had rested.

So the war colleges had gone back to the drawing board, and within two years had perfected concepts that had already been under consideration when hostilities broke out. Those concepts had coalesced into operational plans and equipment had been developed or modified to support them. America's new production lines began to address the issue in top secret factories built in remote areas of the intermountain west and the desert southwest. The culmination of these efforts was what was being witnessed for the first time with Operation Lightning Bolt.

Thirty-two massive C-90A transports were carrying the entire task force very rapidly towards their objective. Four massive Alaska class SSTNs were already onsite and represented a pre-positioned staging area themselves. This massive movement of men and materiel would not be accomplished in a time frame measured in months...it would be accomplished in hours and days.

Now, as the large aircraft approached the U.S.S. Shanksville rendezvous point, the President tuned into the latest verbiage of the ongoing briefing. This portion of the briefing was being given in preparation for the President's own address to the entire task force in just a few minutes at the conclusion of remarks by the National Security Advisor, Bill Hendrickson, and the Chairman of the Joint Chiefs of Staff, General Jeremy Stone.

"Each aircraft can carry a combination of over two million pounds of men and materiel. That equates to sixteen main battle tanks, or twenty infantry fighting vehicles, or close to two thousand troops and their personnel equipment. They can also carry F-35C Joint Strike Fighters or AH1Z Viper attack helicopters in a special stowed configuration. Up to eight of either of those aircraft will fit into one of those transports along with the people and equipment to support them. Those aircraft can then be unloaded and made operational within twenty minutes.

"The United States Marine Corps now has forty-eight of these aircraft in its inventory and many more in the pipeline. Operation Lightning Bolt will be employing forty of them. As you can see on the monitor, thirty-two of those are involved in the initial effort to move the entire 7<sup>th</sup> Marine Division and its supporting commands, augmented by sixteen F-35Cs and sixteen AH-1Zs, onto the objective. They will be on that objective within the next hour.

"Elements of the escorting aircraft, both U.S. Air Force and U.S. Navy off of the U.S.S. Shanksville, will begin a massive attack in the next ten minutes to prepare the objective for landing and to suppress any and all enemy air or missiles defense.

"We believe the surprise will be total, and the shock overwhelming to the 100,000 personnel that are deployed by the enemy in and around this objective.

"Let me remind you that what we are witnessing is an unprecedented event in the history of warfare. In the next hour, over thirty thousand troops and their equipment will be landing far in the enemy's rear, near the pivotal city of Magadan on the Sea of Okhotsk. This city is the logistical control point for all of the enemy forces in far eastern Asia and Alaska. In essence we will set up a large pincer operation against an enemy force of over one million Chinese and their equipment, positioned between our advance in Alaska and their rear at Magadan."

At this point, Hendrickson turned to General Stone, the Chairman of the Joint Chiefs of Staff.

"General Stone will now give a short briefing of the overall military ramifications of this operation. General?"

General Stone wasted no time and jumped right in. He knew the President was scheduled to go on the air in just a few minutes and he wasn't about to delay the Presidential address.

"Thanks, Bill. Folks, as the National Security Advisor has indicated, this operation is historic, both in its execution and its implications.

"In short, we have planned for our forces to engage the enemy first in Alaska and then on the Asia mainland near Magadan. While the attack at Magadan proceeds up the enemy's logistical supply line, we expect our Alaskan offensive to push the Chinese back across the Bering Strait.

"When this happens, we anticipate a complete victory in eastern Asia in a relatively short time frame as those forces are cut off from all hope of outside support or intervention. Their only recourse will be to either surrender, or face total destruction in place.

"And this is where things get exciting. Along with that victory will come the development of a staging area for ultimate attacks on Japan, Korea and mainland China from the North. This will represent a situation which the enemy will not be able to ignore and one that will allow for the exertion of equal pressure by our forces advancing out of New Zealand next month.

"We expect the buildup in eastern Asia that will make all of this possible to occur very quickly. Another eight C-90A aircraft are four hours behind this initial wave. Over the next twenty-four hours, as we set up the rotation, eight aircraft will be arriving every four hours until our force is brought up to the planned level of two hundred and fifty thousand and all of their equipment within five more days.

"That's a brief description of where we are headed with this."

When General Stone turned the time back over to Bill Hendrickson, the National Security Advisor listened briefly to his ear phone and then turned to the President.

"Mr. President, they're indicating that we're two minutes from your address. The time is yours."

As the cameras focused on the opposite end of the table, where the President was sitting flanked by a United States flag on one side and the Seal of the Presidency on the other, President Norm Weisskopf prepared to speak.

**May 13, that same time**

**Flight 4A, C-90A**

**350 Miles Southeast of Magadan**

With the presentation by the President about to begin, Leon Campbell, like tens of thousands of other American service personnel, prepared to listen attentively. They all had the utmost respect for the "old man," both because of his own service record, and more importantly, because of the way he had led them and the nation since the outbreak of hostilities. As Leon thought about this, he also looked with anticipation to the upcoming operation and what it would mean for him.

He had put in his transfer request some time ago and his company commander had informed him just yesterday that the transfer had been approved. After Magadan had been taken and secured, and as follow-on forces pushed north, Sergeant Leon Campbell would be traveling far to the south to New Zealand. Of necessity, his path in getting there would be a circuitous route, one that would take a good week or more for him to make. Magadan was well behind what was currently perceived as the Chinese front lines...but that was what this operation was really all about, to show the Chinese that traditional front line advantage no longer applied when it came to fighting the United States.

"Well," he thought. "That'll take care of itself. My road to New Zealand and the South Pacific lies through Magadan. Better listen up to the President now, though. Here he comes."

In the White House situation room, at command facilities from the Pentagon, to Hawaii, to Alaska and in the air to the southeast of Magadan, the image of the President of the United States appeared on countless monitors and screens.

"My fellow compatriots and defenders of American liberty. Today we embark on a new phase of this war. No more will we allow ourselves to be manipulated at the discretion of a merciless and tyrannical group of nations and their leaders who have pushed us to the very brink of extinction.

"We showed last fall, and are showing again this spring, what we can do against these enemies when we apply the new and unparalleled edge we have developed in traditional warfare methodologies. That edge includes our moral underpinnings, our level of training, the innovation that individual liberty allows our equipment to benefit from, and our absolute commitment to that liberty. As a result of this, we are now steadily pushing the enemy back on several fronts.

"But the road is long and the path difficult. The enemy is numerous and well entrenched. The traditional route, while achievable, will take us far too long and will cost far too many lives, both the lives of our own people as well as those of the many innocent civilians throughout the world who have come under the rule of these diabolical monsters.

"Today, you represent the cutting edge of new methodologies and practices. You represent America's asymmetrical response to the enemy's warfare of terror, hate, lies, and genocide.

"Because of the bravery, commitment, virtue, and liberty you represent, we are going to hit the enemy behind their lines...we are going to show them that old rules no longer apply, that we can bring unimaginable and irresistible force to bear whenever, and wherever we chose. For the Chinese, that demonstration begins today. For our other enemies, similar demonstrations will come soon.

"Know that we, your leaders, support you and are with you in this. We have all faced grave danger and violence in this affair...both our forces abroad and our people here at home. This White House from which I speak had to be rebuilt as a result of that very type of destruction, and the blood of patriots who died bravely for their country stains this ground as well.

"As General Patton said in World War II...*it is not your job to die for your country; it is your job to make sure that those other SOB's die for their country.* We intend to demonstrate today that the enemy can expect to do exactly that, and that they can expect to do it in unimaginable numbers.

"We will force them to *die in unimaginable numbers* until there is not so much as one of them left who will be willing to so much raise their hand in support of the ideologies and national purpose that their sick and perverted leaders have directed them towards."

When the President made this statement, his inflection rose and no one listening could miss the steel or determination in his voice. Spontaneous cheers arose in several places around the globe, including the situation room and within those transports that were carrying the personnel who intended to put the President's statement into bold and immediate action.

Raising his voice over the din, but not to dissuade the emotion, the President concluded.

"Godspeed to each and every one of you. The thoughts and prayers of your countrymen go with you in this struggle...particularly today as you firmly plant the banner of liberty on the continent of Asia, the home ground of our enemies."

### **May 13, that same time**

#### **CIC, U.S.S. Shanksville**

#### **125 Miles south of Magadan, Sea of Okhotsk**

Admiral Darcy watched the display in the Combat Information Center as the initial waves of aircraft from the Shanksville and from Task Force Lightning Bolt began hitting their targets.

By all accounts, resistance in the air was light and there had been very few launches of anti-aircraft missiles in response. Surprise seemed to be complete and initial concerns about high attrition rates now seemed as if they would not materialize.

"Thank God," the Admiral thought as he considered this.

"No doubt we will lose several aviators today, but those losses could have been much, much worse. It appears that our intelligence and psy-ops efforts have paid off."

Those efforts had indeed paid off for the United States. In a reversal of what the Chinese had applied last year over and around the Bering Strait, the Americans had intentionally underplayed their hand regarding Magadan and their access to it.

For months, the chain of Kuril Islands, which protected entry into the Sea of Okhotsk from the Pacific Ocean, had been harassed by American forces. Both U.S. Navy surface and subsurface forces had sporadically fired Tomahawk cruise missiles at various radar and monitoring stations along those islands. No point of the chain was focused on, just a general harassment from both U.S. Navy vessels and from Navy and Air Force aircraft.

Whenever the Chinese made a foray with their forces against these attacks, the Americans beat a hasty retreat, never committing anywhere near enough forces to consider waging a pitched battle against the Chinese. Follow-up reconnaissance missions had shown a definite trend on the part of the Chinese over those months to take the attacks less and less seriously.

The enemy's cavalier attitude had all paid off perfectly yesterday as the Shanksville battle group transited a narrow strait into the Sea of Okhotsk south of the Island of Lopatka. That transit had occurred within a few hours of one of the harassing attacks which had taken out the radar and monitoring equipment in that area and also sunk two Chinese patrol boats well to the west. U.S. intelligence had determined that those two ships were tasked with patrolling that strait and its approaches over the next two days.

"Now months of effort and planning are coming together with this assault...but it hasn't been without cost," thought the Admiral.

One Los Angeles class attack submarine lost, one Arleigh Burke class Aegis destroyer severely damaged, six B1-B bombers, and five HR-7 aircraft and their crews lost in the exchange.

"God rest their souls...God grant that their sacrifices will have been worth it," concluded the Admiral as he returned his attention to the displays his personnel were monitoring and updating so they could communicate effectively with the forces that were now engaging the enemy.

In addition to the attacks on Magadan, three smaller air strikes and one SAG force were prosecuting strikes at sea against Chinese shipping. Several container ships and a full convoy of transports escorted by Chinese guided missiles destroyers were also under attack at the moment.

More ships, aircraft and their personnel were going directly into harm's way in order to ensure the success of Operation Lightning Bolt.

As at Magadan proper, with these attacks it appeared that surprise had been complete. Radio traffic monitored between those forces and their headquarters and support forces indicated that the Chinese were shocked at the level of force being applied here, so far from the front lines.

Those Chinese command and control groups had now clearly determined that this was no mere harassment or diversionary attack...this was the real thing.

### **May 13, one hour later**

#### **Magadan, Siberia**

The U.S. Air Force and U.S. Navy attack aircraft continued to pound positions, but they were now on the peripheral of the target zones as the huge C-90A transports approached. Air superiority had been quickly achieved as only eight Chinese SU-33 aircraft had been in the air patrolling the skies over Magadan when they had been assaulted by over forty F-22, F-15 and U.S. Navy F-18F fighter aircraft. The resulting dogfight had been brief. All eight Chinese aircraft were downed at the cost of one F-15 fighter and one F-18.

With their more modern avionics, better stealth and newer electronics, no F-22s were destroyed. The remaining thirty-six U.S. aircraft took up rotating patrols as American troops assaulted the airfields that would soon be home to those very fighters patrolling overhead.

To accomplish the ground assault, Operation Lightning Bolt had more than twenty C-17 Globe Master aircraft accompanying the C-90A transports. These aircraft were raining down over five thousand paratroops to the two airfields located at Magadan.

Only twenty minutes after the initial alarms went out, parachutes had filled the sky and U.S. soldiers had begun to land. Along with the air strikes, soon heavy mortar and machine gun fire had quickly been directed at whatever Chinese troops were trying to assemble.

With their headquarters facilities, prepared positions and barracks already thoroughly decimated by close air support, the Chinese defenders on the ground were extremely hampered in organizing any large scale defense. Just the same, a few fierce pockets of resistance did develop, mainly centered around the few surviving armored personnel carriers, and light tanks—and in particular around two ZU-23 anti-aircraft units that survived the air assault.

Normally used to interdict medium to low level attack aircraft, the commander of Chinese air defense in that particular sector had wisely ordered the radar units in those vehicles turned off in order to save them. He then had them concealed in a nondescript warehouse and offered them to the young Captain who had taken charge of the ground defense for the base.

The Chinese captain employed those units very effectively. Establishing a defensive perimeter near the warehouse, he had the two ZU-23s and two accompanying infantry fighting vehicles remain concealed in the building while his ground troops retreated hastily in front of the American advance in that sector. This movement served to draw the American forces forward and then, just as American forces began approaching the warehouse, the captain ordered the concealed ZU-23's and IFVs to

attack. The ambush caught the two most forward American platoons by surprise and completely decimated both of them, killing twenty-three and severely wounding another seven soldiers.

Ultimately, one of the ZU-23s was destroyed by a LAW anti-armor unit attached to the Company that had lost those platoons. The second ZU-23 was destroyed by an F-15E Strike Eagle called in for close air support by the mortally wounded commander of the second ill-fated platoon.

Despite inflicting these losses, the Chinese defense of the airfield was futile. Outside of the ZU-23 and a couple of other pockets of resistance, the American troops rolled over both the military and civilian airfields and secured them for aircraft landings within an hour, well ahead of schedule.

As the drama of the doomed Chinese defense of the military airfield played itself out, the C-90A transports began to arrive on the sea shore outside of Magadan. Close air support aircraft and a battalion of American paratroopers (who themselves had landed a half hour earlier for just this purpose) secured the two major landing zones on adjacent beaches and ensured that no SAM or heavy caliber weapons were in a position to threaten the arriving transports.

The initial transports arrived at the two landing zones in two waves of eight aircraft each. The first wave at each landing zone comprised four aircraft with infantry load outs carrying almost eight thousand men. Those four aircraft were accompanied by two aircraft carrying armor, a total of thirty-two M1A1 Abrams tanks...and by two aircraft carrying mechanized infantry, a total of forty light armored vehicles (LAVs).

As each aircraft touched down in the water and powered up to a sliding halt on the undefended beaches, its nose swung upward like a C-5A Galaxy, and revealed two separate levels for the disembarking of troops and equipment. Those soldiers in the aircraft carrying infantry poured out from both levels, down ramps that extended onto the shore. Those aircraft carrying armor vehicles disgorged that armor and their crews from the lower level, while maintenance and support troops used the ramps from the upper level.

Outside of a few cases of small arms fire and one case of light machine gun fire which were quickly suppressed, there was no opposition. Within thirty minutes, following the pattern and training that had been drilled into them while they awaited the arrival of the aircraft on Midway Atoll, all of the troops and their equipment were on shore and utilizing their staging areas to move further inland.

An hour later the second wave of aircraft arrived at each landing zone and approached the positions for the disembarking of their troops and equipment. This wave had been prepared to loiter well offshore if resistance to the first wave warranted it. As it turned out, it did not.

In this wave, there would only be eight of the huge transports—two infantry loaded aircraft for each landing zone, with four more carrying armor and mechanized vehicles. The remaining two aircraft at each zone carried the invasion force's attack helicopters-AH1Z Vipers, and its F-35C VTOL fighter bomber attack aircraft.

The tragedy of the day occurred while these aircraft were just touching down and approaching the beach. Forty kilometers to the north of Magadan, a battery of Chinese short range ballistic missiles had launched direct fire onto the American beach areas. Four other such batteries had already been discovered and destroyed by American aircraft before they could fire. But this battery of sixteen missiles avoided detection and launched its missiles before American aircraft could respond.

The ballistic tracks were almost immediately noted by American AWACS aircraft that accompanied the task force, and seconds later by Aegis cruisers and destroyers in the Shanksville carrier battle group that were closer in to shore. Immediately the interception of the Chinese missiles was handed off to, and engaged by, the Theater Ballistic Missile defense missiles on the Aegis escorts.

But, although those escorts were much closer to Magadan than the Shanksville herself, they were still several miles off shore and the amount of time was just too short to successfully engage and defeat all sixteen missiles. If a Patriot missile battery had already been set up at either of the two captured airfields, then perhaps the tragedy could have been avoided. As it was, four of the missiles made it through the Aegis TBM defense and impacted at the eastern most landing zone.

There were several very anxious seconds as General Atkins and Admiral Darcy waited to see if the detonations were nuclear, biological, or chemical—or if they were standard high explosives. But there were no weapons of mass destruction employed by the Chinese on this day. They remained committed to their own high command policy decision made earlier in the war to not make unilateral use of their nuclear, biological or chemical weapons, and therefore not play to the American and Russian strength in this area. But the high explosive detonations were severe enough.

Three of the missiles exploded in or near the staging areas of the first wave of transports that had already landed, and where thousands of personnel were busily making their way with their materiel further inland. Over four hundred personnel and several light armored vehicles were destroyed in those blasts. More tragically, in a freak coincidence of timing, one of the missiles landed just offshore as the second wave of transports was approaching. That missile hit the right wing of one of the C-90A transports carrying F-35C aircraft for that landing zone.

The impact severed the wing, causing the aircraft to skew and dip into the water. As it did so, its own weight and momentum sheared the tail entirely off of the aircraft. The forward section, which

still contained a full wing and the sheared-off half of another, spun hard in the water as it dipped further, ripping off three of the four engines on the intact left wing.

The catastrophic opening of so many hydraulic, electric, and fuel lines while the aircraft's equipment was still operating resulted in a fire on the intact wing that rapidly spread towards the main body of the aircraft. It came to a halt in about twenty feet of water and began to settle to the bottom, as it burned. Personnel were pouring out of emergency access doors along both sides of the aircraft and out of the rent in the back of it.

Three large explosions occurred in the body of the aircraft as the fire reached fuel, ordnance, and other combustible material stored on board for the F-35Cs. These explosions resulted in a massive fireball within the body of the aircraft burning many men before they could get out.

On the lower deck, a large number of personnel were forced to make the horrific choice of either facing the intense fire, or staying where they were and succumbing to the rising water on that deck. Scores of personnel drowned as the rapidly rising water in that portion of the aircraft made their decision for them.

In the end, of the almost twelve hundred personnel on board that aircraft, only three hundred and eighty-two survived. All eight of the F-35C aircraft were completely destroyed. The wreck of that C-90A would remain there right off the beach for over a year as feverish logistical operations and enemy counter attacks made it impossible to conduct any large scale salvage effort.

The wreckage of that aircraft, and of the others that would later be added to it, would serve as a mute but stark message to American servicemen who fought in and around, or were processed through, Magadan over the next twelve long months. It would do the same for those who would see it through digital imagery. It was a message regarding the reality of the continued terrible sacrifice necessary to preserve freedom and overcome the commitment of a dedicated and ruthless enemy.

Those enemies were far from defeated and would prove, over and over again, that they were still capable of inflicting, and more than willing to wreak, death and destruction on American forces and those of her allies wherever they could be engaged in furtherance of their own aims and designs.

Later, as historians looked back upon it, it would be apparent that the American invasion of Magadan served to markedly increase the bloody tempo of the intense combat for the entire war. A veritable firestorm would ensue in and around Magadan as the Chinese contested America's foothold. And that firestorm would escalate around the globe through the remainder of the war.

The new and bloodier tenor of this war would be most evident on foreign shores like the one at Magadan, but it would also make itself felt in more periodic intense attacks on American soil directly, as future events would soon show.

**May 13, 09:45 local time**

**Executive Council Chambers**

**Politburo, Beijing, China**

Jien Zenim was extremely unhappy. The incessant ringing of his personal phone at a very early hour this morning was the certain tip-off to news and events that would place him and the entire executive committee of the Communist Party of the People's Republic of China on edge.

Jien couldn't stand unexpected disappointment, failure, or reversals to plans long laid.

The news today from the far east on the Sea of Okhotsk represented just that type of occurrence...and the entire leadership council knew it. Continuing to address them all, now that the initial briefing and information had been communicated to them, Jien's displeasure was evident in the berating of his subordinates who should have prevented such a disaster from occurring. As the President of the People's Republic of China and the leader of the largest, most militaristic and populous alliance the world had ever witnessed...and as the architect who had planned it all...Jien felt he was well within his rights to chastise those on whom he depended.

"By our own estimate, upwards of thirty thousand Americans materialize out of nowhere and attack, and then take the most strategic and the most critical logistics point for all of our forces operating in Alaska, and none of you can tell where the breakdown has occurred?"

"The dodging and political posturing I am hearing here this morning has NO PLACE in our discussions. We must know what the real conditions are in Magadan and how they came about.

"I am starting to believe that the problem exists right in this room...and if I cannot be persuaded that this is not the case, I will solve the problem myself, quickly and, I assure you, permanently."

Turning to the large screen projection on the far wall, where he knew several others who were joining the conference by secure video conferencing, President Zenim picked one of those participants, one he felt he could trust completely and who was among the most competent military minds in all of China, and addressed him.

"General Hunbaio, what do our research and development scientists tell us about the new method the Americans have utilized in this landing of theirs?"

The President hesitated for just a few seconds as he asked this question, long enough so he could look around the table and glare at several of those sitting with him in the conference room in Beijing.

Then he concluded, "Please share something definitive with us...as opposed to the hand wringing and excuses I have been witness to so far this morning."

General Hunbaio, the military commander and senior scientist at COSTIND, the Chinese defense industry research and development conglomerate, considered his feelings about this attack.

He was surprised by it...by the Americans' ability to produce so much new technologically advanced equipment so quickly, given the circumstances they had been subjected to. Almost four years ago virtually all of their major, heavy manufacturing had been cut off cold.

"All of that outsourcing, all of those factories...gone," thought the General as he tried to conceive of how he and his own nation would have reacted in similar circumstances.

Their energy dependency had also taken a heavy toll on their ability to fight back, as many of their energy sources had become unavailable to them at that same time. Many other segments of their economy, including most of their high tech, had also been outsourced to the Far East, China most predominant among them, and to India. The war had cut them off with swiftness as well.

"And we thought, with finality," reflected the General before beginning his response.

Yet, here we are, less than four years later, and somehow the Americans have produced an operation of this magnitude right here in Asia, far too close to the People's Republic.

It was amazing...but not altogether surprising to him. He had determined long ago not to take for granted or underestimate the will of the American people and their leaders...irrespective of the hype, and irrespective of the significant gains the PRC had made under certain American administrations. Not taking them for granted or believing the hype had allowed him to secure Lu Pham out of Vietnam so many years ago to develop the LRASD weaponry that had been so effective against the Americans to date. He determined in his own heart and mind that that same trait would serve him and his nation now as he sought for and found a way to counter this new development.

"Mr. President. The technology the Americans have employed is not new. You may remember that in the 1930s, the rich American, Howard Hughes, produced and flew a similar type aircraft. It was called the Spruce Goose, and it employed exactly the same principles of a large aircraft using the surface wave accompanying the passage of the aircraft to produce more lift under the aircraft.

"The Americans have studied this issue in a quest for a true rapid deployment of large forces

"With their operation in Magadan, they are announcing to us that they have deployed just such a force. I am sure they expect us to understand their message...that they could send a similar force towards Tianjin or any of our other ports, or those of our allied and pacified nations tomorrow.

"Given the one grainy picture I have been able to look at this morning, I would say that the design of the large, super transports the Americans have employed is a larger, newer version of a design one of their major aircraft companies came up with about eight or nine years ago.

"That design was a little smaller and had only two engines on each wing. But it was huge nonetheless and looked very similar to this aircraft. I believe the company called it the Pelican, but it was never chosen for military procurement or production and it has apparently remained on the drawing board...until now.

"My own opinion is that the Americans are presenting us with a wonderful opportunity in this. After the shock wears off, and after we develop effective strategies to deal with it, those large, relatively slow moving aircraft will prove to be coffins for many more American personnel. If we find them, they are much easier to destroy than a ship protected by aircraft, submarines and escort vessels.

"Clearly the key will be to determine where they are, and then make sure our defenses are prepared accordingly...perhaps we can prepare a rapid deployment counter force of our own for this...I am not sure yet, but we already have the best minds at COSTIND working on it.

"Now, Mr. President, if I may, we are also working on a plan and operation to interdict and destroy this current force off of Magadan. Admiral Lu Pham has some ideas in that regard using the LRASD devices and I believe we should move forward with a counter attack based on those plans as early as possible. Everyone here knows the success we have experienced as a result of the LRASD weaponry. The latest innovation which allows those weapons to be programmed with criteria so they can broach the service and become a missile has already proved successful. The Admiral is suggesting that we put on a major demonstration of this capability off of Magadan.

"I will brief you on those plans tomorrow. That is all I have at this time, Mr. President."

Jien Zenim knew that he could count on General Hunbaio and Admiral Lu Pham. They had not let him down in this entire affair...perhaps it was time to do something on the Executive Committee that would serve as a warning to several of the others.

The President also knew it was time to take the counteroffensive, and not only at Magadan.

"Excellent, General. Proceed with your planning as rapidly as possible. Please invite Admiral Lu to accompany you tomorrow for your briefing. I would like to meet with him and you personally before the briefing of the full executive committee."

Turning to the entire assembled committee, the President then continued. "In addition to this counterattack on the American forces at Magadan, I believe it is time that we issue the final execute order for our culminating operation in the United States. We cannot afford to allow conditions to continue, where the American morale is building as a result of their recent string of successes."

Addressing himself directly to the Chief of the People's Republic Intelligence Agency, the President continued. "General Zham, please ensure that the final approval and execute order for the operation next month is communicated to our operatives there in the United States. Keep us informed on the progress and as to any complications. Communicate our express wishes to the commander on the scene that the operation must be conducted at all hazards, where there is any significant chance for success. Successful completion of his mission is vital to our overall strategy. Make sure that you emphasize that fact to the entire chain of command."

## Chapter 32

*“I regret that I have but one life to give for my country.” – Nathan Hale*

**May 17, 09:48**

### **Offshore**

#### **Magadan, Siberia**

Landing and logistical operations at Magadan continued unabated. Every few hours, eight more C-90A aircraft landed, disgorging more and more men, materiel, weapons, and equipment.

The 7<sup>th</sup> Marine Division and follow-on units which were now comprising what was being called the 12<sup>th</sup> Army, had pushed well inland along the superhighway and rail system the Chinese had built for their own massive buildup a year earlier. There were simply no major Chinese units to stop them. The head of the Chinese snake was over 1,500 miles away, locked in mortal combat with allied troops around Nome, Alaska.

They dared not turn their back on those allied forces...and yet, they dared not allow the Americans in their rear to continue the buildup and advance out of Magadan. They were caught in a classic pincer, like the North Koreans of the 1950s when General Douglas McArthur had pulled off what had been thought to be an impossible American landing at Inchon, trapping the North Korean army far to the south as they advanced on Pusan.

Now the Americans had repeated the feat, using their new super-transport technology and their advanced rapid-deployment methodologies.

But the Chinese were about to respond.

Flying north over the Sea of Okhotsk, a Chinese air armada equal in size to that of the American one used to affect the landing, the largest single Chinese air attack in their history, was now approaching and about to engage the Americans.

400 SU-35 and SU-37 aircraft, 200 enhanced TU-22M+ bombers, 200 of the new J-10E fighters, 150 attack aircraft of several varieties and over 200 support aircraft were involved. By 9:48, over 100 of the leading aircraft in this vast air armada were approaching the American picket ships and the extents of American AEW and AWACS coverage at the edge of the American defense of Magadan.

What ensued was what American fighter pilots called a giant “fur ball,” a dogfight of massive proportions between American aircraft on patrol out of Magadan and from the U.S.S. Shanksville, and the Chinese fighters in the vanguard of their attack.

The fighting was ferocious as the Chinese, using their own high technology aircraft and benefiting from several years of combat experience, faced off against American fighters that, outside of the one squadron of F-22 Raptor fighters now based at Magadan, held little technological edge over their Chinese adversaries. In the training arena as well, after the years of combat the Chinese had experienced, what was once a clear American advantage had now nearly been negated.

At first, during the initial engagements, the dogfight went to the favor of the Chinese, with their vastly superior numbers coming to bear near the edge of the battle space, out near the U.S. picket ships and the edge of American AEW and AWACS coverage. That advantage allowed the as yet unmolested Chinese bomber aircraft to launch large numbers of LRASD weapons at those picket ships which began to take them out, one by one. By 10:15 AM, that line of picket destroyers and frigates had been reduced to a shambles and the Chinese continued to press on.

Now, as the moving dogfight approached closer to Magadan, the Chinese had to contend with more and more American aircraft and naval vessels in more defensible formations. And the American aircraft and ships fought ferociously to defend a contingent of ten C-90A aircraft that were still in the water, frantically unloading their supplies in an effort to finish and take off before the attack wave could arrive off of Magadan.

Soon, the Chinese fighter advantage and advance began to wane, particularly as the F-22 Raptor aircraft and Aegis vessels took their toll, fighting at a three or four to one ratio against the best the Chinese had, the J-10E and SU-37 aircraft.

By 10:45 AM, twenty miles out from Magadan, the Chinese offensive stalled and a dogfight of rough parity began to play out. Both sides lost more and more aircraft, the continued Chinese superior numbers now being offset by the capabilities of the F-22s. Both sides were many hours away from having any reinforcement aircraft arrive, but both sides had plenty of tanker aircraft in the air, and so the fight continued as first one side, and then the other, would make assaults on one another's tanker and command aircraft.

The Chinese attack aircraft tried again and again to break through the American air barricade to the beaches and to the newly installed American installations at the airfields and along the major highway. But they were foiled in the attempt by the few reserve aircraft the Americans held back to defend inland points against breakthroughs.

In the end, this scenario played to the Chinese advantage in attacking the C-90A aircraft and allied shipping near Magadan. The C-90s, with the fighting now so close, were unable to take off and they remained in the harbor, in deeper water, waiting for the victory that would allow them to depart.

But then, the remainder of the TU-22M+ aircraft came into play. As a result of the Americans having their hands full turning back the attack aircraft and employing the balance of their fighters against the Chinese fighters, these bombers were able to approach right up to the perimeter of the Chinese air advance and launch their LRASD weapons. A contingent of twenty-five aircraft, which carried the latest programming for the LRASD, defined the main thrust.

The Chinese knew in advance that the C-90s would be in the water, and that had accounted for the particular timing of the attack. Coast watchers that they had deployed all along the Kuril Islands had turned the tables on the Americans for this battle. As the Americans had used those islands to lull the Chinese into a false sense of security so the Shanksville battle group could transit them, the Chinese coast watchers had, over the last five days, held their peace until the appointed hour to reveal the exact timing and duration of C-90 flights.

As two groups of twenty Tu-22M+ aircraft approached on each flank of the American position, the twenty-five aircraft carrying the latest version of the Killer Whales made a supersonic dash up the middle, low to the water.

The American AEW aircraft vectored all the resource that they had towards the first two groups of twenty TU-22M+ aircraft which could simply not be ignored. All but ten of those Chinese aircraft were shot down, but not before eighteen launched LRASD weapons. While those weapons were streaking toward various American escort ships in the harbor, and as five of them detected and attacked two of the large SSTN transport submarines, the third group of twenty-five TU-22s arrived.

All of these aircraft were able to launch their Killer Whale devices which were programmed to place the highest priority on the parameters that the Chinese had calculated would detect and prosecute C-90 aircraft sitting in the water...and use the special attack profile that had been developed for them. The Chinese programming proved to be very accurate.

Only six of the LRASD weapons were intercepted by American defenses as they approached the big transport planes. All American personnel on shore and at sea could do was watch in horror as all ten C-90A aircraft were utterly destroyed by the large LRASD weapons which used a pop-up attack profile to come out of the water, rise completely above the aircraft and then crash down upon those aircraft from above as they sat motionless offshore.

By 11 AM it was over...there was now much more debris in the waters around Magadan for those transiting the staging area to look upon.

Luckily for the Americans, they had unloaded most of the men and materiel from the transports before the attack. But the loss of almost one-quarter of their total inventory of C-90A transports in one confrontation was a tremendous blow...not only to the total inventory of equipment, but in real terms to the rate of buildup that could be sustained at Magadan. That buildup would now be slowed by over 30% of what it had been.

In addition, the U.S. Navy had been hit hard, losing three Aegis destroyers, an Aegis cruiser, three frigates and one of the new SSTN transport subs. The two transport subs that had been attacked had used their SUB CIWS systems for defense. But one of them had been attacked simultaneously by three LRASD weapons that had overwhelmed its defenses. It along with all of its supplies which had yet to be unloaded, were a complete loss, lying broken and ruined on the floor of the Sea of Okhotsk.

One hundred and ten U.S. aircraft were destroyed, including forty-two F-16s, twenty-eight F-15s, twenty-three F-18Fs, four F-22 Raptors, all ten of the C-90s, two EA-18Cs, and one E-2C Hawkeye.

The loss of the SSTN, the C-90 transports, and of the vaunted F-22s would come as a shock to the American system, and once again demonstrate that in the face of overwhelming numbers, even the highest technology becomes vulnerable. That shock would reverberate throughout American think tanks and war colleges for months to come.

But the fight had also been very costly for the Chinese. Of the over 1,100 aircraft attacking the Americans, more than five hundred would not be coming home. Only seventy of the enhanced TU-22M+ bombers came away from the fight. Almost all of the SU-35s, half of the SU-37s and most importantly, a full 75% of the J-10 fighters were shot down, along with several tankers, three AWACS and over one hundred of the other attack aircraft.

Chinese production would be hard pressed—as would American production, to keep up with the losses that resulted from the second battle of Magadan—and it would not be the last. Over the next several months, a hot and expensive contest to see which side had the will, the fortitude and the resource to outlast the other in the battle over Magadan would continue.

**May 21, 03:27 local time**

**Approaching the Trans-Syrian Pipeline**

**85 Miles Northeast of Damascus, Syria, GIR**

Colonel Jess Simmons was very worried. In all the flying he had done and all of the combat he had seen, he had never been placed in a position where he was not in control of his aircraft.

Oh, he had taken fire, and even some damage, but his skills had been such, and the damage had been light enough, that he had never felt the slightest doubt about his ability to get his aircraft and his electronics and weapons officer back to base...until today.

The GIR was conducting a massive counterattack all up and down the line in this sector north and east of Damascus. Allied forces that had pushed well beyond Damascus and were approaching the Trans-Syrian pipeline were now experiencing a fierce enemy counterattack that had started yesterday, late in the day.

That attack had come precisely after the reserve AIM-999 Hail Storm missiles had been used to achieve the latest allied advances, and so there were no others available for use against the counteroffensive that the GIR was mounting at this time, and it would be at least another 24-48 hours before any could be spared from either the Syrian desert to the east, or Egypt to the south and west.

Realizing this, the allied command staff had recommended and approved the use of layered conventional forces, to absorb and then roll back the GIR counterattack, preparatory to AIM-999 strikes the day after tomorrow. Colonel Simmons and his flight of Comanche aircraft were an important part of that layered defense.

His command of those stealthy reconnaissance and attack helicopters was very adept at penetrating enemy lines, and determining the locations and the disposition of enemy forces on the ground, and then delivering critical attacks to those enemy forces to soften them up and prepare them for heavier attacks by either Apache helicopters, Multiple Launch Rocket Systems or aircraft of the U.S. Air Force. That air support could range anywhere from fast-moving attack aircraft providing close support, to more strategic attacks from B-2 Stealth bombers or even AIM-999 missiles.

...and softening up the enemy advance columns for that type of support is exactly what Colonel Simmons had been doing early this morning.

But the GIR had responded uncharacteristically quickly and in great strength with several squadrons of the new, GIR export version of the Chinese J-10 aircraft. Those light, very nimble, and highly advanced fighters were fighting the U.S. JSF and F-15 CAP to a standstill, and even penetrating the American CAP in several areas of the front in support of the advancing GIR armor and mechanized infantry.

It was just such a penetration that had caught Colonel Simmons' flight of four aircraft after a squadron GIR aircraft had disposed of, or driven off, the American fighters that were protecting them. On the first pass, these Chinese fighters severely mauled the American helicopters, shooting down two RAH-66s outright and severely damaging the Colonel's aircraft. That damage was severe enough that Jess knew he was not going to make it back to base...or even back to his own lines.

As the reality of the hopelessness of his position finally sank in with the failure of more and more systems, Colonel Simmons keyed his radio and reported to both his weapons officer and to the controlling command aircraft.

"Marty, get ready. We're going down.

"Night Watch Three, this is Dingo flight leader issuing an urgent Mayday. I say, Mayday, Mayday, Mayday...We are going down. Coordinates are..."

But the transmission was cut off in mid-sentence when total electrical power to the aircraft failed, and the Comanche went into an unstable flat spin. The Colonel tried to autorotate the aircraft to a semblance of a "soft" landing, but further control surface and circuitry failures made it impossible for him to regain control of his aircraft.

As the crew of the last healthy helicopter in Dingo flight looked on, Colonel Simmons' aircraft bounced once, and then rolled over on its side before slamming to earth again, its rotor shattering and the aircraft rolling over several times before coming to a smoldering stop against a rock outcropping.

The surviving helicopter had time to make one low level pass over the now heavily smoking wreckage and communicate its location before jinking hard to the left to avoid an enemy missile, and then desperately evading continued attacks as it made its way back toward friendly lines.

**May 20, 19:27, that same time**

**JSF Production Facility**

**Ft. Worth, Texas**

Cindy Simmons shuddered for just an instant as a cold tremor passed over her like the frigid wind from a Texas blue norther. It was something entirely unexpected, and something physically impossible to explain here in the large building housing the F-35C Joint Strike Fighter assembly line in north central Texas where Cindy found herself in the late Spring.

"Jess," she immediately thought.

She didn't understand it, but deep in her heart and soul she felt that something must have happened to Jess.

She was only an hour and a half into her shift. For just a moment she stopped work and just sat there...thinking...worrying. Finally, out of necessity, as the pressure of doing her part in producing these important tools for the defense of America and liberty bore down on her, she put the thought out of her mind and went back to work.

She did so with a prayer that the tremor had been just a physical thing, brought on by something in the air around her rather than some sort of ominous, instinctual premonition. She was all too familiar with the aching void that would forever exist within her since the loss of her son, Billy. And she hoped that she was now simply projecting that ache onto her longing to see Jess safely home. The thought of living the rest of her life with two such voids was unimaginable.

Somehow, deep inside, she knew that something was desperately wrong...and, no matter what she did, she could not entirely shake that gnawing instinctual knowledge. But she would just have to place it in God's hands. His will would be done, no matter her fears, wishes, or premonitions. So she slowly and deliberately closed her eyes, and shook her head, as if to deny such unpleasant thoughts any residence there, and continued—although absentminded and preoccupied—with her work.

Despite her strong faith and unyielding optimism, those unpleasant thoughts continued to plague her, no matter how hard she tried to banish them. Later that night—deep into the night—she would sob quietly into her pillow, praying that her husband, her best friend and love, would be brought home safely to her. But somehow a stubbornly intuitive part of her already knew that the Lord would not be answering this prayer in the way that she hoped He would.

**May 21, 03:29 local time**

**Back on the Ground**

**85 Miles Northeast of Damascus, Syria, GIR**

Chief Warrant Officer Marty Walker regained consciousness with a start. As he oriented himself and tried to gain his bearings, he realized that his head was pounding with a terrible, blinding headache, and he was lying on his side. The memory of how he came to be in this awkward and unnatural position in his Comanche helicopter came flooding back to him. Thick black smoke was entering his compartment rapidly and he realized he had to get out...now.

Normal operation of the canopy in this position, with the helicopter on its side, was impossible so Marty quickly kicked out the side window, which was now surreally situated over his head. As he reached with both hands to pull himself out of the smoking wreck, white hot pain shot up his left forearm, and he was unable to grasp anything with that hand. Looking at that arm and seeing the sharp warp between his wrist and elbow, he realized that his left arm was broken, and so he concentrated his efforts on pulling himself out of the wreckage using his right hand only.

After several very painful seconds and a tremendous exertion, Marty was able to free himself and slide down the side of the aircraft to the ground.

As soon as he was shakily standing on his own two feet, he quickly made his way to the front of the aircraft and the other crew station to check on his pilot, Colonel Jess Simmons.

It was worse than he had feared. The forward compartment was partially crushed and full of smoke, and the Colonel was clearly unconscious and hurt badly with blood running down his forehead. Pulling off the emergency access panel, the Chief Warrant Officer rapidly disengaged and then released that canopy section behind which the Colonel was trapped. He then began to unhook the Colonel's harness and began to pull his limp body out of the aircraft.

Walker knew he would have to exert pressure on his broken arm and use it to help pull if there was any chance of getting the Colonel out. Steeling himself for the pain, the Chief Warrant Officer began to pull, trying his best to ignore the blinding pain as he tried to save his friend.

As he pulled, sparks began igniting within the compartment and a fire started that spread rapidly. Painfully trying to pull the Colonel out of the wreckage, Marty encountered resistance, and quickly found that the Colonel's left leg was badly mangled in the wreckage and he was unable to pull it free. The fire was beginning to reach that appendage and the sickly smell of burning flesh mixed with the fuel, electrical fire, and other smells associated with the wreck of the aircraft.

Marty became desperate and knew that time was running out. He could not safely stay and work with the Colonel for more than a few seconds. Feverishly trying to disengage the Colonel's leg, he finally was able to use his good hand to bend a control panel back off of the leg and free it.

Using the good hand to pull at the leg, Marty discovered unnervingly, that the Colonel's damaged leg was almost completely severed half-way between the knee and hip. The bone had been cleanly broken by the impact with the control panel and only a large hunk of flesh behind the bone held the leg to his body. The same fire that had now severely singed Marty's good hand, had cauterized the Colonel's leg so the bleeding was not as severe as it otherwise would be. But Marty could tell that the Colonel's life now hung in the balance of what happened in the next few seconds.

Using all of his strength, and somehow ignoring what would otherwise be unbearable pain, Marty pulled Jess Simmons free of the aircraft and down to the ground, where Marty rolled them both away from the wreckage as quickly and as far away as possible. Before they had rolled over three times, there was a tremendous explosion that lifted them in the air, throwing them perhaps fifteen feet from the now fiercely burning hulk of their aircraft.

Marty Walker pulled his unconscious commanding officer into the rocks and made his way, slowly, painfully, to a depression near the top of the rock outcropping. From that vantage point he had a good view of the forward area of the battle where the enemy was advancing. It also allowed him to

activate his emergency radio beacon and make contact with the SAR units already airborne and looking for Colonel Simmons' wreckage.

**May 21, 03:42 local time**

**Forward Command Post, U.S. Forces**

**80 Miles Northeast of Damascus, Syria, GIR**

"Sir, we are in contact with Colonel Simmons' rear seater, Chief Warrant Officer Walker. He indicates that the Colonel is severely wounded but alive, and that there are a minimum of eight enemy armored personnel carriers or tanks approaching his position.

"He waved off the first SAR unit, which was going to have to abort anyway because we don't have air superiority in the area. He's requesting immediate close air support."

Colonel Kevin Martin, who had listened intently to the Lieutenant's update, scratched the two day stubble on his chin as he took the facts in and tried to visualize that sector of the battlefield and the available assets at his disposal.

American forces had slowed the enemy advance this morning, but they had not stopped it. Colonel Simmons' own flight of Comanche helicopters had represented the point of the sword in that regard, and a MLRS strike that they had called in moments before going down had severely mauled the forward elements of the enemy advance in this section of the battlefield.

"In fact, their calling in that strike probably saved them from capture or death to this moment," Colonel Martin thought. "If that strike had not occurred, the enemy would already have pushed well past Simmons' and Walker's location."

But that spot was now exactly where the enemy was focusing, and the efforts to rescue the two aviators were now serving to sharpen the enemy's focus.

Due to the instability of the air situation, the sector's JSTAR battlefield control aircraft, with its synthetic aperture radar and combat control capabilities, was well off to the southwest and was not in position to cover the downed aircrew, or the forward headquarters from which Colonel Martin operated for that matter...and these facts deeply concerned the Colonel.

"Okay, get on the line to HQ and request a priority air support package to assist in the extraction of these guys. Ask 'em to bring up the JSTAR aircraft to cover this entire section of the battlefield and request whatever CAP they have for the job.

"We need a heavy duty CAP to drive off the enemy aircraft and keep them off...and we need to sanitize the ground area of enemy armor and mechanized units. Have Walker operate as our on-the-ground forward air controller (FAC) to coordinate the support he needs to keep them from being captured or overrun, and to prepare the area for extraction."

**May 21, 03:59 local time**

**Forward Headquarters, GIR 7<sup>th</sup> Army**

**95 Miles Northeast of Damascus, Syria, GIR**

General Abduhl Selim considered the information coming in from the front. The Americans were focusing efforts on a non-critical portion of the forward portion of the battlefield, and that mystified him. That position was neither strategic nor very defensible. Why would they be focusing their efforts there?

"Go over it once more, Captain. I want to know the details of how this pitched battle developed."

The captain, a man ten years older than the general himself, but one who had come to respect the general's experience and his leadership just the same, reviewed for General Selim what they knew.

"General, we were ahead of schedule at 0230 hours when the Americans began interdicting our forward elements with attack helicopters protected by a strong CAP.

"Your order of 0245, committing the reserve air units, served to blunt this American effort, but did not fully contain it. Our forward progress was severely curtailed by a massive American missile strike at 0320. That strike was not an attack by their new missiles. It was an attack by short range ballistic missiles that we analyzed and determined to be from forward deployed American MLRS units off to our southwest.

"In fact, we were able to backtrack the missiles' trajectory and utilize SU-35 and SU-25 aircraft to locate and destroy two batteries of American MLRS units involved in that attack.

"Very soon after that attack, our fighter aircraft in that sector broke through the American air cover and savaged several flights of American attack helicopters, some of which had served as forward air control for the missile strike we had experienced only a few moments before.

"The pitched battle began to mount shortly thereafter as our forward units began advancing into the area where one of the American helicopters was downed. The force on force structure has escalated ever since, focusing around a minor outcropping of rock..."

The Captain leaned over the electronic map, checked his figures and then pointed to an otherwise nondescript portion of the map that had numerous green unit markers on it representing GIR forces, confronted by a smaller number of red markers representing American forces.

"...here. This is where the air and armor forces are converging on both sides."

Clearly, someone, or something, of great import to the Americans had gone down there. Something they felt was worth concentrating all of this firepower to protect or save.

“How can I use that against them?” the General asked himself.

“If I can but hold the Americans in place in this exposed position for enough time, perhaps...”

Looking at the map and the lay of the land, as well as the advancing units in that particular sector, the young general quickly saw a set of conditions he felt he could capitalize on.

“Captain, contact the commanders of these four armored battalions from the 73<sup>rd</sup> and the 27<sup>th</sup> mechanized infantry division here, that are now approaching the battle. I have new orders for them.

“In the meantime, contact General Abin and inform him of my intention to send another wing of J-10s and two wings of SU-35 aircraft here immediately.”

**May 21, 04:17 local time**

### **Rock Outcropping**

#### **85 Miles Northeast of Damascus, Syria, GIR**

Marty Walker surveyed the terrain and the conditions around him. Thus far he had been able to call in significant air and fire support on advancing GIR formations and avoid capture or death.

Those GIR units that had initially tried to capture him and the colonel had all been destroyed or dispersed by the support he had received, but the overall GIR advance had continued and had partially enveloped his position to either side. A few moments ago several American Bradley Fighting Vehicles had gotten to within two hundred yards in an attempt to rescue them, but they had then had to withdraw under intense enemy fire that had destroyed three and sent the others back to the west.

During the fighting there had been three SAR wave-offs, and one SAR helicopter had been shot down by enemy fire. From the fireball that had resulted off to his south and west, he knew there were no survivors. But he knew that the situation had gone beyond saving him or Colonel Simmons...although keeping Colonel Simmons out of enemy hands was something he had been directed to ensure at all costs, and something to which his command was willing to dedicate tremendous resource as well.

Now there was a pitched battle going on all around him. The enemy was pouring more and more men, materiel, and aircraft into this area of the battlefield, matching and trying to outdo American efforts. Based on what he was hearing over the radio, over twenty enemy aircraft had broken off from one of their large formations and attacked the U.S. JSTAR aircraft well off to the south.

Although all twenty of those enemy aircraft had been shot down, five of them had gotten close enough to the JSTAR to launch medium ranged radar-guided missiles at the large American aircraft and it had been hit and brought down, lost with all of its crew. It was a tremendous loss to allied forces—and it would prove to be a costly one.

Marty was amazed that he and the colonel were still alive. There had been a few very close calls involving tank fire, enemy air attacks and enemy missile attacks. Twice, enemy infantry, despite the supporting attacks by American aircraft, had very nearly overrun his position, and he had been forced on one of those occasions to use his service pistol to shoot and kill the last two attackers.

The colonel remained unconscious, but his condition had stabilized as a result of instructions Marty had received over his radio and the crude application of a tourniquet to his mangled leg. Every so often Marty loosened that tourniquet a little for a few moments in the hopes that some circulation would get down into the lower leg. But from the looks of the horrible wound, and the extent of the severed flesh, Marty doubted much blood was getting there or that the leg could be saved unless they got Colonel Simmons out of here very soon.

Now, a final attempt to reach their position and extract him and the colonel was about to be made by an entire company of M1-A1 Abrams tanks and a battalion of mechanized infantry. It was to be accompanied by the largest surge of American aircraft yet that would try to gain at least temporary air superiority over this section of the battlefield. If they did, a helicopter extraction would be attempted under the covering fire of the armor and the mechanized units. If not, then those units themselves would extract the two men from that outcropping of rock that was now serving as their fragile fortress.

**May 21, 04:32 local time**

### **Forward Headquarters, GIR 7<sup>th</sup> Army**

#### **95 Miles Northeast of Damascus, Syria, GIR**

The Americans were committing their strength just as Abduhl Selim had hoped. When it came to rescuing one of their own, they were very predictable. What he considered the foolish American resolve to rescue their own at all costs was something Selim had seen used against them on a smaller scale several times. He now intended to use it against them on an even larger scale.

Their major thrust was now underway, pointed towards that insignificant outcropping of rock...and that seemingly insignificant rock formation had their full attention. He had committed just enough forces there...actually large numbers of men and equipment...to hold their attention and convince them that they would have make an equal or larger commitment.

It had been a quick-witted and dicey decision. Too little force, and the Americans would accomplish their task too quickly and pull back away from the trap Selim planned for them. Too much force, and the Americans would realize they could not accomplish their objective and would withdraw from the trap as well. Abduhl believed he had timed and proportioned it just right.

Now, though, it looked like the American rescue effort, if indeed that was what it was, would be at least temporarily successful. It would only appear that way because the GIR forces in the area were using that initial degree of success as a lure. The GIR forces in that immediate area would intentionally appear not strong enough to stop them.

And that was just fine. As Selim hoped, it would serve to pull the Americans further in. For that very purpose the general had spent the last half hour rerouting and redirecting significant forward forces to the west of the outcropping to serve as his main thrust. With the destruction of the American battlefield control aircraft, despite the significant losses in achieving it, Abduhl was now confident he could pull off his overall plan successfully.

Turning to his chief of staff, the general issued the necessary orders.

“Have the 73<sup>rd</sup> and the 27<sup>th</sup> begin their advance now. Make sure they understand that our air forces and other committed units will be holding the enemy in place to their east, and that their main task is to completely envelope the partial envelopment we have already accomplished at the focal point...and to do it in strength.

“We will allow the 17<sup>th</sup>, the 3<sup>rd</sup> and the 51<sup>st</sup> divisions, which are advancing as a part of our 2<sup>nd</sup> echelon, to completely destroy any remaining resistance the Americans might care to offer.”

**May 21, 04:45 local time**

### **Rock Outcropping**

#### **85 Miles Northeast of Damascus, Syria, GIR**

For just a brief moment, Jess Simmons came to. He was very groggy and his pain was intense, but he realized he was being carried by several men and he could hear the sounds of a Black Hawk helicopter increasing the speed of its rotor as it prepared to take off. Above that noise, the sound of a pitched battle could be heard. The heavy *crack* of tank fire interspersing the sound of explosions, and automatic weapon fire seemed to be coming from all around...most of it very nearby.

Jess slowly opened his eyes and saw Marty’s shoulder above him. He realized that Marty was one of four soldiers that were carrying him on a stretcher...and his memory began to return.

The crash...they were down. But for how long? He saw Marty glance down at him, notice his open eyes, and smile at him.

“Hang in there, Colonel. We have some welcome visitors here and we’re about to get you on board this beautiful Black Hawk and get you the hell away from here. Just hang on!”

Marty stopped talking and turned away as they approached the waiting helicopter and passed the end of the stretcher he was carrying to a corpsman reaching out of the helicopter. As this was happening, Jess Simmons sighed and closed his eyes.

“So we survived the crash,” he thought...but then an intense pain on right side of his head, coupled with a terrible spasm in the thigh of his injured leg caused him to black out and lose consciousness once again.

As Marty and one of the other medics climbed into the aircraft, and as the door gunner fired a long burst of machine gun fire at a target somewhere to their right, the helicopter’s rotor rapidly gathered speed, and the sound of the jet engines pitched to a scream. Then, the Black Hawk tilted slightly forward and took off.

**May 21, that same time**

### **Forward Command Post, U.S. Forces**

#### **80 Miles Northeast of Damascus, Syria, GIR**

“They’ve got him! Sir, they’ve just taken off and are under a secure CAP making their way back to the rear. They indicate that Colonel Simmons’ condition is critical, but stabilized for the moment.

“Ground units are beginning to pull back, but report heavy fire coming from all sides and that their corridor for escape is rapidly shrinking and closing... .

As the Lieutenant said these words, Colonel Martin urgently held up his hand.

“Hold on a minute, Lieutenant. Everybody be quiet.”

As a few whispered comments circulated amongst the staff, the colonel became more insistent.

“I said, BE QUIET!

“Can you hear that... to our rear? Sounds like heavy engines and tracks.”

Then, from fewer than five hundred yards to their rear, as soon as the first GIR main battle tank in the column cleared the hill above the headquarters encampment, the unmistakably loud *CRACK* of that first GIR tank’s main gun was heard, followed by the almost instantaneous explosion of one of the fuel trucks situated a mere 100 feet from the command tent.

As the Colonel shouted, “Everybody out of the tent! We are under attack!” an entire barrage of fifteen 120mm main guns sounded from the advancing company of GIR T-90 tanks. They were

targeting the three M3 Bradley Fighting Vehicles and the four TOW missile-armed HMMVs tasked with providing security for the camp. They also were targeting the command and control vehicle version of the M3 and the tent it was parked next to...the command tent itself.

The resulting explosions destroyed two of the M3 IFVs and all four HMMVs outright. They severely damaged the command and control Bradley and also completely destroyed the command tent where Colonel Martin had just been listening to the briefing regarding the successful extraction of Simmons and Walker. Every person inside the command tent, including Colonel Martin, was killed before they had time to escape.

The troops caught in the American forward headquarters returned brave, but largely ineffective fire. Similarly, the surviving Bradley put up a heroic fight. But sixteen enemy T-90 tanks rolled into the camp and crushed every bit of that resistance, losing two of their number to the Bradley and having another tank disabled by ground fire from the troops.

The American headquarters facility was completely and utterly destroyed. With that destruction, the envelopment of over eight thousand forward American troops and their equipment was completed, and another rung in the rising ladder that was General Abduhl Selim's list of accomplishments was achieved. Around the Middle East, amongst GIR enlisted soldiers and officers alike...and spreading to the high command, Selim was now being referred to more and more often by his new nickname... the Mahdi's Young Lion.

**May 28, 09:35**

**Near the Lincoln Memorial**

**Washington, D.C.**

Johnny Chen knew he had to be particularly careful. His Chinese features were not overly apparent, but it was obvious that he was of Far Eastern descent and these days in America, that almost always garnered additional attention from both the authorities and from normal citizens who might otherwise be considered simple passersby. Given Johnny's current task, any attention was bad.

He simply did not want to be remembered by anyone who might see him around the national monuments today. It was too close to the date of the operation, but it was also a final reconnoiter that Johnny alone had to make.

In an effort to try to deflect any unwarranted or undesired attention, Johnny always had an "America – Love it or Leave it" sticker on his small Toyota pickup truck, which was now parked not far away. Also, he always went out of his way to find clothes that were made in America, and was always willing to talk about his loyalty to American-made products to anyone who would listen.

During his drive across America for this operation, he had had numerous conversations with individuals about the state of affairs in the world, particularly with those who mentioned his Far Eastern features. He always made it a point to leave them with the firm knowledge that Johnny Chen was a loyal American, who had been here many years, who had come from the Republic of China—from Free China—and who detested with a passion the Communist rulers of the mainland. By the time he and whomever he talked with parted company, he usually had them believing that here was one Chinaman who was willing to lay down his life for his country.

...and he was.

The only problem, of course, was that his country was in fact the People's Republic of China, and everything about the facts of his history was a lie...with the exception of his being here in America for many years.

Johnny was one operative that still had all the "sleeper" contacts and resources he needed for the operation he was about conduct. While it had been Johnny who had infiltrated Vandenberg Air Force Base in California and shot down that Titan IV B booster that was carrying a critical new American KH-12 satellite into orbit, he had done that job alone, and never been contacted to do another, being held in reserve.

But that reserve status was now ended. Johnny had already been in the Washington, D.C. area for ten days and had met with his team three times. They had reviewed each of the assignments and the positioning over and over. All of them had been to the area around the memorial for a personal look, and now Johnny was here today for one last look at the terrain where he and his team would play out their part in the operations three days from now, on Saturday, May 31<sup>st</sup>, during the big festivities.

Johnny knew that at least two other teams, maybe more, would be involved and that those teams were from at least one other nationality. He was relatively certain that long hidden and very important operatives like him from one or more of the Islamic nations would be involved, but he was totally compartmentalized in his own plans and had no contact with the other team or teams, and had no awareness of what their specific plans would be.

"Probably several different attempts will be made, ensuring that at least one of them will be successful," he thought as he strolled past the monument and onto the circular drive that surrounded the Lincoln Memorial and provided access to it.

Johnny knew that the Americans could not be allowed to savor their victories of last fall. The festivities on Saturday were meant to accomplish just that. For the Americans, the day was intended to

honor those victories, particularly the one in Alaska. To tell their people that they were back in charge and had the enemy backpedaling. For Johnny, Saturday would be directed at showing the Americans that no one was safe, that their victories were meaningless for their people here at home...that not even their heroes were secure. No not even here in their very capital.

He contemplated the impact on American morale that a successful mission would have as he walked down the sidewalk along the intersecting road that led to where Independence Avenue and Ohio Drive came together just south of the Memorial. At this point, across Ohio Drive, along the Potomac River, would be where he and his team would set up. There was a food vendor there...a friend, set well away from the immediate security zone of the festivities that would be occurring in front of the Lincoln Memorial. The food stand was on the sidewalk there that paralleled the street, leading to parking areas that served the Memorial and West Potomac Park.

Walking on the other side of the street past that food stand, he checked the fields of vision and fire one more time. Everything continued to look good and he was more certain than ever that if events on Saturday caused the action to flow his way as anticipated, he and his team would be in the perfect position to successfully fulfill their mission.

**May 29, 16:23**

### **Outside of the Oval Office**

#### **The White House, Washington, DC.**

Sitting just outside of the door to the Oval Office, Stacey Urkut marveled that she was actually here, about to talk personally to the President of the United States in his office.

From the battlefield encounter with Colonel Kensington, she had been flown to Anchorage on May 2<sup>nd</sup> and had been allowed a generous two days to get herself oriented to living back in civilization...and to get cleaned up, for which she had been extremely grateful. Then, she had spent almost an entire week working with intelligence officers and members of the command staff for the entire Alaskan theater, sharing with them what she knew and what she had experienced. It may not have seemed like a formal debriefing to her, but the military command in Alaska was very anxious...and very grateful...for the opportunity to debrief her.

On May 11<sup>th</sup> she was flown to Seattle, Washington, where an event in her honor was held and where she met the Governor of the State of Washington and the Vice President of the United States, John Bowers. From there, she and the Vice President had made their way across the United States where Stacey had the opportunity to speak at several rallies in cities from Los Angeles to Salt Lake City to Denver to Dallas to Atlanta, Chicago, Philadelphia and Baltimore.

For security reasons, the Vice President had traveled with her only so far as Dallas. Thereafter she was in the company of the Secretary of Defense, George Crowler, who had been as gracious an escort as the Vice President had been.

She had arrived in Washington, D.C., yesterday for her meeting with President Weisskopf. She was sitting outside his office now waiting for that meeting which would begin momentarily.

A young man, her escorting Secret Service agent, was sitting just across the hall from her. His name was Burt Stevens and he was the head of the President's Secret Service detail.

He had been very nice, and had engaged her about her experiences in Alaska as they had made their way from the entry area here to the Oval Office, and as they had sat here for the last three or four minutes. Coming from a military background himself, the agent had appreciated what Stacey had been through and had been very understanding, complementing her on a job well done.

The door to the office opened and the President's Chief of Staff came out, noticed Stacey and offered his hand to her.

"Mrs. Urkut, welcome to Washington, D.C. Welcome to the White House.

"The President is very anxious to meet you. Please, follow me. He is available now."

After shaking the Chief of Staff's hand warmly, Stacey followed him into the room.

And there it was. Just as you would see on TV, or in the history books. The large desk, the pictures, the windows with the views outside...and the President getting up from the desk and stepping across the room to greet her.

"Mrs. Urkut, it such a pleasure, and I must say, an honor to finally meet you."

The President met her halfway across the room between his desk and a grouping of couches and chairs where four other gentlemen were already seated. He shook her hand graciously and then offered to have her sit in that grouping of chairs.

"Mrs. Urkut, allow me to introduce these four gentlemen to you. I believe you already know George Crowler, the Secretary of Defense. This is Fred Reissinger, our Secretary of State and this is General Jeremy Stone, the Chairman of the Joint Chiefs of Staff."

Turning to the fourth man, the President continued.

"And this is JT Sampson. You may be aware of his internet news site, SierraLines. Although it is somewhat out of the ordinary, because of his relationship to this administration, he is here today to listen report on this meeting to the American people. He will also, if you are willing, conduct an interview with you afterwards...to get the more personal side of your story to the American people.

“That is entirely up to you. Do not feel shy about refusing any press interview if you desire.”

Everyone in the room, including JT Sampson, chuckled at this.

“But I will personally vouch for JT. He has been the most honest, most thorough, and most understanding editor or news executive I have ever met...and he is a loyal American to boot.”

As the President introduced each of the gentlemen, they each stood and shook hands with Stacey, briefly expressing their gratitude to her and their thanks at meeting her.

Stacey recognized George Crowler immediately from her time traveling to Washington, D.C. She also recognized Secretary Reissinger from so many news reports over the last several years as the international scene became more unstable and strained. But she was not as well acquainted with the General, who preferred to stay in the background, working with the various chairmen of the military branches, executing the orders and policies of their commander in chief and his Secretary of Defense.

She was very familiar with JT Sampson. She had tracked the growth of his site on the internet from its early days, when he had personally run almost all of it with his wife, and when so many of his writers and editors had been just ordinary Americans trying to be involved. She was proud of JT, from his personal early involvement in issues, like the Klamath Basin Water Crisis, all the way through his tremendous rise as a news powerhouse during the election of President Weisskopf.

“Thank you, Mr. President, and all of you gentlemen. It is I who feel honored to be here in your presence. Thank you for inviting me...it is something I never expected, and certainly never sought.

“JT, I will be happy to give you that interview. I have admired you for several years as I lurked on the Independent Republic and heard about SierraLines. We were all riveted by your reporting and by reporting from members of the Independent Republic regarding the Klamath Basin Crisis in 2001.

“Thank you for that involvement and example.”

JT knew that his opportunity to engage Stacey Urkut in later conversation was now a certainty. He was grateful for the President’s direct invitation and the opportunity to have such an interview.

But he did not want to go into that now. This was the President’s show, so he responded simply.

“Mrs. Urkut, your example rises far above all of that. That is precisely why the President has us all sitting here today in the Oval Office.”

Thankful for the cue from JT, the President got to the heart of the meeting.

“Now, Mrs. Urkut...”

Stacey respectfully interrupted the President. “Mr. President, please feel free to call me Stacey.”

The President was grateful for permission to address her in such a manner.

“Thank you, Stacey, I was going to ask if that would be okay. As you can see we are all overjoyed to have you here with us today. I want you to know exactly why.

“For months we have prayed that this meeting would be able to take place...that both our own efforts from this office and our military and civic personnel, as well as those of you and so many other brave Americans there in Alaska would make it possible.

“And now those efforts and the help of Almighty God have opened the door and here we are.

“As you know, we are presenting you with the Medal of Freedom day after tomorrow. It is the highest non-military award we can bestow upon a citizen of this nation. Like the Medal of Honor, it is reserved for a very select few who rise above and beyond their call as citizens of our great Republic.

“And that call as a citizen is already a high calling. Higher in my estimation than in any other country because of the blessings of liberty we enjoy in this nation. That liberty places upon each of us great responsibility to be involved...to make sure that our voices are heard such that all of our liberty can be benefited thereby...and prolonged.

“Such liberty requires high moral caliber and fiber...and this is another great responsibility of our citizens. Without that moral fiber, we cannot remain free.

“So, the calling as a citizen of the United States of America is already a high one...and Stacey, you have shown all of us the epitome of not only answering that call...but rising far above it.

“Your reports from Nome, aired on the internet on the morning of June 23<sup>rd</sup> last year, caught the imagination of all Americans and riveted us to our chairs, or wherever else we were at the time.

“The invasion of America by foreign enemies, and the on-scene reporting of it in the face of grave danger will be remembered throughout our history like the ride of Paul Revere...because that is exactly what it became.

“We had already been at war for several years...and we had already been attacked brutally on our own soil...but now the enemy had come to claim that soil. It was something far too many thought could never happen.

“So despite our heightened awareness as a result of the war and so much carnage from continuing terror attacks...and despite the great lengths to which so many Americans had already gone to support the war effort...there was still a certain level of complacency. Your vivid images of that invasion and your messages that accompanied them amounted to a clarion call that brought home the final reality and brutality of our enemies to everyone.

“As the President, and on behalf of the people, I can only humbly thank you for your willingness to do so, and for your bravery in so doing.”

Stacey wanted to speak, and the President could tell that she would like to downplay what she was hearing, but the President pressed on.

“Please, Stacey, let me continue, because you are deserving of every word of praise I have uttered and more.

“After getting the message about the invasion of America out on the Independent Republic website, and after that message had been picked up by every major news service in this nation and the free world, you broadcasted right up to the moment that you either had to leave or face capture or worse from our enemies.

“For most, that would have been far more than enough...but not for Stacey Urkut.

“From there you went on, as 57 year old woman behind enemy lines, to form an effective resistance movement against the Chinese invasion. You accomplished this at continual mortal danger to yourself and your brave compatriots...and you took the battle to the enemy.

“I will tell you, Stacey, your story and that of your compatriots, which you have so articulately and straight forwardly shared as you traveled here to Washington, will go down in our history as being pivotal to the cause of liberty and freedom. As in the crossing of the Delaware River, as in the battle of Gettysburg, as in our victory on Guadalcanal in World War II...your efforts kept the enemy occupied and off balance so that our military had the time to prepare for the great victory that followed last fall.

“We all thought...and I must admit, as a former military man myself, I thought...that there must have been hundreds of you in your group alone. We read the intelligence reports. We marveled at the amounts of resource the enemy was committing...and like the enemy, we underestimated you and the will of your comrades in arms.

“I cannot tell you how stunned we were to hear that you had accomplished it with so few.

“May God bless you, Stacey...you are probably the most deserving person in the history of our nation to receive this award. If I could legally do so, I would award you the Medal of Honor.”

As the President finished, the other gentlemen in the room all nodded their heads in agreement...they were simply awed at what had happened in Alaska...what had set the stage and prepared the way for the successful defense of Anchorage, and the pushing back of the Chinese there in November, only six months ago.

There were tears in Stacey’s eyes. She could tell that this was no political posturing. The President was speaking from his heart.

“Mr. President, I do not know what to say. I only did what I felt compelled to do in the face of such aggression against our country and against my friends and neighbors.

“So many have died. So many have been hurt...have lost everything. I simply cannot accept, for myself only, the honors you bestow...”

As Stacey paused, everyone in the room felt the slightest stirrings of unease in the pit of their stomach. America needed her heroes...now more than ever...and Stacey Urkut was a hero to the nation. One the nation needed, just as they had needed Leon Campbell and others up to this point in the conflict. What would they do if Stacey Urkut simply would not accept?

As the President prepared to interject, Stacey relieved all of their anxiety.

“But I will accept it on behalf of all of those who fought with me. They are the true heroes...from young men barely 16 years of age, to old Native American council leaders in their seventies. Their stories are the ones that really need to be told...not a middle-aged woman’s like mine. I will also accept it on behalf of all of those who suffered so much through the Chinese occupation.

“I just pray for all Americans that our forces are victorious...very soon...and for all free people everywhere thereafter. We are trusting you, Mr. President, and these capable men and women around you...and our brave personnel in the field all over the world, to make sure that happens.

“I know now, from my travels, from seeing firsthand all across this nation how people have come together to face our enemies...that it also depends on each and every one of us. I am thankful for the opportunity to do my part whenever and wherever I can.”

**May 30, 22:50**

**Room 2312, Hyatt Hotel**

**Washington, D.C.**

Sitting in their room watching an old John Wayne/Jimmy Stewart movie, Joe and Elizabeth Trevor basked in one another’s presence.

So much had happened over the last several years and it had all served to draw them together. Their difficulties in having children...Joe’s dedication to his work and Elizabeth’s struggles to come to terms with that dedication during that time period: the events leading up to Joe’s first Nobel Award with the Human Reasoning Structures, or HRS as they were now well known; the war and Elizabeth’s close call with death at the hand of terrorists outside of the Raythone facility in Salem, New Hampshire; the excruciating events and feeling associated with working with Sandra McPherson, and what they had both viewed as her underhandedness in dealing with Joe’s methodologies and her use of it in furtherance of her quasi-legal fetal tissue studies; the unmitigated joy at how that very work had led to the discovery of the HRS in fetal tissue, and how it led to the overturn of abortion practice

in the United States with the pivotal Supreme Court decision last year; and how that had led to a Noble Prize for Sandra McPherson, who had experienced a dramatic change of heart, and who was now their close friend—and who was in fact just down the hall from them.

Through all of those experiences, Joe and Elizabeth's relationship had grown until now they could both say, without reservation, that they were of one heart and one mind. And they had been of one heart and mind in the decision to travel here to Washington, D.C. to watch the presentation of the Medal of Freedom to Stacey Urkut for her phenomenal activities in Alaska.

Reflecting on all of this and on the dramatic turn of events in the war effort, Elizabeth sat up from watching the movie and took her husband's hand in her own.

"Hon, isn't it phenomenal what is happening?" Elizabeth asked with excitement. "I mean, look at our own lives and the events we have been blessed to be a part of.

"It just seems like there is such a tremendous outpouring now and it's affecting so many people all over the world. Like we've turned a corner or passed through a critical juncture in all of this, and are actually making up ground.

"As the President said in his Christmas speech, the Hand of Providence, our Father in Heaven, is lending us His support now . While I have no doubts that there's still a lot of pain and anguish we are all going to experience..."

Speaking of pain and anguish immediately brought thoughts and feelings of her close friend, Cindy Simmons, and reminded her that not everything was rosy or would be considered a *tremendous outpouring* by those adversely affected.

Cindy Simmons had been planning to join them here for the presentation. It was going to be one of the biggest public events and celebrations in American history, certainly the largest since the beginning of the war. But Cindy had called a few days before they were scheduled to leave and informed them of Jess's critical injuries in the fighting in Syria and his serious condition.

"...Cindy's pain is just a little too close to not to recognize it...but still, we have to honor people like Mrs. Urkut in what she accomplished and our armed forces who achieved the victory in Alaska.

"Things like that need to be an example to us all, and help us through what Cindy is experiencing. I'm even more anxious to get down to Texas and help her prepare for Jess' homecoming as a result of this."

Joe listened to his wife. She was always close to the true spirit of things while he plodded along pragmatically and analytically in her wake. As a result, over the years, after they had been able to overcome some of the natural friction that such differing approaches created, they had discovered that they could compliment one another extremely well. Once they made the mental decision to focus on the complimentary nature of their differences instead of the potential friction...their relationship had matured naturally, allowing them to face trials together that otherwise might have torn them apart.

"Honey, I am excited too...and I look forward to tomorrow and then getting down to Texas for a few weeks to help Cindy. I hope we can be there when Jess gets home ...I can't wait to see his smiling face...and you know that guy will be smiling no matter what else.

"Who knows, we might just, as they say in Texas, stay a while, and help him get back in shape on his ranch. We can certainly afford it, and I can get the time off at work if necessary.

"In the meantime, scoot over a little and sit back so I can see John Wayne, would ya?"

**May 31, 11:53**

### **Presentation Stand**

#### **In front of the Lincoln Memorial, Washington, D.C.**

The presentations and festivities had been under way for over an hour. Dignitaries from all around the country were speaking and extending their congratulations and thanks to the President, the armed forces, and to the guest of honor, Stacey Urkut. Other honored guests from all over the free world had made their way here...to honor and commemorate the victories of late last year and the offensive operations they had generated that were continuing that very day.

Over one million people were literally filling up the Constitutional Gardens that ran from the Lincoln Memorial to the Washington Monument, and The Mall that ran from there back to the Capitol building. An excellent sound system was strung up all along the way, all around the Reflecting Pool back beyond the Washington Monument, so that everyone could hear.

People were assembled at the Vietnam Memorial and around it, under the trees in between, around the World War II memorial, and as far away as the Jefferson Memorial where a special gathering area had been set up for overflow visitors. Video displays were set up for live feeds of the proceedings at all of these places, and throughout the wooded areas in between so everyone who was not in a direct line of sight...or was too far away...could watch the events.

People were picnicking with their families. The temperature was warm, but not oppressive for a late spring day in the nation's capitol. The press was broadcasting live to an excited and hungry nation. The good news was contagious and the viewing and listening audience for the event was expected to be one of the largest ever in the free world.

Security was tight.

The Secret Service was, of course, out in force surrounding the President close in to the presentation platform, and surveying all of the ground and air approaches thereto. The Park Service Police, augmented by the Capital police, were spread liberally throughout the crowd—almost six hundred officers present watching for any suspicious activity or movement in the crowd. There were over fifteen hundred National Guardsmen manning blockades, checkpoints and observation points in, and particularly around, the huge crowd. Over two thousand Marines were on alert.

Around the entire perimeter police and National Guard helicopters were patrolling from the air. Higher overhead, a combat air patrol of no fewer than sixteen F-22 Raptor aircraft surveilled the entire region. The ground-based Aegis Ballistic Defense missile batteries around the capitol were on their highest alert and, along the Potomac, no fewer than three Aegis vessels, one cruiser, and two destroyers augmented the ground-based missile defense.

The presentation to Stacey Urkut of the Medal of Freedom was supposed to occur promptly at noon. It was one of the principle highlights of the day. The President was about to approach the podium and make his own speech prior to presenting the award, after which time Stacey Urkut would speak to the entire nation, and the free world, herself.

Joe and Elizabeth Trevor and Saundra McPherson were seated fifteen rows back in front of the presentation stand in an area reserved for VIPs and special guests. That section extended fifty rows back and seated over two thousand special guests of note like the Trevors.

Saundra McPherson, sitting next to her friend Elizabeth Trevor, was proud to be here.

“Yes,” she thought, “Proud.”

It amazed her. Where a little over a year ago she had been totally cynical of her government in general, and particularly belligerent towards the Weisskopf administration, now she sat in rapt attention at the presentation of an award by this administration for efforts in a war that a year ago she would have called unnecessary at best, and self-inflicted at worst. But now all of that had changed.

The unexpected discovery of the Human Reasoning Structures in early fetal tissue from Europe that she was digitally modeling had literally changed her world and the world around her. It had altered her worldview, and opened up the opportunity for the patriotic fervor that she felt today...something she had never really felt before.

Once she knew, beyond doubt, that the fetus was a living, reasoning human, like most of America, she had stepped back in revulsion from what she had been doing. She was just surprised and ashamed that she had not realized it earlier, that it had taken an unmistakable and unarguable scientific proof to draw a conclusion that her own common sense should have told her long ago. She had already determined that she would spend the rest of her life making up for that mistake.

Now, here she was, with her friends the Trevors, and the President was beginning to address them as he prepared to present Stacey Urkut, a woman about Saundra’s own age, a medal for heroism and citizen involvement that went above and beyond her normal duty as a citizen.

“My fellow Americans, as other before me have indicated, we are gathered here today...”

**May 31, that same time**

**3 Miles Away in Quincy Park**

**Arlington, Virginia**

The equipment was now unloaded and set up, partially obscured by the three pickup trucks in which it had arrived. There, at the northeast corner of Quincy Park, those three pickup trucks were now parked in a triangular shape, right on the grass of the park as two of the drivers prepared to open up the end of the triangle and allow the *packages* to depart.

When they did, three ultralight aircraft throttled up and began rolling to the southwest.

All three aircraft were outfitted with very powerful engines that developed much more horsepower than normal ultra lights required. All three of the frames of these particular ultralights were made of very light, very strong, and very expensive composite material that allowed the aircraft to carry up to five times their normal weight. And each of them was carrying that full weight today.

Each small-framed pilot was on a no return mission in each aircraft, strapped to 500 pounds of heavy explosives encased in shrapnel of all types.

As all three gathered speed in the open park, the leader of the team, who was known in America as Sam Hennessee, but whose birth name was actually Sami al-Hinnasi, stood in the middle of the vacant ground between the trucks and silently bid them farewell.

“Go with God, Allah Ahkbar!”

**May 31, that same time**

**Driving North on Quincy**

**Approaching Washington Blvd., Arlington, Virginia**

Nate Thomlason caught movement out of the corner of his eye as he approached the intersection of Quincy Avenue and Washington Boulevard.

He had seen the three late model pickup trucks in his peripheral vision sitting in the park and figured they were just some local people enjoying the late spring weather by picnicking in the park. But the movement from between the trucks attracted his attention.

Slowing down and turning his head for a better look, he saw three ultra light airplanes lumber out from between the trucks that he realized now were further apart than he had thought. But it was those three ultralight aircraft that caught his attention.

“Those aren’t supposed to be here,” he said to himself.

“What in the world do those people think they’re doing?”

Thomlason was an off-duty member of the local Home Guard Unit here in this part of Arlington. Having been an active member of the Home Guard for over two years now, he made it his business to know the Homeland Security rules for the area. There was a flight restriction for all light aircraft this close to the D.C. area, and all ultralights had to fly at least six miles further out.

“They’re less than three miles from the Potomac River here,” he thought.

And then, as realization flooded into his mind, he voiced his thoughts out loud.

“My God, the big presentation over at the Lincoln Memorial!”

Nate always carried his communications gear with him in his vehicle, as well as his M-14 rifle. It was something that would have been unheard of four years ago, but it was a fact of life now.

As he came to a quick stop, Nate called in a report of the three ultralight aircraft, which were now lifting off from the grass, and asked for backup. He then grabbed his rifle and exited his vehicle.

**May 31, three minutes later**

**Private Garage on F street near 21st**

**Washington, D.C.**

At the appointed time, the large garage door opened and very quickly, three heavy-duty, armored, panel vans, labeled with official-looking Brinks Security logos drove out of the garage and separated. Two turned right on F Street and headed for 21<sup>st</sup>, while one turned left and headed for 23<sup>rd</sup>.

All three had additional armor on their sides and the latest armored glass on their windshields. It was a specially engineered glass that allowed those inside to shoot out through the windows, but would stop high velocity bullets from penetrating it. All three also carried four tons of high explosives.

The first two vans turned south on 21<sup>st</sup> and crossed Virginia Avenue, in full view of a platoon of National Guard soldiers who had a blockade set up across C street, on the far side of 21<sup>st</sup>.

The first van picked up speed and drove directly for the concrete roadblock that was designed to keep trucks from driving through the blockade and penetrating further into their perimeter. But this van had no intention of trying to get past the blockade. Its sole purpose was to destroy it.

The soldiers, who for an instant had been fooled by the official looking nature of the security van, now began shouting for the van to stop. As it crossed C Street towards them, they opened fire and people in the vicinity began to scream and scatter.

The fire was ineffective in stopping the heavily armored van, which ran headlong into the concrete barrier and then detonated with a deafening explosion that engulfed the entire squad of troops, several of the concrete barriers and a number of bystanders. The shock wave and blast severely damaged the structures along C Street and set off fires, while tossing around the people within its reach—and breaking them—like so many twigs.

The driver of the second van had held back to watch the effects of the explosion. He closed his eyes immediately before the blast and said a silent prayer to Allah. The blast passed over and shook the van terribly, but it did not destroy it. As the dust was hanging heavily in the air, the driver started forward to make use of the path that had just been blown in the security perimeter surrounding the presentation at the Lincoln Memorial that had just been so loudly and brutally interrupted.

**May 31, 11:58**

**Presentation Stand**

**In front of the Lincoln Memorial, Washington, D.C.**

The explosion had been several hundred yards away from the ceremonies and no one in the immediate vicinity of the President or the crowd there had been injured...yet.

The President was just about to wrap up his remarks and present the Medal of Freedom to Stacey Urkut when he caught just the slightest out of place motion out along the diagonal that led from the Memorial over to the intersection of 21<sup>st</sup> and Constitution Avenue. When he turned his head in that direction to get a better view, the large truck bomb had gone off.

As the smoke and dust cloud was angrily billowing up, and as the President watched the rapid advance of the shockwave along the diagonal road, bedlam broke loose around the presentation stand.

Panic took hold of most of the people in the dignitary area and then in the large crowd behind it, a pandemonium that spread like wildfire and had people rushing madly to get away from the detonation. That mad rush, and others like it, would be the most lethal part of the attack.

Two Secret Service agents, one the head of the detail, Burt Stevens, rushed over to grab the President so they could protect him and guide him towards his armored limo which was parked a

hundred feet away from the presentation stand. Just as they reached for him, the shockwave from the bomb arrived and knocked them all to the ground. As his protectors got up off of him—they had covered him with their own bodies—the President quickly regained his feet and looked for his wife.

There she was, not fifteen feet away and just beginning to get up off the ground herself, her own Secret Service agent detail already standing protectively around her.

“Burt, you’ve got to get myself, the First Lady, the Secretary of Defense, and Mrs. Urkut away from here,” the President said. “What are you hearing?”

As the agents surrounded and protected them, and began to guide them all behind the presentation stand towards the limo and the rest of the security detail vehicles parked on the circular drive, the head of detail quickly responded to the President.

“Nothing yet, Mr. President, just lots of unanswered questions. We’ll know more momentarily, I am sure. Let’s just get you and the First Lady out of here.”

Before getting to the limo, the head of the President’s Secret Service detail received a report through his ear phone which caused him to immediately begin scanning the skies around them.

“Aircraft approaching...three of them.”

### **May 31, that same time**

#### **Secret Service Sniper and Stinger Team Position**

#### **Atop the Washington Monument, Washington, D.C.**

There were two expert marksmen operating as counter-snipers and a two-man team manning a Stinger missile launcher atop the Washington Monument. By the time the explosion at C and 21st Streets occurred, that Secret Service detail had already received the call about the potential threat of ultralight aircraft. That initial report, as it filtered to them there atop the monument, was simply of ultralight activity near Arlington, Virginia, in violation of airspace restrictions.

With the initial report, they had all hoped that the situation just represented errant citizens in violation of the flying regulations around the Capitol.

But with the tremendous explosion to the north and east of the Lincoln Memorial, and with the more detailed report now that there were in fact three ultralight aircraft approaching, all hopes of those types of simple explanations vanished. An assault was being made on the President of the United States, the man they were charged with protecting at all costs.

“There, at two o’clock, just coming over the Tidal Basin in front of the Jefferson Memorial!” one of the snipers exclaimed.

As the other sniper called in the location, and as the Stinger missile team prepared to target the aircraft, one of the members of that team noticed movement in his peripheral vision, and turned his head back towards Constitution Avenue and the White House.

“We’ve got another one, just crossing Constitution Avenue behind us!”

Both small aircraft were flying no more than a hundred feet off the ground and jinking wildly as they approached the Washington Monument. Both were flying at approximately 50 miles per hour.

The leader of the detail instructed the Stinger missile team to take the closer threat, the one behind them, which was now ascending and clearly making an attack on their position.

As this was occurring, a U.S. Army National Guard Black Hawk helicopter swooped in directly behind that aircraft and began pursuing it, firing an M-60 machine gun at the dodging target.

The agent holding the Stinger launcher was frustrated at the sudden appearance of the National Guard helicopter...and so was his equipment.

“I can’t get a lock...I’m oscillating between the ultralight and the chopper, but it wants to target the chopper...can’t you call that guy off?”

Flinching momentarily as another tremendous explosion resounded from the Lincoln Memorial area, the leader of the detail had only a split second to make his decision, it was a fateful one.

“The Guard will bring that guy down, switch to the second target. He’s going to be tough to bring down with a bullet until he gets closer.

“See if you can take him before he gets across the Tidal Pool.”

The Stinger team did as they were ordered, and quickly moved across the room, pivoted, got a clean lock on the approaching aircraft just as it crossed back over land...and over thousands of panicking citizens...and fired.

The stinger rocketed from the top of the Monument with a *WHOOSH*, leaving heavy smoke in its wake and momentarily blinding the agents on that side of the Monument. The missile quickly approached the ultralight, whose pilot saw it coming and immediately dove towards the crowd. Just before the missile impacted, some of the ill-fated members of the crowd below heard him yell, “Allah Ahkbar!” At that instant he detonated the package of explosives behind him and disappeared in a blinding flash, into which the Stinger missile dove, and also exploded.

Over 4,500 shards of metal, ball bearings, and other shrapnel were blasted at high velocity out of the explosion and into the crowd of people below, all of whom were now madly running from the intersection of Independence Avenue and Constitution. Scores were killed by the explosions. More still were killed by the crush and stampede of the crowd; hundreds more were injured.

At the same moment, another violent explosion occurred over towards the Lincoln Memorial as the third armored truck ignited. The pilot of the National Guard Black Hawk helicopter had no time to consider or worry about that third large explosion. His aircraft had already taken the other ultralight under fire and had wounded the pilot in his left thigh, causing the aircraft to begin to fly unstably as its pilot tried to maintain control of the aircraft. It became impossible for him to continue jinking to avoid the attacker behind him and he knew his fate was sealed.

The Black Hawk was now closing in for the kill from behind the ultralight aircraft which was only a hundred yards from the Washington Monument. Just as the gunner was preparing to take the final shots, the second terrorist pilot, finally realizing that he would never make it to his target, which had been the sniper team atop the Washington Monument all along, chose to detonate the explosives on his aircraft. In so doing at that particular instant, he unwittingly achieved his original purpose.

The explosion of the improvised destructive device threw shrapnel in all directions. Blown forward by the blast, hundreds of pieces impacted against the sides of the Washington Monument, a number of them finding their way into the observation post where the Secret Service agents were stationed. One of the agents was killed outright and another injured while below, the sky was raining shards of metal.

As the leader of the detail quickly checked for any sign of life from the dead agent, a crackling, wrenching noise in the air outside of his position drew his attention.

“My God,” was all he had time to whisper to himself.

The blast from the second ultralight also expanded to the rear, and threw shrapnel behind it...right into the path of the oncoming National Guard helicopter. As the pilot madly adjusted his collective and cyclic controls to avoid the blast by climbing over and around it, the shock wave struck the helicopter and jammed both his cyclic and stabilator control systems into position. It also severely damaged the tail rotor. At the same instant, shrapnel blasted through the compartment, killing the pilot and severely wounding the copilot.

With the aircraft locked into its current attitude, the tail rotor tearing itself apart, and the helicopter beginning to spin wildly, the Black Hawk impacted the side of the Washington Monument, five feet below the doomed Secret Service detail leader and the remainder of his team, who were mercifully, quickly incinerated by the fire and blast that raced through their observation deck.

...and there was still a third ultralight.

### **May 31, that same time**

#### **Near the Presentation Stand**

#### **The Lincoln Memorial, Washington, D.C.**

After the initial explosion, when the head of the President’s Secret Service detail received word of the approaching ultralight aircraft, another warning was quickly communicated.

Another truck was seen racing east on C Street towards the site of the initial explosion. This was followed almost immediately by yet another warning, a third armored security truck was approaching along 21<sup>st</sup> Street.

Burt Stevens informed the President, “Mr. President, we have to turn around and get out of here right now...more threats are appearing all around. Two more truck bombs are coming this way and will be here before we can make the limo.

“Follow me,” he urged as he led them away from the Memorial, to the south and west.

As he did so, two agents, who had retrieved a LAWS (Light Armor Weapon System) out of one of the armored Suburbans parked in the circular drive on the south side of the monument, ran to the northeast corner of the Lincoln Memorial and took up a firing position there.

Just as they got set up, there was a mad crackling of small arms fire and then another resounding explosion to their northeast, where another of the armored trucks set itself off against the last concrete blockade manned by National Guard troops, this one on Constitution Avenue.

The agents with the LAWS moved back behind the wall on the interior of the Memorial to avoid the worst of the shock wave, which blasted across the area, again knocking everyone in its path to the ground. When they returned to their position, they were greeted by the sight of an armored security van speeding madly out of the dust and debris, right down the diagonal road toward the Lincoln Memorial and the President’s retreating party.

There was no time to wonder; there was no time to waste; there was only time to react in defense of their President.

“Target acquired. FIRE!” shouted the agent as his partner prepared another round.

But a second missile would neither be necessary, nor possible. Just feet from the circular drive, the missile impacted the onrushing truck and there was a third violent explosion. The shock wave from this explosion was not contained by trees or buildings. The two agents at the northeast corner of the Lincoln Memorial were killed immediately by the overpressure. The individuals in the President’s party, now almost two hundred and fifty feet away and moving to the southwest down a slight incline away from the monument, were thrown down for a third time, this time much more violently.

As Burt Stevens got the President, who was now nursing a painfully dislocated shoulder, up—and as his comrades began carrying the First Lady, who had broken her leg, they were all briefly mesmerized by the final events at the Washington Monument, where the ultralight aircraft blew itself up in front of the pursuing National Guard helicopter, which then crashed into the Monument itself.

“Dear God,” the President uttered to himself. “It’s like the 3-15 attack, 9-11 all over again.”

### **May 31, that same time**

#### **Near the edge of the reflecting pool**

#### **In front of and below the Lincoln Memorial, Washington, D.C.**

Between the time of the initial explosion and the helicopter crashing into the Washington Monument, no more than three minutes had passed. But, to those caught in the terror attack, those three minutes seemed like an eternity...and it wasn’t over yet.

Joe Trevor had thrown his wife to the ground while urging Sandra McPherson to get down herself...and he and Elizabeth had wisely stayed there, avoiding the deadly pandemonium of the large crowd. As Joe now lifted himself up off his wife, he saw that Sandra was nowhere to be seen.

Hundreds of people were laying scattered about on the concrete and asphalt areas above them immediately in front of the presentation stand and the Lincoln Memorial. None of them were moving.

Others had been violently thrown down the steps by the last truck bomb’s shock wave, towards where Joe and his wife had taken refuge against the ground. Luckily for Joe and Elizabeth, because they had gotten low to the ground there at the bottom of the steps near the end of the Reflecting Pool, and because they had stayed that way, they had been spared the worst of the last shock wave as it passed well above them in the air.

“Honey, we’ve got to get out of here,” Joe said to his wife who was just coming to her senses.

As Elizabeth kneeled next to his side, her hands clinging to his arm, Joe surveyed the situation.

To the east, tens of thousands of people who had fled in the direction of the Washington Monument were now scattering into the trees of West Potomac Park and the Constitution Gardens. To the west, there was carnage all around the Lincoln Memorial and Joe felt that they could probably expect more attacks in that area.

To the north, from where the initial explosions had come, Joe could find no sane reason to try to escape in that direction.

He looked to the south and west. About one hundred yards away he saw a group of individuals picking themselves up off the ground. Several of them were obviously armed and must be Secret Service agents or plain-clothed policemen. Then he recognized the President.

“Elizabeth, look! There’s the President’s team.”

For a moment he was tempted to run to them, seeking their help and the help of the agents. In fact, his wife, Elizabeth, was already standing and starting to find her voice so she could yell to them.

Wisely, Joe pulled her back down to the ground next to him.

“Honey, get down here! No way can we approach those agents and the President now. They’ll shoot anyone they don’t know who comes near him.

“We have to stay under cover and move away from here. Let’s move into those trees there on the other side of that sidewalk, and then move back towards the Washington Monument.”

Looking in that direction, Joe started for a moment when he saw soldiers approaching from the direction of the Washington Monument. Then he recognized them as National Guard and saw that they were stopping and rendering aid to other citizens.

“Look, there’s a group of National Guardsmen coming this way. Let’s see if we can reach them and point them towards the President’s party...maybe they can help.”

### **May 31, that same time**

#### **Coming out of the trees**

#### **Along the Reflecting Pool, Washington, D.C.**

Sandra McPherson had never been so frightened in her life. And understandably so.

Nothing she had ever experienced had prepared her for what was happening that morning in front of the Lincoln Memorial.

Despite Joe calling to her to stay down, she had fled blindly away from the explosions as group fear took hold and the crowd rushed away in a panic. She had narrowly avoided being trampled, and had seen many bodies being run over by the feet of tens of thousands as she rushed into the trees.

Now, several minutes, and several explosions later, she was a little more calm and she started wondering where Joe and Liz were, and what had become of them.

She also reflected on the horrific events she had just witnessed and survived.

Oh, she knew they were at war...and of late she had come to appreciate the importance, the utter necessity, of her nation prosecuting that war to the fullest extent. She also knew, as did every American, about the many attacks that had been conducted against her fellow citizens and against the infrastructure of her nation—but it had never happened close to her. And until last year and her own change of heart and attitude, deep inside she somehow believed that maybe America deserved what it

was getting because, in her worldview, somehow America was too rich, too well off, and therefore must be exploiting other nations.

That's what had been taught her in her public education—that's what had been taught directly to her in the universities. She had come to accept it...to believe it...until she had discovered firsthand the lie of abortion. And when that lie came tumbling down, the others were not far behind.

Still, having a change of heart in an ideological sense is something altogether different than having the cruel, harsh, bloody reality of it staring you straight in the face...or trying to kill you. She now understood for herself, beyond a theoretical, laboratory sense, what her enemies were all about...and that was about destroying her and as many of her countrymen as possible.

After the final detonations near the Lincoln Memorial and at the Washington Monument, Sandra stepped out into the open near the reflecting pool, about halfway between the Lincoln Memorial and the Washington Monument, on the Constitutional Garden, or north side of the pool. She saw some National Guard troops coming her way and was just raising her hand to wave to them.

That's when she noticed a loud buzzing noise coming through the tops of the trees. She looked up—and saw another ultralight aircraft bank over the tree line in front of her, and begin following the reflecting pool towards the Lincoln Memorial...on a path that would take it right over her. Transfixed, she could only stare as the small aircraft got closer and closer.

### **May 31, that same time**

#### **Flying low, Above the Reflecting Pool**

#### **Washington, D.C.**

Mohammed al-Hinnasi, the pilot of the third, and as yet unaccounted for, ultralight aircraft, guided his plane towards the Lincoln Memorial, looking for the President of the United States and his party...hunting them.

His brothers in the faith had accomplished their mission exactly the way his father had told them.

At 19 years of age, Mohammed was ready to sacrifice his life for Allah. He had been raised to prepare for this sacrifice. His father, since the time he was a boy here in America, had taught him to bide his time, to be patient, to be quiet and to observe...but never to forget who the Great Satan was...the great enabler of the persecutors of his people and the center for everything lewd and corrupt in the world. And he had internalized the message...learning, waiting...and now his time had come.

He had flown literally at tree-top level, his small landing wheels actually touching the highest leaves and branches at times.

Twice he had dipped into small clearings or openings in the trees to avoid police helicopters...and he had swung back to the west when his brothers attacked the Washington Monument and were spotted by that National Guard helicopter.

Now, he was certain that the other attacks he had heard and seen must have either killed the President, or flushed him from his cover.

And he was right.

As a number of National Guard troops took note of him from below, and began to raise their rifles to their shoulders to shoot at him, he observed that over beyond the tree line to his front and left was a group of individuals, several of them in dark suits carrying what had to be the distinctive submachine guns of the American Secret Service.

"Yes, there they are," he thought as he jinked his aircraft first left, and then right to avoid fire from the National Guard troops. And then he began to put pressure on the stick to steer his flying bomb in the direction of the President.

"Praise Allah!" he muttered to himself. "Accept me into the next life and shower upon me my reward of eternal bliss with my many virgins."

In that instant, his wish was granted...though not to the reward he desired.

A brilliant light and thunderous explosion ended all conscious thought for Mohammed al-Hinnasi as he and his small aircraft were hit by an AIM-9X missile fired by a F-22 Raptor that had moments before picked him up out of the ground clutter, tracked him, and then fired upon him as soon as a solid infrared lock-on was achieved.

Almost immediately after the explosion created by the air-to-air missile, an even larger one occurred as the explosives Mohammed was carrying also detonated and showered the entire area with shrapnel, pieces of the aircraft...and what remained of Mohammed.

Once again, many hundreds of citizens were maimed another hundred killed...including, tragically, Nobel Prize winner Sandra McPherson, who was still standing there transfixed, almost immediately below Mohammed's aircraft when it was hit by the missile and exploded.

### **May 31, 12:01**

#### **The Food Vendor Stand**

#### **Ohio Drive and Independence Avenue, Washington, D.C.**

Johnny and his people had watched the panicked crowd pass by after the explosions. At first a mad rush of thousands and thousands of uninjured people and the entire team had stood in the lee of

the stand, fearing that the stand may topple over on them and they all be trampled...then the torrent became a rush, and that became a steady flow with more and more of the passing people having been injured. Finally, after that last explosion over the reflecting pool, the flow had diminished to a trickle.

At the first sound of the attack, his entire team had all quickly knelt down and assembled their weapons, which had been hidden inside containers at the food stand and which were all made of synthetic materials to avoid detection. As they did so, they also clothed themselves in their official U.S. Park Police hats and light jackets which purposely matched the trousers that each of them wore.

In that first panic, no one questioned them as they prepared to do battle. In fact, once they saw the official-looking Park Police uniforms, many looked to them for direction and Johnny and his team very coolly and professionally directed them away from the carnage towards safety further to the south and west along the Potomac and along Ohio Drive.

Then, as the crowd thinned, the team fanned out around the stand, taking up their pre-planned cover positions behind individual trees, waiting.

It had been Lin Worthington who saw them first.

"There, two hundred yards out, just moving into the Park on the other side of the diagonal."

Johnny looked that way and...there they were. It was not exactly where they had expected the President's entourage to emerge...but it would do.

There looked to be five or six agents, the President, who was holding his arm close to his body, a woman being carried by two of the agents, another man, and another woman.

"I see them. Let them move close, and then on my command, Lin, you and I will concentrate our fire on the President. He's the tall older man in the suit holding his arm close to his body."

Turning to the three other team members, Johnny then continued.

"You three concentrate on the standing agents first, and then on the two holding the woman."

Taking their positions, they all waited on Johnny's command. As the President's group approached rapidly, but at an angle, they came nearer and nearer to what would be their closest approach to the Chinese team.

"Wait...wait...any second now.

"Oh! They've seen us. Open fire!"

### **May 31, that same time**

#### **West Potomac Park**

#### **Washington, D.C.**

There hadn't been any other attacks for several seconds. Not since the U.S. Air Force had taken out the ultralight over the reflecting pond.

Stacey Urkut took stock of the situation around her.

The head of the President's Secret Service detail was talking seriously and with animation into his mouthpiece and listening to replies through his earpiece. Stevens was arranging a pickup of the entire group by Marine One in a clearing only fifty yards in front of them. The Marine helicopter with an entire squad of Marines would be there in less than three minutes.

Stacey had been shocked by the attack and the violence right here in Washington, D.C. It had taken her several minutes to get her bearings, but when she did, she was not a middle-aged woman in the pretty pantsuit anymore. She had quickly reverted back to the Orka...she had been injected into the same type of environment here in Washington that she had lived through for months in Alaska.

Looking to her right, she made out several men standing in the trees over closer to the river, who appeared to be dressed in official uniforms of some type or another. Coming up next to Burt Stevens, she touched his arm and pointed them out.

"Those look like Park Police," Stevens said as he glanced that way.

"Maybe they can..."...but then he, too, noticed their posture...their stance...and he turned his head back quickly for a better look.

Stacey began to voice what they had both already realized, the tone of her voice now catching the President's attention along with one of the other agents.

"If those are our guys, why are they shielding themselves from us with those trees?"

"And why are they..."

Before Stacey could finish, Burt Stevens suddenly ran towards the President, shouting.

"Everybody down! We're coming under attack!"

Almost immediately several things happened at once.

The supersonic snaps of bullets began sounding all around the President and the group of people with him, followed instantly by the report of small arms fire from the Chinese.

Burt Stevens went down just as he reached his President in a brave, but vain effort to get to him before he could be harmed.

The President took a bullet to his shoulder which spun him around violently and he began to fall. Before he hit the ground, another one passed cleanly through his side.

A squad of National Guard troops came out of the trees to the northwest, saw what was happening and began to pour fire at the group that was attacking the President, catching the

President's party in an inadvertent crossfire which severely wounded the Secretary of Defense before he could find sufficient cover.

The two agents holding the First Lady dropped her and rushed towards the President, firing at their assailants as they came.

Another of the agents, lying in a prone position, began to provide accurate covering fire for those agents trying to reach the President.

Stacey Urkut and the last agent, who were closest to the President, also began running towards him—Stacey running to pick up the submachine gun dropped by Burt Stevens, and the other agent trying to reach his President and drag him to safety. As they did so, the sound of the approaching Marine One helicopter began to be heard over the sound of gunfire.

As the American fire took effect, first one, then a second of the Chinese attackers went down.

Johnny and Lin ignored the agents and National Guard soldiers who were firing at them and their other team members. They concentrated on peppering the ground around the fallen President, wanting to ensure that they fatally wounded him.

One of the Secret Service agents now dove in front of the President and took up a prone position in front of him firing back at Johnny and Lin. Johnny heard the hollow thud of a bullet impacting Lin but did not have the time to look over that way and see how badly he was hit.

He saw the impact of first one, and then another round from his weapon hit the agent lying on the ground, silencing that agent's return fire. Johnny now tried to quickly make his way several yards to the east to try to obtain a better angle of attack on the motionless President.

He did not notice Stacey Urkut, who had picked up the weapon lying on the ground from where Burt Stevens had dropped it, and who was now charging Johnny's position, firing as she came. He also did not notice that he was the last member of his team firing.

As he quickly found the position he was looking for, he took note of the Marine helicopter that was just settling to the ground to the east of the President, Marines pouring out of it as it did so. Pausing briefly to notice this also caused him to notice the individual charging him from his left side.

Quickly turning, he came face to face with a wild woman, screaming at the top of her lungs as she charged within ten feet of him. Before he could raise his own weapon, Stacey Urkut, the Orka, fired a three round burst directly into his face...and Johnny Chen dropped stone dead to the earth.

**May 31, 12:07**

**Near Marine One**

**West Potomac Park, Washington, D.C.**

Stacey wandered back over to the area where Marine One had landed. As she came closer she saw a Navy corpsman working on the President. Another one had just looked to the First Lady, and seeing that her injuries, though painful, were not fatal, he moved on to the Secretary of Defense.

Another Corpsman was feverishly working on Burt Stevens.

The Marines and the remaining Secret Service agents had set up an inner perimeter around the President and Marine One and the National Guard was busily establishing an outer security zone.

At her express and insisted request, two of the Marines had carried the First Lady gently over to her husband, who was lying flat on his back and continuing to bleed severely...though the Corpsman had successfully stemmed the flow from the shoulder wound.

But the wound to his side was bleeding profusely and proving impossible to stop...and there were two other bullet wounds. One was a deep flesh wound to the calf, the other was a frothy, bubbling chest wound, which had penetrated the President's left lung.

As Stacey stepped up, she watched as Linda Weisskopf held her husband's hand, and though suffering terribly herself from her broken leg which had yet to be set...she said a soft prayer.

"Dear God, please preserve Norm's life...help him hang on until he gets to facilities nearby.

"If it be Thy will dear God, help him recover and lead this nation to a sure and lasting victory over these monstrous and abominable foes."

...at this point Linda's voice broke, as she continued, exerting her own faith into the equation.

"...and if not, dear God, make us strong to carry on in his absence and receive this good man unto Yourself."

...and more quietly, in almost a whisper.

"...and help me to carry on somehow without him."

As Linda sobbed once and then somehow gained control, President Norm Weisskopf's eyes fluttered open and he lifted his head slightly, catching his wife's attention.

Speaking weakly, but in a steady voice, he comforted her while he gazed intently into her eyes.

"Sweetheart, it's going to be all right. This nation is going to prevail...and so will you. Don't worry for a minute about that."

Surprisingly, despite his severe condition, the President continued.

"You know, the dark cloud that has enveloped our nation for so many years has been broken...it's dispelling, just as George Washington foresaw.

“...and the bright light that has broken it into pieces has been the humbling we’ve experienced through adversity and the light of truth that has burned through that adversity, breaking through the darkness that had clouded so many hearts.

“I have seen it. There may be a hard road ahead, but I now know that this nation will persevere because it has the will to persevere, it has rediscovered its moral compass for guidance and it has the Hand of Providence for support.

“Sweetheart, I have not been a religious man...but I have known the truth in my heart and done my best to live according to it despite my failings.”

Looking more weary by the moment, the President made a valiant effort to squeeze Linda’s hand tightly...something she felt, but only as the slightest pressure.

The he said, “Don’t worry, darling, I’ve done my part.”

Stopping, the President closed his eyes as his wife’s tears ran down her cheek and dripped onto his ashen face.

The corpsman continued his work, but he, too, was captured by the emotion of the moment...the passing of a great man...and his own eyes glistened brightly.

Finally, President Norm Weisskopf, a hero to all Americans in the course of the war, and for many, many years before it...and a hero to freedom-loving people all over the world, summoned the will and strength to open his eyes and speak once more.

“God bless America, Linda...and thank God that I have seen its salvation. It is enough.”

Looking up at his dear wife of so many years, the President continued...fading now.

“You know, for so many years I wondered why that quote from the young Nathan Hale has always been one of my favorites. It wasn’t until this very moment that I understood why.”

More passionately now...almost desperately, his eyes cleared momentarily and he whispered.

“Oh Linda!...I’ll miss you so...but one day we’ll be reunited in peace and everlasting liberty.”

Finally, with a solitary tear rolling down his own cheek, his weak voice concluded.

“...always remember that...always...”

And with those words the President’s head fell back against the ground and he closed his eyes.

As several Marines quickly carried him and Mrs. Weisskopf onboard Marine One and the big helicopter quickly took off, the President’s lungs failed and he stopped breathing.

The brave and dedicated Naval Corpsman worked feverishly over him, trying to revive him. First, he used mouth-to-mouth resuscitation, and then, when the President’s heart also failed, he resorted to CPR. But all of the efforts by the Corpsman proved futile and the President of the United States died of his wounds before the helicopter ever reached Bethesda Naval Hospital.

## Chapter 33

*“An enemy hath done this” – Ezra Taft Benson*

### **June 1, throughout the day - Worldwide**

The news of the death of President Weisskopf spread like wildfire across the entire planet. Everyone, both friend and enemy alike, recognized that a bulwark of the defense of the free world had been brought down, and they all wondered exactly what impact his death, particularly at the hands of the enemy, would have on the overall conflict.

Friends and allies mourned and prepared for the worst. Enemies rejoiced and planned to follow up on what they perceived as a great advantage with more of the same, believing America must surely succumb now. But, despite their momentary success, they would once again misjudge and underestimate the character and firm resolve of the American people and allies in the overall affair.

### **In the United States:**

Vice President John Bowers, along with over 190 million other Americans, had been immediately aware of the attack as a result of seeing it graphically displayed on the TVs they were watching. The Vice President saw the President's attention drawn to the site of the impending first explosion and then watched his, and the crowd's, reaction to that explosion. The video had been wild and disjointed from that point on as cameramen were knocked to the earth—or worse—by blast and shock waves, and the pictures kept changing to whatever view the networks could make available.

All of America saw the graphic display of the crash of the Black Hawk helicopter into the Washington Monument obelisk. It became the video footage that epitomized the entire attack, being played over and over again, much like the footage of the airliners plunging into the World Trade Center on 9/11. But unlike the Twin Towers, the Washington Memorial did not fall.

The final firefight that took the President's life, other than as caught on some very vague pictures and video footage from a great distance, was not captured live on tape, so most of the nation learned of the President's death some time after it occurred. After numerous rumors regarding the President's fate had begun to circulate, an official announcement had been made late that afternoon by an emotional Presidential Chief of Staff from the White House Briefing Room.

But John Bower had benefited from the numerous secure communications he had with the Secret Service, the Military, and the Department of Homeland Security. He and his staff had followed the movements of the President as they retreated away from their assailants throughout the attack, even if they couldn't see the President's movements on TV. Ultimately those movements had brought the President right into the line of fire from Johnny Chin and his assailants, and John Bowers officially learned of the President's death within minutes of his last breath...

...and he literally felt the mantle pass to him upon realizing that the President, his good friend and mentor, was dead. He, John Bowers, was now the President of the United States. An office...and a calling...he had never sought. One he had only seriously contemplated from an almost war gaming standpoint throughout the course of the war, after President Weisskopf had requested, and he had accepted, his nomination to become the Vice President.

“Which vacancy was caused by these same animals, when they killed Alan Reeves,” thought Bowers as he continued to contemplate all that had occurred in such a short period of time.

Despite the analytical nature of the planning, *just in case*, he, along with everyone else, had thought that Norm Weisskopf would not be taken from them.

But now, President Weisskopf had been killed...and in a traumatic and brutally quick fashion. Now, all of wise preparations that had been made at the insistence of the President himself, and with the assent of Congress, had come into play.

After the President, the White House and the Congress itself had been attacked at the outset of the war, killing the Vice President and many members of Congress, the Continuation of Powers Acts had been proposed and enacted in Congress. Since that time, the Vice President's entourage always included the necessary personnel and legal authority to quickly swear him in as President in the event of a successful attempt on the President's life.

In fact, the entire line of succession to the Presidency, to the sixth person, who was the Secretary of Defense, traveled with just such an entourage at all times. No more than three of the people in the line of succession were permitted by law to be at any one event simultaneously. And all six of them were required to be situated in at least three different localities, separated by no less than three hundred miles each, at any time.

In this case, John Bowers was sworn in as the resident within five minutes of the official confirmation of the President's death. In a clear voice, he recited the Presidential Oath to a U.S. District Judge, one of six who now traveled with the successors at all times.

“I, John Bowers, do solemnly swear that I will faithfully execute the Office of President of the United States, and will to the best of my Ability, preserve, protect and defend the Constitution of the United States, so help me God.”

As it turned out, and as had been the case on March 15th, one-third of the line of succession to the Presidency had been killed. Earlier it had been the Vice President and the Secretary of Defense. This time it was the President himself and, once again, the Secretary of Defense, because George Crowler died from his wounds early on the morning of June 1<sup>st</sup>.

Americans in general were reacting with shock and outrage to the attack, and particularly to the death of their beloved President. Since the times of George Washington, there had not been a President who was more widely accepted and revered by virtually all of the citizenry than Norm Weisskopf. In both cases, their leadership during military conflict and the perception that their unique capabilities contributed monumentally to the salvation of a people was what engendered their universal acceptance and respect. In George Washington's case, his providential leadership was called into play during the nation's traumatic "birth." In Norm Weisskopf's case, such leadership was needed in a battle for the preservation of the nation's founding principles and in defense of its people's very lives and freedoms. For both men, there had been no viable contender...against Norm Weisskopf, the principle contender had failed to garner even one electoral vote.

From opinions expressed in editorials, on call-in talk shows, over the internet, and in barbershops across the land, the outrage and anger were palatable. But after well over three years of war, the anger was not a blustering, or a passion-of-the-moment kind of anger. To those watching closely, it was more of a determined set to the jaw, a more deeply engrained resolve kind of an anger, one that grits its teeth and is determined to persevere, no matter the cost, no matter the length of time required.

And it was a mindset that was shared by the vast majority of the people and was now being reflected in the vast majority of the media outlets, who, through the course of the war and as a result of their own losses and betrayals, had adopted a much more American and liberty-oriented viewpoint...more similar in nature to the news media of World War II. JT Sampson's example and leadership in this area had proven indispensable to the change in nature, and this was particularly evident in his response to the President's death.

The result was becoming clear: America was drawing even closer together, becoming more united, more resolute and more determined as a result of the killing of their President. And in this way, the plans of America's enemies had not panned out, even if they didn't know it yet.

Despite the immediate loss, despite the slight hesitations and mistakes that necessarily accompany such an abrupt transfer of power, it was the additional unity, determination, and resolve that would figure most heavily into the course of future events as far as the United States was concerned—qualities that would be very much needed for the free world to persevere.

### **In China:**

When Jien Zenim received verification that the final phase of operation Hung-Lu-Dung had proven successful, and that President Weisskopf was dead, he was elated. As a part of his long-term planning, he had initially calculated that the President elect at the onset of hostilities must be the wife of the former President, or someone closely associated with that former administration. He had done all in his power to engineer it that way.

In much the same way as his manipulations of the American presidential administration of the 1990s had been one of the most enabling features of Zenim's plan, that later administration would have enabled him to usher in the final phases of his long-held beliefs and goals for China without drastic difficulties. The 1990s American administration was something that had been financed, cajoled, blackmailed, subverted, and used to the benefit of the PRC for all of its eight years. The resulting bonanzas that had accrued to China in technology, manufacturing, currency, and economy had ensured the furtherance of the final phases of Zenim's planning. He had engineered it that way.

But he had miscalculated. The new President had been a shock and surprise. Weisskopf had proven very resolute against the PRC. Norm Weisskopf had become the greatest impediment Jien Zenim had ever encountered in American leadership, and his election to the presidency had necessitated the addition of all phases of operational plan Hung-Lu-Dung as a follow-on to Operation Breath of Fire, the plan that had ambushed the Americans so completely off of Japan that March in the early days of the war, and had attacked their homeland so devastatingly at the same time.

Initially, Breath of Fire was supposed to have so disabled and so discouraged the Americans that the new Chinese-engineered administration and media in America would have quickly sued for an end to hostilities. The war would have ended rapidly, with an understanding between the PRC and the new American administration that a new world order had been established, giving rise to China's prominence in Asia and a new order in the Mid East. With their almost complete and foolish acceptance of the straw man argument that a service economy was better than an economy that actually produced something, the Americans would have hardly recognized that a declining America and a disjointed Europe would never truly be able to compete. But with Weisskopf and his administration in control in Washington, bolstering American resolve and spirit, Zenim's well-laid plan had been prevented from complete success.

Zenim hoped now, with the Weisskopf problem addressed and resolved once and for all, that China and the entire Coalition of Asian States, along with their powerful ally, the GIR, could find their

way back to the original path that would lead to a quick resolution of hostilities and the new understanding and order he still planned to implement.

Celebrations in Beijing, Shanghai, Hong Kong, and elsewhere throughout China and Chinese-held territory over the death of President Weisskopf were joyful, reminiscent of the celebrations in parts of the Arab world after the 911 attacks. The Chinese people believed that the Americans would lose heart and soon accept a new reality: that with their great and resolute leader now gone, and with clear indications that they faced a determined enemy capable of striking them within their homeland to this day, even after their success of the last few months, hostilities must cease.

But like their leaders, they would soon learn that this was not to be the case. Once again, they would underestimate the historical uniqueness of American resolve.

### **In India:**

President KP Narayannen had breathed a sigh of relief when he heard of President Weisskopf's death. He had not sought conflict with the Americans, had hoped it would not be necessary. Even during those initial attacks, when his allies and fellow members of the CAS, the Chinese, had attacked America, he had held back, not confronting the Americans directly. Instead, India had concentrated on Sri Lanka, areas along the Himalayas, Bangladesh, and parts of Burma...and with great success.

But he had known that conflict with the Americans at some point was inevitable. His nation was rising out of its Third World status, and not just for particular members of the old caste system. The material wealth being accrued by a larger and larger segment of the vast Indian population through its success in the Siberian Economic Development Pact, and through its own expansion, meant that the people needed even more room to expand. India, along with China and Indonesia, had set their collective eyes on conquering Australia...and to do that would mean removing the American influence from the Indian Ocean.

And that task had fallen to India and President Narayannen, who was under great internal pressure from his Foreign Minister, Rahmish Patel, whom the President by then had recognized as a mere lackey for the Chinese...but a powerful political lackey who had to be taken into account. He had ultimately approved of a plan to attack the Americans, and he had turned it over to his capable scientists and military planners. With America weakened already in the Pacific and Mid East, under full scale assault in both of those areas at the time, the Indians had struck, and struck hard.

In that July, the Indians had attacked the American 5<sup>th</sup> Fleet and U.S.S. Enterprise Carrier Battle Group in the Indian Ocean. It had been a multi-pronged effort and a vicious fight...and it had cost the Indians dearly. But thanks to the innovations of Indian technology coupled with the Chinese LRASD weapons, and the resulting airborne version of the LRASD, the Americans had been defeated on the sea and the U.S.S. Enterprise had been sunk along with most of its escorts.

That Indian victory had led to the attack on, and ultimate occupation of, the American base on the island of Diego Garcia after another vicious and costly fight. With that victory, American influence in the Indian Ocean had ended and American presence was now only rarely felt there through occasional submarine attacks and a few forays by some of their long range aircraft.

But those victories had also produced a very real and direct warning from President Weisskopf.

Weisskopf's Secretary of State, using back channel communication sources, had contacted the Indian President with a personal message from Weisskopf that was worded very straightforwardly. Gain, despite his death, the Indian President recalled the exact words, short and terse:

*"President Narayannen, you shall be held directly and personally responsible for the attack on the U.S.S. Enterprise and the deaths of so many Americans. You and your administration's rejection and betrayal of republican principles, and your alliance with abject tyranny, will ultimately be recognized as the war crimes and crimes against humanity that they are, so help me God."*

Again, President KP Narayannen breathed a sigh of relief. Weisskopf was dead; perhaps his personal vendetta had died with him.

"Surely the new American President, this Bowers, will be someone we can negotiate with, should it ever come to that," he thought.

### **In the Greater Islamic Republic:**

Hassan Sayeed had mixed emotions about the operation that had resulted in the killing of the American President.

Oh, he had gone along with it and looked forward to it, assigning two of his best teams...precious resources that had been reserved in America against just such contingencies. And they had succeeded.

But the advances that the young General, Abduhl Selim, had made in Syria, which had ultimately carried him right up to the foot of the Golan Heights and almost resulted in a major breakthrough into Israel itself, had now been reversed.

Employing those damnable and deadly new Hail Storm missiles of theirs, and using them in increasing abundance, the U.S. and Israeli forces had reversed those gains and pushed GIR forces back beyond Damascus once again, this time completely overrunning the Trans-Syrian pipeline and pushing as far north as the petroleum processing facilities in Homs.

If they were not contained soon, the Americans would be approaching the more critical facilities in Baniyas on the coast...

...and this is what gave rise to Sayeed's mixed emotions. He had urged that the GIR/CAS alliance focus the attacks within America on the more practical, more immediate military impact of attacking the plants that were assembling these Hail Storm missiles.

In the last two months, GIR and Chinese intelligence had identified the three major Hail Storm missile production plants within the United States. They were operating under tight and heavy security in California, in Texas, and in Ohio...but all three locations could be vulnerable to the major type of operation like the one that had been executed in Washington, D.C.

Sayeed understood, and had ultimately gone along with Jien Zenim because Zenim had correctly pointed out that mounting three major operations at once would be much more difficult and would require significantly more time to plan and organize.

Zenim felt that their alliance needed a major success now, and could not afford the time or risk that waiting to mount three operations would take.

This concern was principally founded in the realization that American Homeland Security and Home Guard efforts had been increasingly successful in thwarting and eliminating both Islamic and Chinese cells within America. The GIR/CAS alliance would have to pull out all the stops, using its most closely held and critical assets to mount the single major operation against the President.

And they had.

"What was it Zenim had said that had ultimately caused me to see Allah's wisdom in the attack on Weisskopf?" the great Imam thought.

Something along the lines of, "Perception is reality, particularly among the Americans. If they see us successfully conduct this operation, despite how badly it drains our reserves within America, they will presume we can do more...and this new presumption will occur on top of the major loss of morale and inspiration that will come about through the death of their leader."

And so Hassan Sayeed had gone along with the plan and used his own most valuable assets...and he had rejoiced with the success.

But with the very real reversals GIR forces were experiencing, he still wished there were fewer Hail Storm missiles available to the Americans and their allies...much fewer. And he couldn't help but think that anything they might have done to preemptively blunt America's new technological and battlefield advantage would have ultimately proved valuable. But Hassan Sayeed knew well that regrets represent the foundation of nothing constructive, so he banished any 'if only we had...' thoughts from his mind.

### **In Europe:**

The European nations, who were deeply embroiled in the conflict on two fronts, were also grief-stricken and demoralized by the loss of Norm Weisskopf...particularly England, France, and Germany, who were Europe's production and military powerhouses.

It was a dichotomy for those nations.

The French and Germans, before the war, and during its initial stages, when America and the United Kingdom were going it alone, had distanced themselves from the war in general and from America in particular. With shades of the same arguments that had been made during America's Operation Iraqi Freedom in 2003, those European powers had implied, at the start of military confrontations in Iraq, that many of the issues leading up to the war had been America's fault to begin with. They also argued that America's motives were not really motivated towards the freedom of the Islamic peoples, but more towards oil interests and establishing a geopolitical balance in the region.

Both of those arguments were stances that both Germany and France would later have to reverse, just had they had ultimately had to reverse them regarding Operation Iraqi Freedom, when conditions and the passage of time revealed to all the error of their position.

The English, and ultimately many of the Eastern European democracies, had stood resolutely with America. Later both Spain and Italy had done likewise. But France and Germany in particular had been reluctant, and even counterproductive to allied efforts to contain the GIR and China.

When the invasion of Turkey ensued after Syria announced its union with the GIR, Germany had finally responded. This was because the Syrian army had combined with GIR forces and invaded Turkey. In fulfilling its NATO obligations, Germany fought hard alongside American, Turkish and other allied forces. But the Germans had made it clear at the time that its commitment was not in a global context, and France had taken no action, militarily or diplomatically.

As conditions had deteriorated over the next eighteen months, and as terror attacks began to hit home on European soil in both Germany and France, attitudes changed. With the invasion of Europe by GIR forces after the Greeks had allied with the GIR to complete the defeat of Turkey, Europe had finally awakened fully to the imminent danger it faced. When GIR forces pushed deeply into Romania and the Balkans, Europe went into full war time mobilization to repel the attack.

Russia had not taken part in the conflict at all during this period. From the very beginning, they viewed themselves in an optimum situation to benefit from both sides' struggles. On one hand, they

entered into the Siberian Economic Development Treaty with China and India, opening that vast territory of Siberia up to exclusive exploitation by those nations in exchange for significant sums of hard capital. Ultimately that arrangement had been extended to the GIR as well.

On the other hand, Russia had continued to receive and respond to allied requests and commitments for infrastructure development and economic stimulus packages meant to ensure that the Russians did not enter into a military compact with the CAS and GIR. While extending these offers, Europe and America, who wanted above all to keep either CAS or GIR forces from threatening Europe from the east, had also warned of sanctions, boycotts and tariffs, should Russia continue to develop its economic relationships with the enemies of the west.

The Russian President, Vladimir Putin, had handled all of these diplomatic maneuverings deftly and with obvious negotiating skill. He used his Foreign and Economic Ministers to great advantage in playing both sides to Russia's benefit.

And the game had worked for a time...that is, until that March 18<sup>th</sup> two years after the initial attacks on America, when Siberia had declared its independence from the Russian Federation and had moved immediately to solidify a strong alliance with both the CAS and GIR.

That move had led to war, as the Chinese knew it must, and as they and their allies had planned. They were thus well prepared to conduct immediate military operations against the Russians.

Being quickly routed from the whole of Siberia, Russian forces soon found themselves facing masses of Chinese and Indian soldiers on their own borders. Those large armies then rolled over the Russian border into the motherland itself. Russia's attempt to stop these forces with nuclear weapons had been negated by the very capable and advanced mobile Ballistic Missile Defenses the Chinese had developed and deployed with their forces.

The Russian President, very late in the day, was reduced to seeking help for his nation's salvation from both America and Europe, the very nations he had scoffed at and taken advantage of. It had been a bitter pill for him, and one he was not entirely sure the allies were willing to extend.

But they had, and Vladimir Putin had been particularly impressed with Weisskopf's and America's treatment of him and his nation in their hour of need, despite issues of the past.

Before Russia was attacked, Weisskopf had been very direct in his warnings regarding Russia's ties with China. Putin had scoffed and taken lightly warnings of any potential Chinese Operation Barbarosa, referring back to World War II days when Russia had aligned itself with Nazi Germany and then had been betrayed by Nazi Germany in June of 1941.

Despite the scoffs, that is exactly what had occurred and America's financial and military assistance, along with that of Europe, had ultimately helped turn the tide of war against the Chinese, Indian and Islamic invaders, right on the very streets of Moscow.

Yes, Vladimir Putin and all of the European leaders would miss Norm Weisskopf. Putin considered him the best sort of friend and ally one could have, who, despite having had his advice and counsel turned away, stood willing to assist Mother Russia in her hour of need.

All of these leaders wondered what sort of President this John Bowers, who was an unknown quantity to most of them, would be and whether he could pick up the reins and continue to move the prosecution of the war forward, while maintaining the strength of the alliance of nations involved against the combined might of the CAS and GIR.

### **In South America:**

At the time the President of the United States was killed, the war in South America had evolved into a continual scene of bloody stalemate. In Colombia and Venezuela in the north, and along the Argentine and Brazilian borders in the south, the ebb of battle flowed back and forth, although some progress was being made in some areas in Argentina where Brazilian forces had penetrated.

Brazil and Colombia were the major allied combatants in South America, assisted by American and English forces who were fighting in special forces operations in Colombia, and in larger numbers in Central America, working their way south through Panama. Against this, the nations of Panama, Venezuela, and Argentina had formed the Coalition of South American States and allied themselves with the CAS and GIR. China had several hundred thousand troops fighting with the forces from these nations in Panama and in Colombia.

Although in the past six months troops from Ecuador, Paraguay, and Chile had joined in the fight against the CAS and GIR and their allies, the real driving force behind allied fighting in South America was Brazil. The other, smaller South American nations and their forces would have been too weak to stand against the combined weight of the Panamanian, Venezuelan, and Argentine forces, supported by the large numbers of Chinese.

The President of Brazil, Henrietta Maldenado, who had assumed the office of the Presidency after their beloved President Alfonzo Hermosa had been killed by a Chinese decapitation strike in June of last year, had considered herself a close friend of the American President.

Within a day of her taking the oath of office, President Weisskopf had called her himself and had spent over two hours on the phone with her, talking as one respected leader to another, taking her

immediately into his nation's confidence, committing America's unwavering support to winning the war, and ensuring the freedom and liberty of Brazil and all of South America.

Over the last year, she had developed a kinship with this older man. She was the president of the largest democratic republic in South America. He was the president of the largest democratic republic in North America, and the strongest one on earth.

In all of their conversations, in all of their meetings, he had never treated her as anything but an equal and her respect for, and trust in, him had grown accordingly...she had begun to look to him almost as a child would look to a father.

She had wept openly when news of his death had arrived, even as the leaders of the nations she was embroiled in combat with had rejoiced.

"He will be sorely missed," she thought as she contemplated the road ahead and prepared to address a special meeting of her own security and military advisors the day after Weisskopf's death.

"Ladies and gentlemen, as you all know, this earth has been deprived of a true defender of liberty, a true patriot, and a wonderfully good man.

"We know something of such loss as these same enemies deprived us of our own Panther of Brazil when they killed President Alfonzo Hermosa last year. On a personal note, even as President Weisskopf and his wonderful wife, Linda, sent their condolences and offered up their prayers on our behalf last year, we should now pray that Linda will be comforted and strengthened through this crisis, and that all Americans take heart in their hour of loss, and know that we here in Brazil will stand by them, just as they have stood by us.

"We cannot...we shall not be deterred. If Zenim and Sayeed and their allies think for a moment we shall be cowed or moved to entreat with them as a result of this heinous act...they have terribly miscalculated. And this error on judgment will represent another in a long series of miscalculations.

"Just as they miscalculated when they shot down the International Space Station and its wreckage crashed in Rio and killed so many of our countrymen, they are miscalculating now. They thought that because our country had taken a more social government path, that they could convince us to blame that horrible tragedy on America, whom they were fighting. They thought that we would blame the Americans and be more disposed to their motives and objectives...that we could be manipulated by them through the deaths of so many of our people.

"But they were wrong.

"They miscalculated then and our nation saw through their manipulations to those who were truly responsible...to them, and we declared war on them instead.

"And now they have miscalculated again.

"In this fight for liberty and for peace, we can never afford to lose sight of these facts in prosecuting this war. We can never afford to allow our people to lose sight of these facts either, though I have complete faith in them and their ability to see the truth of these matters.

"We will not rest, we will not be deterred, we will not stop until those leaders and those nations who caused that great destruction to our nation, and who continue to cause it today, are utterly defeated and every visage of their power is removed from any position of influence and destroyed."

**June 4, 09:48**

**Capitol Rotunda**

**Washington, D.C.**

The new Bowers administration announced on Monday, June 2<sup>nd</sup>, that the President would lie in state in the Capitol Rotunda from 9 AM on June 4<sup>th</sup> through 9 PM on June 9<sup>th</sup>, twenty-four hours a day. The former First Lady had agreed late in the day of June 1<sup>st</sup>, while she was still in the hospital. The President would then be buried in Arlington National Cemetery in a nationally televised event on June 10<sup>th</sup>, with Linda Weisskopf in attendance in a wheelchair.

Now, a little over forty-five minutes after the taped-off path around the casket had been opened to the public, over two hundred thousand people were lined up to pay their final respects to the departed president. The line stretched out of the Capitol Building, across the street and down the mall, all the way to the damaged Washington Monument and looped around it halfway down the other side back towards the Capitol.

That number of two hundred thousand waiting in line to see Norm Weisskopf would remain constant, give or take fifteen to twenty thousand, for the entire five and one half day period, except on Saturday, June 6<sup>th</sup>. That Saturday was when the presentation of the Medal of Freedom to Stacey Urkut had been rescheduled to take place...in front of the Lincoln Memorial, the presentation to be made by President John Bowers.

In all, well over three million people would come and pay their last respects to the President as he lay in state. They came in spite of the danger...many came as an act of defiance to the potential for danger and to show solidarity in the face of it. Husbands, wives, children, young men and women, wheelchair bound, grandparents, the feeble—every creed and color who loved and were loyal to the United States of America—they all came, and would have kept coming had the opportunity to do so lasted longer.

**June 6, 11:58**

**Presentation Stand**

**In front of the Lincoln Memorial, Washington, D.C.**

The time corresponding to the attacks of the prior week came and went without incident. The presentations had proceeded as planned and there had been no further attacks as John Bowers began his speech regarding the presentation of the Medal of Freedom to Stacey Urkut to a crowd that was estimated to be in excess of one and a half million people.

President Bowers marveled at the monumental display of fortitude. His faith bolstered almost to the point of tears, the President began.

“My fellow Americans, we are gathered here this morning and afternoon to honor one of our own. Last week’s ceremony was meant to honor the heroic sacrifice, actions and bravery of an individual who stood against our enemies, against all odds...and fought back.

“Today we will continue with and complete the ceremony that was so brutally interrupted just last week. America will recognize and honor her heroes—Stacey Urkut deserves to be recognized—our nation deserves the honor of recognizing her heroism. We will not be intimidated as a people. We will stand firmly, and we will also honor the many more who have now sacrificed their all for our nation.

“Two thousand nine hundred and fifty three names were added to that hallowed list as a result of last week’s attack. Over eight thousand eight hundred more were injured.

“Our own president sacrificed his life...and it was a long and distinguished life of sacrifice and service. God rest his soul. God bless his dear wife and family.

“Linda Weisskopf has given me permission to share something with all of you...as a voice of comfort and strength to our citizens and our allies, as a word of warning to our enemies.

“In his final moments, the President had a number of things to say to his wife and those attending him. Much of it was personal, but these words that he spoke were intended to reach the ears of every American. He said the following, only moments before losing consciousness prior to his death.

*“There may be a hard road ahead, but I now know that this nation will persevere because it has the will to persevere; it has rediscovered its moral compass for guidance and it has the Hand of Providence for support.”*

“My fellow citizens, let this be our expression of faith...our rallying cry...WE SHALL PERSEVERE!

“We shall persevere because of the faith, the morality, the dedication, the liberty, the ingenuity born of that liberty and the resilience of this people. And we shall persevere because a just God rules in the heavens and will support the cause of liberty, as He has done in the past.

“We will persevere because there are literally millions of Stacey Urkuts out there, who, when faced with abject threats to their life and liberty, rise above those threats and somehow come off the winner...or contribute monumentally to the ultimate victory.”

Turning to Stacey, who stood with him on the stand, and as more than a million people cheered both her and the words of their new President, John Bowers continued.

“Stacey Urkut, on behalf of a grateful nation, and for gallantry and dedication and citizenship beyond the call of duty while fighting the Chinese invasion force in Alaska...and in confronting that same evil here last week when you personally confronted and killed the assailant who had shot the President, we present you with the Medal of Freedom.

“May you wear and display it proudly, and may your actions, your sacrifice, your bravery, your dedication and your faith, be a role model for all Americans, young and old, military or civilian, from the local government officials up to and including all of us who have been elected to represent the people on the national level.”

As Stacey Urkut accepted the award and approached the microphone to say a few words, almost two hundred million Americans all over the world watched her, as well as uncounted millions of others all across the free world.

**June 6, that same time**

**Various locations**

**America and the Free World, Off the coast of Liberia**

Alan Campbell listened via radio transmission to the President’s address and now as Stacey Urkut began her acceptance speech, he tried to contemplate how this middle-aged woman could have accomplished what had been attributed to her. Upon reading about, he had commented to his gunny, “You know, Sarge, I would have been hard pressed to do what this lady did. Can you imagine?”

The Sergeant, a twenty year veteran, had seen enough in his career to not discount anything.

“Campbell, the human spirit is capable of things we can’t even imagine. Given the circumstance and her upbringing...despite her age and physical conditioning...I can imagine it. I have seen some pretty unlikely people do some amazing things.”

Now, as Stacey spoke, and as he and his comrades waited off the African coast, in the latest U.S. Navy San Antonio class amphibious ship, Alan felt that he could hear those qualities in the woman’s

voice. Somehow, he knew that this woman had done all that had been attributed to her and probably a lot more. This in turn bolstered his own faith and confidence.

He was a U.S. Marine!, and he was about to go into combat for the first time in support of the allied buildup that would soon strike at the underbelly of the GIR defenses in Africa.

Those same defenses had mauled earlier Brazilian and English attempts to break through and gain access from across Africa to the upper Nile River in an attempt to position themselves to either advance on Egypt or cross the Red Sea onto the Arabian peninsula.

But now over two hundred thousand American troops were going to reinforce well over one million African, Brazilian and other allied troops who were forming up in Liberia to make the transit into the interior—a massive offensive that would try to surround GIR forces resisting the Israeli, British and American advance to the south out of Israel.

Alan was proud to be a part of this force. Proud to be assisting the downtrodden in Africa...yet, as most sane people are, he was also concerned about his first combat. How would he do? Would he support his brothers in arms? Would he survive? Would he be wounded like his own brother Leon?

“Momma, I just hope you are prayin’ for me back home,” he thought. “Technology has provided us the advantage more often than not, but prayers are our most powerful weapon.”

### **Outside of Montague, Texas**

Cindy Simmons, in the comfort of her ranch home outside of Montague, Texas, listened as Stacy Urkut continued her address. She was joined there by her good friend, Elizabeth Trevor, and her husband, Joe. The Trevors had arrived only a day earlier after completing their Washington debriefings, at the hands of the Park Service Police and the Secret Service, and after attending a memorial service for their friend, Sandra McPherson, who had been killed last week in the attacks.

Cindy had tried to convince her friend that she and Joe need not come, even though she had been looking forward to Liz’s visit. But Elizabeth and her husband would have nothing to do with Cindy’s arguments against their coming.

“It’s times like these when friends have to rely on each other, Cindy,” Liz had told her.

“You need us there...and now we need you as well.”

Cindy had been concerned that their place was at their own home, or the home of their daughter, Patricia. But Liz had come up with the idea of having Patricia take some time off from her schooling in Chicago and visit them all in Texas. Patricia was eager to spend some time with her parents after hearing of their traumatic experience.

“Pat would love to come home to Texas for a couple of weeks anyway, Cindy. She’s in between semesters and has the time, and there are a lot of people she knows down there in the DFW area.”

So the Trevors had arrived and they had all spent the evening talking, reminiscing, comforting one another and planning for the future.

Jess would soon be coming home, too.

Cindy had gotten the word just a few days ago. With the combat operations continuing, and intensifying, the days when relatives could fly over to the major hospitals in Europe and see their loved ones were over. He would be flown to the United States in two weeks and would be in a position to come to the Veterans Hospital in Dallas, so he could come directly home.

Cindy would meet him at the Joint Services Base in Ft. Worth, and the Trevors had decided that they would stay on with the Simmons through June and celebrate the 4th of July with them before they returned home to the Boston area.

All of this had been communicated and planned last evening, and Cindy was grateful for her friends’ willingness to support her and Jess during this time of need. She was also happy that she could be of comfort to them after their traumatic experience and the loss of their new-found friend.

Last night they had talked for some time about Sandra, and Cindy had marveled at the change that had taken place in the life of that woman...of her dedication to the unborn after discovering the truth and proof of their humanity. She would never forget the optimism and joy that Elizabeth had expressed, despite the grief at Sandra’s recent demise, as a part of her faith in the life hereafter.

“I believe that Sandra has been given the opportunity to administer to and take care of those spirits...the young children who were aborted,” she had said.

“She’s with them now and I believe that the comforting and ministering is mutual, perhaps even more for what those spirits can do for Sandra, and that God has brought them together.”

That discussion had been of great comfort to Cindy, even though Elizabeth had not necessarily intended it that way. It helped Cindy as she continued to cope with the loss of her son. Oh, she believed she would see him again in the hereafter...and she looked forward to it and wanted to be able to express joy at that anticipated reunion, just as the Trevors expressed their joy for Sandra’s...she just wasn’t quite there yet. She still had a little more grief to work through. She prayed she would be able to get through it soon...soon enough for it not to be any additional burden to Jess.

Just as this thought and prayer passed through her mind, she was brought back to Stacey Urkut’s remarks and the comments she was making at that particular moment.

*“So, Mr. President, I accept this award on behalf of all of those with whom I fought...on behalf of so many who were lost, who gave their lives in defense of our liberty and way of life. I include in that number our former President and Secretary of Defense, whom I had met and who had been so gracious to me, and who were such stalwart leaders and defenders of our nation.*

*“There are so many who have been lost...but they are really not lost to us. Our enemies underestimate our faith and its impact in our lives if they believe that the loss will demoralize us.*

*“On the contrary, we shall be even more dedicated, even more committed to defeating our enemies, whatever the price. The memory of our departed friends demands it. Their spirit lives on to comfort us with their dedication, their commitment and their love.*

*“In addition, in my faith, their very essence—their own individual spirits—live on in the hereafter, a hereafter we all must face some day. I look forward to facing it with head held high in God’s own time...it is not for me to choose that time. God’s timing is His own. But He promises us a joy-filled reunion with those good people who went before. And that is the promise to which we must hold fast.*

*“Truth be known, this promise was the only thing that really enabled me to do what I did in Alaska. I attribute it to my Maker and His will concerning me, and the life He has taught me to live...a life where I need not fear...where I know all things are in His hands and it is but for me to accept and follow His will to the best of my ability.*

*“Sometimes His will is difficult for us to comprehend, let alone accept...especially when we see the lives of good people being lost at the hand evil. But if we hold fast to the knowledge that He is in control, and that we need but look to Him for guidance and strength, we cannot help but prevail.*

*“Therefore, I accept, and I dedicate this Medal of Freedom to Him and to all of my comrades in Alaska and elsewhere who have sacrificed so much in defense of liberty...for liberty is a gift from Him that no man has the right to take from us. Not now...not ever.*

*“Thank you...God bless our nation...God bless you, Mr. President, and those you work with.”*

As Stacey Urkut moved to take her seat and the President turned the podium back over to the master of ceremonies...and as millions around the world cheered the words of integrity and commitment that had swelled their hearts...Cindy Simmons found tears flowing softly and silently down her cheeks.

With the fall of each teardrop...and as they fell faster, and then just as gradually abated...her grief over the loss of her son abated, as if in answer to prayer. Somehow, Stacey Urkut’s message had touched and healed her heart and allowed her to let go. Billy would always occupy a precious corner of her heart, but that corner was no longer cloaked in a heavy black veil. Cheeks glistening with moisture, Cindy Simmons looked heavenward and thanked God for the wonderful cleansing that Stacey Urkut’s words had brought. She found herself quietly whispering the familiar words, “The Lord works in wonderful and mysterious ways...”

Elizabeth and Joe held her, and one another, all of them touched by the poignancy of the moment, all of them feeling the miracle of what was happening.

### **In Havana, Cuba**

In Cuba, the telecast of the ceremony had been carried live on the local television broadcasting equipment that had survived the fighting. In addition, the U.S. occupation forces had set up monitors in many public buildings and in public parks wherever possible.

The turnout by the citizens of Cuba had been amazing.

It seemed to Sergeant Hernando Rodriguez that these people literally thirsted for liberty, despite the decades of communist rule which had held them in bondage. To the amazement of many Americans, but not coming as a surprise to the Cuban American community, the citizens of the island nation had been quick to throw off their communist leaders...from the highest offices, to the local commissars, and party leaders.

Oh, the hard line adherents to the ideology and the party structure had fought, and they had fought hard. But without the general support of the people, who were glad to see the old regime go, the party’s adherents’ prospects were hopeless.

By the first of May, major combat maneuvering by U.S. forces was complete and the large Cuban military units in their Army and Air Force had either been defeated, or had surrendered.

By the end of May, when the President was attacked and killed, most of the hard line, hold-out units had been rooted out and destroyed. With shades of the Iraqi operation in 2003, a Cuban “deck of cards” had been established and, by the end of May, thirty-seven of the fifty-two depicted on those cards had been captured or killed.

The attack on the President had resulted in some more heated firefights over the last week as the few remaining communist leaders tried to use that event to bolster their waning support and create a more general uprising against the Americans.

But their efforts failed.

Firstly, using the event to show themselves and try to fight was a military disaster of tremendous proportions. American firepower and logistics were so overpowering that these fights, though fierce,

were always brief and lopsided in their outcome. The hold-outs played into American hands by engaging them directly.

Secondly, the Cuban people, outside of a miniscule minority who had profited from the old system...and most of those had seen the handwriting on the wall and were unwilling to show any support...were wholly unwilling to support any resistance to the American rebuilding effort.

The Cuban people *wanted* Cuba to be rebuilt.

As far as Hernando could see, the communication efforts by the Cuban American community in Florida over the years had been more successful than any of them could have dreamed. The Cuban people held out a bright hope for liberty...and, when the opportunity was presented, they were grabbing it with both hands and with gusto.

"I should have sensed it, after what happened with Ernesto," thought Hernando. "What happened in the heart and mind of that boy was a microcosm and a precursor to what had happened to the entire country. We just didn't see it."

Now, after listening with satisfaction to Stacey Urkut's words, and as he saw that the Cuban people had listened to those words with as much, if not more, genuine comprehension, Hernando began to eagerly contemplate his return home to his family for an extended leave next month...to his wife, his child, and his parents.

His son, Felipe, was almost two years old! How amazing! He could not wait to see him again. This time he would have some real time to spend with him, to play with him and get to know him.

Maria, in their last phone call, had informed him that she was pregnant with their second child! He had wanted to cry for joy and shout out loud all at once...in fact, back in the barracks amongst his comrades, that was exactly what he had done.

He loved her so and was so grateful for her love, for her outlook on life and her innocence and purity. He would do all within his power to protect that gift...to protect their life together...to protect the liberty and opportunity for their growing family.

And his parents. What could he say? They were so proud of him...he could sense it in their letters and in the brief calls he had the opportunity to make. He sensed his Dad's pride when the two of them talked about their mutual experiences.

Hernando's dad had joined the local Home Guard Unit and pulled sentry duty four times a week. Nothing too exciting had happened, but he had called in several suspicious activities, and Hernando knew that whatever facilities his dad watched were being watched by a loyal and completely dedicated American. He was so proud of his dad...and he was proud of both of his parents for how they had raised him and taught him to appreciate the freedoms and opportunities he had in America.

Now, after seeing his original homeland liberated, he was certain that the people there would embrace those same liberties and opportunities. The anticipation filled him with joy and pride. He would have so much to share with all of his family.

### **In Boise, Idaho**

Geneva Campbell turned off the TV set.

"Such a contrast between this week and last week," she thought.

Last week she had been anticipating the types of feelings that she had experienced this week, only to have those expectations dashed by the violent attack on the President and the crowd.

Those attacks had punctuated the angst she felt about the war in general. She was not against the war. Far from it. She knew it had to be fought and she knew it had to be won at all costs...it was just that the potential cost to her was so great.

With two sons in the fight...her only two sons...she was constantly concerned for their safety.

Leon had already been severely wounded, and he had gone right back out as soon as he was fully recovered, turning down all attempts to offer him a plush and safe stateside job in recruiting.

Alan had followed in his brother's footsteps and joined the U.S. Marines as soon as he could, and was now on his way to who knows where to fight the enemy.

Both of them were full-blooded U.S. Marines and she was so proud of them. She knew she could petition for non-hazardous assignments for at least one of them since they were her only sons and since they both were destined for hot combat zones.

But she would not...she *could not* do that to them. Each of them was so dedicated to the country they had learned to love and the liberty and opportunity it afforded.

"And they know what that opportunity is all about," she reflected as she continued to bask in the warm after effects of the rousing speeches and patriotic ceremonies she had just witnessed.

"Leon got himself an education, pulled himself up by the bootstraps and brought us with him out of the ghettos in Chicago.

"I don't care what any of those race-baiting politicians or their lackeys say...what Leon accomplished could only happen in America. And that same opportunity is available to anyone who wants to break out of the dead end, destructive habits that otherwise would keep them down...and, in spite of the naysayers, carve out their own success, just like Leon did."

For that reason, Geneva Campbell and both of her boys had been ardent supporters of President Weisskopf and his policies. He did not play to the stereotypes or the special interests. His interest, clearly and unambiguously, had been in America, her people and her constitution.

"And it looks like this new President, this John Bowers is cut from the same mold," she thought.

From everything she could see, from everything she had heard, he was an individual who was committed to America and her people, with little or no political ambitions outside of simply doing the job his oath required of him, just as Norm Weisskopf had.

If this proved to be the case, Geneva was certain of one thing: she and both of her boys would be equally ardent in their support of President Bowers. And she was certain that the vast majority of Americans would be strong in their support as well.

The nation was at war. It had been attacked and seriously hurt. There was no time or room for politics and all of the maneuvering and games that went along with it. And the people knew it.

"Perhaps we will finally realize that there never was any room for it," she thought.

"Allowing such nonsense is what produced all of the problems and conditions that brought us to this point...to the possible defeat and destruction of our country and all we hold dear."

And America had indeed come frighteningly close to being defeated as the enemy had advanced on all fronts. Now, though things seemed to have turned in favor of her country, Geneva knew that the outcome was far from certain.

"Just like Norm Weisskopf said," she remembered. "There's a long road ahead."

That knowledge, that a long and arduous road still lay between the current set of circumstances and victory...between war and peace—a peace that would see her sons safely back home—led her to think once again of Alan and Leon and to turn her thoughts, her aspirations and the desires of her heart upward to heaven in a prayer to God that they both would be kept safe.

### **At the U.S. Marine Staging Area in New Zealand**

As his mother was having these thoughts, Leon Campbell was walking away from the area where he and his unit had gathered with so many others to listen to the live audio of the presentation ceremony back in Washington, D.C.

"What an inspiring presentation," he concluded as he contemplated the speeches and the events that had led up to them.

"If Stacey Urkut is any indication at all of what our people back home are becoming...then the enemy has already lost and just doesn't realize it yet."

Thinking about such things always caused him to look forward to the day when the war would end and when the world would be back at peace and he could get on with his life. But he wouldn't allow himself to dwell on such daydreams too long...there was just too much standing between now and then, and he knew that winning was not a foregone conclusion. The price in blood, in lives, and in sacrifice and hardship would be great.

He had finally arrived in New Zealand on June 2<sup>nd</sup> after navigating a circuitous route that led him to this staging area for the offensive back into Australia. That route had ultimately taken him all the way back to Midway Atoll by air, and then he endured an interminable wait as the Chinese counter-offensive against Magadan had everything in an uproar, causing delays as aircraft and ships were marshaled to evacuate the severely wounded and beef up defenses in anticipation of more attacks.

From Midway he had ultimately made his way to American Samoa, and had seen the Republic of China (Taiwan) and the Japanese governments in exile and the military forces they had been able to salvage from their earlier defeats. Those forces had been augmented by American and other allied advisors, personnel and equipment and now represented a formidable force of their own.

And they needed that force. The enemy had advanced as far as New Caledonia, the New Hebrides Islands, and the Loyalty Islands to the west. The front lines of combat on the sea were drawn even closer to the west, between those islands and Fiji, extending up through the Tasman Sea and the Coral Sea to the east of the Loyalty Islands, up to the east of Tarawa, the Marshall Islands and Wake Island, all of which were in enemy hands.

Fiji was under constant attack, and there was just not sufficient allied force in the region to adequately protect it while also protecting the staging areas in American Samoa and the even larger areas on New Zealand where Leon would spend significant amounts of time. Allied planners would not allow the CAS to take Fiji, and would resist at almost all costs any obvious invasion attempt, but they could not afford to defend its airspace on a full-time basis. So the attacks and the destruction there continued. And there were frequent air raid warnings and actual attacks in Samoa as well.

During the six days that Leon was on American Samoa, three air raid warnings, and one actual attack had occurred. That attack had consisted of fifteen Chinese bombers escorted by forty fighters. They had broken through allied air defenses to the west, over Western Samoa and attacked the capital of Apia, causing significant damage.

Allied defenses around Pago Pago were stronger and more layered, so the strikes on American Samoa had been thwarted. But the damage and destruction in Apia were real, and just too close for

comfort. Luckily, there was no significant impact in Pago Pago, where the major Republic of China, Japanese, and other united Pacific Island governments in exile were staging their forces.

Ultimately those forces would serve as one of the major thrusts into enemy territory, slated to work their way up the island chains from New Caledonia and the Loyalty Islands, through the New Hebrides, the Solomons, and the Admiralty Islands towards an eventual liberation of their homes as they converged with the other prongs of what was envisioned to be the great Pacific offensive.

But the attacks out of New Caledonia and the New Hebrides were still too close and too frequent and they served as a constant reminder, to the people and the military forces gathering in the Samoan Islands, of the capability and proximity of the enemy.

Upon arriving in New Zealand, Leon had found that the attacks there were even more frequent than they were in Samoa. The attacks were also much larger as the Chinese, Indian, and GIR forces recognized that the greatest threat to their gains was located here, and they took measures to address it. As a result, the enemy committed larger air and naval forces to attacking allied forces gathering in New Zealand in the hopes of causing significant damage to those forces.

Those forces, comprised of American, British, Brazilian, and free Australian personnel, were clearly gathering for the attack on Australia. Already over three million allied men at arms had gathered on the two Islands of New Zealand, with the majority of them staging near Wellington on the northern island and around Christchurch on the southern island.

The supporting forces also represented the largest concentration of allied naval power in the world, including both of the United Kingdom's new Queen Elizabeth class large deck carriers and five American nuclear carriers, all of which were now outfitted with the SUB CIWS, protecting the islands. The United States also had eight of its Sea Control Carriers in the area, four of them the older Tarawa or Wasp class amphibious assault ships that were operating in a dual mode, and four of them the new Hampton Roads Class Sea Control ships which had been designed and built from the keel up for the sea control mission. The Canadians had both of their newer HMCS White Horse Class ships in attendance as well. All in all, seven large deck carriers and ten Sea Control carriers were operating off the coast of New Zealand with all of their escorts and the vast number of other ammunition, replenishment, oilers, and troop carriers that were gathering for the great invasion.

Once they were all assembled, those naval vessels, and the forces they would carry or protect, would make up the largest single invasion force in the history of warfare.

An equally large and impressive air armada was gathered in New Zealand. And it had to be massive because the CAS production lines throughout mainland China, India, and the former Asian Tigers were producing aircraft, weaponry, and ships at a phenomenal rate to throw into the maw of a battle anticipated to the south and east of their Australian conquest. It was all the massive allied air force could do to counter the increasing enemy numbers.

Finally, Leon had noticed the abundance of missile defense systems, and he was glad to see them...not just the standard SAM sights with AMRAAM, and Patriot batteries, but also many of the new land-based AEGIS cells that held theater anti-ballistic missiles.

"You gotta know that the Chinese and Indians are tempted to use their nuclear capability against what we are doing here," he thought.

"But with this many anti-ballistic missiles around, they dare not open that Pandora's box...at least I pray they won't."

### **Aboard the U.S.S Jimmy Carter off of Magadan**

The captain and crew of the U.S.S. Jimmy Carter had not been able to listen live to the broadcast of the presentation ceremony where President John Bowers awarded the Medal of Freedom to Stacey Urkut. Nor had they been able to hear Stacey's inspirational comments in reply. They had been beneath the waves involved in sea denial operations to any Chinese vessels, surface or sub surface, that tried to approach areas of Magadan and the continuing operations there.

And so far they had been completely successful.

When the Chinese had attacked the anchorage and the staging areas with their aircraft, and when they had unleashed the LRASD weapons, it had been the Jimmy Carter, and her sister boat, the U.S.S. Connecticut, which had killed four of six LRASD devices that were successfully intercepted in the attack on the C-90s. But that had not been anything close to enough. All ten C-90's and one of the four SSTNs had been destroyed and American operations had been seriously retarded.

But only for a short time.

America's rotation of C-90 aircraft that were replenishing and supplying new troops to the operations out of Magadan was adjusted to account for the losses. But there procedures and operations were also modified to combat the attack profile the Chinese had developed. They would not be caught by surprise like that again.

In addition, in order to make up for the loss of the C-90s, the three surviving SSTNs, which carried as much materiel as a large amphibious assault ship and had been scheduled to depart the area of operations, had made two extra trips back and forth to Midway Atoll to pick up men and materiel that had been originally slated for later C-90 flights.

In this way, though the buildup ramped up more slowly, America was still able to maintain its overall schedule at Magadan. A large number of troops and mountains of materiel were being garnered to trap the Chinese currently fighting in Alaska.

Now, as the SSTNs prepared to depart the area of operation for good, under escort from the U.S.S. Connecticut, Captain Simon Thompson prepared his boat for its next assignment.

That assignment would once again involve a mission using his embarked SEAL team under the command of Commander Barry Sheffield. Once again they would be secreted behind enemy lines for a critical intelligence gathering mission.

The Jimmy Carter was no stranger to such missions behind enemy lines. Through the course of the war, it was the boats of the Sea Wolf class that had somehow not been factored into the Chinese recognition profiles, so they had thus far escaped the deadly targeting of the LRASD weapons.

To date, no one could explain the Chinese lapse, but the Captain was understandably thankful for it, whatever the reason. The LA class boats and the newer (but smaller and less heavily armed) Virginia Class boats were all subject to the deadly algorithms of the Chinese Killer Whales. Somehow, in the Chinese intelligence bonanzas and victories of the 1990s when so much damaging information had been gathered by them—or given to them—the Sea Wolf class specifications and information had eluded them.

“They probably wrote it off as just three boats,” the Captain thought. “Figured that, in the overall scheme of what was coming, they would deal with us later. Well, it’s later and they still haven’t tagged a Sea Wolf—and we’ve certainly given a good account of ourselves.”

Two of the boats, the Connecticut and his boat, the Jimmy Carter, operated in the Pacific Theater of Operations, with one of them operating sometimes in the Indian Ocean. The third boat, the namesake of the class, the Sea Wolf, operated in the Atlantic and Mediterranean.

They were principally tasked with interdicting high value naval targets or disrupting the flow of oil by destroying as many large super tankers as they could find and target, as they made their way along the major sea lanes to India, China, Japan and Australia.

The Chinese knew of their mistake...they had surmised early on that the attacks occurring where no enemy combatant was accounted for had to be the work of the Sea Wolves. They were applying as much of their technical and scientific resource as possible to solving the problem, and there was continuous intense pressure on the CAS and GIR military to find and sink the Sea Wolves.

But they hadn’t been able to do that yet...despite some very close calls.

Simon Thompson could not count on two hands the number of times that God-awful sound of approaching LRASD weapons had enveloped his boat...and then passed on as the weapons failed to acquire the Jimmy Carter.

He was certain that, on at least two occasions, those weapons had passed not more than two hundred feet from his vessel.

Now they would be going into the very mouth of the dragon again. Pitting American ingenuity, training and will against the steel-hard will of their enemies.

And the Captain knew that sooner or later the Chinese or one of their allies would figure out the Sea Wolf riddle. And when they did, that knowledge was likely to be announced in the disappearance of one or more of the three vessels.

Thompson was thankful that the Jimmy Carter and both of the other boats had been rotated into dry dock and retrofitted with the SUB CIWS. He was also grateful that the new programming for the Mk-50 Barracuda torpedo was proving successful in intercepting oncoming Killer Whales. But he was under no illusion that such successes would last indefinitely. Once their enemies knew that they had a Sea Wolf sub on the run, they would launch everything they had at her and use all of their resources to track her down, overwhelm her defense and kill her.

It was against that eventual day that Captain Thompson prepared and trained his crew. They could never afford to become complacent. In combat, and against a resourceful enemy, complacency kills. When the time came, they would all have to be top notch and perform at 110% in order to survive. And their survival would not happen at the drop of a dime, or by accident. To survive against this foe, that meant right now, they had to continually sharpen their skills and procedures.

Speaking of now...the Captain had just been informed that they had received the transmission of the audio portion of the Medal of Freedom award ceremony that included the President’s speech and Stacey Urkut’s acceptance. The Captain was anxious for the crew to hear it, and he was anxious to hear it himself. They had all been deeply saddened by the death of President Weisskopf. For folks like him, in addition to his Commander in Chief and the ultimate command authority, the President had assumed almost a father-like role and had represented a paternal influence in his life...for much of his crew, the President’s role had been more reminiscent of that of a grandfather.

The President had not only embodied good leadership, as an individual deserving of great respect. He had also become someone they would all die for, or for whom they would go to the ends of the earth. This crew had done just that, by unquestioningly obeying his orders because of the trust and faith they all had in him. Somehow, for them and for most personnel in America’s armed services, during the course of the war their loyalty to the President had gone beyond just the constitutional

prerogative to obey his orders. It was something much more personal than that. It involved a personal loyalty to a man deserving of such.

But he was gone and now they had a new President. Every one of them looked forward to hearing directly from him as their new Commander in Chief. Every one of them, either consciously or in their sub-conscious, was waiting to see if John Bowers would prove worthy of wearing his mantle. Somehow, deep inside, they all knew that they needed such a leader for the rough road ahead.

As Commander Sheffield stood next to him there in the control room, Captain Thompson took the handset, clicked the transmit lever, and spoke to the crew.

“All hands, this is the Captain.

“Listen up. We have just received the audio from the event back in Washington that concluded three hours ago. It is of our new CINC, President John Bowers, and his presentation speech at that Medal of Freedom ceremony. It is also the acceptance speech of Stacey Urkut.

“We’re going to play it now. It will last about ten minutes and I ask everyone whose duties will allow it to listen carefully, and consider the message and words of our new President.

“Those whose duties prevent them from listening now, and other crew members who would like to listen to the message again later, can listen to the recording at any time from the ship’s files. Just see the XO or your section chief to arrange it.

“After the conclusion of the presentation, I will make a few comments about what was said and then talk about the orders we have just received for our next mission.

“Here’s the President of the United States...”

Over the ship’s intercom system, the President’s words began.

“My fellow Americans, we are gathered here this morning and afternoon to honor one of our own. Last week...”

**June 14, 05:23**

### **High Mountain Meadow off of Deep Creek**

#### **Near Ibapah, Utah**

Ever so slowly, the surreal light was giving way to shades of gray, that would in turn give way in the east to more golden colors preceding the dawn.

Slim loved this time of morning as he watched the horses up here in the high meadow on the upper reaches of Elk Creek (pronounced Elk “Crick” in these parts), surrounded by granite sentinels. They called the place he was camped in Sentinel Bowl, and it was one of his favorite places to tend horses in the late spring and early summer in western Utah, only a few miles from the Nevada line.

It was remote country, the closest town being the small town of Ibapah about fifteen miles to his north and west, population less than one hundred. To stumble upon any real civilization, you had to go five divides over and one hundred and fifty miles to the northeast, to the suburbs of Salt Lake City.

“And I reckon that’s just about far enough...maybe not even far enough,” thought Slim as he considered a place, the Salt Lake Valley, where something on the order of a million people lived.

Slim seldom, if ever, approached any such place. He’d been a cowboy for all of his life. He knew nothing different. He wanted nothing different. He pretty much enjoyed just being left alone to tend the animals and to associate...occasionally...with his other cowboy friends in a good game of poker, or a good meal of steak and potatoes.

There was those around him who said that life had passed him by...that he ought to get a little more into the modern era. But he had freely chosen the life he lived...the one he loved, and he did not regret it one iota. His wife was long since dead. His two kids visited him on occasion and he even got to hold the grandkids when they came by. But leave the life he loved? Not a chance.

Besides, he was still good at it...always had been. If you needed some horses tended or broken, or cattle herded...if you needed fences mended or built, or if you needed a corral, Slim was your man. When it came to livestock, he could tend ‘em, and he could mend ‘em. All over western Utah and eastern Nevada, from Elko and Ely down to Cedar City, Slim was known as a hardworking, totally reliable hand who liked nothing more than to work outdoors and keep to himself.

At sixty-eight, though his face was weathered, he had the physique, the lung capacity and the stamina of most “modern” men who hadn’t cracked fifty yet, so he figured that he was doing okay.

This morning he was tending McCalvery’s horses, and would be watching them all summer. He loved the Sentinel Bowl because it was high and it was remote...the air was clear, and here in the late spring the wind still blew cold and invigorating...and you had a view sketched by God’s hand.

Down below, the Deep Creek valley seemed to be swimming in the surreal light of a full moon that itself had not yet set. Hundreds of cattle were being tended down there by younger cowboys and, throughout the night, Slim would hear the night-herd song being sung by them as they lulled the cattle and kept them from getting restless. Slim loved that sound carried up here to him on the wind. It took him back to earlier days and the times he’d spent with other cowboys those many years ago.

Slim didn’t think too much about world events, but he and the other cowboys could not help but be impacted somewhat by them. Most of the really young cowboys, those younger than thirty, were off fighting. You couldn’t help but miss them.

Several of the others were enlisted in the local Home Guard Unit and took time off to stand another kind of watch... watching over the conveniences and infrastructure and necessities of modern man. As cowboys who had spent their lives watching over things, they were good at it.

In addition, there were large areas of Nevada, off further to the west, that were restricted ground for military training and testing. That was something that had been the case for many, many years and the installations there would normally produce occasional sounds that would drift over the ranges and reach them here. But now, with the world at war, those sounds were much more frequent and originated from areas now much closer to them.

Slim figured that those unsettling sounds were something to get used to, because all of that land was now constantly in use in the training of the large forces America was employing in this war, and in the testing of more and more systems to counter their enemies.

The way Slim figured it, if those sorry Chinese Communists, radical Islamics, or those Aztlan whackos, or whatever they were calling themselves these days, ever got through to him here in the mountains...he'd give them what for. He was still a crack shot with his Model 94, and he knew how to survive and move around in the wilderness.

Considering this, he did allow himself to contemplate one of the few modern events he had taken the time to witness in the last several years. That had been the Medal of Freedom ceremony after the killing of President Weiskopf.

He had held a deep respect for the former President, and had cast his ballot for him. Slim always voted, and he always voted for the man whom he felt could best do the job. He read the papers and he listened to the talk and he always made his mind up well in advance of any election. He might not be into a lot of the modern conveniences, but he didn't view voting as either modern or convenient...he figured it was a necessary part of being able to enjoy the free life of a cowboy.

Anyhow, he'd wanted to not only hear the new President, John Bowers...and he'd liked every bit of what he had heard...he wanted to hear Stacey Urkut speak. He felt an odd kinship to that woman whom he had never met. He figured, honestly and sincerely without any fanfare, that the way she had reacted to those Chinese runnin' dogs in Alaska was exactly the thing he would do here.

...and he'd liked everything she had said, too.

While he was contemplating all of this, and as the hour approached 5:30 AM, the pulsing, rumbling noises began.

It was way off in the west, but it was deep and it was getting louder. The very earth beneath his feet began to tremble ever so slightly in unison with the strange rumblings. As it got closer, the animals began to get disturbed and Slim got up to quiet them down.

Then the first rumbling was joined by another, and then another, until finally there were four distinct and separate pulses that were combining into one huge sound that was coming closer.

...and as it came, the very sky began to lighten with much more than the dawn. And the tremendous strobe light effect was coming from the west, not the east. This was no dawn light. This was a light of obvious unnatural origins.

The horses were rearing now and Slim could tell that down in the valley a regular stampede was in the making. Luckily, the ropes Slim had set out for this high meadow corral last evening were holding and all of the horses he was watching were contained.

But the great rumbling continued and the pulsating lights grew brighter.

Then, looking westward above the valley and across the Goshute Range, Slim saw the first...then the second, and third and fourth pulsing lights approaching...they were too bright to look at directly and Slim had to turn his head as they approached.

As the horses continued to rear behind him, Slim could do little more than stand there in transfixed awe and obliquely watch the spectacle as it approached and passed overhead.

"My God!" Slim thought. "We're launching something big into space...four of them at once."

All four lights were climbing very high, getting further away in the heavens even as they passed overhead. When Slim was once again able to look at them, he saw them all pass well above the feathery reach of some very high cirrus clouds as they continued onward...and upward.

He began to comprehend something of the distances and the speeds involved, and he realized that, although the four space craft and their payloads appeared relatively close together, they must be a significant distance apart.

As they got higher and higher into the atmosphere, their pulsating seemed to make them appear to be a slow, very bright twinkling, as if though they were surreally winking at him as they continued on. Slim watched in awe, not knowing that each of those pulses that were creating the deep rumblings were in fact miniature nuclear detonations against a specially designed shield which translated the force of the explosion into the nuclear pulse thrust that was taking the vessels into orbit.

Slowly the rumbling subsided and, as the horses began to settle down, the rapidly departing lights became little more than very bright strobing dots moving further and further off to the northeast in the heavens, as if to greet the dawn.

"Well," he said to himself, "you sure learn something new every day."

“I knew we had a lot of military exercises and training going on in Nevada, but I had no idea we were launching space ships from over there.”

...and outside of a very select few... which this morning had been added to by hundreds of other ranchers, cowboys, tourists and people otherwise out in the mountains and deserts of western Utah and eastern Nevada, neither did anyone else.

Oh, to be sure, on the western outskirts of Salt Lake City a number of early morning risers had seen the strobe light effect in the sky and felt the much diminished, rumblings. But those who did see it wrote it off as distant lightning over the mountains, and most just slept peacefully through it all.

Which was precisely the way the United States military high command and civilian command authority hoped it would turn out and remain for as long as possible. The new President himself had only learned of, and given final approval to, the plan the day after the Medal of Freedom ceremony in Washington, D.C.

But the launching into space of the four large spacecraft on June 14, using the latest American technology, a single stage to orbit (SSTO) technology soon to be officially dubbed the Orion nuclear pulse boosters, was a date that would later be marked by historians as a turning point in the war.

It would also be recorded as a date that marked a turning point in the history of mankind.

## Chapter 34

*"I shall always remain confident of the American people's ability to rise to any challenge." - Norman Schwarzkopf autobiography, 1992*

**June 22, 18:49**

### **Executive Council Chambers**

#### **Politburo, Beijing, China**

Slim and the other cowboys and ranchers in Utah and Nevada were not the only ones to take note of the spectacular American space launches. In addition to the American authorities monitoring the flights, Chinese personnel who had been scouting the perimeter of the Nevada test facilities, took note of what they saw and passed it on.

In addition, Chinese space monitoring stations in Mongolia and elsewhere within the occupied borders of Chinese territory, including the rebuilt facilities on the Island of Tarawa that the Chinese had retaken from the Americans, took note of the objects entering earth orbit from trajectories originating out of the continental United States.

That was why this meeting was being held. General Hunbaio was completing his briefing regarding what they knew of the launches and the objects being monitored in space.

"In summary, these launches represent unprecedented advancements for the Americans in heavy lift. The four lift vehicles that they utilized were much larger than anything the Americans have used before for satellite insertions, and they are clearly powered by nuclear pulse detonations, using small, specially designed nuclear explosions to provide this Single Stage to Orbit (SSTO) capability.

"This is not a new avenue of research. In the late 1940's and early 1950's the Americans studied SSTO technology extensively. If they have perfected it...and based upon this insertion into space we must assume they have...their lift capacity will greatly exceed the size and lift capability of the largest Russian craft, or any other...and the resulting advantage is cause for great concern.

"As a result, the Americans have successfully inserted these large payloads into geo-synchronous orbit above the United States, and they did so with a minimum amount of exposure over our territories. They are busily constructing a station of some type there as we speak."

One of the executive committee members, Minister Win Chu, the Minister of Transportation and an individual who commanded significant internal security and regulatory forces of his own, interjected at this point. His frustration at hearing that the Americans were maintaining any significant presence in space, even for a week, was obvious. It defined an intolerable situation.

"Then use every anti-satellite weapon at our disposal and destroy these craft where they stand."

The General respectfully waited for the Minister, who was a long time ally and trusted confidant of President Zenim, to finish.

"Minister Win, our initial attempts to intercept these craft with those very weapons as the they went into orbit above us proved unsuccessful.

"Our failed attacks strongly suggest that the Americans have perfected and armed these spacecraft with significant laser defenses. Our current analysis indicates that there must be nuclear reactors of considerable power generating capability on board each spacecraft.

"This explains their abilities both in terms of positioning the large payloads, and in warding off our kinetic energy interception efforts.

"Right now, all four of the craft have unloaded their payloads. And assembled them into a facility of some type...a large facility at this position."

Using his pointer, the general leaned over the table and identified a position in space above the United States on the table top display apparatus that was projected onto the screen being used in the presentation to the executive committee.

"From this position, it is difficult for our mainland or Pacific Island facilities to get a clear picture, either visually or electronically, of what the Americans are doing. The *ta shih* devices do not have the range to determine whether or not the Americans are using novel stealth material and technology in this venture...so we are unsure of the exact magnitude of this American space force.

"But, at this position they are still vulnerable to our attack.

"President, Minister Win, and other members of the Executive Committee, we have a proposal prepared that will describe how we can go about attacking the Americans at this location.

"I will now turn the time over to our newest member of the Committee and ask him to present that proposal to you. The operation is his brainchild. He is a People's Hero and the perfecter of the singular weapons that have allowed us to push the Americans out of Asia and the Western Pacific Ocean and keep them out.

"The People's Republic had made many technological advances during this conflict and in the years leading up to it, but Lu Pham's creation must be recognized as the advancement, above all others, that has reaped the most rewards.

“Admiral Lu, please brief the rest of the committee on the attack plans.”

**June 22, that same time**

**Executive Council Chambers**

**Politburo, Beijing, China**

Approaching the front of the council chambers, Lu Pham found it difficult to believe that he would be making such a presentation. He had been a member of the executive committee for less than a month, and he had thought he would sit in relative silence in such conferences for many years before counseling these others on matters of policy or state security.

The call for Lu Pham to serve in this capacity had come from Chin Zhongbaio, the Chairman of the Chinese Ocean-going Shipping Company (COSCO) and a member of the Executive Committee himself. That he, Lu Pham, would be tapped to be a Committee member had come as a complete shock to Lu, particularly after it was described to him that President Jien Zenim himself had made the request. He did not know the President personally and, though he had attended a few meetings that had included the president, Lu had never imagined that Jien Zenim had taken personal note of him.

But as shocking as the offer to become a member of the Executive Committee of the Chinese Politburo was, it was one he readily accepted. . .and due to the President's overwhelming influence on the committee as a whole, it was one that was approved without dissent.

Chairman Zhongbaio and General Hunbaio had done so much for Lu and his family over the last many years. Their guidance and affirmation had finally allowed him to realize decades-old dreams and to keep promises that were just as old. . .promises to his long-deceased parents.

Lu had recognized for some time that all of those efforts on his behalf had been a part of the larger plans engineered by Jien Zenim himself, plans that included the Three Wisdoms, whose principles ruled China and all of the CAS. . .and extended to the GIR as well. Well over sixty percent of the earth's population now lived under governmental systems that operated by those principles.

They were principles Lu himself had adopted, along with his entire family. The principles were straightforward and simple, and challenged their enemy's notion of individual sovereignty and self-promotion with the ultimate statement about the welfare of the many being the ultimate societal goal.

1. “All men and women are equal.”

2. “All share equally in the bounty of a working and industrious society.”

3. “One goal, one thought, one people for World peace.”

Lu knew that he owed most of his success, and the elevated and comfortable position of his family to Jien Zenim. So a call to serve which originated from the President himself. . .to serve with him. . .was a request which Lu Pham immediately and gratefully accepted.

These musings all flashed through Lu's mind as he approached the front of the room and the position just vacated by General Hunbaio. Taking the pointer from the table, and advancing to the computerized presentation apparatus, he addressed the entire committee.

“Mr. President and members of the Executive Committee, I am humbled and grateful to be standing here before you today.

“We have been presented a great technical and military challenge by the Americans. What they have accomplished is significant and there are many, many ways their accomplishment can be used to harm us, our allies, and our peoples if such advances are allowed to stand.

“We must not, and will not, allow them to stand.”

As Lu continued talking, President Jien Zenim and several of his closest confidants were pleased beyond measure at Lu Pham's opening remarks and with his positive attitude and demeanor.

It was a demeanor and an attitude that was much needed on this committee as a whole. As the president watched, he could see that Lu's enthusiasm was contagious.

“...and well it should be,” thought Zenim. “Lu has been successful in almost everything he has been involved in. From the Killer Whales to the recent efforts that are upsetting and slowing the American plans at Magadan.

“We will make good use of Lu Pham's can-do attitude on this council. . .we must embrace such optimism if we are to prevail. Putting Lu Pham in this position will infuse these older ministers with his spirit. . .and Lu himself will become another valuable and life-long ally in the process.”

Lu Pham continued.

“The Americans have presented us with monumental challenges in the past. . .and we have overcome them. Everyone thought that their vaunted AEGIS system, the one protecting their aircraft carriers, was unassailable. . .and yet we challenged and defeated it.

“We did so by exploiting the greatest weakness in that system and then saturating it with weapons of great speed and with sufficient numbers to overwhelm what defense they could muster.

“We have consistently kept up with and overcome their efforts to modify and upgrade their defenses and maintained that advantage.

“When was the last time an American aircraft carrier sailed with impunity within 500 miles or more of the Sea of Japan, the China Sea or anywhere near the Philippines?

“It has been years now.

“Let me give you two other examples.

“For years the Americans had their way in the skies over most nations who would dare oppose them. They used their stealth technology to fly with impunity through the sovereign airspace of those nations. They even did so at the beginning of this conflict.

“They do so no more.

“At the outset of this conflict, the Americans also used their satellite and GPS technology to great advantage against us and our allies. We won battles and lands from them only at great cost in numbers when facing this technology.

“They do not enjoy that advantage anymore either.

“In fact, it is their effort to reassert this type of dominance in space that we are facing, and, as with the other examples, we shall prevail here as well. And we will prevail by employing the same tactical philosophy with which we defeated their carrier battle groups, by using speed and overwhelming numbers.

“The Americans use defense in depth...layered defenses...as a means to ensure the capability of defending their high value targets. It is a good philosophy that has served them for many years. In the case of their carriers, it was a flawed defense, and in this case, it does not serve them at all.

“In space, they do not yet have layered defenses. They have a single defense that they have just implemented. As with AEGIS, we are going to cut through that defense and we are going to do it with speed and with numbers against which they cannot successfully defend.”

But Lu Pham was wrong...the U.S. had already developed layered defenses in space.

**June 25, 02:54**

### **Presidential Bedroom**

#### **The White House, Washington, D.C.**

The incessant buzzing in his ear awakened President John Bowers immediately. It was not the first time he had heard it, and it certainly wouldn't be the last...but at 2:50 in the morning?

“Well, it must not be too earth-shattering,” the President thought, “Otherwise they would be here in the room carrying Jane and me out of here.”

Rising quickly and taking as much care as possible not to awaken his sleeping wife, the President whispered an acknowledgement into the telephone handset by his bed and then rapidly dressed and exited the bedroom into the hall.

There he found the head of the graveyard detail of his Secret Service team accompanied by Bill Hendrickson, his National Security Advisor.

As they immediately made their way to the elevator that would take them deep below the White House to the situation room, Bill Hendrickson spoke to the President.

“Mr. President, it's started. The Chinese are going all-out to destroy Point Conception.”

**June 25, that same time**

### **Point Conception Station**

#### **Geosynchronous Orbit above North America**

Captain Bart Wynn surveyed the condition of his command, United States Space Station Point Conception. He quickly assessed its defenses against the developing Chinese attack from his commander's console in the CIC. The Chinese wanted to bring Conception down...and if he had any say in the matter, they would fail in that effort.

Captain Wynn had ridden up to orbit aboard one of the four new spacecraft America had developed for this mission. They were all true single stage to orbit vessels that utilized a large supply of miniature nuclear explosive devices to boost them into space. Two of the vessels, the United States Space Ship (USSS) Orion and the USSS Nebulae, designated as LSC-D (Laser-armed Space Corvette – Defense) 001 and LSC-D 002, were specifically designed for the mission of creating and controlling this space station at Point Conception. The other two, the USSS Gaspra and the USSS Ida, designated LSF-RX (Laser-armed Space Frigate – Recon and Exploration) 001 and LSF-RX 002, were larger, more heavily armed vessels, capable of larger payloads and had been designed for deep space assignments. All of them were reusable, shuttle-like craft that were capable of powered landings on the earth once they reentered Earth's atmosphere.

They were also quite capable of defending themselves in space, and the payloads that they had carried into space were even more capable in that regard, as the Chinese would discover shortly.

The two corvettes assigned to the station formed the command and communication modules of the USSS Conception, while the payloads they carried formed the primary defense and living modules. The corvettes were a semi-permanent part of the station and were not scheduled to return to earth for over two years, when they would be replaced by the next class of craft, which would be more capable and would take up permanent residence at the station.

The crews would be in place for their entire tour of space duty, scheduled to last here on the station from twelve to eighteen months. The way Captain Wynn looked at it, this was war and they

had a mission to perform here in geosynchronous orbit above America, and they would fulfill that mission at all costs.

The two frigates, the Gaspra and the Ida, after leaving portions of their payloads here to assist in the creation of Conception Station, had proceeded further into space. They did this by first using conventional rockets to achieve a desired thrust that carried them approximately twenty thousand miles beyond Conception Station, where they then deployed light sails that would allow them to reach their objective within the time constraints of their mission planning, just short of nine months later.

They would indeed be traveling much further out into space.

As a result, the crews' on the Gaspra and Ida had tours of duty that would last somewhat longer than the personnel working here at Conception Station, but they would rendezvous here on their way back to earth eighteen months from now, after a successful and monumental mission.

Their departure using conventional propulsion had been shielded by the positioning of the station and by their stealthy design characteristics which would keep prying Chinese or other enemy radar and thermal sensors from detecting them. Their exotic exterior material was of such a nature that radar and thermal energy signatures were either deflected or completely eliminated. Except when traveling by nuclear pulse thrust, which could be used at any time to augment their other propulsion capabilities, they would be invisible to their enemies.

It had been hoped that their departure and continued voyage had been kept a complete secret from their enemies...and they had been completely successful to date in realizing that hope.

But all of that was not material to the next few minutes, when the fate of the USSS Conception and its personnel, and the credibility of the engineers and designers who had developed it, would hang in the balance. The future of America's presence in space during the war, and, as would later be recognized, the ultimate outcome of the war itself would hang in the balance.

Captain Wynn absorbed the information coming into the CIC. He had long since understood the reason that experienced naval officers had been chosen to command United States Space Command (USSC) vessels.

The environment in which he was now operating was much less a flight deck, and more like the Combat Information Center of a major naval combatant. In fact, the CIC had been designed using the principles learned in modern naval war fighting. In this case, the vessel was in space, but he was being tasked with, and exercising, all of his naval command and leadership experience.

Each of the two corvettes carried two banks of new laser cannons called Laser Weapons Systems (LWS) that got their energy from the nuclear reactors that powered the craft and the station. Those reactors were the latest, most proficient, and most miniaturized designs that America had ever produced and were specifically designed to work with the environmental systems, the laser weaponry, the research systems and the communication and sensory systems that the corvettes carried.

In addition, each of the craft carried two kinetic energy weapons called Kinetic Energy Defense Systems (KEDS), which fired depleted uranium projectiles at hyper-velocity speeds. They used a derivative of the Hail Storm missile's solid state electronic fire controllers to propel those projectiles at a variable rate, depending on the engagement.

But those defenses were only a part of the station's defense capabilities. The defense module had included the provisions and equipment necessary to deploy the station's two primary defenses.

One of these was a bank of sixty-four Block V Standard missiles and the latest AEGIS radar and software modules to control them, specifically modified for space engagements. The entire system was known as SPAEGIS. The system, like its naval and land-based cousins, was designed to control all of the station's defenses, including those on the two craft that were now a part of the system.

Each of those Block V missiles had a miniature tactical nuclear warhead and a range of over 250 miles. They were intended for use against just the sort of attack the Chinese were staging: massed missiles and kinetic projectiles.

"They think they can attack and take down this station like they did the International Space Station three years ago," the Captain thought. "Well .... let 'em try it."

Captain Wynn's thoughts on the destruction of the International Space Station by the Chinese came from eyewitness experience. He had been the commander on the Space Station at the time of the Chinese attack, and if it weren't for the fact that the shuttle Discovery was docked with the Space Station at the time, and the crew evacuated by means of the shuttle just moments before the attack, he and everyone else on board would have been killed.

As it was, the hulk of the Station had fallen out of orbit to earth, impacting in Brazil, killing many thousands in Rio de Janeiro, and had resulted in Brazil declaring war against the Chinese.

Captain Wynn was confident that his defenses would prevent any repeat of that terrible episode. The nuclear warheads on the Block V Standard missiles would literally blow holes in the "shotgun" pattern of projectiles or missiles meant to take out Station Conception.

Then, once any targets, or "vampires" in colloquial naval jargon, had gotten past the missiles, the lasers and kinetic energy weapons on the two corvettes would target any "leakers" as they approached closer to the station. The Captain was quite confident in the Corvette capabilities as well. They had performed admirably against just such attacks as they made their way into orbit.

Any Chinese weapons that were able to get through those two layers of defense would then run hard up against the last defense, which had been carried aloft in the payload of the defense module.

This final defensive layer was a reactive mesh of fine but tremendously strong poly-carbon, called Poly-Carbon Reactive Mesh (PCRM), that was arrayed around the station in a harness. The harness holding it in place was flexible and had fifty remote controlled thrusters which could control the location and shape of the mesh depending on the attack profile. That mesh was also engineered to allow either missiles or projectiles to be fired out through it, but would use its carbon strength and explosive reaction to destroy or deflect any object attempting to penetrate it from the outside.

Finally, Captain Wynn knew that the structure of the station itself had been designed for battle. Air-tight, strengthened bulkheads, and thick dogged hatches would make "Condition Zebra" very effective, when all hatches were secured. A skeleton structure made of the hardest metals and composites, and an all steel exterior skin with thick armor covering critical spaces.

"These babies are not cheap or "light", but neither are aircraft carriers," thought the Captain.

"We aren't going to be caught in a defenseless position like we were on the ISS three years ago."

The time for the initial engagement of the Chinese attack had come. Their first wave of missiles and projectiles were coming into range.

"You may commence firing," the Captain ordered as weapons officers and their personnel began launching Block V missiles and preparing the lasers and kinetic weapons for engagement.

But while the Chinese were unaware of the exact nature of the specific weapons the Captain would employ against them, their planners had made allowances for many of the principles upon which those specific weapons operated.

### **June 25, that same time**

#### **275 miles away**

#### **Approaching Point Conception Station**

Two hundred Chinese anti-satellite missiles were approaching Point Conception. Each was loaded with high explosive warheads and each was traveling at orbital speed. They were coming at the American space station in five waves of forty missiles each. Each wave approaching simultaneously from slightly different angles of attack along the same threat axis, as much as orbital mechanics would allow.

Interspaced between the simultaneous waves of missiles, were clouds of thousands of heavy metal projectiles which had been released by other missiles after they had been inserted into orbit...over five thousand projectiles in each wave, and there were five waves targeting the station.

The Chinese had held very little back, just enough to counter any single satellite launches the Americans or their allies might attempt under cover of this battle. It was their intent, with the massive attack, to completely overwhelm the defenses and obliterate the American presence in space.

### **June 25, less than a minute later**

#### **240 miles away**

#### **Approaching Point Conception Station**

Station Conception targeted five Block Vs on each wave of Chinese missiles. They were programmed to detonate immediately in front of each wave. The station also targeted two Block Vs on each "cloud" of projectiles they had detected.

The first engagement against the missiles was successful for the Americans. Three waves of Chinese missiles suffered over 90% attrition and only two missiles from each of those groups continued inbound towards Conception. The other two attacks on Chinese missiles were less effective, allowing seven missiles from one group and five from the other to proceed on towards the station-and these missiles were relatively widely dispersed.

The engagement against the kinetic projectiles was more effective in percentages, knocking off course or vaporizing over 95% of the projectiles in each wave. But this still left five waves of several hundred projectiles still approaching the station in patterns that could destroy it or do it great harm.

At this point, a weakness in the American system became evident. The Chinese attack, due to its approach from the opposite rotational direction of the space station, was approaching at two times the orbital speed. This meant that quick order, the attack would come too close to the station for continued Block V missile engagements.

The American system had to analyze the effectiveness of the first attack before launching a second one. Precious seconds ticked off until solid information about the nature of the remaining Chinese threat was available and the system engaged the remaining vampires. The system had used thirty missiles for the first engagement; it now fired another twenty-six missiles, leaving only eight missiles in reserve.

This engagement individually targeted each of the remaining Chinese missiles and targeted the remaining dispersed clouds of projectiles with two missiles each.

**June 25, three minutes later****140 miles away****Approaching Point Conception Station**

More small nuclear explosions lit up space, this time much closer to the station.

Captain Wynn was concerned, as were his subordinates, but that concern was buried underneath the professionalism and effectiveness of their training. They performed their duties and tasks without pause and without waver. Their very lives depended on them not breaking their routine or wasting precious seconds.

SPAEGIS quickly informed the controllers in the CIC that two Chinese missiles somehow made their way through the nuclear fireballs set in their paths. The engagements of these missiles was immediately assigned to, and slaved to the lasers and kinetic projectiles on the two American corvettes attached to the station.

At this point, when Captain Wynn saw that only two missiles had gotten through his Block V missile defense, he issued some direct orders that modified the SPAEGIS defense parameters.

"Target the leaker missiles with one of the LWS systems from both the Nebulae and the Orion! Use the KEDS and other LWS from those corvettes to knock down the leaker projectiles.

"Do it NOW!"

The duty officers and operators quickly programmed the system to do as the Captain instructed.

There were less than twenty seconds remaining until missiles and projectiles would begin impacting Conception Station.

**June 25, three minutes later****Within twenty miles****Point Conception Station**

The lasers from the two corvettes performed effectively and quickly, destroying both of the remaining Chinese missiles.

But the remaining Chinese kinetic projectiles from all five waves were now approaching the station. They were greatly dispersed as a result of the Block V nuclear missile attacks and each had to be targeted individually, based on the threat that it posed. They still numbered over three hundred separate projectiles.

As they approached, they were now coalescing into a single, dispersed cloud of projectiles. The lasers and kinetic weapons aboard the two corvettes performed well against these objects, but there were just too many individual projectiles to destroy or deflect in such a short amount of time. One hundred and sixty-five of the projectiles made their way through the station's point defenses and now approached the PCRM defense.

That device had been deployed eight miles out from the station and had made a final adjustment after the final engagement of Block V missiles. There wasn't time to adjust to the effectiveness of the point defenses. One hundred and fifteen of the small projectiles were destroyed or deflected by their collision with the PCRM. Another twenty-six missed the PCRM altogether because they had been sufficiently deflected by prior action to cause them to miss the station entirely.

But twenty-four projectiles succeeded in making their way through every layer of the American defense. They either passed through holes left by projectiles that had impacted the mesh just prior to them, or they passed at angles that missed the PCRM, but still would impact the station.

Fourteen of these projectiles shredded the primary communications antennae on the communications module, destroying the high speed digital interface at the same time. Ten of the projectiles impacted the station along a line that stretched between the living and defense modules, penetrating those modules in seven places, and creating havoc in the secondary, alternate command center for the SPAEGIS system. Six personnel in that area were killed and another four were injured before they could be evacuated to air-tight, secure areas of the station. Another three personnel who were not on duty were killed in their bunks in the living module.

Backup communications with the Station were somewhat slower and more cumbersome, but Captain Wynn informed his superiors on earth that the station had survived and was still capable of putting up a fight and performing its mission.

It would be eight hours, requiring a four hour EVA by three personnel, before something approaching normal communications between the USSS Conception and its control facilities in Nevada, or the alternate facilities in California or Florida could be re-established. It would be two days before repairs were sufficiently far along in the alternate SPAEGIS command center that it could be manned without the need for space suit protection against the vacuum of space. Two cabins in the living module were beyond repair and were evacuated until more serious repair equipment and the necessary material could be launched into space.

That launch and re-supply would occur much sooner than originally planned, and it would be repeated many more times than had been planned. As was the case with American forces off

Magadan, the USSS Conception was in a position where the enemy they intended to use every means at their disposal in the effort to dislodge it.

### **June 25, early morning**

#### **News Stations throughout North America**

Radio and TV news outlets all over the country carried the dramatic footage of the engagement in space. The hundreds of bright flashes could not be missed by anyone who was awake at that hour and chanced to look outside. The brilliant flashes from small nuclear explosions lit up the sky across much of North America, much like a thunderstorm lights up the sky with its lightning flashes.

But these flashes were much, much further away, and there was no resounding *BOOM* or roll of thunder accompanying them.

Numerous calls to emergency 911 numbers in cities, counties, and states were vaguely answered as the operators and dispatchers themselves knew nothing of the event. Calls by state agencies to federal agencies for the most part suffered from the same lack of information and ignorance.

The Department of Homeland Security released an official statement at noon Eastern time regarding the matter. It represented the official government statement regarding the engagement. All of the major radio and TV networks picked it up, as well as the major internet news sites.

*“The numerous flashes in the skies over the United States this morning are the result of our forces establishing a defensive station in space over North America that our enemies are trying to destroy. The enemy has been unsuccessful in their attempts. We are confident that they will continue to be unsuccessful, although they will most certainly try again and the public may witness more displays similar to this morning’s.*

*“Pray for our service personnel, wherever they may be engaged. Thank you ”*

This announcement did much to allay the public's immediate fears and quelled some of the more frantic and hysterical speculation that was beginning to spread across the nation. But the statement and the event itself were also recognized by the vast majority of the people as representing a significant change in the nature of the warfare.

It was a change, despite its potential serious consequences, that most Americans welcomed.

America was taking the initiative in ways the enemy had not expected and that enemy was now being forced to react to American moves as opposed to the other way around.

### **June 26, late in the day**

#### **2500 miles west of the Japanese Coast**

#### **Control Room, USS Nevada, SSGN Trident Submarine**

The trajectories had been back-tracked from all of the launches of the Chinese anti-satellite weapons and their launch locations had been identified. Now America was going to respond. All of those launch coordinates were entered and the missiles were ready to launch.

It would be the first launch of these specially modified Trident missiles in anger. Sixteen of her twenty-four missiles would be launched. Each had ten independently guided warheads, MIRVs as they were known. One hundred and sixty devices were about to rain from the sky on launch sites throughout northeastern China and Mongolia.

Captain Lanier had arrived on site at the launch coordinates twenty minutes earlier.

Outside of his two Virginia Class SSN escorts, there were no other vessels or aircraft in the area, and he was a hole in the water. Or at least he would be until he made these missile launches. Then he would have to “shoot and scoot” the heck out of here.

He was confident that the Chinese were very capable of tracking the trajectories of his own missiles back to this spot, and he wanted to be long gone before any of their aircraft or ships equipped with Killer Whales arrived.

“You may launch the missiles when ready,” the Captain ordered.

At the appropriate moment, the first was launched and it was followed in quick succession by fifteen others. They all broke the surface of the sea, through the tops and bottoms of swells, with tremendous geysers of water marking their exit points. They quickly rose up through the low ceiling with increasing speed.

Soon, the missiles had risen high enough in the atmosphere for the CAS radar coverage out of Japan to take note of their passage and relay alarm throughout the Chinese military and political hierarchy. Before the final trajectories were calculated, Jien Zenim and every member of the politburo, wherever they were located, were being whisked by security personnel into hardened bunkers in their specific locations.

Once it was clear that the targets were military launch sites in Mongolia and northeast China, tensions lessened somewhat, but it would not be until impact verified that the payloads were non-nuclear that a Chinese nuclear retaliatory attack against mainland America would be stood down.

Before that happened, the Chinese KS-3 anti-ballistic missile defense system came into play. Having proven their success at intercepting Russian ballistic nuclear missiles over Russia in the previous year, the Chinese hierarchy had deployed these systems profusely around the Chinese capital

and around all critical war industry sites and military bases. They had full confidence that they would perform equally well against the Americans.

They were disappointed in that expectation.

American miniaturization technology had developed to the point that each MIRV warhead employed no less than ten very realistic and very accurate decoys. These decoys did not remain with the actual warhead itself as did their Russian counterparts. The American technology allowed the decoys themselves to independently target what otherwise would be considered legitimate locations. To the surprise of the Chinese defenders, instead of a maximum of one hundred and sixty expected targets from sixteen Trident tracks, they were faced with one thousand seven hundred and sixty.

This fact would reverberate throughout the Chinese defense and political leadership, particularly in COSTIND where General Hunbaio would be sorely pressed to respond, and to explain why this capability was not known beforehand.

The large numbers of re-entry vehicle warheads, even though less than 10% were actual, made the Chinese solution infinitely more difficult. Several critical minutes were lost in analysis of the attack patterns and the Chinese system almost became so involved with the analysis that no decision was made before impact.

Finally, with only a few seconds remaining before impact, when it became clear that virtually all of the anti-satellite launch sites were targeted by one group of threats, and that two other groups were exclusively targeting critical military manufacturing sites and critical economic infrastructure sites, the Chinese elected to focus on these four hundred threats.

Electronic commands were issued, and the Chinese began launching KS-3 anti-ballistic missiles.

The KS-3 missiles performed well given the time constraints, but they were wholly ineffective in preventing the almost complete destruction of China's anti-satellite launch facilities. Only thirty-five of the one hundred sixty actual warheads were destroyed. Another two hundred and fifty KS-3 missiles were wasted in intercepting harmless decoys.

The massive follow-on attack against the USSS Conception that was planned for the afternoon of June 26<sup>th</sup>, would not occur. All the Chinese could muster was a relatively weak attack that day, one that the remaining missiles on the Conception, coupled with the lasers and kinetic energy weapons on the two corvettes, was able to handle without further damage or loss of life.

**June 27, 23:11**

**National Security Agency**

**Washington, D.C.**

After the attack on the USSS Conception Space Station, Bill Hendrickson had spent over sixteen hours in continuous discussion and debate with his most talented analysts, and with those from the Defense Department as well. Ultimately it was determined what the extent of damage actually was on the Conception and what was needed to repair it. They also spent considerable time analyzing what it would take to ensure the continued ability for the Conception to defend herself in the face of the Chinese attack profiles, as well as how the Chinese might modify that profile to be more effective. With only eight Block V missiles remaining, the entire command chain knew that the Station would not be able to fend off another attack like the major one she had successfully defended against, much less any improvements the Chinese were certain to factor in.

As if to emphasize this, six of those eight remaining missiles were used to defend the Conception against the much smaller attack the Chinese mounted against the station on the afternoon of June 26<sup>th</sup>.

Several anxious minutes passed as the President and his senior military advisors watched and waited while that attack played itself out. Those moments were even more anxious than the attack of the 25<sup>th</sup> because everyone knew how vulnerable the station was, and how much depended on keeping Point Conception controlled and protected until the other American space mission returned.

Although the numbers of personnel involved were small, only forty-six on the Station and fifteen each on the outbound Space Frigates, the strategic import was immense.

“And the Chinese recognize it as much as we do.

“Thank God the Nevada's attack was successful,” the National Security Advisor said to himself as he wearily lifted his briefcase for a brief trip home.

“If they had pulled off another massive attack yesterday, we would have lost the Conception and everyone on board.

“Well, now we've done all we can to protect her and we have the process in place to keep it that way for as long as it takes.”

This had been accomplished with four more launches out of Nevada that very morning, the morning of June 27<sup>th</sup>...all four of the remaining corvettes in America's new spacecraft inventory, all of them designed to re-supply the Space Station and for self-defense. Once again that morning American space vehicles were observed climbing high into the heavens over eastern Nevada and western Utah.

All four had run the gauntlet of what was now only minor Chinese anti-satellite attacks and all four had rendezvoused with the Conception late in the day of June 27<sup>th</sup>. They carried the repair

material and the equipment necessary to allow the crew of the Conception to repair the major of damage she had suffered, or similar damage that she might suffer in the future.

In addition, they delivered another complete defense module loaded with another 64 Block V missiles, and replacement missiles to reload the original bank of 64 missiles, and then reload each bank one more time. These missiles were the last ones available to the United States until more could be manufactured, and since these were working prototypes, it would be at least two months before that manufacturing line was finished with the first production units.

"But if we want to keep Conception up in space, it's necessary," Hendrickson thought as he approached the guard station and prepared to exit the building.

Captain Wynn would now have an inventory of 256 Block V missiles for defending the station, along with four Corvettes arrayed around it. The other two Corvettes returned to earth for later missions. As a policy decision, based on the magnitude of the attacks the Chinese were willing to conduct, and once the production lines were producing them, the United States determined to not allow the stock of spare missiles in place at Conception Station fall below 128 missiles at any time.

Depending on the frequency and nature of the attacks, and depending on their effectiveness, that policy decision would require the United States to replenish the Space Station much more often than had been initially contemplated. It would mean America's production facilities, like the Skunk Works and other very sensitive and secret installations, were going to have to ramp up significantly to produce the missiles, the vessels and the material necessary.

"We're just going to have to, as they say out west, cowboy up," Hendrickson said to himself as the guard at the security station checked his identification.

"What's that you said, Mr. Hendrickson?" the guard asked.

"Oh, it's nothing, Jim," Hendrickson replied as the guard returned his ID and unlocked the gate.

"I was just talking to myself.

"We'll see you tomorrow," he said as he walked through the turnstile and reached for the door that led out into the secured parking facility.

"Okay. Good night, Mr. Hendrickson," the guard replied.

"Have a safe drive home."

**June 30, 19:00**

### **Secure CAS-GIR Conference line**

#### **Executive Conference Room, the Politburo, Beijing, China**

"Then we are agreed," said Jien Zenim to the other two leaders on the line with him.

"We will make the offer to the Americans and their allies July 2<sup>nd</sup> and give them four days to respond, offering a mutual cease fire across the board while they consider the offer."

Jien Zenim waited for the reply from Hasan Sayeed of the GIR and KP Narayannen of India. They had been on the line for three hours, discussing and going over Jien's dramatic initiative.

Basically it called for first an armistice, which would last no more than six months, and then a complete peace treaty which would lock in borders that would be recognized and respected by all nations signing the accord...including every major combatant currently involved in the conflict.

Jien was convinced, and now both Sayeed and Narayannen reflected that same conviction, that the three of them could easily bring all GIR and CAS countries into agreement with this. They were all also convinced that if the United States, the United Kingdom, Brazil, Israel, and Russia agreed, then they could bring all other nations who had been fighting for the allied cause into the fold as well.

And the terms, given the current position of military forces, were very conciliatory and generous from the CAS and GIR perspectives. It had taken Jien the better part of the three hours to convince particularly Sayeed that China and the GIR should give up some of its current hard-won gains.

The world map would reflect these changes and would depict the new world order that Jien felt was necessary if the CAS and the GIR were to maintain their predominance in Asia and the Mid East and parity with the United States and Europe.

In order to accomplish that, Jien was willing to lay all of the following on the table.

- Complete, orderly withdrawal of Chinese forces from Alaska, Panama, and South America.
- Complete withdrawal of Chinese, Indian and GIR forces from New Caledonia, Tarawa, the New Hebrides, the Loyalty, the Solomon and the Admiralty Islands in the Pacific.
- The sectioning of the Continent of Australia into four new nations, one Islamic, one Hindu, one Chinese and the entire southeastern corner to be returned to the exiled government of Australia.
- Recognition of Israeli borders that extend from the Golan Heights westward to the Mediterranean Sea on the north, from the Sea of Galilee down the Jordan River to the Dead Sea and from there to the Red Sea on the west, and including the entire Sinai Peninsula on the South, bordered by the Suez Canal.
- Withdrawal of all GIR forces from the Continent of Europe, granting the former European holdings of Turkey on the European continent to Greece.
- Withdrawal of all GIR and CAS forces from Russia, back to the Siberian border, recognizing the new nation of Siberia as an independent nation.

- The complete demilitarization of space.

- All other borders within occupied, defeated or allied nations would remain as they are, meaning that the GIR would encompass all of North Africa and all of the Middle East, including Turkey, except for the nation of Israel.

It would mean that Chinese and CAS influence would remain in effect, governing all of Korea, Japan, the Philippines, the new Chinese Province of Formosa, all of the China Sea, with the former nations of Thailand, Burma, Singapore, Malaysia, Bangladesh, Nepal, and Sri Lanka simply ceasing to exist, becoming a part of China, India or other CAS states.

The sea lanes from the Mid East, through the Indian Ocean and into the Pacific Region through the China Sea, would be surrounded and completely dominated by GIR and CAS nations.

All in all, these conditions represented the necessary strategic positioning for China, India, and the GIR to control commerce and regulate it in favor of the CAS and GIR alliance into the foreseeable future...and to establish them both as individually equal to either the United States or the European Union. Working together as an economic block, it would assure their ascendancy over both rivals.

But Sayeed and Narayannen had to agree for it to work, and Zenim believed they would.

It was Sayeed who spoke first.

“You are proposing much, President Jien,” the Grand Ayatollah and Imam said.

“The footholds we have in Europe are strong, as is the position on the Australian continent.

“Recognition of the Zionist state of Israel has always been a very sore point for us, particularly now that they control all of the Holy City of Jerusalem. I can hardly imagine the ruling Mullahs and other Ayatollahs of my faith agreeing to this last point in particular.”

Zenim had expected the most resistance from Sayeed. Sayeed was a man of sincere and absolutely committed faith. But he was also a man who considered himself God's mouthpiece to his people...in fact, if truth be known, God's mouthpiece to all of them...and one day that would surely become a monumental problem.

“Hasan, take this to Allah...he will see the wisdom in this and communicate it to you. Islam occupies all of its truly holy sites and for once, they exist under a united and faithful Islam with no western influence and no western corruption.

“Israel's and America's growth and influence will have been contained. The infidels will have been taught a lesson by a united Islam that they dare not challenge in the future.

“If you received direction from above and communicated it to your ruling counsels, I am sure they would not only understand, but would accept it.

“It is not for me to say...but I would ask that you consider it and then take it to the one you receive direction from.”

“Could it be true? Was Sayeed hearing an acknowledgement of Allah's existence and guidance from Zenim?” Sayeed asked himself when the Chinese President was finished talking.

As he considered the words, Hasan Sayeed was sure, that he had heard a bit of a patronizing tone in the Chinese leader's voice...and he did not like that at all. A discomfort bordering on disgust registered on Sayeed's face and Jien Zenim thought for a moment that he had pushed too hard.

But then Sayeed continued to reflect. Although his immediate, instinctual emotional reaction to the perceived patronizing tone was evident, Sayeed did not let it rule his thought process or his ultimate reaction. He was too disciplined by the years, by experience, and by his own faith for that. The GIR leader knew that Zenim had worked with him to make all of the things the Chinese leader had just spoken of a reality.

“Have we accomplished enough of the task for now?” he asked himself...and his God.

After a few more seconds, he came to his determination.

“I will think and pray over this. Perhaps it is enough. Perhaps we have made the gains that Allah would have us make at this time.”

In saying this, never for an instant would Hasan Sayeed concede his overriding and preeminent calling. And that was the unification of all of Islam...meaning, according to the Holy Koran...not just the unification of the current Islamic nations, which he had already accomplished, but the unification of the entire world under the holy banner of Islam.

**July 2, 21:15**

**Situation Room, The White House**

**Washington, D.C.**

By the morning of July 1<sup>st</sup>, the GIR and CAS leaders had come to their conclusion. Hasan Sayeed had agreed in principle with the proposal, but wanted to present it to his ruling clerics, mullahs, and other Ayatollahs before the plan was actually implemented.

The Indian president had gone along with the plan immediately. He saw it as an opportunity to extend an olive branch to the West and, more importantly, to reduce the wartime influence that Minister Patel was increasingly exerting.

With an armistice, followed by an eventual peace, KP Narayannen knew that his administration would be hailed as one of the strongest, most successful and most popular Indian administrations in the history of India as a nation.

So, with provision that the offer was preliminary, and would require fine tuning if the West accepted it in principle, the proposal for an armistice and the steps to a permanent peace were communicated to the United States.

President Bowers and a surprised Security Council were now reviewing that proposal. Bill Hendrickson, the National Security Advisor, was leading the discussion regarding the proposal and what the State Department analysts had been able to make of it.

“Mr. President, this first slide is an illustration of current conditions with respect to actual physical control throughout the Pacific and Asia.”

He pressed a button on the remote control, and the display on the screen brought up an image of the Pacific Ocean and Asia, from Alaska and the Hawaiian Islands, across all of Asia, the sub-continent and across the Middle East.

“As you can clearly see, from the western end of Alaska across the Pacific to New Zealand, and basically all points westward, the enemy is in control. We have made a very slight incursion at Magadan which is being fiercely contested.

“All of Asia and Australia are in enemy hands, as well as all major Island chains between them.

“Outside of Israel and areas to the north and east of Damascus and to the south towards Egypt, the entire Mid East is currently controlled by the enemy.

“Large areas of Europe, despite progress around Moscow, still lie in enemy hands, as does all of North Africa and all of East Africa.

“Large areas of Central and South America are also under enemy control as you can see.

“This next slide will show what the CAS and GIR have proposed as an armistice and ultimate peace plan for these same areas:

“In this slide, we see to what extent the enemy is willing to go to stop the fighting.

“They propose a complete withdrawal from Alaska and from many southwest Pacific Islands. They also propose a free Australian state on the southeast coast...the richest part of the continent.

“They are also proposing a withdrawal from all countries in Africa that are not GIR signatory states, withdrawing from all of Europe back to the Siberian and Turkish borders. Those are significant amounts of territory that would be returned without a fight.

“In exchange, as an overview, they are calling for our withdrawal from the Magadan area, for Greek annexation of the European portions of Turkey, and for our acceptance of all other acquisitions by the CAS and GIR armed forces.”

The new President, who had been in office only a month, but who had been involved in the war from the outset, wanted to hear from his closest advisors. Although the Vice President and Secretary of Defense offices had not been filled yet, those nominations were expected to be approved by Congress within the week. Both of those men were sitting in the room now with the President and already occupied very important roles within the government. So the President respectfully turned to Secretary of State, Fred Reissinger, and Chairman of the Joint Chiefs of Staff, General Jeremy Stone, for their input and comments.

“Fred, what are your thoughts on this proposal? I have to admit that I am quite surprised,” the President asked as he turned to Secretary Reissinger.

“I never expected this bunch to make anything that might be remotely viewed as a concession.”

The Secretary of State, who had been one of the closest advisors and friends of President Weisskopf, and who had come to trust and respect John Bowers since Norm Weisskopf had appointed him first as National Security Advisor, and then later nominated him as Vice president after the death of Alan Reeves, was also surprised by the proposal. He knew that there were several of their allies, particularly in Europe, who would be positively disposed towards such an armistice.

But he just couldn't countenance it himself.

“Mr. President, although some of the nations who make up our coalition will probably feel inclined to negotiate with our enemies over such a proposal, and although I am also personally quite surprised that such a proposal has been made...still, sir, I am abjectly and completely opposed to it.

“Despite their ceding lands that they now control back to us...what they are left with, diplomatically speaking, and I believe economically speaking as well, represents nothing short of an almost complete victory for them...and we would be giving that victory credibility and acceding to it by seriously considering it.”

As the Secretary of State paused for a moment to gather more thoughts, the President interjected.

“Fred, I am also personally dead set against any negotiation with these people.

“But, from an overall diplomatic standpoint, once they have had time to consider it...and it has gone to all of them, just like it has come to us...the question is, who will continue to stand with us against the CAS and GIR, and who will vacillate?”

“Today in this meeting, we must answer that question to our own satisfaction from a diplomatic and international standpoint.”

The Secretary of State replied. "Exactly, Mr. President...that is exactly the issue. I believe that our most staunch allies, and those from whom we receive the vast majority of our worldwide materiel and personnel support will solidly stand with us against this proposal.

"The United Kingdom, Israel, Germany, Brazil, Italy, certainly Russia and all of the eastern European countries...and all of the governments in exile...Australia, Japan, the Republic of China, Turkey, etc. They will all unite behind us and oppose anything short of an unconditional surrender on the part of the CAS and GIR.

"Having said that, we can probably expect France, Spain, the low countries of Europe, some of the Scandinavian countries and some of the African countries to want to give this type of proposal some traction...to negotiate some kind of an end to the war on the most favorable terms. Basically many of the countries who have opposed our foreign policies in the past and who have been relatively untouched by the fighting to date within their own borders."

The President considered this. What would happen to their coalition if France and Spain in particular, who were providing significant men and materiel to the fight in Europe, blanch and either made a separate peace or tried to reinvigorate the currently non-existent United Nations' influence? To date, the UN had been proven wholly ineffective in dealing with the global conflict because so many of its adherents were unwilling to either defy or face down the blatant actions of China and the GIR in particular, who themselves were signatory members.

This was because so many had showed themselves for what they were: actual allies in the effort to undermine and destroy true liberty in the world. They had used the wealth of the west in general, and of America in particular, as a means and end harmful and destructive to American ideals and the traditional American way of life...culminating in this very conflict.

John Bowers had come to the conclusion, just as President Weisskopf before him had done, that he was unalterably opposed to any re-invigoration of the UN in its former form to mediate or become officially involved in the resolution of the crisis. Its mostly empty corridors and meeting chambers could remain that way in perpetuity as far as he was concerned

"Do you believe, Fred, that any of the nations who would be inclined to negotiate about this, would seek a separate peace?"

Fred Reissinger had already considered this, trying to gauge the strength and intentions of the leaders of those nations.

"Mr. President, while I believe there will be pressure from within their political apparatus to do so-and that may manifest itself in some pretty large demonstrations... I don't think so.

"Doing so would place them in a quandary...a significant quandary. They would have Russia as a fully mobilized force on their eastern borders and they would have our coalition, also fully mobilized, on their western and southern borders.

"They might get a respite from our enemies for a season, but I believe that with the examples from Korea, Japan, Australia, Turkey, and Russia, that their leaders know in their hearts that any arrangement made with these nations, will ultimately turn to the destruction of those very countries trying to come to some accommodation with them.

"So, in answer to your question...no, I do not think that they will do any more than talk about negotiating as a means to try to gain some political leverage over us. When we respond with what I presume will be our categorical rejection of this proposal of turning over half the world to these despotic nations, they will come into line and hope to use their "show" to their own benefit later, if things don't go as we hope they will."

The President knew this would be the case...and he was sickened by it.

"Will they never learn?" he thought to himself.

With that distaste in mind and with the disgust apparent on his face, he turned to Jeremy Stone.

"Well, Jeremy, what are your thoughts?"

"Specifically, are we capable of winning this fight unconditionally...with or without some of the nations Secretary Reissinger just mentioned?"

The old general was a fighter...always had been. He was also a very effective leader as evidenced by the long line of successively responsible positions he had held within the military.

He had been reluctant to accept the President's request to be appointed Secretary of Defense. He viewed it as a political position-and he hated politics. But he appreciated and respected men like Norm Weisskopf and John Bowers who could operate in that arena and who could do so keeping their loyalty and oath to the Constitution intact...all the time, 24/7.

After sharing these thoughts very openly and frankly with John Bowers, he would never forget the words this relatively young man had spoken to him.

"General, that is precisely why I want you in this position. Like Admiral Crowler before you. You are a military man who exhibits exactly what you say you respect in Norm Weisskopf and myself. If I didn't think that, I would never have considered you."

That had iced the deal and General Stone had answered the call. He would be the Secretary of Defense, and like his good friend, the late Admiral Crowler, he would do a fine job of it for his country and according to his duty.

“Mr. President, I am convinced that if it were just the United Kingdom, Canada and Brazil who were allied with us, we would defeat these enemies. When you add to that a fully mobilized Russia and the grit, determination, and fighting spirit of Israel, the ultimate result is foregone. In those nations combined, we have the will, the technical capability, and the forces to get the job done.

“That job would be significantly more difficult if we had to rule out direct or unopposed access through the continents of Europe and Africa, but we would still accomplish the mission.

“Mr. President, we *must* get this job done. Now is the time to slay and dismember this dragon. If we allow the CAS and GIR to consolidate their gains and manufacturing capabilities in the vast areas that they have conquered-and would still hold after such a proposal-then we will face an even more difficult task in ten years, perhaps one where the ultimate outcome will be in serious doubt.

“Those are my thoughts, Mr. President.”

For another two hours, the President, offering only limited observations himself, continued to listen to everyone on the team. In the end, they were of one mind: the proposal that China had tendered on behalf of all of the CAS and GIR, could not be accepted-it would be flatly refused.

The President summed up everyone’s mindset in unambiguous terms.

“Thank you all for your input.

“I agree that we must flatly and utterly reject this proposal, in the strongest terms possible...unilaterally if necessary. We can never accept a peace that enslaves our conquered allies and friends and that leaves these monstrosities in place to plague the world at a later date. Band-Aid diplomacy never succeeds when the force with which you are reckoning is intent on eventually enslaving you. It merely postpones the gruesome inevitable. The cancer must be eradicated, not treated with temporary salves.

“Let me tell you what I think this proposal really means-it means we have these animals on the run. They are afraid. They are looking to retain as many of their gains as they possibly can now, before we ultimately take them back from them. I believe their own analysts are telling them that this is exactly what is going to occur, if this war is allowed to continue.

“They have been unable to dislodge us from either Magadan in Asia, or Point Conception in space, despite their best efforts-and they are not going to dislodge us from those places.

“Magadan will ultimately result in one of the largest defeats or surrenders in the history of the world. As you all know, all told we have estimated that there are four to six million enemy personnel stretched out between our forward positions to the north and east of Magadan and our forces in Alaska. Those CAS forces are cut off and their fate is sealed as long as we do not falter or waver.

“Point Conception and the deep space mission it has produced and is supporting, will be the most strategic issue in this entire conflict within another eighteen to twenty months. The enemy suspects this, but is wholly unaware of the details and the ultimate impact it will have...but again, success will only occur if we do not falter or waver.

“We are absolutely not going to falter or waver...not on this administration's watch.

“Aside from this consideration, elsewhere the enemy is losing personnel and materiel in tremendous proportions, wholly disproportionate to our own losses. I do not mean to discount our own losses because they have been costly...severe both abroad and here at home. But theirs are much more severe, even when you factor in the vast populations they have to pull from.

“Fred, make your contacts to our allies and explain our unambiguous position on this proposal. Between now and tomorrow night, I want scheduled discussions with Prime Minister Thatch, President Puten, President Maldonado, Prime Minister Schwarz, Prime Minister Suárez, Prime Minister Malroney, and Prime Minister Nitanyahu. Beyond that, I will make myself personally available to any of the other allied leaders who want to speak with me.

“Schedule it...and, oh, by the way, if the French President wants in on that schedule, please make sure to extend the offer and then arrange it.

“Beyond that, I want a direct response from all agreeable parties to be made jointly on July 4<sup>th</sup>, in the afternoon. As many of those leaders who can meet with me...let's say in Iceland if possible...should be prepared to stand with me as I read a joint statement. Others who cannot be there, I would like to see video conferenced in so all of the free world-and you can bet our enemies as well-will see our complete solidarity in the face of this callous and arrogant proposal.

“We want to demonstrate so they all can see this attempt by our enemies to end the conflict to their great advantage. They must all know, directly, unambiguously and forcefully that at this point nothing short of the unconditional surrender and the utter destruction as governing and ruling bodies of our enemies will suffice for us and our allies.”

**July 4, 13:30 Central Time**

**The Simmons' Lazy H Ranch**

**Outside of Montague, Texas**

Colonel Jess Simmons was finally home. He had been stateside for almost two weeks, and he was thankful to God in Heaven for it.

He had been convalescing, and it looked like he would continue to do so for many months to come, alternating his time between here at home and the Veteran's Administration Hospital in Dallas.

The doctors, miraculously, had been able to save his leg-but not its full functionality. He had little feeling in his knee, and even less in his ankle and his toes. Apparently the nerve damage had been severe enough that his ankle function would be severely constrained for life...very stiff. He would walk with a definite limp, not only from the stiff ankle, but also because that leg was now almost two inches shorter than the other. Too much bone and tissue had been damaged, and had been removed in the surgeries and the fight to save the leg.

At some point, the doctors indicated that the lost tissue and bone structure could be reconstructed with artificial material, but only by conducting several more serious operations and prolonged periods of therapy after each. Jess Simmons was determined to go through all of it. He wanted to be as physically whole as possible...for his wife...for the ranch...for his country.

Thinking of his family caused his heart to well up with so many profound and conflicting emotions. His love for Cindy, and his pride in how she had handled everything from his departure, to her involvement in the war effort and, most importantly, through the loss of their son. That love and pride washed over him...and it washed over the void he had after the loss of that only son, Billy.

He was thankful beyond measure that both he and his wife had been able to come to terms with that void...that their love for their son and their faith that they would see him again one day, had won out over their feelings of sorrow and grief and the desire to crawl into a cocoon made of that grief and be completely consumed by it.

They had shared with one another how the good Lord had touched each of their hearts and healed them over the loss of their son. How the destructive pain associated with that loss had been replaced with a natural sorrow at his absences, but also with the assurance of their eventual reunion.

Those stories, and their impact on the heart and soul, had united the Simmons and drawn them even closer as a couple in a natural and spiritual way, strengthening their love and bridging the long months of separation that the war had made necessary.

Those same stories would be shared over and over, in quiet moments, with one another, with their church family and with all of their good friends, for the rest of their lives.

Contemplating all of this as they finished their July 4<sup>th</sup> dinner, Jess Simmons looked up, down the table at those who were there with them, and felt inclined to say something.

"Cindy...honey," he began, catching her attention and that of the others at the table.

"Mom, Dad and Joe, Liz and Pat...I just want to thank each of you from the bottom of my heart.

"I want to thank you for being here...for taking time out of your own lives...and, Joe and Liz, for taking time during difficult personal trials of your own, to make time for us here.

"You are all an example and inspiration to me of Christ-like service and living. I could never thank you enough for that...or for your support during the long months...and years of my absence fighting in this war.

"It is especially meaningful on this date, when we celebrate the freedom we enjoy in this nation...the freedom whose preservation this war is all about.

"You are all true friends...and Cindy, you are my best friend...my eternal friend...thank you from the bottom of my heart...I am so proud of you...so thankful to you."

With that, Jess had to stop...he was on the verge of tears.

Jess's dad, Bud Simmons, who had always been a man of few words, replied simply.

"Son, I think I can speak for everyone here at this table when I say, thanks back to you. You are the epitome of everything you have just thanked us for...and we all know it."

Almost embarrassed by his own feelings and emotions, Bud Simons hastened to add.

"Now, someone turn on that TV over there and let's listen to the President."

### **July 4<sup>th</sup>, that same time**

#### **Outside the U.S. Embassy**

#### **Reykjavik, Iceland**

JT Sampson had flown with the press pool to Iceland. It had been a surprised and rushed trip brought on by a call from the administration's press secretary. That call had finally established for JT that his good association with the administration had survived the loss of President Weisskopf, whom JT had looked upon as a mentor, and from whose loss JT doubted he would ever fully recover.

Now, he and his associates, who were made up of two SierraLines employees who had traveled with him and four technicians who had been hired here in Iceland, were set up to make a live internet broadcast of the allied response to the CAS and GIR proposal for an armistice.

That broadcast was going to be picked up by several of the major cable networks and carried live on cable television as well. It was in fact the broadcast that the Simmons and Trevors would be watching back in Texas.

It was a momentous occasion. Rumors were flying wildly about a potential cessation of hostilities. JT had developed an instinct about public opinion, through his years of faithful news

reporting, and he believed that, although most Americans would welcome a cessation of hostilities, any such cessation now would leave a hollowness...as if an important job had been left unfinished.

JT was excited about being here to personally report on the response. Despite his success, despite his major news media executive status, JT still loved to personally do the on-scene reporting.

There were some who felt that this personal quirk of JT's was stymieing the full growth potential of SierraLines...but JT felt otherwise and was determined to run the leading Internet News organization as he saw fit...besides, the vast majority of shares were still in his and his wife's names.

So, until and unless someone acquired enough shares to challenge him, he would continue with his "quirk" and seek out the news stories that he felt best qualified to cover, while ensuring that his other reporters got an equal opportunity to do the same.

"This is JT Sampson with SierraLines here in Reykjavik, Iceland, reporting at the scene of the imminent announcement of the allied response to the unprecedented armistice proposal by the Coalition of Asian States and the Greater Islamic Republic.

"For security reasons, the location of the allied response to that proposal was not announced until the live feeds were set-up and the broadcast began just minutes ago.

"That proposal has been made public now for over twenty-four hours and has generated a tremendous amount of speculation. To this moment, it is unknown exactly how the allied leaders will respond to this proposal. The President of the United States is now approaching the podium.

"Ladies and Gentleman, the President of the United States."

John Bowers held in his hands the official response of the allied nations of the world to the CAS and GIR armistice proposal. The winds were causing the papers to rustle somewhat, but the clipboard to which they were attached held them down firmly.

A line of distinguished leaders from various nations flanked the President to either side, and several smaller video windows with other leaders appeared on the screen as he began to speak.

"Today I will respond on behalf of the free nations of the world directly to the armistice proposal by the Coalition of Asian States and the Greater Islamic Republic. The leaders of many of those responding nations have joined me here in Reykjavik, or by video conference from their capitals.

"You can see them each either standing here next to me on my right and left, or in the smaller video windows which should have appeared on your screens wherever you are watching.

"As such, I not only speak for the citizens of the United States of America, whom I personally represent, but I speak for all citizens of the free world who are embroiled in this conflict and whose leaders have agreed to this response.

"To be specific, those sovereign and free nations who have joined with us in this response include all of the following:

United States	Canada	Brazil	Italy	Peru
The UK	Israel	Germany	Denmark	Poland
Russia	Romania	Hungary	Austria	Norway
Czech Republic	Ecuador	Columbia	Honduras	Latvia
Netherlands	Ukraine	Lithuania	Liberia	Nigeria
South Africa	Iceland	Ivory Coast	Costa Rica	

"In addition, the following official governments in exile, whom we have been able to contact and arrange to have present here, and whose nations have been brutally conquered and occupied, have also joined us in this response:

Republic of China	Turkey	Oman	Malaysia
South Korea	Mongolia	Singapore	Thailand
Australia	Nepal	Kuwait	

"There are others, either conquered or coerced into making accommodations with their brutal antagonists, whom I am sure would also join with us if we could contact them.

"As it is, all of these free nations have joined us in our unequivocal, unflinching, and unwavering response to the Coalition of Asian States and the Greater Islamic Republic.

"...and this is our official response:

"To you, Jien Zenim, Hasan Sayeed and KP Narayannen, and to all of those who have allied themselves with you to make this vain, inglorious and infamous proposal, we say the following...

"NUTS!

"If you have any doubt as to our meaning, read up on your history of World War II, and pay special attention to the Battle of the Bulge.

"The answer is no!

"The only acceptable end to this conflict will occur upon your complete and unconditional surrender to allied forces.

"Until that time, there will be no negotiations, there will be no armistice, there will be no cessation of hostilities and there will be no accommodation with your murderous regimes.

"I trust we have made ourselves clear.

"In closing, to our occupied allies, to our personnel and citizens trapped behind enemy lines...and to the impoverished and trodden down people of these horrible regimes, we say the following, quoting the man, Norman Weisskopf, who will certainly go down in history as one of the greatest leaders in American history and one of the greatest friends to peace-loving and freedom-loving peoples in the history of the free world..."

*"Fight on.*

*"Do not despair. As surely as the sun rises in the east, we are coming. The time will arrive when like at Normandy on June 6th, 1944, you will look out and see the sea and the sky filled with the innumerable host of your comrades come to liberate the captive and put down the tyrant."*

"Let me add a few other words to that which I believe are relevant to our current situation. They are the words of the great American patriot, Patrick Henry,

*"We shall not fight our battles alone. There is a just God who presides over the destinies of Nations, who will raise up friends to fight our battles for us. The battle, Sir, is not to the strong alone. It is to the vigilant, the active, the brave. Besides, we have no choice. If we were base enough to desire it, it is now too late to retire from the contest. There is no retreat but in submission and slavery!"*

"All American citizens and our allies should remember these sentiments and feelings as we move forward in this struggle. We should lean on and rely on one another...and we should lean on and rely on our faith in a just and merciful God.

"A wise individual once shared with me the following..."

*"Work like everything depends on you, but pray and live like everything depends on God, because in the end, it does.*

"Thank you, and may that just God bless our cause and our efforts. May He bless each of our free nations. And may we continue to look to Him for guidance, strength and wisdom in the days and weeks and months that lie ahead.

"Good day."

## **July 6th, 10:25 Eastern Time**

### **Meet the Nation**

#### **WNN Broadcast Studios, New York, New York**

The host of the weekly talk show was carefully guiding the interview with Bill Hendrickson, the National Security Advisor, towards its conclusion.

"Mr. Hendrickson, the coalition that the President enumerated in his Reykjavik speech is, as you have stated, very impressive. It is a continued reminder of the former President's capabilities in foreign relations, and a testament to the widespread support of the effort against the CAS and GIR.

"In spite of this, there were some very notable nations that were not listed by the President as rejecting the proposal from Coalition of Asian states and the greater Islamic Republic.

"France, Sweden, Mexico, Yugoslavia, Egypt, Chile, Spain...none of those names were included on the list of nations that responded so negatively to this peace proposition.

"How does the administration explain this?"

"I'll tell you, there is talk of a developing rift in the allied coalition against the CAS and GIR.

"For example, what impact would there be if France and Spain ceased their efforts in the fight...if Mexico became neutral or hostile?"

Bill Hendrickson always found it difficult to believe that people like this host still existed, even in the midst of this fight for the nation's survival-for this very host's survival-a fact that apparently had not yet occurred to him.

"Some people just are incapable of getting it," Hendrickson thought, "Even if they have been hit directly between the eyes by it, as everyone in this nation most certainly has been.

"There are always quibblers. There are always apologists. There are always those who are willing to fault America, no matter her noble aims, or the ignoble aims of her enemies," he reflected.

Anyone who made their living trying to tear down the efforts of those who defended the freedom of the country...who did all in their power to create a divisive stir during actual combat...had always been an enigma to Bill Hendrickson, he did not have an ounce of respect for them.

Yet, he was fiercely dedicated to this man's freedom to do so. He knew that this show reached millions of households. Because of that, he was anxious to represent the truth to those millions.

"Let me answer your question in a couple of ways.

"First, the proposal by the CAS and GIR was not a peace proposal in the least. It was a barely veiled attempt on their part to consolidate the conquered territory that they have already amassed, and to avoid our growing capability to defeat them on the field of battle."

The host interrupted, "Well, Mr. Hendrickson, it sure looked to me like they were willing to give up a lot of already conquered territory. I mean, look at the map. Vast stretches of the Pacific, their continued stubborn hold on western Alaska, the richest part of Australia, all of their advances in Europe, and all of Russia back to the Siberian frontier.

"I would not call that an effort to consolidate what they've gained, I'd call it a serious proposal."

The National Security Advisor let the host talk. He was not about to contribute to an atmosphere in which neither side could get its views across to the listening audience.

“Well, that is perhaps what they want us to think, but when you look at what they were willing give up, and compare that to what they were going to be keeping, the picture becomes very clear.

“From a strategic standpoint, from an economic standpoint, and from a military standpoint, they would have placed themselves in a very strong, almost unassailable position for decades to come.

“They were also asking us to accede to the conquest, occupation and assimilation of hundreds of millions of free people, who are our friends and allies.

“If we were willing to allow that, we would be tacitly admitting defeat and would live with that legacy hanging over us from now on. We could not, ethically, morally, or ideologically accede to such conditions and still call ourselves Americans.

“Now, here's the second way in which I shall respond to your question.

“It is clear to all of us who are analyzing these things that the CAS and GIR understand that the tide of battle turned against them late last fall and early this year. Our own production capabilities have been regenerated, despite their military and terrorist efforts to the contrary.

“Our dependencies on energy, agriculture and many other critical areas have been completely eliminated and we are once again a totally self-sufficient nation. Our enemies know this...those few nations who did not join us in the official response know this as well.

“This very proposal by the CAS and GIR, as the President has stated, is the clearest indication of their own knowledge of this. Our enemies are on the run, and we intend to keep them on the run until they wave the white flag...meaning, until they surrender unconditionally.”

With only a few seconds of broadcast time left, the host took the opportunity to end the interview and his weekly show.

“Thank you, Mr. Hendrickson.

“Ladies and gentlemen, you have been listening to Bill Hendrickson, the National Security Advisor to the President of the United States, discussing this week's allied rejection of the armistice proposal by the Coalition of Asian States and the Greater Islamic Republic.

“It was a momentous decision in response to a proposal many have been calling the last serious chance for peace for several more years.

“Please join us next week, here at the same time, when our guest will be...”

**July 6<sup>th</sup>, 20:52**

**Presidential Offices**

**Beijing, China**

Jien Zenim finished reading the entire transcript of the response the allied nations had officially sent back to him and the other leaders of the CAS and GIR. It was a very short document.

Oh, he had seen the video of the affair...of the new American President and his lackeys all lined up to refuse the offer Zenim and his compatriots had made. But he always waited to read the actual print of any diplomatic negotiations before he reached his final conclusions.

You never knew what might show up in the actual verbiage of the official printed documents.

In this case, his patience was in vain. The official document was in fact an exact transcript of what the President had said.

...and in this case, Zenim's final reaction was exactly the same as his initial one when he had seen John Bowers read it...

He cursed horribly...and long.

## Chapter 35

*“Where love is, God is.” – Leo Tolstoy*

**August 23, 19:07 local time**

**West of Kavacha**

**On the Kamchatka Peninsula**

Corporal Alan Campbell crouched lower in the ditch that he had taken shelter in with most of the rest of his platoon, hugging the ground as machine gun fire stitched back and forth along the top of the ditch...fire that was methodically seeking out the exposed portion of any Marine's body revealing itself above the crest of that small rise less than a foot above Alan's head.

The fighting was fierce and had been hotly contested from the moment of their landing six days ago near the town of Kavacha on the northern Kamchatka Peninsula. In those six days, Alan's Marine battalion, along with the rest of the allied landing force, had been able to advance only twelve miles to the west and had only penetrated eight miles inland.

While it was true that the beachhead itself was now relatively secure, that certainly had not been the case for the first three days when enemy fire had destroyed two of the large transports and had shot down several American aircraft.

Seeking to open up another front against the Chinese forces retreating from Alaska and ensure their defeat and capture en masse, and exploiting the advance of allied forces out of Magadan, the allies had landed over one hundred thousand troops here in the northern half of the Kamchatka Peninsula. The invasion force had been formed by combining several American, Canadian, and Central American commands. New North American recruits, battle hardened forces from Central America, where Panama City had fallen and the Canal Zone was once more in American hands, and combat experienced forces in Africa where the offensive into central Africa had gone better than expected, all made up the new allied Asian invasion force.

Alan's entire division had been transferred from Chad after a large battle in which they, along with two supporting crack Brazilian division, had routed five GIR divisions north east of Lake Chad.

After that victory, and as American, Brazilian, African and other allied forces continued deeper into Chad to threaten GIR forces in Libya and Sudan, Alan had been transported with the other Marines in his division back to Lagos, the Nigerian capital. There he and his comrades had quickly been loaded aboard several T-90A transports and taken away from the continent of Africa.

Using more new T-90A transports, all of the necessary forces had quickly been staged in the Aleutian Islands and then transported across the Bering Sea to the Kamchatka Peninsula. It was hoped that in so doing, and then in building that initial force to over one half million men, several things would be accomplished.

- 1) Any retreat to the south down the peninsula by the large enemy forces under relentless Allied assault in Alaska could be prevented;
- 2) The large enemy naval base at Petropavlovsk could be cut off and isolated;
- 3) This allied force would proceed to the north and combine with the even larger allied force now moving well to the north of Magadan, and present an invincible anvil upon which the Chinese Alaska invasion force would be hammered and destroyed.

“But it sure isn't workin' out that way yet,” thought Alan as enemy missiles screamed overhead.

Dense cloud cover had blanketed the area for two weeks prior to the invasion and American intelligence had failed to penetrate it to the south of Kavacha. Had intelligence been able to pierce those clouds, they would have witnessed the staging of large Chinese reserves to reinforce beleaguered Chinese troops in Alaska.

Without that knowledge, the American landing had come on shore just as three divisions of Chinese troops were passing through the area on their way north to reinforce their comrades fighting in Alaska. The collision of the American landing effort and these Chinese reserve forces was creating a nightmare for American and allied planners as the invasion force was bogged down by unexpectedly heavy, and mission threatening resistance.

Now, the long drainage ditch in which Alan found himself had filled up with hundreds and hundreds of Marines from several companies. As one of those companies provided suppressing fire from a multi-lane bridge to their east, and as American AZ-1H Viper attack helicopters and F-35C Joint Strike Fighters circled above to give support, Alan and the rest of the men in the ditch were ordered to rise up and charge the enemy positions that had them penned down.

The word was passed down that Alan's particular company had been ordered to lead the way.

At the given moment, Alan's company commander shouted, “All right men, here we go!”

“Up and over the top! Follow me!” he urged as he personally rose up to lead the attack...

...and was immediately thrown into the bottom of the ditch by the impact of several bullets that tore a bloody line across the upper half of his body.

Instantaneously energized by the graphic death of their commanding officer, the Marines spilled out of their makeshift bunker with an angry, deafening roar and charged across the hundred yards of open ground towards the grouping of buildings nestled against the foothills to their north. Other companies to their left and right joined in the assault as machine gun fire raked them, and mortar fire rained down upon them.

Alan was shocked at his calm.

The last six days represented the first really fierce combat he had been involved in. It was nothing like the rout they had inflicted on the GIR forces in Chad.

Men were falling dead and wounded all around him—right next to him—as he charged into the face of determined enemy resistance. He knew he should be frightened, but his long months of training and his determination to eliminate this pocket of enemy who were killing and maiming his friends, coupled with adrenaline pumping into his veins, took full control of his actions. Just as they were supposed to do.

Explosions riddled the building complex as the Viper helicopters ripped off volley after volley from their rocket pods. Larger bombs and missiles from the attack aircraft obscured the view, collapsing buildings and creating tremendous amounts of smoke and dust as the Marines approached.

The pall of smoke created by the damage of the air assault acted as a smoke screen for the Marines, severely inhibiting the enemy's ability to direct fire on their advance. Fewer and fewer Marines were falling as the wave of attackers ran into the smoke.

At this point, American air support moved their attacks further to the west of the buildings, targeting groups of enemy soldiers either firing in support of their forces in the buildings, or trying to organize counter attacks to the marines now approaching the complex of buildings itself.

The XO in Alan's company noticed a building thirty yards to the west of where Alan's platoon had just taken cover behind a cinderblock wall.

"Campbell!" he shouted, getting Alan's attention and that of several of the Marines with him.

"You are in charge of the 2<sup>nd</sup> platoon now. Both Lieutenant Brandt and Sergeant Fern are down. Take the platoon and clear out that building there to your west. Contact me when you have done so.

"Do it now!"

**August 23, 22:45 local time**

**West of Kavacha**

**On the Kamchatka Peninsula**

Darkness had descended on the Kamchatka Peninsula and the sounds of heavy fighting had moved well to the west and north as American forces took advantage of the breach they had made in enemy defenses late that afternoon. As those forces did so, Alan and his comrades were getting a much needed rest, taking shelter in the very buildings from which they had finally driven the Chinese.

There had been a short staff meeting where plans for the evening and the next day were sketched out and initial orders had been issued. Another meeting, slated for 03:30, would provide more detail. In the meantime, they had been ordered to secure their perimeter for the night and get some rest.

It looked as though, for the near term, Alan would be the de facto platoon leader. The lieutenant had died before he could be evacuated back to the landing zone and the sergeant, who had been severely wounded in the right hip and the groin, would be heading home. Until replacements could be brought up, Alan was now in charge of fourteen other Marines.

After issuing the necessary orders and performing a communications check with headquarters, Alan studied maps of the surrounding terrain and their initial objectives and orders. Then, before retiring for some rest, he pulled out the letter he had received from his brother, Leon, to read it once again. He got such comfort and strength reading about the experiences of his older brother, despite the many edits that appeared from the military censors who went through the mail.

Alan could understand that—the removal of any tidbit of information that might help the enemy was something he would gladly put up with. After seeing so many of his own killed—no, butchered would be a better term—Alan appreciated and respected the absolute need for operational security.

So, though the communications took many weeks—even months—to pass between them, and although there were sometimes significant portions of the wording blotted out...Alan was always listening for mail call to see if he had received anything from either Leon or his mother.

"I wonder what my bro will think of me being put in this position?" he thought.

"Whatever it is...it'll include some good advice, and I sure look forward to it."

The XO and one of the senior sergeants had already talked to him and he had welcomed and appreciated their input. He was surprised to learn that as a result of other injuries and death, all of the staff sergeants were already assigned to other platoons and could not be spared for his. Both the XO and Sergeant Myerwood had explained to him that his prior leadership and composure under fire had convinced them that he was the best Corporal in the company and therefore the one to fill the void.

While he was grateful for their confidence in him—and he eagerly took and applied their advice and counsel—there would be nothing like getting some personal advice from his older brother. Leon had always been a hero to Alan, long before the action on the Island of Diego Garcia that had led to

Leon's Medal of Honor. Throughout their lives Leon had provided leadership, kindness and friendship that Alan recognized was rare for older brothers in the best of circumstances...much less in the gang-infested projects where they had been raised by a God-fearing mother.

Tonight, before he finally nodded off to sleep, he wanted to review his brother's letter one more time before writing him and letting him know about his current circumstances and then asking what Leon thought...what his advice would be.

Alan had thought that his own combat experiences were fierce and harried. But Leon's letter had shown him know that it could be much worse.

Alan's mind kept going back to two parts of two separate letters from Leon, written a week apart, to which he now turned and began reviewing again.

"We've been at sea for ~~CENSORED~~ days. By the time you get this...I am sure we will be ashore, or will have died or been defeated trying.

"Apparently, and they either don't know and can't go into it...or they do know and for security reasons will not go into it...but apparently the battle at sea over here has been tougher than expected, not that anyone expected a cakewalk. The enemy still has too many of those Killer Whale weapons and no one is taking those suckers for granted...particularly when you on a transport ship.

"Regardless of how fast these new ~~CENSORED~~ ship designs are...regardless of how well protected by our own defenses on board and by the escorts traveling with us...I can tell you I will not be satisfied or happy until I have dry ground back under my feet.

"Just the same, I wish I could tell you, particularly after some of my experiences earlier in the war...how great it was to see so many American and allied ships off of ~~CENSORED~~, ~~CENSORED~~ and ~~CENSORED~~ of ships Alan...it was unbelievable. The living embodiment of President Weisskopf's famous speech after the March 15th attacks.

"And so there we went...off to kick the Chicoms and the radical ragheads out of ~~CENSORED~~, and win it back for freedom A big bunch of ships and escorts went with us towards our goal...another big bunch of ships and escorts towards other objectives. Several groups of carriers and their escorts out in front of us to sweep the seas clean of the Chinese and Indian navies.

"And seeing all of those new ships...all of those new carriers, large and small alike and their escorts...there was not one of us who doubted that the time for complete payback on the high seas had arrived. Got lots of ships and sailors to make up for...to make things right for.

"Well, we were supposed to make the transit in ~~CENSORED~~ days...but now it's been much longer. By the time you get this things will have resolved themselves.

"Isn't that the way life is?"

"Anyhow, they aren't resolved as I write this and each of us is anxious to get a crack at ~~CENSORED~~ and taking it back. We are worried sick over our comrades at sea...and worried about our own safety out here...images of those Chinese super torpedoes haunting our every mile forward.

"But forward we MUST go, little brother (snicker, snicker, snicker...and only snickering because I haven't had a 'little' brother for a long time...now you're a younger brother). There is no going back and as you know, there is no giving in or surrendering to these devils. They are committed to their cause—destroying us. I know you have seen enough by now to understand that. Never forget it.

"I'm glad President Bowers rejected the enemy's proposal. He saw right through them. Nice to see him spit in their eye. He said exactly what any of us out here fighting these animals already know. Nothing short of unconditional surrender is acceptable after what they have done.

"Oh well, I am dragging now...getting too philosophical. I'll write more when I can."

Reading those words the first time had given Alan cause for worry over his brother's safety. Along with everyone else, he knew that a man's life in a combat zone was always in peril...especially considering his own experiences as a Marine. That firsthand knowledge only heightened the concern, particularly for one's own kinfolk.

Reading the letter again, after his latest combat experiences and battlefield appointment to platoon leader carried additional poignancy for Alan. He longed to be able to sit with his brother...to speak of the pain, the butchery of warfare that he had witnessed and knew must continue until this enemy had been vanquished. He wanted to talk about the loss of good friends and how you cope with it, both in the short term and over the long haul.

Sergeant Meyrwood had been almost like an older brother to him...perhaps even a father figure. Now he was severely wounded and could die. The lieutenant was dead...a man Alan had looked up to and trusted with his own life. A man who had done so much for Alan ever since he had been assigned to this outfit after training. Now he was gone.

Alan knew that Leon had experienced all of this...which made the next part of Leon's letter even more apropos to Alan's current feelings.

"Well, Alan, it's ~~CENSORED~~ days later now.

"Sorry I didn't get this mailed sooner...but soon after I had finished the last portion of this letter...our task force moved into the waters off of ~~CENSORED~~ and we conducted a massive landing near there.

"How can I tell you what I am feeling?"

"I am here on ~~CENSORED~~ soil now and we are in the fight for our lives. I mean literally.

"It's more intense than anything that I have experienced to date...and that's saying a lot.

"Before our ~~CENSORED~~ ships went in, a fleet of ~~CENSORED~~ of the new large ~~CENSORED~~ transports went in ~~CENSORED~~ miles to our ~~CENSORED~~. The diversion worked...we were able to land...but just barely. I'll get to that in a moment.

"All of those aircraft, each with almost ~~CENSORED~~ personnel on board were lost. Destroyed...gone. None of them made it to shore. All of those folks are gone. It was a total disaster!

"My God...it's hard to take it in even now, six days later. Hard to comprehend.

"Apparently the Chinese believed our major plans included massive invasion using ~~CENSORED~~. They had shore launched versions of their Killer Whales positioned at each major landing area...in numbers. Supposedly a special configuration for ~~CENSORED~~. It was a slaughter...and I can't talk about it any more. I knew and trained on NZ with a lot of those people.

"Here, we came in conventionally and a lot of those weapons went ~~CENSORED~~ trying to ~~CENSORED~~. I saw ~~CENSORED~~ of them rise ~~CENSORED~~ less than a ~~CENSORED~~ from us, but our point defenses, both the ~~CENSORED~~ and the ~~CENSORED~~ took them down.

"~~CENSORED~~ - don't have that luxury.

"We still lost, ~~CENSORED~~, Alan. I saw them get hit by these monsters and go down...and they went down so fast! My God, bro...I can't describe it to you.

"Our ability to land here a little further to the ~~CENSORED~~ was purchased at great cost...in oceans of our brothers' and sisters' blood.

"But we went on in...into the fight of our lives. For ~~CENSORED~~ days we were penned down on the shore. I came in right behind the ~~CENSORED~~ wave, but then we couldn't land any of the additional personnel behind us because ~~CENSORED~~ couldn't get off the beaches.

"We couldn't achieve air superiority so the fighters had to duke it out right over us...the battle swaying first one way...and then another. When the enemy was in control, we were being bombed and strafed on the beach.

"All the while missiles were flying both ways. Some over our heads towards the ships at sea. Some right at us. Others, of our own, flying right back at the enemy.

"If you have ever read about D-Day and the experiences on Omaha Beach...that is how it must have been...except here it was even bigger and more prolonged. We weren't off the beach late in the day...or the next...or the next.

"So many of the people I have come to know and trust are gone...but we continue.

"I know momma was praying for me Alan...I can't explain it, but I could feel it. God kept me and the others alive on that beach until we finally fought and clawed our way off of it.

"That was ~~CENSORED~~ days ago and now we are fighting our way through ~~CENSORED~~...most of which are still destroyed and ruined from the initial fighting when the Chinese came through here pushing our forces out.

"I can imagine how Billy Simmons must have felt. There are so many refugees...except that now, after almost a year and a half of Chinese rule in this part of ~~CENSORED~~...and well over two years in other parts...well, the original ~~CENSORED~~ citizens are shockingly small in number, and in a pathetic state.

"Now, in the act of liberating a place where these monsters have been in power, what we already knew to be true, we now see - a horror show that would make Steven King turn away in fear.

"We are not just fighting the CAS and GIR soldiers here...we are also fighting the hundreds and hundreds of thousands of their civilians they have relocated to take these lands as their own.

"They are being distributed weapons and fighting as militias against us. Fodder to keep us penned down as their regular forces try to maneuver...and they don't mind at all using whatever original ~~CENSORED~~ citizens who are unlucky enough to be in their path as shields and pawns.

"I can understand why the ~~CENSORED~~ resistance groups we hear about in the mountains have been branded by the Chinese as such terrorists. There is no mercy or pity being shown on either side. It has been a literal battle for survival and until we landed, the original citizens here were losing it.

"Again my younger bro...I cannot begin to describe the scene of horrible images I am witness to. All you can do is push it down, grit your teeth and keep on fighting.

"There aren't many prisoners being taken on either side. Some of the Indians will give up...but the Chinese and the Muslims that have been moved in here are fighting to the death...like the stories you used to hear from World War II. Somehow, human life, to these people, is much more expendable, seems much less valuable, than it is to us. And, when you are fighting an enemy like that, they can sure use that kind of philosophy and culture to their advantage.

"Well, I'll write a little more later about word I have received from mom at home and to ask how things are with you. I hope to get this finally mailed off to you tomorrow.

"Right now, our short reprieve back at what you might call an R&R area is over and it's back to the front and the ~~CENSORED~~ mountain range."

Alan felt the same thrill he had experienced during the first reading of this part of the letter when he discovered that his brother had survived the landings on Australia.

All of them already knew about the disaster near New Castle on the Australian coast and until he had received and read through this letter...he had not known whether Leon had been one of those thousands who had died there.

But Leon's words about their mother's prayers rang true with Alan...because he had felt it too. At the time, he had not recognized it...but now, after reading and thinking on Leon's words again, he knew that his mother's faith had been with him too here in Asia on the Kamchatka Peninsula.

It also helped to read about Leon's determination in the face of much more appalling conditions, to continue to give his all...being further bolstered and strengthened in his resolve by the very hardship and difficulty he was experiencing.

If Leon could do it in Australia...Alan knew he could do it here on the Kamchatka Peninsula.  
...and he would.

**September 2, 01:17 local time**

**Task Force Commander's Conference Room**

**U.S.S. Shanksville, 650 Nautical Miles East of Brisbane**

Admiral Ben Ryan was relieved after hearing the latest intelligence assessment of the enemy location and disposition. After the last engagement the remnant of the large PLAN fleet had withdrawn north, deep into the Coral Sea to lick their wounds and to resupply themselves.

As the Commander in Chief of U.S. naval forces in the Pacific, or CINCPAC, Ryan would be spending the next four days reviewing ongoing plans for CTF 77, the large combined task force whose assignment was the protection of the allied forces that were conducting the continuing invasion of Australia. Admiral Styles, the commander of CTF 77 was working with Admiral Ryan, his commander, to further refine those plans based on the current situation.

And out here on the tip of the sword, as is often the case in warfare, those plans had changed somewhat as a result of the large engagement with the Chinese over the last forty-eight hours.

"And after that last missile and Killer Whale attack, saying that this is the tip of the sword as far as naval action is concerned is almost an understatement," the Admiral thought.

Now, here in the task force commander's conference room, surrounded by his staff and the other battle group commanders, along with two other members of Admiral Ryan's staff, Admiral Styles continued the discussion, picking up after the intelligence report.

"We can't allow the Chinese to regroup and resupply up there in the Coral Sea if we can help it.

"They hurt us yesterday...as each of you know...but we hurt them more and they have withdrawn. We need to follow up on this victory and do everything in our power to harass them and force them into a position where we can destroy them. This is no time to rest on our laurels.

"And we still have more than enough assets to accomplish that mission and ensure that the areas around the invasion anchorages remain secure."

The admiral said this because Combined Task Force (CTF) 77 consisted of several individual carrier strike groups and surface action groups. All of them had been in almost continuous fierce engagements with the Chinese for the last three weeks.

It had taken every bit of power that the CTF possessed to force the issue and push the Chinese north out of the waters of the Tasman Sea surrounding Sydney and southern Australia. Yesterday they had succeeded in pushing them completely into the Coral Sea, far to the north and east of Brisbane, against which the American carriers could now conduct air attacks.

At the start of the Australian invasion operations, CTF 77 had included six augmented American CSGs, a British Task force consisting of both of the United Kingdom's new full size carriers and a Canadian task force centered around their new White Horse sea control carrier. Each of the American carrier battle groups included a nuclear powered super carrier, one American sea control carrier, and all of the escorts necessary to defend them. Those escorts included one Ticonderoga class Aegis cruiser, three Arleigh Burke class Aegis destroyers, one of the new class DDX destroyer and two nuclear attack submarines...a mixture of advanced LA class boats and Virginia class boats.

To most effectively organize all of this...and to defend it...Admiral Styles had organized three American carrier task forces that included two of the augmented CBGs each, and a joint UK/Canadian task force which included all four of their carriers. The resulting powerful American forces included four carriers, two Aegis cruisers, six Aegis destroyers, and four other destroyers in each task force. All in all, the allies had sixteen carriers in the New Zealand area when the Australian offensive began.

Finally, the combined task force also included three SAGs centered around Aegis destroyers that had DDX destroyers and Halsey frigates accompanying them.

Altogether CBT 77 had represented the most formidable and monumental allied naval force at sea. Its defenses included a massive array of the most advanced missile, radar, sonar, CIWS, SUB CIWS and high performance aircraft technology on the planet.

Yet all of that had barely been enough to counter the massive air and naval forces the Chinese and other CAS and GIR nations were throwing against them.

In the last three weeks the Chinese had sunk one American super carrier, three U.S. sea control carriers, one of the full-deck British carriers, severely damaged another American super carrier, and

sunk several escort vessels from various allied nations. Two of the sea control carriers that had been sunk had gone down in the last forty-eight hours. Of the sixteen carriers CBT 77 had started the Australian operation with, five had been lost, one was damaged, and ten were still in the fight.

But the Chinese had fared much worse. They had thrown twelve of their Beijing class carriers and three of their full-deck Mao class carriers into the same fray...and had now withdrawn into the Coral Sea with only five Beijing class carriers left. A loss of ten carriers over that three week period.

And that did not begin to account for all of their losses.

Fifteen Chinese major surface combatant ships had also been sunk. Literally hundreds of land and carrier based aircraft had been shot down as they attempted to penetrate the American defense.

"No," Admiral Ryan thought as Admiral Styles continued, "we may be hurting...but they have been decimated.

"Jerry is right. If we can lure them into another major engagement...we just may break the back of their naval power here off of Australia."

And Admiral Styles was now formulating a plan to harass and push the Chinese into just such an engagement. Turning to CINCPAC, he started to lay it out.

"Admiral Ryan, by using the U.S.S. Connecticut and augmenting her with five of our attack submarines from CTF 77, that submarine force can make a rapid transit up to the south of New Guinea. Once there, I believe we can 'herd' the Chinese into a trap somewhere in the Coral Sea to the south of the Solomon Islands.

"Here's how I propose we do it," he said as he turned his attention to the entire group.

"...and I want a full discussion of the possible enemy response before we finalize the general plan and then send you off to develop the details to successfully pull this off."

Referring to a large display of the Australian Theater of Operations, the Commander of CTF 77 continued his discussion by pointing to that display.

"Now, we'll keep the Kitty Hawk and its entire group right here, to the northeast of Newcastle to continue covering the principle invasion anchorage, but close enough to ferry additional aircraft to this operation if necessary.

"The combined UK and Canadian task force will continue to protect the southern approaches to Sydney in the Tasman Sea off of Cape Howe.

"That's a total of four carriers covering our invasion forces."

Turning to the United Kingdom and Canadian task force commanders, Admiral Styles couldn't help but recognize and congratulate them on their part in the offensive to date...and to give them some commander's instructions regarding the upcoming operation.

"Admiral Weatherly, you and Admiral Tomlinson have done an outstanding job down there and we commend you for it. You will be tasked with covering our backs in this operation.

"Don't be surprised if the enemy tries to probe your position in strength to see if there is something they can exploit while we are up north. We are confident that the two of you will show them the error of their ways should they try.

"Just make sure you don't get the QE sucked into any premature major action down near Melbourne. We are not in a tactical position to secure Bass Strait and Tasmania at this time."

Addressing the rest of the group as a whole, the Admiral then continued. "Okay, as you can see, all of that will leave us with the Shanksville, the George Bush, and the Ronald Reagan and their battle groups, which include the Hampton Roads, the Essex, and the Makin Island, to act as the anvil against which our fast attack subs will drive the Chinese. I expect we can set that up here, in this area well to the south and west of Rennell Island.

"If we do this right, we can create a turkey shoot in the air against the Chinese...and then deal with their surface combatants at our leisure, creating a pincer between our subs to the west, and our large combined task force here to the east.

"That's a 10,000 foot view of the plan...now let's get down to some particulars."

## **THE BATTLE OF THE CORAL SEA: September 4-5**

**September 4, 04:07 local time**

**Combat Information Center**

**PLAN Carrier Zenim, 300 km NE of the Santa Cruz Islands**

Admiral Xi'n analyzed the developing situation reports with a critical and experienced eye.

From the reports he was receiving of submarine attacks to the west and air and missile attacks to the south, it was clear that the Americans were executing a masterful pincer movement. They were on the verge of sucking the remnant of the large PLAN fleet that had been protecting the eastern approach to Australia into a deadly trap...and Xi'n was going to have to allow it to happen, to a point.

It was a risk...both to the five Beijing class carriers and all of their escorts in the force to the south...as well as to his own force here north of the Santa Cruz Islands...a force he was certain the Americans and their allies were as yet unaware of.

The Admiral's powerful task force consisted of the fully repaired and refurbished Zenim and her sister ship, the Xia, accompanied by four of the new naval "strike-at-sea" upgrades to the PLAN Tactical Attack Ships, four of the Chinese latest phased array air defense destroyers, four of the anti-submarine and surface strike cousins of the air defense vessels, and three of China's latest nuclear attack submarines.

Although the Admiral was not entirely certain of the exact location of the Americans, he had twenty-four of the improved recon LRASD weapons moving towards their expected location and hoped he would soon be able to pinpoint it with more exactness.

Turning to the Captain of the Zenim, who had accompanied the Admiral from the bridge to the combat information center and who was standing with him monitoring his duty officers at their various stations, the Admiral inquired.

"Captain, what is the latest update on operations to locate the American fleet?"

After a brief animated conversation with one of the duty officers, who handed the Captain a printout of the latest sensor readings, the Captain responded.

"Admiral, we just received the latest information from the recon LRASD units and we believe that they have now penetrated the outer ring of picket ships in an American formation.

"Just minutes ago an American destroyer and a Los Angeles class attack submarine were detected and engaged by our recon LRASD units. From acoustic signatures relayed from the scene of the engagement, it is clear that the LA class submarine was sunk and the destroyer was damaged and limped away to the west where we can engage it separately at our leisure.

"Based on their programming, the other LRASD units continued on, inbound towards the south and east, towards where we believe they will locate the American formation. I am prepared to order our strike package to launch towards that location now...here, to the south and west of Rennell Island.

"It would be at the maximum range of our aircraft...but with refueling aircraft meeting the strike package on their way back, they will have plenty of margin...and we can communicate with them as to the exact location of the American force while they are en route.

The Admiral considered this carefully. A large strike at this range was a gamble, but every passing minute increased the risk of his task force being discovered by the Americans. With the engagement that just resulted in the sinking of the American submarine and the damaging of the destroyer, the American Admiral would now know that a potent threat of some sort was off to his north somewhere...and he would be anxious to investigate.

"Order the strike package launched as you have outlined, Captain, and then maintain a heavy CAP over this task force and position a strong barrier CAP to the south west per plan Sea Tiger.

"In addition, contact the reserve maritime strike squadrons on New Caledonia and Santa Isabel Islands and have them launch their aircraft in a second wave of attack once we engage the enemy.

"As soon as the American force is positively identified and located, I expect to see a first wave of seventy-two TAS launches of the new ballistic LRASD units. They should arrive either just prior to, or in conjunction with, our strike package.

"I'll be up on the command observation deck monitoring the launches. Carry on."

The Admiral was betting that the Americans must still be unaware of the presence and exact location of his task force. They simply had not had the time to determine it, since the engagement with their picket vessels. He wanted to get his strike package launched, his CAP in place and have those ballistic-assisted LRASD weapons launched before that particular circumstance changed.

The Admiral was correct in his assumption that the Americans had not had time to pinpoint the location of his task force in the time that had passed since the LA class submarine had been sunk and the Spruance class destroyer damaged. They didn't need to.

Admiral Styles of CTF 77 had been made aware of the location of the Chinese task force approaching from his north well before the engagement with the picket vessels and was already taking measures to address it.

### **September 4, 04:29 local time**

### **Bridge, U.S.S. Hampton Roads**

### **200 miles south of Rennell Island**

The U.S.S. Hampton Roads, designated as CVE 24, was the namesake of the Hampton Roads class of Sea Control Carriers that the United States was now producing in large numbers. She was the first dedicated sea control carrier built by America, as opposed to the conversion of large amphibious assault ships to that role prior to her launch. She was outfitted with the latest American technology for both air support, strike at sea, and defense.

She carried twenty-four Joint Strike Fighters, four E-22B, Osprey AEW aircraft, and four CV-22 Osprey patrol aircraft for long range, high endurance anti-submarine or anti-surface warfare. She also carried four Sea Hawk helicopters for shorter range anti-submarine duties. She also was outfitted with

both phased array and conventional radars and included her own Aegis system that could interface with all of her escort ships.

For self defense, she carried an Mk41 vertical launch group of forty cells which held thirty-two Standard missiles and thirty-two ADCAP Sea AMRAAM (called SAMRAAM) missiles. She also mounted two RAM launchers holding sixteen missiles each and four Phalanx CIWS. For sub surface defense, she was outfitted with four SUB-CIWS to defend against LRASD Killer Whales.

Fitted for the sea control role, with all of the air superiority and strike aircraft, she was capable of acting as either the center of a sea control task force of her own, or supplementing a larger nuclear carrier in an augmented CSG.

In this case, the Hampton Roads was operating in the capacity of the center of a sea control task force positioned to the north of the principle American naval force engaged in this large battle. The two large American carrier task forces further to the south and west were in the process of squeezing the remaining vessels of the Chinese task force that had been defending Australia between them and the submarines task force to the west. This was exactly according to Admiral Styles' overall plan. The Hampton Roads and its escorts were acting as a buffer force between the major American forces and anything the Chinese might throw at them from the north.

In addition to the picket destroyer and attack submarine that had been placed well out on the threat axis towards what was perceived as the most likely threat, the Hampton Road's group had a new air-defense variant of the DDX destroyer, a batch IIA Arleigh Burke Aegis destroyer and a Ticonderoga class Aegis cruiser as escorts. A very potent force indeed.

It was the pickets of the Hampton Roads buffer force that the Chinese recon LRASD units had attacked, and it was this task force that those same Chinese units were now in the process of discovering, twenty minutes later.

"Captain, our outer-ring Ospreys are picking up multiple enemy Killer Whale signatures approaching from the northeast...the count is up to twelve, from the same general bearing where the La Jolla was sunk.

"Closest range is now twenty-two miles."

Based on the earlier report from Admiral Styles of a large Chinese carrier task force off to their northeast, and based on the engagement twenty minutes ago with his outermost pickets, Captain Terrace Thurmond, who was in command of the Hampton Roads had expected this report.

As the task force commander he knew his role was to interdict attacks aimed at the major U.S. forces from this quarter, and to soak up any such attacks. His forces were about to do just that.

"Okay, these are probably an initial wave of their Killer Whales from that Chinese task force Admiral Styles warned us about.

"Have the entire group tighten up to a condition two sub-surface defense formation anticipating attack by the whales...but warn everyone to expect both aircraft and missile follow-on attacks.

"I want the barrier CAP pushed out another fifty miles in the direction of those Chinese carriers and launch the ready alert birds to beef up our inner ring CAP."

As the Captain turned to speak with his chief of staff, the duty officer overseeing the specialists who were monitoring the approach of the Chinese LRASD devices shouted.

"We've got an activation! Now another!"

"Enemy devices are going active across the board and are now approaching at high speed."

Captain Thurmond responded crisply and with efficiency born of long practice. Every American and allied sailor expected at one time or another to be under Killer Whale attack. The Hampton Roads had been under this threat since her initial shakedown cruise and had been under attack on several occasions since coming to the waters of the southwest Pacific, first off of New Zealand as the invasion of Australia was staged...and now in the waters off of Australia itself.

But in those other attacks the Hampton Roads had been a secondary target traveling in the company of one or more full-size, nuclear carriers. Today she would be the primary target.

"Place all SUB CIWS systems in the inner ring on full automatic and slave them into the task force defense system here on board the Hampton Roads.

"Continue monitoring airborne threats."

### **September 4, that same time**

#### **Combat Information Center, U.S.S. Shanksville**

#### **450 miles southwest of Rennell Island**

The pace of combat was becoming frantic. Admiral Styles was in the process of directing two separate strike at sea packages and two missile engagements against a Chinese task force to his west and now another to his northeast.

"In subjecting them to a pincer movement we have now been caught in one of their own making," he thought as contemplated the progress of the package already making its way towards the remnants of the task force with which the Chinese had been protecting their Australian conquest.

That package was the largest of the two...it had been the principle objective of the operation...and was directed against the five Beijing class carriers. It was approaching the Chinese

vessels in conjunction with a large cruise missile attack that had been launched by several of the escort vessels in the Admiral's main group.

"Give me a status on Cobra," the Admiral commanded as he now saw enemy missile designators on the main display, rising to intercept his own cruise missiles.

The Admiral's chief of staff, a Lieutenant Commander who was right on top of the latest intelligence, answered. "Sir, the enemy is fully aware of our attack and, as you can see, is firing missiles at our wave of attacking cruise missiles. We have over eighty missiles in that attack.

"In addition, Commander Hennigar, the strike leader, is indicating that enemy aircraft from a sizable enemy CAP are being vectored against his aircraft as we speak. He believes his escort is strong enough to allow the attack aircraft to get through and he has gone to full power to press the issue.

Pausing for just a moment, the Lieutenant Commander listened briefly but intently to the latest communication coming through the headset he was wearing.

"Okay, we're getting reports of a massive missile launch from the Chinese task force..."

"Looks like in addition to anti-air missiles there is also a large counter strike being launched from the Chinese as our aircraft are approaching."

The Admiral considered this report. He had over one hundred aircraft approaching that western Chinese task force and they would be in the thick of their attack in the next few minutes...right on the heels of the cruise missiles which were attacking now.

He knew that all of the ships in CTF 77 would be preparing to receive the missile attack that his chief of staff had just referenced. Barrier CAP would be moving into place, ships would be positioning themselves and the AEGIS system would be fully engaged. He knew that his task force was as prepared as it could be for just such an attack...particularly if the Chinese were not able to support that attack with aircraft...and he believed he'd caught them before they could do that.

So, Admiral Styles was relatively certain that he had caught the primary target of his operation perfectly within his pincer...exactly according to plan. But he was very concerned about the Hampton Roads group. She was hanging out there between him and that second large Chinese task force to the northeast and he felt that the Chinese were going to launch their largest attack from that quarter.

He felt like he had been maneuvered into throwing his strongest attack at those Beijing class carriers, only to learn that two of the larger carriers and their escorts were driving hard for his flank.

Luckily, with the Hampton Roads group positioned to the northeast for just such a contingency, that flank was not exposed. Captain Thurmond was a very capable naval officer and he would have his entire group alerted by now and preparing to receive whatever the Chinese could throw at him.

Nevertheless, Admiral Styles had a feeling that Thurmond was going to need help. Although he'd had to wait while his major attack finished launching, fueling and clearing the area, the Admiral had ordered a second strike package to be prepared to launch immediately after the first. He hoped he could hit that new Chinese task force before they could hit him.

"How about preparations for Python...where are we?"

Again, the Lieutenant Commander responded.

"Admiral, the tankers, AEW and EW aircraft are already airborne. The fighters are launching now and will be followed by the Super Hornets and the JSF attack aircraft.

"We expect them to be fueled, formed up, and on their way in the next fifteen minutes."

"Fifteen minutes?" thought the Admiral. That would seem like an eternity. Who knows what the Chinese from that new group will be doing in that time. Fifteen minutes is almost 200 miles for a strike group...or even further for supersonic missiles.

"Well, inform the captains of the Shanksville, the Bush and the Reagan to pull out all of the stops and have their air operations sped up if at all possible for Python.

"I believe we are going to have to..."

At that moment, Admiral Ben Ryan stepped into the CIC and motioned for Admiral Styles to step over to him for a confidential conversation.

"Look, Jerry, I know your hands are full. But I just got flash traffic from Pearl and decided you needed to hear this immediately. Later we'll brief the staffs.

"Intelligence is indicating that there is a high likelihood of the CAS using their tactical nukes against us here and against the invasion beachhead in the near future. They indicate that if we continue to press inland and if we are particularly successful in decisively defeating the PLAN in this battle, enemy local high command has been given the green light to plan and then execute an attack on us.

"Apparently, a highly placed informant got the word out, and the President wants us to take the threat seriously.

"He is working through State and through the CIA to deliver a back channel message to the Chinese, Indians, and the GIR that he hopes will lessen the threat. That message is apparently very straightforward and represents a new NCA strategy.

"Where President Weisskopf depended on our TBM to forestall and defeat any theater level engagements and would only launch in retaliation for a successful hit on our forces, or an attack against CONUS, President Bowers is taking a different stance.

"This is the text of his message:

*Any nuclear attack launched against any American or allied forces will result in a full scale nuclear attack against the enemy homeland in response.*

“He’s not beating around the bush, Jerry. That is the exact text of the message going to the Chinese and their allies. We need to plan and prepare accordingly.

“Hopefully the President’s message will have the desired effect. My guess is that the successful insertion of the new space station and its ability to defend itself and the continental United States has figured heavily into this new strategy. I’m told that within ninety days we are going to launch another station into geosynchronous orbit above us here in the southwest Pacific.

Admiral Styles was uneasy about the new nuclear policy...and not because he disagreed with it or thought it wrong. He did not let his unease show and he would faithfully follow the orders and directives of his commander in chief. He was certain, should things go well here in Australia and elsewhere for the western allies, that the Chinese and their allies would be more and more likely to turn to their WMDs. He understood exactly what the President was doing and he agreed with it.

“We have the advantage and we need to play to our own strengths,” he thought to himself.

Just the same, he did not relish being on the receiving end of a nuclear attack. That is what caused the unease. No one, not even the most courageous and resolute of military leaders, could face that possibility without a shudder.

“Ben, this means we’re going to have to reconfigure the positioning of the ships in the task force for a possible nuclear attack. Because of the greater separation between them, that will make us much more vulnerable to the conventional attacks we already know are coming. It’s a real catch 22.”

As Admiral Styles paused for a few seconds while he thought it out, Ben Ryan empathized with him. He had gone through this same thought process after receiving the message and while coming down to the CIC to discuss it with Styles. He was anxious to see if Jerry came to similar conclusions as he had in considering the trade-offs necessary for security of the task force in the current dual-threat circumstances. He was pleased when he heard what Admiral Styles came up with.

“Ben, here’s what I intend to do. I am going to place the TBM Aegis ships out further on the threat axis for those nuclear threats in a full nuclear defense posture. The inner ring will go to a sixty-five percent separation. Far enough to provide time for further separation in the event of a nuclear strike warning, but close enough to provide a reasonable conventional defense umbrella.

“I’ll have my chief of staff get to work immediately on this and we’ll implement it as soon as a workable plan is drawn up.

“It’s going to be tough to implement right in the middle of our ongoing strike at sea and defensive operations...but that’s why we get paid the big bucks,” Admiral Styles finished jokingly.

It wasn’t the exact solution Ben Ryan had come up with, but it was more than adequate and in some respects it was even better than what he would have proposed.

“Take some consolation that you will soon have that station up over you, Jerry. I can’t tell you how gratified I was to hear that it would be going up over the Australian Theater of Operations. A lot of lobbying went into that decision.

“The Israelis, the Russians and our own people in Alaska lobbied equally hard and long, particularly since it’ll be six more months before the next one goes up.

“But the next six months here in Australia are going to be pivotal and will set the stage for the future course of the war.”

Jerry Styles considered his superior’s words as he wrote out a message to his chief of staff and had an orderly take it to him.

“Well, I have to tell you, Ben, once that station is in place I will feel significantly better about our chances to stop any full-scale nuclear ballistic missile attack without taking some major hits.

“...with the proven effectiveness of the Chinese TBM...they may be tempted to try it anyway if they begin losing a lot of ground.

The Admiral paused just a moment...

“I’ll tell you something else, Ben. I like President Bowers...a lot. Lots of people were concerned about the size and fit of the shoes he had to fill, but I think he’s going to fit into them just fine.

“In fact, he may need to buy a larger pair at the rate he’s going before all is said and done.”

**September 4, 05:15 local time**

**Forward VLS Control Station, PLAN Amphibious Ship Chongqing**

**250 km NE of the Santa Cruz Islands**

The launch of the new tactical ballistic missiles, those with the Killer Whale acting as the terminal guidance and warhead, had gone off without a problem. All thirty-six missiles had been launched from the Chongqing and the teams responsible for the operation had completed the reloading process for the second wave of missiles whenever the commanders ordered it.

...and that order was not long in coming as a second wave was launched against the American task force to the southwest.

Kao Pham was particularly proud of these launches. They were the latest innovation of his father’s LRASD weapons...a new wrinkle for the Americans and their allies to have to contend with.

These LRASD weapons only carried the rocket fuel and rocket engines to be used for final guidance underwater. The huge ballistic missiles, which the Chongqing carried along with three of her sister ships, would provide the long-range delivery that the LRASDs normally depended upon for their own conventional fuel and propulsion. Not having to include the dual propulsion or the fuel for it had significantly reduced the size of the weapons and allowed them to be fitted as a final stage onto the large ballistic missiles.

“My father’s legend just grows and grows,” thought Kao.

“Designer and implementer of the weapons that pushed America’s aircraft carriers out of the western Pacific and which have been used to keep them at bay all across the world, Hero of the People’s Republic and now a member of the Politburo itself.

“As the Americans try to counter, my father always manages to stay one step ahead of them.”

As he thought this, his thoughts also turned to his sister, Chiang, who had pursued her own chosen field of study and had done very well.

“In fact,” Kao thought, “she too has contributed to the capabilities of the Chongqing.”

Her work was directly related to the algorithms the *ta shih* detectors used to engage the stealth aircraft the Americans employ. A fact for which Kao and every sailor on the Chongqing was grateful.

“I wonder if she’s actually going to marry that politician?” Kao asked himself as he thought about Chiang in far-away Beijing.

“When I met him on leave after they had announced their intentions, he seemed likable enough...and he seemed truly interested in Chiang,” he thought.

Koa had wondered if the interest was real...if perhaps his feelings were more a function of the influence that their father’s prominence might garner...particularly since he had become a member of the Politburo and the executive council. But now that he had met them, and spent several days with them, he was convinced that the attraction was genuine...and that it was clearly mutual.

“And then there’s me. I’m out here having the time of my life sailing around the world and learning about electronics myself...despite the dangers.

“Who knows...maybe I’ll go career when this is all over.”

Kao had been promoted to a section chief on the Chongqing. He oversaw all maintenance functions by enlisted personnel for an entire battery of VLS anti-air missiles located near the bow of the vessel. That included the missile reloading, the missile hatch functions, the readiness of the missiles and the maintenance and integrity of the launch tubes. Much of this was automated, but the equipment had to be maintained and kept in perfect working order for potential combat.

This meant that Koa, as section chief, not only had to have extensive knowledge of the machinery and its operation, he also had to understand and be able to assist in troubleshooting the software and electronic systems that drove it. He and his people had to understand how to repair the equipment or its controls...or to be able to operate portions of the system manually, if necessary, during combat operations.

It was more than achieving high marks on the readiness and maintenance charts, and it was more than competing for the highest sustainability rankings. It was a matter of life and death during combat and Koa understood it and was able to convey it to his men.

“While consistently hitting those high marks on the charts I might add,” he thought to himself as his communications light winked on brightly and the incessant chime of a call came through.

He spoke into the microphone. “Chief Pham.”

The duty officer over anti-air engagements in the combat information center responded.

“Chief, this is Lieutenant Wu. Your systems all look nominal, what is your estimation of their status for prolonged operations?”

“Uh-oh,” thought Koa. “Don’t like the sounds of that. The Americans must have located us.”

He did a final check and assessed the status and the operation of the equipment...equipment that he had become intimately familiar with over the last three and a half years.

“Lieutenant, everything is not only nominal, it’s in excellent shape.

“I don’t expect any down time on our account...even if we have to run through all of the missiles in our magazine.”

Koa, in his mind’s eye, could see the smile spread across the Lieutenant’s features.

“Great, Koa. Prepare for imminent action. We’ve located a large enemy strike about three hundred kilometers out and approaching.

“You’ll get the official order soon, but you might as well get your people ready now.

“Wu out.”

#### **September 4, 05:24 local time**

#### **Combat Information Center, U.S.S. Hampton Roads**

#### **190 miles south of Rennell Island**

Captain Thurmond counted the impact and losses from the initial LRASD attack as he prepared for the onslaught his sensors and barrier CAP now told him was approaching.

The reconnaissance version of the Chinese Killer Whales were not as sophisticated in their attack profile or capabilities as other variants...and the Captain was grateful for that. Against combatant and non-combatant vessels not equipped with the SUB CIWS defense, the normal, straight-on attack profile of the huge supercavitating weapons was still horrifically effective. And that was the exact profile that these long-range surveillance weapons used.

But against vessels equipped with the SUB CIWS, unless the enemy was able to overwhelm those defenses by sheer numbers, the straight-on attack mode could be effectively defeated. Each ship in Thurmond's task force was equipped with the SUB CIWS and those systems provided the edge in defending the task force against the sixteen Chinese devices that had located them.

Still, it had been a harrowing experience for the Hampton Roads and two of her escorts, and it had turned deadly for the third escort. The DDX air defense destroyer, the U.S.S. Townsend, had been severely damaged when one of the three Killer Whales attacking her had been destroyed only one hundred feet from her starboard side, near her fantail and rudder on that side.

The detonation had warped several bulkheads and jammed that rudder into a twenty-four degree cant, while buckling the screw shaft on that side as well. Twelve personnel had been killed and another eight injured in the explosion, flooding, and the fight to keep the ship afloat.

"Well, that crew had worked wonders in the last half hour and the Townsend was afloat, mildly maneuverable and still in the fight," the Captain said to himself.

"But how long will she or the rest of us be able to hold out?"

That answer would not be long in coming.

The Chinese had a wave of SU-37 and SU-34 aircraft that had battled their way through the Hampton Road's barrier CAP over one hundred miles to the north. Over thirty Chinese aircraft had broken through and were now approaching as the inner ring CAP of eight aircraft was vectored towards them. Thurmond knew that those eight aircraft would not be able to hold them all back.

As this stark realization began to coalesce, his air defense duty officer called out.

"Vampire! Vampire! Vampire!"

"Multiple ballistic tracks approaching...count is twenty and rising...now thirty...now forty!"

Ultimately the count went to seventy-one missiles as the Aegis system on all of the ships went into action, both against the incoming ballistic missile tracks and the approaching aircraft. Seventy-one rapidly approaching missiles coming up behind the thirty-two aircraft that were closer, but approaching more slowly.

As it was, the ballistic tracks were going to arrive just before the aircraft and the vertical launch cells of the three escort vessels and the Hampton Roads began emptying at those approaching missiles. Then they would be taking aim at the aircraft as they came into range and as the system rated threat levels, the value of the vessels targeted, and the time requirements for each intercept.

The Theater Ballistic defense capability of the Ticonderoga and Arleigh Burke Aegis vessels came into play first. While the incoming missiles were far out of range of the normal standard missiles, the two ships quickly launched all twenty-four of the combined TBM inventory and downed twenty of the ballistic missiles before any of the surviving Chinese weapons were even in range of the remaining American missiles.

With fifty ballistic missiles still inbound on very rapid ballistic tracks, Aegis set high priority on these targets as they flashed towards the American task force. But these missiles were coming faster than what the extended and medium range standard missiles, or the newer ADCAP SAMRAAM missiles were designed to intercept.

They were simply coming too fast for any type of assured intercepts.

But Captain Thurmond, his personnel and their equipment all tried just the same.

Between the Hampton Roads, the damaged Townsend and the Arleigh Burke and Ticonderoga vessels, which contained a total of three hundred and ninety-four missiles in their vertical launch tubes, over two hundred and fifty missiles were launched at the Chinese ballistic missiles...but only twenty-three of the remaining missiles were destroyed.

In that same time period, another one hundred missiles were launched at the approaching Chinese aircraft. Twenty-one of the thirty-two aircraft were destroyed, but seven of the destroyed aircraft launched their missiles before their destruction and all remaining eight attack aircraft were able to launch their cruise missiles as well...each aircraft launching two missiles each.

A total of thirty super-sonic cruise missiles were now also approaching them and except for the close in weapons system like the Phalanx CIWS and the RAM missiles, there were no Aegis missiles left to defend the task force.

As the cruise missiles rapidly approached, a strange thing happened that all of the defense officers on all of the American vessels noticed at the same moment. The ballistic missiles had some type of separation that dropped away from the oncoming ballistic tracks.

"Rapid change of aspect on ballistic vampires!" cried out the air defense duty officer on the Hampton Roads.

"We have a separation of some sort. The ballistic tracks have continued inbound.

"Those tracks are now going to pass over the task force at an altitude of five thousand feet!"

Captain Thurmond was immediately concerned about the potential for nuclear detonations over the task force, but he didn't have any weapons that could prevent it...and he didn't have time to worry either. The cruise missiles launched by the aircraft were now approaching...and they were coming in on courses that would impact his ships.

The close-in defenses performed well against the cruise missiles. Of the thirty approaching cruise missiles, twenty-one were shot down.

But nine missiles impacted the American vessels. One on the Townsend, two on the Arleigh Burke destroyer, and three each on the Ticonderoga cruiser and the Hampton Roads.

Given its already reduced state, the damage to the Townsend, was significant. It continued to make headway, but was trailing thick black smoke from a hole in its superstructure just above the waterline. The Arleigh Burke escort was moderately damaged, particularly to its rear VLS cells, which, fortunately, were all empty at the time of impact, minimizing the damage. It continued to make full headway and was capable of continuing the fight. The Ticonderoga cruiser was severely damaged with hits in its engineering spaces, the helicopter hangar spaces and to the forward gun mount and VLS cell. Both of its Phalanx CIWS were still operational as the big Aegis cruiser lost headway and was in the process of going dead in the water.

Just before the first of three cruise missiles impacted his ship, Captain Thurmond distinctly heard his ship surface defense officer make a surprising announcement.

"I've got multiple incoming supercavitating weapons!

"Five...ten...no, now over twenty devices. All on a bearing consistent with where those ballistic tracks separated. Now approaching at..."

KA-BLAM!

The cruise missile explosion stunned Captain Thurmond momentarily and knocked him off his feet. As he was helped back to his feet by his aide and others near him, the other two cruise missiles struck the Hampton Roads.

BLAM...BLAM!

The next two hits were not as close to the CIC, but rumbled heavily through the entire ship just the same, causing everyone in the CIC to grab on to something sturdy to keep themselves from falling again. But, aside from some minor cuts and bruises, everyone in the CIC was okay. As he prepared to issue orders to determine the extent of the damage and to organize efforts to resolve it, the Captain remembered the incoming Killer Whales.

"Get me the status on those Killer Whales! SUB CIWS weapons free—engage them now!"

As a result of the missile hits, the Hampton Roads lost the operation of one of its two elevators, took a hit just below the bridge that destroyed the ability to pilot the ship from those spaces, and had its flight deck holed toward the aft portion of the ship, also starting a fierce fire in the hangar spaces below. She continued on unabated, but smoke was pouring from the hits she took and her effectiveness was impacted...at a time when she would be needing everything she had.

As the Captain issued more orders, another warning came from the duty officer for air defense.

"We've got multiple inbound ballistic vampires again...ten, twenty...now over thirty.

"...now receiving AEW reports of inbound supersonic bandits consistent with TU-22M or Blackjack bombers.

"Many aircraft in two groups approaching from both the west and the northeast!

"Count is up to fifty aircraft in the western group and thirty-eight in the northeastern group."

For just a few seconds everything got deathly quiet in the CIC. With few anti-air missiles left, with only three ships able to operate their SUB CIWS against the onrushing onslaught, and with damage already sustained, every man in that room knew what these numbers meant.

All eyes were on Captain Thurmond. He didn't take long in replying, and when his reply came, it was defiant, direct and inspiring.

"Okay, time is short. Send this message as follows to CINC CTF 77 and to CINCPAC.

*"By God, we have drawn all of their strength onto us here at this location. The enemy has been fooled into directing their entire effort at TF 77.3 and are expending it at this time"*

Taking the com in his hand and opening a channel to all of the commanders in the task force, he spoke in a voice loud enough to be heard by every man in the combat information center.

"All right, everyone. We're facing an attack that must have been intended for all of CTF 77. The enemy believes that *we* are the entire combined task force. By fooling them, we've accomplished our mission...each and every one of you can be proud of that."

Knowing full well from the threat displays what the likely outcome of the current engagement was likely to be, but not varying in the slightest, Captain Thurmond completed his communication to all of the ships under his command.

"Now we must maintain that pride and give them hell!

"God bless and preserve each of you and your commands."

**September 4, 05:32 local time**

**E-22A Osprey over TF 77.3**

**190 miles south of Rennell Island**

Lieutenant Commander Joshua Morgan had just given a SITREP over secure communications to Admiral Styles about the fate of Task Force 77.3. The report had been to the point...but he couldn't keep his emotion out of it.

"Sir, the Hampton Roads, the Townsend, the Port Royal and the Decatur are all...dear God...they're gone, Admiral, destroyed and sunk.

"Each of them fought to the end, hit multiple times by cruise missiles they fought on and destroyed numerous Killer Whales around them....until they were taken out, one after the other, by Killer Whales or supersonic cruise missiles that got through to them.

"Currently, there are many men in the water, hundreds of them. What rescue operations we can mount are underway...but we need a lot more.

"We have this early warning aircraft, one HV-22 patrol and rescue aircraft, one F-35 from our inner ring CAP and two F-35s left from our barrier CAP currently returning to this position. Of the entire flight wing of the Hampton Roads...that's it.

Joshua could still scarcely believe what his own eyes had beheld. The intensity of the battle was scarcely imaginable, even to a combat veteran like himself. It had lasted barely a few minutes.

The remaining aircraft from the CAP had engaged the TU-22 and Blackjack bombers and their escorts. After their earlier engagement against the carrier-based aircraft from the Zenim and the Xia, there had been far too few American aircraft to overcome the Chinese numbers and so the sky had literally filled with cruise missiles. At the same time, another seventy-two Killer Whales were inserted into the water by their ballistic missile carriers only a few miles from the task force.

The first wave of Killer Whales, twenty-seven in number, swept in on the task force as the ships were fighting the scores of cruise missiles. The Port Royal, already dead in the water, took three more cruise missile hits before she was struck simultaneously by two Killer Whales.

Before the smoke from those explosions could clear, four more Killer Whales drove into that maelstrom and exploded, adding to the pall of smoke and debris. When all of that had cleared...the Port Royal was simply gone.

The Townsend and the Decatur suffered similar fates, each of them being attacked by many more LRASD weapons than their defenses could possibly handle...seven for the Townsend and eight for the Decatur. The Townsend had already been rendered a floating and defenseless wreck by the cruise missiles, but the Decatur went down fighting.

The Hampton Roads was able to heroically fight off the five Killer Whales that targeted her from that first wave. But the cruise missiles scored six additional hits on her, setting her ablaze from bow to stern and holing her in three places.

She was just going dead in the water when the last wave of seventy-two Killer Whales rushed in. A part of the Decatur was still afloat above the waves and attracted twelve weapons...but all of the rest, all fifty-seven of them targeted the Hampton Roads.

It was the most sustained Killer Whale attack on any allied vessel in the war and for over thirty-five seconds huge geysers, explosions and clouds of debris rose in the air every few seconds, as multiple hits occurred on what was left of the vessel under the developing pall of smoke.

As with the Port Royal, but coming as no surprise to the naval aviators who had watched her end, when that awful cloud of smoke drifted far enough away on the wind to allow them to view where their ship had been...the Hampton Roads was gone.

After conferring with his staff, Admiral Styles issued orders to Lieutenant Commander Morgan.

"Commander, you are to render whatever assistance you can to those in the water. Both your and the patrol aircraft are authorized to pick up as many survivors as you can carry and to leave whatever supplies you can.

"But under no circumstances are you to risk your aircraft or those whom you now command. This battle is far from over and your assets are valuable and must not be wasted.

"Am I clear on this?" the Admiral demanded.

Joshua Morgan was brought right back to the here and now by the command tone in the Admiral's voice.

"Aye aye, sir...Loud and clear."

Having achieved the desired result and hearing the discipline and confidence returning to the young officer's voice, the Admiral continued.

"Good. Then as soon as you must, return with the F-35s to this position and you will be taken on board the GWB.

"We have four other Ospreys coming that way with a large escort...but they are about two hours out. Make sure the people in the water understand and have them prepared to get the most critical personnel on those aircraft when they arrive.

"Tell them to hold on...vessels will try to be in the area within twelve hours."

As the Commander received his orders, he couldn't help but share one last thought with the Task Force commander while he had him on the horn.

"Admiral...you know Captain Thurmond was right."

Admiral Styles had two other ongoing battles to manage...but hearing the emotion and plea in the young man's voice, he decided to break communications protocol for a moment and respond.

"What do you mean son? How was the Captain right?"

Knowing he was possibly out of order...but not being able to help himself in wanting to bring some closure to the horror he had witnessed in the destruction of the task force, Morgan continued.

"Sir, he told us our task force should be proud, that we had accomplished our mission...that this huge attack was intended for the entire force and that we had won by taking it all upon ourselves."

The Admiral remembered Captain Thurmond's last words over the secure net...and he knew then, as he knew now, that Thurmond and this young Lieutenant Commander were right.

"Son...your Captain was right. You did accomplish the mission."

"Know that what your comrades purchased here today will lead to our ultimate victory...and that their loss will be avenged."

As he ended communication with Morgan, Styles thought to himself, "Sometimes the line between victory and defeat can be hard to ascertain, particularly depending on your reference point. Sometimes the successful accomplishment of a mission can bring as much personal and individual tragedy as a bitter defeat."

**September 4, 06:45 local time**

**Two Miles west of the PLAN Carrier Zenim**

**240 kilometers northeast of the Santa Cruz Islands**

Koa could see the silhouette of the Zenim off to his east, plowing through the waves in the pre-dawn light. Further to the north he observed the smoking Xia, which had been hit at least three times but had not lost headway and was still traveling in formation with the Zenim. With most of the damage occurring on her flight deck and the hangar spaces below it, the Xia was clearly unable to receive any of the aircraft that were now returning to the carriers from their attack on the Americans.

The Zenim, on the other hand, was feverishly conducting flight operations. Koa could see the planes landing...and lined up to land, approaching from the rear of the carrier. At the same time, she was launching other aircraft from positions near the bow as she continued to maintain a heavy combat air patrol over the retreating task force, while accounting for all of the returning aircraft as well.

And it was this task force that had been significantly reduced in numbers over what it had been less than two hours ago.

"Hang on, Jing," Koa said to the man next to him.

"The helicopters will be here soon. It's only a matter of time."

Until thirty minutes ago, Koa had not known Jing. He was a sailor who worked in the laundry facilities aboard the Chongqing who took his duty watch on the after deck around behind the bridge and superstructure. Koa rarely had opportunity to go there and, other than knowing that there were personnel who operated the vast laundry machines, he knew none of them personally.

Until now.

"Comrade, can you see the helicopters?" Jing asked.

"I can't see anything and I don't hear them. I don't know how much longer I can last. My head and eyes hurt and my arm is going numb."

Koa looked at the young man next to him...and he was young. Barely eighteen years of age. There was a dark laceration across his head that angled down over one eye...but had somehow resulted in the loss of vision in both. In addition, his shoulder appeared to be dislocated, on the side where his arm was going numb.

Jing was a new recruit who had come onboard less than three months earlier, during the last visit the Chongqing had made to their home port...when she had been upgraded with the latest sensors, software and weapons systems. It had been during that time that Kao had been able to spend so much time with his parents and had been able to meet his sister's fiancée.

Now here he was in the water in the Coral Sea, surrounded by dozens of other Chinese sailors, holding on to a large piece of wreckage from his ship, the Chongqing, which was now gone...along with so many of his friends.

Soon after Lieutenant Wu had informed him of the approaching engagement, the orders had come down to prepare for launch of their missiles. Within a few seconds the entire battery of vertical launch cells had been fired... and then reloaded and then all of them fired again.

Soon after that, there had been a violent wrenching in the ship as she took a direct hit from an American missile of some sort, followed by several other even more violent wrenchings that threw Koa and every man in his section to the deck, bouncing off whatever protrusions or hard edges they happened to be thrown against. Koa lost count of the times the deck shook and shuddered before he lost consciousness.

When he came to, it was dark in his spaces and the deck was canted at an angle to the port side and towards the aft portion of the ship. Smoke was seeping in and Koa rose to his knees and then to his feet, searching for the emergency lighting.

Finding it, he had switched it on only to discover that all but two of his men were either unconscious or dead. Over the next minute or two he and the other two had awakened and revived those they could. Within another few seconds they had determined who was able to exit their spaces to the open main deck above them.

Koa tried to get three of the men who had been injured badly and were unconscious, out onto the deck above. They had to be carried. After bringing one of them topside, there had been first one, and then another, tremendous explosion behind them, in the vicinity of one of the large tactical ballistic missile tubes right in front of the bridge. Those explosions knocked them all to the deck once again.

Rising to his feet, Koa looked back at the fire and smoke rising from the port side of the ship in that vicinity, and now noticed that the entire bridge was a mass of twisted and ruined metal...either on fire or heavily smoking.

The deck took on a much more pronounced slant to aft and the men looked to Koa for orders. There were no officers near and several sailors could be seen diving overboard.

Koa quickly assessed the situation and issued some orders.

"The ship is sinking....time to abandon ship!"

Looking at the cant of the deck where they stood and the distance to the water from the side railing, Koa continued.

"Too high to jump from here....move aft, towards the bridge....there, to where the ship is broken... not as far to the water surface there."

"Follow me."

The men needed no prodding and, as they made their way towards the center of the ship, they gathered more sailors who were coming topside from various hatchways that led below. Those who could speak spoke of mass confusion below and many too injured to get out.

Finally, they made their way to the port side amidships as water began lapping at the main deck. Arriving there, they saw a large piece of floating wreckage not more than five meters away from the ship that looked like it had plenty of room for the fifteen men with them to hold on to.

There was a horrendous ripping sound beneath them and it was clear the ship was breaking up.

"Okay, quickly, over the side. Swim to that wreckage there."

Turning to a group of three of his own section standing near him, he issued more orders.

"You three...help me with these two injured men and we'll float them over and place them on their backs on top of the wreckage .... there is just enough room for the two of them."

The men needed no more encouragement. Over the side they went, swimming to the wreckage and then helping as Koa and his three companions got the two injured men there.

Once there, Koa ordered them all to get on the side nearest the ship and begin kicking their feet to move themselves further away. Kicking for all they were worth, they began to move away from the ship, through the oil and other debris that littered the water. They had to push their way through several bodies and five other men, already in the water joined them as they continued on their way.

They had gone no more than forty meters when there was a violent explosion behind them...the largest they had experienced yet. A strong shock wave blasted across them. Thick acrid smoke engulfed them. Debris and hot metal impacted all around them. Several of the men screamed and one of those injured who was on the wreckage was blown off into the water, sinking beneath the waves. The sea caught fire around them and Koa yelled for them all to kick towards an open space of water another twenty meters to their right which was free of flames.

Ducking under the water several times and losing two more men to the flames, they finally made it and looked back in time to see the Chongqing, less than a hundred meters away, lift up high above them to fore and aft, completely broken in two and then slip beneath the waves, accompanied by a shrieking, grinding sound that was mixed with screams, breaking glass and falling metal. It was a sight and sound Koa would remember until the day he died...which seemed like it might occur any minute.

At that point, there were only eleven men holding to the wreckage, along with the single injured man left on top of it. Over the next twenty minutes, over twenty-five other men made their way to the wreckage that Koa and the others were holding to.

One of the last of these had been the injured Jing, who had been assisted there by two other men. They had swum right up to the area where Koa himself was holding on. Speaking over several sailors' reluctance, who believed there was no more room at their wreckage, Koa had been adamant.

"Quiet, all of you!"

"These are our comrades...our countrymen and our shipmates. We will take on all who come to us for help, just as we have made room for you others who joined us here.

"I am the ranking enlisted person here and we will maintain our discipline and our hope.

"Now, make room for these men. If we run out of space, then the most healthy will spell each other in five minute intervals...and I will be the first to do so."

But there had been no need to spell anyone. Over the next thirty minutes, another five men had succumbed to their injuries or fatigue and slipped beneath the waves, despite the best efforts of those around them who tried to hold them up.

In one terrible case, one man who sank beneath the waves grabbed onto his healthy comrade in a death grip and pulled him under with him. There was nothing anyone could do. Again, a gruesome vision that each of them would carry with them and remember for the rest of their lives.

As the ships of the task force moved off, leaving those in the water to their own devices...and leaving them nothing but hope for rescue, Koa began to plan on how to keep these men alive.

Already they had three men on top of the wreckage where there was really only room for two. They were rotating the injured, who needed time out of the water, into that third position.

Perhaps it was because of his loss of sight, perhaps it was because he simply desired it the most and was somehow attuned to it, but it was Jing who made the first pronouncement.

"Listen...off in that direction," he pointed.

"I hear a helicopter getting closer!"

All eyes looked in the direction Jing was pointing, hoping against hope that he was correct. Their hopes were rewarded as they saw a large Ka-50 helicopter, configured in the search and rescue role, approach them and then hover fifty feet over them.

The three most critically injured were winched up to the helicopter first and then it pivoted in the air, tilted its rotors slightly forward and flew off in the direction of the Zenim. It was soon replaced by another helicopter.

Over the next twenty minutes, using three helicopters shuttling between the wreckage and the Zenim, all of the men in Koa's group of survivors were plucked from the water and transported safely to friendly decks. Koa was the last to leave.

### **September 5, 17:30 local time**

#### **Task Force Commander's Cabin**

#### **PLAN Carrier Zenim, 650 km NNE of the Santa Cruz Islands**

The Chinese were withdrawing north, away from the Coral Sea and away from direct naval intervention of allied operations in support of their invasion of Australia.

Admiral X'in reviewed the last two days' action in his mind.

He believed he had delivered telling blows to the U.S. Navy in the area, but he would not fool himself. It was he who was withdrawing, not the Americans. As telling as his blows may have been and the complete destruction of an American task force could not be discounted-his own nation's losses had been heavier.

The Admiral discounted some of the boasts from the maritime strike force commanders regarding the size of the American task force that had been destroyed. Some of those reports filtering back to him indicated that multiple American carriers and at least eight support and escort vessels had been sunk...the sea wiped clean of a large American task force.

But the Admiral believed his own returning aircrews more. They indicated that there had been a single American carrier there with three escorts...and that the carrier was not one of the Nimitz or newer class super carriers. Instead, it had been one of the smaller Sea Control vessels.

"It's no wonder we wiped them out," thought the Admiral.

"That strike package had been meant to contend with a force four times as large as what they found...and even though we wiped out what we did find, we squandered a great opportunity, both in terms of surprise and in terms of the weapons we had available to be employed."

To the Admiral's credit, he had continued to try to press his advantage, even after the attack he had received from the main American force. That attack had sunk the Chongqing and three of his escorts and damaged the Xia.

Operating under his command, land-based maritime strike aircraft from New Caledonia and Santa Isabel Islands had found and attacked the principle American formation very late in the day of September 4<sup>th</sup> in conjunction with another TAS ballistic missile LRASD attack coordinated from his retiring vessels. The aircraft were from the same squadrons that had delivered such a decisive blow to the Hampton Roads Task Force.

But the American task force was much stronger than the smaller blocking force Admiral X'in's efforts had eliminated earlier that same day. What turned out to be three American super carriers and a damaged sea control carrier were capable of establishing an almost unbreakable barrier CAP between themselves and their foes...and they were capable of doing so on several threat axes.

Each arm of the Chinese attack that X'in had ordered had encountered barriers CAPs over two hundred miles out from the carriers, numbering in excess of fifty aircraft each. Before their long range cruise missiles could be launched, the majority of the aircraft had been shot down. Still, because of the significant escort that had traveled with the strike aircraft, sixteen TU-22M aircraft off of New Caledonia and ten Blackjack bombers off of the Santa Isabel Islands had gotten through and successfully launched over fifty cruise missiles at the Americans.

While this was occurring, another ballistic LRASD launch also came in, coordinated with the air attack. But the American task force contained several more DDX destroyers, Burke class Aegis destroyers and Ticonderoga class Aegis cruisers. This meant that there were more TBM standard missiles that could engage the attack...and this Chinese attack consisted of only forty-eight missiles, due to the loss of the Chongqing.

Only twelve of those LRASD devices landed and engaged the American fleet.

Results were unclear...but it appeared that at least one of the American carriers had been severely damaged and that the sea control carrier had possibly been sunk, along with three or four of the escort ships.

“And what did we trade for this?” the Admiral asked himself.

Of the five Beijing Class carriers and their eighteen escort and support vessels, only one carrier and five escorts had been able to break through the American submarine force after being badly mauled by the large strike forces off of the large American carrier force in the Coral Sea. That much-reduced Chinese force was now escaping westward over the top of the Gulf of Carpenteria, towards the Arafura Sea where they were moving under increasingly friendly and heavy air protection off of New Guinea and out of northern Australia.

“And this task force is escaping first north, and then west towards the Solomon Islands,” bemoaned the Admiral.

“Less one TAS and several escort vessels, and with a badly damaged Mao class carrier.”

The Admiral had already reported these results to his high command and had received tentative orders for provisioning and rebuilding an effective strike force. Later, he would plan a new counterattack that would challenge the Americans and their allies at a future date...but at a future place and time that was still wholly undetermined to the Admiral or his superiors.

It was still just too soon.

In the meantime, the allied landings and strengthening of their positions in the southeast portion of Australia around Sydney and along the coast towards Brisbane and Melbourne would continue, as would their steady advance inland.

“They’ll also undoubtedly move on New Caledonia and the New Hebrides Islands,” thought X’in, “now that we can no longer protect them from the sea and they are left hanging out there.”

As he rolled the tactical and strategic picture over in his mind, he began the first tentative planning towards the kernel of a plan that would lead to his next moves.

“Somewhere around the Solomons,” he said to himself.

“If we can get the promised help from the Indians and the improved Beijing and the new Mao class carrier groups down here in time...that’s where we’ll stop them.”

### **September 5, 18:00 local time**

#### **Task force Commander’s Cabin**

#### **U.S.S. Shanksville, 350 miles SE of Brisbane**

Admirals Jerry Styles and Ben Ryan conferred in Styles’ cabin as they prepared for the departure of Ryan, the CINCPAC.

He would be going back to New Zealand for two days to confer with the exiled heads of state and then on to Hawaii to prepare for the transfer of his command to his new replacement. From there, he would fly to Washington, D.C. to report directly to the CNO, the Secretary of Defense, and the President of the United States about the current situation in and around Australia and operations in the Coral Sea. He would then be assuming his new assignment, the role the new Secretary of Defense and the president had asked him to fill...that of the Chairman of the Joint Chiefs of Staff.

Operations around Australia and in the Coral Sea had turned out to be a victorious campaign to date, but they had also become an expensive campaign. In fact, it would prove to be the most expensive successful campaign of the war, in any theater of operation. Oh, there had been more expensive defeats that had been handed to America...like the one on March 15, that had kicked off the entire Pacific war. But this would be marked as the most expensive victory.

It was an expense that both Styles and Ryan felt personally. Terrance Thurmond had been a close friend of both men, and had been viewed as a rising star throughout the naval high command. He would be sorely missed as would his entire task force and the loyal personnel who had comprised it.

“When you add the Kitty Hawk, the British carrier and the Canadian carrier to what we have left here in the Coral Sea, we have six carriers still operational here off of Australia. Four super carriers, one large medium-sized carrier and one sea control carrier.

“As I see it, we should keep one of our super carriers, probably the Kitty Hawk, and the Canadian sea control carrier here off the invasion beachheads to support those operations,” Admiral Styles said as he pointed out the area on a small map laid out on the conference table.

“Then we can put a strong taskforce of two large super carriers, let’s say the Shanksville and the Reagan, here off of Brisbane to support our ground forces’ movement to the north and serve as a blocking force to anything the Chinese move into the Coral Sea in the near future.

“That leaves the Bush and the British carrier, the Queen Elizabeth, which we will place off of Melbourne to support our offensive down there and also act as a blocking force to the south.”

Thinking for just a moment, and then looking at the overall map, placing his right index finger first on the Alfasura Sea and then on the Solomon Islands, the Admiral then continued.

“Ben, I don’t believe it will be enough, particularly here to the north. That force off of Brisbane needs to be significantly larger because the Chinese still have heavy forces in the area.

“We don’t want to lose what we just won.

“That’s why I am requesting that you talk directly to the folks in D.C. on our behalf when you get there...and I am going to presume that you will support this request, Ben, to get at least another two, if not three, carrier battle groups here to us as quickly as possible.

“I’d like to see another CV-21 and a Hampton Roads class minimally, with a preference for a Nimitz class to augment those two.

Ben Ryan understood where his friend Jerry Styles was coming from. They had lost six sea control carriers and two super carriers in the last four weeks.

The Chinese had already shown that two super carriers, like those that would be stationed off of Brisbane, could be overwhelmed with enough Killer Whales, cruise missiles and attack aircraft. And the Chinese had shown a perfect willingness to commit whatever forces were necessary to do just that.

“You and I both know that if that main Chinese attack had fallen on this task force on the morning of the 4<sup>th</sup>, instead of just on Thurmond...then we could have been hurt badly.

“Thank God it didn’t turn out that way.

“The planning that put Thurmond there may be second guessed in the future...but I know...all of us here know...that it probably saved most of our lives.”

Still, the losses they took were horrendous by any measure, and they were losses that would be difficult, if not impossible, to sustain either here with existing vessels, or back home.

But the Chinese had lost even more and there was no way they could sustain the rate of attrition that was being inflicted upon them.

Admiral Ryan responded. “I’ve got your back, Jerry, and will support and pass on the recommendation just as you have stated it.

“But we have to find some way to slow this attrition down on our side and increase it to the Chinese and their allies.”

Seeing Jerry’s eyes flair at this statement, and understanding the reaction perfectly well, Ben Ryan pressed on while trying to soften what he had to say about the hard cold reality of their position.

“Look, I know we took down over twice the number of carriers and other major combatants, and that we drove these Chinese out of the area.

“But we still lost eight carriers ourselves, Jerry...and over a dozen major escort vessels. Those are losses we can’t afford to sustain.

“We can’t continue to trade off twenty thousand American or allied lives for forty thousand Chinese. We need those numbers to be more like no American lives for a hundred thousand Chinese...or something along those lines.”

Admiral Styles understood his commander...all of them wanted to end the American attrition and force the enemy to perform all of the heavy casualty counts.

But the enemy wasn’t cooperating.

“Ben, thanks for wording it that way. I know I now have the dubious distinction of having won the most costly naval victory in the history of the United States Navy. We drove off the biggest fleet we have ever encountered, and sent them packing, but we paid a horrible price to do it...we both have lost a lot of dear friends and valiant Americans.

“I guess it would be easy to let that fact ruin it all, you know? To somehow make the term *victory* turn into something hollow.

“But that would be true only if you fail to consider the alternative.

“Ben, I know you realize this, but that God-awful alternative—the one the Australians and so many others have had to experience—is something we are not going to allow to continue here in this theater...no second stage...no encore.”

Admiral Styles let the silence hang in the air for a moment between them. Once again, the thought came back to him:

*“Sometimes the line between victory and defeat can be hard to ascertain, particularly depending on your reference point. Sometimes the successful accomplishment of a mission can bring as much personal and individual tragedy as a bitter defeat.”*

To him, that thought was like the tune to an old song that you can’t get out of your head. Haunting...driving him to ensure that he and all of the commanders under him kept the right perspective, the right reference, so they would always see the defeat of this abject tyranny as victory.

He continued. “You get me those extra carriers, Ben...and their escorts. And you keep working with those folks at China Lake and the other weapons labs to keep getting us the best weapons... And speaking of weapons, when are we going to have our own offensive supercavitating devices?”

“We’ve been in this war for four full years and that’s yet to be produced. I keep hearing rumors and comments...but haven’t seen anything concrete yet.

“I don’t mean to minimize what those folks have done, it’s actually phenomenal and bordering on miraculous what they have come up with since the balloons went up and this thing got started.

“It would just be nice to throw something equally effective back at the Chinese and their allies.

“Anyhow, you just keep getting me that equipment and the boys willing to run it and fight it...and I will make sure that the Chinese and all of their allies are pushed completely the hell out of the southwest Pacific all the way back through the China Sea to Shanghai!”

Ben looked into his subordinate’s eyes...eyes that belonged to a long time friend and compatriot. Ryan knew that he was going to be in an important position to help Styles here in the Pacific...but he would also be concerned about every other theater of operation as well..

“Jerry, our own supercavitating weapons are well past the drawing board stage. I can’t go into it any further at this point, but you will hear something dramatic about it in the next few months.

“... and I’ll get those additional resources for you. I know that the Secretary of Defense, and the President all have complete confidence in you...I have complete confidence in you. I know you’ll use those resources to accomplish exactly what we have discussed in the manner you have explained.

“Now, I’ve got to be going...my aircraft is standing by and I don’t want to keep the folks back in Christchurch, Pearl, or D.C. waiting any longer than necessary.”

## Chapter 36

*"The wilderness and the solitary place shall be glad, and the desert shall rejoice." - Isaiah 35:1*

**October 2, 19:07 Mean Time**

**Bridge of the USSS Gaspra**

**Approaching the Orbit of Mars**

Commander David Lewis, the commander of America's first deep space task force, and also the commander of the USSS Gaspra, one of the frigates in that task force, scanned the displays.

Things were going extremely well. They would be approaching the halfway point to their destination the week after next, a full six days ahead of the original schedule.

Crewed by six officers and twelve senior enlisted personnel, these spacecraft exemplified the finest qualities of American ingenuity, technology, and perseverance. Each vessel carried two of the same miniature nuclear reactors like those that powered the corvettes back at Point Conception. As was the case with those vessels, the reactors were used to power the electrical, environmental, laser weaponry, research, and sensory systems carried by the frigates.

But with two reactors, the frigates carried more powerful laser weaponry, communication system, and sensory devices than their corvette cousins. They were also capable of housing more personnel and affording a much larger cargo capacity. They had been designed with just that objective in mind and that capability constituted a large part of their current mission.

The crowning jewel of the American technological breakthroughs, in addition to the SSTO nuclear pulse boosting, and the one that allowed these ships to be effective voyagers within the vast distances required for solar system travel, was the long-range propulsion system that they employed. That propulsion system consisted of operational solar or light sails for each vessel.

As light particles travel in space, they exert pressure along the path they are traveling. Normally, that pressure cannot be felt or even measured without very sophisticated instrumentation. But if the light source is powerful enough and the sails are adjusted appropriately, and if the surface area upon which the light pressure is being exerted is large enough and has relatively little mass...then all of that pressure cumulatively builds up to a point where it represents a force capable of propelling spacecraft.

The sails of the Gaspra and Ida covered many hundreds of square miles and were made of high-tech polymer material so light as to amount to the barest wisp of a presence. The sails easily folded up into a relatively small storage area mounted on the exterior of each vessel. Departing the Conception, the sails had been deployed in front of the vessels and properly aligned to maximize the pressure from solar radiation. The lasers on the vessels had been properly calibrated with divergent optics to provide additional thrust, and the vessels began to pick up speed in a slow, constant acceleration.

Once the Gaspra and Ida had come under light sail propulsion, they had slowly and steadily increased their velocity through a constant, but slight, acceleration until they were traveling at great speed. Several months at the phenomenal velocity they attained would allow the frigates to cover the distance to their objective...a distance in excess of 187 million miles.

Without such propulsion, the travel time for the two frigates would be measured in years and would be dependent principally upon gravitational and orbital mechanics and the narrow windows of opportunity associated with them. Although with light sails the craft also depended upon orbital mechanics, this method of propulsion afforded the task force much more latitude and flexibility.

The Gaspra and Ida had reached optimum velocity some weeks ago, and would now maintain it until they reached a point where the frigates would unfurl and stow the forward light sails and then deploy their aft sails in a configuration such that their lasers, calibrated by their computer system to the proper focus and intensity, would be used to slowly brake them until they arrived at their objective. Once arriving at the objective area, they would use conventional retro-rockets to maneuver.

"Current velocity and status, Lieutenant?" the Commander asked the duty officer.

The young man quickly answered.

"Remaining steady at 68,405.5 knots sir. All systems are well within nominal tolerance."

Satisfied, the commander responded as he turned away.

"Excellent, keep me posted on any changes or anomalies."

As he made his way towards his cabin, Commander Lewis looked at his watch and saw that it would soon be time to confer with the commander of the other vessel, the USSS Ida. As he considered the various items on the agenda for their regular evening conference, he thought about the irony, or the coincidence...though he personally doubted that it really was a coincidence at all...that had put the two of them out here on this long and critical expedition.

Commander David Lewis of the Gaspra, was the task force commander, and Commander Floyd Clark of the Ida, was the second in command. The entire affair had already been dubbed in unofficial circles as the second great Lewis and Clark expedition.

And, reflecting on the historical parallels, Lewis knew that it was just that...a great undertaking. Just as those early explorers had ventured into a vast and unyielding North American wilderness on behalf of their nation in the early 1800s, this expedition had set forth into the vast and unyielding wilderness of space, the true last frontier.

If anything, this time, well over two centuries later, the expedition was much more critical and urgent for the nation's survival than the first had been. For while that first expedition had contained all of the various aspects of exploration, a relatively small company, potential impact on commerce, trail-blazing and geopolitical intrigue that this expedition carried, it had not been undertaken during a bloody world war where the literal survival of the nation might hinge on the outcome.

"Those men had followed a river of water...we are following a stream of light," thought the commander as he entered his small cabin and made the request through the communications duty officer to call Clark and patch the video conference through to him, here in his personal quarters.

After a few minutes, there was a soft chime and the handsome dark features of Floyd Clark, a longtime friend and associate of David Lewis, appeared on the screen.

"Hey, David. You're a couple of minutes early. Something come up?"

Lewis looked at his friend and thought of the two long and intense years they and their crews had spent training for this mission. Astronauts, Naval Officers, and close friends, they both knew how much was riding on what they were doing out here passing the orbit of Mars, further than any human had ever ventured into space before.

Though their non-military protocol and bearing in the evening review meetings might suggest otherwise, David knew that they were both focused on the importance and success of their mission. They both knew, along with all of the crew...that above all else this was a military mission.

"Nope, F.L., nothing out of the ordinary. Just thought I would get into the meeting and review the parameters and catch up on what has happened on the *Ida* today.

"Right now all of our systems on the *Gaspra* are nominal; and it looks like we are still a good six days ahead of schedule. That additional solar activity we were briefed on is really paying off.

"As you know, earlier in the day we experienced some fluctuations in particle diffusion on the sail and had to request the system to perform a normal recalibration on one of our lasers.

"That turned out fine and took only a few moments and, as I said, everything is nominal now.

"Outside of that, anything out of the ordinary with you?"

Floyd Langley Clark, known to his friends as F.L., respected and trusted his commanding officer, David Lewis. He knew that the former President, President Weisskopf, the Chairman of the Joint Chiefs, and the Chief of Naval Operations had all been involved directly with the final decision on the command of this task force. As far as he was concerned they had chosen wisely. Over the last two years Floyd had seen for himself the quick wit, the analytical prowess and the unbelievable astute mind that David Lewis exhibited in action, and he was proud to be serving under him.

"We did have a scrubber act up earlier in the day, but specialist Powers was able to repair it without having to use any of our extra units.

"Outside of that, and our matching your momentary velocity fluctuation as you recalibrated the one laser, everything has been by the books.

"Pretty standard I would say...in fact too standard. Maybe it's time we have another drill."

Commander Lewis smiled broadly at this and Clark knew that the two of them were thinking on the same wave length.

"Exactly what I was thinking, commander.

"Let's say tomorrow morning at oh-two-thirty-five. What shall it be? Fire, enemy action, collision avoidance, major system failure...I'll let you make the call."

This was one of the things Clark liked most about Lewis. He knew how to foster his command and let them take an idea and make the most of it...and thereby learn the most from it.

"How about a problem that involves a combination of critical issues?"

"What do you think of a system failure coupled with collision avoidance...maybe the need to avoid a small meteorite or debris field in the midst of a couple of laser propulsion failures.

"We could have the *Gaspra* discover the debris in our path and then, in the middle of the avoidance maneuver, have the *Ida* suffer the failure."

Lewis felt good about the plan Clark was proposing. He knew very well that the crew needed to be kept at the top of their game, not only to prepare for the potential reality of such experiences here in space, where there was no one but themselves to look to for assistance, but also for the time when they arrived back in Earth orbit.

He was certain when that time came and they were back in orbit ready to exercise the final portions of their mission, that both vessels would be tested to the max in combat. Commander Lewis knew that both crews had to be honed to a fine edge to prepare for that eventuality.

"I like it, Floyd. I like it a lot.

"Let's get it programmed.

"You and your XO handle the system failure and I'll get Roger to work with me on simulating the debris field.

“We’ll make it an unannounced exercise.

“Let’s get back together at 2200 hours, all four of us, and see where we’re at.”

**October 20, 23:25 local time**

**Gregory Range, South of Cape York Peninsula**

**Muri clan enclave, Queensland, Australia**

The last few years had been the most momentous, the most dangerous and the most event-ridden of any of the clan’s collective memory. That memory, passed from father to son, from mother to daughter and from dreamer to dreamer, stretched back to the great *Jukurrpa*, or creation, when the ancestral spirits had arisen from beneath the earth and had given form to the earth, to the mountains, the valleys, the plains, the lakes, the streams and the very stones.

The Europeans had come in the late 1700s and had slowly, but unrelentingly, pushed the original inhabitants of the land aside. Such had been the policy until, beginning in the 1960s, the hearts of the Australian people, as they called themselves, had softened and the same rights and privileges accorded the newcomers by their society began to be extended to the original inhabitants, the aborigine peoples.

But the two century takeover, and then reconciliation, by the Europeans paled in comparison to what the Asians had done in the last two to three years.

The new Chinese and Indian inhabitants, like their armies that had swept all before them, had no tolerance or compassion for anyone other than themselves. They had come to fill the land with their own kind, at the expense of all others, European, aborigine, Islander, or any other.

And that is exactly what they had implemented.

It was a simple but ruthless plan: either the former inhabitants served them, or they perished.

The Caucasian and well-to-do Islander Australians were at least given the opportunity to serve the newcomers and have some measure of life and livelihood. The aborigines, from the Muris here in what used to be called northern Queensland, to the Kooni in South Wales, the Nungah, Warlpiri and others, were hardly even regarded as human by the invaders.

Like most of the others, the Muri had chosen to flee to the mountains and the wilderness areas. A few had tried, along with other Australian citizens, to resist.

That resistance continued in many areas of the island continent and invariably led to harsh retribution by CAS military units and citizens alike...many times taking out their vengeance on unsuspecting aborigine communities that had tried to do nothing more than move out of the way.

Nabalco was a recognized leader in the entire Muri clan. Traditionally the aborigine people did not have a fixed social or religious culture. They had banded together as necessary, with the central societal structure being the family. Elder members of the various families were accorded more respect and deference and usually carried more weight in decision-making. Most groups would generally come to some conclusion based on what the majority of the older individuals had to say.

They were all influenced by dreamers, who were believed to have special access to their ancestors and whose dreams carried significant weight, although there were no official social leadership positions, nor a religion, in the strict definition of those terms. This was simply the traditional lifestyle of the earlier hunter-gatherer aborigine culture.

But two hundred years of dominant European culture had changed that somewhat.

Now the clans had those who represented their interests. Even though great effort had been taken by the Australian government to integrate the aborigine peoples into society as full citizens, there were still legal and homeland issues that had to be resolved and many aborigines desired to live together—some even practiced the old ways in the more remote regions of the continent.

In seeking those to represent them, the clans had turned most often to educated and loyal people of their own. Nabalco was not only an adult of great stature and bearing, one who had fathered and raised five children with his wife, Ulura...he was also educated in the best Australian schools, having graduated in engineering at Brisbane, and having done his masters work in legal affairs.

Despite his impressive education, he had never forgotten his people or the old ways...and he had passed them on to his children. All of them spoke fluently the dialect of Pama-nyungan that was peculiar to the Muri people.

For this reason most of the Muri people trusted Nabalco. They had done so before the great conflagration and onslaught of the Asians...and they trusted him now.

He had led them to this remote area of the Gregory Mountains and they had established themselves, several hundred of them with their families and a few refugees, living the old life and avoiding the new enemy. Nabalco had used the common knowledge of many and had taught the rest, so that they gave off very little heat or other infrared signature of their existence.

When scouts observed Asian military or civilian activity anywhere close to them, the people simply vanished, taking preselected routes to the north into several separate safe locations deeper into the Cape York Peninsula.

The clan found itself in just such a situation this evening. Nabalco was preparing everyone to leave and make their way to the places of safety that they had used several times before.

“The Chinese and Indians are much more active along the major Charter Tower-Cloncurry road, and even the minor wilderness tracks of late.

“You don’t have to travel but a few miles to the south to hear their motors and see their aircraft. Military traveling to the east, civilian traffic to the west.

“We’ve all heard the rumors and seen the couriers and scouts that have passed through. We’ve welcomed several of our Kuni and Nungah brothers who were spreading the word. The Amis have landed and taken Sydney, and then moved up to Brisbane and down to Melbourne. They now control almost all of Victoria and New South Wales, and they are pushing the Chinese, Indians and Indonesians into Queensland.

“There’s a strong rumor that they have made an amphibious and airborne landing near Rockhampton and are now pushing into the Great Artesian towards Emerald. A large number of U.S. Marines and returning Australian forces are in this group, and the Asians are fighting them fiercely.

“All of that bears on the decision we have to make this evening.

“Chinese and Indian activity in our own area is at the highest levels since the takeover.

“All of you know this.

“I have seen it, my brothers and sisters. It is only a matter of time before our large clan here is discovered and treated very badly. I believe we must all move to the places of safety that we have used in the past...and that we should stay there until the conflict resolves itself one way or another, communicating regularly with runners.

“It will mean we are much smaller in numbers and more vulnerable individually...both to the elements of our mother earth and to the enemy, should they discover us.

“But I believe it is unlikely that they will discover us, because the Cape is an area off their beaten path and one they have shown no interest in colonizing to this point. As they defend what they have already taken, it is not likely that they will infiltrate the more remote areas.

“These are my own thoughts and feelings. I know Ulura and my sons agree with me, but it is now left open for discussion and a decision of the entire clan.”

The discussion continued long into the night, into the early morning hours. Many respected men and women spoke. All of them wanted to avoid direct confrontation with any military force, either from the recognized enemy of the CAS, or from the more friendly allied nations. They had seen too often the result of brushing up against military forces conducting combat operations.

Many of the family leaders were reluctant to separate into smaller groups, and wanted to have the entire group only split up to travel to a new more remote location where they could all again assemble. They felt more secure with their numbers, particularly given the sixty to seventy refugees, most of them white Australian citizens, who were just now getting acclimated to living in the wilderness. They feared having to live in smaller, more austere groups while supporting those refugees, particularly given the more dangerous circumstances they now faced, it having been over eight months since the last time they had briefly had to retreat to their enclaves.

Rightfully, it was pointed out to these individuals that there were no areas that had been scouted on the Cape to this point that were large enough to support them all as a single group. They were also reminded by others that the refugees had somehow all survived.

To challenge all of this speculation, one of the older and very much respected Muri woman rose in the circle to speak. “But, my brothers and sisters, there were also fewer refugees when we made that move eight months ago. Many of the newer refugees are wholly unprepared for the more difficult living that a small camp will impose upon them.

“And besides, the circumstances were much different.

“Eight months ago we left because the Asians were widening the major highway to the south, and because of construction activity. We knew that change would be only for a short duration.

“This time we have no idea what the duration will be—and it is likely that the fighting will spread to this region. Any group too close to that fighting, or caught up in it, is unlikely to be able to support itself or avoid being overwhelmed.

“I believe we must find a larger place, much further north on the Cape and all go there.”

The very first hint of lightening lit up the sky when Nabalco prepared to stand and address what had just been said. As he did so, his wife of thirty years gently put her hand on his knee and put just enough pressure there to let him know that he should remain seated.

Thus it was Ulura who stood up to address what the older Muri woman had said.

“Noongi, there would be much wisdom in what you have proposed if we had the time to carry it out...if we had the time to send scouts to find this new place that you speak of, and *then* had the time to devise travel routes to it so that we could all safely come there without notice.

“But there is no longer the time for all of that. We do not know the place and we do not know the route to take to get there.

“We would have to travel in much larger groups which would attract the attention of our enemies and the devices they carry on their airplanes.

“No, I believe we must do as Nabalco has indicated. Let us split up, as we have done before, into our twenty different small groups and make our way to the places we already know are there. Traveling there using the well-planned and well-concealed routes we have already determined.

“If there is any concern for extra refugees, then I say we here in Nabalco’s group will take those you are concerned about with our group, in addition to the ones we already have.

“But it is time to decide. We must rest this day and then be gone with the next night.”

When Ulura set down, there was a reflective quiet in the assembled group of families...and then, one by one, the various heads of the family groups made it known what they would do.

Fourteen groups would do as Nabalco indicated and make their way to their individual areas of safety. Six groups, over 120 individuals, would travel together to the south and search for a larger place that could accommodate them all.

Several of the less capable or disabled refugees were passed from that larger group to several of the smaller ones. Nabalco’s group received four of these refugees in addition to the three they already had taken in. They took them in gladly and prepared them to support themselves, meeting afterwards to arrange the assignments necessary to see them all through to their place of refuge.

The journey would not be easy. Three of the refugees were young children without parents. Two had been adopted by one family and the third, one of the new ones, would now be adopted by another. Another of the new refugees was from the Brisbane area, and had been afflicted with some form of a mental condition that rendered him as senseless as a young child...having lost some of the most basic adult interaction skills. He was also physically disabled and could do little more than hobble slowly, using a cane to support himself.

Nabalco was worried about that one...he would be a severe strain on the group and its ability to reach each evening’s travel goal while moving to the new location.

The other two new refugees were both very soft and well-to-do women, who were extremely unacquainted with wilderness living. They seemed willing enough, but both Ulura and Nabalco knew that the rigors of the upcoming trip and then the condition of their remote camp would try these women’s good intentions to the breaking point.

It was definitely not a good time to be learning how to *camp*.

By seven o’clock that morning, all the decisions had been made and each group made its way to their various concealed huts to sleep through the day. They would all be leaving an hour after sundown to make their way to the north.

Most of them slept fitfully. Numerous times planes could be heard in the distance to the south, some prop-driven making their way to the west, but as the day went on, more and more of them were military jet aircraft flying in formation to the east—Chinese and Indian aircraft of all types.

...and while he slept, Nabalco the dreamer, saw in his dreams a foreboding storm wave breaking over the land...over this very spot...devouring and destroying all in its path as it traveled slowly from southeast to northwest.

**November 12, 11:38 local time**  
**Incirlik Air Force Base**  
**Near Adana, Turkey**

1<sup>st</sup> Sergeant Dave Johnson and Security Force Superintendent (SFS) Nick Jackson, of the 159<sup>th</sup> Security Forces Squadron of the Louisiana Air National Guard, waited impatiently, along with their commanding officer, Colonel Lee Bowman, for the upcoming meeting. All three of them had arrived here at the new operations center just moments ago in an up-armored M998 HMMV escorted by two of the new M1117A Armored Security Vehicles (ASV), which had been designated ASV+ to distinguish them from the earlier ASV models.

Watching now as the M117As and the M998 took up their positions in a mutually defensive, blocking formation on the new tarmac, the 1<sup>st</sup> Sergeant couldn't help but think to himself, "The ASV+ sure is a great upgrade to the original M1117. Putting a larger turret on them so they could hold that 25mm chain gun, *and* a TOW missile launcher in addition to the M2 50 and the M19 grenade launcher has really added the kind of firepower we need.

"It's good seeing them there...just makes a guy feel...well, just more secure. Now, if we could just get that AAW variant.

Turning to Nick Jackson, and knowing that Colonel Bowman was hearing every word of what he was saying, the 1<sup>st</sup> Sergeant commented out loud, "Chief, when are we going to get the air-defense variety of the M1117As we've been promised? It sure would be nice to have a couple of them hanging out here with us as well, don't you think?"

Before the chief could respond, Colonel Bowman, taking the hint, responded for him.

"Chief, explain to the 1<sup>st</sup>-shirt here that we're being adequately watched over. We have four Navy Hornets above us, four Patriot batteries up and functioning, and four HUMRAAMs all making sure the boogey man stays away."

Then, turning to the 1<sup>st</sup> Sergeant and looking directly at him while continuing to address the Chief, Bowman continued, "But let him know, Chief Jackson, that the air defense M1117s are being unloaded in Adana tomorrow and we'll have them by the end of the week."

As he finished, the Colonel winked, and then strolled over to the group of individuals where the colonels who commanded the Rangers and the Turkish forces stood.

Chief Jackson wasn't long in responding for himself as the Colonel walked away.

"Well, Dave, you heard the man...sounds like we're in good shape, and those units will be here before you know it."

Johnson was glad to hear it...and appreciated the manner in which the Colonel and his Chief had delivered the message. All of them, Johnson, Jackson and Bowman, along with almost their entire squadron, had trained together as a National Guard unit and had known each other for many years. Their last duty assignment had been in Cuba where the 159<sup>th</sup> had set up security arrangements at one of the large Cuban air bases right after it had been taken.

Nevertheless, with their sterling combat record and with the current offensive in the Mid East, the 159<sup>th</sup> had been pulled out of Cuba so other, less experienced squadrons could use the more peaceful assignment there as a place to learn...while the 159<sup>th</sup> was assigned to the task force with the critical combat mission of invading the underbelly of Turkey and taking and holding Incirlik Air Base.

Now they had been on the ground here in Turkey for less than a week, firming up the security situation around the newly reconquered base as the front lines pushed deeper to the north and east into Turkey. All three men were anxious to conduct this meeting and get some very useful pointers from the special guest who was about to pay them a visit.

As they waited, Johnson believed the current security situation at Incirlik was well under control, but he would never underestimate the enemy, or allow his people to overplay their own hand. They still had a regiment of U.S. Army Rangers and an entire battalion of Turkish forces augmenting the perimeter security at the base, guarding against a possible GIR counterattack and break through allied front lines that were now over fifty miles to the north and to the east. Such a counterattack was still a definite possibility, and allied forces at Incirlik and Adana had to continue to guard against it.

As its first order of business, the 159<sup>th</sup> Security Forces Squadron had been assigned to handle all of the inner ring security at Incirlik. And that was what these three men were focused upon. Ultimately they would be responsible for the security of the entire base, once the overall tactical situation calmed down further and allowed their forces to accomplish that mission by themselves.

For the time being, they were still experiencing enough GIR air attacks and persistent small arms attacks from groups of GIR soldiers and local Islamic partisans to warrant the additional allied forces. Those GIR ground forces had either gone to ground or been bypassed in the general allied offensive that had landed near Adana and then captured Incirlik three weeks ago. With time, those enemy attacks were decreasing in both number and intensity as the enemy groups were identified, prosecuted and either captured or destroyed.

The base itself, and its rapidly ongoing repair, was serving as a model of Joint Operations effectiveness in the ongoing allied offensive. Marine and Air Force engineers, and civil contractors were getting the runways, hangars and control facilities rapidly into working order. The Navy was bringing in more than sufficient fuel and other supplies by ship and was providing air defense over the base from both TBM Aegis ships and carrier aircraft until air operations were possible from the base itself. American, British and other allied intelligence operations were providing a very clear picture of the current overall tactical and strategic picture. And, as he had already covered in his mind, Johnson knew that Army and his own Air Force security personnel, augmented by returning Turkish forces, had local security concerns well in hand.

But, despite their confidence in the current intelligence and security situation, there was nothing like firsthand experience to augment their perceptions and preparedness. The man they were about to meet represented the epitome of firsthand experience for this entire area over the last few years, not only for Incirlik, but all the way across Turkey and into Armenia and Georgia, when dealing with GIR military forces. He had been doing so, with the barest resources for four years, behind enemy lines.

Amongst American security forces, particularly U.S. Air Force security squadrons, the name of Captain Luke Hanson was something of a legend in this conflict. And David Johnson, Nick Jackson and their commanding officer, Colonel Lee Bowman, all would be meeting that legend today.

In fact, that meeting would occur in just a few moments as all three men saw that the Black Hawk helicopter carrying Hanson had just landed about a hundred yards away.

**November 12, 11:41 local time**

**Incirlik Air Force Base**

**Near Adana, Turkey**

Luke Hanson soaked up the memories as the helicopter flared to a gently descending hover before touching down, allowing him to exit the aircraft with the intelligence and security personnel who had escorted him here.

It was hard to believe he was back at Incirlik, standing on this ground where so many of his friends had died, and where he and a few others had escaped alive...almost four years earlier.

So much had happened in the intervening years as he fought the GIR behind enemy lines. All of those guerilla and partisan experiences had finally culminated almost a year ago with the successful covert operation directed at GIR General Talabari in Tbilisi, Georgia, when the U.S. CIA operative, Riley Adams, had successfully eliminated the famous GIR general.

That success had been followed by the amazing allied victories later that fall in Alaska, Israel and near Moscow, and then the great breakthrough in Syria into Saudi Arabia and the former Iraq late this summer. Those later breakthroughs had eased pressure on his own partisan forces in Georgia as the enemy armies in those areas, seeing that they were about to be cut off entirely on the Turkish peninsula, streamed to the east to try to thwart the allied advances.

The vast reduction in GRI forces in his area had allowed Hanson to successfully carry out the mission he had been given last month and to make his way south, to meet up with the American, British and Turkish at the beachhead here. That meeting was occurring today, here near Adana, where the allies, using American C-90A transports, huge SSTN amphibious assault submarines, a massive allied naval task force and a plentiful supply of Hail Storm missiles had forced their way ashore. The U.S. and its allies were now pouring more men and materiel into a massive pincer on the GIR forces, which were trying to defend their holdings in Turkey and keep American forces out of central Iran.

Reflecting on all that he had experienced in the fighting of the past years leading to this moment, those few months back at the start were still indelibly etched in his memory. Those weeks saw him transform from a regular army officer into a guerilla fighter who built a force of partisans to combat the conquering GIR forces in this part of the world.

Through it all, he had not forgotten his home back in Nebraska, and now, at long last, he was going to be returning there.

But he had one last assignment to fulfill before doing so, and he was looking forward to it. He was here to brief the new security forces on the defense of his old base here at Incirlik, helping them understand how the GIR had been able to defeat and then over-run them with their massive forces.

And from that understanding he was hoping to convey to them how they could prevent it from happening in the future.

Approaching the group, he saw a full-bird U.S. Air Force Colonel, flanked by a U.S. Army Ranger Colonel and a Turkish Colonel, step forward. The Air Force Colonel addressed him as they warmly shook hands.

“Captain Hanson, I’m Colonel Lee Bowman, commanding the 159<sup>th</sup> Security Forces Squadron.

“Let me be the first to welcome you back to Incirlik, you’ve been away far too long.”

After shaking hands, the Colonel made the introductions to the other two Colonels, to SFS Jackson, and to 1<sup>st</sup> Sergeant David Johnson. Then, just before moving indoors, he halted the entire group and made another announcement.

“Before we proceed with the briefing, Captain, let me just add this so that everyone can be sure to keep their schedules straight.

“You are going to be involved in a special awards ceremony here tomorrow afternoon, before your departure, which will be repeated in Washington, D.C., when you return stateside.

“That ceremony will include the presentation of a Silver Star, and an advancement in rank.

“So let me be the first to personally congratulate you, Lieutenant Colonel Hanson. Well done !”

Luke Hanson really didn’t know what to say as all of those present shook his hand again and slapped him on the back, wishing him the best. All of this was news to him and came as quite a shock.

Looking around, he caught site of the ASV+ vehicles standing vigil, and he had to stare at them.

“Colonel,” he said, as everyone turned their gaze towards the M1117As he was looking at.

“May I?”

Colonel Bowman understood very well why Hanson was captivated with the new Armored Security Vehicles. They represented a firepower capability that was a far cry from the capabilities of the V-150 security vehicles that would have been in place here at Incirlik when the base had been overrun and upon which Hanson and his own forces would have had to depend.

“1<sup>st</sup>-shirt, why don’t you explain all the finer point of the ASV+ to the Lieutenant Colonel?”

David Johnson gladly complied. “My pleasure, sir.”

As the two of them walked over to the nearest vehicle, Johnson found that for the moment, there was very little to say. The mood just wasn’t right for discussion or explanation at this point. Hanson could very well see for himself the strength of this vehicle. As they got close, the vehicle commander climbed out and greeted them both with a friendly smile and a warm handshake.

When Hanson reached the vehicle, he climbed up onto its large front tire and then onto its armored side and stood up on the deck surrounding the turret. He leaned over and thoughtfully touched the 25mm gun barrel and put his other hand up on the TOW missile launcher while observing the .50 caliber machine gun and 40mm grenade launcher barrels that also protruded from the turret.

Standing up to his full height, Hanson slowly turned and surveyed the view from where he stood.

The 1<sup>st</sup> Sergeant could see the faraway look in his eyes, and knew that Lee Hanson was recalling the fight that had taken place near here when he had been in charge of the security at Incirlik and had faced overwhelming odds.

“It’s a fine piece of equipment, Colonel. I’m sure you guys would have made the most of them in the fight back then.”

Hanson was brought back to the present by the 1<sup>st</sup> Sergeant’s comments. Looking down, he smiled as he imagined what he could have done with three or four of these babies.

“1<sup>st</sup> Sergeant...you’re right. It is a fine piece of equipment, and we would have made the best of them. They would not have turned the tide in that battle...there were far too many GIR tanks and aircraft for that, but we surely would have sold this base at a much stiffer price. I just hope we’ve learned in the intervening years to never underestimate the capabilities of our enemies.”

And for that, the 1<sup>st</sup> Sergeant had a most definitive answer.

As Hanson climbed down from the vehicle and they began walking back to the operations building to start the briefing, 1<sup>st</sup> Sergeant David Johnson put his arm on Hanson’s shoulder and replied, “Lieutenant Colonel Hanson, we *have* learned that lesson, over and over again...and I believe you are going to be pleasantly surprised at just how well we have learned it.”

## **November 21, 17:16 local time**

### **Anadyr Mountain Range**

#### **North of the Kamchatka Peninsula**

Sergeant Alan Campbell took stock of his current situation and position. He and his lead platoon were perched at an altitude of over 6,000 feet on a divide that looked down a barren slope into the next drainage. It was snowing and visibility was poor.

Progress had been slow and costly. The Chinese were not about to relinquish any of their positions without a heavy fight, though they were surrounded and cut off. In the three months since Alan had landed further south on the Kamchatka Peninsula and started north, they had been toiling against the elements and fighting the Chinese hard for every inch of ground, facing increasingly cold and blustery weather, facing mass attacks and charges by the Chinese.

But they had made progress, and in all areas.

American forces had pushed up from Magadan despite the massive Chinese air and sea effort to close that logistics point and cut it off. Some of the fiercest prolonged fighting of the war, on the sea, on the ground and in the air had occurred there...and it was still going on. Despite that prolonged Chinese effort, the allied 12<sup>th</sup> Army that had been assembled in Magadan and had been sent north and east toward the Bering Strait, was now less that eighty miles to Alan’s south and west.

The force of which Alan was a part, which had landed on the north central Kamchatka Peninsula and moved north, had gained the high ground in the Anadyr Mountains and pushed the Chinese who were trying to retreat down the Kamchatka, back over those mountains here. Other Chinese forces clung feverishly to the most direct route through those mountains, the superhighway and rail line they

had built to make their invasion of Alaska possible...but the joint allied command had circumvented that roadway and had marched overland through the steep mountains to penetrate the range here, where Alan was now positioned.

From this position, they would be able to encircle the Chinese who were defending the roadway and not only pincer them...but also push on towards the major forces that had been trapped by the American crossing of the Bering Strait.

In that area too, the allies had made progress, albeit against more begrudging and fierce opposition by the Chinese. The crossing had been extremely costly, as the Chinese knew it was coming and were prepared for it. But it had been made, and the Chinese had been driven completely out of North America, with the final Chinese organized forces surrendering north of Nome on October 27<sup>th</sup>, a day that would be long remembered and celebrated in American history.

"We sure celebrated the news of it here," thought Alan as he spotted through his infrared scope. "And we weren't even involved in the action.

"I bet just about every American celebrated that date when they heard of it. I'd love to know how Leon celebrated it over in the land down under."

Thinking of the land down under made Alan wish he were there...it had to be something approaching warm down there as opposed to this cold...and it wasn't even officially winter yet!

Just then Alan spotted movement, a good nine hundred or more yards out, down the slope, moving in his direction.

He checked his scope and made sure it was properly calibrated.

There! One, two, three...many figures now coming out of the fog and clouds that hung close to the mountains here.

"Heads up, men...we've got company coming up the slope," Alan informed his squad, causing them all to sit up and take more careful note from their firing positions.

"Keep your heads down and prepare your positions!"

Alan knew that the rest of the platoon was positioned just below him and he was ready to send a runner over to the LT to apprise him of the situation. The rest of the company was headed this way and if a fight was going to be made, Alan was grateful that he held the high ground.

Just as he thought about dispatching the runner, he noticed the leading figure in the approaching group of soldiers stop—over eight hundred yards out—and aim some sort of scoped device up towards the ridge line where Alan and his men were positioned.

"Get ready, men...prepare to fire..."

"No!...hold that...do not fire...hold your fire!"

Alan had seen the flash of light from the device the leading soldier held and he recognized it as the identification sign they were supposed to flash to friendly forces.

"Corporal Lindsey, get over to the LT right now and let him know that it looks like we have some friendly forces headed up out of the next drainage...make sure he understands that. They are to our forward and moving this way and they have flashed a proper ID code.

"Ask him for instructions."

Alan was not taking any chances. He flashed the recognition signal back, and then yelled for the approaching soldiers to hold their position until he got some indication of what to do.

The soldiers below him did as he said and a tense pause ensued.

The lieutenant contacted his captain who passed the word back to make contact by sending a few men forward, making sure they were covered.

The lieutenant brought the entire platoon up to the ridge and set up effective covering fire positions, with good overlapping fields of fire. Only then did he send Alan and two privates down to make contact with the advancing group.

As Alan got closer, he hoped that these people really were friendly forces. Hidden by a depression in the slope, and by the clouds, he now noticed as he approached within one hundred yards of the men how many of them there were. Stretching around the corner of the hill and then all the way down into the valley below was a line of several hundred soldiers.

As he got closer, a Captain came forward past his point men, smiling, and reached out to shake his hand, while an individual several soldiers back took a picture.

"Sergeant, I'm Captain Beasley of the Alaska Army National Guard.

"Which way to China?"

Alan Campbell's face broke into a wide grin at the question as he clasped the Captain's hand and shook it vigorously...ending in a warm embrace and a slap on the back as the camera clicked the picture. That picture of American forces linking up in the Anadyr Mountains to the west of the Bering Strait would become as famous as the picture of the American and Russian soldiers shaking hands as they met in Germany in World War II.

For Alan and all of the other Americans, it meant the beginning of the end of their successful campaign in the cold eastern reaches of the Asian continent...something they all looked forward to with anticipation. It would be an end that would spell the ultimate and complete encirclement of almost four million remaining Chinese soldiers in this theater of operations.

Many of the Chinese would fight to the end, and the final surrender would not occur until their numbers had been vastly reduced by Hail Storm missiles, American infantry and armor attacks, and by the elements. That surrender would occur near their last holdout, along the highway they had built to funnel their armies toward Alaska the prior year. It would occur once the sub-zero winter conditions near the Arctic Circle, coupled with the continuing, relentless American attacks and the Chinese lack of fuel and supplies would dictate the absolute futility of their position and the necessity of their unconditional surrender.

**December 4, 21:05 local time**

**Near the Little Zab River**

**North of Kirkuk in the former Iraq**

General Abduhl Selim had gotten the great Imam to approve all of his plans. He was a little surprised by the approval...but was glad that the Imam was giving him full military leeway in this area that used to be a part of central and northern Iraq.

He had called for the abandonment of Baghdad because it was indefensible against the Americans and their allies. His large forces could hold onto the terrain around Kirkuk and in the mountains to the north, south and east of it...or so he believed.

Ever since his own grand and successful counterattack against the Americans in Syria, his reputation and the esteem and trust that the soldiers held for him had continued to grow. Ultimately that counterattack had failed, but not because of the young general. No, it had failed because older, less capable generals had not held the flanks as they should have.

His southern flank had failed and then folded, and it had taken all of his skill and intuition as a soldier and a leader to achieve a strong fighting withdrawal. But he had accomplished the dignified retreat and saved most of his command after inflicting severe punishment on his enemies.

"I could feel a breakthrough in my grasp," the young general reflected.

"Just thirty kilometers and we would have taken the Golan Heights with all of Israel at our feet."

But it had not turned out that way, and for whatever reason Allah had willed it otherwise.

Since that time they had been forced into one fighting withdrawal after another all across Syria and into Iran. At least in his sectors they had been fighting withdrawals. In other areas further to the south, the withdrawal had turned into a rout...and then a major allied breakthrough as the Americans and the Israelis broke across the former Saudi Arabia, Kuwait, and into what had been southern Iraq, threatening and then entering the southwest corner of what had been called Iran before the great Hasan Sayeed had united them all into the Greater Islamic Republic.

There the eastward advance of the enemy had been halted as fierce, fanatical fighting broke out, where the Americans and Israelis were attacked by the GIR military, the militias and the local population. Reports indicated that the carnage was horrendous, but the advance eastward into the GIR had been halted and the enemy had turned north.

That northward turn is what had ultimately concerned Abduhl.

He was covering central and northern areas of the former Iraq, stretching up into Turkey where an avenue had to be kept open for the GIR armies there in Turkey and northward through Armenia and Georgia into the southern parts of the Russian confederation to return and consolidate their defenses here and further east in the mountains.

But it had not worked out that way either.

The Americans and returning Turkish soldiers had landed with amazing swiftness in southern Turkey, bypassing many of Abduhl's defenses along the Syrian-Iraqi border and surprising the GIR commanders in Turkey. It was Abduhl's first experience with the new American T-90 transport and SSTN submarine technology, and it was something he would not forget or fail to factor in to future contingencies. But now those American forces had pushed deep into Turkey and were cutting off many of the returning GIR forces and threatening the western elements of his own.

Abduhl knew he was being forced to withdraw his forces and whatever GIR forces could escape out of Turkey.

"Either we withdraw them, or become enveloped," he thought as he analyzed the situation.

And having his own carefully positioned forces become undermined was not something the young general was going to allow to happen. That is why he had asked for and received permission from the Imam to evacuate Baghdad and pull back into the mountains into a more defensible position.

Sayeed had carefully considered Selim's plans, made a number of comments that were very relevant to tactical situation, and then approved them. He had also given Selim further assurance.

"Hold out there along the borders, in the mountains around Lake Azerbaijan.

"Stop the Americans and their allies there, and I will raise an army of God to come to your assistance and once more drive them back."

Abduhl Selim believed that the Imam, Hasan Sayeed could do just that. Particularly after hearing how the people had fought alongside the Army to halt the incursion near Ahvas. If the Mahdi had the time, he could bring to bear millions of faithful committed to Allah and to Jihad and drive the infidels back out of their lands.

...and perhaps he could do a similar deed here in the mountains...perhaps he could mobilize the people to work with his forces here...to help thwart the Americans and their allies...to fool them into spending their precious Hail Storm missiles.

"Ahkim, contact the divisional commanders.

"I either want them here by 2300 hours, or I want them conferenced in. No excuses. Let them know that it is according to my express orders. We have much to discuss."

**December 9, 23:42 local time**

### **Indian Embassy**

#### **Krasnoyarsk, Siberia**

Ambassador Buhendra Gavanker locked his desk drawer, turned off and secured his computer, and prepared to go home after another long day conducting the diplomatic duties of his office as the Ambassador of India to Siberia. It had been a long, sixteen-hour day, just like most of his days dealing with the many diplomatic, economic and military issues that were constantly arising.

Sometimes he knew that his wife and children wondered why he had moved them up here to Siberia to be near him when he rarely saw them more than a couple of hours most days. But just having them here, being able to look into the kids' rooms before he went to sleep himself, being able to lay next to his wife...all of that made the pressures and stress bearable...much more so than having them thousands of miles away.

It had taken him a good nine months to call for his family's relocation to Krasnoyarsk, the new capital of Siberia. By that time the fighting had moved much further off to the west, as the Russians continued to fight to preserve Siberia. It was a fight that was ultimately carried into the heart of Russia itself, and right to the gates of Moscow.

By that time, Buhendra had considered the areas all around the capital safe. During that period he had also felt that it was surely only a matter of time before the western nations conceded and a diplomatic solution to the world war could be achieved because, at the time, the CAS and their allies, the GIR, were victorious on all fronts.

But much had transpired since that time, in the over twenty months since he had been appointed to this role on the eve of Siberian independence, and since he had brought his family here nine months later...over a year ago.

"Siberia itself has changed," he thought as he walked out of his office and past the guard station. "The politicians here are just like everywhere else...perhaps they have learned too well. It wasn't six months before they started trading land and resources for recognition...and personal favors."

To begin with, Siberia had officially stretched from the Ob and Irtysh rivers in the west, to the Pacific Ocean. From the Arctic Ocean in the north, to the border of China and Mongolia in the south. A massive land area, numbering almost forty million inhabitants and a wealth in natural resources that had barely been tapped, despite the several years of the Siberian Economic Development Treaty that had preceded Siberian independence.

Under that treaty, enacted between the Russian Federation, the People's Republic of China, and India, Siberia had been opened up to economic resource exploration and development by the vast numbers of workers that India and China could mobilize, as Russia benefited from the hard currency those nations could then pay for the resources they discovered and developed.

The pact had held during the outbreak of hostilities between America and the GIR, and then as the entire CAS, including India, had entered the fight against the United States. Russia played both ends against the middle, stayed out of the fight and prospered immensely.

For two and a half years.

Then Siberia had declared its independence and was immediately recognized by China and India. Russia, seeing how they had been used and taken advantage of, had immediately declared war and joined the fight on the side of the western Allies, on the side of the United States.

But Russia, like America and all of the others arrayed against China, India and the GIR, had continued to be pushed back. Right out of Asia, right out of the western Pacific Ocean, right out of the Middle East, and right out of all of Australia.

It was during this time that Siberia had begun to be partitioned. First, all of the far eastern provinces and areas, from the Lena River system, across the Cherskiy Mountains to the Bering Strait had been sold to China. In return, the Chinese had paid over one hundred billion yuan in hard currency and agreed to provide for the perpetual defense of Siberia.

Within three months of the great *Siberian Purchase* as the Chinese were calling it, a buffer zone was created by mutual agreement that extended from the Ob and Irtysh rivers to the Yenisey River. This region was to remain an official part of Siberia, but was to be autonomous and administered jointly by India and China in two distinct "regions."

What this meant was that many hundreds of thousands of Indian and Chinese immigrants were moved into their respective regions. Ultimately, millions would be moved in and when those populations reached the appropriate percentages, it was clear that the autonomous regions would "vote" to become a part of their mother nations.

Over the ensuing months it became clear what these two actions represented, beyond the obvious fact of adding territory to the nations of China and India. As CAS and GIR armies poured across Europe right to the gates of Moscow and crossed the Bering Strait into North America, right up to the doorstep of Anchorage, Alaska, it became clear that China and India also had intended these two vast regions to be staging areas for their further military conquests.

And they had.

By that point, Buhpendra had marveled at the progress and felt that the war was all but over...that surely Russia, the United States and their allies must sue for peace.

But he had been wrong.

In the last year, the Americans and Russians had used new high technology innovations and an indomitable will to somehow rally their forces, stand their ground and then force the CAS and GIR armies back. Now it was the GIR and CAS forces themselves who were suffering great setbacks.

Now there were occasional air raid warnings in the Siberian capital. No bombs or missiles had fallen yet, but the very fact that the warnings were being broadcast and that the citizens, including Buhpendra's family, were drilling to take shelter, sent shivers down the Ambassador's spine. It would only be a matter of time before the "exercises" became real.

Based on Buhpendra's own intelligence briefings, which he believed that Foreign Minister Patel—a political animal if there ever was one—was doctoring to appear much more positive than they actually were, Buhpendra knew that the military situation was worsening.

Such thoughts about the kinds of political intrigue that individuals like Patel seemed to spawn never failed to remind him of his old friend, Russian General Andrei Nosik. That Russian General's forces had provided security to the work project Buhpendra had managed for India during the days of the Siberian Economic Treaty, before the outbreak of hostilities.

"Now there was a man who did not have a political bone in his body," Gavanker thought, reminiscing about his old friend.

During their many months working together, Andrei had taught Buhpendra how to read between the lines of the contemptible politicians' statements, and how to form friendships and alliances with those who could give a more accurate picture of what was going on.

Buhpendra had put that knowledge to good use since Andrei and his forces were driven out of Siberia. He had read between the lines...and he had friends who could tap into less formal lines of communication that provided a clearer picture of the overall diplomatic and military situation. As a result, the Ambassador knew that the Americans were pressing into Asia in the east, and the Russians were threatening the Ural mountain regions in the west.

"Perhaps it is time to consider a quiet move back to Madras for Eshy and the boys," he thought.

...and he immediately rejected the idea.

"With Patel looking over my shoulder, and having to ask him for the permission and the funds to accomplish such a move, there would be no hope in keeping it quiet," he thought. "...and then it would breed consequences of its own."

"Perhaps I can find a way to speak discreetly with the President," he opined to himself, knowing that KP Narayannen would arrange for his family's safe and unfettered travel back to India if he knew that Buhpendra was concerned for his family's safety and if they were in imminent danger.

Failing that, Buhpendra Gavanker would not just sit back and wait for the worst. He would prepare a way to ensure his family's safety, while doing what he considered to be his duty to his nation...however he had to go about it.

### **December 9, that same time**

#### **Field Marshall's Command Headquarters**

#### **Kazan, Russia**

The briefing was going just as he liked them. Punctual, to the point and with absolutely no hint of what the Americans would call brown-nosing.

Field Marshall Andrei Kosik was not the type of General who led from the rear, or who would ever be comfortable sitting in the plush offices of the Kremlin—and since the destruction of the Kremlin in last year's fighting it wouldn't be possible anyway—rubbing shoulders with political officers and issuing orders that were as much based on how one could advance his career, or impress the President, as they were based on what was best for the Rodina. He had made his feelings in that regard very clear to President Putin when he had been selected to lead all Russian ground forces in the war against their enemies in the CAS and the GIR.

So here he was, less than fifty miles behind the front lines, working directly with the generals leading the Russian army groups...many of whom would rather be much further behind the lines...and with the generals leading the divisions within those army groups. Planning with the roar of mechanized units in the background and the screech of jet aircraft passing overhead. In an environment where the accountability and responsibility of the decisions made could not only be appreciated, they could be felt and heard...right down to the tips of your boots.

Catching the eye of the American Colonel, who was here as an advisor and as a liaison between the Russian high command and the small but very powerful American light division that was traveling with the central army group, the Russian 23<sup>rd</sup> Army, the General spoke.

“Colonel Evans, please brief the command staff on the current disposition of your American Hail Storm missiles and the new Patriot batteries your forces have with them.

“Also, if you please, what is the status and planning for getting an American space station platform up over eastern Russia?”

“I am interested in the capabilities of the lasers we know are operating from those platforms against Chinese, Indian, or GIR ballistic missiles. The Patriots are great...but they are not a seamless defense. I am hoping that the laser capabilities of those platforms are as effective in the atmosphere as our observers have indicated they are in space.”

Colonel Barry Evans had been handpicked for this assignment by the Chief of the U.S. Army, and he had been interviewed by the President of the United States at the time, Norm Weisskopf, immediately before departing for Russia. He had completed his doctorate in advanced Russian studies, held a Masters degree in orbital mechanics and had graduated at the top of his class in mechanical engineering...at West Point.

Bright, engaging, and a natural leader, he was also a proven combat officer who was an expert marksman, and who proudly wore the ribbons and emblems of a qualified and combat-experienced Ranger paratrooper. He had joined General Nosik’s staff immediately after the great victory near Moscow last year. He had seen Nosik’s brilliant leadership as the Russian and European armies, gratefully assisted by America’s single high-technology, joint services division, pushed the Chinese and Indian masses east towards the Urals, and the GIR armies south towards the Black Sea.

Evans knew that the Field Marshall understood and greatly appreciated the advantage that the American Hail Storm missiles afforded his joint command, and he understood that Nosik also was very capable of making the best use of them. He had seen it over and over again, knowing that the Russian pushed for a higher allotment of the missiles to his effort, but knowing that he would make masterful use of whatever resource he did have.

“Field Marshall, we have just received two hundred of the Block 3 Hail Storm missiles.

“They have a 60 kilometer longer range, are capable of 25% more loiter time over the target area, have enhanced active stealth capabilities, and are now capable of varying their own fire rate and munitions muzzle velocity based on over five hundred pre-programmed target profiles as opposed to the eighty target profiles of Block 2 missiles.

“Three new Patriot Block VIA missile batteries and kits for five upgrades to the Block VIA standard have just arrived here in Kazan in the last thirty-six hours, flown in by Globe Master transports. This will allow us to complete upgrades to all existing batteries and will give us a total of twenty-four batteries for the Russian theater of operations—enough to cover your entire eastern and southern front—but only enough for single-layer coverage in that wide an area.

“If we want depth, we have to look at major and secondary threat axis, and defend accordingly.

“For more area coverage, we are now completing and manning three land-based AEGIS VLS cells around Kazan, although the sites for these missiles are fixed compared to the Patriot batteries.

“They are the latest upgrade and they provide very adequate coverage out to Theater range...of course their effectiveness is greater at closer ranges, and particularly if the area targeted by the enemy is not more than twenty degrees off the azimuth of the location of the battery.

“These three cells now mean that Kazan, Kirov, Gorkiy and Saratov are all covered, in addition to the Moscow coverage already in place. Between these point locations and the Patriot batteries, your forces are now amongst the best defended against ballistic missile attack—certainly the equal of any of our other allies—and in many cases, better defended than many of our own forces.”

The Colonel intentionally stopped at this point, knowing that he was not authorized or in a position to go into the Field Marshall’s other request...hoping that the good news he had just shared would generate conversation and planning that would help him avoid those questions.

But the Field Marshall did not ask questions only to see them go unanswered.

“This is excellent news, Colonel, and you will have to pass our appreciation on to your superiors...particularly your new President, who has impressed us all in a very short time.

“Now please cover the timing and planning for the laser-armed space station and the capabilities of its laser systems as regards atmospheric interception of ballistic missiles.”

Andrei Nosik knew that the Colonel did not want to respond...that he did not want to be placed in a situation in which his options were either to disappoint his hosts, with whom he was doing his best to help defeat the common enemy...or to fudge and see if he could get around what undoubtedly were strict orders regarding information about America’s new secret weapons.

“Field Marshall, you know that I cannot go into specific details on what little I do know of the space stations, their scheduling and their weapons capability. I do not have the “need to know” for a lot of it...and I am constrained on the rest.

“You also know that I will help you in any way I possibly can to enhance your efforts against our enemies. So I can say this:

“America’s National Command Authority, our President, has made it very clear, and very public, that its first order of business is defeating the Chinese gains in the Pacific and bringing direct pressure against the Dragon from that quarter.

“As we clear the sea lanes and increase direct operations against mainland China, they will respond. That will relieve pressure in other areas and weaken the enemy so that our allied forces can exploit those opportunities in their area of operations.

“It is likely that the next station will go up over the Pacific... though there are good arguments for positioning over southern Europe or the Mediterranean. I’m certain that your government will make the case diplomatically through the U.S. State Department... and through your own military channels.

“Since I represent one of those channels, I will relay your preference and its reasoning.”

Again the Colonel stopped, pausing in the hopes that Nosik would have had enough... and again the Field Marshall would not let him off the hook.

“And what of the laser capability?”

Smiling now because he knew that he would have to find a way to walk the tightrope... and knowing that the Field Marshall understood this and wanted him to do so, the Colonel continued.

“I cannot share with you the exact performance parameters of the weapons on the Conception station or the new Southern Star station that has been announced to now be operating over Australia.

“I do not know the parameters myself and believe that the numbers of those individuals who do know them is relatively small... and very well compartmentalized.

“However, I do have some expertise in the area myself and I can share with you my own conjecture. The laser capabilities will be based upon the power source, the beam wavelength, and the atmospheric conditions at the time of the shoot.

“Without a truly massive power supply—something probably larger than would fit on a station the size of those in orbit, it is not likely that those lasers will have sufficient strength to reach deep into the atmosphere and destroy hardened warheads... particularly if there is any cloud cover at all.

“As a result, short of some technological breakthrough in miniaturization that I am unaware of—which is always possible in circumstances like this—I doubt that the current stations are going to be capable of helping us much with ballistic missile attacks here on the ground.

“Now those lasers can be quite effective against long-range ballistic tracks that actually reach near orbital altitudes. In that case, or in self-defense where missiles are entering space to attack them, they probably have effective ranges measured in the many hundreds of miles.

“That is the best information I can share with you regarding the topic. I believe that the Block 3 Hail Storm missiles and our latest Patriot batteries coupled with the AEGIS sites are going to be much more effective for you.”

Andrei Nosik knew that the Colonel was right, but believed he could make use of the Space Stations just the same... although not in the way that either Colonel Evans or the Chinese and their allies might envision.

Sun Tsu would best appreciate what Andrei Nosik was considering, and Andrei found that very ironic... and very satisfying.

**December 16, 09:29 EDT**

**Situation Room, the White House**

**Washington, D.C.**

The Vice President was increasingly confident in the executive team that the President had assembled over the last few months.

Fred Reisinger respected the quiet, resolute and effective job John Bowers had done as the National Security Advisor to President Weisskopf. His regard for Bowers grew as he observed him. Bowers had, at first reluctantly, but very capably, filled the shoes of Alan Reeves as Weisskopf’s Vice President after Reeves had been killed in the initial Chinese attacks.

But the esteem and respect he held for Bowers were climbing to their highest levels as a result of how the young President was now conducting the nation’s affairs in the absence of Norm Weisskopf. Reisinger knew that the new President’s conduct of the war and his adroit hand at the nation’s helm increasingly inspired those in the administration as well as on both sides of the aisle in Congress.

After the tragic death of his friend and President at the hands of their enemies, Fred Reisinger had seriously considered informing the new President that he would serve out his term until January, and then retire as soon after that date as the President could find a replacement. But before he could find the time alone with the President to deliver that message, John Bowers had come to him and asked him to serve as his own Vice President.

In the midst of the ongoing crisis, with the country still in desperate need of firm and unshakable leadership—and Fred himself being a 110% loyal American patriot—there had been no way Fred Reisinger could refuse. Like almost all of the soldiers who were fighting, Fred found that he was in this thing for the duration, and he willingly acceded to the President’s request.

Now, as this special meeting of both the international and Homeland Security teams continued into its third hour, where he and several others were joining the meeting by secure video conference,

Fred was once again glad to be surrounded by people of such high caliber, all committed to a calling higher than themselves.

*"Who more than self their country loved,"* were the words that came to his mind.

The President was speaking.

"I can't emphasize to you how critical it is to maintain the gains that we have achieved of late.

"The victories have been expensive... but we knew they would be. There are those who will count the expense and indicate that we should have accepted the Chinese offer in July after all.

"But every person sitting in this room knows that the cost of such an acceptance would have been far higher than what we are paying now. It is a price in terms of trust and faith, in terms of our way of life and in terms of history that this administration was, and continues to be, unwilling to pay.

"...and in the long run it would have been much more expensive in terms of lives when these rabid enemies came at us again after they were good and rested and in a geo-political and economic position that would have been almost unassailable.

"So we must persevere and continue. And I have to say that we are making good progress. If we can keep it up...if we can maintain it...in another eighteen months or so we will be in a position from which I believe we can dictate the unconditional surrender of our enemies...and they will accept it.

"Jeremy, fill us all in on the latest regarding our second space station launch and in terms of our efforts in space."

Jeremy Stone was an old war horse. He had been a soldier all of his adult life. He viewed his current position as Secretary of Defense as a political position...as a necessary evil. It was necessary because he was irrevocably committed to his nation's foundational premise that the nation's military was always to be under civil command authority. He viewed it as an evil because of the politics that necessarily came along with that premise.

But he was a good soldier and he supported his President completely. He supported his judgment; he supported his maturity; he supported his instincts...his honor and his integrity. He knew that John Bowers was open to good counsel and that he sought it in his decision-making. And he knew he, Jeremy Stone, could impart some of that counsel to the President.

Knowing this—not in a vainglorious manner, but simply in understanding the applicability and need for his own experience—Jeremy had agreed to serve as Secretary of Defense. That acceptance had then opened the door for Admiral Ben Ryan to be promoted to the post of Chairman of the Joint Chiefs, which he had just vacated.

"Mr. President, the launch and assembly have gone according to schedule, but not without opposition. The Chinese continue to try to bring both the USSS Conception and the USSS Southern Star down, launching considerable attacks at them both. But they have failed in their attempts, and the Southern Star is on station and keeping a watchful eye over the entire Australian theater of operations.

"As long as the Chinese continue to use their kinetic weapons, launched from ground, and as long as they use long-range missiles as they have done, we feel confident that both stations will weather the storm. An added benefit is that the Chinese are expending substantial resources and effort, which they would otherwise apply somewhere else.

"They know that these stations are returning to us the tremendous advantage of having space-based surveillance where they do not. Our advantage is not yet as widespread as it was prior to the war...but we'll get there. And each new piece of information that we obtain is making a huge difference in our opportunities for success.

"It's just too bad that we are still five months out from the next launch, and then three more before the one after that. But that is the way it is. Anything we launch that does not have the level of defense that these craft have is going to be most likely shot down before it can arrive on station and perform whatever function we establish for it.

"But regret is a useless emotion..." the Secretary observed in a tone bordering on pensiveness.

The President took Secretary Stone's brief pause as an opportunity to interject.

"What about the decision as to where the next station will be? Fill everyone here in on that."

The new Secretary of Defense was happy to address this in front of the entire group. There was a political aspect to this that he wanted to encourage, and he felt that he could accomplish that here.

"Well, Mr. President, the decision has boiled down to two principle contenders for our attention: one over the central Pacific where we can obtain oblique coverage all the way to the Philippines and Japanese Islands, and the other over the Eastern Mediterranean, where we can obliquely cover Moscow to Tehran and down into North Africa.

"There are significant diplomatic and political efforts being exerted to influence the decision. State will have to be involved...but I see those as our two most advantageous choices."

The President caught the inference and felt he knew where Stone was going with it.

"Jeremy, explain to the group what the most important military consideration is for the location of this next station in terms of prosecuting the war effort?"

The old General silently thanked God that the President had responded in this way...it was exactly what he hoped for and it allowed him to cut through to the heart of the matter.

“Mr. President, China is by far the greatest threat to our forces and our nation. Putting that bird over the Pacific is what will help us hurt and push back the Chinese the most.”

There was no pause. There was no equivocation.

“Then that probably makes the decision for us. Short of something more compelling, the next station will go up over the Pacific,” the President responded, without hesitation.

“Anyone have a different take than the one the Secretary of Defense has just shared?”

“Other opinions? Fred? ... Sam?”

The President knew that Fred Reissinger and the new Secretary of State, Sam Loper, might have diplomatic reasons to consider a different alternative and he wanted to make sure that they had a chance to air them.

In fact, Fred Reissinger, as the former Secretary of State, could think of several reasons that allies, particularly Russia, Israel and perhaps the United Kingdom, would give for parking a station over the eastern Mediterranean, and they were based on more than diplomatic concerns.

Speaking from his secure location at Camp David, the Vice President addressed the meeting. “Mr. President, the liberation of Turkey on Sayeed’s doorstep would occur more surely and quickly if a station were located there...and the Russian offensive against the Chinese would benefit greatly.”

Seeing Sam Loper, the new Secretary of State, sitting near the National Security Advisor, Fred asked, “Sam, what do you think?”

Sam had been Fred Reissinger’s recommendation when the President had asked him who he thought should replace him. After meeting with Sam and reviewing his background, the President had come to the same conclusion. Loper had a distinguished career of over twenty-three years working within the State Department, spending well over half of that time in the field, particularly in eastern European nations and the nations of the Mid East.

“Mr. President, Russia, Israel, and the exiled government of Turkey...which by the way has taken up offices in Adana in the last five days...along with several of our European allies, notably Germany...have all contacted us directly over this issue. They are all expressing their strong desire to have our next space station positioned over the eastern Mediterranean.

“They all feel that the result of having such a strategic military advantage in the area, coupled with our Hail Storm missile technology and our growing naval advantage, would result in a much more rapid defeat the Greater Islamic Republic.

“In Russia’s case, they feel that a breakthrough in the Urals would accomplish the same thing we are seeking to do in the Pacific...with much the same results.

“They feel that that if we can continue to make gains in Australia using the most recent station, and then make some gains in the central Pacific with our growing allied strength there until the next station is positioned, we will quickly reach a point with either the GIR defeated, or a Russian breakthrough into Siberia, where the CAS has to fight against our vastly superior forces on both their eastern and western borders.”

The President carefully considered this alternative. He had requested that all scenarios be played out in the war colleges to determine whether a U.S. focus on China would end the war more quickly and with less loss of life...or whether a focused effort on the GIR or Siberia would make the desired outcome occur more quickly.

“Jeremy, do you and Ben have anything to say to these comments from our allies in Europe and the Mid East, and the requests and recommendations they are making?”

Ben Ryan, who had only a few days earlier arrived in Washington after making a smooth transition of CINCPAC to his successor, indicated he did have something to say.

“Mr. President, Mr. Vice President, and Mr. Secretary of State...with all due respect to our allies. As dangerous as the cumulative power of the GIR is, and as dangerous as India’s masses and technical capabilities are, it is clear that the Chinese are our most serious adversary.

“We simply must apply maximum pressure against the Chinese while we continue our efforts in the Mid East, in Africa, in Central and South America and in helping our allies in Europe. The best place to do that is in the Pacific with the triple axis approach we are conducting.

“The greater threat we pose to the Chinese, the more resources they will be forced to turn towards us and the less they will be able to export to their allies. Make no mistake—despite the capabilities and resources of the GIR and India, the most serious technological threats are represented by what they are receiving in the way of exports and license builds from the Chinese.

“We see this over and over again on the battlefield...on land, in the air, and on the sea.

“I cannot emphasize enough, from a military perspective, how critical it is to maintain the pressure on the Chinese in the Pacific...to keep them from having the time or the resources to further consolidate their holdings or develop counters to the advantages we are bringing to bear.

“Those are my thoughts.”

Jeremy Stone had listened to his subordinate and friend carefully. He was content to let the words Ben Ryan had spoken pretty much stand for him as well. A few well spoken word, sometimes created the greatest impact. So he simply added his own closing comments to Ben’s well-chosen words.

“Mr. President, I concur with Ben. He has summed up our wisest choice, and he has done so very succinctly.

“The GIR and India are capable of putting up stiff fights against us. China has already shown that, if we give her the time, if we allow her to build her resources, if we do not keep increasing pressure on her—she is still capable of defeating us.

“I agree that the best place that either we or our allies can apply the pressure is in the Pacific.”

The President did not take long to consider the alternatives. He was determined and felt that America must press the advantage against their principle antagonists, the Chinese, without pause.

“Jeremy and Ben, I agree.

“Proceed with the necessary orders and planning to put this next bird up over the central Pacific.

“Fred, work with Sam to explain this delicate, difficult decision to our allies and then make the firm commitment to them that the fourth one will go up over the eastern Med. This assignment requires your time and wise attention. Our allies need to fully understand our reasoning here.

“In fact, unless I miss my guess, by that time, they will probably be asking us to advance the location out over southern Siberia, Arabia or the Indian Ocean. I believe our allies will make those kinds of gains in any case.

The President then turned to his National Security Advisor, Bill Hendrickson.

“Bill, I know you’ve been working heavily with Secretary Stone’s people and with NASA. Please give us a briefing about how L&C II is proceeding.”

By L&C II, the President was referring to the new acronym that had been universally adopted by both the national and military leadership for the deep space mission out beyond Mars, the Lewis and Clark Expedition II.

“Mr. President, the mission is now eight days ahead of schedule in terms of the initial flight time. They are well over halfway to their objective and are now well beyond the orbit of Mars.

“We expect that they will be on station by mid-February, and will then spend two to three months gathering material, testing it and then preparing for their return trip to earth.

“At that point, if their return voyage goes as well as the outbound trip, we can expect them back at Point Conception with their cargo by early autumn of next year. Once there, after another six to eight weeks of final calibration and material forming, they should be able to begin the planned...”

As the National Security Advisor continued, a number of the people in attendance couldn’t help but notice that discussions of this nature seemed so surreal. Despite the fact that they had planned for, worked for and had visions of this day for several years, now that it was actually happening it almost seemed like a dream. The perfecting of the laser technology, the miniaturization of the powerful nuclear plants, the nuclear pulse SSTO boosting, and particularly the light sail propulsion—all developed under the tightest iron clad secrecy—had been topics for science fiction novels to this point in history. Now it had become scientific reality. It was a large concept to swallow, and it served to make them all extremely proud of the American scientific community.

John Bowers was amazed by the achievement, and he saw a visionary potential for it beyond the current circumstances. Without them realizing what his full intentions were at this point, he was already working with the budgetary and oversight committees in Congress, the scientific and business communities, and with NASA to develop the groundwork that would bring that vision to fruition.

Norm Weisskopf had wisely embraced this bold, expensive, and risky scheme as an avenue to end the war more quickly and convincingly. Now John Bowers was going to take the ball the former President had handed him and not only make sure that the critical and paramount military goal was achieved...he was also going to make sure that the United States continued to use the proven technology to press further outward into space after the war.

As far as he was concerned, it was well past time that America and the free world push on towards the full scientific and economic development of space. He felt inspired to move towards establishing a permanent presence on the moon, and then on Mars and Phobos—perhaps one day even on the distant Galilean satellites.

It was inspiration...planning and dreaming on a grand scale.

“But it is inspiration whose realization must wait on the more pressing issues that lie before us,” he thought as Bill Hendrickson continued.

“Everything in its turn. We can perhaps plan and prepare to one degree or another for some of these far reaching goals now...but we will not begin to accomplish them until we rid the world of these rogue regimes and the hell they have created here on earth.

“...and when we do, perhaps then we can gaze outward and begin to move in that direction with the other sovereign, independent, free constitutional Republics.”

Those thoughts crystallized the President’s thinking...and his commitment. In a flash of enlightenment, he understood what he had to do, and how he was going to go about doing it.

At the end of Bill Hendrickson’s briefing, the meeting was opened for discussion. It was an upbeat discussion, full of optimism and hope...full of a spirit of accomplishment and an almost boundless horizon for American ingenuity.

The President bided his time during the discussion, listening to all of the comments and recommendations. Most of the participants were already aware of the President's basic position regarding the space program, not only for the war effort, but his general longer-term desires.

But the plans were no longer general in nature. The President had made an epoch decision in the course of this meeting, one that would entail a monumental goal and challenge to the American people...indeed, to all of the free peoples of the world.

President Bowers decided to share it with the members of his security council.

He motioned to get everyone's attention.

"This has been a great discussion...stimulating and enlightening. With our freedoms, with our faith and the support of Providence, there is nothing worthwhile we can't accomplish.

"Let me just outline to you another decision I have been seriously contemplating during this morning's meeting, in addition to the one regarding the placement of the next space station.

"It is a decision that would couple our ultimate victory in this conflict with even more far-reaching effects afterwards.

"The decision that I am contemplating as the President of the United States is this.

"At the conclusion of this war, I want us to seriously consider and move towards committing our nation to a far-reaching goal in space research and exploration that will establish a basic identity, purpose and challenge for our people. After this war is won, and in conjunction with the research, development and manufacturing efforts we will have made to win it, we will then proceed to not only maintain those efforts, we will use a large portion of the mobilization of our production, manpower and technology infrastructure to accelerate them.

"I know that during the reconstruction and rebuilding efforts that we will be expending on behalf of our allies and other people of the world, this will be a monumental effort, but as a nation I feel we should make the firm commitment to have a permanent, manned installation on the moon within five years of the end of hostilities, followed by a permanent manned installation on Mars five years later. By permanent I mean something more than just habitable but dependant on re-supply from Earth. By permanent I mean installations that are self-sustaining in terms of basic air, water and food supply.

"I see the decade following this war as a decade in which mankind, led by the free and principled leadership of the United States, moves out into the solar system...to the asteroids and the Saturn and Jupiter systems to develop the wealth of information and resources that lie there waiting for us.

"I believe it is another of America's manifest destinies...that our solar system, and space in general, beckon to us just as the great American west beckoned more than two centuries ago.

"Americans have always been a people who yearn to discover what God has created...what is simply out there *waiting to be discovered*...and to *use* those discoveries for the benefit of all mankind. That is one of the noble characteristics that has separated us from other civilizations. I believe that, once we have defeated the evil that is represented by our adversaries in this war, it is incumbent upon us to use the technological advances that we have obtained in our war efforts in a more historically positive and constructive way.

"By committing ourselves to this enterprise we will take the will and the drive with which we are prosecuting this war effort and further apply it towards expanding into space. In so doing, I believe we shall see miraculous strides forward in our lifetimes...and our grandchildren will inherit the stars.

"Such an enterprise will allow us, along with our allies, to extend the true free market that we establish amongst freedom and peace loving nations here on earth, and advance it into space.

"Some might claim that I am putting the cart before the horse by envisioning such achievements even before we have been victorious in this war effort. But I want all of you to know that what I am envisioning is evidence of two things: my confidence that we and our allies will eventually prevail, and my belief that we will use our uniquely American ingenuity and goodness to turn the scientific components of a once horrific global situation into promise for the future of all mankind.

"This administration, if nothing else, will be marked by two great accomplishments.

"First and foremost, we shall focus all of our energies towards bringing this war to a successful and victorious conclusion...and we shall achieve this goal. This has been the most horrific and widespread war in mankind's history. In winning it...in completing the work begun by Norm Weisskopf, we will make the world safe again for liberty and republican governments everywhere.

"Second, following that triumph, and utilizing the capabilities associated with achieving it, we will initiate mankind's drive into space, with America's principled leadership and example pointing the way in what will be an unprecedented, historic, and tremendously positive effort that will serve to further unite the free nations of the earth.

"Our current efforts in space are rightly meant to lead us to victory over our enemies' tyrannical regimes. Regimes who would destroy all peace, who would eradicate all freedom and who would forever extinguish the ability to achieve any worthwhile prosperity based on the enduring values of individual liberty, responsibility, and freedom governed by individual moral restraint.

"...and our efforts *shall* accomplish that aim, which will end with the eradication of those regimes and their abettors from the face of the earth.

“As we proceed down that path, I wanted you to know exactly what my long term view includes. In addition to winning the war and helping to rebuild all that has been lost...it will most definitely include the commitments I have shared with you here at the end of our meeting. Please keep those commitments in mind as we move forward. We will discuss them with greater frequency, and in more and more detail as we progress towards victory, and as circumstance warrant it.

“Again, I thank each of you for your part in this meeting.”

## Chapter 37

*"A man, Sir, should keep his friendships in constant repair." - Samuel Johnson*

### Christmas Day - Brasilia, Brazil

Maldonado picked up the extension, surprised at the unannounced and unscheduled call from John Bowers, the President of the United States. She hoped that nothing had gone terribly wrong in the war effort. In the few seconds before the call, her advisors had not alluded to anything of that sort...at least nothing that current intelligence was aware of.

But you never knew.

"Yes, this is Henrietta Maldonado, Mr. President. It is a pleasant surprise to hear from you.

"Well, thank you very much, Mr. President. Merry Christmas to you as well.

"It is wonderful to speak to you, and I will convey those wishes and thoughts on to my entire cabinet and the people of Brazil.

"Yes.

"That is correct, Mr. President, and thank you for making mention of it. We take a great pride in our troops and their accomplishments in the foreign deployments we have made outside of South America, in Africa, and in Australia as well.

"It is.

"Yes, things are going well here on the continent also. Not as quickly as we would like in Argentina after the latest influx of Chinese troops, but ahead of our projections.

"Thank you.

"You know, I must say that, in addition to the overwhelming numbers you are providing in Australia and in Africa and elsewhere in the world, your efforts in Panama, now that the Canal Zone is once again in American hands, have truly bolstered us. The ability to now place much more pressure on the enemy from the north in Colombia and your special forces' achievements in Venezuela have been nothing short of extraordinary.

"Oh, no need, Mr. President.

"Believe me, those sentiments come directly from the field, Mr. President and are conveyed through me. Please pass them on to your own military leaders and particularly those in Panama, Colombia and Venezuela.

"Yes, I understand. I will.

"Before we finish, I must also convey to you the thanks of all of the Brazilian people for you, your government's, and your people's generosity to our people here in Brazil. The food, the equipment, the weaponry, and the technical assistance in rebuilding and improving areas torn by this war have been God-sent...and we thank you all for being the instrument in His hands.

"Why thank you, John. God bless you and your people as well.

"Once again, Merry Christmas.

"Goodbye."

As she hung up the phone, she was amazed at the time that the President of the United States had taken with her personally.

There at the end, he had addressed her by name, as a friend—as an equal partner in this fight. There was a unique combination of strength, warmth and humility in his demeanor. And she would never forget the effect it had on her. It was a trait that apparently Norm Weiskopf had either passed on, or had sought in his Vice President, and Henrietta was comforted that John Bowers possessed a genuine warmth and thoughtfulness just as innately as his remarkable predecessor.

...and, thinking now on its impact on her, she decided to pass it on. Picking up the phone she had just used, she contacted her own Chief of Staff.

"Alfonso, please schedule three calls for this morning.

"I know they are not on my schedule, but I am asking you to put them there. About fifteen minutes each.

"I want to speak to the Presidents of Peru, Chile, and Ecuador this morning."

### Christmas Day, Presidential Retreat - outside of Moscow

Vladimir Putin thought back on the call he had received from John Bowers as he played with his grandchildren in this warm, comfortable and secure retreat deep in the forest outside of Moscow. The call had been unscheduled and unannounced...but not entirely unexpected.

"The Americans are very sentimental about such things during this season," the President thought, "and well they should be.

"Their faith has sustained them throughout their history, and has helped sustain others.

"Despite the years of mistrust, antipathy and 'cold' warfare...that faith is helping to sustain us during this conflict as well."

And he had to admit, since Communism had been overthrown, the traditional feelings of goodwill and faith at this time of year, so long suppressed by the Communist party...had blossomed again and were very evident all over Russia.

"In fact, if anything, the sentimentality here is even stronger," he reflected. "We never reached a point before this war began where the season was as commercialized as in the United States."

Just the same, the call had been pleasing, even refreshing, at a time when the rigors and concerns of all-out war still completely occupied him, as the leader of the Russian Federation.

In Putin's eyes, John Bowers was shaping up to be a very capable leader. He had great vitality due to his relative youth, and he as was driven as Weisskopf had been, and that was saying a lot.

As he reflected on the call, he was amazed at how friendly and how personable the President had come across to him. The call had, in fact, been a personal one...not laden with the usual formal speech of diplomacy or negotiations.

And yet, Putin realized that John Bowers had accomplished some important diplomacy and negotiating during the call. He had reaffirmed America's intentions with respect to their space station deployment—intentions that were not aligned with what the Russian Federation had desired. He had reassured the Russian President regarding America's unwavering support for the Rodina, promising specific quantities of troops, weapons systems, food, agricultural equipment, and technical assistance.

"And he had done it all with a call that I will always remember as a wish for me and my own family to enjoy a 'Merry Christmas'...amazing!" concluded the Russian President.

And as it had done with Henrietta Maldonado, the call inspired Vladimyr Putin to make several calls of his own...to pass on the faith, cheer, friendship and support from one allied leader to another.

### **Christmas Day, The Oval Office - Washington, D.C.**

After a day of contacting all of the major allied leaders and extending them the heartfelt feelings and wishes of the season, and then bolstering them with the firm assurances of America's support—the President prepared to make his most important address, to the American people.

Through most of his life, he had never thought of himself as much of a public speaker. Oh, he could issue the orders and directives necessary to fulfill whatever goals his superiors in the military or civilian life had outlined for him. And he was strong at developing and implementing the plans necessary to accomplish those directives.

But, until he had been appointed into high public office, he had not been required to speak in front of large numbers of people.

Then, starting with his appointment as the National Security Advisor to President Weisskopf, all of that had changed. He had tried to avoid public appearances as much as possible, but with world conditions degrading, the responsibilities of his office increasingly required him to articulate the administration's positions on national security via television, radio, and at public events.

As Vice President, his spoken words were increasingly in demand, particularly as America had suffered so many setbacks in the early years of the war. In addition, President Weisskopf's plan for using the leadership to rally the morale of the American people continued to this day, in the face of persistent enemy attacks.

While John Bowers was still a rather reluctant public speaker, believing that he lacked a natural flair for it, reality belied his own feelings on the matter. He was inspiring in his sincerity while communicating his thoughts and his goals in a compelling, heartfelt manner. If asked how he so smoothly transitioned from a *behind-the-scenes* man into an *in-the-public-view* man, he would simply state that somehow God had filled in the gaps and given his thoughts voice, and that accounted for it.

And perhaps it had.

Either way, as the cameras came on, and the President looked into the one directly in front of his desk, he knew he was looking into the heart and soul of America and of free people everywhere as he started his Christmas speech.

"Good evening my fellow Americans, and good evening to all of our friends and allies watching throughout the world.

"Merry Christmas to each of you, and a particular wish for a Merry Christmas to all of our military service personnel stationed throughout the world on this special day. For all of us, no matter what our role, I trust that, even in the current hardships of war that we all face, the spirit of the Christmas season abides with all. That the great example of selflessness, sharing, giving, healing, unity, perseverance, and sacrifice fills your hearts as it does my own, and that of my family.

"Tonight I bring you a message based upon those traditional and foundational Christmas principles. It is a message filled with hope and progress in this war, and one filled with the promise of a bright future that we can now glimpse on the far horizon.

"Though the dark clouds and rough seas still make the journey perilous, I am confident that we are steadily progressing toward the light along the horizon dispelling the storms of these past years.

"Let me share with you why I believe this.

"Tonight, except for a few miles just north of the juncture of the Isthmus of Panama and South America, all of Central America had been freed of the tyranny of Chinese and CAS forces. Although

the locks have been destroyed by the retreating Chinese forces, the Panama Canal is once again firmly in American hands, and it will remain that way perpetually.

"Tonight I can say to you that the Caribbean has been cleared of enemy forces. Cuba has been completely pacified, her people freed from dictatorial oppression, and her leaders brought to American justice. Along with other prominent terrorist leaders who have already been captured and sentenced in American military tribunals, those leaders will have their sentences carried out on January 1st of the coming year, less than a week away. All other Chinese and other enemy forces and facilities in the Bahamas have long since been defeated and occupied by American forces.

"In South America the war effort is progressing favorably. Venezuela has been completely cut off from resupply or reinforcement by our air, land and sea forces. Venezuelan, Chinese and remaining Panamanian forces there are now confined to rough terrain and dense jungle areas along the northeastern coast. American, Colombian, and Brazilian forces have them surrounded there. In Colombia, enemy forces are fractured, but continue fighting fiercely in pockets in the densely forested highlands, but they are without hope of assistance from either CAS or CASAS forces.

"The only area of South America where enemy forces continue to maintain any advantage is in Argentina. Brazilian and other allied South American forces have been thwarted from making headway there since the Chinese shifted their major South American focus to that region. Over eight hundred thousand Chinese troops, some from northern sections of the continent and others who arrived there in Chinese convoys and aircraft, reinforced and bolstered Argentine forces to the point of stopping Brazilian, Ecuadorian, and Peruvian advances, and in many areas, throwing them back.

"Tonight I am announcing the formation of a large American expeditionary force to assist the Brazilians in defeating the last vestiges of Chinese power and tyranny in Argentina. We will continue to assist our freedom loving friends and allies in South America until that task is accomplished, and their lands are free of this blight that threatens the peace, prosperity, and liberty of all people.

"In Africa, the three-year aim of allied forces of driving a pincer at the underside of GIR and Chinese forces that have been assaulting Israel from Egypt has finally been realized. Using a coalition of free African states, coupled with Brazilian, American, and English forces, we have broken through enemy defense forces in Chad and driven hard up under the principle GIR forces in Egypt. At the same time, joint Israeli, American, and English forces have broken through enemy defenses in the Sinai and have now retaken the Suez Canal and crossed over into Egypt. Five days ago these two allied forces met and joined together one hundred miles south of Cairo on the Nile River, successfully splitting enemy forces in the area. At this hour, GIR forces are in retreat across the western desert of Egypt toward Libya, while Chinese forces are retreating to the south towards Ethiopia.

"In Asia, the Chinese invasion of Alaska has been repulsed and Chinese forces in far eastern Siberia have now been defeated. It has been a costly campaign and we still must deal with the entire southern two-thirds of the Kamchatka Peninsula. At Magadan, where a large portion of our forces staged, though Chinese attacks are continuing there on a frequent basis, the tide of battle has turned. The original purpose of our invasion of Magadan has been realized. Now the large forces that have steadily built up there, coupled with those pouring out of Alaska, will focus on consolidating the strong foothold we have established on the mainland of Asia. Once that consolidation is accomplished, we will extend our foothold to the east to threaten the Chinese homeland directly. It will be a threat the Chinese cannot ignore.

"My fellow Americans, tonight I am proud to be able to announce that in Australia, allied forces from America, England, Australia, and the many exiled nations of the Pacific and Asia are making steady, hard-fought progress against monumental numbers of Chinese and Indian forces. We are liberating the continent, but it is not an easy fight, and it is not yet accomplished. Enemy military forces are being bolstered by a tenacious citizens' militia comprised of millions of Indian and Chinese immigrants who have been given land in the area, brutally displacing the former and rightful inhabitants. The further north and eastward we push, the more difficult the battles become as those inhabitants occupying the land for two to three years now consider it their own.

"Well, that land is not their own. And we say to these people that they will have to relinquish it and lay down their arms or be treated as enemy combatants. Despite their resistance, with our space-based surveillance, and with a plentiful supply of Hail Storm missiles coming off of our production lines, along with all of the other implements of modern warfare, we are steadily pushing the enemy back. As of tonight, the line of advance extends from Townsville on the northwestern coast, across the Dividing range to Hughenden, from there on a line south across the Great Artesian Basin and to the west of the Grey Range to the Darling River in New South Wales and from there, following the Darling River to the coast, where our forces have just finished liberating Ardelaid in South Australia. Over 20% of Australia is once again free. The day will come when all of Australia will be freed from the oppressive yoke of tyranny.

"In Europe, hard fought progress is also being made. European Union armies, assisted by our own forces, have driven the GIR out of the Balkans and are now fighting fiercely along the western borders of Greece against Greek and GIR forces. All of central Europe has been liberated all the way to the Ural mountains where Russian, European and American forces are preparing for a great

offensive against that natural defensive barrier that Chinese and Indian troops have strengthened into what they are calling the Ural line. They will soon find that such a static defense, manned by the forces of oppression, cannot hold against the forces of liberty.

“Other Russian and European forces have pushed to the south, pushing GIR forces, who are retreating to the south in an effort to link up with their forces in the Middle East. Our allies are now about to break through GIR defenses in Georgia and threaten GIR Turkey from the north.

“In the Middle East, American, Israeli, and English forces have defeated GIR armed forces in Syria and Saudi Arabia, cutting off the southern Arabian Peninsula and penetrating deeply into the former Iraq. American and exiled Turkish forces have established a strong foothold in Turkey around Adana and have progressed to the north and east of there, entering Iraq on the north near Mosul. GIR forces have retreated from Baghdad and now allied forces from the south and American forces from the north have linked up there in the former Iraqi capital where many of the citizens have welcomed us, and are looking forward to the institutions of a democratic republic being once again established amongst them. Our forces are now facing stiff resistance in the mountainous northeastern Iraq all the way down to the Persian Gulf along all approaches into the heart of the GIR, the former Iran.

“My fellow citizens, these are all tremendous gains and have all been made in the year that has passed since the great military victories at Anchorage, Moscow, and in Israel. The actual gains in Australia have been made over the last four months.

“I must add that all of this is also occurring only a little more than a year since the miraculous moral victory that we experienced here at home, when nation’s turned away from the culture of death that had reigned for decades and re-embraced life and the moral foundations of our heritage.

“At that time, President Weisskopf urged America to remember the more important moral victory because it lays the groundwork for all other victories and gives them meaning. I have memorized a portion of his words from that speech and would like to recite them to you this evening. I believe that they should be written on every American’s heart and soul.

*“Let us remember the date of October 12<sup>th</sup>, Columbus Day, a true day of discovery, a day of self discovery, when an even more important focal point in the history of our nation and our people was reached. Through the Supreme Court ruling of that day, the legal sanction of the evil growing in our own hearts was dealt an even more stunning blow.*

*“As a result. I am compelled to believe that Providence is once again smiling on these United States, and that we are now not only in a position to physically go forward in this monumental struggle...we are prepared to do so in our own hearts.*

“What our great, late President Norm Weisskopf said at the time was true. His words were true when he uttered them, and they will remain true eternally. That is the nature of truth. Despite what others might believe, time and circumstance do not erode its meaning, significance, impact and value. If anything, they serve to reiterate them.

“Those words Norm Weisskopf spoke have turned out to be prophetic when considered in light of what has happened in the ensuing twelve months. Our continued knowledge and acceptance of those truths have reflected in our actions and in our success. Here we are, a year later, and all of our gains bode very well for our cause and give reason for great hope. Hopes for similar gains over the next year’s time. Hopes for a brighter world for tomorrow, of that thin line we now see on the horizon breaking forth with bright sunlight upon the entire world...the light of peace, truth, and liberty.

“Let us use that hope, that commitment to truth, to fuel our drive towards the light. Let us always remember that our gains have come at great cost. Hundreds of thousands of allied military personnel are dead along with uncounted numbers of civilians. Even though they have been greatly diminished, there are continuing acts of terror inside of America. One of those cowardly terrorist acts killed our beloved president and members of his cabinet right here in Washington, D.C.

“But, in the face of this, and as a result of our hopes, Americans and allied peoples all over the world are making the sacrifices necessary and enduring these hardships with a will. The hearts and souls of free peoples everywhere have been tested, tried, and purified in the forge of the unrelenting opposition of an enemy committed to the destruction of our liberty, our way of life, and our very lives.

“Their wicked crusade has caused us to look deep within ourselves and tap the strength and faith existing in our innermost being. And now that we’ve returned to those roots, there is no end to the good we can accomplish once we have defeated this monstrous evil.

“Let us go forward, secure in the knowledge of our standing with one another and before God. We are fighting for the right; we are fighting for liberty; we are fighting for moral compassion and the unalienable rights of all mankind.

“And we shall prevail, so help us God.

“Merry Christmas to you all, and may God continue to bless the United States of America.”

**January 1, 06:42 CDT**

**The Lazy H Ranch**

**Outside of Montague, Texas**

It was a cold morning in north-central Texas. The temperature was hovering around twenty degrees, and the wind was out of the north under cloudy skies that reflected the few lights shining in the town of Montague, eight miles to the southwest. There were occasional flakes of snow in the air, and the forecast called for light snow later in the morning.

Jess Simmons was loving it.

He had left Cindy asleep in the bed and gotten up at 4:30 AM to come and take a look at the tractor. "Taking a look" had turned into a complete check-up and rundown of its operating condition. By 6:15 he had gotten the beast started and warming her up while he did a few daily chores.

His leg was feeling great, despite the limp.

He wondered if Cindy was up yet, whether the rumbling of the old Case tractor here in the barn had awakened her.

"If I know her, she was up by six and will have breakfast for me before I can get this thing out of the barn and into the fields," he thought as he prepared to climb up on the tractor.

Sure enough, as he drove the tractor out of the barn and started down the gravel road to the fields they owned on the south side of their property, as he passed the house, a light appeared in the doorway as Cindy opened the door and waved him in.

Jess left the tractor idling and climbed down off of it. It was a little awkward for him with his leg, but he was able to get down from the Case safely. He had been practicing for over a week, looking forward to the day he would take the tractor out and get some of the necessary work done to maintain his fields through the winter.

Today was that day... but not until after he had eaten a hearty breakfast prepared by Cindy.

"Oh man, what's that I smell?" he asked, as he walked through the door and caught a whiff of the aroma coming out of the kitchen.

"Smells like thick sausage gravy over homemade biscuits."

Cindy already had the places set and the food on the table when he walked into the kitchen.

"Biscuits and gravy with some scrambled eggs and orange juice, to be exact," she said with a warm morning smile, as he sat down.

After a blessing on the food, which Jess asked Cindy to say, he dug right in.

"It must be twenty degrees out there this morning, so this is really hitting the spot, sweetheart."

Cindy ate her own food and watched as her husband literally devoured his. She was happy to see him applying himself to working on the ranch. The war had kept him away for a long time, and there had been some doubt at first as to how much he would be able to do. But he had always loved ranch work and he was determined to be able to mind his own "place."

She would have liked him to take a little more time, but knew him well enough to know that he would push the envelope as soon as he felt he was ready. He always had; it was one of the qualities that had made him such a successful National Guard officer--the ability to know when you were prepared to push the limit, and then to be able to do it successfully.

And apparently today was the day he was prepared to push the envelope here on the ranch.

Thinking about his service caused her to remember something she had wanted to ask him.

"Jess, did you finish that letter to Abraham?"

Cindy was referring to General Abraham Eshkol of the IDF. He had worked with Jess extensively when Jess had served in Israel, first as an advisor to the IDF, and then, later, when he was on active duty there. They had become close friends and the Eshkols had provided a second home to Jess whenever he was on leave in the area.

In the course of the warfare, Abraham had been promoted from Colonel to General and was now fighting with American and other allied forces in the former Iraq. Jess had received a letter from Abraham last week and had mentioned to Cindy that it was important that he reply soon.

Cindy knew how he felt. She had recently sent a lengthy response to Elizabeth Trevor, letting her and her husband Joe know how Jess was doing and again thanking them for the six weeks they had spent here at the Lazy H. They had been a tremendous help to both Cindy and Jess in preparing for Jess's return, and then assisting as he rehabilitated to a point where he could get around on his own.

"Not yet, honey. Later today or maybe tomorrow morning after turning over that stubble field, depending on how well the Case works... and how well my leg holds up.

"I owe him a detailed report on my condition... and I also owe one to Marty and to General Donovan. I may even mention working on the tractor today.

"I also want to respond to the SITREP Abraham gave me about what is going on over there in the Middle East, and let him know how much faith we have in what they are doing over there."

Jess became quiet and contemplative for a moment.

General Abraham Ishkol had conveyed to him the success they had experienced since Jess had been seriously wounded and transported back to the United States. Knowing that operational security

was paramount, and realizing that anything of any tactical or strategic importance would be edited out, Abraham had still been able to convey the essence of the situation.

Like anyone else, Jess worried over the safety of his friend. But he also understood the risks of military life, and particularly of combat. He had experienced them himself for several years, culminating when he was shot down and severely wounded. He and Cindy had both also experienced it in the most poignant way possible with the loss of their son, Billy.

As Jess now knew, from his friend's letter, from other reports he had received from General Andrew Donovan not long after the start of the battle that had injured Jess, the leading elements of the GIR counterattack had punched completely through American and Israeli defenses. That breakthrough had carried GIR forces all the way past Damascus to the very foot of the Golan Heights where Jess had spent so much time. In that position, the GIR forces had endangered the entire northern portion of allied operations in the area and were threatening to break through into Israel itself.

Then, one flank of the GIR forces had collapsed under pressure from US forces that had maneuvered northward, along the coast of Lebanon, and attacked GIR forces just south of Homs. That battle had resulted in the failure of the entire GIR counterattack. With the major forces that had penetrated through Damascus in danger of being encircled, all of the GIR forces had fallen back rapidly to their original positions before the counterattack had started.

And allied forces had then pushed them back much further beyond those positions.

Using a vastly replenished supply of Hail Storm missiles and with all available reserves being thrown into the battle, allied forces repulsed GIR forces all along the front. They quickly penetrated into the former Iraq, and well into Saudi Arabia. What had looked like a potential defeat had been turned into a successful offensive of tremendous proportions. And it had been turned around in the space of a few short weeks.

Now things had slowed down. After initial success in southern Iran, Allied forces were being held firmly there by reinforced GIR armies and a belligerent population. In the mountainous regions of the northeastern portions of Iraq, the same young general who had masterminded the GIR counterattack in Syria, General Abduhl Selim, was conducting effective defensive operations. Abraham and the other allied commanders in that area were having a tough time rooting him out.

"They have a lot of fighting and hardship to go through before they crack that GIR egg...but with our forces on the borders of Iran, at least victory there is in sight now."

Cindy reached across the table and put her hand on her husband's arm.

"Jess, those capable men and the good Lord are going to see to it that all of that happens. Both of us have complete faith in that.

"Right now, I'm just grateful you're home safe.

"Our family has given everything we have," she said with her eyes welling up, the memories of Billy forever intertwined with any mention of the war.

"And I can honestly say that...if presented with the same conditions again...despite the loss and heartache, I know we would do nothing differently. But I'm glad you're home and that you're rehabilitating here where I can keep an eye on you.

"No offense to Andrew Donovan, Abraham, Marty and the others, but the Simmons have borne a heavy price. What we need for you now is the healing that comes from the tender loving care that you are getting here at home, and from the therapy you are receiving every minute you work on that old Case tractor."

As Jess lifted the last forkful of biscuits and gravy to his mouth, he stared into his wife's moist eyes. In his mind he thanked God and his lucky stars for this wonderful woman, who had suffered so much and who came through it all strong and dedicated.

"Honey...I can think of no place I would rather be than right here with you.

"I want you to know...I believe you know that it's always been that way, even when I was called away. It's that way even if I feel that I should be back over there doing my part.

"I know I can't and I have accepted it...and I am grateful to have you here...taking care of me.

"It's the same with Andrew, Abraham and Marty. They all look forward to the time that they can each be back home with their own families, and I pray God will grant them each that opportunity soon, so they can feel the great joy and contentment that I feel.

"But, right now," he said as he chewed and swallowed that last bite of breakfast, and then stood up and hurriedly washed it down with the last of his orange juice, "the Case and that southern stubble field are in need of my attention, and I can't keep them waiting any longer."

As Cindy smiled and shook her head, she started picking up the dishes. With a smile on his face which radiated his love for her and the excitement he felt about getting back on the tractor, Jess gave her a warm hug and then opened the door and went out into the warmth of the Texas cold.

**January 5, 22:55 local time**  
**Secure Housing Unit, COSTIND Conversion Operations**  
**Pham Residence, Tianjin, China**

The family gathering was somber as Lu Pham, his wife, Song, their daughter Chiang, and their new son-in-law, Hua Jianying, reflected on the latest news about Kao.

After being rescued by the Chinese helicopter, Kao and the men from the Chongqing had been safely bought aboard the Zenim as it retreated north and westward, past the Solomon Islands. While in the infirmary there, Kao had developed a pulmonary infection, falling gravely ill. The pneumonia only worsened his serious condition attributable to the oily water he had swallowed and the burns he had suffered both on the ship and later while in the water.

As a member of the Politburo and the executive council, Lu had been able to access the latest information...had even spoken with Admiral Xia about his son and received word back that his condition had worsened and that he had been airlifted to the best medical facilities the Chinese had within distance of the aircraft carrier at the time, in Rabaul.

Since that time, the information had been no better. The doctors considered Kao too sick to be transported, otherwise he would already be back in Beijing receiving the best care available in all of China and its holdings.

"Well," Lu said to the entire family as they sat around the low table in the family room of their home, "I have received permission to make a trip to Rabaul, and Song can come with me if we feel it's necessary. I will be conducting official state business in New Guinea and at various other locations on the return trip.

"We wanted to talk about this, discuss it together, and see what you and Hua think, Chiang."

Chiang held her husband's hand and considered it. But before she could make a comment, her mother, Song, spoke up.

"Chiang, before you and Hua share your thoughts, I want to make sure you know how I feel."

Lu immediately interjected, "Song, I'm sorry...I took it for granted that everyone would...please, go ahead and forgive me for being presumptuous."

Song reached over and took Lu's hand while looking at him. She knew he had a lot on his mind and was under intense pressure...more so in his role in the Politburo where he was expected to continue overseeing and managing the technical side of weapons development, but also on the political side, an area that he had always avoided...even disdained. Now, of necessity, he had to deal with it and he had to do so deftly.

"It's all right, Lu. I meant nothing by this. I know you understand and it is easy to take things for granted. I do it all the time. I just want to make sure Chiang and Hua know how I feel."

She then turned back to her daughter and son-in-law.

"Chiang...Hua, your father tends to be positive about things. He has always been an optimist.

"Coupled with his drive to produce the expected results, it is his optimism that has made him successful...not only as an engineer, but as a hero of our adopted homeland, of your homeland, Hua. It is also helping him in his role in the politburo...although I constantly tell him that he must remain careful because not all leaders are like him...some will use his positive attitude against him.

"Nevertheless, he is being very optimistic about Kao now. The fact is, your brother...Hua, your brother-in-law, is very near death.

"I have prevailed on your father to seek and to obtain permission for this trip. I could not bear him dying there, so far away, alone. I want to be with him.

"If, as your father hopes, he recovers...then we will be there to help him through. If not, then we will be there in his last moments to comfort him and to give him the dignity of being surrounded by those he loves as he dies. Then, afterwards, we will bring him home."

As Song said this, she found she could not go on. A vision of her wonderfully handsome son, who had been so full of life, who would make a special and precious husband and father, suddenly eclipsed all else in her consciousness. The thought of life without him was too much to bear and contemplate...and so she broke off talking and the entire room was silent for a few moments.

Chiang broke that silence.

"Mother and father, I only wish I could go with you!"

Turning to Hua, she looked at him imploringly.

"Hua, do you think I should put in a request at work...would they approve it?"

"Would there be any negative repercussions?"

Hua had come to love and respect this entire family that had made China their home and done so much for his nation. He was impressed with Lu's achievements and recognized him as a People's hero...not because of the association and opportunities it might open to him, but because he genuinely revered what Lu had accomplished. He respected Kao and knew of the upbringing he must have had to be so willing to fight for China, his adopted home.

Most of all, he was in love with Chiang...this marvelously talented and beautiful woman who was as driven as her father.

Letting go of her hand, he used his other hand to gently place his finger under her chin and raise it up so she was looking at him. He had never seen her like this...and it touched his heart to see her emotions and love for her family.

"Chiang, of course you should put in a request.

"I know you do not consider such things....and I know that you would not seek favor or advancement as a result of such things...and I know that you eschew anyone who would use their position to seek favor or advancement. But I promise you, with your father being a Hero of the People's Republic, and with his recent advancement not only onto the Politburo, but onto the Executive Council at the express request of the President... there will not be a problem.

"My guess is your supervisors and their managers will jump at the chance to make sure your schedule is arranged so that you can make this trip as easy as possible. They probably will suggest that you make sure your father knows who it was that approved the trip.

"If I could come with you I would, but unfortunately the campaign for mayor here in Beijing will not wait, and the selection will come in March, whether I am here or not.

"From what your mother is saying, you may well find yourself over in that part of the world until that time. My only regret will be that we are so far apart for so long."

Chiang threw her arms around Hua and hugged him, smiling at her parents as she did so.

"Father, Mother, would you mind? Can I come with you?"

Song's answer was immediate. "Of course you can, Chiang. I know that your brother will be helped by your being there. It will brighten up his mood considerably and we all know that a person's mental attitude is an important part of their health."

Lu was a little slower in responding. After a few seconds, Chiang's smile faded a little, expecting that there was some obstacle.

"Chiang, I too want you to be there. I know it will help Kao. But I have some reservations. The area is near the combat zone. Australia has been invaded by the Americans and their allies, and there is a great battle raging there now.

"Rabaul is a critical staging area for our forces in defending Australia, and in defending approaches to our homeland from the southwest Pacific.

"There will be danger and I think we should carefully consider it before making that decision. I have a hard enough time accepting your mother on this trip because of the danger. But, as you know, she is headstrong and has insisted."

Smiling now, Chiang quickly responded to her father. "And I am my mother's daughter, father...and just as headstrong. Just ask Hua."

Hua lowered his eyes sheepishly, smiling while shaking his head in agreement with the obvious.

And Lu knew his daughter...and also knew when he had been soundly defeated and over-ridden.

"All right, all right!" he said, raising his hands in a mock attempt to ward off a fictional attack. "I had to point out the dangers. But I know we all are willing to take the risks.

"Besides, we will be accompanied by an elite, combined arms security brigade whom the President informs me are the absolute best in the business. We will have aircraft, troops, and even a specially outfitted destroyer at our disposal.

"I'll meet with the executive committee tomorrow and will finalize the travel schedule then."

**January 14, 20:12 MDT**

**Boise International Airport**

**Boise, Idaho**

Geneva Campbell was a little worried because Alan's plane was now more than twelve minutes late...but she was not overly concerned. A few minutes late was not at all unusual from what the others who were also waiting on the plane had said.

"I've waited months and months to see my son," she told one woman who waiting for her husband. "I suppose I can wait another few minutes."

Several of the others, when they discovered that she was waiting for a Marine who had been serving in Siberia, thanked her for her son's service to the country. They also thanked her for raising her son in such a fashion that he would want to serve.

One older gentleman, upon hearing that Alan was in the Corps, came over and sat with Geneva while she waited. It seemed he was a veteran, a Marine himself, who had served his first tour of duty in Vietnam in 1972, and had served his last one during Desert Storm in 1991.

So it was, when Alan came walking off the aircraft, wearing his dress uniform, there were applause from the people standing there waiting for him...first from the few Geneva had been able to talk to, and then spreading to almost everyone in that section of the concourse. Somewhat unsettled by all of the attention, Alan walked up to his mother and gave her a big hug.

When he was finished, the older gentleman got his attention and shook his hand.

"Sergeant, I want to thank you on behalf of myself and my family, for your service to our Republic...to our nation and our freedoms.

"From this old gunny, all I can say is, *Semper Fi!*"

Alan knew immediately that he was talking to another Marine. He introduced himself as Master Gunnery Sergeant Jason Gwinn and, as others shook his hand and voiced their thanks, Alan and his mother waited while the old gunnery sergeant met his wife and then made introductions.

The four of them then walked down the concourse together discussing their families, the progress of the war and the conditions in America. All of them agreed that the overall experience had brought everyone together as Americans like no other event in their memory, despite the hardships and sacrifices...or perhaps because of them. One example of this was that there were very few, if any, hyphenated Americans now...just Americans. If someone tried to identify themselves as such, they were almost universally corrected with a simple, "*You mean American, don't you?*"

Alan had not considered himself an "*African-American*" since he couldn't remember when. Whites, blacks, browns, reds, and every other variety of citizen were working together as Americans in this conflict, fighting together...dying together. There just wasn't time or inclination for the vast majority of Americans to worry about such things when they were fighting for their very survival.

"And that means there never really was any time to worry about it," Alan realized as the conversation continued.

When the Gunny heard that Alan's brother was Leon Campbell, he stopped in the middle of the hallway and again shook both Alan's and Geneva's hands. He knew all about Leon's exploits and his citation. He made a point of knowing all of the Marine Corps Medal of Honor winners and had not put the Campbells' names together here in Boise, Idaho, until Alan mentioned it.

"I can't tell you what a pleasure it is to meet the brother and mother of a Medal of Honor winner...and to see the younger brother following in his brother's footsteps," he said.

"God bless you. God bless you all."

As the four of them exited the terminal building, they parted as the best of newfound friends and shared addresses and phone numbers. The gunny lived only about twenty-five miles away in a small town where he and his wife had retired.

"We live up on the bench on the north side of town," he told them.

"A beautiful rural American town, rooted in agriculture with its values rooted firmly in God's green earth, where they live the parable of the harvest every day...you reap what you sow. One day when you get married and start having kids, think about it...great place to raise a family."

"In the meantime, Alan, you, your mother, your brother Leon, and any family or friends are welcome out at our place anytime. I know Melba will cook you up a fine meal...and we can go out in my pasture, that runs clear up against the butte, and shoot my .50 cal. rifle and talk about old times."

Both Geneva and Alan thanked Jason Gwinn graciously and indicated they would take him up on his invitation at least once while Alan was on leave...and more often after the war. Alan was certain that Leon would want to meet Gunny as well.

All of it was almost overwhelming. As they got into the car, Alan spoke to his mother across the car. "What a neat thing, Mom, to come home to a spontaneous welcome like this.

"When I walked off the plane, I thought you must have arranged all of that."

Geneva smiled, knowing how it seemed, but also grateful for the people who had so spontaneously responded to her son's homecoming. It was like something you read about, but never really expect to happen to you.

After they had gotten into the car and as they were putting on their seatbelts, she responded, "I know. I was worried when your plane was late and started asking some of the people waiting if all of this was normal...if I should be concerned.

"They were all so nice and began to get excited when they heard that one of our boys was coming home on leave on that flight. Then I began to worry about what you would think of all of the attention, that it might be embarrassing.

"But, Alan, all of those folks, all on their own, were anxious to welcome you home. To welcome anyone home who has been fighting in this war.

"...and the Gwinns were sure special, weren't they? I believe you have found a friend for life."

Leaving the airport, they got onto Interstate Highway 84, and traveled west towards the expressway connector that led towards downtown Boise and their home off of Orchard Avenue.

Alan sat in contemplation for most of the ten minute ride, thinking about his experiences, about his home and conditions here in America and the realities he had witnessed in Africa and Siberia. As they exited the freeway, he tried to articulate his feelings as best he could to his mother.

"Mom, you know, over the last year I have learned a lot...seen a lot. I thought I had made some big changes in the years preceding my war experience, what with us moving here to Idaho from the ghetto in Chicago and all.

"But now I realize that all of that was just setting the stage.

"We are so lucky...so blessed in this country, Mom! I don't think there's another place on this planet, where a family could do what we did. Where there is so much opportunity if people will just make the effort to work hard and pursue it. They got to just look past all of that bickering and social squabbling...all of those people trying to keep others penned up in stereotypes, buying their votes.

"I'll tell you this, Mom. Ain't none of that on the battlefield...and from what I can see, there's not much of it here at home anymore either."

Geneva cherished the change she had seen in her sons over the last few years associated with their move to Idaho...but particularly since they both had gone into the Marines, been trained, and been out in the world.

"Alan, your Papa, he knew these things all along. He used to talk in much the same way you are now, expressing many of the same thoughts...you're more like him than you know.

"Anyhow, he would get into some real heated discussions, and even into some trouble with the local politicians and leaders, back there in Chicago.

"That's why I was so touched by the experiences Leon had when he was coming out of that coma. I know he saw Jerome, your father, there in Heaven, or whatever place Leon was visiting while he was unconscious. I know he is there waiting for each of us.

"I know he would be proud of you both, Alan.

"As terrible and dangerous as this war has been, it has brought most Americans to the point where they are looking past all of that previous foolishness and looking instead at what they can become with the freedoms we enjoy...and how they can help others. As much as I look forward to the end of this war, to when you boys can be safe back home and starting families of your own...and as much as I ache over the terrible losses, I am grateful for the change in the people and I am grateful that we are beating these monsters who would take it all away from everyone on the planet."

Alan was surprised at the length of his mother's statement and the passion with which she spoke...and he was proud of her. She embodied the principles they were talking about and she had tried her best to pass them on to her sons. It was clear to him now, more than ever, that both his Mom and Dad were solid-people and great Americans, and he was so proud to be their son.

"Well, I have to tell you, Mom, we've still got a long and hard fight ahead of us. Those people have been indoctrinated in what it is they believe and they fight us tooth and nail. But we are winning, Mom, and pushing them back.

"I believe that, as soon as they finally realize that we are not going to make peace, that we are taking this all the way to Beijing...and as soon as the large portions of the people in the nations that they are subjugating to make their machine work, as well as citizens of their own countries...realize that that God-awful machine is vulnerable and breaking down, I believe we are going to have a lot of help finishing these tyrants off.

"We've just got one heck of a long road, a long difficult march, before we get there.

"But enough of all of this philosophy and war talk...let's move on to what's really important.

"What's for supper?"

## **February 11, 02:05, local time**

### **124 Kilometers South of Vladivostok**

#### **The Sea of Japan**

The large convoy was moving north, towards the petroleum terminals and docks at Vladivostok. Five supertankers, eight large container ships and six smaller transports escorted by two Ma'anshan frigates, a Lanzhou class destroyer, and a Hangzhou class destroyer.

The frigates and the Lanzhou destroyer had been upgraded to the latest sonar, radar and defensive weapons suite that the Chinese offered and they were formidable vessels for escort duty. Both destroyers were outfitted with four LRASD weapons each, suited for use against any enemy submarines that might penetrate the defensive formation they were using to defend the tankers, container vessels, and transports they were shepherding.

The formation was sixteen kilometers across, between escorting vessels on each corner, with the merchant vessels in a tighter formation in the middle that was four kilometers across. The entire group was under constant air coverage from patrol craft operating out of Vladivostok.

Suddenly, without warning, the Hangzhou destroyer blew up in a huge and terrible explosion that ripped vertically across its midsection and literally tore the entire ship in two. Within seconds, the other leading escort, one of the Ma'anshan frigates, also exploded with deafening *VABOOM!* that echoed across the entire formation.

Warning messages were immediately communicated to all vessels and aircraft...though none of them needed the official messages to understand that they were under attack on this clear night. The light, smoke, and debris from the explosions were visible to all. One Badger patrol aircraft saw the first two explosions clearly from twenty thousand feet at a distance of over forty kilometers.

Within another ten seconds more horrific explosions cascaded through the formation of ships being escorted. Each of the tankers blew up. Three of the container ships and two of the cargo vessels all exploded in a similar fashion. The worst explosions were aboard the tankers as their huge cargoes of petroleum products were complete ignited by the initial detonations that assaulted them.

From above, an SU-24 Fencer maritime patrol aircraft was in a position to see the assault on the inner group of merchant vessels before the wave of explosions engulfed them. Later, they reported seeing what appeared to be the slightest hint of several underwater streaks approaching the vessels,

becoming more apparent and more resolute as they approached the ships, culminating in the tremendous explosions that racked the vessels. The streaks were coming at the formation of ships from over one hundred and eighty degrees to their front.

Within ten minutes the attack was over except for the continued blaring of the warning klaxons from those vessels that had not been hit. There had been no hint of any approaching weapons on the sonar of any of the escorting ships. Outside of the report from the single patrol aircraft, there had been no visible sighting of the impending disaster.

The ships scattered and completed their journey into Vladivostok during the rest of the early morning hours, the last two ships limping into port near noon, having been damaged from the proximity of the explosions of two of the tankers and the debris that had rained down upon them.

Chinese naval analysts immediately began to pore over the data from the surviving ships, the eyewitness reports and the data from patrol aircraft that had been over the scene. Within twenty-four hours, they had reached an initial conclusion and passed the report on to COSTIND and to the higher level officials who had gotten word of the attack and were demanding answers.

### **February 13, 17:36, local time**

#### **Captain's Quarters, USS Jimmy Carter**

#### **400 miles west of Hakodate, Japan**

The Chinese analysts had come to the conclusion that America had finally employed some sort of offensive, supercavitating weapon of their own, and they had been right. The propulsion system and the material that the weapon was either made out of, or coated with, was a mystery to the Chinese. But the signs of the rapid approach and the terrible explosions were clear evidence.

Captain Simon Thompson was sitting in his cabin, completing the final after action report for the attack he had conducted on that large Chinese convoy. It had been successful beyond his hopes or imagination. For once, there had been no return fire. The devices had worked as advertised and had left little trail of their approach.

"Even if the Chinese had shot down the azimuth of what little trail those weapons left," he thought, "they would have come up completely empty-handed.

"I'll bet they figured they were attacked by three or more boats...and that they have no idea from what distance the attacks had occurred."

But Captain Thompson knew all of those things.

America's newest naval weapons system, the submarine-launched Mk-77, had just received its baptism of fire and it had operated almost completely flawlessly.

Thompson had released eighteen of the weapons. Only one of them had failed to operate and had sunk to the bottom of the Sea of Japan. The other seventeen had performed flawlessly.

Programmable from aboard ship either before launch, or after launch as long as the control wiring remained attached, the long, sleek supercavitating torpedoes were stealthy, capable of loiter, and capable of making their attacks from almost anywhere on the compass. And, with the new synthetic fuel products that had been developed specifically for them, in either conventional or rocket-propelled mode they left very little evidence of their presence.

"That is, until just before they strike home," thought the Captain as he continued to type in the details of the attack.

Running towards their target at an extreme depth, up to one thousand five hundred feet, or loitering at that same depth, the weapons attacked at a steep angle from beneath. That angle was programmable, but since the trail of the weapon would become visible after the weapon passed through a depth of fifty feet, the designers presumed that most attacks would utilize a deep approach.

Which is exactly what Captain Thompson had ordered.

Their warheads were a wonder. The plastic explosive packed into the warhead kept the weight down but was capable of producing the equivalent of up to three-quarters of a ton of TNT. The yield and certain characteristics of how the explosion penetrated the side of the target vessel were also programmable and could be adjusted for maximum effect against various types of targets.

The maximum range was over one hundred and twenty miles, but that was also variable depending on the loiter time, the target acquisition, and approach parameters that could be programmed into the microelectronic brain of each weapon. Under full rocket power, the weapon had a range of almost twenty miles and could reach speeds in excess of five hundred knots.

The Jimmy Carter had fired these weapons from a range of more than seventy miles. The Chinese never saw or heard the Jimmy Carter, and she had been well off the azimuth of any of the terminal attack bearings of any of the devices.

"...and we fired them right out of our standard tubes," the Captain emphasized to himself.

"Just a little longer than an ADCAP Mk-48, about the same weight...but a lot meaner looking and a whole lot more wallop," he concluded as he finished the report.

His final statement, after a summary, was adamant and to the point.

"In closing, the initial combat test of the Mk-77 Supercavitating Weapons Systems (SCWS) has been an unqualified success.

“It is the recommendation of this command that we outfit all Sea Wolf, Virginia, and remaining LA Class boats with a full offensive complement of these weapons.

“The Alaska class SSTNs and the Ohio class SSGNs should also carry a reduced number of these weapons for self-defense purposes against either surface or submerged threats.”

### **March 4, 18:47 Mean Time**

#### **Bridge of the USSS Gaspra**

##### **In orbit around Ceres, The Asteroid Belt**

David Lewis watched as his team brought another piece of the asteroid up into orbit and secured it to the train he was building. That team consisted of six specialists working with the Frigate’s lander and the mining and cabling equipment that had been brought into space for just this purpose.

They had arrived in orbit around Ceres, the largest asteroid in the asteroid belt, almost two weeks earlier and had immediately set about their task with a will. This forty-ton rock was the third that the team operating off of the Gaspra had cut out of the massive hulk of Ceres which was a little less than a third the size of Earth’s moon. The team operating off of the USSS *Ida*, Floyd Clark’s vessel, was a little behind the Gaspra operation and was completing its second excavation during this shift.

The material, carbonaceous chondrite, was dark and rocky in appearance. The same substance that made up most meteorites. Because of this, Ceres was classified as a special Class M asteroid. The special nature of its composition is what had brought them here for this mission. Ceres’ material had registered on the spectro-analyzers from Earth as harder and less porous than other forms of carbonaceous chondrite, which made it an excellent choice for their purposes. Over the next six weeks they would cut out forty of these rocks and place them in chains in space for transport to Earth.

Commander Lewis had his communications specialist contact Commander Clark on the *Ida* once he saw that the rock was finally secured in position in the chain.

“F.L., this is Lewis. We have number four in position and I am going to have my team start the preparatory work for cutting out number five on this shift. What’s keeping you guys?”

“We’re going to be two up on you in another few days if you’re not careful. Over.”

It didn’t take very long for Clark’s witty response to be communicated back to the Gaspra.

“I roger that, Gaspra. What can I say? Some folks prefer fast and loose...others like slow and steady. We’ll finish number three today. Each and every one of them will be within tolerance of composition and mass. We’ll keep it that way and finish on schedule. Over.”

Commander Lewis responded.

“OK...We have four of the same...and I prefer a team that is fast and steady. That’s us.

“All chatter aside, I want to finish ahead of schedule if I can so we can have plenty of time for our visit to Pallas inbound. It’s a little further out of the way than your secondary objective, Vesta.

“So, we’ll target a departure date of Gaspra on April 10<sup>th</sup> or 11<sup>th</sup> if things continue to proceed this well. If we get approval, we’ll have to alter the mission plan accordingly.

“We’ll plan on keeping the same inbound rendezvous point and schedule in accordance with the current plan. That means we’ll meet just inside of the orbit of Mars.

“Come up with an altered communication plan to conform with that objective ASAP. Over.”

Clark knew that Lewis was excited about the prospect of more exploration; it was in his nature, and he wanted to get as much benefit out of the mission as possible while they were out here.

But Clark also had a feeling that the Joint Chiefs and the NCA would want to get those rocks back into Earth orbit as soon as possible.

“Wilco, Commander. We’ll get the altered plan to you by 0900 hours tomorrow.

“But, if I may, you might find that command wants us to expedite things and cut out the secondary targets altogether if we have enough rocks and any extra time.

“Satellite photos of Australia and the latest SITREP show things proceeding faster than expected there. We’ve punched through Chinese lines in the Channel Country and are driving on Alice Springs. It looks like a large force of Chinese has been cut off on the Cape York Peninsula.

“If we have that kind of success elsewhere, they may want to move the timetable for our operation up. If they do, they’ll order us home quicker and forgo the secondary research objectives.

“Just the same, we’ll get that plan to you as advertised. Over.”

“I read you loud and clear,” Lewis replied. “At least we’ll give them the option...they can decide from there. I’ll look for your plan around 0900 tomorrow, Gaspra, out.”

### **April 15, 11:20 Local Time**

#### **Executive Council Chambers**

##### **Politburo, Beijing, China**

President Jien Zemin expected good news. They needed good news. He demanded good news on behalf of himself and his nation. And today was the day he expected COSTIND to deliver.

“General Hunbaio, please proceed with your report.”

General Hunbaio was aware of his leader’s discomfort and expectations...and he was painfully aware of the reasons for it. Lately, from near earth space, to the oceans, and on land, Chinese fortunes,

and those of her allies had been faring badly. After so many years of success...after so much territory won...it was hard to take the setbacks and reversals. Hard militarily and hard politically.

Ultimately, if the setbacks were not arrested, they would lead to doubts, and doubts would lead to questioning, questioning would lead to disaffection, and disaffection would lead to unrest and rebellion. Chinese leaders had walked a razor's edge in modern times since the cultural revolution. It was the same razor's edge that imperial Chinese leaders had been forced to walk for many millennia.

Now Jien Zemin saw that the edge was much too close for comfort. He was depending on Hunbaio and Lu Pham, to come up with something to counter the Americans so he could dictate the pace and the flavor of this conflict and its ultimate outcome.

For four years the Chinese had done precisely that. Everything had gone as Jien and his inner cadre had planned and predicted in the war effort. But everyone in this room knew that over the last year they had lost their initiative and were reacting defensively to their enemy's initiatives.

Hunbaio knew that this was unacceptable, both militarily and politically, and he knew that something extraordinary was required. Something that could challenge the new technologies and advantages that the Americans were coming up with. Something to once again throw them off balance so China could regain the initiative, pass it on to their allies and retake all that had been lost.

And General Hunbaio believed that he had just the information that the President was looking for. "Mr. President, I have some extremely good news. We have completed the final atmospheric testing of our new Dragon Spirit prototype craft, in the Altyn Tagh region near Lenghu. This is a very secret and very remote facility employing our highest technology and most advanced defensive systems. The nearest thing it could be compared to is the Americans skunk works in Nevada.

"Initial feedback on the tests indicates that the six prototypes were completely successful in all of their operational tests within the atmosphere, exceeding expectations in several critical areas, including particle weapon tests, maneuverability, and electronic warfare.

"Beginning in May, they will be tested in space, using special SSTO orbits that keep them well clear of the American space stations for the time being, although at that point their existence will become obvious to the Americans and their allies.

"Production builds have already begun in anticipation of a successful battery of space-based tests. This decision was made on my own authority, Mr. President, with input from Admiral Lu Pham and Sung Hsu, a leading manufacturing technologist who has spent years working with Admiral Lu.

"It became clear from their input that, barring any unforeseen catastrophic problems, we would be able to retrofit any minor adjustments to the units of the initial production run after analyzing and adjusting the design as required based on the atmospheric and space-based tests.

"I am happy to say, that based on the atmospheric tests we have just completed, there will be no alterations required. We expect to be able to produce five of these craft per month beginning in April."

Jien Zemin was ecstatic. This was precisely the type of report he had hoped for. He also respected and appreciated Hunbaio's initiative and risk in ordering the production runs. Success in the testing put him, and the program, in a position to make a tremendous difference in a shorter period of time, probably saving many weeks, if not months, on the schedule.

"This is excellent news, General. I commend you for own initiative..."

As he said this, Zenim turned and faced the video conference screen directly, speaking to Lu Pham who was attending the meeting from facilities in Rabaul.

"...and the use of your very capable employees...and I am speaking of you Admiral Lu...regarding the production schedule, Now, here is my directive.

"We shall not perform the initial space-based tests using the hyperbolic orbits you have described. The reasons for deleting these tests are not technical; they are political and they are military, and they are well worth the risk we shall take in doing so.

"Our sources in the United Kingdom and Russia indicate that the next American space station will be launched into orbit over the central Pacific in early to mid-May. Its presence there will be completely unacceptable. They have damaged us significantly in Australia with their Southern Star station. A similar presence over the central Pacific will allow them to accelerate their operations there.

"I am ordering you, General, to work directly with the PLA and see to it that the space-based test of Dragon's Spirit in May is a combat test. Intercept the new American station after it is launched.

"Plan immediate follow on missions against the Southern Star and Conception stations. I want them brought down, and I want their destruction to be as visible over Australia and America.

"In addition, I want production rates doubled by June so that it is we, the People's Republic of China, who exert complete control over space by July of this year and on into the foreseeable future.

"We shall see how the American leaders and those of their allies enjoy defeat and helplessness in space, just as they have sought to exert those same conditions on us.

"They shall soon find that we are not helpless...no, not helpless or defeated at all."

**May 21, 21:50 WST**

**800 yards outside of the outer perimeter fence**

**US Air Force Space and Missile Range, Central Nevada**

Lee Phillips was one of those Chinese-Americans who barely looked the part. Outside of slightly higher cheekbones and dark hair, he did not display any of the racial characteristics, particularly about the eyes, that would identify him as being of Chinese descent.

But that did not matter in the least. He was a third-generation Chinese-American who had been recruited into the services of the PRC intelligence apparatus by one of his cousins when he had traveled to mainland China in the mid 1990s as a young, aspiring engineering technician. While there, he worked for a large computer manufacturer that was setting up operations in the PRC at the time. It had not taken too much outlay of funds or entertainment by Chinese intelligence at the time to seal the deal. And it became apparent over the next several months that Lee was a “natural.” Between that time and 2004, Lee’s meteoric advancement within his firm in China had landed him so many stock options and resulting wealth that he had been able to return to America and retire at the ripe old age of 32 years old, well before the onset of hostilities, exactly as planned.

He had brought his new Chinese wife with him, herself a colonel in the Chinese intelligence apparatus, back to the West Coast of America, and they had played the role of American urban yuppies to a tee. Living 80 miles southeast of Sacramento in the Sierra Nevada Mountains in their multi-million dollar chateau, the couple had gathered data and transmitted it back to their masters in Beijing, either by courier or by secure, encrypted satellite transmission, while those devices were still available. That data had included critical information for the Chinese planners regarding the American mobilization effort and the computer technology advancements the Americans were making during the early stages of the war.

Once the satellites had been destroyed, Lee, his wife, and his entire team had been viewed as too strategic an asset to risk, and so their active work had ceased. They had not been activated even for the monumental operation the year before in Washington, D.C., when the American president, Norm Weisskopf, had been killed while presenting the Medal of Freedom to Stacy Urkut, an American woman who had been a hero of the American resistance of the Chinese invasion of Alaska.

That operation in Washington, D.C., had been a costly joint Chinese and Arab venture in which all of the operatives had been killed. It had nonetheless been successful in its immediate and primary goal of assassinating the strong-willed and insightful American leader who had led the United States through the darkest days of World War III.

But strategically the operation had failed miserably. China’s enemies in general, and the American’s in particular, had not been demoralized by it. To the contrary, they had rallied around the new President, John Bowers, who was turning out to be as strong a leader as Weisskopf had been.

“Where do they get these people?” Lee asked himself as he monitored communications and continued to watch through his night vision equipment the prominent rise in elevation, some 25 miles distant, behind which he knew the American space launch facilities were located.

“Bowers has not only energized the people past the death of Weisskopf, he has redoubled their efforts militarily in the field and pushed the American efforts successfully into space.

“Well, perhaps after tonight we can put a stop to that,” he muttered as he considered the other operatives he had working with him tonight.

Ten miles to his north and west, atop a ridgeline, he had his principal communications team. Upon seeing the flash of the launch, and its continued strobe-like effect made by the nuclear pulse technology employed by the Americans, Lee would wait until the spacecraft cleared that distant rise. He would then use his miniature transmitter to send an encrypted burst message to his communication team on the ridgeline behind him. That message would travel in a very short and tightly focused, line-of-sight beam to his people on the ridge, who would in turn transmit news of the launch using their sophisticated short-wave radio so that listening stations directly on the West Coast could then transmit the message on to China.

Two other Chinese-Americans who were operating the sophisticated 10-meter radio accompanied by a three-man Latino security team were located on that ridgeline at over 8,000 feet. The two Chinese operatives there had been in America for over 10 years themselves and had been assigned to him by Beijing after the onset of hostilities. They had helped him in various low-risk operations when he was gathering information during the early days of the war.

The three Latinos were very experienced in security operations. Each of them had been members of the military in their homelands of Nicaragua and Panama before “immigrating” to America across the southern border of the United States as a part of Hector Ortiz’s FTA smuggling operation.

Lee had met Hector only once, and had been impressed by the man who had created the largest Mexican NAFTA trucking company and ultimately established that company’s U.S. headquarters in Dallas, Texas. The entire operation had been nothing more than a very sophisticated front company for bringing Aztlan operatives and weapons into the United States for use in helping bring down *El Norte*. Hector had created unbelievable chaos and carnage across much of western America by using

his operatives to attack malls, infrastructure, manufacturing plants, and other facilities after the onset of hostilities against the mainland United States in that fateful March.

“Well, ultimately Hector was caught, tried and executed, along with most of his leaders and personnel,” Lee contemplated as he continued to think about his five team members up on the ridge.

“But the fall of his organization added to my own. Those three guys are good and are just what we need for this evening.”

Since coming onboard with Lee’s group, the Latinos had posed as immigrant workers at his chateau, using the time in training for field operations like the one tonight.

With a Stinger anti-aircraft launcher and four missiles, a LAWS anti-armor launcher and an M60 machine gun, he felt his team would certainly be able to hold out long enough to successfully transmit the required message when the time came.

And he was right.

**May 21, 22:02 WST**

**U.S Air Force Security north-central monitoring post**

**Outside the US Air Force Space and Missile Range , Central Nevada**

“I’ve got a contact Chief...no, wait...now it’s gone,” Specialist First Class Logan said as the rising sound of the approaching craft continued outside of their camouflaged position.

“Funny, but it was a clear read...just too short to pinpoint.”

As Chief Miller contemplated a reply that befitted any false alarms at this particular stage of the launch, Logan excitedly announced, “Now another contact! Definite transmission, 10-meter band, coordinates Delta-Bravo 23.5, Victor-Echo 55.”

The Chief wasted no time. All thoughts of any snide comment disappeared with this definite contact so close to the perimeter of the base. He immediately contacted the quick reaction team and reported the contact.

Three miles to the west, a heavily armed Kiowa helicopter and an Air Force Osprey tilt-rotor aircraft had been spooled up for the last half-hour in the event of any security need. Upon getting word of the transmission, these aircraft immediately lifted off and sped towards the coordinates on the ridgeline where Lee Phillips team was located.

The Kiowa was armed with a 25mm chain gun and a pod of direct fire missiles. Its detection and self-protection electronics were state of the art...and it soon found it needed them.

Eight hundred yards in front of the Osprey tilt-rotor aircraft, which itself was armed with a 40mm cannon mounted in a pod of the left side of the aircraft, a door-mounted .50 caliber machine gun on the right side, and carrying 18 heavily-armed Air Force security personnel, the Kiowa helicopter instantly detected the launch of a Stinger missile that was targeting it.

The small wasp-like helicopter made an unbelievably sharp turning ascent to the south, while dropping several bright flares to decoy the infrared, heat-seeking missile.

As this occurred, the Osprey began targeting the firing position of the Stinger missiles with its 40mm cannon. The third burst silenced the Stinger missile launcher and killed the Latino who manned it, but not before another missile was launched just as the Kiowa turned back towards the fight, having successfully eluded the first missile.

The second missile slammed into the side of the faired cowling covering the Kiowa’s engine, just below the main rotor and blew the helicopter out of the air. The main rotor itself came completely apart and spun off wildly in one direction while the burning hulk of the helicopter plunged to the ground and exploded.

With the onset of combat, the commander of the reaction team inside the Osprey called for reinforcements. Another reaction team had been dispatched and now approached the back side of the ridge. The first team’s Osprey landed approximately one thousand feet below the ridgeline and two thousand yards distant, and immediately came under fire from the M60 machine gun and LAWS that Lee’s personnel had set up on the ridge.

Desperately trying to buy time so they could disengage, Lee’s two remaining Latino personnel continued to provide covering fire while the two Chinese operatives packed up their shortwave radio and retreated to the opposite side of the ridge. As they began to make their way down the slope on that side, they saw the second U.S. Air Force reaction team approaching.

Unseen by the Americans, who were deploying and focusing on the reports coming in from the first reaction team regarding the location of the enemy firing positions, the two Chinese split up, shielded themselves from the advancing Americans using rock outcroppings, and took opposite paths along the ridgeline to try and evade capture.

Ultimately, the American reaction teams completely surrounded the two remaining Latinos in Lee’s team and killed both of them. In the exchange, two Americans were seriously wounded, along with the loss of the Kiowa and its two pilots.

Three hours later, one of the Chinese was located with infrared detection gear hiding in a crevice along the lower end of the ridge. As American personnel approached, he killed himself.

Lee and the other radio operator successfully evaded capture, having completed their mission of alerting the Chinese armed forces of the launch of the latest American mission into space.

**May 22, 02:15 local**

**PLA Space Launch Facilities**

**Central Mongolia**

The Colonel looked up from the display that he had just completed reviewing and addressed the commanding general.

“General, we have received a launch and attack authorization code from Beijing. Intelligence indicates a successful launch by the Americans of three nuclear pulse SSTO craft 15 minutes ago.

“Our eight Dragon Spirit craft are fueled and ready to launch. I will need your final review and approval to execute the orders.”

General Hsua’ba reviewed the information from the communications officer on his screen—the same information that the flight operations officer had just referred to. It was all as Colonel Zo had indicated. The time for launching and testing of the Dragon Spirit aircraft had arrived.

“You have my approval, Colonel. Order an immediate launch of our spacecraft and an intercept of the American space station according to our plan and based on this latest information.

“As soon as the spacecraft obtain orbit, have the mission commander, Colonel Le’dung, contact me for a final status report and any resulting command instructions.

“Inform the entire strategic missile forces assigned to this mission to begin their attack as soon as the American station comes within range and continue that attack throughout the engagement.

“Also, contact General Shaun at the Altyn Tagh facility and have him hold his four remaining aircraft in a ready condition. Indicate that those aircraft must launch within five minutes of my order.”

The General reflected on this momentous occasion. Although he had been concerned about General Hunbaio’s orders to make the space debut of these craft a combat mission, he understood full well the reasoning behind it. It was paramount that the Americans have no advance warning of the Dragon Spirit craft, and that their initial deployment occurs under the cover of China’s normal, and to date ineffectual, missile and kinetic energy attacks against American launches.

“Who knows?” the general mused. “Perhaps this time those attacks will prove effective and the Dragon Spirit attack can proceed immediately to the American Southern Star station.”

Either way, the General knew that confusion and surprise would reign amongst the Americans once they realized the true nature of the threat against them. It was clear to the General and to the entire chain of command, up to and including the entire Politburo and Jien Zemin himself, that it was paramount that this new American foray into space over the central Pacific be stopped, and their station over Australia be destroyed in this first combat mission of the Dragon Spirit spacecraft.

The General’s attention was attracted to the bright and simultaneous ignitions of four heavy-lift Chinese boosters on the displays at four different launch pads on the base. Although the digital display screens made them appear much closer together, the General and the entire staff in the operations center knew that each launch pad was separated from the other by over two kilometers.

Dual solid-fuel rocket engines, complimented by dual liquid-fuel motors, all working in concert in an SSTO configuration, would lift their payloads into orbit. In this case, the mammoth, heavy-lift vehicles would each carry a flight of two Dragon Spirit craft into orbit.

As the lift vehicles thundered up into the dark sky, the General anxiously awaited the successful insertion into orbit of the craft, and then the communication with the mission commander.

**May 22, ten minutes later**

**PLA Space Craft DS-001**

**Over Eastern Mongolia**

Colonel Le’dung reviewed the status of the spacecraft under his command as he prepared to contact General Hsua’ba back on earth. The status was good—all of his vessels had been inserted into orbit perfectly and were now in the prearranged formation that would allow them to join in the missile and kinetic energy attack on the American space station that had already begun.

The Colonel was proud of his nation’s achievement, and proud to have been given command of this initial manned combat mission against the Americans in space using the Dragon Spirit spacecraft.

And what wonderful spacecraft they were.

Each craft under his command contained a crew of four. A flight commander who also served as the pilot, a co-pilot who also operated defensive electronics systems, a weapons officer who operated the craft’s offensive weaponry, and a flight engineer who also served as a communications officer.

Each of the craft was 28 meters long and shaped in a single, flat airfoil design with two small vertical stabilizers, and a raised, faired crew compartment along the upper centerline of the craft that had space for two tandem seats that were positioned back-to-back with a small crew mess, bathroom, and sleeping quarters in between. They were coated with a continuous layer of polycarbon material on the bottom and across the front of their rounded noses for thermal protection during re-entry. The Chinese viewed that material as a pronounced improvement over the earlier American’s tiled carbon-

carbon material. The Chinese material was applied in a single sheet while being engineered to dynamically respond to the extreme heat of re-entry in such a fashion as to fully protect the spacecraft while making any thermal expansion seams and joints unnecessary.

The craft were powered by two compact nuclear fusion engines, which would allow the craft to operate either in space or as airborne aircraft once they re-entered the earth's atmosphere. Although not strong enough to lift the space craft into orbit, the two fusion engines did allow for significant maneuverability and speed within the vacuum of space. They also allowed the craft to attain a Mach six speed within the atmosphere once their orbital velocity had bled off.

The Chinese designers and the pilots and personnel who operated them also considered the weaponry the spacecraft carried to be the most advanced on earth. Two charged particle weapon booms, or cannons, were mounted in each airfoil, one on each side of the crew stations. They retracted into the upper surface of the craft for protection during orbital insertion and during re-entry. Each was capable of providing lethal, non-refracted energy bursts that were effective against non-hardened targets in space at ranges in excess of five hundred kilometers, and against hardened targets at ranges approaching two hundred kilometers.

In addition, each craft had two retractable, self-stabilizing 40 millimeter cannons for close-in fighting and eight prototype, long-range anti-aircraft missiles mounted in fully enclosed stations along the top of the airfoil. Those missiles were the latest innovation in the Chinese inventory, and had been designed specifically to be a standard part of the Dragon Spirit weapons load-out. They had been engineered to be able to operate either in space or within the atmosphere in keeping with the Dragon Spirit's mission profile. Each missile carried a 50 kilogram warhead, had a range in excess of 300 kilometers, and was capable of infrared, radar or stealth targeting.

In the stealth targeting role, the prototype missiles themselves carried an initial prototype version of a micro *ta shih* stealth acquisition and targeting system. The *ta shih* system consisted of sophisticated passive electronic sensing equipment coupled to the latest bi-static radar, multi-static radar, and a revolutionary scalar system that were programmed into the missile's targeting circuitry. The entire system had been discovered by Chinese scientists several years earlier and then developed to the point where they were capable of acquiring and targeting American stealth aircraft. Two years ago the system had gone into production deployment and had proven very effective. It had given a significant boost to the war fighting capabilities of Chinese forces and their allies to whom the technology had been sold and licensed.

...and it had come at a time when the overall war effort of the Chinese had peaked and then ebbed. The system was proving to be a significant bright spot that was preventing the defeats and losses the CAS was currently experiencing from turning into total disaster.

The advent of the micro version of the *ta shih* system represented a breakthrough in miniaturization for the Chinese that would soon become standard issue on most Chinese aircraft as they were mass produced and retrofitted to older missile systems, or incorporated into new designs.

"Perhaps as we mass produce this particular system and deploy it into frontline, offensive use, it will help us turn the tide of war back in our favor," the Colonel thought.

"The first test of that hypothesis is going to come in a very short time," he continued to himself.

At that moment he received the "green light" from his communications officer indicating that it was now possible to contact General Hsua'ba. As he prepared to do so, and as he considered the awesome firepower and technology at his disposal, the Colonel couldn't help but have a final thought.

"In their own words... the Americans will never know what hit them."

## Chapter 38

*“Not gold, but only man can make a people great and strong; men who for truth and honor's sake, stand fast and suffer long.” – Ralph Waldo Emerson*

**May 23, 23:32 local time**

**Inside the main cave**

**Muri Redoubt, Central Cape York Peninsula**

It had been seven months since the small group of Muris led by Nabalco and his wife Ulura had come to this hidden spot from the Gregory Mountains. The twenty-seven people of his company had swelled to over forty souls since that time, but it had not been without severe troubles and difficulties.

As he had foreseen, back in the fall, the fighting between the western forces led by the Americans against the Chinese, Indian and Muslim forces that had occupied Australia had spread to the northwest and overrun the Gregory Mountains. The very spot the clan had been using for sanctuary during much of the war had been engulfed by several pitched battles as the western allies slowly pushed the Asian forces back in that area.

“We would have all either died or been captured and mistreated by the Chinese and Indians had we stayed,” Nabalco thought as he reflected on all that had occurred.

As a leader in the clan and as a “dreamer”, he had experienced several visions regarding his people. Invariably, when he had these very vivid experiences, the dreams came true, and what they were experiencing now was no exception. He had seen the battles spread to engulf the Gregory Mountains rendering their former hiding places unsafe. He had urged the clan to split up into much smaller groups and move to safety in the north, each group moving toward small enclaves that had already been prepared and to which routes of escape had already been planned.

Although all of the groups had moved, six of them had elected to do so together, hoping to find another larger hiding place somewhere in the wilds of the Cape York peninsula.

That particular effort had failed and led to disaster.

As the Chinese and Indians were pushed back, a substantial portion of them were cut off by the American, Australian and other western allies' advance. Over 250,000 enemy troops and almost as many Asian civilians who had been brought in to settle this portion of Australia but who were now escaping to the west had become bottled up just north of the Gregory Mountains. Just as the Muris had done before them, they began moving further north in the hopes of escaping destruction. Their commanders sought the protective umbrella of Indian and Chinese air cover on the northern half of the peninsula as they came closer to their bases in New Guinea and on the islands to the north of Australia that they still controlled. They hoped to either be reinforced and start an offensive against the Americans' flank...or be evacuated.

As this large force moved to the north through the lands to which the Muri had fled, they had discovered the larger grouping of Muris and slaughtered most of them, taking captive those they desired or felt were capable of toiling mercilessly for them as they moved to the north.

The western allies were not taking lightly the presence of this large enemy force on their flank. As a result, Nabalco thanked the heavens that his clan was not directly in the path of the Asians. The Americans were bombing their enemies and hounding them relentlessly...wanting to force them to surrender or to annihilate them in order to remove the threat. Anything close to the Chinese or Indian forces was apt to draw the advanced missiles from which the Americans produced their Hail Storms, or to draw fire from their other precision weaponry.

Despite that precision, if you were an aborigine or other refugee in hiding near an enemy camp and they moved in your direction, those weapons ...or those of the enemy...would not distinguish between you and a actual enemy intended target.

The Cape York peninsula had thus turned into a major battlefield in the war and many of the Muris had been forced to flee their smaller sanctuaries in order to get out of the way of the fighting when they could...and to inflict casualties on the enemy when they could not, in an effort to separate themselves or do as much damage as possible before dying or being captured.

Some had found other safe places or joined with other groups who already had. That is why Nabalco's group had grown to its current size, and this was a concern for Nabalco. Educated in engineering and having been fully integrated into the Australian society before the war, Nabalco understood the capabilities of modern military forces. He knew that the larger his group became, the more likely they would be discovered.

As he contemplated these issues, he noticed that “Tex”, one of the original non-aborigine refugees his group had taken with them away from the Gregory Mountains, had hobbled across the cavern to the small fire and sat next to it.

“Tex, isn't it a little late? Don't you have watch very early in the morning?” Nabalco asked.

Tex turned to look at Nabalco. His understanding and his ability to communicate and move about had improved dramatically over the last four or five months. When he had first come to the clan he could barely speak intelligently, and he could hardly walk due to the stiffness in, and damage to, his left knee and ankle, and because he was missing half of his foot on that leg. In addition, his right hand was horribly misshapen, the thumb having somehow healed completely out of joint while the index finger had clearly been badly broken and then healed that way too. Several times during their escape deeper into the Cape York Peninsula, Tex had literally had to be carried to where they were going.

But, as time passed, particularly in the first two relatively peaceful months, understanding began creeping back into his mind and his vocabulary and his pronunciation improved. This led to the reason he was called "Tex" by the members of the group. His accent sounded like a western cowboy, and the name had been a natural.

Ulura had looked closely at Tex's leg, foot and hand. She had some skill in medical treatment and there were others amongst the group who could help. For the missing portions of the foot, there was nothing that could be done. Heating and soaking the joints in the leg, soaked in various herbal potions, and then exercising them, had eased the stiffness somewhat in Tex's walking, but his movement was still labored and, depending on the terrain, certainly not sure.

They had fared better with the right hand.

After closely examining it and with the concurrence of a former emergency medical technician who was a part of the group, they had re-broken the index finger and set it. It appeared to be healing nicely. The ligaments and tendons around the thumb had already healed in the out of joint position before Tex came to them, so getting it back into joint had been very difficult. Eventually, through therapy and through staged pressure the thumb had been coaxed back into its normal place, but it was unlikely that he would ever have full use of it. The best that could be said was that it at least could function in a near normal fashion.

Amidst all of this Nabalco had been impressed with the attitude and drive of this young man. He was clearly not Australian, but he had been raised well. He wanted to carry his own weight and he had volunteered, as best as he was able to communicate it, to begin doing work around the camp, up to and including taking his turn on watch.

"Mr. Nabalco, sir, I've already slept four hours this evening and my dreams were troubled...so I got up to tend the fire before going out to look at the stars before my watch."

Nabalco considered the young man's words...and he was a young man, probably in his early to mid twenties...and asked him about his dreams.

"Tex, what troubled you about your dreams? Tell me what you experienced."

A look of frustration crossed Tex's face and he looked at the dirt before responding.

"That's just it...I can't remember my dreams any more than I can remember anything about myself. They were just troubling."

As Tex stopped speaking and tossed small twigs into the fire, Nabalco considered his comments. It was not unusual for an individual to forget his dreams, but this young man was troubled by so many things...his injuries, his identity...he certainly didn't need more weighing him down.

As he got up and approached Tex, and as he considered his own thoughts, Nabalco decided that they both could benefit from the night air and clear skies.

"Well, Tex, why don't we both walk out under the stars...perhaps we can find some form of answer or comfort for you...and for me, too."

**May 24, 00:07 local time**

**Outside the main cave**

**Muri Redoubt, Central Cape York Peninsula**

The stars were beautiful as Nabalco and Tex sat near a cliff and looked into the night sky. The air was clear, only a few clouds drifted overhead. The major fighting was seventy miles or more away to the east. Distant flashes could be seen along the horizon in that direction from time to time, but they did not disturb the solitude there where Nabalco sat with his refugee friend.

They had been watching the night sky for twenty minutes and Nabalco was content to let the young man quietly look at the stars and use the quiet, the beauty, and the majesty to help heal his immediate worries. He knew it was good medicine for the soul. Nabalco was applying the same medication, meditating with the backdrop of that majesty providing the foundation for deeper thoughts, and hopefully enlightenment.

As they watched, Tex began humming a tune to himself. It was one Nabalco had never heard Tex hum before, and did not recognize it.

"What's that song you're humming Tex?" he asked in a whisper.

For a moment Nabalco was sorry he had asked because Tex immediately stopped and did not answer right away.

"I don't know, sir. It just came to my mind. I think I can remember a few of the words...something like,"

"Oh the stars shine bright, each and every night ..."

Suddenly, far to the south, well above the horizon, a bright flash lit up the sky. Both Tex and Nabalco averted their eyes from the brief intensity, which cast shadows across the landscape.

It was followed by other similar flashes and stabs of red and blue light...crossing each other...reaching out. Interspersed in the beams were what appeared to be smaller lights moving with great speed, also crossing each other's path. Deep rumbling like thunder soon began to be heard coming from the cloudless sky to the south, forming a backdrop to the light show going on above.

The display went on for some moments. Both men...along with millions of others across Australia...were captivated by it. On several occasions there were clear detonations, brief flashes of bright light mixed with orange and reddish hues. These flashes were not as bright as the initial, larger flashes, but clearly they told of man-made objects meeting very violent ends.

Finally, there were fewer and fewer stabbing beams of light and detonations. Just as it seemed that the display was over, there was one final detonation.

And this one did not go out. It remained visible as it moved across the sky, finally appearing to catch fire as it arced over towards earth...leaving the unmistakable track of a larger object entering earth's atmosphere and breaking up as it did so.

"This is not good news I fear," said Nabalco.

He had heard stories of the American exploits in space. From his infrequent communications regarding news reports on the progress of the war, to stories told by passing refugees or allied scouts, he had heard of America's success in launch of two space stations into orbit. One of those, the Southern Star he believed they called it, was over Australia. There had been reports of the imminent launch of a third one over the Pacific Ocean.

"Tex, I am afraid we are witnessing war in space. Apparently the Chinese are attacking an American space station orbiting over Australia...and by the way those pieces are falling to earth, I am afraid they have succeeded in severely damaging or destroying it.

"The way those pieces are falling to earth seems so familiar somehow."

Tex was watching in silence, listening to Nabalco. At the mention of the pieces falling to earth being familiar, a memory flashed into Tex's mind. It was just a brief thought and it was over quickly, but he remembered seeing the same type of thing himself...years earlier...and a name.

"Yea," he said slowly as the thought was verbalized, "It's just like the Columbia falling to earth."

Nabalco quickly looked at Tex.

"Yes Tex, that's exactly it. It is just like the shuttle Columbia disaster. It's amazing that you remember that...can you remember any more?"

Sadly, Tex shook his head. It had just been a brief flash of a memory...outside watching the sky when it occurred. Just like tonight, but in the morning with...with...he just couldn't remember who he had been with. But he did remember seeing those bright, fiery pieces entering the earth's atmosphere, just like these...except he was sure that there were a lot more pieces in this instance.

"No...no, I just remembered for a second seeing those pieces falling to earth while I was outside watching the stars. And the name...nothing more."

**May 26, 09:30 local time**

**Headquarters, 15<sup>th</sup> MEU**

**U.S. Marines Corps, Brisbane, Australia**

Colonel Warmont considered Master Sergeant Campbell as he prepared to issue new orders.

The Master Sergeant, a certified American hero, whose latest enlistment had expired four months ago, had immediately "re-upped" at that time with no request for any intervening leave. Despite his status, and despite the resulting option that he had to return home at almost any time he chose, Leon Campbell had instead elected to remain in the war zone and was clearly in this fight to the end. The Colonel had a tremendous amount of respect for that and what it said about the young man.

Campbell had been attached to the Colonel's staff as a special "operative" within a month of the Colonel's arrival in Australia after the successful flanking invasion into Brisbane, north of Sydney. Those operations had gone very well, but they had also been intense and bloody. The Chinese, Indian and GIR forces that were occupying Australia, along with the massive influx of their citizens who were settling it, had proven resourceful and tough in resisting the three MEUs and other allied forces that had invaded. If for no other reason, they had shown it with their massive numbers and their willingness to spend those numbers in massive human wave assaults on his and other allied positions.

"When you couple that strength and resourcefulness with some of their technological innovations and weapons systems, you are left with a very dangerous foe," the Colonel reflected.

Campbell's attachment to the Colonel's staff had had been the result of upper command's approval of a special request by the Master Sergeant to search for a fellow Marine whom Campbell felt somehow was still alive although the official record indicated that he was presumed dead. The Colonel felt that the Master Sergeant's request, after intense combat in Brisbane, had been granted by his superiors in the hopes it would keep the hero out of harm's way so he could survive the war.

The Colonel himself would not have countenanced such a special "mission". Campbell was too valuable as a combat veteran, despite his notoriety and previous, unquestioned heroic service, to not

be stationed at the front where he could be most useful in fighting the enemy and helping to save other American lives as a result of that very experience. In addition, though the Sergeant was personally dedicated to finding his fellow Marine, it was also clear that he would follow orders without question and had no qualms about being in the line of fire.

But, orders were orders, and the Colonel had accommodated the Master Sergeant...all the while maneuvering so that he would ultimately be in a position to issue new orders to Campbell.

Now that time had come.

But before he issued the orders the Colonel couldn't help but reflect on the circumstances surrounding the Master Sergeant's quest. The Colonel had taken some interest in the case, had come to understand that the fellow Marine for whom Campbell was searching was a Captain Billy Simmons, a friend of Master Sergeant Campbell with whom he had entered service at the outbreak of hostilities. Simmons had apparently died fighting the Chinese as they pushed allied forces completely out of Australia. The Colonel had watched the film of the crash of the Captain's AH-1Z Viper helicopter after it took off from the deck of the doomed U.S.S. Tarawa.

"I can't see how anyone could have survived that crash," the Colonel thought again to himself as Campbell stood at attention in front of his desk.

All of this flowed through the Colonel's mind as he returned the Maser Sergeant's crisp salute.

"Master Sergeant Leon Campbell reporting as ordered, sir!"

After allowing Campbell to hold his salute for an instant more, the Colonel responded, "As you were, Master Sergeant Campbell. Please have a seat. Make yourself comfortable."

As Campbell sat down, the Colonel continued.

"Well, Master Sergeant, how has your search progressed, any success?"

Leon reflected upon his efforts of the past few months briefly before responding. Colonel Warmont had been very patient with him, and very understanding. This was only the fourth status report he had been requested to give since being attached to the Colonel's staff over four months ago.

"Colonel, first let me thank you for your help in this endeavor. It means a lot to me, and I know it means a lot to other Marines and service personnel. The entire search has been a testament to our nation's commitment to not leave its people behind if there is any chance of finding them.

"Having said that, although I have had a few leads, nothing has really panned out.

"Apparently, outside of those already captured, we were forced to leave behind a relatively large number of other personnel in the retreat, perhaps as many as seven hundred. Some were fighting and cut off...and I know what that can be like. Others were wounded or otherwise injured.

"What became of those people varies. Many were later captured, some died fighting, and some took up with the local population and became refugees. A few took to the woods on their own.

"In my own efforts, I have been able to identify thirty-three personnel and update their specific disposition. Of those, ten died before our return, fourteen are apparently still in captivity amongst our enemies, and nine have been found alive and are being debriefed before returning home.

"But specifically regarding Captain Simmons, I have found nothing definitive."

The Colonel considered the report.

"Well, Master Sergeant, you have done a good job, and a thorough one. I am sorry you have not been able to find more definitive information regarding Captain Simmons...I know the two of you were close before the war and kept track of each other during it. I mourn his apparent loss, but applaud your efforts on his behalf...and on behalf of his parents and loved ones.

"Perhaps some day, because of your efforts, or due to events we can't foresee at this time, more information regarding his ultimate fate will become available.

"Now, the time has come to move on. I have new orders for you.

"You are being assigned to a large combined task force that will be penetrating the Cape York Peninsula and either defeating, destroying, or otherwise driving enemy forces from that area.

"We have an entire Marine Expeditionary Force (MEF) forming there now, along with elements of several U.S. Army Divisions and a combined force of Australian, Philippine, and Japanese forces.

"It's going to be a major effort in that sector while our other offensives continue to proceed into the interior and along the southern coast. We just cannot allow the large enemy force that has retreated onto Cape York to retain a position behind us on that flank. As we proceed to the east in the interior such a force would present a very real danger to our entire operations in northern and central Australia. To that end command has requested as many seasoned veterans as we can muster to be assigned to the force – men who are capable of working and fighting in the dense foliage and rough terrain for which that the inhospitable area is known. And that is where you come in Master Sergeant.

"I have requested and received permission for you to be in the vanguard, path-finding elements of that force, in command of a group of scouts and snipers who will be assigned directly to the Regimental Commander who is spearheading the advance.

"Are you up to that challenge, Master Sergeant?"

Leon did not have to think about his response. His training, his disposition, and his commitment to his nation and its freedom left but one clear, unequivocal answer.

"Yes sir! When do I mount up, sir?"

**May 29, 09:30 EST**

**Situation Room**

**The White House, Washington, DC**

The President of the United States, John Bowers, soberly scanned the faces of his National Security Council. This was a meeting that combined both of the sub-councils of that group that had been formed by the late and former President Weisskopf at the outbreak of the war. Those two sub-councils were the National and the International groups.

Several members sat on both councils, while others were involved with the specific areas where their own agencies and responsibilities were more focused. In this instance, due to the nature of the threat and the potential impact to both the CONUS and American and allied activities in the rest of the world, the President had felt it necessary to convene both groups together.

“Okay everyone, I have asked Bill to brief us on the extent of the damage we have suffered in the recent attacks and where we stand right now.

“I know that there are various departmental and agency responsibilities associated with aspects of the attacks and their impact...and that any number of individuals on this council could render the briefing. However, in talking with the Secretary of Defense, the Chairman of the Joint Chiefs of Staff, the Directors of Homeland Security and the CIA and others, we all felt that the National Security Advisor would be able to provide the best overview without requiring several briefings.

“We will break down into specific departmental and agency discussions after the briefing.

“Bill, go ahead.”

Bill Hendrickson surveyed the grim faces of those gathered around the long conference table in the situation room. The principle members of the cabinet and other agencies represented on the full National Security Council were sitting at the table, and their aides were behind them along the wall.

The topic was the ferocious attacks the Chinese had mounted on the just launched USSS Admiralty space station that had been slated for positioning over the western Pacific Ocean, and the ensuing attack against the USSS Southern Star over Australia. After those attacks it was feared that the action would move rapidly against the USSS Conception over the Continental United States.

The news was not good...but it was better than it might have been. Hendrickson began.

“Quite frankly, ladies and gentlemen, what I have to tell you today is a message of bad news...but it is not as bad as it might otherwise have been...and mingled in with the decidedly bad news are the seeds of future success.

“As you know, at approximately 0300 hours on May 22, the Chinese commenced an attack against the launch vehicles that comprised the USSS Admiralty space station group. This occurred after the launch of the station and its accompanying space craft. That launch had been observed by a group of enemy operatives who had infiltrated the launch range in Nevada. Although our security forces at the base were able to discover, interdict and destroy this group, they did not do so before the enemy had communicated the time of launch by short-wave radio.

“We are convinced that this communication is what allowed the enemy to coordinate their ensuing attack. That attack was made by a total of twelve spacecraft that had been launched from China with what is obviously their own SSTO configuration.

“The attack was coordinated with a large wave of missiles and kinetic weapons against which the USSS Admiralty was in the process of defending itself. Though these types of attacks cannot be taken lightly, in the past, our space station groups have been able to rather handily defeat them. They were in the process of defeating this one as well, but we now know that the Chinese were using the attack to distract the Admiralty group and mask the approach of the manned Chinese spacecraft.

“...and the Chinese succeeded in that purpose.

“They launched eight spacecraft initially against the Admiralty and they came in behind the wave of ground-launched kinetic weapons and missiles. These spacecraft were highly maneuverable and launched their own long-range missiles at the Admiralty. While the Admiralty was engaging the ground-launched and space-launched missiles and the ground-launched kinetic weapons, the Chinese spacecraft engaged our forces with their primary weapons. These were some type of directed energy weapons with which they began targeting our spacecraft at a range of several hundred miles.

“As the range closed, the effectiveness of these weapons became more and more telling. While our people were staving off the kinetic weapons and missiles, these craft approached to within three hundred miles where their energy beams began to burn through the structure of our own craft.

“Soon after that point, our own lasers began to damage their craft, and our own missiles began to destroy the Chinese craft. But by that time the enemy had come closer and were attacking from fairly widely divergent directions and there simply was not enough time to defeat them all. In the end, the Chinese penetrated to close range and pressed their attack with what appeared to be self-stabilizing 30 or 40mm cannons. Once they came that close, they were to near for our nuclear tipped missiles to be employed. The few remaining undamaged lasers on the Admiralty simply could not destroy them all before the Admiralty group itself succumbed and was completely destroyed.”

“Completely destroyed?” asked the Secretary of State.

“Were there no survivors?”

Bill glanced down for just a moment before answering, but then looked up and soberly addressed the United States Secretary of State's question while speaking to the entire group.

“No, Mr. Secretary, there were no survivors. But, the Chinese attack did not end there.

“During the attack on the Admiralty group, our forces were able to destroy four of the Chinese craft. The remaining four Chinese craft were then tracked by land and sea-based systems, and ultimately by the USSS Southern Star as they made their way to the south, towards Australia. En route, they were joined by four more similar spacecraft that the Chinese launched. The entire reconstituted wing of eight spacecraft then proceeded to attack our Southern Star Space Station.

“Again, this attack was accompanied by a massive wave of kinetic weapons and missiles which the Southern Star had to deal with. Behind this attack came the eight Chinese craft.

“Using secure data links, our people over Australia had observed and listened in to the earlier attack against the Admiralty and they had time to prepare themselves accordingly. The Southern Star had quickly developed a plan to target the Chinese craft earlier with some of their nuclear tipped missiles while using the remainder to counter the ground-launched attacks. This plan proved more effective. They also had come up with a plan for close-in defense that included new fields of fire for the lasers that took into account the manned, maneuvering spacecraft. This too proved more effective.

“In the end, all eight of the Chinese spacecraft were destroyed. Tragically, although seven of the personnel onboard the Southern Star were able to evacuate into one of the corvettes and detach themselves safely from the rest of the station, the station itself was severally damaged. A final attack by the last remaining Chinese craft ended with that craft impacting the Southern Star itself. The force of that impact forced the incapacitated Southern Star into an erratic and highly unstable orbit. While there is some question as to whether the space station would have been able to remain aloft after the attack in any case, the impact of this final attack sealed its fate.

“Early that morning, at 00:27 hours, the USSS Southern Star entered the earth's atmosphere at a steep angle and began to break up. What was left of it after the heat of re-entry and its own breakup crashed into the Indian Ocean to the west of the Australian coast.”

As Bill Hendrickson paused a moment to see if there were any comments, the new Chairman of the Joint Chiefs of Staff, Ben Ryan, interrupted at this point.

“Bill, excuse me for perhaps getting ahead here, but I know we were able to get a fix on the launch locations of the Chinese spacecraft. The Admiralty and the Southern Star, along with other assets, got a fairly good fix on the first group of enemy spacecraft as they came after the Admiralty, and then on the second group as they joined in to attack the Southern Star. From that data I know we determined the location of two primary launch facilities, as well as information regarding the manufacturing locations of these new spacecraft.

“Could you brief the rest of the group on the outcome of our operations against those facilities?”

Bill Hendrickson had planned to give this briefing later in the meeting, anticipating a long discussion on the attack itself. But he already had the associated information loaded into his hand-held computer and could quickly move his own time table forward.

“Admiral, I have that information right here if you will give me a second.”

Utilizing the hand-held computer, he quickly reviewed the pertinent information.

“Using the Admiralty, the Southern Star, certain ground and sea-based assets and NRO assets, and using some very high value and critical HUMINT assets inside China, we were able to narrow the launch facilities down to the two locations. The Chinese are manufacturing and using prototypes from one of those locations and are starting up full production manufacturing facilities at three other locations on the mainland.

“After receiving National Command Authority, the Joint Chiefs ordered immediate cruise missile strikes on all of those locations. The U.S. Air Force and U.S Navy participated in the attacks the next day. Afterwards, we used NRO assets in the form of three SR-77 aircraft, to attempt a battle damage assessment.

“Sadly, we discovered that the attack had caused very little damage to the two launch facilities, and only moderate damage to the three manufacturing facilities that the Chinese were ramping up. In finding this out, we lost two of the SR-77 aircraft. The launch facilities are very heavily defended by the latest Chinese anti-aircraft, anti-missile, anti-stealth, and anti-ballistic missile defenses. The manufacturing facilities were not as heavily defended but the imagery we did obtain during the BDA indicates that they were beefing up those defenses even as we were attacking them.

“A second, more major coordinated operation against the facilities was conducted yesterday utilizing two dozen of our conventional ballistic missiles and over one hundred of our best cruise missiles. Three of our new prototype unmanned, hypervelocity recon aircraft went in right behind the attacks and were able to do a fairly comprehensive BDA.

“We are confident that we moderately damaged the launch facilities, and severally damaged the new manufacturing facilities. In fact, two of those manufacturing facilities were completely destroyed...but we are also quite sure that the prototype manufacturing facilities and the launch facilities are not out of commission and the Chinese are strengthening their defenses.”

This information was new to most of the participants in the meeting. Outside of the direct chain of command associated with the missions which included the Chairman of the Joint Chiefs, the Secretary of Defense, the National Security Advisor and the President, the others were unaware of the most recent attempts to destroy the Chinese facilities that were producing the new Chinese spacecraft.

As Bill Hendrickson again paused, several voices were raised to make points regarding the attacks and to raise concerns.

In the midst of this, the President caught the gaze of Talbot Johnson, his Chief of Staff and nodded his head. At that gesture, Johnson held up his hands and quieted the various conversations that were growing in volume in the conference room.

"Listen everyone, this is a critical issue...but we also have several other critical issues to discuss this morning so we have to get through this quickly.

"Mr. President, did you have some direction at this point?"

The President stood up and paced back and forth behind his chair before responding.

"Yes, thank you, Talbot.

"As regards this issue, I can categorically state we are determined to continue to attack and ultimately destroy the Chinese bases and facilities associated with these new spacecraft...and to re-establish our presence in space over Australia, the Pacific and elsewhere.

"There are significant plans underway to accomplish this, both in terms of launching new, stronger space station groups and in terms of using assets already in space."

The President turned to the individual who represented the newest position that had been added to the Joint Chiefs of Staff. During the preceding eighteen months, as the United States had contemplated its planned activities in space, and the breadth of those activities, a new command had been created, The United States Space Command. At that time, General Laramie Wilson had been selected by the President to lead that command in a top secret meeting that had involved all of the other Joint Chiefs, the Secretary of Defense, the National Security Advisor and the President. The Vice President had also been apprised of the appointment. It had been a temporary, one-year appointment and Wilson had served in secret, bringing in various general officers and senior level officers to serve with him. After the launch of the Point Conception Space Station and the Lewis and Clark II expedition, the appointment had been placed before congress which had quickly approved the creation of the new service and the appointment of its chief. After several briefings, the congress had recognized the necessity for the new military service because of the strategic nature of its responsibilities, because of the expected rapid growth of that command and because of the critical nature of its ultimate interface to all other earth-based commands.

For himself, General Wilson had risen through the ranks in the Air Force, where he had started as a pilot with the Strategic Air Command and risen to command first Carswell Air Force Base in Texas, and then later Mountain Home Air Force Base in Idaho. When major hostilities broke out the General had requested a combat command. His request was granted and he was given the command of all U.S. Air Force equipment and personnel in Central America. Two years later, as fighting raged throughout Central and South America, the General's area of responsibility had been expanded to include all of South America.

His planning and leadership had proven exemplary and upon the recommendation of the prior Chairman of the Joint Chiefs and the Chief of the U.S. Air Forces, he had been selected by President Weiskopf as the primary candidate for the head of the USSC. President Bowers had made it official and named him to the spot and then seen him confirmed by Congress in that position.

Now, as the President turned to him for the briefing that he had been asked specifically to prepare for the military and civilian leadership of his nation, the General contemplated the importance of what was transpiring. In addition to the newer, heavy corvettes and frigates that the United States would be launching into space from both their Nevada range and the new facilities that had been completed at Vandenberg Air Base on the west coast, the General couldn't help but contemplate the imminent return of the USSS Gaspra and the USSS Ida from the asteroid belt.

"General Wilson," the President stated, "would you proceed with your briefing regarding plans for Operation Dominant Oversight and Operation Heavenly Hammer?"

**June 2, 21:39, local time**

**Presidential Retreat**

**Mysore, India**

As President KP Narayannen waited for the meeting to start, he contemplated the events that had led him to this place and this time. He never expected thing to go as they had, and yet here he was.

He had to admit to himself that much of his discomfort was a result of his own choices. Although it had gone against his better judgment, he had been caught up in the allures of power and influence and had willingly set himself and his nation on the course that had led to war.

Throughout the 1980's and 1990's India had been walking a tightrope...forced to deal with powers with which she did not feel particular affinity as a result of a desire to keep powerful adversaries at bay, particularly in Pakistan. This had led to the Americans, who were seeking to use

the Pakistani's as a balance against Iran, to funnel more and more materiel and technology into Pakistan... a totalitarian state that was strong in its militant Islamic leanings.

"Why hadn't the Americans seen back then that we here in India, with our republic and freedom, were a much better fit for their strategic goals in this region?" the President asked himself.

But such questions were moot now.

Despite some attempts by the United States at normalization during the "War on Terror", the Indians had also been courted first by the Russians and then by the Chinese... and these efforts were not mere flirtations, they were substantive and major economic and diplomatic proposals which the Indians could not ignore. The promise of prosperity and power, economic power, had swung the pendulum towards the Chinese in 2004 as joint economic summits produced joint statements by both nations regarding their intent to use their large, cheap labor pools to their mutual advantage.

With the creation of the Siberian Economic Development Treaty and the triad of Russia, Indian and Chinese exclusivity in that endeavor... the real stage had been set.

America had responded with tough economic measures and the Chinese and Indians had ultimately created the Coalition of Asian States, which expanded economic ties to formal military alliances and war had ensued.

Narayannen had not relished the thought of war with America... had thought he could steer India away from direct confrontation and allow China to do all of the heavy lifting. But he had been wrong.

China had delivered a devastating blow to the Americans that March and as the fortunes of war went well... more and more pressure was placed on India to secure the southern front in the Indian Ocean and to eliminate the American presence there, particularly on the island of Diego Garcia.

Using Chinese technology, augmented by Indian engineering and planning, the Indians had used their own two carriers and their ample air force to fight a successful campaign against the U.S. 5<sup>th</sup> Fleet that led to the capture Diego Garcia and driving the Americans out of the area.

Later, a successful Indian, Chinese and Greater Islamic Republic invasion of Australia had occurred which ultimately led to the occupation and pacification of that entire continent.

During those days, although the Indian President continued to harbor secret misgivings, the temptations of power and basking in the glory of victory were almost impossible to resist... and KP Narayannen knew that he had reveled in their success, and relished their growing influence. He had almost reached the point where he believed that there would never be any negative consequence to him personally or his nation as a whole.

Particularly as Siberia declared independence and the Indians and Chinese helped them to expel the Russians from their borders. Then, as the Chinese successfully invaded North America and took the American oil fields north of the arctic circle, it appeared as though either a negotiated settlement to the war, or the actual defeat of the Americans was imminent.

But then had come the devastating defeats near Anchorage, outside of Tel Aviv, and at the southeastern gates and suburbs of Moscow. And what defeats they had been!

The allies had employed new technology in their so-called Hail Storm missiles and had continued to improve them and add to them in the eighteen months since. Their own version of supercavitating torpedoes were now deployed, not to mention their continually improving efforts in space which had played such a pivotal role in the ongoing fight more recently.

Despite the recent downing of two of the American space stations by new Chinese spacecraft, the war effort was not going well. CAS forces were being pushed back on almost all fronts where they were in direct contact with the enemy. In Australia, allied forces had cut off a large force on the Cape York Peninsula and had pushed CAS and GIR forces back in the interior to near Alice Springs.

In the Mid East, Allied forces pushing north out of the Sudan had joined together in Egypt with forces emanating out of Israel and were now pushing to the west towards Libya and to the south along the Nile towards Ethiopia. Allied forces had also cleared all of Israel, Syria, and Lebanon of GIR and CAS forces, pushing far to the north into Turkey where they had been joined by Russian, European and American forces sweeping down from the north. The heart of the GIR, the former nation of Iran, was being invaded on two fronts, and the last he had heard, the oil refinery city of Abadan had been taken on the coast and Ahvaz, to the north, had fallen only three days later. The allies had been stalled on the northern border of Iran by fierce resistance, but were now advancing up the Dex Revier valley in the south in a push through the mountains towards Qom.

The situation was equally grim in Central and South America and in Africa. What had appeared to be almost certain victory had been turned into the prospect of a slow and methodical defeat over the last eighteen months and the Indian President now felt that old feeling in the pit of his gut, the feeling that created such anxiety and foreboding. It was a feeling that implied a sense of doom for his country, for his plans, and for him personally.

A note he received three weeks earlier through back channels had not helped. It was from Fred Reissinger, who was now the Vice President. It had been short and direct.

*"President Narayannen, America has not forgotten the promise that our late President Weisskopf made to you regarding your actions in the Indian Ocean. You shall yet be held personally accountable by the United States when you are finally brought to justice."*

KP Narayannen believed Fred Reissinger. He had met the man on several occasions and knew that the statesman meant exactly what he said. The Americans had not forgotten.

The only hope that the Indian President saw lay in the desperate course of action he would be embarking on today. He had called this very private and very secret meeting of his most trusted advisors and leaders in the government for just that purpose. He knew he had to be extremely careful, but he also knew he had to act if he had any hope of avoiding the retribution he was now certain would ultimately be visited on his nation...and upon him personally.

"Ladies and gentlemen, thank you for responding to my request so quickly and so discreetly.

"I know each of you share my concerns concerning the direction the war effort has taken and the potential future it bodes for our nation. Out of that concern, we are meeting today to develop a course of action that will spare us the destruction we may otherwise face as a people.

"In that regard, let me be direct. The Americans and their allies are winning...and they are winning decisively. I am convinced that it is now only a matter of time before the fighting and devastation they are wreaking on distant places are visited upon us here.

"We must remain very discreet, and we must move forward cautiously and with great care. But I believe it is time we face up to reality and reach out to the Americans in an effort to shorten this war and avoid the worst for our people and ourselves!"

## **June 2, that same time**

### **Presidential Retreat**

#### **Mysore, India**

Ambassador Buhendra Gavanker had been in Mysore less than a day, having arrived yesterday afternoon. What would normally have been a magnificent opportunity to enjoy one of India's most historic sites, was replaced by cruel necessity with the strict business at hand, which was being conducted in absolute secrecy. There would be no enjoyable or leisurely tours of the Maharajah's palace while he was here, and he would be leaving to return to Siberia tomorrow morning.

Upon arrival at the presidential retreat, Gavanker had been surprised at first by the absence of his direct supervisor, the Foreign Minister, Rahmish Patel. As last evening's dinner and informal gatherings had progressed and as Buhendra met and conversed with the others who had been invited to the conference, he came to the conclusion that he was not surprised at all by Patel's absence. Everyone in attendance were individuals like Buhendra, who felt growing anxiety with the war effort against the west, and who had been cultivated in those very views by the President himself. The Foreign Minister definitely did not fit that profile...and would be alarmed if he were aware of the meeting bringing together so many leaders who harbored what Patel would consider disloyal views.

Outside of the Foreign Minister, the Minister of Defense and the Minister of Finance, every other member of the President's cabinet and many of their deputies were also in attendance. This included a few, like Buhendra, who were subordinates to some of the missing ministers.

Since his appointment as the Ambassador to Siberia, Buhendra had worked with his typical commitment and energy, giving his best for the nation. Over time, KP Narayannen, had become more and more personally involved with Buhendra's assignment and activities, which Buhendra surmised was due to the critical nature of India's economic and security agreement with Siberia. At first it had surprised the ambassador, feeling somewhat uncomfortable that his direct chain of command, Rahmish Patel, was not involved in all instances. But as time progressed Buhendra found himself coming to like the President personally, and agreeing with the views he articulated.

"Besides," he thought, "the President supported me and won my loyalty and trust naturally."

Buhendra knew that the President found a strong affinity in the practicality and technical expertise that Buhendra had, and that he had found a powerful ally and friend in the President.

...and now he knew why.

"This sets things in a whole new light," he thought.

"The risks and the potential consequences of what the President is proposing will increase by orders of magnitude and I certainly hope that everyone here appreciates that fact and is as completely committed to what it will require as I am.

As Buhendra contemplated this, the President began going from person to person in the meeting and asking them specifically what their thoughts and intentions were regarding what he had proposed regarding opening up direct communications with the west.

Most of the department heads, agency leaders, ministers and ambassadors in the room agreed with the President emphatically.

One of the people, the Deputy Minister of Finance, Raj Tajil, voiced some trepidation.

"Mr. President, while I agree in principle that the war effort is going badly and that there is significant potential for risk to the nation as the western allies come closer...isn't your suggestion that we negotiate terms with the enemy bordering on sedition, or even worse?"

Buhendra watched the President's face closely as this question and challenge was issued.

He had to admit that Narayannen didn't flinch or show any sign of anger or impatience with Tajil or his question. On the contrary, he responded directly to it.

“Raj, that’s a fair question.

“There would certainly be many in government service who are wholly committed to this effort, some for personal advancement reasons, some for ideological and political reasons, and some out of a commitment to our national pride, who would agree that the very thought of negotiating with our enemies and suing for peace, would in fact be seditious.

“Clearly, I don’t agree with that premise. We are elected by our people, and some of you have been appointed by those of us who are, and our duty is to their well being, their freedom, and the survival of our nation, its government and way of life.

I believe, as President of our Republic, that this course of action is in line with those goals.”

The Deputy Finance Minister nodded his head, but then added.

“Then, Mr. President, why hold these meetings in such secrecy? Why not debate them in the true spirit of our form of government in the open so that we can come to a conclusion that represents the desire of the majority of those who represent the people?”

Again the President did not waiver, did not reveal any frustration, angst or anger.

“The answer to that question, Raj, given the nature of the situation, the nature of our allies and their forms of government, and the nature of some of those in our own government who would abjectly oppose us... is self evident.”

As the others in the room took their turns in responding to the President’s request for their views, only one or two more voiced any concern about what the president was proposing.

Buhpendra was surprised that these protests had been voiced...or allowed. He wondered how they could successfully go about the tasks they were discussing with such dissent amongst them.

When it came Buhpendra’s turn, he answered without hesitation.

“Mr. President, as one who has been involved in an official governmental administrative capacity only since the creation of the Siberian Economic Development Pact, and having observed the types of impact that particular pact and the eventual independence of Siberia has had on our nation, I can only say the following...

“The economic benefit of the pact, even while the Russians were our partners, has been substantial. As a nation our economy has benefited tremendously through that pact. Of course, with the independence of Siberia, our profit margin has increased, but we have also had to significantly increase our costs for security and the war effort as that new front was opened up.

“It seems to me that the governmental forms of the western allies much more nearly match our own and the principles upon which our republic rests. While I know it is true that the Americans played the Pakistanis off against the Iranians without contemplating how much that pushed us towards their own enemies at the time... first Russia and then China... I believe the war has changed all of that. I believe the Americans want this war brought to a speedy and successful completion... I know the Russians do... and I believe they will be very willing to open a dialog with us to lead in that direction.

“In short, I fully support seeking a direct dialogue with the west, and particularly before the ravages of their technological war machine are unleashed on our nation directly. The sooner and more sincerely we do this in my estimation, the better.”

That portion of the meeting went on for another thirty-five minutes as everyone had ample opportunity to express their thoughts while they finished eating the fine meal of chicken curry over which the discussion had been held. Then the meeting was adjourned for one hour for each of the participants to return to their room and freshen up if they so desired.

When they resumed the meeting a little more than an hour later, Buhpendra’s concerns about the dissent were answered in a very direct way. He and the others in attendance could not help but notice as the meeting reconvened that Raj and the other two attendees who had voiced strong negativity and resistance regarding the purpose of the meeting were no longer present with the rest of them.

All three of them were simply gone, without fanfare or discussion, and Buhpendra and the others would never see any of them again.

**June 16, 03:45 local time**

**Fortified Observation Post 28**

**Elevation 3450 Meters, Kum Mountain, the former Iran**

Utilizing his new Chinese infrared viewing scope, Izza had been watching the valley below for more than two hours... and had seen nothing.

Even in June, at this elevation at night, it was quite cold.

But that was alright. Izza had on a heavy wool jacket and a good, warm wrap to keep his head warm. Besides, he was a defender of Allah and the road that climbed through the pass below, and then down the other side, led to the holy city of Qom, over two hundred and fifty kilometers to the north and east, and one of the holiest cities in all of Islam, surpassed only by Mecca and Medina.

“I wonder if our brothers have been successful in defending those holiest of cities against the faithless,” Izza asked himself as he momentarily lowered the monacle scope from his right eye.

Then, thinking back on his own assignment this night, the cold air, and the importance of his duties, he continued to himself.

“Well, if defending such a place as this and keeping the infidels at bay is not enough to keep one warm...then nothing is.”

Hearing movement in the bunker behind him, he quickly lifted the device back up to his eye and continued to scan up and down the valley through the slit in the bunker.

“Izza!” his sergeant whispered from the firing position to the left, “keep your eyes open!”

“The Captain says that our air defense units are picking up incoming stealth missiles.

“The last area intelligence indicated that American, British and Israeli forces were massing and preparing for an assault, and we lost communications with observation post 32 across the valley.

“Could be a simple communications hitch...but I don’t think we should count on it. Besides...”

Before the sergeant could finish his sentence, there was a sickening and mushy “THUD” and the sentence ended. It didn’t trail off...it just stopped.

Turning his head slightly, Izza saw the sergeant’s lifeless-and now headless-body flying backwards, blood and gore spread across the back wall above the entrance. The corpse landed with the torso hanging outside the position into the aisle behind them, while his legs stretched forward into the position, both boots pointing up, and the left leg twitching uncontrollably.

That’s when Izza noticed the warm liquid and small pieces of skull and brain on his face.

Before he could raise his hand to wipe it off...or utter a cry of alarm to the two men manning the communications equipment in the back of the bunker...there was another sickening “THUD”.

Izza never heard that one...and he never saw the flash of light that entered the bunker right through the slit where he had been stationed that exploded with a deafening roar.

### **June 16, that same time**

#### **SAS Sniper Team, 1.6 kilometers to the West**

##### **Near the Dez River Pass, the former Iran**

“Good shooting old boy...I should probably say, old boys, since both of you were spot on.

“Perkins, call it in and then let’s be off before any observant mullah or other ragheads note our position and bring something unsavory down on top of us.”

After he had finished speaking, Sergeant Tony Mallory waited for his personnel to transmit the short communication signal indicating a successful completion of their mission. When that was done, he led the four-man team through the rocks and back away from the military crest of the hill, up over the actual ridgeline, and into a prepared position where they would be protected from what was to come, and where they could await their next assignment.

Within the four-man team, Mallory and another member of the team provided security with their assault rifles, and also carried the communications equipment. The sniper used the latest American Barretts design, a .50 caliber sniper rifle that also housed a target designating laser for the fourth member of the team. That sergeant carried a “Quick Strike” shoulder-fired, hypervelocity missile that had a target selector switch that allowed the missile to home in on the laser designator provided by the sniper. The selector also allowed for infrared or dead site targeting.

In the most recent engagement, the missile had used the laser designator to track right through the slit in the enemy bunker and destroy everything inside after the sniper had eliminated those manning the firing and observation positions.

With the last engagement against Izza’s position, the team had completed their sweep to destroy three fortified enemy observation posts. Now, unless they had missed one, the avenue was open for the allied mechanized divisions, preceded by a small volley of the latest Hail-Storm missiles, to assault the major defenses the enemy had prepared less than two kilometers up the road, at the top of the pass.

Mallory shooed his team under the rock outcropping facing away from the high mountain valley of the pass, with a, “Come on troopers, time to snuggle in, all safe for the night.”

As he did so, and as he went to ground and got under cover, a flight of twelve missiles snaked up the valley on the other side of the ridgeline and began to wreak havoc and destruction on the enemy.

### **June 18, 17:22, local time**

#### **Secure Command Bunker**

##### **The Eastern Outskirts of Tehran, The former Iran**

Hasan al-Askari Sayeed had just finished conferring personally with General Abdul Selim, his young Tiger of Islam. He was not happy with the content of the conversation, or what it would mean to the Greater Islamic Republic and his continued faithful dream of a world united under Islam.

The western Allies were advancing rapidly on Tehran.

Selim had performed brilliantly in his defense of the Tabriz gap between the Caspian Sea and the Azerbaijan Sea. His twelve divisions had held up almost forty allied divisions for two weeks as Russian, European Union and supporting American forces assailed his positions.

Sayeed had thought that the young General would be successful and was in the act of thanking Allah for the great victories the General was winning when news of the allied breakthrough at the Dez River Pass had been reported to him. Thirty divisions of American, British and Israeli troops had

broken through the pass and had quickly advanced on and attacked Qom yesterday. It was immediately clear to Sayeed, and to Selim, that Qom would fall.

Selim's forces were ordered into a fighting withdrawal towards Tehran in an effort to keep the forces under Selim's command from being surrounded, and to allow time to get as many in Tehran as possible to join with Selim's forces in defense of the city.

But it was now clear that Selim and his forces were not going to make it to Tehran in time.

Surprisingly, in Qom and elsewhere, many citizens were now going over to, and joining the infidels, abandoning the true faith for the hope of the freedoms and secular allurements the westerners, and particularly the Americans, promised.

"A free society," Sayeed muttered to himself.

"Free to do what...sin, to profane Allah and his ways?"

Regardless of the reasons, many of the students and their families and many of the more liberal clerics were apparently jumping at the opportunity to align themselves with the invaders.

The great Imam and Ayatollah never considered for a moment the possibility that the many freedom protests that had occurred in Iran itself in the 1990's and early 2000's before his meteoric rise to power had simply faded undercover rather than been extinguished. He never considered the help he had received from the Chinese and the impact it had had on those who might otherwise have opposed him. Many opposition leaders simply ceased to exist, but others, and their followers, had never been stamped out, and they had bided their time patiently, realizing that, with the success of Sayeed over the last several years, any attempt at resistance or insurgency would be doomed to fail.

But now that the Americans and their allies had broken into the hear of the Greater Islamic Republic itself...the opportunity for resistance to Sayeed and his pure version of Islam had arrived. That message of resistance to Sayeed and acceptance of the western invaders was finding very fertile ground in the hearts and minds of more people than Sayeed would have ever imagined.

And many of these knew the deeper secret, that Medina and Mecca had already fallen. Their faith was shaken, their future was completely unsure...and they had lost their zeal and their commitment...doubting themselves and their religious tenets.

Despite the fact that he would not countenance the reasoning and betrayal of his own people, Hassan Sayeed knew the dark secret too...and he was deeply troubled by it.

"Am I to be tested like father Abraham then...who was told to take his only son into the desert and to sacrifice him on the altar," he asked himself.

"Oh Allah, where are you?"

"How could you forsake all of us?"

"How could you forsake *me*?"

Medina had fallen in a rather uninspiring fashion. Though Sayeed was terribly upset by the actions of his forces in that area who had retreated past the city in front of the enemy onslaught...and then been destroyed when they were caught in the open by several waves of the damnable American Hail-Storm missiles...he was thankful that the city had been preserved for the faith.

But the story of the fall of Mecca haunted him.

Over one hundred thousand GIR troops, consisting of infantry, mechanized, and armor units supported by limited air support, with all of their equipment, and plenty of ammunition had retreated into the city on June 4<sup>th</sup>. The population had completely supported the GIR forces, with many faithful within the city joining the ranks to fight in defense of the holy city.

U.S. and U.K. forces had surrounded the city and cut off all access to it by the morning of June 6<sup>th</sup>. They had set up checkpoints on all major access roads and ringed the city with men and steel. Within two days, they had dug in and the defenders were completely cut-off with no hope for support or relief. Outside of divine assistance, it was clear that the western forces would be content to simply starve the defenders and inhabitants out.

That was when things had gone even more terribly wrong.

During the mid-afternoon of June 6<sup>th</sup>, the Americans sent a unilateral peace and cease-fire delegation of ten personnel into the city under a white flag. They indicated that they came to negotiate some way to keep from damaging or destroying the holy city and to save as many lives as possible.

They were admitted into the city by the defenders.

The delegation included a General of the United States Marines, the provisional head of the new Arabian government-appointed by the Americans, two senior career diplomats-one from the U.K. and one from the U.S., two translators, and a team of four Marines for security.

The delegation had the power to offer a complete ceasefire, food and medical supplies for all in need and an honorable handling of the GIR forces who were being asked to surrender unconditionally.

The entire team had been taken to the central part of the city and admitted into a large outer courtyard at a mosque there. Two of the security detail had accompanied the peace representatives and translators into the courtyard and the other two members of the security team had stayed outside with their vehicles. A delegation of the city leaders and military leaders of the GIR forces met the U.S. General and the diplomats within the courtyard and negotiations began.

The GIR leaders made their position clear, swiftly and brutally. First, the American signal battalion on the outskirts of the city had lost contact with the delegation.

Then, allied airborne surveillance had picked up a brief exchange of automatic weapons fire, first within the courtyard and then outside, next to the vehicles.

One of the marines near the vehicles tried to give a brief report.

"We are under attack..."

This was followed by more automatic weapons fire and then a few seconds of silence. After that, of a sudden, there was a horrendous uproar and wild celebration. Literally tens of thousands of weapons were fired into the air. The celebrations turned into an orgy...and orgy of mutilation.

All ten members of the delegation were decapitated, their eyes gouged out and replaced by horse dung. The bodies were literally torn limb from limb...and then, in a manner reminiscent of a similar occurrence in the town of Fallujah, Iraq, during operation Iraqi Freedom in the spring of 2004, the mutilated body parts were hung from bridges and light posts around the central portion of the city.

The heads were placed in one of the allies' vehicles and sent careening out of the city towards the allied lines. The entire thing was captured live on a television broadcast within Mecca and then picked up by allied forces...including one enterprising WNN crew that snuck some of its personnel into a restricted area just behind allied lines.

Within hours, the whole world had witnessed the orgy of mutilation in Mecca.

Major General Lender, who commanded the United States Marine surrounding the city, had wasted no time in coming up with a plan to deal directly and harshly with the atrocity, and the defenders in the city.

America had learned from its experiences and horrors of this war, she had learned from Fallujah of Operation Iraqi Freedom, she had learned from 9-11 and from the bombing of the U.S.S. Cole, she had learned from the initial World trade Center bombing in the early 1990's, she had learned from Beirut and from countless other terrorist and extremist attacks.

There would be no further attempt at negotiations with terrorists or their Jihad cousins. America and her allies knew from harsh experience that this enemy respected but one thing.

The official request for retaliation and pacification literally flew up the channels to the White House where President John Bowers reviewed the request the afternoon it arrived, consulted with the entire National Security Council that evening, and then approved it...with no alterations.

The next day, all allied sniper teams and probing forces were withdrawn to the perimeter.

An ultimatum was issued at 12:00 noon the next day, June 7<sup>th</sup>.

The GIR forces and those who supported them within Mecca had 24 hours to do the following:

- 1) *Anyone non-combatant desiring to leave the city could leave on a main road and be processed through the checkpoints. Non-combatants were defined as women and children, where males under the age of 13 were defined as children, and males over the age of 65 were also included. No weapons would be permitted. Anyone known to be a leader or collaborator of terror, jihad or GIR official-regardless of age or gender-would be detained.*
- 2) *Any male combatant between the ages of 13 and 65 who wanted to surrender was directed to one of four separate gathering points outside the city. The surrender was unconditional and combatants would be subject to indefinite detention and intense interrogation.*
- 3) *Anyone seen with a weapon would be killed on sight.*
- 4) *The blood of any non-combatants who were either forced to stay, or who decided of their own accord to stay, would be on the hands of the combatants who elected to fight.*
- 5) *After 24 hours, the city would be reduced and destroyed.*

Most of the combatants and their families did not believe the Americans and British would follow through with these threats...and if they did, they presumed that there would be a harsh house to house, door to door, urban struggle for the city where they could severally bleed the allies and obtain for themselves their paradise through Jihad.

Sayed himself believed this would be the case...and longed for the films of the Americans taking terrible casualties in the holy city. Films he would use to enrage Muslims everywhere.

All of them were terribly mistaken.

Over 200,000 civilians in the city chose to follow allied directions. They came in long lines and convoys all that day and throughout the night, most with nothing but the clothes on their backs.

At the same time, more than 25,000 combatants surrendered...not wanting to fight in a cause that was doomed, no matter how gallant the religious respective.

But in the end, over 75,000 combatants and an estimated 65,000 civilians remained in the city and around the holy shrines, fortifying them all for the expected ground assault...that never came.

With no more talk, with no more fanfare, at noon on June 8<sup>th</sup>, the bombing began.

Waves of B-52H bombers performed the most intensive bombing raids since the Vietnam War... all concentrated on the one, city. Wave after wave, the bombers came throughout the 8<sup>th</sup>, 9<sup>th</sup> and 10<sup>th</sup> of June...non-stop.

Interspersed in with the ARC LITE bombing was the use of dozens of newly developed MOAB II area demolition bombs. Mammoth 60,000 pound bombs that were delivered by specially

configured C-17 Globe Master transports, dubbed B-17 IIs. Each of those behemoths was capable of completely reducing entire city blocks. They were known as poor man's mini-non-nukes.

By the morning of the 9<sup>th</sup>, first hundreds...and then thousands of inhabitants and combatants began exiting the ruined city. Any who came out with weapons in their hands, or who otherwise attempted to fight were immediately shot down and killed.

Soon, all who came out were unarmed and nonbelligerent.

By the afternoon on the 9<sup>th</sup>, no major structure was left standing in the city. By noon on the 10<sup>th</sup>, when the bombing campaign ended, not one stone was standing left upon another within Mecca.

An eerie silence fell across the face of the countryside in and around the remains of the city. There was not so much as a moan coming from the ruins. .

That afternoon, allied scout, EOD and medic teams entered the city. Over a two day period, fewer than 500 injured were pulled from the mounds of rubble. By the 14<sup>th</sup> of June, all rescue and recovery efforts ceased. The allies did not intend to rebuild Mecca...they intended to send a message.

Over one hundred U.S. Army D-9 caterpillar bulldozers then appeared on the perimeter around the city and converged on it. They literally covered over the smoldering debris and smoothed it out in three days time. A flat, desolate landscape then occupied the ground where once Mecca stood. All debris, all ruined or discarded weapons-all bodies-had been buried there.

Atop this soil the allies sprinkled salt and then soaked the ground in swine fat. Around the perimeter, and interspersed every five hundred yards within, the following metal signs were erected:

*Here stood Mecca, until it was occupied by barbarians, terrorists and desecrators  
and those who harbored them, who then committed atrocities against the United  
States of America and the United Kingdom and their allies.*

*Now there is nothing here but a desolation of pig-fat and salt.*

*Let the fate of this once great city be a clear message to all those who would  
desecrate that which is holy and who would consider committing similar atrocities  
against United States or United Kingdom forces, personnel or civilians.*

*To the innocent we allowed to escape we say-De Oppresso Libre!  
To the barbarians who died here we say-Sic Simper Tyranis!*

Sayeed could still see those signs in his mind's eye. He could not help but mourn the loss of the city and could also not help but wonder how he could motivate the faithful to keep on fighting...to find strength in praying five times a day to such a place, a place that was now nothing more than a smoking, smoldering, desecrated wasteland.

For the first time in his life his faith wavered...and it shook him to the core.

Then...a piercing pain in his side and heart...an all consuming pain that filled him first with rage...and then with strength.

He would have to leave Tehran...but he knew where he would go, and he knew to what the rest of his life would be devoted.

In many ways, it would be devoted to the same goal to which he had dedicated himself for the last many years. But now the fight to unite the world under the banner of Islam would have to take on a new form, and it could only do that after he had reconstituted his strength in some area of the world not yet assailed so devastatingly by his enemies, where he could rebuild the faith and the institutions that would soon be lost to him here.

## Chapter 39

*“There is no chance, no destiny, no fate, can circumvent or hinder or control the firm resolve of a determined soul” – Ella Wilcox*

**July 2, 14:55, Local Time**

**Large Inner Courtyard, Principle Hamadan Mosque**

**Hamadan, Greater Islamic Republic**

Hamadan was a smaller city in the northwestern part of the former Iran that was strategically out of the way and off the beaten path. As Allied forces passed to the North of it in their pursuit of the GIR Armies that had, until recently, been successfully holding back the Allied onslaught near Tabriz, Hamadan had not been directly attacked. As the allied breakthrough to the east of Qom threatened Tehran from a different axis, and as that same breakthrough threatened the envelopment and destruction of the GIR armies in Tabriz headed by the young General Selim, Selim's forces had been forced to rapidly fall back towards Tehran, with the allied forces fast on their heels.

As the large allied offensive and GIR retreat occurred to the north, Hamadan experienced relatively light bombing and shelling of its local GIR garrison by allied peripheral forces as they passed. The same type of thing was occurring with many cities throughout the former Iraq and Iran.

Now, in several of these bypassed cities, with apparently little allied presence, the local garrisons and those still faithful to Hassan Sayeed's vision were gathering and preparing to fight. The local clerics were whipping them up into a frenzy because of what had occurred at Mecca in June.

One of those clerics, who had amassed his own personal militia of over twenty thousand well provisioned men, was the Ayatollah Sheik Aman Saldi. He was relatively young, but fiercely loyal to Hassan Sayeed, and wholly committed to resisting and defeating any infidels coming within his reach, and punishing any of his own who betrayed the faith and consorted with the enemy. On this day, he was speaking to ten thousand of his own followers, and a large number of local citizens and members of the local garrison that had gathered within the walls of the holy mosque in Hamadan to hear him.

“My brothers, the Americans and their running dogs, in their arrogance, have made yet another fatal mistake. Similar to their actions six and seven years ago in Iraq during their so-called Operation Iraqi Freedom, they have bypassed many tens of thousands of the faithful, falsely believing that we will be overly impressed with their technology and the swiftness of their advance, and that we will sit idly by while they continue to attack, oppress and kill our brothers and sisters of faith and defile Allah.

“They have their automons in the air above us to watch over and contain us. Just look above yourselves now and you are sure to see them. Their incessant buzzing is heard night and day. They think that these flies will deter us and frighten us into inaction.

“But they could not be more wrong.

“I say to you, to those faithful gathered here this day, to all of those within the sound of my voice, or who will hear of it later... we are now behind the enemy lines, and we will wage Jihad upon them and their supply lines until the head of their military snake is left toothless in the center of our land. Then, we shall sever that head and stomp it to death!”

The cheering was wild. The militia and local garrison fired incessantly into the air. They knew that the local television crews, who were filming the event, would beam the images of this defiant gathering to the world. They hoped and believed that other faithful followers of Allah and the great Imam Sayeed would see it and take heart...and rise up behind the allied armies.

...but it was *they* could not have been more wrong.

It was true, the allies, and particularly the Americans, had left unmanned aerial vehicles (UAVs) in place in an operation to watch over the bypassed cities and forces. The Americans named this operation *Ruthless Sentinel*.

With this operation, as had been the case with the surrounding of and destruction of Mecca, the Americans and their allies had learned well from their experiences in Iraq in 2003 and 2004, and from their experiences in the years of warfare that had ensued. They had modified their operational plans, adjusted their thinking and prepared procedures and scenarios accordingly. The UAVs were not just there to watch over the potential belligerents and provide surveillance. As the operational name implied, those UAVs were meant to do much more, and they were equipped to do so.

The latest Predator IV UAV design had been tested and deployed to the battlefield by the United States only a few months earlier. They were now being mass produced by the thousands in new American wartime manufacturing plants. They were extremely capable aircraft in terms of performance, endurance, and armament, and could be remotely controlled from either land-based or airborne command centers hundreds of miles away. Each controller was capable of remotely controlling twelve to fifteen aircraft.

...and at this moment there were literally hundreds of aircraft hovering over the bypassed areas of the former Iran alone.

This particularly large gathering in Hamadan was quickly observed by a nearby Predator IV. The information regarding its size, location and disposition was then relayed to the controllers and on up the chain of command. Quickly, the buzzing over Hamadan increased dramatically as first dozens, and then scores of Predator IV aircraft were quickly diverted to fly high over the city, monitoring the mosque and those gathered there, and standing ready.

As the intent of the gathering became clear and as the militants and regular GIR army troops began responding to Saldi's rhetoric by firing into the air...orders were issued to the Predators and it began to rain in Hamadan.

...a rain of death.

Each of the Predator IVs was equipped with a miniature version of the Hail Storm weapon system that had been so successfully deployed by the Americans on special cruise missiles against CAS and GIR armies to date. In the cruise missile form, it was a system that had been very instrumental in helping turn the tide of war a year and a half earlier. On the Predator IV, the smaller Hail Storm system was designed to ensure that the tides of war, once turned, remained that way behind the front lines. In order to do so, it comprised several hundred .177 caliber, depleted Uranium pellets that could be quickly and accurately targeted on people, vehicles or installations using its solid state, electronic firing system.

Seventy-five of these aircraft now attacked in a coordinated fashion, guided by six different controllers located in ground-based command centers and on airborne command aircraft up to two hundred miles away. They targeted the deadly ordinance of their aircraft on the gathering of militants, the regular army garrison, the supporting citizens, and upon Saldi himself, who was speaking from a podium at the front of the crowd at the mosque in Hamadan.

The attack's duration spanned all of eight seconds, eight *powerful and significant* seconds.

To those on the ground, in the middle of the target area, the only indication of attack had been a sudden and dramatic increase in the buzzing sound from overhead. That sound had reached a crescendo as the high velocity projectiles reached the ground and decimated the gathering.

Those in attendance never stood a chance.

Those on the peripheral of the gathering, who were standing back from the crowd and were thus outside the kill zone, were spared death, but not the horror. As soon as their brains could register and comprehend the carnage that their eyes were witnessing, they screamed wildly and incoherently, and then ran madly away from the mayhem they had witnessed in the large courtyard.

On television screens throughout the Arab world, where the broadcast was being carried live, and on allied monitors from the aircraft above, one moment the defiant figure of Saldi was standing at the podium enraging his followers...and the next moment splinters of wood and plastic and unrecognizable pieces of Saldi himself were literally flying through the air as a veritable wave of hypervelocity projectiles swept over the stand where he and his lieutenants were positioned and across the crowd immediately in front of the stand. Not one solitary soul was left alive on the stand or amongst the hundreds gathered directly in front of it.

Within those eight potent seconds, the entire gathering had been broken, dashed, and utterly destroyed. Over twelve thousand potential Jihadists had suffered their martyrdom without ever being able to attack the "infidels". Instead, the allies had destroyed them first without losing a single life.

There would be no insurgent uprising whatsoever arising out of Hamadan...and after two or three more examples were made of similar gatherings...there would be very, very few insurgent uprisings anywhere in the Arab world.

For that matter, as the Predator IVs were deployed in numbers elsewhere around the world, there would be very few insurgent uprisings anywhere else either.

### **July 3, 22:47, Local Time**

#### **Improvised Landing Field**

#### **100 km west of Tehran, GIR**

Abduhl Selim was known by his friends and his enemies to be very wise for his years. All of the men under his command knew this...and, along with his fierceness, his dedication and his uncanny ability to survive and inflict damage on his enemies, his wisdom was one of the reasons the men under him so willingly followed him.

Now that wisdom was telling him what he should do.

A direct, secret communiqué from the great Imam himself indicated that Selim should gather his most trusted and capable subordinates and a personal security force made up of a battalion of his most loyal troops and leave. The communiqué had been in the form of a direct order and the General was busily preparing his staff and security force to do exactly what their leader required of them.

But before he left, he wanted to address all of the men...both those who would be going and those who would stay and continue the fight here. He arranged for his words to be carried to his forces using a narrow, low-powered frequency, and using the latest scrambling equipment available.

As tens of thousands of weary GIR soldiers listened, General Selim began.

“My brothers, and I call you brothers because that is exactly what you are...brothers in arms and brothers in the faith.

“Side by side we have fought a good fight. We have inflicted significant damage and casualties on a technologically superior foe. Your achievements and fierceness will be written about, spoken about and revered for its greatness generations to come by the faithful everywhere.

“Now the time has come for us to part paths.

“I have been ordered to the side of our great Imam and Mahdi where he shall continue the fight to the east, while you continue here.

“I will not mince words...it will be difficult for us all.

“You here who stay and those who command you have the difficult task of choosing to fight a disciplined withdrawal to Tehran, under less and less friendly air cover, and more and more assaults from the sky by the Americans and their allies...and their devastating weapons. Or, you may choose to simply melt away, back to your families and homes to see what the future holds.

“It is my wish that as many of you live to a ripe old age as possible. I say this as a young man myself, one who has not always acted as though he wished to see old age (and here, many of the troops laughed to themselves, knowing their General for who he was)...as most of you are all too aware. But I also say it as one who has served proudly at your side. As of this date, it is my firm conviction that nothing further will be served by your slaughter here to the west of Tehran.

“Each of you and each of your units will have to decide for yourselves what you shall do.

“You all know what has occurred at Mecca, at Qom, and just two days ago at Hamadan.

“It is my express order, and it is being circulated now amongst your commanding officers, that all of you who wish to fight on in the defense of Tehran form up by 0500 hours to do so. By prior communication, units wishing to fight are already in position providing flank security for this army. Just the same, none of you should forget or be lax in your perimeter patrols or defenses. Just listen to your senior sergeants and to your officers regarding how you form up. They already have their orders.

“All who wish to return to your homes should also form up in groups of no more than five, and begin your journey by 0500 as well. Orders pertaining to this have been issued as well. If stopped at enemy check points or by enemy forces...do not resist them. If interrogated, you must not reveal critical information. Simply remain firm in your insistence that your only wish is to return home to your wives and children. Remember that at this time to resist is to die, and to die in a manner, as the Americans have already shown, that will deny you any Jihad rights in the hereafter. Who would be fool enough to allow the Americans to take from us that eternal reward?

“Now, I say to you all...Allah Akbar!

“May Allah the merciful be with each of you.

“That is all.”

The stunned soldiers responded positively to their General and to their officers. Fully 70% of the army melted away to the north and east, into the rugged terrain where the allies had not encircled their forces and where the greatest available amount of remaining GIR air coverage remained.

The other 30% of the army provided security and diversionary fighting while their comrades departed. Those fighting forces then fell back towards Tehran. But what had been to that point a disciplined retreat, before long turned into a headlong route. By July 7th, allied forces would be on the outskirts of Tehran, where they would surround the city and issue the same ultimatums that were now becoming commonplace for any belligerent city that was a strategic military goal for allied forces.

Given what the General had allowed outside of Tehran, given the examples that had already been set-particularly at Mecca, and given the growing number of Iranians who were standing up for their own freedom...the outcome would never be in question. GIR forces defending the city, already faced with significant internal upheaval within Tehran, would surrender unconditionally and be taken into custody and allied forces would enter the city by the middle of the month with little opposition.

Thus was reduced the largest remaining GIR military force in eastern Iran, the heart of the GIR, and thus fell Tehran, the capitol of the GIR.

The large airlift of General Selim's command staff and security battalion, protected by the best remaining SU-35 and imported J-10 fighter squadrons the GIR had, flew to a secret rendezvous with Hassan Sayeed's entourage on July 4th.

But when they arrived, Hassan Sayeed discovered that General Selim was not with them.

By that time, he and four other personnel from his staff who, like himself, were native to Turkmenistan, had made their way across the hills and mountains to the north of Tehran and had taken up with a band of nomadic sheep herders in the area. On July 5th the young General looked like nothing more than a relatively young herder, and his “Uncles” looked like the other older tenders of the large sheep herd belonging to that group.

They moved slowly...parodying the nomadic life that had continued on in this terrain despite the war and despite whoever was in power in Tehran. It was while traveling with this group that, some months later in early November, Abduhl Selim was recognized by a young fifteen-year-old sheep herder from another wandering tribe as both groups attempted to unobtrusively cross into Turkmenistan near an American checkpoint.

Despite his relative isolation, the fifteen-year-old had come to idolize Selim during the course of the war, and, upon recognizing him, he began yelling, "Allah is great! Allah is great! We are blessed to be in the company of the Tiger of Islam."

An alert American junior intelligence officer at the checkpoint, who spoke the language fluently, recognized what the young man was saying before he was quickly hushed by his elders. Noticing the rapidity and manner in which the young man had been silenced, the officer became even more suspicious and ordered an entire platoon of US Army Rangers to surround the herdsmen, detain them, and attempt to individually identify them.

Thus Abduhl Selim, the young Tiger of Islam, and favorite General of the Imam Hassan Sayeed, was taken into custody by U.S. forces without a shot being fired.

But by that time, so much more had transpired.

**July 4, 09:30, EST**

### **Press Room**

#### **The White House, Washington, DC**

"Ladies and Gentlemen, I would like to make a brief statement, after which I will be happy to take a few of your questions."

John Bowers scanned the audience in front of him. This was only his second official press conference of the year, though he had spoken impromptu to the press on numerous other occasions, and though he had made numerous public speeches which the press had covered. He recognized the major Washington, D.C. correspondents of all of the major news media, and many of the foreign correspondents from countries that were major allies of the United States.

What made this press conference different was that for the first time, there were correspondents here from some of the nations that had now been liberated in the Mid-East, including Jordan, Saudi Arabia and Iraq, as well as press from Australia and areas of Africa and South America where the fighting was ongoing.

"On this celebration of independence here in the United States, I am grateful, despite the horrors and sorrows of a continued world war, to be able to speak about the progress we are making.

"The war effort continues unabated throughout the world and our forces are on the move and the enemy is being pushed back in every major theater of operation in which we are engaged.

"This does not mean that there are not setbacks and that the enemy has given in...quite to the contrary, they are becoming desperate and are fighting hard. We witnessed how hard they are fighting and to what extents they are willing to go in May with the heavy fighting in space over the Pacific Ocean and over Australia where we suffered significant losses.

"We are witnessing the continued fierceness of the enemy in Australia and in eastern Asia as our forces continue the push towards China. We are seeing very difficult fighting in the Pacific, South America, parts of Africa and in remaining pockets in the Middle East.

"Having said that, I can report the following very positive developments:

"Our forces have defeated all major GIR armies on the Arabian Peninsula. Outside of small pockets of resistance in Yemen, all of Saudi Arabia and the Arabian Peninsula has been liberated."

At this announcement there was a spontaneous cheer from the gathered press corps.

"Please, let me continue. There is more.

"In Iran, though the fighting is still hard and far from finished, we are witnessing a marvelous outpouring from many Iranian citizens who favor the individual freedom which espouses a much more moderate and tolerant interpretation of their Islamic faith than what their leaders and the militants have been pursuing. We're talking about tens of thousands of people who are taking active measures to support our efforts. They are doing it at great risk. The adherents of Hassan Sayeed's vision of compulsion and world conquest are rapidly falling apart within the borders of their own nation. Within the next two to three days, our forces will be on the outskirts of Tehran, and we expect Tehran to fall within weeks."

At this statement of the imminent fall of the capital of one of the major enemy belligerent nations, there was more spontaneous cheering and clapping in the press room.

And in this case the cheering was not just occurring at the press conference. Listeners in the free nations all over the world and in many of those areas liberated by allied forces also cheered wherever they happened to be watching...in their homes, in their places of work, in pubs, and on the street.

The President calmly waited to allow the spontaneous outpouring at such good news to run on for a few seconds...then he continued.

"Please...please, I understand that good hearted people and those of reason who love liberty and morality are happy to hear this...but I MUST reiterate. There is much hard fighting ahead of us. The GIR is widespread and there is every reason to believe that Hassan Sayeed will seek sanctuary in, and continue to direct his forces from, one of the nations that we have yet to reach.

"We still have three very effective, very numerous and very committed enemies to defeat...but we are making steady and significant progress.

“Let me now take just a moment and address a couple of issues that have been raised in the press and by others who have sought to question the morality and the effectiveness of our progress. I am referring to the defeat of the GIR forces and those who harbored them at Mecca, and of the successful interdiction of and pre-emptive defeat of the uprising in Iran at the city of Hamadan.

“I shall speak of the battle and victory at Mecca first.

“I do not believe there are many people who have access to news coverage who did not see the absolute atrocities committed against our peace delegation at Mecca. As you all know, on June 6th ten members of a peace delegation that we had sent to the city in an attempt to negotiate an honorable and safe surrender of the surrounded GIR forces who had retreated into the city, were slaughtered and then mutilated in a most horrific way.

“The United States of America has learned from almost thirty years experience that those who commit such atrocities can be dealt with in but one way. It is either complete, unconditional surrender...and quickly...or death. Our experience has been...and this is something we had to relearn, for you see, our grandparents from World War II learned the same lesson with the fanatical Japanese and Nazis...that through unmitigated and direct confrontation of such barbarians, ultimately far more lives are saved and the conflict shortened.

“This is the essence of what Harry Truman understood and decided in World War II when nuclear bombs were used to end that war. It is the same decision we undertook at Mecca, but we did not have to use nuclear weapons to do so.

“Therefore, after the attempt at normal and honorable negotiations, where our representatives were massacred and mutilated, on June 6th our forces made a direct and unambiguous call and communication to the well-provisioned and large enemy forces within Mecca, calling for them and the citizens to surrender militarily and come out of the city. Many of the citizens and a surprising number of the military forces chose to heed that call.

“Over 75,000 GIR forces and 60,000 civilians chose not to. They paid for that choice.

“We bombed the entire city to rubble and did not lose a single U.S. or allied soldier in the process. While the intensive bombing campaign continued, almost 10,000 more soldiers and an equal number of civilians escaped the city under our terms. The rest all died there and the battle ended on June 10th. Fewer than five hundred survivors were pulled from the rubble.

“In order to have accomplished the same thing through an assault on the city, we estimated that many, many fewer GIR forces or their civilian adherents would have survived and that allied casualties could have numbered several thousand. We were not willing and we shall not be willing in the future to pay such a price when other alternatives are available to us.

“As a result, we have conducted the same type of operation, albeit on a smaller scale, in two other cities, both located in Iran. The result has been that the enemy has become much more willing to offer their unconditional surrender with far fewer allied casualties.

“So, let these operations be a warning and a clear message to our enemies in the future. We shall try honorable negotiations to bring about your unconditional surrender...but we shall not tolerate ever again any Jihad, martyrdom syndrome, banzai or suicide attacks. We shall utterly destroy you in place to bring about your abject, complete and unconditional surrender before allowing you to satiate yourself in American or allied blood.”

As the President paused to continue...there was significant clapping and cheering, but there were also many hands held high by reporters and calls for the President to answer questions.

“Mr. President! Mr. President!”

But John Bowers was not ready to open the meeting to questions yet.

“Before we open this up for some questions, let me cover the last point I want to make.

“This has to do with an operation we are conducting in all belligerent nations behind our advancing front lines. It is an enemy combatant and insurrection pacification program that has its philosophical roots in the same principles that drove our operation in Mecca and others like it.

“Basically, it is this. We fill the air with remote-controlled, unmanned aerial vehicles (UAVs) that have tremendous loiter capability, tremendous surveillance capability and that are armed with a miniature version of our Hail Storm system. When I say fill the air, I mean aircraft numbering in the hundreds over each major area of offensive operations in each theater of operation.

“Whenever a gathering of ten or more potential enemy belligerents is observed, our people check the gathering for several criteria that indicate to us that the individuals are part of an active resistance, or that they are about to form one. If they are, without warning we take such gatherings out.

“The operation has been very successful. We have operated against groups of enemy belligerents, insurgents and terrorists numbering anywhere from ten to over ten thousand.

“As most of you know, two days ago in Hamadan, Iran, we engaged a major portion of the local militia under the command of Ayatollah Sheik Aman Saldi. Saldi was one of the leading figures within Iran that our forces were looking to either apprehend or neutralize.

“When it became apparent that the gathering was belligerent and that Saldi was present at a meeting whose purpose was to galvanize the armed militia and regular GIR forces into action against our forces, we acted. More than 12,000 personnel were eliminated, including Saldi himself.

“As was the case with Mecca, let these types of events be a clear and unmistakable message to our enemies: *We have the power, we have the technology, we have the means, and we have the will to utterly destroy your ability to resist and your will to resist, including the ability and will of those who would support you or give you sanctuary.*”

“Now, I will be pleased to take a few of your questions.”

**July 4, 09:42, EST**

**Press Room**

**The White House, Washington, DC**

Hands immediately shot up all over the room as the President opened up the meeting for questions from the gathered press. President Bowers scanned the room, looking at the various news agencies represented and decided he would take what would most likely be the most divisive question first. For that, he pointed towards an older journalist, a woman who worked for CBC who had been known for years to be confrontational toward any administration considered to be conservative.

Raising his voice above the din, the president called on her.

“Leslie, please.”

Surprised to be called on so quickly by the President and knowing that he was expecting a difficult question from her, Leslie Dahl did everything in her power to not disappoint him.

“Mr. President, thank you for taking my question...and I would like a follow up as well, please.”

“You have indicated that the destruction of Mecca was purely a military operation that was targeted at destroying the military capabilities of the enemy gathered there.

“If that was so, why not just ring the place with steel and wait or starve the enemy out?”

“Why did they have to die, and why was it done in such a way that almost ensured the destruction of the most holy site in the Islamic world?”

The President did not need to pause or think about his answer...he already knew it.

“Leslie, I believe I have already explained this adequately. It was a military operation because our military forces had surrounded a large and capable GIR army that was well-provisioned and itching to draw us into a fight. We attempted to negotiate. They massacred and mutilated our negotiating team. We gave them every opportunity to surrender and avoid death. They refused...they died...and we won a significant victory.

“It is true that the operation destroyed holy shrines of Islam located within the city. But that destruction cannot be laid at the feet of American forces. When a barbaric enemy perpetrates inhuman atrocities against our people-people whose aim was peace-and then seeks refuge within a holy building, it is they who are desecrating the building, not us. It is our duty to seek them out, no matter where they find haven, in order to prevent further sadistic, merciless loss of human life. The fact that they hide behind the walls of holy sites after perpetrating acts that are the antithesis of holy is simply evidence of their incomparable cowardice and hypocrisy.

“And they paid a terrible price for that mistake.”

Leslie Dahl was chagrined by the President's answer and how he had turned the tables on her. In frustration, before she could get to her well rehearsed "follow-up", she blurted out.

“But what about all of the innocent civilians who also died there...and what of the desecration of that place with the fat from pigs?”

The President, who had expected such questions and who had been mentally prepared to answer them directly from the moment he had made the decisions, answered her immediately.

“I'll take that as your follow-up.

“Most of the citizens who stayed behind with these troops were anything but innocent, Leslie. They were abetting, supporting and harboring enemies of this nation who wanted to kill as many of our boys as possible. I view any such “civilians” as enemies in this war and worthy of our targeting. They must come to know that to take such actions against the United States of America is going to mean that they are going to pay a terrible price and many of them are going to die.

“As to any non-enemy combatants or sympathizers who were held against their will in the city...all I can say is this.

“Blame the enemy troops and belligerents. That blood is on their hands.

“Finally, regarding the pig fat, I have no problem using the thinking and culture of these extremists and animals against them...and will do so in the future, as often as the opportunity presents itself. That can be done without besmirching the faith of others of that culture because, quite frankly, reasonable Muslims will not put themselves in a position to be on the receiving end of our ire.”

As the President finished, Leslie tried to say more, but she was drowned out by a chorus of other journalists seeking to have their questions answered.

Picking out a foreign journalist, the President motioned toward them.

“Let's see...Imene, from liberated Turkey.

“Welcome, it's good to see you here and good to see that a free press has been re-established in your country. Go ahead.”

Imene was glad to be there too. The trip to America as the lead correspondent for the Turkish Times would have been considered a significant accomplishment at any time...but it was a particularly momentous accomplishment now, following his nation's liberation.

"Thank you, Mr. President, for allowing me to present my question and for the sentiment.

"No one appreciates the free press, or the great responsibility a free press has to be impartial, and focused on accuracy and legitimacy, more than those of us in Turkey who have been liberated from under the stiff, heavy boots of oppression.

"My question is this: How quickly do U.S. analysts feel that the former Iran will fall completely, and do you expect that that fall will realistically end Hassan Sayeed's power?"

The president chuckled to himself as Imene got that second question in there.

"Well, Imene, I can see that you are not missing a beat regarding your abilities as a free journalist. Your knack of turning one question into two, without even asking for the follow-up, ranks right up there with the best we in this country have to offer.

"But, seriously, I will answer both questions as best I can.

"We expect to surround Tehran in the next few days and are hoping it falls quickly. Once that occurs, the fall of the rest of Iran is going to depend on how quickly we can move to the east.

"At the current rate of advance, it will take a few short weeks...but there is always the potential for set backs and delays, either due to enemy action, unforeseen logistical issues or natural conditions such as the weather.

"Beyond that general statement, I will not discuss any specifics of the ongoing operations.

"Regarding Hassan Sayeed's capabilities, we are not going to underestimate him. The result of the last time the world underestimated this man has been almost five years of the bloodiest fighting and repression in history. He has hundreds of millions of Islamic people yet to his east all the way to Indonesia who have not been pacified. My guess is that more than a few of those still believe in his misbegotten vision and will welcome him with open arms, should he be able to arrive there.

"If that proves to be true, as he coordinates his planning with India and Red China from those locations, he will still pose a very dangerous and mortal threat to us and to our allies. We will respond accordingly first to prevent that if we can, then to defeat it if we cannot.

"Thank you for your question, Imene, and all of our best to you, and God bless you in the rebuilding of your nation.

"Next question?"

Again hands shot up all over the room and voices rang out.

"JT, what's on your mind?"

Several of the more liberal journalists in the room could barely contain their frustration as the President called on JT Samson, the owner and chief editor of SierraLines, the largest and most influential online news source on the Internet.

Since the days of the late President Weisskopf's campaign, JT had enjoyed a close and trusted relationship with both the Weisskopf administration and now the Bower administration following President Weisskopf's death. Many of the more liberal journalists complained constantly about the apparent favoritism, but their dissatisfaction did not deter the White House in the least.

"Well, Mr. President, I wanted to ask about the current situation and condition in space.

"Is it true that the Chinese have developed and deployed their own single stage to orbit militarized spacecraft? And have those Chinese space craft engaged and defeated some of our own in battle in space over the Pacific and Australia?"

Despite the good relationship the administration had with SierraLines and its owner, the President and his staff knew that JT Samson was a proficient journalist and that he was capable of digging deep for stories. When doing so, he rarely pulled his punches or sought to soften the direct questions associated with rooting out every ounce of information he could regarding those stories.

This was one of those times.

Although not able to deny the obvious battles that had occurred in space, to date the administration had not divulged any more information regarding those battles other than the fact that certain vessels had been lost. That JT Samson was using many heretofore unknown specifics in his question meant that his sources were very good indeed. Whatever JT's sources, they had leaked classified information that the administration did not want China to become aware of their knowing.

"JT, you know that I will not comment regarding the specifics of any ongoing operations."

JT was not deterred by the President's non-answer and did not hesitate to press the issue.

"But Mr. President, the actions I am referring to happened weeks ago and are not ongoing. Have the Chinese deployed their own SSTO militarized space craft?"

John Bowers knew that JT was aware of more than the official story, yet he could neither deny nor confirm the specifics to which JT was alluding. National security reasons and counter intelligence issues forbade him from discussing them in detail in this forum so that the Chinese would remain in the dark regarding how much the United States knew.

"JT, in answer to your questions, I can only say the following.

“Since we deployed our space stations over the United States and Australia, the Chinese and their allies have made every effort that was technologically available to them to attack and destroy them.

“As we have expanded our operations in space, they have continued to make these attempts, and as a consequence, the environment in space has become very dangerous.

“As we have announced in the past, in late May our Southern Star station was destroyed in combat by enemy forces...beyond that statement, I cannot give you any more details at this moment.

“Next question please.”

And so it went. For the next hour the President continued to answer questions regarding the current military, economic and political landscape. Everyone agreed that the President was as open and as forthright as possible. He was not above some sparring with those who either had an agenda or were contentious, as he displayed early on with Leslie Dahl...and he was very good at defending himself against such adversarial behavior.

Near the end, the President called for the last question.

“Okay, this will be the last question...there, in the far right corner. It’s Rob Jamison isn’t it?”

Rob Jamison was the owner and manager of the largest online town hall and source for conservative internet activism on the web. His site, the Independent Republic, had been around since 1997 and had earned its attention by living up to and implementing its conservative/constitutional charter through online and protest activism against the liberal administration in America at the time.

Because of the hundreds of thousands of registered users, and even more non-registered participants, the Independent Republic forum was able to beat the mainstream media to the punch in many instances regarding reporting on current events. As a result, the Independent Republic was able to quickly react by amassing protesters, or supporters, that numbered anywhere from a few local individuals to thousands of participants.

That capability had been particularly noteworthy during Operation Iraqi Freedom in 2003-2004 when the site had partnered with other online sources and conservative talk radio show hosts to organize very large, very patriotic and very successful Support the Troop Rallies all across the nation. This had been done to answer the emergence of some leftist anti-war rallies that had started to appear as the invasion of Iraq had begun. The Support the Troop Rallies had completely eclipsed the anti-war rallies in terms of individual attendance, in terms of numbers of rallies, in terms of the frequency of rallies, and in terms of the heartfelt, all-American feeling and pride that was exhibited.

Those rallies had carried over into the outbreak of World War III when first the Greater Islamic Republic and later North Korea, China and India had allied together and made war on America. Throughout the dark days of those first four years, the Independent Republic and supporting organizations had maintained Support our Troop rallies all across the country.

...and they continued to organize and hold them to this day.

The site had really broken the mold in mainstream, real time news reporting when one of its registered members had witnessed and reported on the Chinese invasion of Alaska as it happened two years earlier. From Nome, using her personal computer, Stacey Urkut had provided a vivid and stunning report of the enemy aircraft and paratroopers invading Alaska before she had literally had to flee for her life. Tens of millions of viewers had gotten word of the report, up to and including the White House, before official military reports had come in, and certainly hours before the mainstream media had been aware of the event. For several hours the people were riveted to their computer screens reading what Stacey wrote and thus living the experience with her.

Stacey Urkut had gone on to be a leader in the resistance against the Chinese in Alaska and had ultimately been awarded the Medal of Freedom by the President himself. Rob Jamison and his Independent Republic had gone on to grow exponentially to the point that they themselves were asked to attend major press briefings at the express request of the White House who readily embraced this grassroots, unfiltered (meaning without the spin and interpretation of the mainstream commentators) news source for the people.

All of this went through the internet web site owner and former Navy veteran’s mind as he asked his question from his own wheel chair.

“Mr. President, I can’t tell you how good it is to be here today. Thank you, sir, for your service to our republic, both in the uniformed services and as our President. Believe me when I say this, and know that I speak for all of those who are registered at my own site, you are doing a marvelous job.

“Now, let me just ask this.

“Mr. President, I cannot help but note that the military actions our forces have been ordered to take both in Mecca and other cities, and in the *Ruthless Sentinel* pacification operations we are conducting, have occurred exclusively in the theater where we are fighting Islamic fundamentalists.

“Given our destruction of their most holy city, and given the direct action we are being forced to take against large masses of Islamic Jihad fighters, is our fight in that theater against these nations, or is the fight against fundamental Islam?”

The President was not surprised by this question. It was similar in nature and substance to Dahl’s earlier question.

It was more direct though, and it was a direct question he had fully expected much earlier. In either case, John Bowers was glad to answer and glad that Rob Jamison had been the one to ask it.

It was a question that he had been forced to come to terms with himself long ago, before the current conflict ever began. His coming to terms with it had started when he had first heard of the bombing of the Marine barracks in Beirut in the early 1980's. It had come to full maturity later when he served in Kuwait and Iraq during the Desert Storm conflict. All of those experiences had created in him a determination to fight this particular brand of tyranny with all that he had. And that was exactly how he viewed it, a repressive and tyrannical ideology hiding behind religion, and he was convinced that that view had now been proven right time and time again in the current conflict.

"Rob, thank you for that question. Many Americans have wondered about this very thing as we have fought these enemies and their allies, has expressed itself very directly.

"This fight is against the enemies of liberty, whatever they choose to call themselves.

"In this case, we have extremists who have hijacked an entire religion for their own perverted and misbegotten reasons. They have applied their own warped interpretation of Jihad and the rewards for it. They have seduced entire nations and peoples with their self-serving lies and dogma.

"To anyone of the Islamic or Muslim faith who believes that their faith compels them to randomly kill innocent peoples simply because they fear a different lifestyle and influence, or compels them to practice abject tyranny over their own people simply because they are afraid that their adherents may use their own free will to choose another path, I say to you now, your time has come.

"Your stain upon the world of rational thought, free will, liberty, virtue, honor and integrity has run its course and will soon come to an utter and complete end.

"Your reward, unless you turn from such ideology and altogether quit it and divorce yourselves from it, will be your utter ruination and destruction...not some perverted and obscene hope for seventy-two innocent virgins for you to ravage."

The President leaned towards the sea of reporters and journalists in front of him...and then looked directly into the camera with sincere, but serious reflection. He continued.

"What an obscene thought and view of heaven.

"These are the extreme and radical beliefs of tyranny that we fight, just as we fought the incarnation of similar tenants in Nazi Germany, Imperial Japan, Communist Russia, North Korea and so on. Just as we fight them in Red China and their so-called Coalition of Asian States today.

"This *radical* Islam is a "religion" that does not allow for the existence of other religions, except as they are willing to accept, and live under, Islamic law and acknowledge Islamic superiority, both of which infer humiliating consequences, at the very least, and genocide at the worst. It is a "religion" whose god dictates that the world must eventually be "united" under Islam by force of arms. And, if the murder, sometimes in the most torturous way imaginable, of millions of innocents is required, then such killing is to be considered a calling by these *radicals*.

"I know that all Islamics do not feel this way about their faith...do not derive these radical and tyrannical interpretations from their own scriptures. To those rational and peaceful Islamic people we have always said, *join with us and help us rid you of this stain*.

"We say today, *join with us and open up your lands to the blessings of peace and free will*.

"Events right now in the former Iraq and Iran are showing us that more and more of these people are willing to do this very thing.

"We will help those peoples who desire to practice their faith in peace and tolerance to do so, but we shall never again accept such tyrannical and evil ideologies foisted as religion. Americans are a tolerant and patient people...but such notions have exhausted both our patience and our tolerance...and we shall not be taken in again.

"Yes, we have freedom of religion...but that means the peaceful exercise of faith while allowing others the same privilege without compulsion. When any so-called faith crosses the line as I have just mentioned...it is no longer religion, irrespective of what label its adherents try to place upon it. At that point it has become nothing more than totalitarianism and shall be treated as such.

"On this July 4th, when we celebrate our own independence and the principles upon which it is founded, and the hard fight that led to its realization, let us steel ourselves to the completion of today's fight. On this July 4th when we continue the selfsame struggle of so long ago, let us commit ourselves and let us fulfill our critical role in this pivotal moment in history...a role that demands that we stand up for freedom and liberty, and that we stand boldly and tall.

"In case anyone has misunderstood, the fight we are embroiled in is against abject tyranny. It is exactly what this war is all about. It is a struggle against the tyranny and the oppression of these radical Islamics of the Greater Islamic Republic who have perverted, distorted and wrested faith into something obscene that threatens the free will, free expressions and liberty of all. In the same way, the political ideology of the members of the Coalition of Asian States threatens those same principles. There is the same threat, my fellow Americans and citizens of the free world, a dual threat that has allied together to assail freedom from both a perverted religious and a perverted political standpoint.

"But they both shall fail...they shall be defeated.

“Rob...all of you gathered here in the White House Press Room, and by extension, anyone within the sound of my voice...that is what the operations at Mecca and Hamadan were really all about. Let the enemy have no doubt about our resolve or our determination. We shall not fail, we shall not deter, we shall not falter or retreat from our sworn duty and this our solemn conviction.

“With the help of Providence, we shall go forward with these measures...and any others that save American and allied lives and prosecute the war effort to a successful and victorious conclusion while giving the enemy every opportunity to surrender unconditionally. We shall do so until those enemies either do surrender unconditionally, or until we have utterly and completely annihilated them.

“There is no other option or course.

“Thank you,” the President said as he stepped away from the podium and exited the press room.

**July 12, 19:12, local time**

**Jianying Household**

**Beijing, China**

Hua and Chiang Jianying were together on one of those rare occasions when they were both at home relatively early and could enjoy one another's company and relax either watching a good movie, listen to music together, talk, read, or otherwise wind down from their respective jobs.

Hua was continuing in his position as a member of the Party Congress in the People's Republic of China. Events of late were keeping that body extremely busy as they addressed, with growing frustration, the consequences and results of the setbacks in the war effort. Fourteen and sixteen hour days were becoming quite common. More rationing of almost every conceivable item, curfews, lights out, crackdowns on any dissident activity...all of these and many more policies were being instituted as allied forces pressed closer towards China from the northeast, from the east and from the south.

Those forces might still be thousands of kilometers away, but there was no denying that they were edging closer...and the impact of their growing proximity was being felt more and more often. Cruise missile attacks were now fairly commonplace as the Americans used their capitol ships, their submarines, and their long-range aircraft to launch them at critical Chinese infrastructure and manufacturing capabilities. Despite the relative success of Chinese air defenses, the increasing frequency of the attacks was beginning to affect the people's vigor and absolute commitment to the war effort. Hua and the rest of the Party Congress were under increasing pressure from the president and politburo to ensure that the people's commitment was maintained and did not waiver.

For her part, Chiang was directly involved in the defense of the nation as she worked as a Program Manager for COSTIND, the Chinese Commission of Science, Technology and Industry for National Defense, managing several programmers and analysts as they sought to improve the capabilities of the anti-stealth fire control system for the *ta shih* system. Her earlier efforts in developing and analyzing the system had been so successful that it had led to her promotion to Program Manager. She was extremely gratified with that promotion because she knew that, despite the fact that her father was Lu Pham, a Hero of the People's Republic and a member of the Executive Council on the Politburo, her promotion and success were based much more on her successful work with the programs that controlled *ta shih* than they were a result of who her father was.

As they sat on their plush pillows and listened to romantic music, Chiang asked her husband.

“Hua, can our forces continue to hold back the Americans and their allies?”

It was a question on many minds these days. After years of unparalleled success with a string of one major victory after another, in the last year and a half the Chinese people now found themselves hearing less and less of victory and more and more propaganda. The implications were clear to most Chinese, even if they weren't in a position like Hua and Chiang where they were privy to more details of the worsening strategic situation.

“Chiang, the American ability to rebound and build a revitalized capacity in manufacturing and technology has taken most of our planners by surprise. It's actually astounding, the rapidity with which they have been able to rebound, given where we had them several years ago.

“On the other hand, we still have this advantage in numbers and our technology is ahead of them in some areas and at parity with them in the others.

“Ultimately, my love, despite the huge army and naval forces that are arrayed against one another all over the globe, I believe the outcome will be decided in space. It involves such a small number of personnel...but the communications, the surveillance, and the power projection capabilities are enormous for whoever controls it.

“Remember how we defeated the American's in space four years ago? Well, since then we had fought them to a standstill, up until last year. But they surprised us and jumped back ahead last year by launching and maintaining those space stations. Now, with the advent of our Dragon Spirit spacecraft, we hurt them in space again...it's like a roller coaster ride.

“...and it's not over either. It's going to be a tough battle, both in terms of technological progress and in terms of actual combat.

"I honestly think our overall ability to halt the Americans in Australia and in Asia will ultimately depend on the outcome of that fight. Yes, we'll be doing more with space forces and you may be sure that Americans are doing the same.

"In the meantime, a lot of fighting continues down here on earth...all over...and the impact of that fighting is no less traumatic for those involved, or for their families."

And that was something to which Hua knew Chiang could relate personally and directly. Her own brother, Kao, had been severally wounded as a result of battles at sea in the South Pacific and then his condition had worsened as a result of infections that had set in during his hospitalization.

The seriousness of his condition had led the entire Pham family to travel to Rabaul and visit Koa five months ago. Chiang had traveled, fully supported by her husband, with her father, Lu Pham and her mother, Song, to the rear areas of the war zone where Kao was in the hospital. He had been too ill to move to better facilities in China and so the family had visited him there, hoping that an extended visit would lift his spirits and allow him the strength to overcome his injuries and the infection.

As a member of the Executive Council, Lu Pham had been accorded an entire brigade of elite forces for security for him and his family. A specially configured Type 52D, phased array destroyer and its entire surface action group was made available to them in Rabaul, along with the transport and fighter aircraft that had brought them there and defended them. All of this to ensure their security and to allow them every means for a safe escape should the situation become untenable.

Although there had been several air raid warnings, and two cruise missile attacks while they were there, none of the danger had been near the hospital or the facilities where they had stayed through February and into March.

Koa had recognized them when they arrived and his spirits had soared. He was able to tell them of his experiences, his comrades and his commitment to the fight. His stories inspired them all.

But one thing he could not do was fight off the effect of his injuries and the infection raging throughout his body. After several days of what appeared to be improvement associated with his improved spirit, he began to succumb again to his condition. The family had stayed by his side, faithfully keeping vigil in shifts.

Ultimately, Koa Pham had died from his injuries and infection in the hospital in Rabaul in early March. His family had taken his body back to Beijing for burial, mourning him, but intensely proud of his sacrifice and all the more committed to the cause of their nation.

**July 30, 01:15, local time**

**High Geosynchronous Orbit**

**Point Solitude, Opposite Asia, Earth**

While the officers on the command deck ensured that they had attained stable orbit at Point Solitude, Commander David Lewis considered the historic nature of the voyage that his command had just completed. From Earth, out beyond the planet Mars to the Asteroid belt and back, he had successfully commanded the small task force which was comprised of the USSS Gaspra and the USSS Ida with a combined compliment of thirty-six officers and enlisted men.

It had been a voyage that smacked more of science fiction than of reality...and yet it had been all too real. In fact, it was a reality that David Lewis knew was apt to make a significant difference in the war effort now...and probably in the overall direction that a free mankind would take following the successful completion of the war.

Now, at the completion of the epic voyage, here he was, making a top secret return to Earth orbit.

Turning to his communications officer, Lewis issued the long anticipated order.

"Lieutenant, park her here in stable orbit and get command on the communications net.

David again considered that what he was witnessing was more akin to something from a sci-fi movie of his youth than what he had anticipated experiencing in today's military when he had started his career many years ago. As he waited, after a brief second or two of hazy fuzz, a clear picture of Admiral Hightower materialized on their flat panel, plasma display.

"Admiral, this is Commander Lewis reporting in, sir.

"We have successfully arrived on station in Earth orbit per our orders. Both vessels have successfully harvested an entire load of cargo and are awaiting further orders."

The Admiral remained quiet for just an instant before responding to Lewis.

"Understood, Commander.

"Let me break protocol for just a moment to say that it's great to see you, Dave. You look good.

"Now, as you are aware from the communications you have received, we are embroiled in quite a situation down here. You will receive more concerning the latest situation report in a special encrypted, eyes-only communication later today.

"In the meantime, begin processing the cargo per your original orders.

"In order to assist you in that endeavor, two corvettes, the USSS Millport and the USSS Stearns will rendezvous with you at 0900 hours with the hardware needed for preparation of the ordinance.

"I know its short notice, David, and I know you and your crews were hoping for a well deserved leave, but you and Floyd are going to need to be prepared for action with whatever ordinance you can

produce within the next seventy-two hours. Orders to that effect will be issued within the next few hours, so consider this a heads-up.

“We’ll contact you after the arrival of the Millport and Stearns and begin putting together the operational plan, which will include both of those vessels in your augmented task force.”

After another brief pause, the Admiral finished.

“Is all of that clear?”

Lewis had experienced conflicting emotions as the Admiral had talked. He felt a definite letdown when it became clear to him that the long-awaited R&R would not be forthcoming. They had all looked forward to their relief crews coming onboard to take over for them in processing the cargo into the ordinance that the allied forces would require, while they took leave earth-side.

But that letdown had been short-lived as the Admiral had continued speaking. It had been replaced almost immediately by the excitement of impending action with his command. It was clear that the need for the vessels and their special ordinance was imminent, and although the Commander wondered just how much ordinance they could possibly prepare in such a short time, he looked forward to retaining command of not only the two original vessels in his task force, but the two new corvettes as well for the operation and the attack that he was sure would follow.

He knew that Lieutenant Commander Clark and everyone on both vessels would feel the same.

“Yes, sir, those orders are clear, and we will fulfill our mission, whatever it may be.

“...and if I may say so, it’s good to see you and this beautiful blue orb again too.

“Lewis, clear.”

**July 30, 23:55, local time**

**High Geosynchronous Orbit**

**Point Solitude, Opposite Asia, Earth**

The Millport and the Stearns had both arrived exactly as the Admiral had indicated and brought the necessary hardware with them for the preparation of their ordinance, the special carbonaceous chondrite projectiles they were fabricating. That hardware included special heat shielding to assist in maintaining the projectiles’ integrity through re-entry, and special penetrators for the hardened warheads to assist them in impacting their targets.

But that was not all the two vessels brought. In addition, they brought several upgrades of hardware, software and firmware for the command and control, targeting, guidance, weapons and communications systems of the Gaspra and the Ida. Those upgrades represented the latest technology from America’s Military Space Command research, development and manufacturing facilities for the most current upgrades being used on the latest space vessels that were being launched into space.

All of those upgrades were being feverishly installed and tested as the entire task force prepared for battle. In a little more than forty-eight hours they would depart Point Solitude and make their way towards the position that had been identified as the initiation point for their attack. They expected resistance and, to that end, another two corvettes would join them en route, while two more frigates like their own...but newer...would create a diversion to draw off most of any enemy response.

If the work on the special ordinance continued at the present rate, the task force would have a total of twelve devices ready to deploy against the Chinese. This was about 5% of what they had expected to process altogether, a complete procedure which they had expected to accomplish in over three months time. Now they were being ordered into immediate combat after only three days with only one twentieth of what they had expected to ultimately have available.

The current operation called for using six of the twelve projectiles and retaining six as a reserve for alternate targets, or in case a target was somehow missed...or, more ominously, in case either the Ida or the Gaspra were lost before they could fulfill their mission.

**August 3, 12:17, local time**

**Dragon Spirit Manufacturing Facilities**

**Northern Manchuria, The People’s Republic of China**

The early afternoon was hot and muggy, with a temperature at 38 degrees Celsius, and with a crystal clear sky, despite the humidity.

The modern facility was a wonder of automation and modern manufacturing principles and capabilities. It had been designed to be protected against air attack of all types, being in a sheltered valley, with both conventional and *ta shih*, anti-stealth missile emplacements all around the valley and extending out for many miles in concentric circular installations around the facility.

The production rate of Dragon Spirit spacecraft at this facility had increased to the point where one new vessel per day was now being produced. It was the darling of Chinese spacecraft production when compared to the other three facilities where between one aircraft every one and a half days to one aircraft every three days were being produced across northern China and into southern Mongolia.

The Americans had already made three attempts to attack and destroy this particular facility using cruise missiles, stealth aircraft, hypervelocity aircraft, and even conventionally armed intercontinental ballistic missiles. In every case, the Chinese air defense systems had performed well

and in only one case had any damage been inflicted. That had occurred during the ICBM attack when one of those missiles had gotten through the defenses and completely destroyed the production staging building several weeks ago.

That damage had hampered production for over a week, but had not stopped it. Now, after supplies had been adequately re-provisioned and after defenses had been correspondingly beefed up, the facility was operating at full production and setting the pace for the other facilities.

Now the facility and its defenses had been placed on the highest level of alert.

Early this morning American spacecraft had been picked up approaching from the west to east, coming in over Russia. A formation of two American spacecraft was detected, and, except for a reserve of four spacecraft, all available Dragons Spirit vessels had been launched to intercept.

The high command of the People's Republic was not happy with this development because they had been marshaling a large force of Dragon Spirit spacecraft to attack and overwhelm the American Space Station orbiting over the United States. After downing the newly launched station over the Pacific and the station over Australia, Jien Zemin had ordered all resource dedicated to downing the station over the continental United States. He wanted to do this before any new stations could be launched and as a demonstration to America that their newfound space dominance was at an end.

But the Americans had an operation of their own squarely aimed at spoiling those Chinese plans.

It was clear that the Americans were sending their own message, boldly entering the space directly over the PRC in an orbit clearly meant to attack the Chinese space manufacturing and launch facilities themselves. Though the Chinese had built significant reflective surfaces as anti-laser protection into their principle facilities, they could not risk allowing the Americans unfettered access to the space over the facilities for fear of them burning through the Chinese defenses or using other weaponry to damage or destroy the Chinese production and launch facilities.

The battle had taken place high over eastern China. The two heavy American space frigates had successfully fought their way through Chinese missiles and kinetic weapons and then battled the twelve Dragon Spirit craft sent up to intercept them. It had been a tough fight with eight Dragon Spirit craft being destroyed in the fray. Ultimately, only four hours earlier, the Chinese craft had finally overwhelmed the two American vessels and destroyed one of them. The other had been able to retreat and escape off to the north. The Chinese technicians on the ground and crews in space had cheered their victory as their surviving spacecraft returned to earth to be re-provisioned.

But now the tables were turning.

A few minutes ago an even larger force of six American spacecraft had been detected approaching from far to the west. The four remaining Dragon Spirit craft were being hastily launched and Chinese missile and kinetic weaponry were preparing to attack the new American threat.

### **August 3, that same time**

#### **Command Deck**

#### **USSS Gaspra, Well to the east of Japan**

"We have multiple small vampire tracks now rising out of central Mongolia and central China, sir. Expected interception of the first wave will be in less than five minutes."

David Lewis knew that these missile launches contained two types of Chinese weapons, high explosive warheads and kinetic weaponry.

"Okay, Bill," he responded to his defensive weapons officer, "Have Ida slave the launch of their SPAEGIS missiles with ours to form a wall against the first wave of missiles and put the lasers in automatic defense mode.

"Send the corvettes forward to be in a position to intercept any Chinese spacecraft."

The first wave of American missiles were launched by the two frigates and they closed on a trajectory that would spread them out in front of the oncoming Chinese weapons.

Despite the urgent calls coming over the comm. frequency between the American vessels, the defense against kinetic weaponry was becoming old hat for the Americans. But it was still not taken for granted. It was just a fact that the American defensive systems had proven very capable of intercepting the "clouds" of Chinese kinetic weapons launched at them.

Still, if they missed, people would die and vessels would be damaged or destroyed...and, either way, it took time and concentration to order, launch, monitor and make the intercepts, and time was a commodity that was precious in dealing with the imminent and fast pace of space warfare.

On this occasion, when the appropriate moment arrived, eight blindingly bright detonations several hundred miles in front of and well below the American formation blossomed. It happened just moments after the oncoming Chinese missiles had released their hundreds of kinetic weapons. The defense worked perfectly. No kinetic projectiles got through the nuclear shield that the Ida and Gaspra established in front of their formation.

But then, coming in at high speed a few seconds behind the kinetic weapons, over three dozen Chinese missiles with high explosive warheads approached the American formation.

By that time, the four American corvettes had accelerated out in front of, and slightly below, the two frigates and all four began engaging the Chinese missiles with their own lasers as the *Ida* and *Gaspra* did the same.

The American laser barrage destroyed all but three of the Chinese missiles, all of which came in targeting the *USSS Stearns*. Close in weapons on the *Stearns* accounted for two of these missiles, but the last one penetrated and hit the *Stearns* towards its aft end, ripping into the engineering spaces and into the engine itself before exploding.

The concussion from the explosion and the resulting rapid decompression killed two American personnel in the engineering spaces and the craft was left adrift in space because its engine was severely damaged. The *Stearns* had to shut down its primary propulsion and go into auxiliary power to maintain life support, communications and defenses.

By this time, the four Chinese *Dragon Spirit* spacecraft arrived on the scene, fighting fiercely to get past the remaining three corvettes and attack the frigates.

They were foiled in their attempts.

All four were destroyed by the combined firepower of the two frigates and three corvettes. In the exchange another corvette was moderately damaged and the resulting forces knocked it out of the orbit necessary to remain with the rest of the formation as they hurtled towards their firing positions. That damaged corvette was able to alter its orbit so as to eventually take up an orbit coincident with that of the *USSS Stearns* and provide it with more defensive firepower.

Proceeding with only minor, ground-based hindrance after this engagement, at precisely 12:32, the *Gaspra* and the *Ida* reached their initial firing positions just to the east of Japan high over the Pacific Ocean and launched two of their weapons each at the People's Republic of China.

Thus began the first orbital bombardment of earth in history.

### **August 3, four minutes later**

#### **Dragon Spirit Manufacturing Facilities**

#### **Northern Manchuria, The People's Republic of China**

Outside the facility, klaxons were sounding. Wu Xin was completing final repairs and tests for the analog sensors that provided measurements of atmospheric conditions to the backup power generators for the inner ring defense systems for the facility.

Wu had been called out moments before as one of those sensors had begun acting erratically.

"Of all times for there to be an anomaly," he thought, "right in the middle of an attack.

"The entire system was supposed to have been given routine maintenance just last week."

What Wu found was that this array of sensors had not been properly grounded and therefore what was known as a "floating ground" problem was causing the problem. Wu had quickly tied the sensor array to the proper ground using some spare cable he had brought with him. It was a temporary fix which would later require the installation of properly insulated and gauged cable, but this impromptu band-aid was something that would work well enough for the moment.

There was not time to perform an exhaustive test and after a brief check with his multi-meter, and an affirmative reply from the command center that the problem had been corrected, Wu immediately started back to his hardened bunker.

As he parked next to the facility and stepped out of the vehicle towards its entrance, he noticed several of the missiles in the secondary defense ring launch to intercept an incoming enemy missile.

Completely absorbed by the site, he only had the quickest impression of a distant, but very fast moving bright object approaching the facility from a high angle trajectory from the west.

He glanced up just in time to see one of the just launched Chinese missiles impact the object, which Wu now recognized as a much larger object than had been his fleeting impression, and to see the explosion from that impact have absolutely no effect whatsoever on the incoming enemy projectile, warhead, or whatever it was.

As the object came on at unbelievable speed, Wu had no time to form another mortal thought.

In that instant, there was a blinding quick approach of the brightly-glowing, ten-ton carbonaceous chondrite projectile. Its heat shield had worked perfectly. Very little of the object had burned off during re-entry. Now its penetrators worked equally flawlessly.

The object, impacting at many times the speed of sound, penetrated hundreds of feet into the earth. As dirt and rock slowed its passage in a time span that measured only hundredths of a second, the object exchanged its speed and mass for energy...tremendous amounts of energy. The resulting explosion vaporized the entire facility and a good part of the valley where it was located.

Wu Xin simply ceased to exist...as did all of the other workers.

The impact reached well beyond the fifteen levels that extended below the ground in what had been engineered to be a hardened facility against American conventional penetrator weapons.

But those Chinese engineers had not contemplated a ten ton penetrator coming down from orbit.

A large mushroom cloud, one that could be seen for many kilometers, began to form and rise over the site immediately after impact. The impact itself reverberated through the Chinese bedrock and was felt physically by people on the street as far away as Beijing. It was recorded by seismic

monitoring equipment as far away as New Delhi, India and Anchorage, Alaska, as well as throughout the western Pacific wherever such monitoring equipment was located.

The shock wave radiated out from the location of the impact and destroyed concrete buildings in the valley up to two kilometers away, and masonry buildings for up to four. Not only was every living soul in the manufacturing facility vaporized, but hundreds of people within those four kilometers were also killed or severely injured.

Similar events transpired in quick succession at all three other Chinese Dragon Spirit production facilities and one of the launch facilities for the spacecraft.

For some reason, either due to faulty targeting, or more likely due to a projectile whose internal structure was flawed, one of the incoming orbital projectiles missed the second Chinese launch facility by over ten kilometers. A large mushroom cloud rose from that impact as well, but it was over a relative lightly inhabited area, causing very few casualties, and no significant military damage.

But, if the personnel at that facility thought they had been spared...and the commander of the facility thought just that for a few minutes...they were sadly mistaken.

Within two minutes, the American weaponry officer on board the *Ida* who had launched the errant projectile, recognized from the computer analysis that the trajectory of that projectile would miss its intended target. One of the reserve projectiles was launched at the remaining launch facility, impacting a few moments later with the same results the other facilities had experienced.

In a period of less than fifteen minutes, the entire research, production and operational launch facilities for the new Chinese Dragon Spirit military space craft were vaporized. Not only were the facilities destroyed, but even more importantly to both China and the United States (although for exactly the opposite reasons), most of the brilliant engineers, technicians, military commanders, and planners associated with the program were killed as well.

**August 5, 02:44 WST**

### **US Air Force Space and Missile Range**

#### **Central Nevada, United States of America**

Within twenty-four hours of the devastating attack on the Chinese space facilities, the United States launched two new frigates and two new corvettes in SSTO flight profiles. The new craft would form the core for the new USSS Southern Star space station over Australia.

The Southern Star would remain there through the rest of the war despite the best efforts of the CAS and GIR to bring her down.

The USSS *Gaspra* and the USSS *Ida* returned to Point Solitude immediately after the attacks and began processing the remainder of their special, shielded and hardened projectiles for further use in the war effort...but it was the relief crews for both vessels that would do the processing.

At long last Commander Lewis and Lieutenant Commander Clark and their crews go their leave.

After the relief crews arrived, and while Lewis and Clark and their compatriots were waiting to depart for Earth, they listened to a message to all of the surviving crews of those ships involved in the attack. That message was delivered by the President of the United States in a special closed circuit communication regarding the success of the mission that was broadcast live from the Oval Office.

"Folks," he said, "Yesterday each of you made history with your attack operation from space."

"But more than that, you demonstrated to our enemies that our commitment to victory is unshakable. You helped show them to what lengths we will go to ensure victory and secure the blessings of liberty and freedom for ourselves, and anyone else on this earth who seeks it.

"All I can say is thanks for a job well done. Your comrades and your countrymen salute you.

"God bless you each for your parts in this...and God rest the souls of those brave ones who fell yesterday in this operation. I can assure you their sacrifice was not in vain."

**August 15, 08:44 WST**

### **Campbell Residence**

#### **Orchard Avenue, Boise, Idaho**

Geneva Campbell was grateful for her Saturdays. They gave her a chance to really get some major things accomplished around the house, as opposed to only having the time to pick at various projects after work each day throughout the rest of the week.

Over the last couple of years she found that she could make the most significant progress if she used her time during the week to prepare for her Saturday work schedule. As a result, she now found that she was sometimes able to complete several major tasks on any given Saturday, and this gave her a great sense of accomplishment, and prepared her for Sundays when she would go to church and then visit the sick and needy people in the various hospitals and nursing homes near her.

She found, through all of this, that keeping herself busy throughout the week and then trying to serve others each Sunday really helped her to pass the time without having to worry too much about her sons. Both of them, Leon and Alan, were still away fighting in the war, Leon somewhere in Australia and Alan now somewhere in eastern Asia.

Today her major task was to go out and finish harvesting the abundance of tomatoes and green beans growing in her garden. She would harvest this morning, clean the produce and put away what she would use in the immediate future in the early afternoon, and then later this afternoon she would do her canning so she could store in her pantry what she couldn't use in the near term.

In addition, she always made a practice of taking at least ten percent of what she canned and either giving it to the local homeless shelter or in some other way donating it to the needy.

She planned to do that on Sunday.

"The good Lord said in the Bible in the book of Malachi, chapter three verse eight, that we was robbin' Him if we didn't bring in our tithes...and there ain't no way I'm gonna rob God," she thought.

The way she figured it, Jesus himself had said that we should share and give to the poor.

"...and then that's exactly what He did when he was here on this earth."

Geneva felt that by freely and charitably giving of her own excess to those in need, she was not only doing what Jesus would do if He were here, and therefore trying to be more like Him, but she was also fulfilling the commission on tithing that Malachi had prescribed.

And, now, she was just about ready to go out and start.

"But I've still got another ten minutes or so before nine o'clock," she thought.

"That's enough time to read Alan's letter just one more time before I go outside."

Geneva had received the letter in the mail yesterday and had completely read it through twice last night before she went to bed. It was a wonderful letter. She was so proud of both of her sons for their dedication to the country...and particularly proud of Alan because of what he had written in this letter.

As she read it again, she got to the particular part of the letter that brought her the greatest joy and caused her eyes to brim.

"Mom, I haven't shared this with you yet, but for some reason I figured as we prepare to move out (and I can't tell you either where we are, or where we are moving out to) for our next mission, that it'd be a good time to let you know.

"I know it's gonna make you happy, Momma, and I want you to know that I'm happy too.

"About two months ago, while we were involved in a major firefight over near the coast, two friends in my squad were badly wounded. We did everything we could for the both of them, Mom, but one of them died before the med-evac helicopter ever got there.

"It was the other one, my friend named Lonnie that I wanted to tell you about.

"He's a good kid, Momma...I mean a really good kid.

"I have never seen him smoke, drink, cuss, tell bad jokes, go to the girly places, or do anything mean or spiteful. Sometimes, with the pressure of combat, with friends dying all around you...it's easy to escape into some of those things, to sort of get away from it all. There's a lot of guys out here who do those things, and I'm not real proud to admit to you, Momma, that sometimes I have too.

"But that's all behind me now, Momma, and here's why.

"You see, this little ol' Lonnie never did those things...and I mean it when I say he is a little guy, Mom. Someone you would never expect to see out here. When I first joined the squad and saw his size, I was surprised he had been able to make it through Marine boot camp let alone the later training that put him into the type of work (which I can't go into) that our squad does.

"But he did.

"Even though he's a little pipsqueak in size, and even though he is soft spoken and pretty reserved, I have found that he is physically wiry and tough on the outside, and that he's one of the biggest guys I know in terms of inner strength.

"He's not afraid at all of doing whatever he has to do in any combat situation we have faced...or in doing any of the work around camp that needs to be done. He never complains and it's been amazing and a great example to me.

"I've really come to like and respect Lonnie, Mom.

"Anyhow, he told me one time that his own Mom and Dad had taught him about some young warriors from another time in ancient history. He called them *stripling warriors* who had fought for liberty in their time. He told me how his folks had taught him that the Lord protected those warriors and watched over them as long as they were true to Him, and that the good Lord would do the same for him if he would be as true to God as he could be.

"Lonnie believed his folks. He read about those stripling warriors to me from a book that he carries around with him. That book documented the story and the struggles they had.

"Mom, just before their first major battle, this is what that history says about them:

*Now they had never fought, yet they did not fear death; and they thought more upon the liberty of their fathers than they did upon their own lives; yea, they had been taught by their mothers, that if they did not doubt, God would deliver them. And they rehearsed unto me the words of their mothers, saying: We do not doubt our mothers knew it.'*

"Mom, I have to tell you, from the bottom of my heart, when Lonnie read that to me, I thought of you. I couldn't help but think of all your prayers for Leon and me. I couldn't help but remember your great faith in God and in Jesus. I couldn't help but say to myself... *I do not doubt my mothers knew it!*

“Mom...when I thought of those things, I felt a great swelling in my heart and I wanted to have that same faith that these young men had...that Lonnie has...that I know you and Leon have.”

At this point, Geneva began to cry, just like she had done the night before when she got to this point in the letter. She had always prayed not only for the physical safety of her boys, but even more so for their spiritual safety. Because safety in this world is one thing, but knowing that there is an eternal life awaiting you on the other side is all that really matters. And a mother who does not know that her son will inherit that eternal life is a mother with a deep and abiding concern...especially when her son finds himself in a life and death situation day after day.

This letter represented a literal answer to her prayers.

Leon had found God before ever going off to war and was always willing to witness to others of it...in his own way...on the battlefield or off. Geneva was convinced that it was Leon's faith that had allowed him a glimpse of his own father in the afterlife while he was in a coma after sustaining severe injuries in the Indian Ocean on the Island of Diego Garcia, almost exactly four years ago.

For his actions there, Leon had received the Medal of Honor. When he recovered from his injuries, despite the Marines' desire to use him and his notoriety to help recruit others, Leon would have none of it. As soon as he was able, he had requested to go back into combat, and the United States Marines had granted that request.

His letters often made reference to his faith in God, particularly as he was now searching for his good friend, Billy Simmons, who had been lost in Australia and was presumed dead.

But Alan had never quite gotten to the point of having faith in God. Geneva had always thought that Alan believed there was a God...but that he'd never made the leap to actually coming to know Him and putting his trust and faith in Him.

He was not what Geneva considered a *bad* boy, even though he had made his share of mistakes, and done his share of wrong.

“We all have,” thought Geneva as she considered Alan.

“But the good Lord Jesus has given us a way to overcome those wrongs through His own sacrifice and example. The way to make better people out of ourselves in this life is through having faith in Him, accepting Him and following Him, which at the same time prepares us for the life hereafter with Him and all of our loved ones who do the same.”

It had always been her fondest desire for Alan that he would find that path, and embrace it. From what followed in his letter, now she knew that he had.

“Mom, I spoke to Lonnie about all of this, about his faith and the faith of these young warriors...and he told me that I could have that same faith. He told me that if I came to Jesus and accepted Him and His gospel, I could repent and be a changed man, putting all of my mistakes behind me...and looking forward to a future where I was improving and becoming a better person.

“I know that this is stuff you and Leon have told me in the past, Momma. I suppose Daddy told me the same thing when I was very young before he died. It's just that somehow, someway, here in this place it finally took hold, and I *wanted* Jesus' help, to know Him and come to trust Him.”

Geneva thanked God for this young man, Lonnie, whom Alan had met and befriended. She thanked Him for the good parents who had raised him to be such a good example and to be willing to witness to her son. She vowed, someday, to find and to thank Lonnie's parents personally.

“Anyhow, Momma, two months ago, I accepted Jesus into my life and I joined and became a part of the body of Christ in His church. Lonnie himself baptized me in a little stream, and a whole bunch of our company attended and looked on.

“I have to tell you, Momma, there were some streaked cheeks on a lot of those old grizzled Marines' faces...even if most of them were not believers themselves.

“You can't go through what we have gone through without giving a lot of consideration to life, and the hereafter...I don't care who you are. When you see someone make that change, whether you are ready to make it yourself or not, well, in this environment, it means a lot to most of them.

“I know it meant something for a number of the men in our company when I did.

“Anyway, while he was lying there wounded, waiting for the helicopter, I was real concerned about Lonnie. He'd been shot through the shoulder and had taken another round through his side. He was bleeding a lot and the three of us who were working on him thought he was not going to make it.

“As he lay there, I was helping the medic by holding my palm over one of Lonnie's wounds to try to compress it and stop the bleeding. I was crying while I was doing it when Lonnie looked up at me and...and he started comforting me!

“He told me that I shouldn't worry about Him, that it was all in God's hands and he wasn't afraid of God's will in the matter. He told me I could use my faith to help him, and asked me to pray for him and his family. He then asked me if his friend Trevor was around.

“Well Trevor is another one of the believers in our squad, and a good friend of Lonnie's. But Trevor was out on our perimeter providing security. So I sent the other Marine who was there with us to get him, and to relieve him, because Lonnie was asking for him.

“When Trevor got there a few minutes later, Lonnie asked him if he would bless him before the helicopter got there. Trevor told him he would and then, while the medic made room for him, he took a little vile out of one of his pockets and then put a drop of some oil that was in there on Lonnie's head.

“Momma, I don't know how to tell you what happened after that. It was so beautiful, and so surreal in that environment. Trevor said a prayer out loud...and gave a blessing to Lonnie. He did it in the name of Jesus, Momma, and he promised Lonnie that God was watching out for him and that it wasn't his time yet and that, if he had faith, God would heal him and he'd make it home to his family.

“What impressed me most was that I knew that Lonnie was okay with it either way. He had faith in God's will, Momma, and was willing to come or go however the Lord wanted it.

“When it finally got there, Lonnie was carried off in the helo. We've since heard that his injuries are severe enough that he'll be going home soon to Ely, Nevada...but he's going to make it and ultimately have a full recovery.

“Trevor and I have had a lot of talks since. I go to a service every Sunday with him, when our duties allow. I am growing in my new faith in Jesus, Momma, and I know it's that same faith you have. I also know it was your upbringing that has made all of this possible for me, that put me in a position to understand and accept it.

“Thank you so much, Momma. It is a debt of gratitude and honor I can never repay except by passing it on...and that's just what I am going to do.

“I know it may sound hard to believe, but out here in this place, fighting this war, with what I have found here I have to say that I have never been happier.”

And that was where Geneva chose to stop and put the letter away. For her, it was the most wonderful place imaginable to stop because she could truly *feel* what Alan was experiencing. Now, across the thousands of miles, in addition to their love, their mutual faith built a bridge across it all.

It was a strong bridge, a bridge that would withstand whatever winds blew against it...and Geneva had never been happier for, or with, her son, Alan.

After putting the letter away, she walked to the front door to go out into the garden that was located on the side of the house and do the work she had planned. As she reached for the door, before she could turn the handle and go out into the yard, the doorbell rang.

Since she was already reaching for the door handle anyway, she quickly opened the door and found, there on her doorstep, two immaculately dressed United States Marine officers.

“Mrs. Geneva Campbell?” asked one of them.

When Geneva nodded, the realization of who these men were and why they were likely on her doorstep began to reflect on her face and in her eyes. As it did so, the second Marine officer took his hat off and held it over his breast and said,

“Mrs. Campbell, we're with the United States Marine Corps.

“May we please come in?”

## Chapter 40

*“Stay well - Stay safe - Stay armed - Yorktown” – Matthew Riley*

**September 20, 10:48, Local Time**

**Ambassador's Office**

**Indian Embassy, Omsk, Siberia**

Buhpendra Gavanker had been back in Siberia for over a week. His time was filled with the duties of a full ambassador to a close ally nation. There were diplomatic issues, economic issues, military issues and cultural issues to address that kept him very busy, particularly after an absence of several weeks due to his trip to India.

He considered the city that he had returned to, where he now lived and worked. Years ago the Russians had designated Novosibirsk as the capitol of Siberia, taking it away from its traditional home in Omsk. But when Siberia had declared its independence from Russia, and the Indians and Chinese had backed the new Siberian government with over 500,000 men, one of the first official acts of the new government had been to move the capitol back to Omsk.

To begin with, while the move and transition to the new capital was taking place over the first twelve to eighteen months of independence, the Indian government had established its embassy in the Siberian city of Krasnoyarsk. The Gavanker family had moved there to be with Buhpendra while he settled into his very busy schedule as the new ambassador. The relocation had not been easy for the family. There were many, many times when the father and husband of the home would simply not get home until long after everyone else had gone to bed, if at all. Despite his necessary absences, Buhpendra made up for his long periods away by spending genuinely quality time with his family when he was able to be with them.

As the seat of government settled in and became permanent in Omsk, the Indian embassy had naturally been moved there. Buhpendra had coordinated the entire move with his own government and with the Siberians...as well as with the Chinese, who seemed to be intent on having what Buhpendra considered to be undue influence in, and access to, almost everything in which he was involved. That move of the embassy had also necessitated a move for the entire Gavanker family. It was a move for which they had come to be thankful, over the last eight to ten months.

Buhpendra, while still working long days, had seemed to find more time to be home with the family...almost every night they could eat as a family and enjoy time together before bed time. But, ever since the meeting in Mysore, that had all changed again. Now his schedule was extremely hectic once again, similar to the earlier times of separation when he served in Krasnoyarsk.

As he contemplated the moves and his schedule, and as he considered the momentous events in Siberia over the last two years...and the even more momentous events that were soon coming, he thought to himself, “Can this genie ever be put back in the bottle?”

The very question he just posed to himself only served to show him again how difficult it was going to be for him to stop almost incessantly focusing on the import and potential consequences of his Indian trip and the meetings in Mysore. The strain of living with the knowledge of President KP Narayannen's plan to make direct overtures to the western allies and the probable consequences of that plan were constantly weighing heavy on Buhpendra's mind.

Oh, make no mistake, the Ambassador to India agreed with the plan. He had always had trepidation about the overall war plan they had been involved for the last five years... not to mention his nation's precarious alliance with China...but he had also understood the reasons for both. Now, with the war fairing badly, those trepidations, and a desire to preserve his country, took precedence.

“I wonder sometimes,” he thought to himself as he signed a number of requisitions, “If the war effort had continued with all of the victories, would I have even entertained such a plan as this?”

Gavanker was honest enough with himself to know that he wouldn't have. He also knew that his President also would never have considered such a notion either.

“KP is acting as much out of self preservation as he is for the nation,” Buhpendra thought.

“He is hoping that a successful break with China and alignment with America will help him escape the war crimes trials and an injection.”

But all of that speculation was pointless now. What was important now was the hard cold reality of the plan and their commitment to it. Gavanker knew that it was too late to turn back, and he knew that the timetable for implementing the actual contacts was fast approaching.

Buhpendra's part would begin day after tomorrow, the same day that back channel contact with the Americans would be made. Because of his former relationship to the Russian General Andrei Nosik, who was now a Field Martial, Gavanker would be making the contact with the Russians.

The contact would be initiated by secure, encrypted, and scrambled communications across Siberia, over the Urals, and into Russia. Buhpendra was relying on his former knowledge of Russian

frequencies when he had worked together with Nosik who commanded the Russian security forces that protected the coal site in Gavank, Siberia, where Buhpendra had directed the Indian operation.

He hoped that the Russians were monitoring these frequencies. Buhpendra had taken several of his deputies, several ranking cabinet members within the Siberian government, the head of Indian Security forces defending the diplomatic team within the country and the deputy head of Siberian defense forces in on the plan. They were all extremely dedicated and knew their parts in initiating this communiqué and in developing the plan once contact with the Russians had been made.

The plan Gavanker would implement in Siberia was very similar to the plan that the Indian President would implement within India to contact the Americans. Both Buhpendra and the President were staking everything, up to and including their own lives and the lives of their families, on a successful contact with the Americans and the Russians in order to devise and execute India's next move ... in order to plan for India's exit from the CAS and its capitulation to the western allies.

It was a high stakes game...and the stakes would ultimately pay off for only one of the two men.

**September 21, 06:55, CST**

**Near the northern property line**

**Lazy-H Ranch, Outside of Montague, Texas**

It was warm in Texas. A high pressure system that had enveloped the state for the last several weeks had slowly moved to the east, but not so far that conditions had changed too much. Outside of a few morning low clouds, the skies were fair, the winds light...and the temperatures remained warm.

Here in north central Texas, as was almost always the case this time of year, and outside of those times when colder, dry air came barreling down from the north, it was also humid. Moisture from the Gulf of Mexico was perpetually funneled up across the entire eastern half of the state when these conditions were in place, and that moisture hung in the air on these early mornings in the bottomlands. You could almost see it...you could certainly feel it.

"Must be in the mid-eighties already," thought Jess Simmons as he continued to work the fields with his new John Deere tractor.

"Probably be over one hundred again today."

But that wasn't too bad. Jess had grown up working in Texas fields like these. He knew that before too long, probably in early October, a norther would come down and push the warm humid air clear down into Mexico, heralding the advent of autumn, when temperatures would moderate down to the seventies in the day and the cool fifties at night. He always looked forward to that time of the year.

He'd been home from the war over a year now, and he was about as healed as he was going to get from the injuries he had sustained while fighting in Syria.

His head injuries had completely healed, or so it seemed. No more throbbing and aching...no more sudden headaches. The doctors had worked miracles.

"...and so did the faith and love of Cindy and so many others," he thought.

His leg was a different matter. It was a miracle in itself that he had not lost it...and the doctors had brought his function and use of that leg very far along.

But, even after all of the operations and therapy, his left leg was still an inch shorter than his right, and his knee and ankle were difficult to bend more than fifty percent of normal.

The result was that Jess was forced to walk with a perpetual limp. Oh, it was not nearly as bad as it had been a year ago...and he was able to get around quite well. But it was noticeable, and he was certainly not capable of some of the harder work that he otherwise was used to doing, and would be doing out here on the ranch if he could.

"I'll just have to learn to live with it," he continued as the tractor reached the edge of the field.

"... and be grateful that I can even get out here and work at all on the place and enjoy the beauty of the timbered hills and the Clear Creek Valley up here near its source."

Thinking about the scenery there overlooking the valley caused him to reflect on the great void in his and Cindy's life. Their lost son, Billy, who had loved this country as much as his father and who had spent countless hours exploring it, hunting on it and fishing in the creek.

He remembered breaking the news to his dear wife Cindy...and how it had felt to deprive her of a hope that their son was still alive and breathing, somewhere. There were times he regretted having to dash her hopes...there were times he felt guilty about it...there were times to this day where he held out some hope himself...but he could not deny the cold reality of what he saw and what that told him as a professional...which was what he had ultimately felt compelled to share with his wife.

"Thank you, dear God, for Cindy," he muttered in silent prayer as the thought of her pain rested heavily in his mind. "I don't know how I could have gotten through the loss of Billy, or my own rehabilitation, without her. Even during the unbelievable heartache and mourning she went through, she was always there, never missing a beat..."

"Dear Lord, how has she been able to do it?"

Jess Simmons was sincere in his prayer and question to God. He could hardly fathom her ability to help until he remembered a scripture from his childhood.

*"For God so loved the world that He gave His only begotten Son."*

...and he knew. He knew that Cindy was only following the example that the God Himself had set... in the midst of grief, in the midst of loss... He gave.

...and so was Cindy...and he knew that her example had helped him to do the same thing  
 "...she's my own very special angel, sent down from Heaven."

### **September 21, that same time**

#### **The kitchen at the ranch house**

#### **Lazy-H Ranch, Outside of Montague, Texas**

Bacon was sizzling and its fragrance was filling the air. There were biscuits in the oven and a bowl of fresh made gravy was warming on one of the burners.

"All I have to do is get the eggs fried, the juice out and the table set, so I'd better call Jess in," Cindy thought as she reviewed the country breakfast she was preparing.

She walked over into the foyer where their dual CB (Citizens Band) / SSB (Single Side Band) radio was mounted to the wall and turned the CB radio to channel 14.

"Comanche, this is the home lodge. Do you copy?"

After a few seconds, during which Cindy could imagine Jess hearing the call and reaching up to grab the mic and keying the transmitter, the response came back.

"Home lodge, you've got the Comanche. What's up babe?"

"Well, if you're close to the south side of the field and start back right now, you can get here at about the perfect time to get a warm breakfast.

"What's it going to be?"

Jess didn't have to think...long years told him that unless there was something really pressing and important, the best thing to do was not to let the meal go cold.

"I'm on my way...see you in about ten minutes.

"Comanche clear."

Cindy smiled, knowing that if something important had been afoot, he'd have let her know. As it was, he was going to arrive at just the right time.

"Home Lodge clear," she responded.

For just a brief moment, she almost keyed up her mic and made another call...but then realized her mistake and put it in its cradle and started back to the kitchen.

As she did, she thought, "No more calls to Billy the Kid."

As always, when she thought of him, she was saddened.

"Will it always be like this?" she wondered to herself.

"She would often forget for an instant that he was gone and wonder how he would look, what he would think or say...how he would be feeling, what he would be doing...what he *was* doing?"

Somehow she knew that the feelings would subside and be less poignant over time. Not that the hurt of missing him would ever really go away...she couldn't imagine that, but that the realization of his goodness and what that meant to her in her faith, would allow her to accept God's will for him...that He had called Billy home, and that they would be together again.

"Oh, what comfort that brings...I don't know how I could handle it without knowing that," she thought as she set the orange juice pitcher on the table and began putting out their two place settings.

"It's just without his body...without a grave we can visit, there's just not the closure we need.

"Please, dear Lord...hear my prayer," she prayed.

"Let us, in Your will, find closure and the Peace you have promised," she concluded.

Completing the short prayer, she stopped and briefly listened to the feelings in her heart...to the spirit of things and what she knew was the Holy Ghost...and she knew that somehow, someday, she and Jess would find the closure they sought.

She had no idea how soon or what form it would take.

As she experienced these feelings, she was just putting the eggs on the plates and setting the bacon, biscuits, and the bowl of warm gravy on the table in the breakfast room. When she heard the familiar swing of the front door, she knew that Jess was home for breakfast, and she rushed to meet him so she could share the experience with him.

### **September 22, 04:30 local time**

#### **Communications Station**

#### **Control room, USS Jimmy Carter, SSN 23**

Captain Thompson listened as his comm officer related what their sensors were picking up.

"Okay, let's start from the beginning and rehash this one more time. You are telling me that the UAV has picked up a signal from the Indian mainland on the old microwave channels we had set up with the Indian navy during exercises back in 2003?"

The Lieutenant responded in the affirmative and then went back over what he had already explained to his captain. He was glad to do so, to check his figures and his translations one more time. But they came up with the same conclusion.

"Yes, sir, that is exactly what I am telling you.

“Our UR-23 001 has picked up a signal from the Indian mainland that is being transmitted using protocols and security encryption that is in keeping with the 2003 naval exercises.

“Sir, they are telling us that they want to make official contact with the United States or other allied officers or representatives capable of negotiating with them.”

The Captain needed to verify the supposed location from which the transmission was emanating.

“Once more, tell me about the encryption and the access codes regarding the message.”

“Sir, the encryption matches our procedures for that period, the access and priority codes indicate it is a flash message from the head of the Indian government, sir, from the President of India.”

The Captain considered the ramifications.

He was in enemy waters captaining a vessel that the entire enemy force structure would literally do almost anything to find, prosecute and destroy. Of his full load of weapons, he had less than half left to him, consisting of:

8 Mk-77 SCWS supercavitating torpedoes

8 Mk-48 ADCAPs advanced conventional torpedoes

7 Tomahawk SLCMs land attack cruise missiles.

It was entirely possible that the enemy had gotten some wind of his current patrol within the Indian Ocean and was trying to lure him into revealing his location.

On the other hand, if this communication was genuine, it had the potential of being huge.

“Okay, put together the following communication via the global surveyor network to CINCPAC.

Have it read as follows:

*“JC received comm from Indian government using 2003 joint exercise protocols indicating it is from the Indian President's office.*

*“They want to open negotiations with any American representative possible.*

*“Please advise.”*

That was a long message, but the Captain needed to transmit the essence of the communication to CINCPAC so the proper decision could be made.

### **September 22, 1 minute later**

#### **85,000 ft over the Indian Ocean**

The high-flying Global Surveyor III reconnaissance and communication aircraft received the compressed, encrypted burst of data from the Jimmy Carter's own UR-23 UAV and transmitted it on.

Capable of loitering in a lazy figure eight pattern over and area for two weeks or more, these latest generation aircraft were the highest flying, most stealthy, most enduring and most advanced UAVs yet produced. Their ultra-efficient engines, their ultra-light and strong composite construction, their tremendous wingspan and the relatively large payload capacity made them well suited for the missions they performed.

In this case, this URGS III, was part of a network of such aircraft that the United States kept up at all times over the Pacific and southern and eastern Indian Oceans to facilitate communications.

The USS Jimmy Carter had been assigned to a patrol area for its mission that would keep its own UR-23 UAV within range of this particular Global Surveyor if the need arose for communication.

Now the message was being conveyed through a network of six different URGS aircraft, interspersed with ground stations where possible, and back to CINCPAC headquarters in Hawaii.

Within five minutes the entire message had been received and decoded. It was brought to the attention of CINCPAC himself by his deputy commander who was on duty at that particular time.

From there, it was communicated via satellite uplink, using the Point Conception Space Station, to Washington, DC and the White House, where the President's National Security Advisor read it twenty minutes later. . .less than an hour after it had been transmitted.

Less than an hour later, a video conference was arranged which included the President, the Vice President, the Secretary of Defense, the Secretary of State, the National Security Advisor, the Director of the Central Intelligence Agency, the Chairman of the Joint Chiefs, and CINCPAC.

### **September 22, two hours later**

#### **The White House Situation Room**

##### **Washington, DC**

President John Bowers bowed his head and uttered a silent prayer as the digital plasma displays went black and as the other attendees left the room as he had requested. For a moment he was left alone with his secret service detail, and he bowed his head.

“Dear God in Heaven, please let this be a true opportunity to shorten this horrific conflict and the suffering it has caused. . .please help us restore peace and liberty to this shattered and broken world.”

The State Department personnel were already making their contacts. . .new war plans would be detailed, reviewed, critiqued and then detailed again in the Pentagon and the war colleges. . .hundreds of thousands of American personnel would soon be on the move. . .intelligence assets in very dangerous places behind enemy lines would be contacted and given orders. . .allies would make their plans. . .and somewhere off the coast of India, a valiant American Captain would take his vessel

deeper into harms way for more direct contacts with a former aggressor and belligerent nation in the hopes of making the marked difference in answer to the very prayer that the President had just uttered.

**October 12, 02:50 local time**

**Command Post outside Presidential Residence**

**New Delhi, India**

Rahmish Patel, along with the Defense Minister, monitored the command frequency as the special internal security battalion made its way into the Presidential compound. What started as a scuffle at the gate, turned into a hot firefight as the Indian forces under the Defense Minister's command made their way across the courtyard under fire from the Presidential security force.

There were just too many personnel in the special security battalion and they had been specifically trained for this mission...to battle a smaller contingent of Indian troops who would be loyal to the constitutionally elected president. The surprise of Indian troops under the Defense Minister's command assaulting the Presidential compound in such numbers was telling on the Presidential security detail which, though highly trained was much smaller, and those forces under the command of the Defense Minister, who was following the dictates of his political and ideological leader, Rahmish Patel, soon entered the presidential residence itself.

There, on the lower floor, another fierce firefight ensued.

"That fool," thought Patel.

"Did he really think that all of his treachery and treason would go unnoticed?"

"Did he really think that the Indian people and their true leaders would allow him to take the gains of a decade and turn them over to our enemies in a day?...a week?...or a month?"

"Well, now, President KP Narayannen...or should I say, the former President...will pay for his high treason with his life."

Turning to the Chinese liaison officer at his side, and catching the attention of the Defense Minister who nodded grimly, the Indian Foreign Minister, issued the fateful directive.

"Colonel Chian, you may deploy your troops into the Presidential residences and either capture or kill former President KP Narayannen and those in league with him.

"...and, if you are in agreement, please pass the execute order for our joint Operation Mongoose on to your superiors."

**October 12, that same time**

**100 Meters beneath the Presidential Residence**

**Secure Command and Control Facility, New Delhi, India**

KP Narayannen had been listening to the progress of the battle raging above him as he feverishly issued orders to those military forces still loyal to him in the New Delhi area and in those regions of the country where his carefully crafted plans were being carried out this morning.

The problem was, of course, that powerful individuals, agencies and forces within his government and military were not standing idly by. They apparently had plans of their own, and those plans were clearly aimed at thwarting what the Indian President was trying to accomplish.

"They are too late to stop it," he said to himself as he approved and then ordered transmitted the official declaration severing the alliance with the Coalition of Asian States and declaring India's official capitulation to, and cooperation with, American, British and Australian forces.

Within seconds the communications officer in the command bunker notified the president that the transmission had been effectively jammed by powerful electronic warfare equipment both on the ground near the facility and in the air over it.

"Keep trying to circumvent the jamming", the President indicated.

"How about the land line transmission?"

"Was it able to get out?"

The communications officer responded by letting the President know that the land line communication had indeed successfully been sent to all points to the south and west of New Delhi, but that the lines to the north and east were down and not responding.

As this was occurring, the head of the Presidential security detail rushed into the room.

"Mr. President, we must leave now and get you out through the emergency access tunnel.

"The traitors have been joined by a large contingent of Chinese Special Forces and they are now overrunning our positions. It will only be a short time before..."

There were several prolonged bursts of automatic weapons fire down the hall from the control room in which the President was sitting. Almost immediately, three more members of the Presidential security detail backed into the room, firing as they did so.

Two of them were knocked off their feet by bursts of automatic weapons fire from outside the room as the President and his Chief of Staff were hustled towards the back of the room towards an already opened, armored door that led to the emergency tunnel.

The President, his Chief of Staff and two senior level cabinet members hurried through the armored door with the chief of the security detail. As they did so, three large concussion grenades

bounced into the room and exploded with thunderous roars. Except for those already through the door, everyone else in the room was stunned into submission by the blasts.

As several Indian and Chinese Special Forces personnel rushed into the room, the armored doors of the access tunnel clicked shut and sealed themselves. It would take plasma welders over two hours to cut through those doors and follow the President and his remaining personnel.

By the time that was accomplished, KP Narayannen and those with him would have long since reached the end of the tunnel and stepped out into what they hoped would be friendly forces and a quick flight away from New Delhi to those more friendly and loyal places to the south and west.

Instead, they stepped out of the tunnel right into the hands of Rahmish Patel, who had personally joined a second combined Indian and Chinese Special Forces team after they had secured the exit to the tunnel from the President's forces that had been guarding it.

Upon seeing the President and his remaining team members apprehended, and once he was assured that all of them had been disarmed, Patel addressed KP Narayannen.

"Mr. Narayannen, you are under arrest for treason against the people of India."

Turning to the commander of the Indian contingent of Special Forces that were now covering the President and those with him, Rahmish continued.

"Captain, please take these prisoners away and hold them each in solitary confinement where they will await a swift and speedy public trial."

## **October 12**

### **Along the Siwalik Range, Along the Brahmaputra River And on the Coast near Cochin, India**

As KP Narayannen was taken into custody in New Delhi by Rahmish Patel and those forces loyal to him, the fateful plans that the Indian President had made were playing themselves out...along with the plans of the forces that were committed to countering them.

To the north of New Delhi, along highways that the Chinese had built right up to the borders of India, and that the Indians themselves had then constructed through the major river valleys that penetrated the Siwalik Mountain Range, hundreds of thousands of Chinese troops were entering India. Through huge tunnels, across wide bridges and along the superhighways that had been constructed to facilitate the immense trade that had been going on ever since the creation of the Coalition of Asian States five years earlier, division after division of Chinese troops, tanks and mechanized vehicles now traveled at high speed.

Those highways had also been built with foresight, looking forward towards military logistics and transportation. That foresight was paying off now as Indian forces loyal to Rahmish Patel and the CAS facilitated the blitzkrieg invasion of India by the Chinese, who were converging on and being funneled along the both Sutlej and Ganges River into the interior of India. Their aim was to forestall and checkmate the capitulation and cooperation plans that KP Narayannen and those loyal to him had worked out with the western allies.

In addition to the incursions along the Ganges and the Sutlej Rivers, the Chinese were also making a massive incursion into the eastern part of the nation, in the Arunachal Pradesh along the Brahmaputra River. In these areas, Indian troops loyal to the war effort and the alliance of the CAS also facilitated the blitzkrieg entry of several hundred thousand Chinese troops into India in a pincer movement aimed at the heart of the subcontinent.

Within ten days, the numbers of Chinese troops massed in many separate locations along the borders in these two areas and entering into India along the routes indicated would swell to a force of over ten million. The Americans used three of their orbital bombardment inventory from the Lewis and Clark II expedition to attempt to thwart this Chinese buildup and incursions...but although upwards of three hundred and fifty thousand personnel were killed or wounded by these orbital attacks, the Chinese had dispersed their troop strength enough to keep the attacks from seriously challenging or stopping the massive infusion of forces into India.

While all of this was occurring, an initial allied force of over four hundred thousand American, British, Canadian, and Brazilian troops was landing to the north and south of the Indian seaport and major naval base of Cochin. The allied troops were being flown on to the beaches by the largest air armada in history, centered around the largest contingent of American C-90B transport aircraft ever assembled...much larger than the original C-90 force that landed American troops in Siberia almost eighteen months before. The air assault force was itself being supported by the largest combined submarine force ever assembled. These forces consisted of two of the three American Sea Wolf class nuclear attack submarines, twelve Virginia class American nuclear attack submarines, two of the Ohio class SSGN nuclear cruise missile submarines, ten Alaska Class SSTN amphibious assault and transport submarines, and four of the new Olympic Class SSCVN aircraft carrying submarines.

This was the combat debut of the Olympic class, which was a major revision of the huge Alaska class design, carrying twenty four VTOL F-35 aircraft, four E-22C VTOL AEW aircraft, six S-22C VTOL ASW aircraft and up to ten UR UAV aircraft. In addition the SSCVN submarines were fully outfitted with a full array of torpedoes, including the Mk-77 supercavitating torpedoes, along with a

total of forty-eight vertical launch tubes accommodating anti-air missiles and other missiles up to and including the AGM-999 Hail Storm cruise missiles and the latest American Tomahawk SLCMs.

This fleet of submarines was in place to provide the air cover and precision air and fire support necessary for the allied troops who were landing around Cochin and who would then be advancing to the north and east to confront the oncoming Chinese forces. In that role, the allies were receiving major support from friendly Indian forces in the area who had been gathering there under the auspice of future combined armed operations being prepared to reinforce the Indian operation in Australia.

The two Indian carrier battle groups, three entire wings of Indian attack and air superiority fighters and twelve divisions of armor and mechanized infantry were in place to support the American, British and Australian landings. All of the leaders of these forces were loyal to President KP Narayannen and his effort to make peace with the west and avoid the total destruction of India that he felt sure awaited his nation if they attempted to resist the west to the bitter end.

What KP Narayannen and his allies had not considered was the depth or breadth of the warfare that would result from the attempt as the Chinese rushed in millions of men to thwart the allied effort of opening up another major front against them on mainland Asia. One of the largest and bloodiest campaigns of the entire war would ensue on the sub-continent and it would not just be a war of army against army...it would be a horrific civil war pitting family against family, father against son, hamlet against hamlet, caste against caste, and belief systems and ideologies against themselves.

...and it would not be limited to the sub-continent.

### **October 12, throughout the day**

#### **Ambassador's Office**

#### **Indian Embassy, Omsk, Siberia**

Ambassador Buhpendra Gavanker paced anxiously in his office, monitoring the day's events in India, and here in Siberia in his own area of responsibility. His chief of staff came in regularly with reports and updates and he listened to both the UHF and VHF radio consoles which had been installed on his desk. They were monitoring all of the relevant Indian, Siberian and Chinese frequencies, as well as the frequencies that had been communicated to him by the Russians as a part of the plan.

He was also watching specially installed video monitors of the Omsk International Airport, the two Siberian Army barracks, the three Indian Army and security forces barracks, and the Chinese barracks across town near their own embassy. If there was to be trouble, it would probably start there.

He was very concerned about his wife and children. If things went as well as could be expected, they would not be exposed to too great a danger as friendly forces occupied Omsk and the surrounding countryside. If things went badly, it was likely that all of them would be dead by tomorrow morning...and in all probability, their deaths would not be easy.

"Is there anything more I could have done?" he asked himself as the report he had been waiting for was broadcast over the radio.

"Badger flight now entering Omsk International Airport airspace and requesting clearance for immediate approach and landing."

That communication let him know several things. First, he knew that the air corridors he and his compatriots had prepared for the incursion of Russian aircraft into Siberia broadcasting Indian IFF signals had worked. Second, it let him know that the element of surprise was still in his favor, despite the momentous activities going on to the south in India and the heightened levels of alert and security Indian and Chinese forces were now on worldwide.

"It helps, I suppose, that we have the contacts and level of commitment from so many critical players, both militarily and diplomatically," he thought.

Buhpendra was extremely humble in his analysis...the principle player was Buhpendra himself. It was Buhpendra's efforts, and the high respect and esteem in which he was held, that had allowed for the development of the entire Siberian part of the operation. That respect and esteem was shared not only amongst the Indians themselves, but also amongst the Siberians. And none of that even began to speak to the one factor that made the entire thing even remotely possible overall. That critical factor was something else that Buhpendra brought to the table himself and was what gave hope for peace to the area and a real possibility for eventual permanency to Siberia independence.

...and that was Buhpendra Gavanker's personal relationship with Field Marshal Andrei Nosik.

Nosik had been a rising star in the Russian military for several years...ever since his assignment to Siberia as a Colonel in charge of the security forces protecting the Indian petroleum and low sulfur coking operations, and the nearby Chinese cobaltite site after the signing of the Siberian Economic Development treaty. Throughout the war, as a result of his leadership abilities, Nosik's star had risen from Colonel to General and then to Field Marshall.

That star had recently climbed another notch when Nosik had been promoted to be the highest ranking officer for the Russian Army, and in charge of world-wide ground operations. In effect, he was now the American equivalent of the Chief of the Army in the American Joint Chiefs of Staff, and this made for an opportunity in Siberia that neither he nor Buhpendra and the Indian government, intent on reaching an agreement with the west, could afford to pass up.

So, when the Russians heard the communication out of Siberia on their old frequencies, and when that communication had found its way to Andrei Nosik's attention, things had progressed rapidly. The plans were swift in their making, and bold in their scope. Buhpendra knew that Nosik hoped, with the successful implementation of the Badger plan, in one audacious move to break the bloody stalemate that had developed to the west in the Ural Mountains. There, massive concentrations of UAR and CAS troops were proving immovable as they held back the relentless attempts by Russian and European forces, with significant American technological help, to break across those ranges and into Siberia proper, and ever closer to China and India from the north and west.

"I would have loved to have been a fly on the wall in his office when he received my reply to his question proving my personal authenticity," Buhpendra thought to himself as he reflected upon the events that had led them to this point.

*"Share with us a personal experience in an immediate and direct communication that would only be privy to the Field Marshal and Dr. Gavanker, indeed!"*

"I can only hope that some of his superiors were in attendance to hear of his overindulgence with Vodka on that evening in March when he and I celebrated our first year in Siberia in his office," Buhpendra continued to himself.

After the reviews and promotions we both received from our superiors that week we deserved to indulge ourselves somewhat. But the description of his dancing around his office and onto his desk in his red Long Johns to Tchaikovsky should have raised a few eyebrows and made for a few laughs at the good Field Marshal's expense.

"...and it worked well enough. There were no more questions about authenticity after that."

And with the whole, brilliantly planned operation posing as first a strategic withdrawal from the Urals, with Indian authentication at the highest levels, and then with authenticated communications of a vast Russian breakthrough and wild retreat, apparently the storyline was working.

"Nosik is nothing short of a military mastermind. Such a simple plan...and yet so outlandish!"

As the ambassador completed his thoughts, he saw what he had been waiting for dropping from the cloud cover over the Omsk International Airport.

First, a flight of four SU-37 aircraft roared down from the clouds and over the field. They were painted in standard Indian colors, but they were not in the Indian inventory. They were brand new Russian aircraft, and part of the air armada that was descending on Omsk as a part of operation Badger. Buhpendra knew that there were many escort aircraft above the airport...as many as eighty now converging here to give cover and support to the operations that would soon commence.

Then, he saw the first one drop out of the clouds. Buhpendra could not have imagined that such a large aircraft could exist...and yet, here it came, one of the American T-90B transport aircraft...and then another, and another, and finally the fourth and last. All of them landing on the main runway and then taxiing to prearranged spots on the tarmac and disgorging so much equipment and so many men.

Now...there was movement from the Chinese barracks and one of the Siberian and one of the Indian barracks. Armored personnel carriers exiting the bases only to be taken under fire by Badger Operation-friendly forces already stationed there. Firefights were developing at all three places, but the Chinese were quickly gaining the upper hand in their area as tanks and attack helicopter joined in the fight to quell those resisting their desire to exit their base and speed over to the airport.

A huge, bright flash obliterated the leading elements of the Chinese armored column and then video from that area was lost.

Buhpendra's phone was now ringing incessantly...but he let it ring. Unless informed by his chief of staff of specific, planned communications, he would not answer the phone anymore this day.

His thoughts turned to his family and he hoped for their safety in the bunker forty kilometers to the north where they were located with Special Forces guarding them and access to air evacuation should it become necessary. All of the plans were in place and now all they could do was wait, hope and pray as the drama unfolded.

Buhpendra knew that there would be surprises, failures and disappointments. That was the nature of such operations...both militarily and politically. Rarely, if ever, did everything go exactly as planned. He could only hope that the successes and achievements of this day would outweigh the failures and disappointments and that his family and he would come safely through it.

Whatever the outcome, Buhpendra knew that the final contest and battle were now irrevocably joined in Siberia. He and his comrades would at the very least, despite any mortal fate, be comforted in the fact that they had dared against all odds and at great risk to achieve great things. At the very best, they would hasten the day that this part of the world and their own peoples enjoyed the blessings and tranquility of peace and prosperity together, and they would live to see it and tell about it.

They had aspired to worthy and good goals, and they had not shirked or avoided the opportunity fulfill them, irrespective of the risk involved...and they had done so at a time when just such risks and daring exploits on behalf of their peoples and their eventual liberty were desperately called for.

**October 13, 06:50 local time**

**Politburo Executive Committee Meeting**

**Secret Hardened Facility, 100 km North of Beijing**

"Order! We will have order in this room or I will have those who are unable to restrain themselves forcibly removed! I promise each and every one of you, at this stage, in this crisis, any members of this body who are required to be removed in such a fashion will not be returning...not to this committee, not to the Politburo, not to their homes.

"I hope I have made myself clear."

As Jien Zemin completed his all too real threat and glared at the entire assembly, Lu Pham glanced around the room at the other members of the executive committee. Lu was actually glad that Jien was willing to use his power and authority in this particular manner to restore order as the news of the disasters in India and Siberia was relayed to them. Lu believed such sternness was necessary.

Lu was no stranger to bad news...even after all of the years of achievement here in the People's Republic of China he remembered well his younger years. Bad news had been the norm in those days in North Vietnam. One defeat after another...one failure after another had beset the north in their long struggle against the Americans. But in the end, it had been the Americans who had left Vietnam and the North who had emerged victorious. Lu had no doubts that if the people gathered in this room, and by projection, if the forces that they represented and led, were able to muster the steel and the will, then history would repeat itself, even with the disturbing news that they had received this morning.

Lu Pham listened as Jien Zenim, now having achieved the order that he desired, continued on.

"I want to know how this could have happened. Clearly there has been treachery at the highest levels...certainly within the Indian government, and perhaps within our own.

"I have instructed our intelligence services to use whatever means necessary to root out those involved and then to pursue them with all diligence...even those who may have escaped us for the time being. An abject example must be made...no matter how long it takes, no matter where it leads.

"I am instructing our research and development teams, and Lu Pham, this is directed principally at you, to redouble our efforts on systems that can counter our enemies, particularly the Americans.

"Their orbital bombardment is proving monumentally difficult to overcome, even with the tremendous numeric advantage of our forces. Their new supercavitating weapons seem to be the equal of, or better than, our own. Their active stealth capabilities are rendering our *ta shih* systems less and less effective. What must we do to regain the advantage? Lu, do you have any news in this regard?"

Lu was surprised to have been pulled so early into a direct conversational and presentation role in the meeting. Despite this, Lu stood with confidence where he was, turned to the majority of the executive counsel, and spoke.

"Mr. President, my comrades. It is true that the Americans are fielding more and more technologically advanced weaponry, and that they are doing it with surprising speed. But we are not defeated yet, nor shall we be as long as there is breath left in my body.

"Before speaking to some of our own technological breakthroughs and advances, I would like to address this very point...our spirit and our will. As most of you know, I worked in my early years on projects for what was then the North Vietnamese government. Despite whatever bad news we may have heard today, I tell you now it is nothing compared to the bad news we received in North Vietnam during the late 1960's and early 1970's on a daily basis...in fact, right up until we were victorious.

"In those days, the Americans literally bombed us to the negotiating table and they took away everything from those negotiations that they desired. We signed treaties indicating that they had, in effect, won the war...but their victory in 1972 was a hollow one. They wanted anything that they could point to as victory so they could withdraw. So, we gave it to them, and they did.

"But why did they want to withdraw? Why were they so desperate for any *victory*?"

"I can tell you why. It was because we bled them. For every man they lost, we lost twenty or more, over a million to their fifty thousand. But we were willing to lose them in order to win the war...and in the end...we did.

"We must have the strength and the will to persevere in the same way today.

"You all know the history. Two years after their so-called victory, we simply ignored the treaty and invaded. The Americans did not have the will or the stomach for the fight. Their citizenry had had enough. The *anti-war* segment of their society was now calling the shots. There would have been more protests, and maybe even riots in the streets, had America chosen to re-open old war wounds by returning and making certain that the treaty terms were met. The potential protestors and rioters were our staunchest allies, in that respect. So America sat by and watched us do what we had promised by treaty not to do. And they abandoned their equipment, they abandoned their honor and they abandoned their friends and allies...and we emerged victorious.

"We can have the same spirit and the same will today. We can instill it into those who work with and for us. If we succeed in doing that...then all of our technological wonders will be icing on the cake and they will hasten our ultimate victory."

The members of the executive committee were mesmerized by Lu's presentation and his attitude and demeanor. They took heart from it and Jien Zenim stood back and watched it happen, watched as this foreigner, who had meant so much to their successes in the past, now helped him turn what almost any other leader would define as an unmitigated disaster into a rallying point.

The technology that Lu described was hopeful, particularly the hidden particle beam research facilities and the ground based batteries that were about to be employed. But Jien Zemin recognized that of all the military leaders in this room, and of all the political leaders as well-excepting perhaps himself, Lu Pham more fully embodied the spirit and fundamental principles of the greatest Chinese war leader of all time, Sun Tsu, than anyone else in the room.

...and he was describing that philosophy in no uncertain terms. In fact, he was explaining it in layman's terms, to the entire Executive Committee of the Politburo of the People's Republic of China at a time when they needed it the most.

**October 20, 01:21**

### **Overlooking CAS Position**

#### **Promontory Point, North Central York Peninsula, Australia**

Leon Campbell watched through his sixth generation night vision goggles as the enemy encampment...and it was a large one...slept.

His goggles included an independent power source mounted in his helmet that allowed the goggles to function. They worked night or day, automatically adjusting to the light conditions, and they had digital readouts in a miniature heads-up display that was automatically generated in each goggle in such a way so as to appear as a single readout to the user.

Based on that display, which was tied into his regimental net, Leon could see that the enemy did not sleep blindly. They were not incompetent and they were not inexperienced in the least. They had set up both physical and electronic sentries that extended out more than a mile, around the perimeter of their camp. They had roving patrols that extended out several miles beyond that, including a large one that frequented this very promontory.

Even though the enemy was clearly very experienced, the American Marine Master Sergeant and this squad could be considered extremely experienced as well. Leon had no doubt that his squad of Marines could fight the Chinese platoon-sized patrol to a standstill and defeat it, particularly with the type of support that they could call in. But he also knew that such an action would defeat the principle goal of the mission upon which he was embarked...to find, and mark for attack, the heavy concentrations of enemy forces.

Ruining that goal was something Leon was not going to allow to happen.

With this encampment, he knew that they had discovered what he considered to be the mother lode of enemy forces remaining on the peninsula and so there would be no effort to engage the enemy platoon. In fact, he had done and would do all in his power to avoid such a fire fight.

After more than four months of continuous fighting, the large allied task force to which Leon had been attached in late May had succeeded in pushing the enemy forces on the York Peninsula back to the very northern tip of the peninsula. There had been several major battles and many small skirmishes in the process. The small fire fights generally consisted of brief, very violent confrontations in thick foliage where allied and enemy patrols or medium sized maneuvering forces ran across each other. The larger battles had occurred as allied forces bottled up large segments of enemy forces, or as enemy forces attempted to counter attack and lure allied forces into traps laid by a very crafty Chinese commander in chief on the Peninsula.

Though heavy losses had been inflicted on the enemy, allied losses were also heavier than expected and the enemy had not been either maneuvered into, or caught in, a position where a final decisive blow could be delivered.

It had not been an easy task and Leon now had several more close friends who would never be returning home alive. The enemy was determined, and seemed to be becoming more determined, as they were pushed further and further to the north, particularly of late.

At this juncture, both sides were suffering from a decided lack of airborne reconnaissance. This had been particularly true for the allies after the loss of the first Southern Star station over Australia. In addition to that loss, as they pushed the enemy slowly and bloodily further and further north, the enemy had benefited from significant access to more and more air cover from New Guinea and other islands to the north where the allies had not yet penetrated. This allowed them to engage allied air power and particularly to interdict any Global Surveyor or other UAVs that the allies tried to launch for reconnaissance purposes.

But the situation had represented a doubled-edged sword because enemy forces suffered from the same disadvantage.

But now things were beginning to change. With the new Southern Star Space Station, space based coverage was once again in place. In addition, no more than twenty miles behind the front lines, the allies massed significant Marine F/A-35 aircraft whose vertical take-off and landing ability

allowed them to be right there over the battlefield in significant numbers whenever needed, or to interdict enemy air assaults as they came in support of enemy ground action.

Within a hundred miles of the front, new airfields had been constructed and more conventional allied fighter and attack aircraft were also available.

Still, there was significant enemy threat from the air and this required that some reconnaissance be obtained in what Leon called *the old fashioned way*. And that meant boots on the ground...boots like Leon's and his squad here on this promontory.

"And tonight we have hit the jackpot", Leon thought to himself as he surveyed the enemy encampment from his concealed position.

There was significant armor massed to the right, three hundred meters from the small stream that ran through the camp. They had anti-air missile batteries stationed around three corners of the camp, facing toward the major threat axis...towards allied forces, with another two batteries to the rear at the last corner and in the center. There were three large bivouac areas for troops and a large motor pool. What clearly looked to be a fuel and supply depot and then the defensive positions.

"These guys plan on being here a while...like they plan on defending this spot", Leon continued.

"Great...let them prepare their defenses, that will be all the better for our purposes. There must be seventy-five or eighty thousand troops in that valley alone."

Leon did not hesitate for a moment, or act with any trepidation. This was particularly true after the heartbreaking news of his own brother's death had been delivered to him two weeks ago.

This encampment was the enemy, a large enemy force positioned on the flank of ongoing allied operations in the interior...operations that were going very well indeed, having pushed the Indian and Chinese forces well beyond Alice Springs, but which would be threatened if the enemy were allowed to maintain any foothold whatsoever in position here on the York Peninsula. This enemy encampment also represented the local embodiment of the very real forces of evil that had taken two of the three people Leon had been closest to away from him, and had caused similar anguish for millions of others of innocents throughout the world.

No, there was no question, they must be destroyed...as many of them as possible.

And Leon and his squad had it within their power to facilitate just that very thing.

Finally, some of the highest impact weapons available to the allies had been approved for release on the York peninsula. With a force of thirty of the new ADCAP Air-launched and Sea-launched Hail Storm cruise missiles now at the task force's disposal, Leon knew that the entire valley over there would be a killing field, and that not one allied soldier would be lost in the exchange if everything went as planned...of course assuming that he and his team were able to remain undetected.

Leon had every intention of doing both...accomplishing his mission by rendering that valley over there essentially lifeless, and remaining undetected in the process.

"Gunny, on my order, prepare to transmit each of the coordinates I gave you and their description. Then have the Lance Corporal and his team hold the laser designators on the money.

"I'm going to make one last visual scan of the area."

As he scanned the area from west to east, Leon came to the end of the encampment and what he knew were the outer electronic sensor devices and human sentries that the enemy had deployed. He panned another three hundred meters west and then suddenly swept his field of view back to the east.

There...about two hundred and fifty meters beyond the enemy's outer perimeter, but well within range of their sensors if they happened to detect their presence was a group of unidentified people. In a large overgrown hollow, Leon's sensors picked them up. From this angle, he could just make out their heat signatures and could now see why they had gone undetected by the enemy. They were in the shelter of a low ridge of small hillocks which were overgrown with brush with what appeared to be large dark areas, or caves, at the bottom.

Leon could just make out the forms of two of the individuals, facing the enemy encampment just below the ridge line and well concealed in brush...but in a position to watch the enemy.

"Gunny, before you transmit the coordinates, contact HQ and ask them if we have a force of twenty-five or thirty people within three hundred yards of the west side of the enemy encampment we have been preparing to target."

The grizzled old Gunnery Sergeant responded immediately to Leon's request.

"Roger that...I'll ask."

A few seconds later, the answer came back.

"That's a flat negatory on the friendly force near the enemy MS...we're it."

By the time the answer came through, Leon had figured out in all probability who those people were, and what they were doing there so close to the enemy.

"Well then, I'll bet that bunch must be another one of those civilian refugee groups we've seen the past few months in here.

"About half the time, they seem to get caught up in the fighting, or just get in the way of those animals down there...or sometimes caught in the crossfire.

"Ask HQ if they want us to make an attempt to warn or extract those people."

**October 20, 02:32**

**Two hundred fifty meters east of the CAS Position**

**At the Low Ridge Line, North Central York Peninsula, Australia**

Nabalco and Tex continued to watch the Chinese and Indian encampment to their west. As they did so, Nabalco continued to berate himself for getting the group caught in this position.

"How could I have been so stupid?" he muttered silently as he contemplated the events.

Two days before, it had become apparent that a very large enemy force was moving into their area. They had moved from one prepared position of concealment to another in front of the group and just barely avoided detection. Just last evening they had made their way into the caves that were heavily concealed by brush and undergrowth at the bottom of the depression they now occupied.

Now that it was clear that the enemy planned to stay for some time, Nabalco knew it was only a matter of time before the caves and the entire group was discovered. He could not risk that, and so he was prepared now to take the risk of leaving the area entirely under the cover of darkness.

But he was concerned about the electronic sensors and patrols the Chinese were sending out.

"Like I said, how could I have been so stupid?"

This time he was a little too loud and Tex heard him.

"Stupid? You have to be kidding me.

"It's nothing short of a miracle that we are even alive, Nabalco. Please don't let the moment dull your edge...we need you sharp if we are going to get out of this."

Nabalco knew that Tex was right...but he was too humble to admit it.

Just the same, he was about to thank the young man when he heard a warning whistle.

"Tex, you stay here and watch them over there...I'll go and see what's happening."

As Nabalco carefully made his way down the slight rise, he saw the reason for the whistle and he thought for just an instant that all was lost. There were two soldiers with assault rifles and night vision gear amongst his people. Then, as he got closer, he was able to make out the uniforms...Americans!

As he walked up to them, a large Negro American soldier addressed him.

"Are you the one they call Nabalco? If you are, then please listen to me.

"My name is Gunnery Sergeant Gaffney and this is Corporal Thomas, U.S. Marines.

"We have to get you and your people out of here as quickly as we can. Within the next two hours, this entire valley is going to be destroyed along with everything in it."

**October 20, 04:12**

**Overlooking CAS Position**

**Near the Promontory, North Central York Peninsula, Australia**

As the two Marines led the twenty-eight civilians carefully up the slope to their concealed position, the Chinese platoon approached from the southeast around a rock outcropping that jutted all the way to the top of the promontory. As they rounded the outcropping, they became visible to Leon and he immediately alerted two of his number who were not occupied with lazing target positions, and also contacted Gunnery Sergeant Gaffney and Lance Corporal Thomas.

Seconds after Gaffney got the information and began to spread it amongst the civilians, twelve of whom were also armed...the point man on the Chinese platoon spotted the refugees and held his fist up in the classic stop sign for military personnel on patrol.

As the Chinese quickly and efficiently spread out into an assault line, Gaffney herded the civilians into a makeshift defensive position and began positioning the armed refugees for best effect.

Firing broke out between the two groups as the Chinese advanced. Leon and the two corporals he had selected to assist waited patiently until the Chinese moved into their overlapping fields of fire from above...and then opened up on them in a murderous barrage that took the Chinese completely by surprise. Before the Chinese captain in charge knew what was happening, six of his sixteen men were down. He ordered an orderly withdrawal to a less exposed position so he could regroup.

Amongst the civilians, the Chinese fire had already had telling effect. Five civilians were down...one of them Nabalco, who had been seriously wounded through the throat and Lance Corporal Thomas, who was fatally wounded as he turned back a charge of three Chinese who approached closest to the refugees' position.

Before the Chinese could regroup, the fighting was momentarily interrupted as numerous bright flashes and then trails of light erupted from the forward portions of the enemy encampment as Chinese surface to air missiles lifted off to intercept incoming American aircraft and missiles.

But it was too late.

As the Chinese missiles rose...eighteen stealthy American Hail Storm missiles came screaming low over the promontory. They were supported by a dozen higher flying American and British F/A-35 aircraft flying anti-radiation roles against the enemy air defense batteries. Before the Hail Storm missiles finished clearing the promontory, twenty high-speed HARM missiles were launched targeting the radar and *ta shih* sights amongst the enemy encampment with devastating effect.

Two American aircraft and three Hail Storm missiles were downed by the enemy missiles before the remaining fifteen Hail Storm missiles delivered several million deadly hypervelocity projectiles amongst and all around the enemy encampment, shredding all vegetation, all flesh, all soft-shelled vehicles and all armor within the horrendous radius of their targeting. Numerous secondary explosions marked the spot where ammunition or ordnance on various vehicles exploded.

There were some defensive fortifications and hardened areas within and around the camp that were in the process of being constructed. Within the walls and under the cover of some of these structures there was the possibility of survival from the Hail Storm missiles. But the attack occurred with such surprise and rapidity, that unless personnel were already positioned or housed in those structures, there had been no time to gain access to them. Outside of this, the destruction by the Hail Storm attack was complete and devastating.

It was then that the coup d'état was administered in order to ensure complete victory. The final projectile, a small one that had been made for just this sort of precise and limited role, came in from space and impacted in the middle of the camp.

The resulting explosion, crater and shock wave destroyed everything that was left from the Hail Storm attack. No structure, no fortification and no hardened shelter could withstand it. The back of organized CAS resistance on the York Peninsula had been broken.

During the several minutes that the devastating attack took place, culminating in the high wind and shock wave washing over the distant promontory, the Chinese Captain sensed the hopelessness of his own position, now without any hope of support from what he had considered to this moment to be a very strong mother force. So he took the wise opportunity to retreat his platoon back around the rock outcropping, laying down effective cover fire as they did. He and his soldiers had seen enough...they would seek no further contact with the Americans or their allies this night, or at any other time during the two days it would take them to reach a sheltered area on the coast and arrange transport off of the continent of Australia.

**October 20, 04:21**

### **Overlooking the destroyed CAS Position**

#### **On the Promontory, North Central York Peninsula, Australia**

Leon surveyed the destruction of the enemy encampment below. Smoke rose everywhere amongst the ruins and he saw no movement. Perhaps there were some survivors down there, but he couldn't see any from this vantage point, and the recovery operation would be a task for other allied forces tomorrow and through the next few days.

Right now, he had the task of solidifying his position, identifying the refugees that Gaffney was bringing in and buttoning things up for their extraction sometime tomorrow morning.

There had been casualties. Lance Corporal Thompson was dead along with three of the refugees...including their leader who had bled to death while one of the female civilians, clearly emotionally attached to him, had ministered to him and tried to save him. There were also two wounded. Leon had sent his own corpsman that way as soon as he could...but it was too late for either Thomas or Nabalco. He was able to help the two wounded civilians.

Now, as the refugees finally reached the top of the promontory and Leon's position, he briefly eyed each one of them as they approached. Most of them appeared to be aborigine tribesmen of some sort, with a few mixed Caucasian and other race refugees. Thomas was being carried by Gaffney and each of the three dead refugees was also being carried by his compatriots, who were also helping the corpsman with two wounded civilians. Nabalco's body was in a makeshift stretcher and there were four of the refugees carrying him reverently. The woman, whom Leon would later come to know as Ulura, Nabalco's wife, was chanting an aborigine dream chant as she walked. Leon saw the motion of one of those carrying Nabalco as he reached forward and put his hand on the woman's shoulder, attempting in some small way to console her while he helped carry the stretcher with his other hand.

It was then that Leon noticed that this refugee was another Caucasian, that he had blond hair, that he was about six feet tall. Leon also noticed his gate...it was clearly impeded, the guy had either been born with a disability, or he had been injured somehow...though it was still dark and Leon could not see him well, there was something familiar about the way he walked.

Moving forward, Leon waited by the side of the trail as the entire group began to pass by. When those carrying the stretcher approached, Leon issued an order.

"Watson, Peterson, come over here and take over for these folks carrying this stretcher...I'd like to speak with some of these people a moment."

As the two corporals responded, Leon asked the stretcher bearers to set the stretcher down and then he asked them all to step aside, off of the trail for a moment.

"I know you are all shocked and dismayed at the moment and I am so sorry for your loss. But I need to ask you how you came to be down there near the Chinese and Indian encampment.

"If we had not seen you there, you would have experienced the same fate as the enemy."

Leon's request was greeted by silence.

"Come on, we're your friends. Surely one of you can let us know how you came to be there."

The refugees looked at one another briefly, and then Ulura stepped forward and began to speak.

"We had been avoiding the Chinese and Indians as best we could for months. We have seen the results of not doing so and did not want end up like those others, either enslaved or butchered.

"My husband, Nabalco...he led us the entire time and we thought we were in a safe place until this large group the enemy came on us two or three days ago and we...we just couldn't..."

Ulura broke down at this point and the Caucasian refugee, an individual the others called Tex, put his arm around her. As he did so, he turned his face towards Leon and spoke.

"Look, Master Sergeant...can't you see she is mourning?"

"Can't you just let us mourn the loss of our friend until tomorrow morning? Believe me, we've been trying to avoid these people as much as you have been trying to destroy them. We would..."

Leon, shocked at the recognition of the voice, broke in...

"Mister, how did you know my rank? ...and my God, Billy, can that be you?"

Turning and catching the Gunnery Sergeant's attention, Leon ordered.

"Gunny, get me a light over here...on the double!"

Gunnery Sergeant Gaffney did his best to dissuade his Master Sergeant from any type of light whatsoever on that high hill.

"MS, it'll be daylight in a little over an hour or so. Can't a light wait until then?"

But Leon would not be deterred.

"Gunny, get a light. Use one of our soft, map reader lights and then we'll go into the hooch we set up in the brush...but bring a light and bring it now."

The Gunny...and just about every other Marine in Australia knew of Leon's quest, of his search for his friend and fellow Marine. At the insistence in the Master Sergeant's voice, the possibility of the fulfillment of that quest captured the moment for everyone in Leon's squad and every one of them, except for the three who were on guard duty on their perimeter, followed Leon and the five civilians.

Once surrounded by dense brush, Leon turned the light on and shined it just below Tex's face.

"My God, it is you! Billy...how did you get here...don't you recognize me?"

But there was no recognition, although a glimmer of understanding did show on his face.

"Master Sergeant, I can't say how I knew your rank...and why you are calling me that name?"

"I actually don't remember my name...everyone here calls me Tex because of my accent."

Leon reached forward and hugged his friend.

"I'm calling you that name because your name is Billy...Captain Billy Simmons, United States Marine Corps. And you sound that way and they call you *Tex* because you are a bonafide, certified Texan, right out of the great Lone Star State. Don't you remember?"

"You went down in your Comanche off the coast of Australia. You must have washed up on shore and be suffering from amnesia.

"You and I went to college together at Boise State University in Idaho. We enlisted. You visited me on leave when I was hospitalized in Washington, DC.

"Believe me when I tell you...your name is Billy Simmons and you have a Mom and a war-hero Dad who are going to be so happy that you are alive!"

Still holding his friend's shoulders, Leon turned towards the other members of his squad and caught the eye of a grinning Gunnery Sergeant Gaffney.

As Billy Simmons, still suffering from amnesia, and the other refugees looked on in awe and wonder, Leon issued a quick order.

"Gunny, get HQ on the horn...we need to report all of this. There's a whole lot of people who are going to be surprised and happy to hear this news...I can hardly believe it myself."

### **October 30, 10:43**

#### **Lazy-H Ranch**

#### **Outside of Montague, Texas**

Jess and Cindy watched the Marine sedan approach the house along the quarter mile gravel road that led to the house. It was a pleasant day and the visit, whatever purpose it had, was unexpected.

As the car got closer, Jess made a comment as he recognized the insignia on the vehicle.

"U.S. Marines...maybe they've found Billy's remains and we can bring him home."

The thought gave hope for closure to Cindy. She had finally accepted the reality of Billy's death...but closure was something she knew in her heart they both needed.

Today she was going to be pleasantly and joyously surprised.

As the car stopped in front of the house, Jess himself was shocked when his own former commanding officer, General Larry Donovan, emerged through the open black door.

"What in the world?" he said out loud.

It was at that point that Jess knew that this visit was going to be something much different than an ordinary sharing of information about your typical MIA.

...and from the tone in his voice, Cindy began to understand the same thing.

As the three officers approached the house, a Marine Colonel, a Marine Major General, and Brigadier General Larry Donovan of the U.S. Army, Jess walked out on the porch to greet them.

"Larry, what on earth are you doing here? I didn't even know you were stateside."

All three officers were smiling as Larry made the introductions.

"Jess, Cindy, I'm here on official business...some very gratifying official business.

"I was at the Pentagon for a briefing when some news came in. As soon as it was verified, the Chief of the Army and the Marine Corps asked the three of us specifically to share it with you.

"Here, Jess", General Donovan said handing Jess Simmons a very official looking memorandum printed on official U.S. Marine stationery, "read it for yourself."

Jess took the message, which was about a page in length, and quickly read it.

He almost dropped it to the floor, but regained his composure and with tears welling up in his eyes, he passed it to his wife Cindy.

As she quickly read it, Jess asked his friend.

"Larry, has this been verified?"

"Dear God, is it really true?"

By this time, Cindy had finished reading the note and as her husband put his arms around her and they began to cry into one another's shoulder, she heard her husband's long time friend answer.

"Yes, Jess...Cindy, it is true. It's been verified. Billy is alive."

Turning to the Marine General, General Donovan invited him to continue the discussion.

"General, why don't you and the Colonel continue and fill in some details for the Simmons."

The General took up the conversation.

"Thank you General Donovan, I'll be happy to. Colonel, you jump any time if you need to.

"Mr. And Mrs. Simmons, as you can imagine, your son was severely wounded in the crash of his Viper Helicopter, but he somehow washed up on the Australian shore. Many of his injuries were treated as he took up with refugees who had some medical personnel amongst them. That group of refugees were constantly moving in the interior of Australia to avoid enemy patrols and the newly established enemy civil authorities.

"In addition to his physical injuries, your son Billy, was also suffering from amnesia through the entire period. He simply did not know who he was, including knowledge of his military service.

"Thankfully, that has lessened somewhat since he was recovered...due in no small part to his Marine friend, Master Sergeant, Leon Campbell."

Jess looked up at mention of Leon's name.

"Leon...Leon is with him?"

The General nodded his head as he continued.

"It was Master Sergeant Leon Campbell who recognized him. His squad brought Billy in during a reconnaissance mission that turned into a heavy engagement with a much larger enemy force.

"That was over two weeks ago and Billy has gone through quite a bit of debriefing, medical evaluation, and recuperation since then...but now he's coming home to both of you within the week.

"Every now and then, we experience something like this from the Grand Designer upstairs that is perfectly to our liking. This is one of those times and I am so happy for your joy.

"I know I speak for the entire Marine Corps, for the Joint Chiefs, and by special direction, I can tell you I speak personally for the President of the United States when I tell you how grateful your entire nation is for your son's service...and now for his recovery.

"Mr. and Mrs. Simmons, this is the stuff that Marine legends are made of...and your son, and his friend Leon's efforts will go down as one of the major "Marine stories" for all future generations.

"It is also likely to be a story that has some legs within the civilian community as well, so don't be surprised if you get a call from the White House...and ultimately from the press too. But we will do all we can to shield you from the latter for as long as you desire, and as long as we can."

## Chapter 41

*“No arsenal or no weapon in the arsenals of the world is so formidable as the will and moral courage of free men and women.” – Ronald Reagan*

**November 3, 13:20, Local Time**

**Heavily Fortified Command Bunker**

**The Muller Mountains, 35 km NW of Kualakurun, Indonesia**

Hasan Sayeed continued to monitor and command the armies of the Greater Islamic Republic from his state of the art and heavily protected command bunker here in the remote reaches of Indonesia. But, as a result of the fall of Tehran and most of the western nations comprising the Greater Islamic Republic, the amount of time requiring his direct attention had been greatly reduced and so he was also able to reflect, reorient and plan.

Located in a steep gorge on a tributary of the Kahayan River deep in the Muller Mountains, the bunker had literally been blasted out of the rock underneath peaks that reached heavenward almost 2300 meters, or 7,000 feet. With multiple redundant transmitters and receivers that operated on every bandwidth conceivable, with the actual hardware located in retractable, camouflaged positions all along the primary and secondary ridgelines, and with the latest encryptions, noise-blanking and frequency hopping technologies, it was felt that locating the exact source of his command post would be a very difficult task for their enemies.

“And I pray to Allah that is so”, thought the great Ayatollah.

Either way, it had long ago been decided that as soon as it even appeared that the enemy may be closing in on his position either electronically or physically, the great Mahdi would be moved to one of his several other fall back command centers that available to him throughout the hundreds of islands that made up Indonesia. With a largely Muslim and very dedicated population...it would be easy for the Islamic leader to melt away into the geography and the population and rise like a Phoenix to continue the battle for the faithful.

“The comfort of these facilities is a tribute to the hard work and commitment of the faithful in this area...and the exactness of the faithful officers and Mullahs who ensured it happened according to the dictates of Allah,” Sayeed thought as he began reading the intelligence reports out of Australia.

Sayeed kept close tabs on the progress of Allied forces on the island continent. They were the closest, and, coupled with their naval and air support units, the gravest threat to Sayeed's rebuilding effort here throughout Burma, Singapore, Indonesia and the Philippines where very sizable, and as yet very faithful Islamic communities continued to thrive.

“With the help of Allah, we shall return to the Holy Land one day and reclaim all that's been lost.

“When we do, there will be a terrible price paid by the infidels...yes, terrible indeed,” Hassan said to himself as he read how GIR and CAS forces were retreating westward from central Australia to prepared positions closer to the western and northern coasts...and closer to air and naval support.

“But as terrible a retribution as shall be paid by those infidels, it will pale in comparison to the one that will be paid by the unfaithful who have betrayed us.

“Oh ye of little faith, how ye shall mourn,” he concluded to himself as he thought back on the hundreds and hundreds of thousands of GIR citizens who had turned to the western armies as they penetrated into the borders of the former Iran with their irresistible technological. That would have been forgivable, and perhaps understandable under the circumstances, but what could not be forgiven was the way so many had accepted the infidels with open arms and then almost immediately began to collude with them to the detriment of the GIR, and more importantly as far as Sayeed was concerned, to the detriment of their holy faith.

As Sayeed contemplated what he considered to be this great betrayal, he could not help but think of his third wife, Lhidi, who turned sixteen years old back in August of this year. She had been so beautiful, and yet so proud and headstrong. She had been given to him by faithful parents from Islamabad and he had enjoyed the distractions and ministrations she provided him, and what he had felt were the growing trust and faith she was developing.

She had given him a son two years ago...collectively his fifth son from his three wives. She had seemed so proud of that child and Sayeed had hoped that the birth and duties of motherhood would dissuade Lhidi from some of her other tendencies.

Sayeed was not blind to the feelings of any of those around him and he had not been blind to Lhidi's. He knew that she had a propensity to desire the things of the west, particularly what the west considered as women's rights...and she had voiced those desire to him when they were alone.

Perhaps what had ultimately transpired had been his own fault because he had not been more forceful in his discouragement of her leanings and desires in that regard.

“I grew soft,” he said aloud to himself as he looked back on the events of the last year as they related to Lhidi when the western armies had finally succeeded in invading.

Whatever the reasons, he would never forget the shame, or the anger, when he discovered that Lhidi had been one of the betrayers. She had arranged with a select group of her bodyguards, three whom her family had been allowed to select from Islamabad, and defected to the western armies.

...and she had done it in such a way, with the issuance of her own public statements against him, against their efforts as a nation, and even the faith. It had hurt him personally, and her betrayal had hurt Allah's work even more...and it was something he would never forget, and never forgive.

His own respect and standing amongst the people had been noticeably and understandably diminished. He could just hear the whispers and the talk amongst those who did not understand how Allah deals with his chosen vessels.

*"If he cannot bridle or control even his youngest wife, how can he lead a nation in war?"*

Her defection and betrayal had been far from the first, but it had been personally the most devastating event imaginable to him. Her prior physical and passionate ministrations had turned to mental and emotional anguish for him which had distracted him from the task at hand at the most inopportune moment. And her defection and betrayal had certainly led to a flood of others.

Hassan Sayeed, in his pride and arrogance, and in his total acceptance of a faith whose very founder had established the pattern, could never imagine the reasons for Lhidi's behavior. He considered the fact that his other two wives remained faithful to him and Allah, was proof positive of the fact that his way, what he proclaimed as Allah's way, was more than good enough for all women.

He would never consider that what Lhidi felt as the betrayal of her own parents in treating their beloved daughter as property and as a pawn for their personal gain, and the betrayal of her religious leader, who had been so willing to take advantage of her sexually for his own gratification and against her will...in fact, her will had never even been considered in the matter...had led to Lhidi's actions at the first realistic opportunity she had to get away from the situation. He would also in fact be shocked if he could read the hearts of his second wife regarding the matter.

Sayeed, like so many others in his position, could not, and would not, see the obvious cause and effect relationship between his own behavior as it related to Lhidi, and the course Lhidi chose. All he could see was that Lhidi had dared to defy him and to defy what he considered to be the absolute tenet of his faith, and for that, she and any like her had earned his anger and vindictiveness. In fact, he vowed that she would pay with her very life.

"No, I swear before Allah that there will be a special place in hell...and even a foretaste of it on earth, reserved for all those who would betray Allah in such a way," he thought angrily as he contemplated the details of its torments.

"...and perhaps such conditions will be extended to the homelands of the infidels who have colluded with them as well, if Allah is willing.

"Yes...I am sure He is willing...and I know we have the means and that Allah will provide the right martyr teams with the appropriate levels of commitment. It is time...my mourning for Lhidi and all those who joined with her to strengthen the enemies of God is ended.

"It is time. I will issue a Fatwah to that effect this evening after prayers, and the word will go out to the faithful Ayatollahs, Mullahs and clerics.

"Perhaps in the coming months...surely in the coming year, Lhidi shall realize, all too late, the mortal mistake she has made...and perhaps she and all of the unfaithful like her, along with their infidel friends, shall witness a world-wide mourning and howling the likes of which have not been seen in a thousand years."

**November 17, 23:56, Local Time**

**Level 3, Row 189, Seat P, C-90BT Aircraft**

**150 ft over the Caribbean**

Sergeant Hernando Rodriguez reflected on the years of combat he had experienced. He had joined the Army in Florida during the preliminary battles of what would become World War III, when the U.S. was forced to re-enter Iraq and fight the Greater Islamic Republic, which had used a vote in Iraq to join the GIR as a pretext for forcing the Kurdish people into their ranks against their will. As America responded to that issue and re-entered Iraq, the North Koreans had invaded South Korea forcing the U.S. to engage in a major two-theater war. Then, as the United States mobilized to respond to that invasion and help South Korea, the Red Chinese, who had been pretending to mediate the crisis in Asia, conducted an horrific surprise attack against the United States.

That attack was made against the Carrier Battle Groups and transports and amphibious ships that were approaching South Korea as a relief force, and used new Chinese technology in the form of a very powerful, long-range supercavitating weapon. It had been terribly successful and had sunk two U.S. Carriers, two large Amphibious Assault ships, and many more escort, transport and amphibious ships. That engagement represented the worst loss in the history of the U.S. Navy, killing or injuring over thirty thousand American service personnel.

But that was not where the horror ended. While those attacks were being made, more surprise attacks, some of them pure terror attacks, were conducted simultaneously all across the United States by Chinese, Islamic and Aztlan forces and terror cells who had been gathering and preparing for years

within the United States itself. Those attacks killed tens of thousands of American citizens, including the Vice President of the United States and the Secretary of Defense when the White House had been destroyed in one of the attacks. The President, Norm Weisskopf, had himself narrowly escaped death.

So, when Hernando had joined during those initial days, he had no idea what his enlistment would really mean. He had thought in terms of a war similar to the actions that had been waged in Iraq twice before in Operation Desert Storm and Operation Iraqi Freedom, or in terms of Operation Enduring Freedom in Afghanistan. There had been no comprehension, either for Hernando or for most other Americans, what those initial battles in Iraq would lead to.

But now they all knew now.

"In essence, at this point, it means we fight until this thing is over...five years, seven years, then years...however long it takes," he thought as he sat in his barely padded seat in the C-90BT.

The C-90BT aircraft had been specially configured for the transport of large numbers of Americans troops. Thirty of the total fleet of one hundred and eighty had been modified in this manner. As such, outside of their own personal gear, or whatever gear they may need for assignments that some may already be aware of after their stateside leave, these aircraft were optimized for carrying up to twenty-five hundred troops at a time, either as follow on troop build-up missions during an operation, or, as was the case now, for carrying troops home for leave.

Hernando had fought in Central America, Alaska, Cuba and then in South America alongside Columbian, Brazilian and other allied troops. He was amazed that he was still alive after the many combat experiences he had lived through...and after so many of his friends and compatriots had been severely injured or killed.

Hernando had other friends who had been assigned to Europe, some to the Middle East and on into Iran and now India, others who had fought long and hard in Australia and the islands of the Pacific, and others who had been shipped to Siberia and were now deep in the heart of Asia. He heard from them every now and then, and the comments and feelings had become all too familiar.

*"We're in this to the end. If we let these animals off the hook without an absolute and complete victory, we will risk the life and liberty of all of our friends and loved ones and our very way of life."*

It was exactly the way Hernando felt and he wondered where his next assignment would be...after this long overdue leave.

He had fought with the Columbians and Brazilians for the last year, after his leave back to Florida had ended. He had earned that leave after the successful campaign in Cuba where the communist regime and dictator had been defeated by American forces. The dictator had been captured and put on trial.

Due to his duties, he had not seen that trial, but he had followed it faithfully through his wife's and his parent's letters. The old communist had tried to use a defense that posited that as the sovereign leader of a nation, he had only been acting within the capacity of his office in protecting Cuba. The American Attorney General and lawyers had literally torn his defense to shreds. The evidence clearly and unimpeachably showed that the Cuban leader had funded and planned massive terror attacks against the people of the United States. The testimony of several of those directly involved in the FTA Trucking Company that had used the NAFTA agreement to bring in hundreds of terrorists and their weapons and to plan these attacks had been the final nail in the coffin. The Cuban dictator had been found guilty and was executed by lethal injection.

But before the trial or eventual execution took place, his leave with Maria and his son and parents had been nothing short of wonderful. Maria was pregnant with their second child at the time, and in the intervening year, she had given birth to their second son, Jose. Oh how he loved her! What a grand life they had as citizens of the United States, despite the war, despite the attacks within America, despite the dangers. As he thought on their freedoms and the opportunities that resulted from them, he felt once again that great welling up in his bosom and the great commitment to protect their life, their liberties, and their hopes for the future with his very life.

His first son, Felipe, had been two years old when Hernando had returned home on leave. What a great time it had been playing with him, getting to really know him and having so many experiences together. At two years old, he was able to recognize and communicate with his Dad...Maria had done such an excellent job in raising him. And he would catch Maria beaming at him out of the corner of his eye when he would give Felipe horse rides on his back. How could he describe, even to himself, the pride and love he felt for his son and for his entire growing family?

Since he had been gone to South America, their second son, Jose had been born and was already over a year old! Felipe was approaching three and a half! He was so excited to see them.

...and he was so grateful to be going home to see them.

The fighting in South America had been hard, and it wasn't over yet. But the outcome was clear now. Supported by American air power, and in particular the Hail Storm missiles and Predator IV UAV systems, Columbia had been completely liberated and then the war had been taken to Venezuela. Despite having already cut off most Venezuelan forces, it had taken almost nine months of hard fighting on three fronts...American, Columbian, Central American, and Canadian troops from the north, American and Peruvian troops from the west and Brazilian, American and English troops

from the South...to defeat Venezuela and completely depose their so-called President, who had always proudly maintained that he was the bastard child of the Cuban dictator. He too had ultimately been captured and taken into custody, where similar charges of aiding and abetting and funding terrorist attacks against the United States proper and American civilians specifically were being brought against him. He had been extradited to the United States and would soon be standing trial there, just like his supposed father, and certainly with the same results.

Despite all of this, as Hernando reflected on it, and even with the technological advantage, fighting in the forest covered mountains had been extremely difficult and deadly.

In the end, Brazilian and Columbian troops, who were the most acclimated to the terrain, the climate and the cultures had proven extremely important and beneficial to the American, Canadian, English and other allied forces in the endeavor. Their insight and their ability to help with targeting and reconnaissance had ensured that the west's vast technological advantage was used against the remaining Panamanian, the Chinese, the Venezuelan and the Argentine forces to great effect.

Now, as Hernando and so many others were flying home on leave, the battle was being taken in earnest to Argentina. There in the southern parts of Brazil, a new American expeditionary force and many of the allied forces that had been fighting in the north, were finally making the difference. For almost three years, a see-saw campaign had taken place between mostly Brazilian and Argentine forces, raging in northern Argentina where the initial Argentine invasion of Brazil had been pushed back to. But over eight hundred thousand Chinese forces had reinforced the Argentines there in the last year while the heavy campaign was going on against Venezuela. They had done this in an effort to relief pressure on Venezuela and force the allies to send more men and materiel southward.

The joint Argentine/Chinese second invasion of Brazil had proceeded rapidly, once again advancing eastward towards Porto Alegre, Brazil on the Atlantic coast. This time, with so many Chinese troops in accompaniment, the enemy offensive had succeeded and had penetrated through to the coast. Porto Alegre had fallen, severing southern Brazil into two parts. The land and people that had been occupied by the Chinese and Argentines had been literally raped. The deadly events in Porto Alegre, after the enemy occupied the city and had been allowed by their officers to go completely out of control for seven days before they were finally reigned them in, would forever be known as the Rape of Alegre...and it would be an event that would impassion the Brazilian people and the allies to ensure that their enemies were never again able to threaten them in such a way.

And that was where the enemy success in Brazil had ended.

The Argentine and Chinese forces could not make effective use of the port. Allied naval power was far too strong and, along with U.S. Naval supercavitating weapons and air power, ensured that no COSAS, CAS or GIR naval power could come anywhere near their Atlantic outpost on the sea.. Argentine and Chinese forces, in army group strength, tried to expand their corridor to the sea, both to the north and south. But Brazilian forces, strengthened significantly by new recruits and the older national guard and reservists who were called up, stiffened and had held their own.

At the same time, American expeditionary forces joined by Canadian, and Peruvian forces, who had been freed up as a result of the victory in Venezuela, staged along the coast to the north of Porto Alegre in Florianopolis, while additional Brazilian, English, Columbian and Central American troops staged to the south in Rio Grande. By the time Hernando left South America, a two pronged counter offensive had already begun which was aimed at enveloping the Argentine and Chinese troops that had broken through to the coast. Those enemy troops were falling back to avoid certain annihilation.

"And well they should turn tail and run," thought Sergeant Rodriguez.

"They are out their dangling on a limb that is just begging to be cut off!"

As a result of all of this, the second invasion of Brazil was stopped and was now in the process of being thrown back...and this time there was every expectation that the allied offensive would not get bogged down in northern Argentina as it had before, but would finally be able to push all the way through to Buenos Aries, or until enemy forces surrendered unconditionally.

"And when that finally happens, and I hope and pray it is soon, enemy forces, and in particular Chinese forces, will have been completely cleared from all of the Americas," Rodriguez thought as he nestled his head back into his pillow and felt like, after having reviewed the whole thing in his mind that at last he would be able to get some sleep.

"North, Central and South America will finally be free of Chinese influence and meddling.

"We should never have let such a nation, whose government, ideology and culture is so alien and antithetical to our own, gain such power in our own backyard. It's been decades in coming...perhaps soon it will really be finished," he continued.

As the Sergeant drifted off to sleep, his thoughts turned to the things which naturally gave him the most happiness and contentment.

"Maybe soon, I'll be able to get back to a normal life where I can praise God, love my wife, raise my kids, and take care of my parents in freedom, and peace the way it was meant to be."

**November 25, 22:24, EST**  
**Thanksgiving Day, Weisskopf Residence**  
**2488 Shady Lane, Naples, Florida**

The festivities and meals were over, the kids and grandkids had all gone, and now Linda Weisskopf was alone preparing for bed. As was her routine, she was reading a one of her classic novels before retiring. As she was sitting up in bed this evening, she was trying to read *Little Women*.

...but she couldn't really get into it, so she put the book down on the nightstand beside her bed.

There had been so much to be grateful for today on this Thanksgiving. The war effort, after so much discouraging and downright bad news for so long, was finally looking more and more hopeful. Tens of millions of people in many different parts of the world from Australia, to the Middle East, to Africa, to South America, to Asia were being liberated. There had not been a major terror attack of any kind in the United States for over three months, though the terror alert level remained at Red.

"And it probably will, and should remain there until the war is over," thought the former First Lady as she contemplated it.

That level, while being costly, had all of the Federal, State and local agencies on their highest footing. As a result of the experiences thus far in the war, it had the American people on their highest level of alert as well.

"Though I honestly think at this point, the people would already be there with or without the official color scheme," she continued.

"Ever since that mall attack in Colorado, when the people themselves helped turn the tide with their own firearms, it has been apparent that the people themselves are the best front line deterrent in the fight against terror here at home.

"Norm saw it early and pushed both for the Home Guard legislation, which formed up common citizens, under their sheriffs, to watch their local infrastructure...and he pushed for the gun laws that allowed the lawful people in this nation to carry concealed or not and be in a position to defend themselves with their own firearms against these enemies at any time.

"How could we have forgotten our own heritage so completely and made ourselves so vulnerable," she wondered.

"Well, I don't think we are very vulnerable now...and I don't believe we will allow ourselves to become that way again for a long, long time.

"I pray never."

Sighing, she looked heavenward for a moment.

"Norm, it's been almost eighteen months, and I do remember.

"One day, in the good Lord's own time, we shall be reunited eternally, just like you said. I'm looking forward to that day...but still have some work to do I suppose."

As she considered this, she could not help but think to her regular calls and activities with Sandy Bowers, the wife of President John Bowers.

Sandy, until Norm had asked her husband, John, to be his Vice President after the death of Alan Reeves, had never really been in a position of high political visibility and all of the social activities that went along with it. She had done well as a line officer's wife in the military and when John was an appointed member of the President's cabinet, but that was nothing compared to the role she had come into when her husband became Vice President, and then in her current role as First Lady.

Oh, she was game, and viewed her role correctly, from the day she had become the Second Lady of the United States, until eighteen months ago when she had become the First Lady. She supported her husband, engaged in worthwhile programs and activities, and was very careful to not be drawn in by any detractors or journalistic traps.

But she was wholly not used to it, and had never sought, imagined or seen herself in the role before assuming it.

Despite all of that, Linda Weisskopf regarded Sandy Bowers as the one of the most congenial person she ever met, always open to offers of assistance or advice, and then applying it in her own way to the tasks she sought to accomplish.

"I really like that about her."

And the principle source for the advice Sandy was now receiving was Linda Weisskopf.

It was counsel that she viewed as a God-send to her personally. It had lifted her up and given her a purpose in her darkest hours.

Losing Norm, being there and watching the light go out of his eyes, watching him die after being attacked in front of the Lincoln Memorial, had been the most difficult thing Linda Weisskopf had ever experienced. It had not shaken her faith...but it had affected her. Within days she was experiencing something she knew that many military personnel experience after combat...delayed stress syndrome, and had been diagnosed with the same.

What she had experienced on that day had been combat. Quick, brutal, terribly bloody and violent. While it was happening there had been no time to think about it...but afterwards, after all of

the ceremony, after the healing and caring in the hospital for her own injuries...when she had finally gone home...to her own home...the stress and discouragement had begun to build.

The call from Sandy Bowers seeking help had given her purpose and a will.

"Perhaps Sandy planned it that way," she thought as that possible realization came to her mind.

"If she did, well then, God bless her for it and I hope she has benefited in any case."

Either way, Linda knew that spending several hours per week in the calls and activities with Sandy had been like a physical salvation to her...a balm on her inner wounds.

"Helping and serving others always works like that.

"It's what my parents taught me long ago, and it's something I have seen so many times in my own life. I guess when such traumatic experiences come along, the good Lord has to remind us of it.

"We find ourselves by losing ourselves in the service of God and His children."

And that was exactly the way Linda viewed her efforts in counseling Sandy...and in the other activities, programs, and events to which she committed herself.

She had discovered in so doing, that the good Lord, and her nation, had not forgotten her. To the contrary, they were eager for her involvement and input.

She loved it, and on this Thanksgiving evening, before she finally laid down and closed her eyes, the realization of the good it had done her touched her heart and filled her with gratitude.

"Thank you dear Lord for your mercies.

"Please let Norm know this night of my love, and help me to continue to help others as long as I am allowed to remain down here away from him."

**December 3, 07:50, EST**

**Trevor Residence**

**Nashua, New Hampshire**

"Hurry up honey, you know we have to be there at least two hours early to clear security."

Elizabeth Trevor was anxious to be going. She and Joseph were packed and ready to fly down to Texas to once again visit their close friends, the Simmons. With Billy coming home next week, they wanted to make sure they were able to get there in plenty of time to help Cindy and Jess have their place just they way they wanted for Billy's homecoming.

News of Billy's miraculous survival, the way he had been found by his Marine friend, Leon Campbell, himself a Medal of Honor recipient, and of Billy's continuing recovery from amnesia, was one of the things that had captured the imagination of people all over the country. They were literally talking about it in towns and cities, living rooms and kitchens, cafes and coffee shops, and in churches, synagogues, and cathedrals all over the country.

"You can almost see the anchors of the news programs and the hosts of the special news shows drooling in hopes of being the first to have either Billy or Leon on their shows," thought Elizabeth as she walked to the bedroom to see what was taking Joseph so long.

As she turned the corner to walk down the hall to the bedroom, she almost ran headlong into Joe coming the other way.

"Hey, watch where you're going there young lady," Joseph said as avoided the collision, caught her in his arms and twirled her around into the living room.

"...and if you're not especially careful...well, we might end up being even later, hehehe."

Elizabeth loved her husband and allowed him to twirl her around for a moment longer. He had always been such a good, faithful, Christian man. From their earliest times during his Physics undergraduate and Physiology graduate studies in Utah and Texas respectively, to that first job at Talbot Laboratories, to the later years working for the government on the Genome Project, Joseph Trevor had always had a deep and abiding love for God and his wife and family. It was that love and faith on both of their parts, that had helped them through the good times and the difficult times as well.

"Like the time there in Massachusetts when I got caught in the middle of that terror attack...now that was what I would call a difficult time," she thought.

"Joseph had come running and had shown such concern for my safety and such chagrin knowing that he had not been able to do anything to help when I was in the most danger."

After all of that, when Joe's star had risen as a result of the research into the sub-molecular Human Reasoning Structures (HRS) that he had discovered while researching the Genome and he won the Nobel Prize, the fame and all of the attention had not gone to his head. Instead, he had avoided it as much as possible and if anything, the experience had allowed he and Elizabeth to even grow closer. He was always willing and eager to seek her opinion on matters even related to the technical side of his work, anxious to discover and understand Elizabeth's feelings or intuition on the matter and then to try and somehow take them into account. By doing so, he had always included her and made her feel a part of what he was doing.

Later, after his Noble Prize, a little over three years ago, he had become involved with the research and development scheme that Sandra McPherson had proposed regarding the virtual modeling of his Human Reasoning Structures so their study and work associated with them could

become more widely spread and less costly. He had embarked on that path with all of the faith, trust, hard work and commitment he was known for, and he had been used.

It turned out McPherson was very pro-abortion, something the Trevors were unalterably against, and that she wanted to use Joe's discoveries and methodologies to more closely study human fetal tissue... a practice that was outlawed in the United States. But McPherson was a genius in computer modeling and she was using virtual models for her research, obtained from physical fetal tissue in Europe, where it was legal. So she had skirted the law and used Joe's material in a way he would never approve. He had tried everything, including his contacts within government to stop her.

"But the good Lord knew what He was doing," thought Elizabeth, "even when we did not."

Saundra had unexpectedly discovered the HRS within the fetal tissue... proving that the fetus, at an earlier time frame than anyone had thought possible, was capable of reason and therefore fully human. It had been a signal event in Saundra's life, for despite all that had happened, and despite her own belief system, she was an honest person and recognized the import of her discovery.

Joseph himself had also seen its import and had readily set aside their past differences to work with McPherson to verify and then publish the information.

During that entire process, as was his nature, Joseph included Elizabeth and the culmination of the process had literally changed the world. Based on the new, verifiable evidence, Roe v. Wade was overturned by the Supreme Court of the United States. Abortion became illegal, and with the announcement of the facts associated with the discovery, the absolute vast majority of Americans, well over 90% approved of the change, and changed their own lives accordingly.

"What a ride all of that has been," Elizabeth thought, "and what a man you are Joseph Trevor."

In addition to all of that, even after all of these years, Joseph Trevor's love and physical attraction towards her had not diminished, and that made her feel special too.

But there was a time and a place for everything, and after a few more seconds of dancing her around, just about the time when his hold on her became a little tighter and the look in his eyes was beginning to change, she knew it was time to let him know that now was not the time or the place... they had a plane to catch.

"Honey, I've loved the dance... and I love you too... but now that I've found you, it's time to go."

Joseph Trevor was not insistent on pursuing his physical feelings. He knew his wife, and he had played along waiting for her to tell him it was time to go. Mind you, if she had been willing to delay and actually entertain his advances... well then, who was he to stand in the way of his wife's desires. But he knew that it was more important right now to catch that plane, and be on time.

"Well, okay you big stick in the mud. Let's go catch that plane.

"I am looking so forward to seeing the Simmons and helping them prepare for Billy's return. I can tell you right now that their reunion is going to cause me to cry like a baby."

As they walked toward the door, Elizabeth thought for a minute and then asked.

"What was it you were doing back in there anyway that caused the delay in the first place?"

I know you didn't go to the bathroom, and I thought you were already ready."

With a twinkle in his eye that comes from knowing, loving and living with someone for over twenty-five years, Joseph answered.

"Waiting for you to come around that corner."

**December 7, 02:11, local time**

**Ground Based Particle Weapon Command Center**

**Mongolia**

Lu Pham had progressed in his role on the Executive Committee of the Politburo in the People's Republic of China. Ever since their last major meeting he had become one of President Jien Zenim's most trusted advisors and confidants, and not just in matters related to weapons research. It seemed that President Zemin needed him to step beyond his traditional endeavors of research and development, project management and deep involvement with the math and technology of his ideas, to a more direct command role in the implementation of the weapons and their use operationally.

That was exactly what he was involved with this morning.

He had three ground based particle weapon facilities spaced along the Chinese and Mongolian border areas now completely operational and ready to attack the Americans in space. These facilities were immensely powerful and used up a corresponding immense amount of energy. Lu was sure that they would be more than powerful enough to bring down the American craft and stations in space.

Lu knew that it was imperative that the Chinese do so.

"If the Americans still enjoyed their abject and total advantage in space as they had done at the onset of hostilities, then what we are about to do would never have been possible.

"They would have already seen our energy emissions from space and known what we were about to do and taken measures to eliminate it," he said out loud as his assistant stood by.

"They want it that way again, and that is something we simply cannot tolerate.

"Prepare units one and two to fire on their targets, hold unit three in reserve for defense."

Lu was sure that a defense would be necessary, he just wasn't sure how much or to what degree.

“Commence firing!”

The Americans had not attacked any CAS or GIR forces with their orbital bombardment weapons in several weeks. Everyone on the Executive Committee was hoping that Lu's efforts could eliminate the American presence in space before they could make any more attacks.

But that hope would prove to be futile.

**December 7, that same time**  
**High Geosynchronous Orbit**  
**Point Solitude, Opposite Asia**

What the Chinese were not aware of was that two other missions had already returned to earth orbit from the asteroids and had rendezvoused with the USSS Gaspra and the USSS Ida. There were now, at any one time, eight missions working the asteroids, either on station, or in transit either way. New materiel for orbital bombardment was arriving at the rate of another package every four weeks.

But the Chinese could not know this. Point Solitude where these returning vessels made their rendezvous and where they processed their material to form the desired orbital bombardment projectiles, was in the shadow of the earth as respects all of Asia all of the time. It was a position from which they could develop and launch their projectiles without the knowledge of the Chinese at all.

In addition to this, and of immediate interest to the Chinese, the United States had placed an orbital station over the Pacific Ocean and the other one back up over Australia. But the Americans had learned from the attack of the Dragon Spirit craft back in July that the Chinese possessed particle beam weaponry, and they had established new sensing and defense systems on the new vessels based on that experience. The new station over the Pacific had just become completely operational the week before, and it, would receive the attention of the Chinese first.

Particle beams are not visible to the human eye. When they are fired, they are also not susceptible to cloud cover or other atmospheric conditions the way a laser is.

When the Chinese fired their particle beam weaponry, a massive stream of charged particles rose heavenward at the speed of light. They passed through clouds, rain, dust particles, and the atmosphere cleanly as they were designed to do. They moved unerringly to their target, the new Admiralty Space Station over the Pacific.

That's when things changed.

Based on sensing equipment that had been set out along all of the major threat axis around the station, the American space craft and its crew sensed the particle beam simultaneously with its arrival. The automated defense system for the craft activated itself and, based on what the American knew of the Chinese technology, set up a field on the specially manufactured skin of the station that was, in effect, a reverse charge to those particles that were arriving with the Chinese attack.

Human reaction time was fast for the crew and a tribute to their training, but it was much, much slower than the automated, electronic defense. The human response was measured in seconds where the system defenses were measured in milliseconds.

The electronics systems officer, who served as the defense officer announced what his instruments were telling him and his section.

“Captain, we are under attack from an extremely high powered particle weapon originating near the Chinese Mongolian border.

“All readings are off the scale.”

Captain Cleverly glanced at the readings himself and then wasted no time in responding.

“Increase the defensive field effect to maximum and fire the secondary maneuvering system, put us on a course of 123 degrees, up angle 40 degrees.”

The particle beam was much more powerful than those carried by the Dragon Spirit craft. Much stronger even than the factor the Americans had built in case of ground attack.

“Captain, outer hull is heating up and in danger of breach at stations 37F and 39F. We need to get out of the path of this beam.”

The Captain had another idea.

“Rotate the station, spread out the effect evenly as we move.”

As the station began to move and to rotate, the Chinese technicians were able to tell, from the readings associated with the beam itself and its behavior, what the Americans were doing.

Lu Pham ordered all three systems to target the Australian station.

“Captain, we are now under attack from three, I repeat three, ground based weapons.

“Measurements just went off the scale in terms of power and heat. Breaches imminent all along the outer hull... I recommend we abandon ship.”

The Captain had to concur.

“Get a message off to USSPACOM as follows:

*Under attack from three powerful ground based, Chinese particle weapons. Shield marginally effective against one, failing against three. Abandoning the station. Electronic data follows.*

“Then sound abandon ship.”

**December 7, five minutes later**  
**US Space Command (USSPACOM)**  
**Honolulu, Hawaii**

The Captain in charge of the communications division reported to his commanding General, who this morning was acting as the current duty officer.

"General, we have the data from the Admiralty.

"She's gone sir, completely destroyed with major components falling back into Earth's atmosphere over the South Pacific as we speak.

"We believe that several of her crew were able to get to the escape pods and abandon ship. Those pods are programmed to reenter the earth's atmosphere and make parachute ocean landings.

"SAR teams are moving into position for recovery.

"We alerted the Southern Star who charged their field to the maximum and began moving and rotating their vessel before coming under attack.

"Currently they are still underway but have suffered extensive damage. They may be just able to get out of the line of enemy fire behind earth's shadow."

General Percifer listened soberly to the report.

He was upset because he had been assured by the intelligence services, including USSPACOM's own, that the particle beam sites in China had all been destroyed months ago. Of course, at the time, that meant the sites where the weaponry for the Dragon Spirit was being developed and tested.

"Obviously, the enemy had larger plans for their technology outside of what they showed us and which they chose not to share with us until this moment. But they sure are letting us see it now," he thought as he began asking for more information.

"Okay, what of the coordinates for these sites?

"Have they checked out?"

Another one of his staff, the Colonel coordinating operations at Point Solitude answered.

"Yes sir, the coordinates match the telemetry and the visuals received from both the Southern Star and the Admiralty. The folks at Point Solitude are simply waiting for the order to attack."

This was what the General wanted to hear. He had already received approval from Washington, both from the Joint Chiefs and from the White House, to place a priority on any request or need to attack enemy facilities that posed a threat to any of the US Space Stations.

"With one station down and another in danger of the same, I would say that these three sites represent a threat alright," he thought.

"Get Point Solitude on the horn for me and I will issue the orders immediately."

Turning to his Chief of Staff, he issued more orders.

"Have my entire staff in the control room conference room within the next ten minutes. I want every aspect of the attack and the assessment of its effectiveness reviewed by the entire staff."

**December 7, twelve minutes later**  
**Ground Based Particle Weapon Command Center**  
**Mongolia**

Lu Pham watched as the telemetry told the awful truth.

The Americans clearly had more of their orbital bombardment projectiles...many more. They also clearly had more stations in space in geosynchronous orbit, hiding in Earth's shadow and out of the line of fire of China's particle beam systems, from which they were launching these attacks. At this moment, a single large projectile was precisely targeting each of his installations, and there were two smaller projectiles behind each of the large ones.

"Those smaller ones are their insurance," he thought.

"I am sure they have gauged our capabilities and have applied a large factor to ensure success."

Considering the alternatives, which were growing fewer and fewer by the moment, Lu Pham made the decision as to how they would defend the installations against the attack.

"If we can somehow split the first one, there may be enough time to respond to the follow on projectiles...and it would take all three systems to potentially stop any one of the larger objects."

The next fifteen minutes would tell the story.

...and they did.

Lu ordered all of the sites to focus on the projectile targeting his most capable system, the one closest to the command facility and only 80 kilometers away.

Things went as Lu had anticipated.

With all three particle weapons focusing on the one large projectile, they were able to split it into two pieces while it was still high in the atmosphere, many miles above the earth.

Both pieces fell to earth in sparsely regions, and video cameras at the facility were trained towards their impact points and showed the tremendous explosions and mushroom clouds associated with those impacts. One of them hit earth only twenty-three kilometers away from the command

facility and the shock wave tore several of the cameras from their mounting hardware outside the building and knocked down a number of out buildings.

Lu did not notice that relatively minor damage because he was buried over 200 meters beneath the surface in a completely independently shock mounted facility, encased in rock.

With the split of the first major projectile, the three Chinese weapons had just a few seconds to focus on the two smaller objects approaching the main facility. By that time the first smaller object was only two miles above the facility and all three systems open fired on it. But it only lasted a few short seconds as the two other particle beam facilities targeted by the other large orbital bombardment projectiles were hit and went off line. Those facilities, and everyone working at them, had been completely annihilated by the large American projectiles targeting them.

Still, the main facility was successful in splitting the first small projectile when it was less than a mile overhead, it's pieces narrowly missing the facility itself. But by that time it was too late to target the last projectile.

Time had run out.

The glowing carbonaceous chondrite projectile that had been mined from the asteroid belt and launched from Point Solitude impacted squarely on the last remaining Chinese ground-based particle beam facility, creating a crater twenty meters deep and rendering anything within a two hundred meter radius a twisted, burning, smoking ruin. The overall facility was severally damaged and knocked off line, and would remain that way for at least two or three months had the Americans not recognized the probability, given the defense that main facility had put up, that the facility was not completely destroyed. Within ten minutes of the initial attack, a follow-on attack of two projectiles finished what the first attack had started. There would be no more particle beam attacks into space originating from ground stations in the PRC, or originating from any of its allies or their controlled territories..

Lu dreaded the report he would have to make to the Executive Committee, and to Jien Zemin in particular. At the very least, he knew that he could revel in the fact that another US Space Station had been destroyed, the Admiralty Station.

She proved to be the last Space Station lost to the Chinese in the course of the war.

### **Christmas and New Year in North America**

Throughout the United States and all of North America, the hopes of the people continued to rise as a longer and longer time period passed without a major terror or enemy attack within the continental United States and Canada.

The adoption of and implementation of the Home Guard program was a major reason why, along with the severe attrition that the enemy sleeper cells had experienced. The Home Guard Program across the United States through legislation and initiatives of the Homeland Security Department was one of the great legacies of President Norman Weisskopf. Under President Bowers, the program had continued growing unabated to become a mainstay of the defense of America against enemy infiltrators or terrorists, and it had worked well, despite the many, many attacks that had been conducted on America's soil. The Home Guard had interdicted, prevented and defeated attacks throughout the United States before they could ever get going in many cases, and helped defeat and lessen the impact of actual attacks in many others.

It had been so successful, that Canada had adopted a very similar program under the conservative administration that had been elected after the outbreak of hostilities. Within a year of the United States adopting its Home Guard program, the Canadians had adopted their own Home Front program.

Another great legacy of President Weisskopf had been the rapid rebuilding and growth of American manufacturing and revitalizing the American steel and energy industries necessary to sustain it. Opening up the Alaskan National Wildlife Refuge (ANWR), the waters off the Pacific Coast, areas of Utah, Arizona, New Mexico, Texas and many others to petroleum, coal, solar, greater hydro and geothermal production had allowed America to make rapid progress in energy production and independence. Once multiple new nuclear power plants had started coming online, energy self sufficiency was assured. Within three years America was completely energy independent and exporting energy to her allies.

The most modern steel production processes and mills, automated through the latest American innovations in computer-aided technologies, using true expert and intelligent systems, allowed for continuing rapid buildup in wartime production. Allied nations and peoples were calling it the modern American miracle, and it was allowing America, once again, to assume the role as the arsenal for freedom and liberty that it had donned in earlier generations and crisis. As a result, modern manufacturing plants, putting out the latest tanks, aircraft, spacecraft, ships, missiles, trucks, rifles, ammunition, support equipment, clothing and the myriad computer chips and systems that controlled them and lent to them their high technology, cropped up all over the nation.

By this Christmas and New Year, this production miracle was producing a veritable avalanche of Army, Naval, Air Force and Space Command systems for the over fifteen million personnel the United States had under arms throughout the world...and this did not include the over ten million Home Guard personnel within the Continental United States. The American citizenry was mobilized

to support the effort to the max, and they were hardened to it as well. The rationing programs, similar to those used in World War II, for materiel critical to the war effort, were being willingly and gladly adopted by citizens who had seen far too many of their own wounded or killed to enemy action at home, and who all knew several military personnel who had experienced the same overseas.

Despite the anxieties, hardships and dangers presented by the war, Americans were upbeat and positive. Society had literally been transformed by the crisis. Instead of the numerous divisions socially, morally and culturally that had sprung up from the 1960's through the 1990's, that tended to divide the people and set them against one another, now the vast majority of the people were much more focused on the foundational and critical values essential to a truly free culture. These were values that took into consideration the great responsibility and accountability that freedom must require of its benefactors if it is to hold and maintain itself. As a result, there were no hyphenated-Americans anymore, everyone was considered an American, committed to the red, white and blue.

Abortion was now illegal, and the vast majority of Americans (polled in excess of 90%), after hearing of, reading and contemplating the meaning of the Human Reasoning Structures and their presence in the unborn, were solidly behind the reversal of *Roe v. Wade* that had taken place. Federal and State Laws had been passed recognizing and codifying this decision. The war effort had taken a dramatic turn for the better soon after the decision and the late President himself had spoken directly to the cause-effect relationship of those events in his Christmas address of that year when he said:

*"I stand before you this evening and say that my own personal conviction is that our successes on the field of battle over the last few weeks are tied directly, inexorably to the earlier decision by our people, through our Constitutional processes, to reverse the greatest blot and stain that has ever existed on our national consciousness. Our founders taught us that among the unalienable rights that we all enjoy, that the first is the right to life. As a people, as a nation, we have now remembered that simple and benign truth. Let us never forget it again, let us never lose our morality in such a horrific way, because in our morality, we find our freedom and liberty."*

Most Americans had agreed with that statement and were even more committed to it now.

Another great change that had carried through to the present time and was directly tied to the Home Guard program and the principles behind it, was the reaffirmation in the American psyche of the Second Amendment to the Constitution. As a result of the Firearms Restoration Act, throughout all fifty states and within the Federal Code, law-abiding American citizens were not infringing in their bearing of arms in their own defense. In fact, with a backdrop of unrestricted and total war and terror, Americans were encouraged to bear arms...at all times. And in so doing, to the consternation of the very few people who were still inclined to restrict gun rights, what had America experienced?

The trends and statistics were clear. With over four years of data to draw on, there had been a tremendous drop in violent crime across the board. From assault to robbery to rape to murder, all major categories of violent crime were down...way down. The old western adage, that, *an armed society is a polite society*, had been proven true now that so many were armed...over 120 million.

Finally, as a punctuation to all of this...God was back in the consciousness and day to day activities of most American citizens. Not by law or acclamation, but by the free choice desire of the people themselves. Never had church attendance been at such high rates. Never had charitable donations to churches been such a high percentage of citizens' disposable incomes. Despite the rigors and hardships of war, the common American citizen was now donating almost 10% of their pre-tax dollars to charitable causes...and many of the more religious, though they never demanded it, saw this as no accident. They viewed it as a part of God's law of tithing, that when adopted freely by the citizens themselves would prove to the benefit and blessing of the society as a whole.

In addition, prayer had been re-enthroned as a motivating and moving part of American culture...publicly. Laws that had been passed prohibiting public prayer in schools, at school events, at public and government events, had all been overturned. The true meaning and original intent of the founders regarding the first amendment to the Constitution had been re-discovered. The Constitution forbade the establishment of a state religion...but also allowed for no laws passed or instituted by Congress prohibiting any citizen from a free exercise of their religion, as long as they did not infringe on the rights of others. The uttering of prayer on the official programs at public events by those so inclined was no longer viewed as infringing on anyone. Those who did not believe were not forced to bow their heads, to stay where prayers were uttered, or to assent to the prayer. But the vast majority of the citizens, through the hardships, loss of life and destruction had learned that John Adams, words regarding the foundation of America was true:

*"We have no government armed with power capable of contending with human passions unbridled by morality and religion. Avarice, ambition, revenge, or gallantry, would break the strongest cords of our Constitution as a whale goes through a net. Our Constitution was made only for a moral and religious people. It is wholly inadequate for the government of any other."*

All of these things made for a thankful people, full of gratitude. But that was not all, they had become a positive people, full of optimism for the future. Optimistic about the eventual triumph of right over wrong...and the very nature of the conflict bore stark witness to the basic truth that there were absolutes in this regard...the triumph of good or evil, liberty over compulsion, freedom over

tyranny, optimism over pessimism. Americans felt bright about their future...literally looking to the heavens for guidance and the future during the remainder of, and after the completion of the war.

...and this optimism and outlook, coupled with the continuing positive progress on the war front, caused it to be the greatest, grandest, most joyful, most grateful, and most heart warming Christmas and New Year's holidays that any citizen remember experiencing in their life time.

Many children enjoyed their first truly "wondrous" Christmas, and many parents were able to, for the first time since the fateful days when war broke out, provide a traditional American Christmas similar to the ones they "used to know". The New Year's celebration was equally gratifying, with the optimism and hope of the season, and the progressing events, in rich and evident supply.

### **Christmas and New Year in Central America**

Most of Central America, being historically grounded in Christianity, was grateful for the Christmas and New Year's season. The forces of tyranny, particularly the Red Chinese forces that had been in the area for so long, were now in the process of being completely defeated and removed. Panama was well on the road to republican government, and any vestige of the support that certain governmental officials and the more socialistic or Marxist elements in society, had been completely removed from the public arena by the people themselves. There was simply no traction left for them after the tremendous warfare that had swept over the region. Truth be told, many of them had been, as had happened with the leadership of Romania after the Iron Curtain fell, summarily executed.

Such attitudes were the norm across all of Central America. The enemy had been driven out, American help and support, as well as other allied help and support, were in abundance. People were looking forward to having an opportunity to establish republican forms of government for themselves.

One major exception remained, and that was Mexico.

Despite the successful actions of the U.S. military while conducting Operation Alvarez, when Red Chinese and Islamic sympathizers and operatives had been attacked and either killed or captured by American forces, Presidente Conejo of Mexico remained very aloof and non-committal to the allied cause. It was a source of continuing consternation to the American public in general, and to the Bowers administration specifically.

Mexican public opinion seemed to be split almost right down the middle regarding the issue. Significant perceived negative impact to Mexico had occurred as a result of America's response to the war in general and to the influx of terrorists and infiltrators across her borders specifically. Ever since America had militarized its borders soon after the initial attacks, the movement of illegal aliens across the southern border had been dramatically reduced. With a significant commitment of National Guard and regular Army rapid deployment forces, with the assignment of Home Guard units to as "buffer" zone that had been established...individuals and coyotes had found it almost impossible to cross unobserved and un-apprehended into the United States.

The drop in illegal immigration also meant a drop in hard currency flowing back into Mexico to the families and business of those laboring in America. On the northern side of the border in the United States, with full mobilization and with the stark realization of the horrors of war being played out on American soil with the attacks that had occurred, there was no shortage of American workers for American fields, factories and for any of the service industries where so many of the illegal aliens had worked before. Not only the politicians and the military leaders, but the American people themselves had at long last awakened to the dangers of allowing their borders to be wide open, and for the development of such a significant sub-culture, outside of the law, amongst them.

Many Mexicans were angry at this, feeling that their chance at the *American Dream* had been taken away from them by the Americans themselves. This element sided with Presidente Conejo in his actions and words against America. Their attitudes were growing increasingly belligerent and brazen. After a cessation of several years, Mexican border patrols, beholden to drug and other criminal concerns...and believing their actions to be supported by their own government, began to confront smaller INS and Home Guard units on the north side of the border. As had been the case in the late 1990's and the early 2000's, these confrontations escalated more and more into actual gunfire.

Many other citizens of Mexico recognized the wisdom of American actions in defending itself, securing and protecting its borders, and defeating the forces of tyranny on the American continents. This group held out for the promise of more legal immigration opportunity in America and were dedicated to working with the Americans to expand the legal immigration in keeping with the Bower administration promises. These promises held for an increase in immigration limits within the new constraints established early-on by the Weisskopf administration at the outset of hostilities. These clear constraints included:

- *A basic, tested understanding of the U.S. republican form of government.*
- *An Oath of allegiance to the United States.*
- *Three years legal living and productive working in the United States.*
- *No social welfare cases allowed as immigrant citizens.*
- *No "anchor baby" provision.*
- *Ability to conversationally speak, read and write English.*

*- No ties to terror, crime or enemies of the United States.*

Those Mexicans who supported the United States in its legal and defined immigration policy, were themselves becoming more and more outspoken against the element in their society who were becoming belligerent to the United States. They believed that such belligerence and hostility would drive an already aroused American citizenry to demand much tougher conditions for Mexicans desirous to work in the U.S. or to ban entry from Mexicans altogether. It was developing into a dangerous internal situation.

Then, during the week between Christmas and the New Year, it exploded in violence.

On December 28<sup>th</sup>, a group of over five hundred Mexican citizens, including scores of women and children, proclaiming that they were simply reaching out for the Christmas gift of living in the United States that so many of their citizens had acquired in the past, made a rush across the Arizona border, near its eastern boundary with New Mexico. More than half of them were armed and they were escorted by over one hundred heavily armed Mexican federal troops.

They cut through the border fencing, using explosives provided by the military, and violated the American border. Once across the border, the group ran up against a Home Guard unit of four individuals. Upon observing them, the American unit duly reported the incursion, which had also been spotted by a Predator III UAV providing border sentry duty. The Home Guard unit then used a bullhorn they had been issued and called on the Mexicans to halt and return across the border.

A brief, but intense fire-fight ensued when the leading Mexicans and several of their escorting troops opened fire on the four Americans. After a few minutes, all four Americans were killed, and then had their bodies mutilated in a horrific manner reminiscent of activities in the Mid East. This happened in full view of all of the Mexicans as they gathered around and literally ripped the American citizens limb from limb, some of the young children joining with their parents in taking part...all of which was also viewed by the Predator III and its monitoring military personnel.

Within a ten minutes, a single Predator IV aircraft, armed with the UAV version of the Hail Storm weapons system made a single pass over the invading Mexican killers. A quick reaction platoon arrived on the scene within thirty minutes and found all of the Mexicans dead...including all of the women and children.

The entire affair had also been observed by other Mexican nationals on the south side of the border, including one Mexican Federal patrol who took vivid digital pictures. Editing out the border crossing and the attack and mutilation of the four Home Guard personnel, the Mexican government, with Presidente Conejo full complicity and approval, created a propaganda piece and broadcast it across their nation. The effects were immediate and precipitous amongst that part of the population that supported their President in his defiance of America.

After the release of the Mexican propaganda piece, on December 30<sup>th</sup>, the Bowers administration released the detailed pictures of the entire action as filmed by the high flying Predator III aircraft. The differences between the films were clear, to the point of being able to readily tell where the Mexicans had edited their film. Amongst the more rational part of the Mexican population, the deceit and agenda of their own government was clear...and this realization led to precipitous results.

On January 2<sup>nd</sup>, precipitated by several large and contending demonstrations taking place across the nation to mark the incident after the New Year celebration, civil war erupted in Mexico.

### **Christmas and New Year in South America**

Heavy fighting still continued in Argentina, where massive COSAS and Chinese forces were fighting hard, but losing ground in their efforts against allied forces. Throughout the holiday period, while celebrations and thanksgiving went on further to the north in Columbia, Venezuela, Ecuador, Bolivia, Chile and northern Brazil, as a result of the end of hostilities in those areas, the fighting in Argentina remained fierce and protracted.

Henrietta Maldonado, the President of Brazil, proclaimed the entire week between Christmas and New Year as a "National Week of Prayer and Supplication". Specifically, she requested that the people and their leaders pray for allied forces fighting in Argentina, and for the war ravished countries throughout South America, and specifically to pray and supplicate God in Heaven for Brazil's sons and daughters who were in harm's way, or others who were suffering in any way as a result of the war.

Oh, in the mountains and in the rain forests, there still were smaller groups of enemy personnel. But most of these had been cut off completely and were merely looking for a way to conceal themselves and make their way towards the western coasts of the continent in the hopes of being picked up and ferried away from South America by COSAS or Chinese friendly forces.

On occasion, these units would either be discovered in their lairs, or they would reveal themselves through attacks in the outlying areas. Whenever this happened, it was not long until reaction forces were either inserted nearby, or local garrisons sortied to cut the enemy off. With American satellite coverage once again restored in this part of the world, and with the amazing reconnaissance and endurance capabilities of American UAVs...in most cases the enemy units either surrendered when confronted, or were annihilated if they chose to stand and fight.

## Christmas and New Year in Europe

As had been the case in the U.S., Europe enjoyed its first normal Christmas in several years.

The gratitude was most poignant in those areas that had been liberated from the grip of tyranny. Greece, Turkey, Romania, parts of Hungary, Albania and large sections of the Ukraine and Russia who had been overrun and occupied, some for several years, were now liberated. Most of the more southern sections of this area had been occupied by forces from the greater Islamic Republic who had brutally suppressed any Christian celebrations or observances. Large areas of Eastern Russia between Moscow and the Ural Mountains had been occupied by the Chinese and some Indian forces. They proved just as intolerant, brutal and merciless as the Islamic forces in their suppression of Christianity.

Once these areas were liberated by allied troops, as most of them had been in just the last year, the outpouring was tremendous. Allied forces, particularly American and English forces, received welcomes and parades that rivaled anything that had happened in World War II when allied troops liberated western Europe. Somehow, all of those who cherished freedom and looked forward to self determination, even the Muslims, atheists, agnostics and other non-Christians in these countries, knew that the arrival of allied forces meant that they would be free to worship...or not worship...as they pleased. They also recognized, that the foundation for their laws and living must now be based on free choice rooted in fundamental moral constraint, rather than coercion, tyranny and compulsion based on a ruling elite's vision of political, ideological or religious dogma.

As time went on, and as the wave of liberation continued to roll over occupied and aggressor nations, a recognition developed amongst the vast majority of people that a fundamental moral foundation based on Judeo-Christian values were proving to be the best foundation for freedom, peace and prosperity. These universal values included:

- *Love God with all thy heart, might, mind and soul.*
- *Love thy neighbor as thyself.*
- *Do unto others as you would have them do unto you.*
- *Lose yourself in the service of others to find yourself.*
- *All men are created equal.*
- *All mankind are endowed by God with unalienable rights.*
- *Self-improvement leads to the most effective service.*
- *Education, self-reliance and hard work improves one's self.*
- *Tolerance of other's morally based belief systems provides for domestic peace.*
- *Persuasion, long-suffering and reason are the best vehicles to change.*

As these principles and knowledge became more and more apparent-and this occurred naturally because of the trauma these populations and peoples experienced during the warfare pitting those very principles against their ideological opposites-other belief systems, long locked in the morass of intolerance, ignorance and compulsion, began to change...began to adopt the Judeo-Christian principles themselves in order to affect change, peace and prosperity amongst their own peoples.

It would not happen overnight, all of the principles would not be adopted at the same time, and there would be set backs and divisions...but the changes that began as nations were liberated by the armed forces of those nations allied to the United States of America were inexorable. There had been individual experiences with it since the American revolutionary period of 1776-1792 where the fundamental principles underlying American liberty had attempted to find firm root elsewhere. Examples such as during the French revolution, the changes to the English system of government brought about by American independence, the changes to western Europe and in the Pacific after World War II, and particularly during the era of what became known as the *Reagan Revolution* which led to the fall of the Iron Curtain and the dissolution of the Soviet Union were all notable. But future historians would almost universally agree that the time period surrounding Christmas and New Year of *this* year represented the point in time when the fundamental principles upon which American liberty were founded finally showed without doubt that they were beginning to take firm root universally throughout the world.

...and the people of Europe, in their Christmas and New Year's celebration, joyously heralded in the beginnings of this change. Despite this, it would be shown in future events-even as strife and war broke out in Mexico-that it would all still be tested by the horrors of war that would themselves yet be felt in many areas of the world, even as peace seemed to be breaking out so soundly in other areas. These celebrations were nonetheless the harbinger of the future...and somehow, the people of Europe instinctively knew it and marked it with their exuberance.

## Christmas and New Year in Africa

The devastation of war was nowhere more keenly felt than on the dark continent, which more and more was being referred to by the local inhabitants as the continent of death. While it was true that major combat operations had all but ceased there in Africa by New Years, yet the fallout and effects of war were most dramatically felt in this area of the world, where more than in any other area, the resources to recover and help those most effected by war's devastation simply did not exist in quantities to make a difference.

After helping to defeat enemy insurgencies and uprisings in several of the African nations along the southwestern coast, allied armies had twice staged along the Ivory Coast, in Liberia, Benin and Nigeria during the course of the long war. Their purpose each time was to penetrate into the interior in an effort to relieve beleaguered allied force in and around Israel. Once they were stalled and thrown back...the second time they were successful.

Although the large numbers of allied troops associated with these activities, and all of the logistical support that necessarily came along with them, provided for an economic influx into those specific areas, that condition was also a two-edged sword. Along with the devastation left behind by the earlier warfare, GIS and CAS forces conducted numerous raids and attacks trying to penetrate through to the staging areas of the allied forces. This resulted in sustained destruction to those nations.

As the allied armies marched northeast into the interior of Nigeria, Chad, Ethiopia, the Sudan, Libya and Egypt to battle Chinese and Islamic forces blocking their path, the destruction and damage from the resulting large conflicts were devastating to the impoverished people and their minimal infrastructure. It was a population and an infrastructure that had already been terribly punished by decades of civil strife and the blight of the Aides epidemic. The suffering experienced by these terribly downtrodden people as the tides of battle twice swept through their territories was appalling.

Like a swath across the continent, whole areas were depopulated by the terrible fighting and by the massive migration of the civilian population as refugees in front of it. Oft times, the people were simply caught up in the maelstrom, unable to move out of the way of the surging forces. From central Nigeria, across Niger, Chad, Sudan and into Libya, Egypt, and Ethiopia, over one hundred and twenty million souls had been displaced, and an estimated sixty million had died in central Africa alone.

The hardship the massive influx of refugees placed on the surrounding nations was almost as great as the warfare itself to the nations that had been directly in its path. Zaire, Cameroon, Uganda, Kenya and Tanzania on the south and Algeria and Mali to the north and west, were all devastated by the tens of millions of refugees and resulting poverty, sickness and strife that accompanied them. Millions more died in that strife and the ensuing diseases and drought.

Allied soldiers from the United States, Brazil, England, Canada, and other nations who were a part of the offensive...and then later part of the relief efforts after the defeat of CAS and GIR forces on the continent, were moved to tears at the unrelenting poverty, sickness, disease and suffering they witnessed. As much as anything else, their own letters home and reports to their superiors resulted in the massive relief that was pouring into Africa. Churches, private charities, individuals and official governmental efforts earmarked large proportions for the budgets for the suffering in Africa.

And as always had been the case, the vast majority of this relief came from the United States. As was the case after World War II...and indeed after every major war...and as was the case during the terrible droughts, epidemics and civil wars of the past in Africa, the people's of those lands would remember, would be bolstered and inspired by, and would seek, in their own way to emulate, the generosity and actions of the bastion of liberty, prosperity and peace, the United States of America.

...and thus would the ideological and fundamental moral changes being felt in Europe and in other areas of the world begin to see their own beginnings in Africa as well.

### **Christmas and New Year in Middle East**

Outside of mainland Asia (including India) and Australia, and the areas of the Pacific and Indian Oceans surrounding them, the most recent major combat had been felt in the Middle East. Indeed, major combat operations were continuing in the region in far eastern parts of Iran, and just starting in Afghanistan. Even with the benefit of Hail Storm systems, Predator III and Predator IV aircraft and the latest American orbital space station, the USSS Caspian which had been positioned over the Caspian Sea, in the mountainous terrains of those nations, the fighting was still difficult.

In addition to the ongoing major combat, large areas of the liberated and conquered territories in Iraq, the former Iran, eastern Turkey, Syria and areas along the western shore of the Persian Gulf were still in the midst of pacification operations. Although those pacification operations were significantly smaller due to the Predator IV UAVs and due to larger and larger portions of the populations of the nations throwing off their leadership and accepting with open arms the western allied armies.

As stated, the continuation of what had become a global operation in conquered areas of enemy territory requiring pacification, Operation *Ruthless Sentinel*, was very helpful in this regard. Without risking allied lives, and in those areas that had either been passed over in major combat, or where insurgents felt that they could still challenge and snipe at allied forces, *Ruthless Sentinel* ably demonstrated the futility of such intentions. In a manner that either annihilated the opposition, or so cowed them and their supporters that normal pacification and reconstruction operations could be conducted more safely, the Hail Storm weapons of the ever-present Predator IV aircraft rained death and destruction on any significant gathering of insurgents.

But it didn't always work the way the allies planned, as it had in Hamadan. Some of the more dedicated and fanatic adherents to the brand of fundamental and radical Islam as taught by the Grand Ayatollah Ol Osam Hassan Sayeed...whom these individuals knew had escaped with a promise to return from the east and avenge their losses...learned their own lessons from the slaughter of

Hamadan and other places and fought on. In those cases, the insurgents would fain pacification in order to draw the allied forces closer to them into normal reconstruction and infrastructure building operations...and then they would strike.

In each instance, the insurgents were soundly defeated in the end...sometimes causing the allies to raise entire towns and villages in the resulting battles as they had been forced to do in Mecca. But each of those instances was preceded by a surprise attack from a population thought to have already been well on the road to pacification, thought to be working with allied forces, and scores of Americans, British, Canadian, German, Polish, French, Russian or other western allied nation personnel were killed at the outset.

One unintended consequence for the radicals resulting from these operations was that they further and further separated and isolated themselves from the growing portion of the population who were accepting and welcoming the freedom and change brought by the allies. As had been the case in Iraq during Operation Iraqi Freedom, after sovereignty was turned over to the Iraqis in 2004, and before the rise of Hasan Sayeed, the more moderate Islamic peoples began to resent and view as enemies the insurgents who were causing such difficulties for them.

As soon as allied forces could recruit and train them, Iraqis, Syrians, Iranians and other local people were fighting the radicals themselves, and they were doing so with the same determination that the allies were, purging themselves of those who tried to infiltrate their ranks in a vain effort to upset the change, the peace, and the freedom that was the promise for so many people in these areas.

### **Christmas and New Year in Australia**

The continent down under was still embroiled in a bloody, horrific, and long lasting battle. Although CAS and GIR forces had been pushed well back, their numbers were constantly reinforced from what seemed to be inexhaustible numbers out of China, India, Indonesia, and other areas of the remaining GIR, and the as yet unaffected areas of the CAS nations. Tens of thousands of allied troops fell in the effort, millions of enemy military and civilian personnel were killed.

The initial invasion and occupation of the northwestern and western areas of the continent by CAS and GIR forces ultimately culminated in the complete subjugation of the continent. Now, the allies were slowly pushing the enemy forces back in Australia. That entire four year period had been a continual scene of warfare, bloodshed and conflict. Even during the more than two year period when no major allied forces were present on the mainland to contend with or hinder the enemy, small numbers of allied forces who had been cut off or otherwise left behind in the Australian interior maintained a valiant and bloody resistance. In this they fought alongside local Australian citizens and aborigines against enemy military forces and the growing presence of GIR and CAS civilian infrastructure that was being established throughout the continent.

Now, the tens of millions of GIR and CAS civilians that had been transplanted into Australia with a promise of free land and dominion fought alongside the several million strong military forces of their mother countries. They did this in an effort to maintain their presence within Australia and somehow halt the allied advance and push them back. Even with Hail Storm missile systems and the other technological advances, the allies were hard pressed to maintain their offensive and avoid going into defensive postures against the massed attacks directed at their formations.

From large naval forces to the North of Australia, protected by bases in New Guinea and in the surrounding and strategic island chains, CAS and GIR aircraft staged continual massive attacks against allied forward positions. They also staged deeper, daring raids targeting allied logistical supply and staging areas. The same thing occurred from enemy airfields in the western areas of the continent that were still under the umbrella of Indian and Chinese naval air forces operating in the more protected waters of the Indian Ocean.

The advent of the new American SSVN Olympus class aircraft-carrying nuclear submarines and the even newer SSCN Barney class arsenal submerged cruisers that escorted and supplemented them, would soon prove that the waters of the Indian Ocean were not as protected or safe for CAS and GIR shipping as they imagined. In fact, these submarines, when coupled with the Alaska class transport, and Virginia class attack submarines, would soon prove that no place along the coastlines, or within controlled waters of the enemy would any longer be safe for their naval operations.

But until then, the lengths to which the enemy would go in preventing the allied offensive from continuing were epitomized by the fact that the Chinese had utilized their most advanced and secret particle beam technology twice to prevent the Americans from establishing a Southern Star space presence over Australia. Even though their first effort had proven successful in destroying the Southern Star space station, the second effort had proven futile and opened them to attack by other American spacecraft and installations which destroyed the entire Chinese particle beam system.

While that event had severely hindered the enemy efforts and outlook in Australia, it had not ended them. Continuing massed frontal assaults on the ground and contention for control of the airspace over the front proceeded. The continued presence of enemy forces in the island chains to the north and east of Australia would allow the enemy to slow the allied offensive efforts, particularly in central and northern areas of the continent.

## Christmas and New Year in Asia

Except for a thrust into Siberia from Alaska that had linked up with the American landings at Magadan and then proceeded westward, and except for the new fighting in India and in Siberia, the landmass of Asia had remained impenetrable to the allied cause. But these incursions, and the footholds they were establishing for allied forces were proving very disconcerting and disturbing to the CAS and GIR leadership.

Allied plans projected a multiple pronged assault on Asia consisting of five thrusts. One would develop and proceed south from the Capitol of Siberia, hoping to force the enemy forces that were holding the allies back in the Ural mountains to retreat from those positions for fear of being flanked and out maneuvered. It was hoped that this would allow for the large Russian and European forces fighting in the Urals to achieve a breakthrough and open up a large offensive front into the heart of Asia from Europe proper.

A second thrust was to be located in India where allied forces had pushed up from their beachhead around Cochin towards Bangalore before meeting stiff and determined resistance from the massive numbers of Chinese troops pouring into the country. It was hoped, that by employing Hail Storm weapons and other advanced technology, that allied forces on the sub-continent could ultimately persevere and achieve positions from which to threaten China directly. They intended to do this exactly as the Chinese had entered India, but in reverse through the major river valleys that penetrated the Silwalik Mountain Range, along the Ganges and Sutlej Rivers, and through the Arunachal Pradesh along the Brahmaputra River.

The third spoke of the planned allied offensive was meant to originate out of Australia. Once enemy forces were defeated there, the allies hoped to consolidate their forces in the area and then follow the same general path that General Douglas Macarthur had taken in World War II to attack the Japanese. This would threaten the all-important sea lanes and oil conduits and divide the sub-continent and Malay peninsula from the eastern portions of Asia and China itself.

The fourth spoke of the attack would originate in the Pacific Ocean and follow a general line through the island chains similar to what Admiral Nimitz and the U.S. Marines had followed in World War II. The specific islands that would be attacked would differ from those in the second world war because the Chinese had occupied and fortified different islands themselves, but the idea of bypassing and island hopping would be applied using the same principles.

Finally, the Americans would continue with their fifth assault spoke from Magadan in Siberia. This thrust was already raising great concerns in China itself because it had been the first incursion into their mainland fortress, and because it still offered the allies the greatest chance of penetrating directly into China. In so doing, it would pose a direct threat to the rich and productive areas of Manchuria...and Manchuria was the gateway to Beijing itself.

Pitted against all of these plans by the allies were several critical factors that the CAS and GIR nations in Asia had developed in their own favor. The first was the depth to which Jien Zenim's Three Wisdoms had been accepted and adopted into the day to day living pattern by the citizens of the CAS.

1. "All men and women are equal."
2. "All share equally in the bounty of a working and industrious society."
3. "One goal, one thought, one people for World peace."

These social and communistic constructs had been so engrained into the people, and their success over the last several years at expanding their economies, expanding their national and geographic spheres of influence, and improving the quality of life of their citizens, had been so apparent, that the people as a whole had become wholly committed to them. They were as committed to the resulting lifestyle as any of the fundamental or radical Islamics were to their own belief systems...and perhaps more so. Similar to the Nazis of World War II, or the Japanese under the Emperor, the people of the various Asian nations were engrossed in their totalitarian way of life. It was a way of life that had been specifically designed and engineered around these very constructs so that the ideology would be more palatable to those very people whose culture represented thousands of years of subservience.

The second factor that was a positive influence on continuing CAS and GIR war efforts was the high technology innovations that had been, and were, being developed and deployed into the fight. Many of these innovations, particularly the varied applications of the super cavitating weapon technology, surprised the west and cost them dearly. This was especially true from the outset of hostilities through the following three or more years when the west was pushed back so drastically on every front. The ability to come up with new innovations continued to threaten the allied efforts at every turn as had been demonstrated by the development and use of the particle beam technology.

A third factor in favor of the CAS and GIR nations in Asia, and directly relevant to the effectiveness of the second factor, was the phenomenal manufacturing and production capability that had been developed. Centering on the already tremendous production and manufacturing capabilities of the Asian tigers and of China itself before the war, the CAS had expanded significantly on these capabilities in the intervening five years. Capitalizing on the tremendous amount of investment in manufacturing that the west had made in China and throughout Asia in general, and specifically from

the United States, with the coming of the war all of it had simply been nationalized by the invading and victorious CAS forces.

China, Japan, South Korea, India, Taiwan, Singapore, Hong Kong, Indonesia and Malaysia had ample production capability to draw from, despite damage during the onset of hostilities. Most of that damage had been centered around Taipei in Taiwan and Seoul in Korea, with other significant damage during the short lived fighting for Japan. All of the damage however was quickly repaired by the industrious people, particularly as a result of the influx of Chinese peoples as masters and overlords into all of these nations.

Once consolidated, the processes that had made the Asian tiger what they were, were exported to other nations as they came under CAS and GIR rule. This meant the Philippines, Vietnam, Cambodia, Burma, Siberia (which was already benefiting from the Siberian Economic Development Treaty), western Australia, and New Guinea all become significant production houses in their own right, and all consolidated under one whole, the CAS and Jien Zenim.

The tremendous capacity of the manufacturing capabilities throughout Asia and the CAS/GIR sphere of influence literally kept pace with the growing American production power-house and technological development. This proved very advantageous for CAS forces as the allies progressed in their offensive operations because the manufacturing plants allowed for a tremendous number of high technology weapon systems and supplies to be constantly available to CAS forces and their GIR allies. In fact, the CAS had tremendous excess capacity and the production from those plants was being judiciously stored for reserve forces to be applied as added defense to any allied breakthrough, or as extra offensive capability for CAS or GIR counterattacks and breakthroughs.

A final factor, and one that was well known historically, was the tremendous numeric advantage that the Asian mainland held in manpower over all other continents and nations. It was one of the principle reasons why famous generals like Douglas MacArthur and others had always strongly counseled against any major land war on the mainland of Asia.

With China and India so tightly allied under the Three Wisdoms, two and a half billion people were available for the overall war effort from these two nations alone. Despite horrendous losses to date, and particularly as their forces were pushed back, the Chinese were fielding an armed force of over one hundred and twenty million men and women at arms. India had grown her CAS-loyal forces, despite the upheaval and fighting on the sub-continent itself, to over sixty-five million.

When the other CAS allies were added to this, Indonesia, Vietnam, Korea, and the remaining GIR forces from the Middle East, the western allies were facing a combined CAS/GIR force in Asia alone of over one hundred and ninety million men and women at arms. This huge force was backed up by a tremendously industrious population and outfitted with high technology weaponry that in many areas was close to parity to that of the allies.

All of these factors made for very serious obstacles to the planned allied offensive operations and represented great risks should any one of those planned axis of attack run into any significant difficulties. If CAS and GIR forces, in their numbers, were successful in achieving a flanking breakthrough during a counterattack on any extended allied thrust, the results could and would prove disastrous, with the risk of a slaughter defeat and slaughter of tremendous proportions.

The leadership of the CAS and GIR, particularly Jien Zenim and Hasan Sayeed, were well aware of this potential and were constantly reviewing, plotting and planning to exploit it wherever possible. Into this planning they included two new faces at the highest level of their planning and strategy sessions. One of these was the new acting President of India, Rahmish Patel, whom Jien Zemin had met with personally on several occasions. Zemin had to admit that Patel's cunning and ruthless nature was much more desirable than the former Indian President, KP Narayannen's tentative nature, who had proven himself a traitor, and who would pay a traitor's price for his sedition and treachery.

The other new face in the high level meetings was none other than Admiral Lu Pham, who Jien Zenim had elevated in position to Vice Premier of the Communist Party, and the first Vice President of the People's Republic of China. This had been accomplished through unanimous voting on the Executive Committee of the Politburo, and then by a large super-majority of the entire Politburo. As such, Lu Pham and his technological brilliance was now employed in the highest level discussions, planning and strategizing of the entire CAS and GIR war effort, which represented the fate of well over four billion of earth's inhabitants directly, and all of them by extension.

As the Christian Christmas holiday and New Year passed, and as America prepared to launch new space station facilities over the Ural Mountains and far eastern Siberia in support of their planned and ongoing offensives, the CAS and GIR leadership planned how they could counter both the offensives and the space based advantage. Since they now had no counter for America's space based efforts, they listened to Hasan Sayeed's plans and already issued fatwahs. They also listened to Lu Pham's ideas as to how they might counter allied technology through misdirection and other means...and then they prepared to implement those plans at the earliest possible dates.

...and their implementation would strain and rock the free world to its very core, and ensure the final disposition of the CAS, the GIR, their leaders, and so very many of their peoples.

## Chapter 42

*“The cries of the widows and the fatherless on our frontiers now require that blood from my hands. I look on their commands as next to divine, and I do not choose to disobey them. General, I would rather lose fifty men and my own life than not to empower myself to execute this piece of business. You be murderers, but I be an executioner.” – Colonel George Rogers Clark, St. Vincennes, 1779*

**January 4, 9:20, EDT**

**Situation Room**

**The White House, Washington DC**

As Admiral Ben Ryan, the Chairman of the Joint Chiefs, expertly wrapped up his briefing of the current military situation in Asia and the planned positioning of the new Space Stations in support of upcoming offensive operations, the President was anxious to get to the next piece of business.

“So, in summary, our current plans will place three more stations into orbit in the next week, the first to be over northwest Siberia, the second will be put in place over the Indian Ocean, and the third over the northern Pacific. With these stations in place, and given their new defensive systems and their own offensive capabilities, we will be in a position to support our upcoming offensives.

“First, we will begin our long awaited central Pacific campaign targeting Wake Island, Tarawa and then island hopping toward an eventual attack on Okinawa. The kick off is scheduled for January 11<sup>th</sup> when the invasion fleets sail from Midway Atoll, for a scheduled landing at Wake Island on January 16<sup>th</sup>. Our new USS Midway will provide overall strategic reconnaissance and fire support as necessary.

“That support will include the identification and destruction of any enemy naval assets that might discover or interdict our task force as it approaches the island. Any sub-surface threats are expected to be interdicted by sweeps in front of the task force by the USS Jimmy Carter and her two supporting Virginia class boats.

“Our operations in the Indian Ocean, targeting Diego Garcia will commence on January 18<sup>th</sup> with planned landings at Diego Garcia. That task force is already underway from New Zealand and will be under the eye of the new USS Guadalupe, which will perform similar support for the Indian Ocean task force as the Midway provides for the Wake Island force.

“In that instance, the USS Connecticut and its supporting attack boats will be in the vanguard.

“Now, if there are any questions or comments, I would be glad to entertain them and lead the discussion regarding them.”

For the next ten minutes several pertinent questions regarding the Admiral's presentation were discussed. At length, the President raised his hand and interjected.

“Ladies and gentlemen, we are short on time, so for just a moment I would like to review and discuss the situation in Mexico.

“I have a number of my own ideas resulting from earlier discussion with several of you, but I would like to come to a consensus regarding our own response.”

Via video conferencing, the Vice President, Fred Reissinger spoke up.

“Mr. President, I have worked this issue at length with the Mexican President and his Foreign Minister and his staff.

They are pushing for a return to the days before the war when Mexican citizens were able to come across the border at will and find work here in America. Despite our best efforts to explain to them that those days are over forever, they will not let go of the issue. There is no doubt that Presidente Conejo is still stinging from Operation Alvarez and the embarrassment it caused him.

“He and those in his military, finance and foreign ministries, which is where his own greatest support comes from, are actively working to undermine our position in the war. They are also working to blatantly incite their own citizens to violating our borders and causing incidents.

“We have friends in their interior ministry, in their agricultural ministry, in their internal security apparatus, their judiciary, something less than half of their federal legislature and in their business sector. While they are open in their support for our current war efforts and immigration policies, they are afraid of Conejo's control and influence of their own military.

“I am afraid at this point, as much as I am against giving up on that option, that something other than diplomacy is going to be required to resolve this issue.”

With this somber statement from Vice President Reissinger, who had worked for years in the State Department before being appointed Secretary of State under the Weisskopf administration, the entire room quieted and sat in a reflective mood for a few seconds.

It was the Director of Homeland Security, Stewart Langstrom, who spoke up first.

“Well, our southern border area is secure and it is manned in more than sufficient strength by Home Guard units, the INS Border Patrol, National Guard, and U.S. Army quick reaction units, to

curtail any illegal alien, drug smuggling or potential terror infiltrations. We have plenty of Predator II aircraft for surveillance backed up by Predator IV aircraft to target larger incursions that develop into full blown emergencies like the one that has precipitated the current crisis.

"Quite frankly, that is exactly what happened with the crisis that precipitated the current crisis... within a few minutes flying time a Predator IV ended the incursion.

"But, and I would ask Admiral Ryan to confirm this with the CINC of NORCOM, if it came to a major invasion at multiple points by components of the Mexican army or very large numbers of illegal aliens, I am afraid we would need more support."

Admiral Ryan responded quickly.

"No need to confirm Stew. I have reviewed this with the General on numerous occasions.

"We have a plan for a full military defense in depth. It was developed when the very real danger existed of large Chinese forces advancing through our defenses in Central America and into Mexico.

"Mr. President, it would require our devoting another three divisions of regular U.S. Army troops to the border area and committing several wings of U.S. Air Force fighters, attack aircraft and bombers, along with a plentiful supply of AGM-999 Hail Storm cruise missiles."

With this, the room grew quiet, waiting for the President. They didn't have to wait long.

"Fred, Director Langstrom, and Admiral Ryan, thank you for the input. I believe there is a real danger, and I believe it is important to address it quickly and resolutely."

Looking into the video conferencing lens, the President spoke to the Vice President.

"Fred, I'd like you, along with the Secretary of State, to personally deliver a message to Presidente Conejo. Let him know that we view the increasing incursions coupled with his attitude as a prelude to war and that our doctrine of preemption has already been solidly established. Let him know we will not hesitate to use that doctrine with Mexico.

"Let him know that his government has thirty days to use their own forces to cause a halt to all incursions, to begin utilizing the established legal immigration policies across our southern borders, and to visibly cease the incitement of his people and military forces against the United States.

"Otherwise, we will view their continued actions as a menace and clear and present danger to the United States and we will act to defend ourselves.

"Just that clear, Fred. Let the chips fall where they will.

"I will talk to Congress in private about this as you start your trip, and will then address them in open session the day of any actions we are forced to take."

The room was now even more quiet. Most had understood what the Vice President was alluding to when he, above all people, indicated that the diplomatic card was exhausted. They just couldn't have imagined it being addressed so directly, or so quickly against their neighbor to the south.

"Admiral Ryan, work with the other Joint Chiefs and draw up plans for this should the Presidente refuse. For what it's worth, Zachary Taylor and Winfield Scott had the right ideas."

**January 11, 09:30 local time**

**Off the west coast of Midway Atoll**

**Central Pacific Ocean**

Petty Officer 3<sup>rd</sup> class, Tinley, "Tin Man", Erickson was excited. When the opportunity for this new assignment came last year, while the USS Barney was still under construction, he had jumped at it. And he had not been alone either.

His mentor and good friend, Chief Petty Officer Debaul Ernest, also known as "Big Ern", had signed on to man the new USS Barney with him. The two of them had become friends over two years ago while serving in the southwest Pacific. Ultimately their friendship had brought them close enough that Chief Ernest had helped Erickson get through being Dear John'ed by his hot, Tampa girl friend. Six letters that she had sent him over a period of several months had somehow got mistakenly shipped to the wrong ship in the Mediterranean when they were supposed to have come to the guided missile destroyer he was serving on off the coast of New Zealand.

"They weren't even close," thought Erickson.

"How could they make that big of a mistake and send all of those letters to a supply ship in the Mediterranean like that?"

How or why didn't matter now. It had just been one of those things and by the time the letters caught up with him, the damage was already done. In the letters, Erickson's girl friend had kept asking and pleading with him to write back soon so he could help her understand and get past her developing feelings for someone else. Problem was, by the time the mail got straightened out, and all six letters were delivered to him, it was over. The last letter told him she'd decided to marry her new romance.

Ever since, with Big Ern's help, Erickson had devoted himself entirely to his duties, writing only to his parents and closest friends, and then only occasionally. He was dedicated to helping win this war, and then to making a new start for himself back home when he got there.

And that attitude had led directly to the USS Barney.

"What a miracle of a ship...or, boat I guess," Tinley thought as he considered the marvel he was now embarking on.

The USS Barney class had been named for a guided-missile destroyer that had been built in the 1960's and that had served with a distinguished record throughout the cold war. The original Barney was a part of the Charles F. Adams class of guided missile destroyers, the first ones that had been built from the keel up for that purpose. Commissioned in 1962, she saw action on her shakedown cruise helping with the blockade of Cuba during the Cuban missile crisis, where she served with distinction. She also was a veteran of distinguished combat service during the Vietnam conflict. After that conflict, she continued to serve until just before Operation Desert Storm when she was decommissioned in December of 1990.

Petty Officer Erickson made it his business to know everything he could about the namesake and history of the ships he served on. And he was now proud to be serving on this new, modern ship...even if it had meant his volunteering for the submarine services to do so, and even if it meant that they called their ships, boats.

The new USS Barney was much larger than the earlier Barney. Where the former DDG Barney had displaced something over 4,000 tons, the new SSCN Barney displaced almost 40,000 tons and was over six hundred feet in length. The boats were based on the earlier design that produced the Alaska class SSTN nuclear powered submersed amphibious assault ships. Using the four hundred foot long, ninety foot wide, level area in front of the conning tower, and a one hundred foot long level space behind it, that was common to all of the variants of the Alaska class, the Barney class had ample room for the myriad launch tubes in many blocks of VLS cells that comprised its main weaponry.

On the earlier Alaska class these vast level areas on the deck of the vessel allowed for loading ramps that led down into the bowels of the boat. Using those ramps, vehicles and troops could either be loaded into the vessel, or offloaded either onto RORO (Roll on Roll Off) capable docks, or onto landing craft, including landing craft air cushioned (LCAC). Each amphibious assault sub carried four LCACs in large well docks. Those four well docks, two on each side of the boat, were covered by smooth-fitting doors that were opened when the vessel surfaced.

The level deck spaces topside on the SSLHDN, the new designation for the Amphibious assault version of the Alaska class SSTN boats, vessels allowed for flight operations for their eight F-35 attack aircraft, eight MV-22 VTOL air assault aircraft and up to eight more helicopters for airborne assault. They also allowed for forty-eight VLS cells for anti-aircraft or surface to surface missiles for self defense. A tremendous advantage with these VLS tubes was that all of these cells could easily be reloaded from the vast spaces below decks were reloads were stored.

In addition, all of the Alaska class and all of the variations thereof carried a full load of torpedo weapons, including the latest Mk-48 ADCAP torpedoes, Mk-77 CWS torpedoes, and the latest sub launched Harpoon and Tomahawk missiles, not to mention six SUB CIWS systems for defense

They also incorporated the same stealthy acoustic and operating characteristics of the Sea Wolf class which had been successful throughout the war in avoiding enemy tracking and acquisition capabilities. Though the Chinese and their allies were getting closer and closer to acquiring a solid signature of the Sea Wolf boats, they still had not been successful.

Erickson knew that the first major modification to the Alaska class had been the Olympic class SSCVN nuclear class submarine aircraft carriers. Their modification of the Alaska design consisted of altering and filling up the first two levels of storage spaces beneath the topside decks with hangar and repair facilities for aircraft. The ramps from topside were replaced with elevators and thus the subs became nuclear powered aircraft carriers in their own right. They were similar in capability to the Hampton Roads Class Sea Control ships, except for the huge advantage of being able to travel underwater, and their more extensive missile launch capabilities.

Erickson had read reports of the Olympic combat debut off of Cochin, India, where the standard air wing of twenty-four VTOL F-35 Joint Strike Fighter (JSF) aircraft, four E-22C VTOL AEW aircraft, six S-22C VTOL ASW or SAR aircraft, and up to ten UR UAV reconnaissance and light strike aircraft had performed so admirably and effectively.

Like the Alaska class, the SSCVN class carried a total of forty-eight VLS cells in two twenty-four cell blocks. These could be loaded with a variety of weapons for self defense or attack, ranging from the latest mod block Standard missiles, to Quartet cells of Sea-RAM missiles, to vertical launch Harpoon and even Tomahawk and Hail Storm missiles. The latest AEGIS system was also installed with the phased array radars being mounted on the conning tower and an ingenious submerged capability to launch any of their VLS missiles, including the anti-air variety, at targets acquired through a miniature phased array system that could be launched from over 200 feet deep which then assembled itself into a towed radar platform upon breaching the surface.

"Those are sure capable vessels," the Petty officer thought to himself, "and all in all they are going to help change the entire complexion and course of this war."

"But those large amphibious assault subs and aircraft carrying subs needed a more capable and lethal escort than a few nuclear attack subs, and that's where we come in."

Seeing his friend, Chief Petty Officer Debaul Ernest approaching, a smile lit up Erickson's face.

"Hey, Big E," he called.

"How about we take a few laps after duty, you know, a friendly little foot race?"

The Chief Petty Officer smiled at his friend, and then replied.

“Only if you are itching so bad for a whoopin' you can't stand it anymore, Tin Man,” he said as he eased past Erickson in the passageway.

“Gotta get a readiness report up to the LT right now though. I'll see you at 1630 hours, short of some kind of an emergency or battle stations, and we'll go...what do you say, a couple of 400 meter warm ups and then one more for the foot race?”

Erickson laughed out loud and then answered good naturedly to the Chief's back.

“A whoopin' did you say? Chief, you know good and well that the only whoopin' that's going to happen in this foot race is the one you'll be taken on your Big Ern self.

“1630 hours it is.”

All of the talk got Erickson thinking about that other perk that he enjoyed on this vessel. With the double sized pressure hulls, joined at the very top and bottom of their curves and then surrounded by another outer pressure hull, all of these large class subs had ample room for a 200 meter track that ran around the perimeter of the larger storage space in the middle, widest decks of the boat. It was there that the Big Ern would meet Erickson when they got off duty.

“Duty,” he thought to himself as he went about his own responsibilities.

“We've got a duty to open up that can of whoop on our enemies and with this vessel, we're talking about the biggest, baddest can of whoop imaginable, short of one of our SSGNs unloading its full load of Tridents.”

Petty Officer Erickson knew, that with 480 launch tubes arranged in ten forty-eight VLS blocks, that the ships of the Barney class carried more offensive and defensive missiles capability and capacity than any ship that had ever been launched. They were the ultimate embodiment of earlier Arsenal Ship designs. Ranging from the smaller RAM missiles, to the standard air defense missiles (up to and including the latest Theater Ballistic Missile Defense weapons), to Tomahawk SLCMs, to the awesome Hail Storm AGM-999 missiles, the Barney class carried them all...and they carried in their holds up to three reloads for each tube for a total of 1840 missiles without replenishment.

He also knew, that with the latest AEGIS system installed on the boat, offering the same capabilities as that installed on the Olympic class, and with the resurgence of America's satellite capabilities, that the Barney class could deliver those missiles and their destructive payloads accurately against any enemy. With all of that capability, these ships could adequately protect carrier battle groups, or entire theaters of operation, from enemy aircraft, cruise missile, or ballistic missile attack. They would be used to escort carriers and /or amphibious assault ships and then protect beachheads with their weapons, providing defensive fire and this awesome offensive fire support up to several hundred miles inland.

“A big old can of whoop indeed,” he said to himself as he summed it all up to himself.

And a whoopin' was exactly what he, Big Ern, and everyone else on the thirteen ships of Task Force 56 expected to deliver real soon to the Chinese on Wake Island.

The task force was comprised of two Barney class SSCN vessels, two Olympic class SSCVN vessels, four Alaska class SSLHDN vessels, two Virginia class SSN vessels, and the vanguard group of the USS Jimmy Carter and two more Virginia class SSN vessels. Despite the combat debuts of the Alaska class and the Olympic class in other theaters, those debuts had been in mixed Task Forces of various submerged and surface action vessels. TF 56.1 would be the first all submersed invasion, carrier and fire-support task force in history and Erickson and his friend Ernest were excited and proud to be serving as a part of it.

...and those in leadership positions in the United States were all anxious too, from President John Bower, to Secretary of Defense, Jeremy Stone, to the Chairman of the Joint Chiefs, Admiral Ben Ryan, right down to the Captain of the Barney. They were all eager to pull off this surprise attack against the Chinese at Wake Island on January 16<sup>th</sup> and observe its results. Those results would be critical for the final execution order for the next anxious attack two days later on January 18<sup>th</sup> by another completely submersible task force against Indian forces at Diego Garcia in the Indian Ocean.

**January 13, 08:10, EDT**

**Today in America Set**

**CBN Studios, New York City**

“Thank you. We're back this morning recounting the amazing story of survival of Marine Captain Billy Simmons and the story of the commitment and faithfulness of his close friend, Master Sergeant Leon Campbell.

“Captain Simmons, in our introduction before the break, we reviewed a special compilation of the essentials of your service in the Australian area, the fall back to Sidney, the defeat of U.S. and allied forces there and their fighting withdrawal, the videos of the loss of your ship and your desperate effort to get your aircraft off its deck climaxing in your crash into the ocean, and then what we know of your life in Australia culminating with your rescue.

“Right now, I'd just like to ask you...how's your memory? How much has come back to you?”

The young Captain, who was becoming used to these interviews, this being his third nationally televised one since returning stateside, and wearing his dress uniform, considered the question. It was not an entirely easy one to answer.

"Well, I can say that a lot of my memory has come back in the last few weeks, and I thank my parents, my friends, the doctors...and most of all I thank God for that.

"I am remembering more and more of my childhood, upbringing, my parents and our home life. I remember going off to college and joining the Marines and even meeting Leon there...but that part is still not complete...there are, uh, like missing parts.

"I remember a good deal of boot camp, I guess those NCOs leave an indelible impression."

At this comment Leon chuckled and the well known host, Kathy Curry, turned to him.

"You've got that *knowing* laugh Sergeant Campbell, do you have something specifically memorable about your boot camp training to add to the experience?"

"It is my understanding that the two of you went through that training together."

Leon, also wearing his dress uniform with his rank, service ribbons and awards, most notable amongst them being his Medal of Honor, turned towards Kathy Curry and the camera and replied.

"We did go through that training together.

"I was just thinking back to our initial drill instructor at the San Diego Marine Recruit Training Depot and the very indelible impression he left on us as we got off that bus."

Turning to his friend Billy, he asked, "Do you remember him, Billy, do you remember the first words out of his mouth?"

Billy didn't hesitate at all. His eyes lit up brightly and his smile broadened perceptively.

"You mean, *Drill Instructor Sergeant Matthews?*

"How could I forget? Let's see...I believe he said something like this, "I am Drill Instructor Sergeant Matthews. At *all* times, you *will* address me as "Sir." If you have a request or a statement to make to me, you *will* formulate it with the words *Drill Instructor Sergeant Matthews, Sir!*"

Billy shook his head as he continued to smile, relishing the memory now.

"Like I said Kathy, U.S. Marine NCOs have a way of leaving an impression...amnesia or not.

"My memories of those Drill Instructors were among the first to come back clearly once things started to return, and right after my memories of home which had started to return there in the outback of Australia...and yet, there is still a lot I can't remember.

"A lot of my actual experiences during the war are not really back in focus yet. There are brief ones, like some of the fighting in Australia, particularly around Alice Springs.

"I also remember being on the Tarawa and the orders for our departure from the waters around Sidney. But I can't personally remember, even with the help of those remarkable photographs and videos, anything about my take-off or crash.

"Now, the time in Australia, particularly after being taken in by Nabalco's people is a different matter. It is much clearer, right up to the time when Leon and his squad contacted us."

Billy hesitated, the emotion in his voice clear to millions who were watching and listening.

"Nabalco was as good a leader, as good a man, as I have ever met...he sacrificed his life for those he loved and for their freedom, even for those of us who were not of his clan.

"He took us in and made us a part of his clan.

"Lance Corporal Thomas, who was lost saving us was made of the same metal. I owe him my life, and I shall not, I cannot, ever forget those sacrifices.

"...even as I cannot forget the dedication and commitment of my good friend here, Leon Campbell. It's easy to see why a man like this was able to earn the Congressional Medal of Honor."

Leon was chagrined to be made an issue of, or to be singled out in such a manner. He replied quickly to deflect as much notice as he possibly could.

"Billy...let me tell you, and you know it is true from your own experiences, this medal is something I wear only to remember others...like Lance Corporal Thomas.

"You know what I mean. Other's died so I could get off that Island...I just did what I had to do."

As she listened, Kathy Curry realized that she was genuinely growing to like and revere these two young Americans.

She herself had been significantly altered by the war.

As she thought on this, and her own experiences and changes, she couldn't help but think to herself, "...and who wouldn't like these two," she thought.

"It's an all-American story. It resonates with people...even people like me, because each of us have been touched so deeply by this conflict. Every one of us personally know people who have been injured or killed. All of us have heard the explosions, seen the fire and destruction right here in our own towns and cities.

"I find myself being more and more grateful that things are finally turning around. I find myself much more emotionally attached to stories like this because I have had to relearn what it means to actual people because of its proximity to me.

"How could those of us in my profession been so foolish about something so intrinsic. How could I have been so foolish for all of those years," she asked herself.

“Well, that's the way things were...and this is the way things are. I am much more emotionally and personally affected by the events that I cover now than I ever would have dreamed possible then...not so *professionally detached* like I and every other major journalist, or anchor used to be.

“...and a big part of that is because of the dedication, commitment, and sacrifice so epitomized by these two young men...and really, epitomized by the miracle that our country has become.

“After all of the divisiveness of the late 80's, and during the 90's and early 2000's. After so many years of our foolish agendas...dear God it feels so good to be human again.”

Suddenly realizing that quite a few seconds of dead air time had passed as she thought about these things to herself...and that her cheeks were moist with tears, Kathy stammered a bit, rather unprofessionally perhaps, but not in the least ashamedly.

“Err...well Billy, Leon, excuse me. It's just that I...it's just that your stories...I mean...”

Leon quickly came to her rescue.

“No need to apologize, Kathy.

“We know exactly what you mean and where you are coming from...how these things can give us pause, believe me, I know.

“Having lost so many friends in this fighting...having lost my own brother...I know that the emotions are strong. Those type of emotions make the drive for freedom and liberty strong too. We cannot let those folks down whose sacred blood and honor has paid for what we enjoy

“Let me just share a quote from my mother, who is as sweet and Christian a woman as you will ever find...but who is also is rock solid and strong in her commitment. Here's what she said to me last week when I was home, for the first time since my brother's loss.

“I know she would not mind me sharing it. With tears in her eyes, this is what she told me.”

Leon pulled a small piece of paper out of his breast pocket and read it to the world.

*“Leon, your Dad and your brother are now in Heaven lookin' down on us. Their journey and their travails here are over...and you know we are going to miss them...I am going to miss them, son. But, just as sure as the sun is going to rise tomorrow, you also know we can't let them down...we just can't. We owe them too much and they are expecting good things of us...and we are going to be with them again if we do our best, hold to this truth, and never give up.”*

Leon, Billy and Kathy...and millions of others...all had tears in their eyes before he had finished. Then the Medal of Honor recipient continued.

“Actually, emotions and commitments like this are a real good thing, Kathy. I don't think there's a single person out there in your audience...at least I pray that there aren't folks like that anymore, who would hold it against you.

“I can promise you that the U.S. Marines don't...and that's a good bunch to have on your side.”

Regaining her composure, Kathy's face lit up at the thought that the U.S. Marines, as a whole, would think highly of her.

“Why thank you Leon, Billy, that is really a comfort and an honor to know.

“Billy, I understand in Australia they called you Tex, before they really knew who you were.

“I guess there are a few other things that can leave a lasting and indelible impression, like your upbringing in Texas.

“In that regard, Billy, what are your plans? I know you are headed back home for an extended stay after this interview.

“As we close this morning, what can you say to our audience about your future plans?

“...and how, Leon, do you suppose you are going to fit into those plans yourself?”

Billy, thoughtful at the prospect of an extended stay at home, and yet sure of himself when it came to his immediate future, calmly looked directly into the camera and replied.

“Kathy, I am grateful to be going home and spending time there in February and March...maybe longer, who knows?. I look forward to spending some time with my father...himself a decorated and also wounded war hero...and with my mother, who is as dedicated an American, and as fine a mother as you will find.

“Having said that, let me make this clear.

“I am a U.S. Marine and I will be in this fight to the finish. As soon as I am healthy enough, I will be going back out and staying out until this thing is settled and done.

“I owe it to Corporal Thomas, I owe it to Nabalco and his people...I owe it to my best friend, Leon, here, and I owe it to so many others, and to my God.

“We'll talk about future plans in my life...as to whether I make a career in Texas or with my Marines...only after this necessary business is completely finished.”

Leon Campbell, fairly beaming at his friend's patriotic reply, ended the interview with his own affirmation of the same points.

“Kathy, Billy has completely summed it up.

“I'll be back out there too for as long as it takes on behalf of so many who have given so much.

“But I will especially be there for my brother, Alan, and his memory.”

**January 14, 04:48, local time**  
**Easternmost Observation Post**  
**CAS Forces, Wake Island**

Twenty-three year old Specialist Thuan Nguyen carefully watched the Pacific Ocean to the East. He panned slowly from his right to his left, using his enhanced and magnified night vision gear. It was not a new task for him...it was routine...but it was one he took seriously.

As a Vietnamese soldier here on Wake Island with other, principally Chinese, CAS forces, he was aware of the historical disdain that some CAS allies held for him and his countrymen. He had heard about it all of his life, and had experienced it in fact. But he had been able to ignore it and not let it affect either his own actions, or his own well being.

He had his own views regarding it.

He was proud of his nation and its heritage. Despite the fact that up until the mid 1900's there had never really been an actual Vietnamese nation, he was proud of what had been accomplished since that time. He had been taught and indoctrinated all of his life about how his fathers had managed, at horrific cost, to outlast the Americans. After being fought to a standstill for eight or nine years, and losing every major engagement to the American military, and following the 1972 Paris Peace accords that the American President of that era had brutally bombed the North into signing, North Vietnamese forces had spent nearly two years regrouping and then violated the accords and invaded the South. Knowing full well that the Americans had reduced their numbers drastically and were continuing to do so, the North had literally dared the Americans to build back up. But due to inflated public opinion polls and the actions of a vocal minority of war protestors that were sympathizers with the North's communist goals, American politicians lost the will to fight and did not stand up to the North. Instead, they sped up their own withdrawal and ignored their own accords to support their southern allies. Thus the stage was set, through patience, horrific cost, and ultimate manipulation of the American press and politicians, for the North's communist revolution to triumph and bring about the uniting of his nation under communist rule.

That triumph ultimately lead to purges and executions, driving hundreds of thousands of South Vietnamese to take to San Pans on the South China Sea to avoid the holocaust. Any of the South Vietnamese citizens who had too much western education or influence, or had any ties to the American military, were marked, and either had to flee, or face the work camps or death.

"Up until this war, no one, no other country has been able to really say anything like that. *We beat the Americans*," he mused as he continued his watch.

"Perhaps that is the real reason why so many of them have disdained us...they were just envious. Now they no longer have that excuse, and things have lightened up significantly."

"Maybe so," he continued to himself, "but even in this war, they have had to recognize that it was a patriot from Vietnam who helped them send the Americans and their allies reeling.

"The fact that we are sitting here on this island right now is proof enough of that."

...and CAS forces had been here, manning their vigil, in the hopes of pushing their envelope further to the east someday, for over three years now.

There were over ten thousand CAS personnel on, or around, the island now either on the ground or in the ships of the naval task force. With full air and naval support Thuan was certain that they could prevent the Americans and their allies from dislodging them.

All of this, and the reasons for it, was so obvious and clear to the young man.

The knowledge of why the war had progressed so positively for so long had allowed Thuan to patiently endure some of the early discrimination when he entered the service four years ago. It allowed him to maintain his composure now, when a clear knowledge of the contributions of Vietnamese in this conflict had become, more and more obvious.

Nguyen knew that with the example and rise in power of the most famous of those Vietnamese patriots, Lu Pham, most of the disdain and discrimination was over for good. Comrade Pham had not only labored for years with the Chinese to develop the weapons that had helped defeat and push the once-thought invincible Americans back in this war, he had then been named a Hero of The PRC and risen to be a leading member of the Politburo itself.

"In fact, if rumor can be believed, he is now a leading member of the Executive Committee of that body," Nguyen thought with a satisfied and knowing smile.

Then, the smile instantly faded as Thuan noticed something out of the ordinary in his peripheral vision. It was something on the edge of his view, far in the distance in the haze of the pre-dawn light...something moving that should not have been there.

Barely perceptible, yet...yes, there it was. Movement, and fairly rapid movement.

Low, just coming over that far horizon he could make out, small, thin specs approaching at high speed. If it had not been for the elevated position of his post, it would have been another twenty or more seconds before Thuan would have seen them.

"But surely the radar or other sensors must have noticed them," he thought as he began to speak into his lapel mounted microphone to report his sighting.

Before he could do so, air warning klaxons and sirens began blaring all around the island.

The island's main tracking stations and the sensors on aircraft far overhead were now also picking up the oncoming missiles.

"Post ZM reporting.

"Many incoming missiles, south southeast at 163 degrees."

As Nguyen listened to the confirmation and response to his report, and as CAS aircraft and anti-aircraft missiles screamed over his head to intercept the incoming barrage, he continued his watch, scanning back and forth across the horizon, and at the waters between himself and that horizon.

There!...something more...to the north of the missile stream, miles and miles to the east of his position, out there on the surface of the ocean, just in front of the horizon. The optics of his equipment allowed him to zoom in and then automatically optimized the picture and focused and sharpened the view, almost miraculously considering the distance.

He increased the zoom factor to the maximum of 75X.

There it was, a device moving along the top of the water. Some sort of object with what looked like antennae and dishes or some type of electronic equipment on it. Now, two or three hundred meters in front of that object, he saw the thinnest of objects just breaking the surface of the water. Really, it was the disturbance in the water itself that first drew his attention to it.

A mast, or periscope!

Now, a tower breaking the surface under it.

Then what must be a massive deck was also breaking the surface, very low to the water. Coincident with this, several hundred meters to the east and south of the first one, another...and another vessel broke the surface of the ocean. Several large submersible vessels were surfacing out there...just over twenty miles to his east in plain view of Wake Island.

"Post ZM reporting...twenty-two miles to the southeast at 135 degrees...I am observing several vessels breaching the surface."

The response to this message was much more tense and abbreviated than the last. Nguyen could feel the tension building in the command post.

Almost immediately, as he continued his observation, there were many more missile launches from each of the vessels...and then, from two of them, he noticed small silhouettes on the decks. Silhouettes of...what?

Aircraft.

Modern jet aircraft were appearing on the deck of several of those vessels and launching vertically into the air. Four, eight...now twelve aircraft rising up and swinging towards the island. As they did so, an even more massive barrage of missiles rose from that first ship and arced over rapidly towards the island.

Those American missiles, because Nguyen was certain that this must be an American force, began intercepting and obliterating the CAS aircraft and missiles that were rushing to defense of their positions on Wake Island. The CAS attack against the incoming American missiles was being, in turn, itself attacked by American anti-missiles.

The air was filled with hundreds of missiles and explosions between Nguyen and the vessels he was observing. A few American missiles and aircraft were being downed, but many more Chinese aircraft and missiles were falling, succumbing to the overwhelming numbers of missiles the Americans were putting into the air.

Now, even more American aircraft were coming over the horizon, merging with the first group as they came toward him.

"ZM here again...enemy aircraft being launched by the vessels...I repeat, we are now coming under attack by enemy air craft being launched in numbers by submersed vessels that have surfaced directly to our southeast

"Now...they are deploying what looks like air cushioned...."

Back in the hectic CAS command post, the communications teams heard...and felt...the many explosions that drowned out young Taun Nguyen's voice, and then rendered the radio frequency on which he had been speaking dead, filled with nothing but static.

...and it was a rolling barrage of explosions that maintained a relentless and deadly march across the island...towards them.

### **January 14, that same time**

#### **Combat Information Center, U.S.S. Barney**

#### **TF 56.1, Just East of Wake Island**

The information flow was getting thick now as reports came in more and more rapidly and were displayed on the various plasma screens as symbols, vectors, plots, or in textual format. Admiral Chelsea was content to let his staff, and that of Captain Dintz, the captain of the U.S.S. Barney, manage the tactical situation. That was their job.

His job as the commanding officer of the amphibious assault contingent of TF 56 which had been named TF 56.2, was to make any more strategic command decisions necessary for this part of

the assault, and to ensure that all vessels and personnel carried out the overall orders and planning as approved by the CINC of Task Force 56, Admiral Tanner.

...and at the moment, that part was going fine.

The overall situation was looking good. Not a slam-dunk by any stretch of the imagination, but initial reports regarding the effectiveness of their assault were very encouraging. Complete surprise had apparently been achieved by the submersed task force and the enemy had been knocked back on its heels. His two Virginia class attack subs were off to the northwest and southwest, protecting the approach to his vessels from any enemy submarines. Thus far, there had not been any.

The U.S.S. Jimmy Carter was off to the northwest, on the other side of the island, using the continued ability of the Sea Wolf class to infiltrate enemy waters so it could attack any enemy shipping of opportunity.

Here, his very capable arsenal ship, the U.S.S. Barney, was protecting the four SSLHDN Amphibious Assault vessels that were launching attack aircraft and the initial Marine assault to take Wake Island. The air cushioned craft and the helicopters and STOL assault aircraft that those vessels had launched were approaching the island right behind the attack aircraft and the massive barrage of cruise missiles that his vessel and the other vessels of the overall task force had launched.

Hail Storm missiles, anti-radiation missiles, anti-personnel missiles, anti-armor missiles, the new anti-stealth missiles, and bunker and hardened structure busting missiles of all types had been launched and were now impacting CAS forces on the island. All of those missiles combined the latest active and passive stealth measures to get past the enemy's radar and anti-stealth sensors, and in the case of the high speed anti-radiation and anti-stealth missiles, to target those systems specifically. In so doing they flew in the face of the enemy defenses to seek them out and destroy them.

Admiral Chelsey was positive that the pounding and destruction that enemy forces on Wake were taking would leave them open to the Marine assault his forces were throwing at the island. He had three waves of Marines he would launch this morning, over four thousand men. That would be followed up by C-90B landings this afternoon with another five thousand men and their equipment, who would remain on their ships, or rotate onto the island until the next operation further to the west. But that would not happen until the air space around the island had been declared safe for that landing.

Much further out to sea, two more Virginia class attack subs defended the flag portion of Task Force 56. That contingent which consisted of two SSCVN carriers and the task force's second escorting arsenal ship. The carriers had launched two aircraft strike packages a little earlier this morning. One of those strike packages was a strike at Wake Island itself. That strike would fill a dual role for his forces here. One part of that package had just arrived over his vessels to provide CAP for them. The other part was rolling in right behind the missile barrage with his own attack aircraft, significantly bolstering the overall air strike capability his four amphibious assault vessels delivered.

The other air attack the carriers had launched was a large Strike at Sea package at the enemy naval task force northwest of Wake Island. Satellite imagery from the new space station, the USSS Midway, which was now in position high over the northern Pacific, had shown the enemy vessels lingering in those waters some distance off Wake Island. That enemy task force consisted of what appeared to be four Aegis-like enemy guided missile destroyers and two of the Beijing class Carriers the Chinese employed. It was a potent force and an integral part of the enemy defense of the island.

...and it had to be eliminated.

The arsenal ship escorting the two carriers had launched over two-hundred cruise missiles at that enemy task force, which would arrive just in front of their Strike at Sea package.

"In fact, if everything has been coordinated and orchestrated properly, those missiles should be arriving there right about now, with the aircraft hot on their heels," thought the Admiral.

**January 14, 05:40, local time**

**PLAN 3201 Kunlun**

**Flagship, PLAN Task Force off Wake Island**

The speed, surprise and violence of the overall American attack had taken everyone defending the island by surprise. Hectic and tense radio transmissions abounded. Tempers were short and the frustration level was rising precipitously.

The island itself was taking a beating, and now a major attack was inbound for his task force.

"Who would have thought that an entire invasion task force could arrive from under the waves," the Admiral asked himself.

But that was just what the Americans had done, and Admiral Tsung had to admit to himself, even if he was not willing to convey it to his command yet, that Wake Island was in imminent danger of being lost. Once again they had been completely surprised, not only by the American presence, but by how they came to be there.

Yet, with his new, modern cruiser, the Kunlun, perhaps he could deliver a few surprises of his own. Admiral Tsung was committed to putting up as stiff a defense of the island as possible and see if his new capabilities would be enough to win the day.

"And that's exactly what we are going to find out," he thought.

“If I had four such vessels, I am confident I could completely repel these American missile attacks along with the sea and air assaults that are the main components of their invasion. Repelling those components of the attack would force them to completely withdraw in failure.”

When Admiral Tsung wished he had four of the new vessels, he was referring with great pride to the new Chinese heavy cruiser class that the Kunlun represented. Because of its similar signature, the Americans had already mistaken it for one of the guided missile destroyers they thought were escorting the two Beijing class carriers. But they had been.

The Kunlun displaced significantly more than those vessels, almost 10,000 tons versus the 7,200 tons for the guided missile destroyers. It integrated the latest Chinese Aegis-like, computerized defensive system into both its traditional weapon systems and its non-traditional systems. It carried the latest defensive and offensive missiles that the Chinese had to offer...and it carried them in greater numbers than any other Chinese vessel to date. It also carried the latest ship-borne version of the *ta shih* system for detecting enemy stealth technology.

But it's most important asset was entirely new to the PLAN, and was something the Jiangnan and Shanghai shipyards were now integrating into all new classes of Chinese naval combat vessels as rapidly as possible. It was a ship-borne version of the charged particle beam weapon that the Chinese had employed on their Dragon Spirit space craft and in the much more powerful versions on their ground based, space defense systems which had been located on the Mongolian border.

In ferocious battles that spanned the last few months, the Americans had defeated the Dragon Spirit craft and destroyed their production facilities. They had also destroyed the three space defense systems along the Mongolian border as well.

“But they missed our manufacturing in the shipyards,” the Admiral thought.

“So now it will be my turn to surprise the Americans with our own new capabilities here in the defense of Wake Island and our forces here.”

At the first sign of attack from the sea, the Admiral had ordered the Chinese task force to launch a full defensive air cover over Wake Island. After this was done, a moderate CAP had been left over the vessels as the entire force of eight ships now sped towards Wake Island to assist its defense and engage the enemy vessels there.

...and they sped right into the teeth of the American attack that the Admiral had just discovered was directed at them.

“Charged Particle System now active,” the weapons officer indicated to the Captain of the Kunlun as the enemy missiles came closer and closer to the engagement envelope.

“Set all systems to automatic, using template 34Z.

“Have all weapons system officers prepared for manual over-ride as necessary,” the Captain calmly replied as he ordered the use of an artificial intelligence template for the system that was geared towards American cruise missile attack, followed immediately by their attack aircraft.

The ship-borne version of the particle beam system was not as large or as powerful as the large land based systems that the Chinese had used in the earth-to-space engagements with the Americans. But it was still somewhat larger than that of the Dragon Spirit weapons that had been used in direct space combat against American space vessels in the summer of last year.

This limited its primary capability to being able to shoot a line of sight charged particle beam against hardened moving or stationary targets at a two hundred kilometer range. The targeting was slaved to the Chinese Aegis-like defensive system which consisted of the phased array radar system, the *ta shih* anti-stealth system, and a new, advanced optical acquisition system that used digital optics and infrared to track and target visual objects in the absence of any radar or stealth targeting data.

The Kunlun carried two charged particle weapons stations, one fore and the other aft. Both were directly behind the ship's twin gun mount fore and aft, 150mm dual purpose, automatic firing cannons.

When the Admiral had arrived with the ship ten days before, the flag for the task force had been immediately transferred to the Kunlun. Ever since, the Admiral had been busily integrating the new flagship and its capabilities into the overall task force through very vigorous training exercises. Those exercises included everything from defending against high flying ballistic missile and aircraft attacks, to countering potential orbital bombardment, to the more likely condition of defending in the face of an attack by low-flying cruise missile approaching at high speed just over their visual horizon.

...and now the training was being put to the test. The Admiral only wished that his forces had been given more time.

With over two hundred American missiles targeting his ships, and with thirty American aircraft carrying over a hundred more missiles, there were simply too many threats. Even factoring in the ample defensive systems of the other ships, and the fact that they were all integrated together with the Kunlun...it was just too much. The Chinese defenses, even with the particle beam capability, were overwhelmed, particularly on the ships furthest away from the Kunlun.

The Chinese CAP aircraft did help blunt the attack, but all six of those aircraft soon fell to the overwhelming American numbers.

Then the Kunlun began to tell on those overwhelming numbers. Missile after missile, and then several American aircraft fell to her charged particle fire. Electronic systems and the skin and

structure of the American missiles and aircraft heated up and melted, or vaporized, depending on how long the Chinese could hold a firm lock on their targets. Those missiles and aircraft simply exploded or otherwise fell tumbling from the sky.

Electronic emissions gathered from one of the two EW aircraft accompanying the American strike soon revealed the nature of the threat the Americans faced. Orders were quickly issued that changed the strategy away from boring in closer to the Chinese task force where the likelihood of being downed by the charged particle fire increased dramatically. Instead of following the original plan where they would launch their own missiles from close range behind the wall of the massive cruise missile barrage in front of them, the American pilots were ordered to launch their missiles at longer range and then to drop down to the deck and egress the area.

By the time the American aircraft finished launching their missiles and dropped to the deck to get away from line of sight fire from the Kunlun, the other three Chinese escorts and both Chinese carriers had been hit by multiple missile strikes. Two of the escorts and one of the carriers sank outright, going down with tremendous loss of life within ten to twenty minutes of the attack. The other damaged escort not too severely damaged and still capable of some defensive action from its aft mounted weapons systems while its damage control parties worked feverishly on getting the vessel back up to full speed and away from the site of the battle.

Due to damage along its deck, the remaining carrier, the Nantong, was unable to continue flight operations at the moment and the surviving aircraft she and her sister ship had launched earlier were ordered to attempt to land at Wake Island if possible. Only nine of those aircraft were able to land at there between American attacks later that morning. Despite the damage topside, the Nantong was capable of making steady headway under full power. Joining with the Kunlun and the remaining Type 52D guided missile destroyer, the three ships made a high speed run closer into the Island.

Protecting their flanks, were two Chinese fast attack nuclear submarines, which were also making their way closer to Wake Island for their pre-planned defense of the approaches to the island.

**January 14, 10:15, local time**

**Flag Conference Room, TF 56**

**U.S.S. Shafer, 120 Miles Southeast of Wake Island**

Admiral Tanner made a final review of the situation report and accompanying recommendations in his cabin on his flagship, the U.S.S. Shafer, before sending them. They would be transferred via secure satellite link back to CINCPAC in the next few minutes. From there, he knew they would be forwarded on to the Washington DC, the Joint Chiefs and to the POTUS.

Sustained combat, as was certainly to be expected, was ongoing on the island. But the enemy had somehow been better entrenched than had been expected and they had pinned down the first wave of Marines. It hadn't been until the second wave of Marines had come ashore from the four amphibious assault subs that any progress had been made toward dislodged them.

Now, at least over the eastern side of the island and the approaches to it, his forces were reinforcing and supporting their beachhead at will.

"Now, if we can somehow negate that new Chinese vessel and its cohorts on the west side of the island," he thought to himself, "then we should be able to approve the C-90B landings this evening and consolidate the island completely.

"But that was going to take some doing.

"So far, that ship and its particle beam weaponry, particularly under the umbrella of the remaining island defenses, has been a very tough nut to crack."

And that was what the main recommendations and requests that were going out in the Admiral's FLASH SITREP were all about.

The Admiral knew very well that strategic space assets were being amassed for attacks on the Chinese mainland and their command and control infrastructure there. Orbital bombardment material was tightly guarded and reserved for those missions. But he also knew that this attack had to succeed, and it had to succeed rapidly. There were too many other, soon-to-be-implemented operations that were depending on that success, and on his ground, air and sea forces taking control of and establishing a firm, unshakable presence here. That made the quick success of the invasion and the taking of Wake Island something of a strategic imperative itself.

...and Admiral Tanner was not in the least hesitant to make use of that fact.

As a result, the Admiral was comfortable that his request for a space based attack on the Chinese vessel would be approved. By analyzing the movement and characteristics of the Chinese ship based on the last two attacks against it, the Admiral was positive he could force the enemy into a movement pattern that would successfully allow it to be targeted from space. He was prepared to do just that as soon as approval was obtained. He would have to adequately prepare and protect his own forces from the results of that attack, but he felt he could easily do that here on the east side of the island.

Tanner reviewed his request from the SITREP communiqué once again.

*...THEREFORE CINC TF 56 REQUESTS CINCPAC OR NCA APPROVAL OF SPACE BASED ATTACK ON REMAINS OF CHINESE TASK FORCE WEST OF OBJECTIVE.*

*OPERATION TO BE PREPARED, PENDING APPROVAL, FOR 1600 HOURS LOCAL TIME EXECUTION. PLEASE ADVISE.*

"Well, that should do it," he thought as sent the message to the communications officer.

"They will know that I have the mission planned and ready, just waiting their approval."

What the Admiral didn't know was that the situation revolving around the new Chinese vessel, the cruiser, Kunlun, would resolve itself before his plan could be executed.

**January 14, 10:35, local time**

**Control Room**

**U.S.S. Jimmy Carter, 21 miles west of Wake Island**

The sounds of sustained underwater warfare had gone on all around them. It was not an uncommon occurrence. Throughout the war, from the very earliest days, even before open hostilities had been initiated, the Jimmy Carter had been at the center of action in the Pacific.

Now, here she was again in the thick of it all, and the entire crew, particularly those operating the various stations in the control room, wondered when her luck was going to finally run out.

She had run completely around the island to the south and avoided all contact, both of her own and by the enemy. Several hours ago, far to the north, she had picked up the sounds of battle. Impacts to vessels in the water and the unmistakable sound of distant ships sinking and breaking up.

Then, beginning less than an hour ago, things had literally blown up right around them.

They had been tracking what they knew to be one of their own Virginia class boats, the U.S.S. Zachary Taylor, as it approached the island from twenty thousand yards to their north. Out of nowhere had come the unmistakable sound of the firing and then that God-awful approach of a Chinese underwater Killer Whale device, a supercavitating weapon. The horrendous noise literally drowned out all else. Compelling in its attention, singular in its focus...coming to kill, and quickly.

The Zachary Taylor had boldly proceeded directly in towards that single oncoming weapon and used its own SUB CIWS to defeat it, destroying it less than eight hundred yards from impact. Then, having detected no enemy submarine or surface vessel, and correctly determining that the attacking device had been a variety that had been seeded into the waters to guard against the approach of American vessels, the Zachary Taylor had proceeded in further towards the island.

Simon Thompson had ordered the Jimmy Carter to quietly follow and also proceed in closer to the island, to the port side of the Zachary Taylor but several thousand yards behind it. He knew that the low powered underwater IFF that his boat emitted every sixty seconds would allow the Zachary Taylor to identify him in the same way he had identified them. It was emitted in a pre-programmed fashion sounding like various varieties of local transients, or aquatic life, in a predetermined pattern that other friendly vessels could decipher and recognize as specific to each individual American boat. Situated as they were behind and to the side of the Zachary Taylor, the Jimmy Carter's position would also be ideal to offer support, allowing him to independently targeting enemy vessels that he acquired.

Now, over an hour into the advance, the sea had suddenly filled once more, not with one, but with many enemy weapons.

From two separate azimuths in front of the other American vessel, six of the latest Chinese conventional torpedoes were suddenly launched.

The Zachary Taylor snapped off one Mk-48 ADCAP at its attacker on its starboard side, but did not have time to fire anything at the one to its port, which was less than three thousand yards directly in front of the Jimmy Carter. Instead, in a high speed maneuver, it turned further to starboard in an attempt to get past that enemy vessel.

As the Zachary Taylor maneuvered violently and valiantly to avoid the six torpedoes coming at it, it left a trail of sophisticated sound devices in its wake to confuse and defeat the Chinese weapons. This worked on three of the weapons, but the other three successfully bored through these defenses and relentlessly pursued the Zachary Taylor.

The SUB CIWS (Submarine Close in Weapons System) that all American submarines now carried was a very capable system against any inbound underwater threat. The Zachary Taylor now employed the two SUB CIWS weapons stations facing the oncoming torpedoes to good effect. The high speed, supercavitating projectiles fired by the system destroyed first one, and then a second of the remaining Chinese torpedoes.

Before the third torpedo could be targeted, that sound that struck fear into any American submariner, or any mariner for that matter, suddenly sounded once again in the waters near Wake Island. This time though it was three Chinese Killer Whales, which had been set up in conjunction with the position that the Chinese submarines had taken, that suddenly ignited in the water less than one thousand yards in front of and to either side of the Zachary Taylor.

The Zachary Taylor never stood a chance.

In a final effort to save the boat, the Captain broached the vessel at high speed. Just as the nose was coming out of the water, and after destroying two of the Chinese approaching supercavitating weapons at close quarters with their SUB CIWS, the final Chinese Killer Whale and the final Chinese conventional torpedo struck the Zachary Taylor almost simultaneously.

The explosions, coming on either side of the vessel, completely ripped the boat in half. The momentum of the submarine and the violence of the explosions thrust the front third of the boat completely clear of the water, and then that portion fell back into the ocean, lost all forward momentum and immediately began to settle. Twenty-one of the forty-five crewmen from that section, many of them badly wounded, managed to exit that part of the vessel before it completely slipped beneath the waves.

The lower two thirds of the boat never completely gained the surface of the water. Although its momentum carried the forward portion near the surface, that was the part most effected by the explosions of the enemy weapons, where the Zachary Taylor sustained the worst blast damage. As that after section reached its highest point of travel, only yards below the surface, and just as it began to turn over and sink, somehow twelve of the eighty-eight crew members in that section escaped the vessel and swam to the surface.

The Jimmy Carter saw none of this. But it heard it all.

Captain Thompson ordered his boat to open its outer doors during the loudest part of the engagement and then to a full stop and dead silence as the action continued. He and every man who heard the death of the Zachary Taylor cringed at the sounds, but then soberly and determinedly waited for a chance to mete out justice and death to their enemies. The enemy boat in front of them had slowed down and was creeping towards them as quietly as it could, while the other enemy sub maneuvered wildly to avoid the Zachary Taylor's Mk-48 ADCAP.

But the Zachary Taylor was not going to die alone on this day.

Its single Mk-48 ADCAP ran hard through all of the Chinese defensive efforts and caught up with the Chinese boat. Struck amidships and holed, the Chinese could not control the flooding. Waiting too long to blow its ballast tanks, the enemy sub never got above a depth of 50 meters, and then slowly began to sink to the bottom, giving its surviving crew members, which included the captain and the entire control room, several minutes to contemplate their fates. Soon after passing its crush depth of over 600 meters, it was heard imploding and breaking up by the crews of the Jimmy Carter and the second Chinese submarine which was coming closer and closer to the Jimmy Carter.

The second Chinese submarine would soon follow the fate of its companion.

When it had approached to within eight hundred yards of the Jimmy Carter, which remained dead in the water, listening passively to their enemy's approach, Captain Thompson ordered two Mk-48 ADCAP torpedoes fired through the already opened outer torpedo doors.

The Chinese did not have the time to even take a snap shot at the Jimmy Carter. It would not have helped them if they had. Immediately going to full power, the Chinese boat attempted to make a downward spiraling turn, knuckling its wake and dropping noise makers into it as it did so.

None of it helped.

Within a few short minutes, there were two more explosions and another Chinese submarine sank to the bottom with the loss of all hands. Holed twice, this one sank much faster than the first.

When he saw that the Chinese vessel did not have the time to mount even a snap shot at its position, Thompson ordered the Jimmy Carter to maintain its position and its dead quiet status. After a forty minutes of listening, the boat carefully continued its stealthy approach towards Wake Island.

Not knowing that they had now cleared all of the major Chinese underwater defenses, it took the Jimmy Carter another two hours to come in close to Wake Island. There, they finally discovered the Chinese surface ships that were helping with the defense of the island. Those ships consisted of none other than the cruiser, Kunlun, the damaged Chinese Beijing class carrier, the Nantong, and the Type 52D guided missile destroyer.

Upon discovering them, the Jimmy Carter carefully and stealthily spent the time necessary to maneuver in as close as possible to ensure kill shots on all three vessels.

From a range of five miles, Captain Simon Thompson, calmly fired four Mk-77 supercavitating weapons at the Chinese vessels and then quickly loaded all four of his tubes and fired again. He then rapidly egressed to the southwest at high speed. Those eight weapons wreaked horrific havoc on the remaining Chinese ships, utterly annihilating all three of them.

Struck by two of the weapons as it attempted to start a high speed turn, the Kunlun was torn into three pieces and rapidly went down with its captain and Admiral Tsung, the task force commander. Of the three hundred and eighty personnel on board, only fifty-two survived.

Hit by three of the four weapons targeting her, the already damaged Beijing class carrier simply rolled over amidst a tremendous cloud of smoke and debris and sank rapidly. Only two hundred oil soaked personnel, many of them badly injured, survived to either be picked up by the few remaining Chinese helicopters, or to swim towards and be washed ashore on Wake Island itself.

The Type 52D destroyer, which was furthest from the Jimmy Carter's attack, made a valiant effort to run directly towards the island and ground itself there, where its missiles could still help with the defense of the island. Although one of the multi-mode American supercavitating weapons was successfully defeated by the shallow water the ship was running in, the last Mk-77 followed its target right in towards shore and detonated against its aft section on the port side, breaking its back. Many of the crew survived and joined the ground forces on Wake Island.

The water was shallow enough where the Chinese guided missile destroyer went down that she did not sink completely, rather, they came to rest on the shallow ocean bed, the upper portions of their superstructures canted at unnatural angles and sticking grotesquely out of the water.

Pictures of that destroyed Chinese vessel would be aired throughout the allied world, and ultimately find their way to Beijing and the Politburo. They would be the banner photos depicting the defeat and surrender of CAS forces at Wake Island, which occurred less than twelve hours later. Those photos would also herald the beginning of the allied offensive into the conquered territory and holdings of the CAS in the central Pacific Ocean on the road to Japan and the Chinese mainland itself.

**January 27, 21:08, Local time**

**Presidential Offices**

**New Delhi, India**

Acting President Rahmish Patel reviewed the information he had received from the Director of the Indian Intelligence Bureau. It was a very sensitive document referencing the current defense and intelligence situation in Siberia, within India and in the Indian Ocean.

Patel was under a lot of pressure from Jien Zenim to get things under control on the sub-continent and in the other areas of influence that the Indian government had heretofore had responsibility for. The presence of huge numbers of Chinese troops only underscored the pressure. It was clear that if the Indians could not bring things under control themselves, then their Chinese allies were more than willing to do it for them.

“General, are you certain that this data represents the most up to date information?”

The acting President was already well known for his impatience, and his present demeanor was a clear indication that, for whatever reason, that patience had been exhausted.

“Yes, Mr. President, it represents the most up to date information we can get our hands on. The people over at the Multi Agency Center (MAC) regularly update their information from the Defense Intelligence Agency (DIA), from the Joint Intelligence Task Forces (JITF), from the Defense Image Processing and Analysis Center (DIPAC) and from our own Research and Analysis Wing (RAW). They then analyze all of this in conjunction with the latest information from the Chinese and the GIR intelligence agencies to come up with this report every twelve hours.

“The report you are holding was completed a little over an hour ago. It is the latest we have.”

As he reviewed what he was holding, he had to voice his disgust at what he was seeing.

“Well, General, the report is either flawed, or it is the most dismal intelligence report I have read.

“Well, which is it?”

General Singh knew that Patel was powerful, influential and smart. He also knew that he could be dangerous if provoked.

But the General knew his duty and he performed it.

“Mr. President, we do not control the events that make up the intelligence situation reports, nor can we. What we do is report them as accurately as possible.

“That is what you have in your hands.

“The report is not flawed, but it is a dismal report in the circumstance. It is also accurate and that gives us at least the power to respond from a position of knowledge.”

The President respected a clear and direct answer...despite his propensity to berate the messenger when he was at the end of his patience.

“Well, the old boy has some grit left in him,” the President thought, “Good.”

Turning to the summary of the situation in Siberia, the President spoke clearly to Singh.

“Well, then we shall start in Siberia.

“Ambassador Gavanker...or should I say, the traitor Gavanker, must be brought to justice.

“His treachery has put us all in a very desperate situation and he must be made an example of.

“Him and his entire family and any staff loyal to him. Do I make myself clear, General?”

“Put your best team on this.”

Singh nodded his understanding and made a few notes before responding.

“I do understand, Mr. President. We will send our best team in there and have them contact our operatives already in Siberia to arrange it as soon as it is practicable.

“Is there anything else?”

Patel thought about the executive summary for each area.

On the ground in India the Americans and their allies had been halted along a line from just south of Bombay, across to Bangalore and then south to the coast just north and east of Madras. Only the arrival of literally millions of Chinese troops had stopped the Americans and their technology machine. It had done so only because there were more Chinese personnel and equipment than the Americans could effectively destroy.

Now, the enemy was pouring more resources into the country at Cochin and Madras...and it was clear that they wanted to occupy Bombay and use it in a similar manner.

...and they may soon be able to do so based on what had happened on the 18<sup>th</sup> and 19<sup>th</sup>.

Diego Garcia had fallen to the Americans.

On the same day that the Indian military leadership had received a detailed report from the Chinese regarding the loss of Wake Island, the same thing had occurred at Diego Garcia. An entire American amphibious task force, supported by two carriers and numerous escorts had arrived off of Diego Garcia completely undetected.

“How will we ever overcome the events of that day?” the President asked himself as he reflected back on the events of just a little over a week ago.

“A completely submerged amphibious task force, carriers, escorts and all, arrives at of nowhere.

“Until I saw the actual reconnaissance pictures I could not believe it. I thought our own people were making up wild stories to cover their own deficiencies.”

But the Indian military had not been covering up. Ten thousand U.S. Marines came ashore from those behemoth submarines. Then, a few hours later, as soon as it was safe, as was the case at Wake Island, ten thousand more were landed on the island by those gargantuan, American C-90B transports.

Benefiting from the use of the awesome variety and firepower of the U.S. cruise missiles, and from the newly inserted space station over the Indian Ocean, the fighting was brief, but violent.

By 1900 hours that day, the island had been overrun. Over eight thousand Indian soldiers and personnel were killed. The United States lost almost nine hundred personnel. More importantly in the overall scheme of things, they had re-established themselves in the Indian Ocean where they could conduct naval operations throughout the region as they had done for so long before this conflict.

The strategic implications of the American presence at the base at Diego Garcia were not lost on Patel. He knew that it would be particularly useful to them for punishing and threatening the CAS forces still fighting to hold onto parts of western and northwestern Australia. It would also be of great benefit to them in the support of their ongoing invasion and operations on the sub-continent itself, and in wrenching control of the oil lanes from GIR and CAS hands.

“...and with their space station, there nothing we can do about it,” thought the President.

That was perhaps the most troubling thought of all.

The Americans were slowly but surely establishing themselves in an overall invulnerable position throughout near-earth space...watching over the various theaters where their space stations existed...raining down fire from above on targets of their choosing. Patel, Sayeed and even Zenim were powerless to halt or interdict it.

Then the President had a thought.

“If they can’t keep the Americans from targeting us, then perhaps we can pull in so close to them... embrace them so tightly...that their war shots will be just as apt to kill their own as us.”

Patel looked up and noticed that the General was still patiently waiting for more orders.

“Er...yes, General, there is something else.

“Have my chief of staff come in, and re-arrange your schedule for a general meeting of the entire cabinet. I would like you to brief them all on this same information. It shouldn’t take more than an hour or so to arrange the meeting...those who can attend directly and video feeds for the others.”

As the General stepped out of the room, the Indian President thought about how he could best implement what he was thinking. Clearly it was not a new thought...others had tried before.

But those others had not been Rahmish Patel.

As his Chief of Staff entered the spacious and ornate room, Patel stood up from behind his large desk and came around it to pace in the middle of the room. The Chief of Staff held back, in the entryway, waiting for the President addressed him.

“Mahj, arrange an emergency executive defense committee meeting. We’ll hold it in the conference room down the hall. Make sure those who are within immediate driving or walking distance are here personally. Bring the others in via live video feed.

“Tell them it is a matter of utmost importance and that General Singh will brief us on some critical intelligence and that I will make a statement.

“What time is it now?”

The Chief of Staff looked quickly at his watch and responded.

“It’s almost 9:30, sir.”

Patel thought about the people who would be attending and their likely schedules for a moment.

“Okay, convene the meeting at 10 PM and let them know that it will take no more than an hour, with a follow up meeting late tomorrow morning.

“You might as well schedule that one now too, Mingh. Make it for 10 AM and make sure everyone is aware and clears their schedules for two hours tomorrow.”

**January 27, 21:51, Local time**

**High Geosynchronous Orbit**

**USSS Guadalupe, Over the Indian Ocean**

“How certain are we of this information,” the Captain asked his communications officer who had just delivered the decoded and translated message.

“Sir, it all depends on whether the information we received from our Indian allies is accurate or not. Based on the nature of this message that the ELINT people intercepted and that the frequencies,

encryption keys and translators we received from the Indians just allowed us to decode and translate, it would seem that their information is very, very accurate.

"My own read, and the read of all of our ELINT people earth-side and here on board, is that we are looking at an actual, honest-to-God message from the Indian President's office.

"They will be having an hour-long high level meeting starting in the next ten minutes."

Captain Lewis rolled the information his communications officer had just given him over in his mind for another second or two. The he asked.

"What does our G2 say?"

The Lieutenant had already checked.

"G2 has been in contact with his counterparts in Diego Garcia and Cochin. He has also talked with G2 at USSC. All of them feel this is the real thing, sir."

David Lewis liked a junior officer who was on the ball...who had all of his ducks in a row. And this Lieutenant was clearly displaying that he had all of that right stuff, and more.

"Reminds me of myself," he thought before continuing.

"Okay, thanks, Lieutenant. Patch me into the orbital network and get me Captain Clark at the Point Solitude Complex."

While the Lieutenant did as he had been commanded, Captain Lewis, who had recently been promoted and given command of this station over the Indian Ocean, considered how pleased he was that it was Captain Floyd Clark he would be working with on this operation..

Clark was now in command of the Point Solitude Space Complex where asteroid material was being received regularly now and fashioned into projectiles.

When his communications officer motioned to him that contact had been established with Point Solitude, David Lewis keyed the microphone he was holding and spoke into it.

"Hello, F.L.?"

"This is Lewis on the Guadalupe and I have a rush order for you my friend."

**January 27, 22:48, Local time**

**Presidential Conference Room**

**New Delhi, India**

General Singh's presentation had gone well. Everyone recognized the import of the data and it had set the stage for the President's impassioned presentation outlining what he wanted his military planners to do. They had all listened as Patel had explained his plans for embracing the enemy forces.

He had just finished that presentation and was about to open the meeting up for questions and discussion when the double doors to the conference room flew open, banging hard against the interior walls, and the President's security detail came rushing into the room.

"Seated! Everyone remain seated.

"Mr. President, you must come with us now!"

Before Patel could respond, two burly security officers grabbed him by each arm and literally picked him up off the floor and rushed him out of the room. As the room erupted into pandemonium, with various agency heads and military leaders shouting questions and calling to their own security details who were also entering the room, the President asked the head of his detail.

"Rammi, what is this all about?"

The Colonel turned to the President as the team rushed through the front doors past many armed guards who had not been there when the President's meeting had started. They were guarding and lining the path to a waiting presidential executive helicopter, whose blades were already spinning.

"Mr. President, we've picked up an object coming in over the Himalayas. One projectile, sir, targeting New Delhi.

"It's coming in at orbital speed and will arrive here at almost any moment. Mr. President."

Rahmish Patel could only think of one thing to say.

"The Americans!"

The whine of the helicopter's turbines picked up, and its blades began turning faster and faster, as the security detail led the President to the open door on that side of the helicopter. While Patel was getting in, he put his hand out and held onto the door frame to steady himself.

He noticed that the darkness of the night was waning and giving way to...light! A growing light though it was not yet 11 PM. Rapidly, that light increased and the President's attention was drawn to the east and north...the source of the growing light.

There it was! A fiery mass coming directly at them almost too fast to comprehend.

The Colonel wasted no time.

"Mr. President, get in now!"

He shoved the President into the helicopter hard and then rapidly closed the door, motioning frantically for the pilot to take off.

Climbing rapidly and turning to the south and west, the officer piloting the executive helicopter tried to escape the oncoming horror with his President. Patel had been thrown to the floor by the

Colonel's shove, and then held on there as the helicopter frantically rose and turned. He had just gotten his hands up to the window sill and pulled himself up enough to look out.

What he saw took his breath away.

The landscape for miles around was lit up surreally, as bright as the middle of the day. Long shadows were being cast to the south and west by an impossibly bright light immediately behind the helicopter that Patel couldn't see from his position.

In that moment, as he watched, the intensity of the light increased tremendously in magnitude as the orbital bombardment projectile impacted behind them.

Patel's helicopter was no more than five hundred feet in the air and only a quarter of a mile away from the site of the impact, which produced a blast with the force of a small nuclear weapon.

The blast and shock wave from the impact caught up with the presidential helicopter at almost the same instant. First the shock wave swatted the President's helicopter from the air like it was no more than an agonizingly slow-moving fly being hit by a lightning-fast, stone-hard swatter. Then, less than two tenths of a second later, the blast incinerated the wreckage and everything in it before it ever reached the ground.

Before Patel's plan for embracing the Americans and their allies could be put into motion...or even communicated...the Americans had reached down from space and embraced him first.

## Chapter 43

*"We shall not tire, we shall not falter, we shall not fail."* – President George W. Bush, 2003

**March 23, 13:20, CST**

**The Main House**

**Lazy-H Ranch, Outside of Montague, Texas**

Billy was amazed. Everyone he could hope to be here, was here, as he was preparing to once again leave home and go into harm's way. Family and friends had come from all over the country to wish him well and see him off.

Besides his Mom and Dad, grandparents and uncles, aunts and cousins, their good friends, Joe and Liz Trevor, were here with their daughter, Patricia. Billy had known Patricia most of his life, although the Trevor family had moved away some years ago. Now, over the last two weeks, something of a romance had begun to develop between the two of them and Billy was somehow glad she was here to see him off.

"See me off," he thought

"A few short weeks ago that had seemed so improbable."

But a miracle of remembrance and healing had occurred after Billy got home and began walking through the woods and fields of his home. Those walks, the smell of the flowers, the hay, the sounds of the birds...particularly the meadow-larks...all of it had been like a salve to his heart and mind.

To his soul.

With his family and friend there to help them along, one day the memories had simply started flooding in, filling in the gaps, giving him his full identity back.

Speaking of friends, of course his best friend, Leon Campbell was here with him as well, and Leon had brought his Mom, Geneva, down from Boise, Idaho. She was a gem of a woman whom Billy had met while he was in school at Boise State University where he had first met Leon.

"God bless them for being here," Billy thought.

"I know that in their loss it has got to be especially hard for them, particularly for Mrs. Campbell, with Leon so set on going back out too."

Even though he knew it was hard for Leon's Mom, after losing Alan, Billy could understand Leon's desire to get back out there, in the thick of things fighting the enemy. He felt the same way, and would have it no other way.

Though things were going much better for the allies now, and progress was being made on all fronts, the enemy was resourceful and ruthless, as they had proven over and over again throughout this war. Until they were completely put down, they would remain dangerous and capable of causing terrible harm to American forces, or to America's people.

"You don't have to look to far, any place in this country, to know that's true too, thought Billy."

He and Leon had discussed it many times, it was one thing to be fighting these enemies overseas and living with the horror of combat and the sudden loss of friends and comrades. It was another thing entirely to hear of these enemy animals infiltrating into the United States itself and butchering innocent civilians there.

For that reason, if no other, Billy and Leon, and millions more like them from every walk of life, from every income bracket, from every social segment of society, were in the fight until it was over.

"Until we put these animals down, and everyone who supports and abets them.

"Just like the rabid dogs that they are," he thought to himself.

Billy had been raised in a good Christian home. He had been taught to love his neighbor, to turn the other cheek and to be kind to those that spitefully used him. He believed all of those things, he really did...and he wanted to emulate his Savior, Jesus Christ, and be like Him. But he also believed that there came a time when you had to sell what you had and buy a sword to defend your family, your freedoms...and in this case, your very religion...from those who would destroy all of them.

It was something Billy took no joy in doing. It was something he didn't *want* to do. It was something he *had* to do. He was almost as upset about being forced to take up his sword in his own and his family's defense against people who would enslave, kill, and destroy all he cherished...his very way of life...as he was at the carnage those enemies created. But, it was a necessary business, as distasteful and horrible as it was.

Billy was determined to wield the sword until it was finished so that his own future children, his mom and dad, and all of those he loved would not have to experience any more of the horror.

Now, that the meal was finished, the conversation was slowing down...the time had come.

Billy's Dad, Jess Simmons, stood up and everyone got quiet.

"Well, I guess it's that time. As much as none of us want the time to come...particularly Cindy and I, the time has sure enough come and Billy is going to have to be driven down to Ft. Worth.

“Billy, before you go...and I can say this to Leon as well...anyhow, Billy, we just want you to know we love you. Go with God, son.

“What you are doing is necessary. I know how you feel...exactly how you feel. I have seen it, felt it...been there. If the doctors would let me...if they would clear me...I would be right out there with you. As it is, I will have to settle to be with you boys in spirit and in faith and to do what I can here at home working with the intelligence, analyzing, and sharing what I have experienced and learned in my own campaigns.”

Turning to his wife, Cindy, Jess beckoned that she too stand...and she did.

“Cindy, would you like to say something?”

Cindy already had tears streaming down her cheeks. She took a handkerchief and wiped them away, and then she spoke softly.

“Oh, I guess so, Jess.

“Billy, you know we love you. You know we'll miss you. We're so glad to have *you* back...completely. Be safe and stay close to God. He'll watch over you.

“While I was working at the factory, building those airplanes...all I could think about was how each one of them was going to be used to protect boys like you and Leon here. I prayed over each one that I worked on...not that it would necessarily kill someone else's boys...because they are children of God too...but that it would be a tool in God's hands to protect liberty and freedom, particularly freedom to worship Him.

“...and, I must confess, that it would be a tool in His hands to maybe protect you, Billy, and your father...and God has answered those prayers.

“Now, look here, I've gone and said a lot more than I intended.

“Just know we love you and'll be looking forward to your return when this business is finished.”

When she finished, she stepped over and gave her son a big hug...and was soon joined by Jess who wrapped them both in his arms.

After they had finished with their own family goodbye, and tears were dried, everyone came up to shake hands with and hug Billy...and most of them also hugged Leon and thanked him for his service as well. Grandparents, Aunts, Uncles, cousins, nephews, nieces...friends...all of them took part in the farewell and all of them were touched and filled.

An awkward moment came when Patricia Trevor stood in front of Billy. Billy stuck his hand out to shake her hand and she grasped it...but did not shake it. She just looked at if for a second or two. Then, Billy, unable to hold himself back, reached out and hugged her tightly, and she hugged back.

All four parents watched, and cried, silently praying for a safe return so that the tender shoot that was developing here in their hearts, might have a future opportunity to grow and blossom.

Then it was time to go.

Billy, Leon, Jess and Grandpa Simmons all climbed into Jess's F-250, 4X4, crew cab pickup, rolled down the windows, and all of them waved as they drove away. The family members waved back as they drove down the drive, and those in the pickup, especially Billy, kept waving until they were out of sight and well on their way over to U.S. 287 for the trip down to Ft. Worth.

**April 3, 23:48, EST**

**Jessup Residence**

**1724 Ridgeline Rd., Henderson's Gap, Tennessee**

Sloan Jessup was up late. He'd been out surfing the internet, reading the latest news about the war on the CBN and WNN web sites. After he had reviewed today's news, he had surfed a few other web sites that interested him, and then he had purchased some things for his son and daughter, things that might bring them some joy and also teach them a thing or two about the true priorities of life. It was something he had been doing for them for years.

As he thought on his kids, one eighteen and the other almost twenty, he couldn't help but reflect on their mother, Judy, and their brief three years together from 1989 through 1992. The time seemed to flash through his mind in a few seconds. They had been so young then. Now, it had been seventeen years since the divorce, eighteen years since they had irrevocably separated...eighteen years of dedication on his part, trying to atone for his life before.

Earlier today, as he did every Sunday, Sloan had attended church services from 10 AM until noon. Every week he attended the 1<sup>st</sup> street Methodist church in Henderson's Gap and taught a Sunday School class there. He also helped with the youth program as a scout leader every Wednesday evening. He prided himself on having helped over fifty young men obtain their Eagle Scout award over the years.

Many members of the congregation, and other prominent people in the small town talked about Sloan all the time. His success with the Scouts was something that made the entire community proud. He was so consistent, so dedicated to his worship and to the scouting program, that the pastor, most of the congregation, and many people in the community considered him to be among the most faithful members of not only the Methodist church, but also of the entire community of Henderson's Gap.

But Sloan Jessup was not a Methodist or a Christian. He had not been either for many years.

Sloan had served in the 101<sup>st</sup> Airborne Division during the 1990-1991 Desert Shield and Desert Storm operations in Kuwait and Iraq. He had been there on the ground for over seventeen months, first preparing for, and then taking part in the combat operations against the Iraqis in Kuwait and Iraq. His particular unit had been inserted deep into Iraq as part of a blocking force and had remained there in Iraq for several months after combat operations had ceased.

It had been a great victory, one that had come much more easily than had been expected as the Iraqi forces had been bombed relentlessly, and then had, for the most part, either fled in panic or surrendered by the tens of thousands when American and allied forces attacked. As a result, there had been very little cost in lives to the American and allied armies.

For Sloan, who was a young man twenty-four years old at the time, though the physical cost due to combat had not been great, his other experiences there led to the greatest sacrifices he would make in his entire life. Ultimately, the decisions he made there led to the loss of his wife and children, the loss of his faith, and the sacrifice of all that he had been loyal to or held dear to that point in his life.

While providing security in southern Iraq, before allied troops pulled back into Kuwait, Sloan's company had also supplied humanitarian relief to the local citizens. In the course of his duties as a non-commissioned officer, Jessup had met and been befriended by a prominent Shiite cleric and his family in one of the towns. He had no idea that the leading Ayatollahs and mullahs in Iran had issued fatwas to that very effect, to find and befriend American soldiers whenever and wherever possible.

Despite regulations against that type of fraternization, Sloan had ultimately used his position and his duties to create opportunities to meet with the family in general, and the father in particular, under the pretext of giving them and their small town aide and counsel. Over a space of several weeks he had become very close to them and been influenced by them and their beliefs.

...and in the process, Sloan Jessup had been converted to the Shiite branch of Islam by that very influential cleric who would later rise in prominence within the GIR. It was a conversion that he had never doubted and from which he had never wavered in all of the long years since.

While surfing the internet tonight, he had briefly visited a site that he had been instructed to visit through his surfing of the internet the month before. It was Sloan's habit to surf the internet every Sunday night. He stayed on for no more than forty-five minutes each time. Once a month, he received a message instructing him to visit another site in the course of his other innocuous surfing. Every week he would visit that site and he would then memorize the single phrase that he ultimately found there. In reality, this was the real purpose of his internet activities.

Due to the instructions that had been given to him, he had never returned to any of those sites once a message had been delivered. Even if he had, he would have found that it did not matter. The small sites were developed with html and java programming code that tracked any visitors that happened to find them. That code was specifically looking for Sloan's tell-tail internet identification so his handlers would know that he was remaining true to the instructions that had been given to him. Once the code indicated to his handlers that Sloan had visited the site after the message had been posted the site was deleted. It's IP (Internet Protocol) address and its URL and the files that made up the site were deleted from the internet by early the next morning.

Each week, for many years, whether it had been through receiving faxes from a new number each week, then new email addresses each week, or finally, for the last fifteen years, through the use of the internet and the different sites he had been instructed to visit, Sloan Jessup had been faithful to his instructions. He had followed them with exactness in each of his visits, memorizing the short phrases and directions his handlers sent him and acting accordingly.

Mostly, the messages he received were nothing more than a new number, a new email address, or a new internet URL address for him to use until he received the next message.

Occasionally there was something more.

That had been the case in late 2001 after the 911 attacks. Oh, how he had rejoiced in those attacks. They had punctuated everything he himself had been living for and working towards. He had hoped that he would somehow get the chance to strike his own blow at that time against what he had come to believe was the decadence and immorality of his own nation's form of government, and the liberties it afforded to its citizens.

He had bought completely into the belief that control and strict discipline proscribed and administered by religious political leaders was the only way to avoid sin. He had come to believe that those Ayatollahs and Mullahs, in curtailing freedom of choice and in punishing severely the slightest variance from what they proclaimed as God's plan, were in fact acting for God.

In so doing, he had given his free will over to tyrants...and had given up his own soul as well.

After 911, when the messages started coming in instructing him to do specific things, he had felt that his almost ten years of faithfulness were about to be rewarded with a substantive mission of some sort. When he had been instructed over the course of four consecutive weeks to retrieve several vacuum packed bags containing a fine white powder, and to then store them all and keep them safe until otherwise directed, he was sure that an actual mission of some sort was in the offing. He was particularly convinced that this was the case when news reports of packages and envelopes of a similar white powder started showing up in Florida, the Washington, D.C. area, and other places

causing anthrax. He was certain that he was about to be used as part of a massive and even more deadly second wave of attacks.

But, although he had done as instructed and retrieved and stored those eight packages, no further orders specifically concerning them had been forthcoming. The silence was broken a few years later when he had been instructed to obtain eight more packages, this time containing a fine gray powder.

As with the white powder, he was instructed to carefully store them and await further instructions. Again, he had felt that a mission of some sort that would involve him personally was in the offing, particularly since so many attacks were already occurring on American soil. But once again, outside of the regular changes to the addresses and locations for his communications, no more specific orders regarding either set of packages had come. He had kept them ever since, wondering what their purpose was, wondering what his part would be in their use.

Now, tonight, another message had finally come that had nothing to do with a new internet address. It was a message to act...to make use of the packages he had kept for so long. The countdown had begun that Sloan had long dreamed of, that would allow him to atone for his earlier life...to atone for his earlier part in the attacks against Islam.

"Six weeks...over the next six weeks I will learn my part, and then I will enter into Allah's paradise and receive the martyrs reward," he thought.

Unknown to Sloan, the same message had gone out to nine other Islamic operatives who had been held in deep cover for all of these years. In all, ten operatives. Ten Christian converts who had stood the rigors and test of time and events.

Originally there had been twenty-four of them, all single, all living alone in various places throughout the United States, Canada, Great Britain, France, Italy and Germany. In the intervening years, six of those had died of wholly natural causes. Eight more, who had appeared to have wavered in the faith, had also died. But their deaths only *appeared* to be from natural causes. In reality, those deaths had been anything but natural, despite how they had looked and how they had been ruled.

Now, the last ten of the deepest cover operatives that the GIR had amongst their enemies...three in the United States, one in Canada, one in Great Britain, one in France, one in Italy, one in Germany, and two in Russia...had all been ordered to act simultaneously. There was nothing that could or would tie their actions together, other than the acts themselves. There would be only vague hints as to where their motivations lay, and they themselves would not survive the operation to be questioned.

### **May 9, 06:25, Local time**

#### **Politburo Executive Committee Meeting**

#### **Secret Hardened Facility, 100 km North of Beijing**

Even though he detested the need, Jien Zenim was grateful that he had had the foresight to begin holding the executive committee meetings in these secret hardened facilities. There were eighteen of them scattered around the nation and they rotated the meetings through them according to a random, computer-generated pattern that varied the location, the meeting time and the meeting duration.

Despite the inconvenience, the necessity had been proven in late January when the Americans had killed the acting President of India, Rahmish Patel, with a decapitation strike from space. That strike had killed the Indian President and many of his cabinet members and key advisors. Zenim knew, that such a strike, if brought down upon him, even here in this nuclear hardened facility, would most likely prove fatal to himself and everyone in the facility.

Because of that, a dozen newer facilities were being constructed around the nation. The new facilities were stronger, deeper, and much more self-contained and were designed to withstand the largest American orbital bombardment devices that had been seen to date. The Chinese President was anxious for these executive meetings to move to those locations. Each of those locations was a very tightly guarded state secret, with clearances set to the highest levels within the People's Republic security apparatus. They were so secret that the facilities were being constructed using slave labor that would be disposed of after completion to ensure that no one ever spoke of their existence or location.

As the various leaders droned on regarding the status of their particular areas of responsibilities...and each was a status that Jien was already aware of and had reviewed and edited...Zenim contemplated the worsening military situation.

At first, he had been shocked by the death of Patel and the resulting fall of his government. Then he had realized that it could actually represent a windfall for his own plans. The Chinese had already been prepared to step in and assist the Indian government to any degree necessary, up to an including full control of all governmental functions using Indian figureheads. Patel had been proving that he was unsuited in that role. Although he was dedicated to the CAS and Jien Zenim's vision for it, he was also far too independent and ambitious. His death had opened the door for Zenim to have the local Chinese military and political generals install individuals far more pliable to the Chinese will.

...and that was exactly what they had done.

But things had still not gone as Zenim would have liked. Irrespective of the vast numeric superiority enjoyed by CAS forces in India, the Americans and their allies had continued to advance. That advance had surged during the confusion resulting from the loss of the top of India's chain of

command. Once Chinese forces had stepped in and placed their own people in positions of authority, and as the large Chinese forces were better integrated into Indian forces, the advance slowed.

But it had not stopped.

At the present time the Americans and their allies had advanced to the point where they controlled all of India south of a line that ran from the southern suburbs of Bombay eastward along the Narmada River to its source and then southeast to the coast near Kharapur. It was clearly only a matter of time before both Bombay and Calcutta fell into allied hands completely. At that point, almost half of India would have fallen to the allies.

More and more Indian citizens were either surrendering to the allies, or they were streaming away from the fighting as refugees. The problem was, that most of those refugee convoys were doing all in their power to escape southward, past the front lines into allied controlled territory.

...and the subcontinent was not the only place where CAS and GIR fortunes were fairing badly.

Australia was on the verge of being completely cut-off by sea, stranding several million CAS and GIR military personnel and civilians there. The CAS and GIR military forces there were now constantly under allied air attack from the sea, even in those north and western areas of the country where staging had safely been accomplished in the past. Large concentrations of Chinese, Indian and GIR troops anywhere on the continent were almost immediately attacked by either orbital bombardment or by the deadly attacks of the American Hail Storm missiles. With more and more of the Indian Ocean coming under allied sea control, and with the two American space stations in place over Australia and the Indian Ocean, there was nothing that anyone could do about it. The outcome was inevitable, within a few months at the most, Australia would fall completely into allied hands.

In late February all remaining GIR forces in Iran had been completely over run by the Americans, the British, the Brazilian and their other allies. On March 2<sup>nd</sup>, the remaining GIR military and political apparatus in Iran surrendered to allied forces unconditionally and the date was designated as VG-Day by the allies to represent the defeat of the GIR, even though the knew Hasan Sayeed had escaped and was coordinating his forces in the Pacific from somewhere in Indonesia. Despite this fact, most western people had recognized the defeat of the major center of the GIR's influence and power as the death knell to the radical Islamic cause and celebrated it as such.

At the time, Jien Zenim had felt that the western allies were premature in their celebrations and that Sayeed would certainly come up with some plan to counter attack and regain his lost power.

But, within weeks, on March 28<sup>th</sup>, under the threat of orbital bombardment, laser attacks, and hail storm missile attacks, remaining GIR and CAS forces in Afghanistan and Pakistan surrendered, along with the surviving political leadership in those countries. It had been a shocking development to Zenim and to Sayeed, forfeiting what both leaders had hoped would be significant time and effort that the allies would have otherwise had to expend on attacking and conquering those nations.

"I suppose we are experiencing a taste of what the Americans and their allies experienced in early in this conflict as so many nations surrendered to us without a fight," Zenim thought.

"Well, if we have the time and if we can once again develop the appropriate technological innovations, it can happen again, despite these major setbacks."

After Afghanistan and Pakistan surrendered, allied forces immediately began occupying the strategic areas of both nations and subjecting the rest to their world-wide and very effective *Ruthless Sentinel* operation for pacified nations. In so doing, they minimized the amount of personnel necessary to occupy the nations and were able to concentrate on moving their large forces into position to continue the advance into India on a second front, and ultimately into China as well.

With the fall of Pakistan, all GIR military activity was now limited to Australia, the islands of the Pacific around Indonesia, the Philippines and Malaysia, and to the Malay Peninsula itself. There were still hundreds of millions of GIR citizens there with significant production capabilities.

"...and they still has millions of personnel who can fight," the Chinese President reflected.

Thinking about the GIR and its forces led the Zenim to thinking about Hassan Sayeed himself. He glanced at the large digital display screen which showed the various individuals attending the meeting by secure video conferencing. There, sitting in a executive chair, was the Islamic Mahdi.

"There he is, directing his portion of the fight from what must be a formidable and advanced headquarters of some type.

"The very fact that he was prepared to move himself and his staff to such a facility speaks volumes about the man and his resourcefulness, survivability, and planning.

"I may not know where he is, but I'm glad he's still a part of the fight, and didn't just disappear.

"He's a strong ally and I know he'll capably fight and impede the Americans on that southern front, while I concentrate on India, the approaches to Japan and on Siberia."

"Siberia," he thought.

"That vast northern, cold wilderness. So full of resources, so helpful to us... and so remote."

Zenim knew that its very remoteness was a two edged sword. It had helped the CAS when the Russian and American forces were so far removed from it. It hurt them now that those same enemies had invaded it. Siberia was providing his enemies, headed by the angry American Eagle and its sharp talons, and a vengeful Russian bear, avenues leading directly into China itself.

Airborne Russian forces, supported by American technology had landed in the capitol of Omsk, Siberia in October of last year. At the same time, a massive assault, supported by Hail Storm missiles and orbital bombardment had broken huge gap in CAS defenses in the Urals, behind an entire retreating and then surrendering Indian Corps.

Since that time, the Russians and their European allies, had driven across Siberia to Omsk and linked up with the airborne Russian forces there. All efforts by Chinese and Indian troops to flank those forces, or to block them, had been crushed by American support from space and by increasing numbers of Hail Storm missiles. Several of the attempts had been pressed home extremely well and had impeded and slowed the Russian advance, but nothing had been able to stop it.

Now, a formidable Russian and European force was cutting south from Omsk, clearly intent on invading Mongolia and ultimately intent of the invasion of China itself from the north.

The most critical offensive against Chinese forces was being waged from the eastern reaches of China where the Americans had established their beachhead. At that time they had completely flanked and cut-off Chinese forces that had invaded Alaska, advancing from their positions on the seacoast of Siberia northward into the staging and logistical areas of the Chinese force in Alaska.

After the defeat of those forces, the Americans had turned their interest westward, towards China. All along that path the Chinese had resisted heavily. Some of the most viscous and long lasting fighting of the war had occurred in this area. The proximity to Chinese airfields and missile emplacements meant that a steady stream of air and missile attacks harassed and punished the Americans. But, as had been the case in other areas, the Americans Hail Storm missiles technology and their orbital bombardment and laser capabilities was proving too much for the Chinese defenses.

Now, this deadly American dagger was poised on the Chinese border itself, pointing towards Manchuria and then Beijing itself. Although Chinese attack operations continued unabated, Zenim knew as he looked at the digital display depicting the most up to date strategic information on the far wall, that the conditions that the CAS was facing were becoming more and more critical.

Considering the overall situation, and when thinking of the actions that Sayeed had taken, it became clear to Zenim what he and everyone gathered here in this meeting was going to have to do.

"...actions similar to those Sayeed had taken," he thought as he made up his mind.

"The seat of government will have to be moved further to the west, in the interior where we can continue directing operations with the least threat of disruption and danger."

Interrupting the finance minister who was detailing for the group the increasingly dire economic situation as more and more requirements taxed their production capabilities and began to draw into the strategic reserve of the PRC, Jien Zenim addressed him.

"Pardon my intrusion Minister Chu, and thank you for the status. We can all see that our strategic reserve is being diminished across the board, but as a preparation for conditions like this was the very reason we created and maintained it.

"You may be seated."

Then, making his comments to the entire group, he continued.

"Now, let us all be very clear about this, we face dire circumstances and we are relying on our research and development to come up with solutions to the American orbital bombardment, Hail Storm missile and their new submerged task force capabilities. Those particular areas are giving the Americans and their allies a tremendous advantage, despite our own technological innovations.

"In a few minutes, Comrade Lu Pham will present to us the latest condition of our advances and what they can mean to us and how soon they will be available.

"Before we do that, I would like this entire group to consider the possibility of moving, with our entire staffs, further to the west. Specifically I am talking about the ten current facilities we have there, and the eight new facilities under construction there. In order to facilitate this, I intend to order all construction on other facilities to cease except for cosmetically completing those facilities to the point of fooling the future operations of the Americans and their allies.

"In fact, if we are wise, we may leak some information to them in order to test those facilities against the orbital bombardment the Americans surely plan for them. In this fashion we will be able to make whatever adjustments necessary to the actual facilities."

To his surprise, before he could continue, Jien Zenim found himself being interrupted.

Hassan Sayeed spoke up over the video conferencing link from his own command facility.

"Mr. President, excuse me for the interruption.

"I believe your idea is a good one. In order to facilitate it, we must buy time so we can develop and then implement plans that will first halt, and then throw back the oncoming enemy forces.

"I would like to give this entire body a briefing on a plan that I have ordered implemented that has the power to do this. It is a plan that will be conducted within the borders of our enemies...and not only within the United States, but within the borders of all of our major western enemies.

"It is an operation that will most surely give them pause in their advance...and potentially it will have the power to defeat them. It will strike fear and terror into their population, and may well destroy a majority of their populations."

As Hasan Sayeed made this pronouncement, the intake of breath from several in attendance was audible. The looks of incredulity on their faces was also very apparent.

After a brief pause, Sayeed continued.

“Yes, I said a majority of their populations

“In so doing, it will also paralyze their manufacturing, their economics, their transportation and every aspect of their societies.

“Without discussing the specific details regarding the operation itself or its exact timing, let me explain the basic nature and timing, which is imminent, so you can be prepared to take advantage of it.

“I will also ensure that our scientists make available to you and your scientists the measures you can use to protect yourselves and your people from any unintended harm that the operations may inadvertently cause your own people.”

**May 9, 23:00, Local time**

**Presidential Quarters**

**Secret Hardened Facility, 100 km North of Beijing**

As he prepared to retire for the night, Jien Zenim was amazed at the audacity of Sayeed's plan, particularly now that the two of them had spoken and he had be appraised of its finer points.

“It just might work,” he thought.

But they only had a week to prepare...and that was not nearly enough time to get as ready as they would otherwise like to do. The ramifications on their own population and leadership could be extreme if they weren't ready when the storm hit that this operation was sure to generate.

“But, still, I can understand Hasan's reluctance to speak of it earlier. The potential for leaks to the Americans was just too great.

“In fact, I am surprised that he gave us any warning. He must think that the operation, with the few details he has divulged, at this point is beyond being compromised.”

The more he thought about it, the more impressed he was...and the more concerned.

He was worried about what the allied response, particularly the American response would be.

He remained impressed as he thought about the preparation, the compartmentalization, and the control over long years. All of that was something he never would have believed the Islamic intelligence services capable of. In addition, the communication channels back to the clerics and mullahs throughout the Middle East who were prepared, on the signal of the attack to rouse the people to rise up in insurgency, was also impressive.

“Sayeed must have an especially effective...what would the Americans call it?

“Yes...an especially effective grapevine to pull this off without a leak,” he continued to himself.

Yet, as he thought about it, perhaps that aspect of it was not so surprising after all. His own intelligence services had reported to him at the time, that before 911, many more people on the Arab street were aware of the planned attacks than could be imagined. They may not have known the exact date, or the exact method, but they had definitely known something was coming.

Based on what Sayeed had told him today, clearly something like that was going on in the Arab and Islamic world with this attack too. Additionally, Sayeed wanted to coordinate the response even further by having the remaining GIR armies, the Indian armies and the Chinese armies coordinate an all-out attack against allied forces in conjunction with the upcoming operation...something planned to maximize the loss of moral the allied forces were sure to experience when they found out about the devastation of their homelands.

“Yes, if we time it right, and if it is effective enough, it just might work after all.”

Later, as the operation and its effectiveness unfolded, Jien Zenim would wish with all of his being that he had listened more to Lu Pham's objections to the plan during the meeting after Hasan Sayeed had finished. He especially would wish that he had listened to that part of him that registered his own concerns about supporting Sayeed's plan, and how the Americans might respond to *that*.

Instead, Zenim cast all doubt and concern aside and threw every bit of moral, political, and military support he could muster behind Sayeed's operation and the now developing CAS and GIR plans to take advantage of it.

**May 16, 12:00, CST**

**I-70 Bridge over the Mississippi River**

**St. Louis Missouri**

Sloan Jessup drove his late model SUV along the interstate, westbound over the Mississippi River. In the back, packed into a single oversized duffle bag, were thirty small, helium filled balloons. Each balloon was attached to small, light-weight device containing a tiny printed circuit board controlling a timer and a set of small louvered holes on the bottom of a small platform. Each small platform was covered with a heavy cellophane wrapping that was filled with a mixture of the white and gray powders that Sloan had brought with him.

The balloons and their attached devices were small enough that they all fit into the single duffle bag. All of the devices together weighed less than twenty-five pounds and would be easy for him to carry and climb with, which was exactly what he intended to do.

Sloan had carefully mixed the powders late this morning in his hotel room exactly as he had been instructed. He had then carefully filled the cellophane covered devices with the mixture according to the directions he had received and placed them in his car. The mixture included a special binding and acceleration agent that had caused the powders to merge at the molecular level and initiate rapid DNA alterations within the resulting cultures.

Unknown to him, several Iranian scientists had covertly obtained the necessary documentation and samples in Iraq and then continued the biological work of the Iraqis after 2001. By the time the GIR was formed, they had made significant progress towards developing a unprecedented biological binary-agent process. Using the Iraqi anthrax and other pathogens, the GIR scientists found a way to manipulate the DNA strands of the target cultures and apply the necessary agents to accelerate and bind them into something much more lethal. That process had matured to the point of producing the second set of packages that Sloan Jessup and the other Islamic sleeper agents in the west had received.

Soon after the dispersal of these pathogens, an American cruise missile attack had destroyed the main research site outside of Tehran, and killed most of the principle scientists the GIR had employed in the research and development effort. Most of their documentation was destroyed with them.

The GIR literally had this one opportunity to use their weapon against America and their allies.

Now that the agents had been combined, Sloan knew that he only had a matter of hours before his own contact with the powders would begin having an effect on him. After that, he only knew that his own end would come fairly quickly.

"The glory be to Allah," he thought as he stopped his car in the outside lane of westbound traffic.

As traffic piled up behind him, and as sought to get around, Sloan waved them by.

One of them pulled up next to him and a young black man asked,

"Hey there, need some help?"

Sloan concentrated on not showing his nervousness as he replied.

"Oh, no. But thank you.

"The car has just stalled and I believe it may be a vapor lock of some sort. I have a few tools and will just take a look, or wait until it can start again."

As that car drove off, Sloan walked to the front of the car and lifted the hood. He then went around to the passenger side of the vehicle and got the duffle bag out of the back and brought it to the front of the car where he stood, looking under the hood as if trying to fix the problem.

In reality, he was waiting.

More vehicles were held up in traffic behind him and the traffic jam began to grow. To those passing, it seemed like a middle aged man who knew what he was doing was trying to fix his stalled car in that outside lane.

Then, behind him, Sloan heard in the distance the sound he was waiting for. It was the sound of screeching brakes and a collision. Looking to the east he could see that about a quarter mile behind him a car that was attempting to get out of the stalled traffic lane had pulled in front of another car and caused a collision. That collision had caused a chain reaction that ended up blocking all lanes of traffic, just as they were supposed to do.

Now westbound traffic was being stopped completely by the major wreck and Jessup could see people getting out of their cars and rushing around to see if anyone was injured.

Sloan did not know who the others were who assisted him, or where they had come from. He just knew from the messages that he would be helped in some fashion and that he should wait until it occurred. Once it did, Sloan waited another minute or two while the traffic between him and the wreck cleared out. Soon all of the cars behind him had passed, and there were no cars between him and the major wreck behind him.

Upon seeing that his automobile was relatively alone, Sloan left his car and began climbing onto the railing and structure surrounding the support column next to which he had stopped. He had scouted the area yesterday to ensure that he could climb the support structure. In so doing, he found things exactly as they had been described to him.

Once he climbed to a certain level, he reached the access gate to a ladder that led him directly to the top of the column and the support cables that ran along the top. He had to use a large pair of bolt cutters to cut locks off of both the bottom and top access gates to this ladder, but with no one in the near vicinity and the duffle bag draped over his back, he easily accomplished that task.

Standing at the top of the structure, over one hundred and fifty feet above traffic and over three hundred feet above the Mississippi River, Sloan began to release his balloons, one ever twenty seconds as he had been instructed. As they were released from the bridge, each balloon floated lazily out over the river. With the wind eddies around the bridge and the normal gusts, a good deal of separation developed between each of the individual balloons.

All of the balloons and the devices they carried were generally being blown towards the downtown St. Louis area, and the suburbs beyond. As each device moved along in the air, rising

gradually as they went, they slowly began releasing their fine powdery mixture just about the time they crossed over the Mississippi shore.

The biological agent began to drift and settle to earth. Barely noticeable, it gently settled on homes, cars, streets, warehouses...and on the people along the path of each balloon.

### **May 16, that same time**

#### **I-70, East of Sloan Jessup's Vehicle**

##### **St. Louis Missouri**

Deputy Haggerty had his emergency lights on and was occasionally sounding his siren and blowing his horn as he approached the site of the wreck. He had been dispatched to the site of the wreck moments ago after a cell phone caller had reported it to the 9-11 dispatcher who, in turn, had routed it to the Highway Patrol.

Haggerty had already been approaching the bridge eastbound on I-70 and it was a simple matter of driving up to the wreck in the opposite lanes and then using one of the *Emergency Vehicle Only* crossovers near to the wreck to gain access to it.

"And I'll be able to do that in just a moment or two as long as I can navigate the rubber necking backup this wreck is causing," he thought as he approached the location of the wreck.

"This one right here should do," he said out loud to himself as he slowed his cruiser and turned into a crossover almost a half mile west of the wreck.

As he did so, he reported in.

"Dispatch, this is 33-17, now coming up on the scene of the accident."

The response was almost immediate.

"Dispatch copies 33-17, approaching the scene of the accident on the I-70 bridge."

As he proceeded eastbound in the westbound lanes, Haggerty saw a single car, with its hood up, parked in the outside lane a little less than a quarter of a mile from the wreck. He could not see anyone around the car.

"Dispatch, 33-70.

"Be advised, I have a single stalled automobile with no occupant, stopped in the outside lane of I-70 westbound. Between the state line and mile marker one."

After a brief pause of perhaps five seconds, the Highway Patrol dispatcher responded.

"Dispatch copies."

Haggerty pulled up to the wreck and stopped. He got out to appraise the situation and check for major injuries. Thankfully, there were none outside of some bruises and a few minor cuts and scrapes.

The three vehicles involved straddled all three lanes of traffic and were locking them all.

Haggerty told the drivers of the vehicles to wait just a moment, and he called in to dispatch again, this time using his lapel mounted microphone.

"Dispatch, 33-70. We have no injuries here. No ambulances or EMT required.

"We are going to need three wreckers. Have them approach using I-70 eastbound and then use the first crossover after the state line on the Missouri side and proceed eastbound in the westbound lanes to the scene of the accident."

After hearing that dispatch understood his requests, the deputy began to walk over to the first wrecked vehicle. Then he realized that he would need some more documentation, measuring devices, and flares from his vehicle and he turned back towards his cruise.

When he did so, he remembered the solitary vehicle with its hood up further down the road.

Looking that way, he could see that the stalled vehicle was still there...and then he noticed movement at the top of the support column on this side of the freeway in his peripheral vision. Looking closely, he saw a single individual on the very top of the column releasing what looked like balloons into the air.

Looking more closely, he could see that the man was releasing something more than balloons. There appeared to be some sort of platform suspended below each balloon. There was a line of several of them now stretching out in the air, over the Mississippi River, far out and away from the bridge towards...downtown St. Louis!

### **May 16, five minutes later**

#### **On the I-70 Bridge near the wreck**

##### **Over the Mississippi River, St. Louis Missouri**

After receiving a frantic call from Deputy Haggerty, the Sheriff's dispatch had relayed the basic information relating to the call, and then the call itself, directly to the St. Louis Regional Crisis Center for the Department of Homeland Security. The dispatcher there immediately advised her superior, the current duty officer, of the situation who immediately got on the radio with Haggerty.

Upon hearing the description of the objects the individual was releasing, and then hearing that the individual was releasing them in an orderly fashion, the duty officer immediately instructed Deputy Haggerty to use whatever means necessary, up to and including deadly force, to stop the individual from releasing any more objects.

After issuing those orders to the deputy, the duty officer requested that the Sheriff confirm the orders, and then the duty officer began coordinating other resources to address the crisis. This included reporting the situation up his chain of command to the National Crisis Center, talking to the duty watch at NORCOMM, and speaking with local and state agencies.

The Sheriff, who had had listened to the conversation, and respecting the duty officer's recognition of proper protocol, confirmed the orders to his Deputy.

Haggerty, who years earlier had qualified as a marksman in the United States Army as a Ranger, and who maintained that classification within the Sheriff's department even at his current age of forty-six, immediately drove his vehicle over to the stalled car. Upon getting there, he got a Bull Horn from the backseat of his cruiser, and then got out and went to the rear of the vehicle and opened the trunk.

From the trunk, he retrieved a special, law enforcement version of the Ruger Mini-14 rifle. The rifle differed from the stock Mini-14 in that it had a three-way selector switch that allowed for single shot, semi-automatic, or full automatic operation. It also differed because it had a special, longer and thicker tactical barrel on it. This heavier barrel allowed the Mini-14 to maintain better accuracy than the stock Mini-14. With a lighter, shorter barrel, the stock variety was known for heating up after several shots and becoming less accurate.

Grabbing several thirty round clips, Haggerty positioned himself for a clear shot of the perpetrator, who had just released another balloon. Feeling ready to confront the individual, Officer Haggerty turned on his Bull Horn and spoke.

"You there, on top of the support column.

"Immediately cease releasing those balloons. If you attempt to release another one, I will be forced to shoot to kill.

"Drop the duffle bag on top of the structure, keep your hands away from it, and start down the ladder, now!"

### **May 16, that same time**

#### **On top of the I-70 Bridge Support Column**

#### **Over the Mississippi River, St. Louis Missouri**

When deputy Haggerty spoke through the megaphone, Sloan immediately looked down and saw the officer and noticed the rifle.

Without having to think about, Jessup immediately dropped down on his stomach, laying prone on top of the structure. He knew in this position, that the officer could not see him and he would have another few minutes to release more balloons according to the pattern he had been instructed.

A loud ping on the side of the column near his feet sounded almost simultaneously with the crack of the deputy's rifle.

Then another shot...and another.

Sloan felt a tug on his back and realized that the top of the duffle bag was probably visible to the deputy. He carefully removed the bag, taking it off his shoulder and laid it out next to him. There was a neat hole through the upper back of the bag, but no balloons had been hit.

Sloan released another balloon over the side of the column.

A shot rang out almost immediately and the balloon simply disappeared as it was exploded by the high velocity round and its device fell to the freeway below, showering Haggerty and the opposite lanes of traffic with its deadly mix.

The sound of an approaching helicopter told Sloan that he had even less time than he had thought. Rather than risk the balloons being picked off one by one, Sloan made the decision to release them all at once.

Opening the mouth of the duffle bag completely, Sloan pulled the last nine devices from the bag and then pushed them all over the side of the column at the same time into the air.

Another shot rang out, than another and another. Three devices fell, each one a little further away from the interstate towards St Louis. Then the shots began to miss as wind current moved the devices around, making them harder to hit.

Before Haggerty stopped shooting, three more devices had been brought down over the Mississippi River...but three others escaped destruction and joined the other twenty one devices on their way to St. Louis. Several of them were already over the city, releasing their cargo.

A military helicopter pulled up near the column, with a sniper hanging over its side, strapped to the interior compartment. Another voice spoke through a megaphone and issued stern instructions for Jessup to either cease his activities, not move and lay prone, or to be shot dead on the spot.

Rather than comply, Sloan Jessup, convert to Islam and soldier for Allah, simply rolled off the column and fell, not to the waters of the Mississippi River which may have offered some chance for his survival, regardless of how small, but to the pavement of the Interstate Highway below.

As Deputy Haggerty, who himself was a walking dead man...he just didn't know it yet...watched the perpetrator bounce off several support beams and then hit the pavement, he knew immediately that there was no chance of survival.

He called the Sheriff's dispatch and reported that the standoff situation had ended and was now under control. The Sheriff himself, as well as the Crisis Control Center were both listening for any report coming from the scene. Upon hearing that the immediate situation had been resolved, the Sheriff thanked Haggerty and told him he had done a fine job.

But in reality, the situation was anything but under control, it had really only just begun. Over the next several weeks, the deadly situation triggered by the release of this substance by Sloan Jessup and his compatriots would rage completely out of control throughout the free world, and it would lead to the most horrific warfare ever fought by mankind.

**May 16, 18:45 EST**

**Air Force One**

**Over Madison, Wisconsin**

"Alright everybody, for right now, let's just stick to the basics of what we know."

President John Bowers was sitting in his office on Air Force One, having been whisked away by the Secret Service from an economic summit in Minneapolis two hours ago. He had his Chief of Staff, the Secretary of the Treasury, the Secretary of Commerce, and the Secretary of the Housing and Urban Development with him, who were also seated with him in the office now.

There were twelve screens set into the wall across the room from the President's desk. All of those present in the room were facing these screens, eleven of which displayed the real time images of other members of the President's cabinet, high ranking members of the National Security Council, or other individuals critical to the discussion. These included the Vice President, the Secretary of Defense, the Director of Homeland Security, the Director of the FBI, the Director of the CIA, the National Security Advisor, the Secretary of Health and Human Services, the Director of the Center for Disease Control, the Attorney General, the Chairman of the Joint Chiefs of Staff, CINCNORCOM (The Commander in Chief of NORCOM), and the Secretary of State.

The President did not know all of the details yet, but he knew the situation was serious. Instinctively he knew that his country was under a major attack and he was determined to first understand it, to then counter it and stop the damage and suffering...and then to pay back the enemies who perpetrated it. The purpose of this meeting was to make progress towards the first two goals.

As soon as he had a decent understanding of those first two, he would sit down with the key members of the National Security Counsel and the military and map out an attack plan.

Addressing the Director of the Homeland Security Department, the President spoke.

"Stewart, what do we know regarding the number of incidents?"

The Director of Homeland Security had been conducting his own emergency meetings for the last two hours. In those meetings he had talked significantly with the agencies from the State's affected, the Emergency Preparedness Office for the Center for Disease Control in Atlanta, with NORCOM and with several ranking staff members from Health and Human Services.

"Mr. President, we can confirm three incidents here in the United States, with a possible fourth. The confirmed incidents occurred in St. Louis, New York City, and Philadelphia. The unconfirmed report is from San Francisco. Within the hour we have also confirmed a report from Toronto, Canada.

"From the reports we have pieced together, all of these incidents occurred in the separate places within twenty or thirty minutes of each other. There is no doubt it was a concerted effort. Each incident involves the spreading of a very light, airborne substance, delivered by various means.

"Each of the perpetrators was either killed, or committed suicide when approached.

"We are working with local authorities and the FBI at this point to try and identify these people and determine something about their background. None of them had any personal identification on them and for those who had cars, their license plates are a dead end. Either stolen or fabricated."

When Director Langstrom had stopped speaking, the President turned to the Secretary of Health and Human Services, Jill North.

"Secretary North, what is the latest on the symptoms and what we know of the material that these people attacked us with?"

Jill North had been a part of the Weisskopf administration. She had lived with the knowledge that such an attack was possible, even probable, since major hostilities in the Middle East began. She had been surprised, but thankful, that nothing had transpired to date. In the intervening years, she and her staff and the agencies under her, had taken the time to plan and prepare.

But, as symptoms of these incidents were beginning to display themselves and as the disease was spreading, she knew that she could not have been fully prepared for this.

"Mr. President, we are studying the substance. Samples are already in Atlanta and I will let the Director of the CDC address that particular question in just a moment.

"As to the symptoms that victims are displaying...it is extremely troubling and something we need to immediately take into consideration. We may not know at this point exactly what the substance is, but we do know that it is extremely contagious and that it proves to be fatal, very quickly.

"Our most direct example of this occurred with one of our first responders. In St. Louis, the Sheriff's deputy who responded to the incident there, and was personally instrumental in helping end

it, was exposed to a liberal dose of the substance. Within three hours of exposure, he began developing severe flu-like symptoms that led rapidly to severe hemorrhaging and the expulsion of bloody sputum. Most disturbing was a rapid swelling and severe pain in the lymph glands and then the appearance of sores in his mouth and on his skin that rapidly spread over his entire body, these sores rapidly filled with an opaque fluid and then turned into sharply raised pustules.

"This deputy died in great pain less than an hour ago. Several motorists and other officers that the Deputy came in contact with after the incident, and then several of the initial medical workers who dealt with him, have all come down with the same symptoms within the last two hours.

"We are treating all of them now in secure, environmentally controlled facilities. The entire episode, including all incidents are being treated as a class 3 contagion and we are following procedure to cordon off and quarantine areas. We have a major lock down on the city of St. Louis now, where hundreds of cases of these same symptoms have now been reported.

"We are experiencing similar conditions in all of the affected cities. Panic in those areas is becoming a very real concern as people are hearing of the disease and its symptoms, and as they observe official governmental efforts to cordon off areas. The result is that many are trying to leave those areas. The problem is that many of those trying to escape have already been infected."

Let me ask Dr. Slater to step in at this point and talk about the substance itself. Dr. Slater?

Dr. Ian Slater, a medical Doctor, held a PhD. from John Hopkins in the study of contagious pathogens. He had been working with Secretary North for several years to prepare for just this type of an outbreak. That work had included significant coordination and cooperation with the Department of Homeland Security, who coordinated the efforts with the states, and with NORCOMM.

"Mr. President, ladies and gentlemen, we have an extremely serious situation on our hands.

"This substance is highly contagious and exhibits very dangerous and quick acting symptoms both in terms of its incubation period, but also in terms of its onset and maturity. In the end, those qualities may actually help us as its spread plays out...but right now, it is hurting us badly, as is evidenced by Secretary North's description of current conditions.

"The agent itself is rather complex. We are almost certain at this point that it is at least a binary agent...perhaps an agent with as many as three or four pathogens factored into it."

The President interrupted briefly at this point.

"Excuse me, Dr. Slater, but for the benefit of those who may not be aware, please explain what you mean when you say it is a binary agent."

The Doctor immediately understood the need to be a more basic in his explanation and complied.

"Certainly, Mr. President.

"A binary agent is one that is activated to its full potential when the two agents are combined. Standing alone, the two agents may or may not be dangerous, but when combined, their threat posed by them usually rises by several orders of magnitude.

"We believe that this is what we are dealing with here.

"We have already isolated *Bacillus anthracis* as one of the agents in this deadly mix. For those of you unaware of the significance of that statement, let me fill you in. *Bacillus anthracis* was the substance that was used in the anthrax attacks in the United States after 911.

"Our test have already indicated that this particular strain is of the same variety as that which was used in 2001. In other words, this substance comes from the same source as that used in 2001."

With this statement by Dr. Slater, several of the individuals in attendance immediately began asking questions, or making statements simultaneously. Several of the attendees literally shouted at the Dr. himself about the sensitive nature of the statement that he had just made.

The President considered the nature of the statement and the security clearances of everyone in attendance. He judged for himself that their clearances were adequate and that there was a definite need to know for everyone on the room, given circumstances. He judged that this warranted him making an important and startling revelation.

"Okay everyone, let's have some order.

"Everyone please be quiet so we can continue."

Once everyone settled down and order was restored, the President continued

"Alright, I am about to make a statement that must be considered by everyone in this meeting to be a Q Class Secret, Eyes Only and Ears Only. You are not to discuss it outside of this meeting, or any other meetings unless they deal specifically with this topic and specifically with the people you know are cleared for this information.

"For all intents in purposes, that only includes the people in this meeting unless you are otherwise informed in person by myself, the Vice President, the Director of Homeland Security, or the Secretary of Defense. I will now ask each of you directly, for the record, if this is clearly understood."

After querying each person regarding their understanding of the statement he had just made, and seeing that everyone had quieted and been sobered by the statement, the President continued.

"In 2001, following the 911 attacks, this nation was subjected to a biological attack by anthrax. It was a small attack and we wondered at the time why a more major attack was not forthcoming.

“The substance that was used was determined by the CDC and by military analysts at the time to be weapons grade material that had originated in our own labs several years earlier. We had given it to a sponsor state for use in their research operations with an agreement that precluded any further development or weaponizing without our express agreement and instruction.

“But the sponsor nation not only developed more of the material, they weaponized it and then attacked us with it after the 911 attacks by bin Laden.

“That nation was Iraq.”

With this revelation, the meeting again descended into chaotic discussions, shouted questions and statements. The President let it go on as a form of relief valve, but then reigned the meeting back in.

“Okay folks, get control of yourselves.

“Please stop the separate discussions and let me continue!

“This information was classified at the highest levels of our government. It was not relayed to the public. I was not a part of the administration at that time, but I can fully understand the need for the sensitivity.

“I can tell you this, the knowledge that I just shared with several of you, was a considerable part of the decision process to invade Iraq in Operation Iraqi Freedom in 2003. That was because we knew that Hussein had this material, and we knew that it was the material that had been used to attack us. It was not until late 2002 that a direct link was made between the attack and the Iraqi government.

“This is extremely germane to the current discussion because our own intelligence agencies determined in 2005, while in Iraq, that the material had been moved into Iran before our attack on Iraq, in much the same way that Hussein moved his most modern aircraft into Iran in 1991 during Operation Desert storm.

“Ultimately, with the rise of the GIR, Hassan Sayeed took possession of all of the remaining inventory of that particular strain of anthrax that was used in the attack on America in late 2001.

“Now, in light of this information, Dr. Slater, if you would, please continue.”

Slater himself had not been aware of the complete story, he had just known that the material had originated in U.S. military labs and been transferred to Iraq during the period of time when the United States helped Iraq in an effort to balance the region against Iran and the Ayatollah Khomeini.

“Well, as I stated, this strain of anthrax has already been identified and we believe that there are at least two, maybe even three other substances included in the overall agent.

“The symptoms suggest the plague and small pox, but we are not entirely positive about that yet.

“In addition, as I stated, the incubation period and onset of symptoms and their maturity seem to be vastly accelerated through a DNA altering and acceleration process we are not familiar with.

“Apparently these unknown DNA altering accelerants are introduced to the pathogens. When they are mixed together under the right conditions, an extremely fast acting, extremely contagious, and an extremely lethal biological weapon, with the characteristics I have described, is the end result.

“Ladies and gentlemen, I cannot over emphasize the seriousness of this attack. As time goes on we will learn more about the substance, we will decode it, and we will find ways to defeat it. Right now, we must arrest its spread and that is going to take extraordinary efforts. I have to tell you, in my professional and considered opinion, that even with our best efforts, there are going to be a large number of fatalities in the infected areas...a very large number.”

The meeting was quiet as everyone absorbed the impact of Dr. Slater's statement. But the meeting had to go on and the President took the lead in getting the discussion back on track.

Turning to his Chief of Staff, Talbot Johnson

“Talbot, prepare Executive Order T2500 for my signature, declaring a National Emergency over this attack and that invokes all provisions of the Presidential Directives associated with National Emergency Operation *Barrier*. Make sure the wording implements Executive Orders 10990, 11001, 11003, 11004, 11005, 11049, and 11310 specific to this situation in the effected areas and any surrounding areas up to a two hundred miles radius. Ensure there are provisions to expand that radius as the situation warrants it.

“Have that Order ready for me to sign by 2000 hours including the removal of its temporary designation and logging it under its official national registry number.”

Responding to the questioning look from several of the attendees, the President addressed them.

“Folks, the Executive Order that I am directing Talbot to prepare will officially implement the quarantine orders and national emergency plan on the designated cities. Each of those areas, based on the orders of the CDC, the Department of Health, FEMA and Homeland Security are already being physically quarantined even as we speak.

“What this Executive Order will do, in addition to continuing, expanding and accelerating the quarantine operations, is that it will allow the government to take over all communications, all transportation, all emergency and hospital health services, and all emergency response in the impacted areas. We will use the current providers, but their actions, by law, will be directed and coordinated by the CDC, FEMA, and the Department of Homeland Security.

“Martial law will be declared, curfews will be instituted and strictly enforced...up to an including the use of deadly force. Local, State and Federal agencies will all work together in implementing this. The cordoned off areas will have the quarantine enforced in the same manner.

“Announcements over radio stations, TV stations, and in the local newspapers will be made immediately, by special edition if necessary. Vehicles and aircraft will announce the situation and provisions by loud speaker and mega-phone twenty-four hours a day.

“The National Guard and elements of the regular services from NORCOM will be called up to assist in the martial law, the curfews and the quarantine. They will provide security at power plants, government offices, banks, malls, shopping centers, and major food stores. Units operating in infected areas will wear full bio-gear and will be subjected to decontamination and chemical check and analysis before exiting. Even then, those units will reside in fully quarantined areas during off hours.

“Folks, this is not going to be easy. We’ve all drawn up plans regarding just this type of scenario. We all expected it sooner in this war, and perhaps, with the successes we have been having, thought that the danger of this may well have passed.

“Today we have found out that this is not so and now it is time to put our plans into effect.

“Dr. Slater, please let us all know the moment you have more information about what we are facing and how we can counter it. In the mean time, Jeremy, work with Ben to draw up a full response to this using our space based assets and our Tridents. I want to know who instigated it.

“I will address the nation tonight at 2200 hours.

“Are there any other comments or questions?”

The Secretary of Defense, Jeremy Stone, motioned with his hand, and upon being recognized by the President, he addressed the entire group.

“Just briefly, Mr. President.

“Before coming in to the meeting I was informed by the National Reconnaissance Office, by SPACOM, and by several of our other intelligence assets, that the CAS, particularly the People’s Republic of China, GIR forces, and numerous insurgency elements in already occupied lands are in the process of vast and imminent preparedness.

“I expect within twelve to twenty-four hours we are going to see a massive offensive directed against us across the board.

“In addition, I was just able to confirm reports of major uprising in many of the more fundamental towns and cities of Iraq, Syria, and Iran. There has been significant damage to infrastructure that had been repaired and there is significant loss of life amongst relief workers and some allied forces that have been isolated in the attacks.

“Given this, and given the positioning of enemy military forces engaged with our forces at the front, their generally weak defensive posturing, and their logistical situation, I find all of this extraordinary. I can’t believe that it is a coincidence that this is occurring at this time, in conjunction with these biological attacks.”

The President considered his good friend’s words. For many years, while John Bowers had himself been a junior officer in the military, Jeremy Stone had been a General Officer, ultimately rising to be the Chairman of the Army and then the Chairman of the Joint Chiefs...now he was John Bowers own choice for the Secretary of Defense. The President had tremendous respect for Stone’s military knowledge, his intuition and his wisdom.

“Have our forces deal harshly with the uprisings in Iraq, Iran and Syria, Jeremy. In areas where *Ruthless Sentinel* may have been suspended, re-institute it. Immediately. It is a shame that these radicals and fundamental Islamics have not learned their lesson. We will not risk allied lives to try and negotiate with or pacify them. Until they come to us from out of these particular towns and cities willing to submit themselves to abject unconditional surrender, have the Predator IVs and, if necessary, full-scale Hail Storm missile attacks do out talking and negotiating for us.

“Regarding the buildup of their forces at the front, I guess it could be a coincidence Jeremy...perhaps they want to simply try and overwhelm our space based and hail storm capabilities and make a breakthrough somewhere. In that case I would watch closely where they start their attacks, figuring that those attacks may just be diversions meant to soak up our orbital bombardment and Hail Storm missiles. Their principle targets would likely be elsewhere.

“Having said that, I tend to agree with you.

“I do not believe it is a coincidence that they would be gearing up for a global offensive within a few hours of this level of biological attack.

“Make sure our Theater Missile Defense capabilities are primed in all theaters. Our response is likely going to invoke the need for that protection. Make sure we do the same for the offshore and onshore AEGIS sites here in the CONUS, and make sure General Percifer with SPACOM has all of his ducks in a row for laser defense of the Continental United States and other theaters.”

## May 17-June 8

### The great Biological attack of World War III

In the United States, the advance of the disease was rapid. In several cases, infected people had already left the cordoned off areas before they could be stopped and the disease rapidly spread wherever they went. Major *hot spots* of disease infection developed around each of the initial sites and in the towns in between.

From San Francisco, the disease spread across the bay to Oakland and San Jose, it spread south to Santa Cruz and north to Santa Rosa, and then east to Sacramento, and the numerous smaller towns in between. It then progressed to Reno Nevada and Bend, Oregon and the areas immediately surrounding them before being arrested on the west coast.

In St. Louis, the spread of the disease was particularly horrific because the deliver mechanism spread it over such a large geographical area before it could be stopped. Major Missouri hot spots developed in the large metropolitan area of Kansas City, downstream in Cape Girardeau, and in Springfield. The disease also jumped the Mississippi River into East St. Louis, Illinois and down stream to Paducah, Kentucky.

In the New York City area, the number of infected people was the largest as the substance was released from several high rise buildings without being impeded at all. Hot spots developed at White Plains and on Long Island. The disease jumped the Hudson River quickly and took hold in Jersey City and in Newark, New Jersey. More hot spots developed as far out as Bridgeport, Connecticut and Paterson, New Jersey.

From Philadelphia, predictably, and perhaps as planned, the disease rapidly marched south towards the nations capitol. Wilmington, Delaware was infected, then Aberdeen, Maryland, and finally Baltimore, Maryland. A monumental effort was made all along the Patuxent River in Maryland to stop the spread before it reached Washington, D.C. The effort was successful, but not before numerous people had to be shot while attempting to cross the line between Maryland City and Laurel. From Philadelphia the disease also spread north to Trenton, New Jersey and into the interior of Pennsylvania, infecting Allentown, Reading, Lancaster, and York before being halted.

Road blocks were established further and further out from the infected areas in an attempt to ensure that anyone who could possibly have been infected were stopped before spreading the disease further. As Dr. Slater had suggested, the rapid incubation and onset of the disease ended up helping in this regard because people could not get as far before exhibiting signs of the disease.

To help in this, the executive order President Bowers signed, and which he explained in full in his address to the nation on the 16<sup>th</sup>, went into full effect on the 17<sup>th</sup>. By that afternoon all transportation was halted within three hundred miles of any infected areas, except for biologically protected law enforcement agency personnel, or other personnel working for government agencies directly involved with addressing the situation.

In those areas of the country infected by the disease, all commerce ceased and the negative economic impact grew to dangerous proportions. Commerce simply could not continue as heads of households, business owners, workers, and others gathered their own around them and sought to isolate themselves from others to prevent the spread of the disease. For the most part, and based on the advice of the government agencies, this meant staying at home and using the phone to call emergency numbers for food or medical care. But in all too many cases, and as time dragged on without complete help being available, massive numbers of deaths occurred in rioting, looting, stealing, murdering for food or medicine, and as people, in desperation tried to break through the barricades and defenses set up at the perimeter of the quarantined areas.

For those seeking help, and for those personnel guarding the other parts of the countryside that were not infected, it was a heartbreaking and gut wrenching business.

The entire attempt to contain the disease and then help those infected was a monumental effort, and as Hasan Sayeed had foreseen, and as Jien Zenim recognized, the effort required literally millions of personnel. To cordon off the areas effected and then administer help and aid to the roughly twenty million people living in those areas infected by the disease stretched the nation, despite its war footing, to its breaking point. The National Guard and military reserve were employed, Home Guard personnel were called up to unprecedented full-time duty, military leaves were canceled, units about to depart for foreign theaters were rerouted to help at home. America's ability to continue its ground and sea offensive against the CAS and GIR was negatively impacted.

But if Hasan Sayeed and Jien Zenim thought for an instant that this would impede an American response, they both were terribly mistaken, as future events would make clear.

The CDC did a heroic job of identifying the pathogens and how they were working together. In addition to the *Bacillus anthracis* anthrax that was identified that first day, based on the symptoms, it was quickly determined that *Variola major* – *hemorrhagic*, the most fatal version of small pox, and *Yersinia pestis*, commonly known as the Plague, had all been involved in the weapon that was employed against the United States and the rest of the free world.

Exactly what accelerants were used and what form of genetic alterations the enemy had made to these diseases would not be known for over a year. But within a week it was determined that the anthrax and plague could be prevented, and at certain stages of the incubation, treated, with the right antibiotics. Both were able to be completely prevented with the right vaccinations before infection.

The only treatment for the small pox, which was the most lethal ingredient to the mix, was for the person to either have been vaccinated beforehand, or for the individual to survive the disease itself. With the form of small pox deployed in the weapon, the mortality rate ended up being almost 90%.

In Toronto, the disease was almost completely restricted to the metropolitan area itself. One terrible exception was when a family of seven left the area before the quarantine could be adequately completed and drove the entire distance to Montreal. They were deathly sick when they arrived. First relatives, then friends, and then medical staff who tried to help them were infected before the outbreak there was recognized. Those people in turn infected more and more people and ultimately all of Montreal had to be cordoned off while the authorities fought the disease in both cities in Canada.

In Europe, large areas around London, Paris, and Rome were infected. In Germany the outbreak occurred in Mannheim but spread to Karlsruhe and Heidelberg before it could be stopped. In Russia, St. Petersburg and Moscow were hit hard. The English and French had very effective anti-biological warfare plans and agencies in place, as did Germany and were able to mitigate what would otherwise have been an even more horrible disaster. But in Russia, large areas of the countryside around the two major cities were infected before a sufficiently large and impenetrable perimeter could be established.

By the end of the first week in June, the worst of it was over. Spread of the disease had been halted and the rampage had run its course with those who had been infected. By that time, emergency and governmental personnel had established enough aide stations that were well enough supplied to feed those who remained. Vaccines and antibodies were finally available in sufficient supply so that the entire population could receive the appropriate doses if they so desired. Most chose to do so.

It would take another nine to twelve months before anything close to normal day to day living would be re-established. There was just too much damage, there had been too many deaths and there was just too much work to do to make it possible to return to *normal* any sooner. If indeed things would ever be *normal* again. But, by June 8<sup>th</sup>, the clean-up could at least begin.

The clean-up job itself proved to be as monumental a task, if not more so, than the effort to stop the spread of the disease, cordon off those areas infected and provide food and necessary, life-sustaining services to the victims within those areas until the disease could run its course. There were millions of dead bodies, animal and human, that had not been buried or otherwise properly disposed of. This in itself caused outbreaks of all manner of disease and other health concerns.

There were tons and tons of food that had gone bad. Most services had broken down or been destroyed in rioting and looting. There was wide spread property damage.

There were whole neighborhoods and small towns whose entire population had been wiped out.

As the workers went into these areas they saw the horrors for themselves, or were told of the unbelievable carnage that had existed while the disease ran its course. Collectively, a name began to develop for this period in the free world when so many were killed or injured by this act of war. It was called the *Great ThraxPox Plague of World War III*.

The numbers were staggering.

In the United States alone, over eight million people contracted the disease and just over seven million of those died. Another million died in the rioting, looting, murdering, hunger, thirst and in the other outbreaks of diseases associated with the effects of the attack. Over eight million Americans lost their lives in a single attack over a four week period.

Nothing like it had ever occurred in America before. Not even the great civil war, or as some called it, the war between the states, of 1861-1865 could compare. All of the wars the United States had been involved in its history combined, outside of this one, did not produce the horrible carnage that could remotely compare to this.

The impact to the national consciousness from such a wide spread catastrophe was deep and abiding. Entire histories, novels, series of novels, and large studies would be devoted to the attack and its impact for decades to come. The stories of the suffering and survival of the victims and those attempting to help them or prevent the spread of the plague would ultimately be spread down through generations. No one would have to utter it, it would be imbedded in the resulting psyche of the nation.

*Never, never forget! and Never, never again!*

In the rest of the world, the attack was even more horrific.

Over fifteen million people in those other nations died, a disproportionate number of those in Russia where emergency services and preparation were still not as advanced as in the western nations. Like in the United States, the effort to address the attack itself and then its aftermath was tremendous and taxing. Offensive operations were suspended and the allied nation held their ground, while they gathered information on the attack and the attackers, and prepared their response.

As it turned out, holding their ground was not so easily accomplished. The CAS and GIR armies came boiling out of their own defensive postures and attacked allied position relentlessly in India, Australia, in the islands of the Pacific, north of Manchuria and in Siberia north of Mongolia. In many

instances, despite orbital bombardment, Hail Storm missiles and conventional defenses, the overwhelming numbers of personnel and equipment being produced within the factories of the CAS and being drawn from strategic reserves, pushed the western allies back.

A significant bulge developed in the middle of the line in India. Under the onslaught of literally millions of Chinese and Indian troops, allied forces were driven into a hard fought and begrudging retreat. The allies finally thinned out the ranks of their attackers sufficiently to stiffen up and hold in the streets of Bangalore.

In Australia, the result of the counter attack was a halt in the allied advance. Perth, which had been liberated by the allies two months before, was again overrun by Indian and Chinese troops and armed civilians. The street to street fighting was intense. Before it ended around June 1<sup>st</sup> with the CAS forces retreating along the coast to the north, the city had been laid waste and was in ruins.

In Siberia a large pocket of Russian and European Union troops was flanked and then surrounded. Over half a million were caught in the pocket that was cut off as over a million allied personnel withdrew one hundred miles to the north into defensive positions and used air power to try and lend support to their surrounded comrades. No quarter was offered and none was requested. The entire Russian and European Army Group fought to the death, inflicting over two million casualties on the Chinese before they succumbed to the hordes of Chinese forces and equipment.

In Manchuria, a large, two million man Chinese force attacked into the teeth of American technology and firepower. But four hundred thousand had to give way before the two million and the Americans were pushed back sixty miles to the north of the border where they established adequate defensive lines to hold the Chinese at bay as orbital projectiles and large attacks of Hail Storm missiles prevented the Chinese from overrunning the American position.

During this time, SPACOM successfully launched and inserted two new space stations that would prove highly destructive to the Chinese. One was in orbit directly over northern Japan, the other was placed in orbit over the South China Sea. From those positions, the Americans were able to defend allied task forces anywhere in the western Pacific theater.

Though the Chinese launched hordes of missiles at the stations, they were unsuccessful in damaging or impeding their operations.

### **June 12, 21:20, Local Time**

#### **15 km north of the Heavily Fortified Command Bunker**

#### **Muller Mountains, 35 km Northwest of Kualakurun, Indonesia**

Major Riley Adams was once again doing what he knew best, and what he loved the most. Deep in Indian Country, as enemy territory was called by people in his line of work, he was scouting out and performing valuable reconnaissance and surveillance of a high value and important enemy target.

"...and in this case, it is a target that is about as high value as they come, and it is one I have watched before," he thought as he reflected back five and a half years to the moment when he and Tony Davis had been operating in the Kurdistan region of northern Iraq.

"Tony had this same Sayeed, in his sights and was ready to pull the trigger when that traitor Talabari offed him and went over to the other side."

Those events had ultimately led to completion of Hasan Sayeed's rise to power and the complete formation of the Greater Islamic Republic. It had led to World War that had raged now for six years...and it had ultimately led to Adams himself getting the opportunity to administer justice and payback to Talabari in Tbilisi, Georgia.

"How many people could have been saved, how much suffering could have been spared had we just got this guy back then," the Major wondered?

"Maybe not all of it, because Jien Zenim and the Chinese were going to do their thing in either case...but it would have saved a lot and made the job of beating the Chinese a lot easier."

But now, after today's observations, Adams was sure that Sayeed was in this particular facility.

It looked innocuous enough from this distance. A simple entry into the mountain at the end of a single lane, mountain road. A very small guard detachment, no more than six men at that entrance at any one time and very few people going in and out.

But when you looked closer, you could see that the road itself was much more than a simple country lane here in the middle of the wilds of Indonesia. The drainage for the road was excellent.

After careful study it was clear that someone had spent a lot of time and dollars building that road and contouring and then re-vegetating the cuts through the hills. In addition, the culverts, bridges, and roadway support was first rate and professionally disguised to make them be hard to spot from the air.

Adams was looking at it from the vantage point of another mountain side, a vantage he himself had chosen to give him the clearest view possible of the road and the entry.

"The road alone has to be worth millions way out here.

"And it is uncharted, meaning it has been built in the course of this war after our satellite coverage was down."

Unless he had been made aware of it by a local villager whose family had disappeared while working on the project four years ago, Adams would never have found it.

This was the third such facility he had observed. His hopes had been high at the other two when he witnessed a lot of official looking activity. He had watched and watched and no one official had ever entered or exited the facilities on those other islands.

If it had been almost any other operative, they might have been fooled. But Adams and his single security NCO had been up close, within hearing distance, and had listened to the guards talk and joke amongst themselves.

They had all been far too at ease for the main man to have been in there, he thought.

But that's not the way it is here.

At this facility, there was very little fanfare. But when Adams had been close, he found that these people were all business. Not at ease whatsoever. They were strung as tight as a bow string.

Then today, his patience had finally been rewarded. After two and a half weeks of observing here, he had finally seen a small party come out of the entry and move up a trail on this side of the mountain. Four security personnel had accompanied the party directly while at least eight or ten others had fanned out into the brush both above and below the party for several hundred yards.

The communications link had also let him know that in conjunction with the exit from the facility of this party, a large flight of GIR aircraft, the most modern ones they had, had taken up a CAP position over the mountain.

"Thank goodness we have our station up over the South China Sea," he thought.

"There's so much more to see when you have a bird's eye view like that."

From a range of a little over two kilometers, he had used the optical and digital enhancement capabilities of his surveillance gear to enhance the image of those he was watching. Then he had taken a close look at each of the principle personnel in the party. It wasn't clear to him why they had exited the facility or what they were inspecting, perhaps there was a radar site or air duct up there.

But he did know that the third man he looked at was Sayeed.

He had reported it in with a simple phrase.

"Control, the Mullah is in the hole," which he followed with the exact GPS coordinates of the entry and the mountain itself, including a digital terrain model of the mountain.

Now, as he had been ordered to do, he had moved back to this more remote position to continue with his observations and reports until ordered to do otherwise.

Despite those orders, Adams knew that they had found the big bad dog of the GIR and he couldn't help but think that real soon, something would be along to put the rabid dog down.

And he was right.

**June 14, 12:00, EDT**

**Oval Office, The White House**

**Washington, DC**

President John Bowers looked very serious as he stared into the camera and started his address to the nation and to the world. It was a message meant as much for his enemies as it was for his friends, compatriots, allies and countrymen.

"My fellow American, allies, and friends.

"Tonight I speak not only to you, but to our enemies. In particular I want Jien Zenim and Hasan Sayeed and their fellow tyrants, henchmen and underlings to hear what I have to say and to understand the deadly seriousness with which I speak.

"In the middle of last month the United States and our allies were attacked mercilessly by our enemies who employed biological weapons of mass destruction. The death toll has been beyond imagination. Literally millions of our fellow citizens are dead and large areas of the country have been rendered idled and devastated.

"I will address more fully the specifics of our domestic response, our relief efforts and the progress we are making in each area at another time, with another talk to you my fellow Americans.

"Tonight I want to talk about our international...our military response to the enemies who attacked us in the dastardly and horrendous manner.

"Our enemies thought that such an attack would force us to negotiate. They thought that we would be cowed by such an attack. They feel, even at this late date, even after so much has transpired, that we are weak and we are soft.

"They have learned nothing and they could not be more wrong.

"A great occupant of this office said a number of years ago after a similar, but less horrific attack.

"*Today we pray, tomorrow we fight.*"

"Well, today I say to all within the sound of my voice, including the animals who perpetrated or supported this barbarity.

"Today we shall fight while we pray!

"I am issuing an ultimatum to the Coalition of Asian States and to the Greater Islamic Republic.

"Surrender now, today, this moment...or die.

"You must offer up your unilateral surrender within twenty-four hours or you and your people will face a retribution like none other this world has ever seen. Nuclear hell-fire and orbital

bombardment will commence starting tomorrow on your capitols, on your manufacturing centers, on your economic centers, on your armies and navies and on your persons.

“The United States is in the position to prevent you from attacking us in a like manner and we will use those land based, sea based and space based assets at our disposal to completely intercept and interdict any return fire or counter launches we observe.,

“You lie helpless and prostrate before us. I say again, after the loss of millions of our own, whose blood literally cry from the ground for our righteous retribution, surrender now, or die.

“In order to punctuate the reality of this ultimatum and the firmness of our commitment, I will now show you all a real time display of an attack we are making on the principle perpetrator of this horrible attack at this very moment.

“Enemies of American and liberty, watch and learn.”

The President turned to a black screen on the wall which lit up with a live video feed as he watched. The camera zoomed in on that display and the picture showed a lush, jungle-covered mountain with the following caption under it:

**Hassan Sayeed's Command Bunker  
The Muller Mountains near Kualakurun, Indonesia.**

The display centered on a large concrete reinforced, metal entry door set in the side of the mountain with a paved road leading to it. It was dark outside, but with the infrared imagery the audience could easily make out the guard post several hundred feet in front of the entrance.

Over the space of several seconds it became apparent that the landscape was lighting up in an unnatural way. It was occurring far too quickly and the hues of color were unnatural for a normal sun rise. Soon, the camera caught, in its upper left corner, the unbelievably fast approach of a tremendous meteor-like object...and that when the entry to the bunker slid open.

The entry door rose swiftly on its tracks as it was opened from inside. Before it was fully opened, a group of men was seen rapidly exiting the bunker, running towards a waiting, armored SUV that had just driven up. As they reached the SUV, and its doors were jerked opened for them to get inside, the display zoomed in on one of the individuals in particular.

That person had stopped, realizing it was much too late to run, and was now watching the approaching object that was heralding his own death.

The clear image of the High Ayatollah, Hasan Sayeed, filled the screen momentarily. A look of complete and utter disbelief filled his face, but his eyes burned with rage, and he raised his fist, defiantly to the heavens.

Suddenly, the picture went white with a blinding flash of light.

After several seconds of nothing but a bright white screen, the image slowly clarified itself. What it showed was the image of a glowing crater, roiling with flames and smoke. The lush vegetation, the metal entry door on the mountain side, and Hasan Sayeed standing next to his SUV peering into the heavens had all completely disappeared and were now nowhere to be seen.

Rising above the cauldron, marking the fiery tomb, was a fireball of flame, smoke and material, rapidly climbing upwards into the night sky in an expanding mushroom cloud.

As the cloud continued to rise, the image returned to the President who was now once again facing his audience in the Oval Office. With a look of complete determination on his face, he spoke a single, simple phrase..

“*Sic Simper Tyranis*...thus may it always be to tyrants.

“Remember Jien Zenim, you have until tomorrow.

“America and her allies shall rise up stronger as a people and as a nation.

“To the American people, and to all of our allies I say, God bless you all...and may God continue to bless the United States of America.”

## Chapter 44

*“True worth is in being, not seeming.” – Alice Cary*

**July 12, 02:14, local time**

**Executive Committee Conference Room**

**Hardened Bunker, Gongga Mountains, Near Litang, China**

Eight of the new hardened facilities had been completed in time to escape the American retribution. The entire Executive Committee had been dispersed to them before the onslaught.

Since June 15<sup>th</sup>, as the American President Bowers had promised, more and more of China's major manufacturing facilities, her political infrastructure, military bases, research and development facilities, shipyards, major highway bridges, power plants, major refineries, (particularly the new refineries that were processing synthetic petroleum products), airports, and any other major infrastructure was systematically destroyed by orbital bombardment or nuclear missiles strikes.

The orbital bombardment projectiles, except for the smaller ones with which the Americans attacked the smaller targets, were impervious to the anti-ballistic missile capabilities of the later generations of the Chinese KS-3 and KS-4 missiles. With respect to American ICBM (Intercontinental Ballistic Missile) attacks, the United States had become so adept at utilizing the non-nuclear versions of those missiles that the Chinese had been forced to attempt to intercept every incoming ICBM, not knowing which ones may at some time carry a nuclear warhead.

With the all-out onslaught, on many occasions, incoming tracts of twenty to forty warheads would be seen on radar attacking a target. Of those, only two or three would actually be nuclear armed warheads. The others would be either conventionally armed warheads, or small orbital bombardment projectiles coming in on the same trajectory. In almost all cases, Chinese ballistic missiles defenses were completely overwhelmed...and they invariably missed the one or two incoming American warheads that were nuclear.

The results were that more and more of China's infrastructure was being destroyed.

Those results also meant that larger and larger portions of the metropolitan areas containing critical manufacturing, shipbuilding, refineries, political leadership, infrastructure and military bases were being destroyed. Tens of millions of Chinese were dying and hundreds of millions displaced.

Beijing, Shanghai, Tianjin, Hong Kong, Qingdao, Nanjing, Wenzhou, Fuzhou, Chongqing, Guiyang, Nanning, Chengdu, and Lanzhou had already been ruined and laid waste in this manner.

Lu Pham's beautiful daughter, Chiang, her aspiring political husband, Hua, and their new daughter, Lu Pham's only grandchild, were all killed in Beijing. They had been at home eating lunch together on June 15<sup>th</sup>, not far from where Hua worked in the National People's Congress. When the buildings housing the congress had been destroyed by American orbital bombardment, Hua, Chiang and their daughter had all been killed by the shock wave that washed over that section of the city.

Lu Pham's wife was only spared death in Tianjin because she was with him, protected for the time being in the hardened facilities.

The same thing was happening to the other leaders and their families all across the nation.

“...and yet we survive,” thought the PRC president.

“Despite the best efforts of the Americans, our leadership survives, tens of millions of our military personnel survive and fight on, and our strategic reserves and hidden manufacturing and research facilities survive.

“We planned well.

“We must give Lu Pham time.”

Lu Pham, the brilliant Vietnamese scientist who had provided so much technical expertise and leadership to the PRC, was now being called upon, along with his entire staff, to do the almost impossible: defend against the American orbital onslaught from space, destroy the American space stations that were becoming more and more numerous over every major theater of war, and wrest control of the seas once again from the overpowering presences of the United States Navy.

Pham had ongoing projects to address each of these areas...but none of them had borne fruit yet.

In that regard, Pham's research scientists had reported on their study and analysis of the orbital bombardment material the Americans were using. It proved conclusively that the material definitely came from the asteroid belts beyond Mars. The projectiles were made of the hard carbonaceous chondrite material that could only have originated there.

This definitive news, delivered by Lu Pham in this very meeting, had stunned most members of the executive committee into silence. The fact that the Americans had extended their operations out that far into space indicated that they probably already had installations on the moon and Mars, or that they would soon have bases there.

Addressing them, Jien Zenim upbraided them for flinching at the American achievements.

“So what?”

“We have achieved many startling technical breakthroughs ourselves and are capable of more.

“We must steel ourselves and continue to inspire our military leaders, our politburo and other political leaders, and our people.”

Zenim was surprised when an angry outburst interrupted him.

“How long must we listen to the fatal dreams and fantasies and blathering of this old fool?”

The outburst was coming from Director Lin Xin, the leader of the Council for Financial and Economic Health in the Politburo and someone Zenim had always felt was unalterably loyal to him.

“Lin, calm yourself.

“I would hardly categorize what we have achieved over the last six years as dreams and fantasies. We have united the entire western Pacific and all of Asia and the Middle East.”

Shocked to be interrupted twice in such a fashion, Jien Zenim was shouted down by Lin Xin.

“And where has it gotten us you ass?

“Tens of millions of our people are dead!

“Almost two hundred million of them have been displaced.

“I tell you all now, even if we could somehow find a way to stop the American attacks today, our economy would take twenty years to recover and half of our people would die of hunger and starvation before we could even begin to feed them.

“...and this old fool”, he said, pointing a shaking finger directly at the digital camera, “wants to use what little resource we have left to continue to fight a hopeless battle.

“Our dead...our precious dead, cannot be brought back.

“It is time we recognize the inevitable, end the reign of this madman who has led us all to destruction and sue for whatever peace we can obtain from the Americans and their allies.”

Zenim recognized that Xin had lost his wife and entire family in a strike at one of the nuclear hardened sites outside of Shanghai. He had hoped to be able to control Xin's obvious mourning and emotions and gradually bring him back into the fold. But what happened next told Zenim that such hopes and remedies were not going to be possible.

The men gathered in this meeting were not here by chance or for light or transient reasons. They had all proven their commitment and their loyalty to Jien Zenim over decades of dealings at every level of government. Most of their hands were stained with the blood of countless underlings, competitors and the many internal enemies who had challenged each of them and lost, or whom these men themselves had challenged and defeated.

But commitment and loyalty only go so far when the pressure becomes intolerable. In response to Xin's outburst, of the ten Executive Committee members present at the conference, three more agreed with Xin and called for the ouster of Zenim, followed by dialog with the Americans.

Jien Zenim used the control console on the arm of his leather chair to cause his screen to go blank for a moment so that he might regain his composure, address this issue of dissention, and not be seen by the others while he was doing so. His two most trusted confidants were here with him. Lu Pham, who now headed all Chinese military and scientific research and development, and Liu Liang, the head of internal security forces for all of the PRC.

Beckoning quickly to Liang, the President simply said.

“Take care of this...today.

“...all four of them. No later than tomorrow morning.”

Liang immediately left the room,

Zenim used his control console to reactivate his screen. He had only been off for a few seconds, but when the video feed was restored, Zenim was surprised to see all of the other participants sitting quietly, if somewhat impatiently, waiting for the meeting to proceed.

That is, all but one.

Only seven images of the other members of the Executive Committee were now being displayed where before there had been eight. One of those screens had gone completely blank and the loss of that image had nothing to do with Jien Zenim's control console.

Several of those in attendance began speaking.

“Where is Comrade Cheng?”

“Mr. President, we lost your display in the conference for a moment.”

“Does any of this matter? The entire Politburo is in disarray and it is time to resolve things.”

Jien Zenim simply held up his right hand, palm facing the camera recording his image.

“Comrades, I know that your frustrations are high, so I will forgive some of these outbursts for the time being. Our leadership council simply *cannot* fracture at this point.

“I am sure Comrade Cheng will join us momentarily. Apparently there has been some sort of a technical difficulty with the video feed. I am sure that as soon as the technicians have corrected it, he will rejoin us in the meeting.”

A small measure of calm was restored by these events and by the President's comment. The meeting continued, but it did not last long.

With dissension in the ranks on the verge of verbally and physically manifesting itself again at any moment, Jien Zenim quickly ended the meeting. He had hoped that he could make it last longer, that some type of resolution to their difficulties could be agreed upon, and that Comrade Cheng's

image would reappear. But the prospect for more open defiance and dissent was too great and the meeting ended without any of those things transpiring.

Cheng's absence, as one of those who still supported Zenim, left another pallor over the entire affair for the President.

Even though Jien Zenim had been wrong about Cheng rejoining the Executive Committee meeting, he would soon find out that he had been correct about why Cheng's video signal had failed. There had been a technical difficulty.

Twenty tons of carbonaceous chondrite material arriving at orbital speeds tended to create significant *technical difficulties*.

It also tended to curtail attendance at Executive Committee meetings... forever.

Carefully leaked information allowed the Chinese to successfully use their other, not-as-reinforced facilities as effective decoys to lure American orbital bombardment or nuclear missiles onto them. This not only drew the fire of the Americans, but it also identified weaknesses in China's own security and identified traitors to Jien Zenim's government.

But despite reports circulated of the deaths of various high-ranking members of the Executive Committee associated with these attacks, the Americans relentlessly continued their search for the specific locations of all Politburo and Executive Committee members in an effort to eradicate them.

Reports coming in later that day after the Executive Committee meeting was over would make it clear to each and every member of that committee that America's intelligence efforts and their growing space-based reconnaissance and surveillance capabilities had paid off. Comrade Cheng was dead. Using their latest super earth penetrating orbital projectiles the Americans could now destroy these new facilities at will, just as soon as they found them.

The message from the Americans to Zenim and all of the surviving members of the Executive Committee was clear.

*There is no place that you can hide. You will all ultimately be found and brought to justice.*

**August 5, 10:15, local time**

### **100 Nautical Miles West of Hawaii**

#### **U.S. Navy Testing and Proving grounds**

The dreadful sound of the approaching enemy Killer Whale filled the water. It was a sound that had literally terrorized the earth's oceans for almost six years. It was a sound that had heralded the destruction of thousands and thousands of ships, and the deaths of hundreds of thousands of allied personnel throughout the conflict.

It was also a sound that for well over half of the war, had caused the most powerful Navy the world had ever known, the United States Navy, to retreat and give place to the advancing CAS and GIR military juggernaut.

But now, all of that was ending. Due to more recent American military technological advances, the U.S. Navy had once again regained supremacy of the seas. With weapon systems that had been specifically designed for defending ships against Killer Whale attacks, the United States Navy and its allies had slowly, painfully, pushed the enemy forces back.

The allies had developed everything from enhanced programming for allied torpedoes, to the TRES (towed, reactive, explosive system) devices that were towed behind escort ships, to the SUB CIWS (sub-surface close in weapons systems) that fired streams of underwater hypervelocity projectiles, to supercavitating weapons of their own in the effort to defend allied shipping and defeat the Killer Whale weapons. Despite all of this, the enemy LRASD devices, these "*Killer Whales*", still struck and destroyed allied shipping far too often.

Every type of vessel from merchant vessels, to tankers, to destroyers, to AEGIS cruisers, to large amphibious assault ships, to aircraft carriers, to submarines were still being hit by the enemy weapons. Whenever that happened, except for the largest of ships, it was almost a given that the stricken ship would sink. In the few instances where that was not the case, a larger ship was put completely out of commission by both the terrible damage and the horrendous loss of life.

Now, while American orbital bombardment and missile barrages were laying waste to enemy lands, the United States Navy and the navies of its allies were still slowly advancing back across the Pacific Ocean. But the cost of that advance was still far too great in terms of the loss of personnel, vessels, and material. The enemy still had very long and extremely sharp teeth.

Something had to be done. The political leadership demanded it. The military leadership demanded it. The people of the free nations of the world demanded it.

Today, as this particular LRASD weapon approached the American submarine that lay just off its path, America's military weapon designers would find out if they had finally devised a solution that would answer the demands of the allied nations and finally, once and for all, defeat the Killer Whales.

This morning they would discover whether or not they had developed a foolproof, 100% reliable weapon to interdict and destroy these killers of the oceans.

The weapons officer in the control room of the USS Texas, the Virginia Class nuclear attack submarine conducting the test, informed his superior of the progress.

“Target, range 5400 yards and closing at a speed of 585 knots.

“Target now acquired. It will be in range in five, four, three, two, one, zero.

“Target in range and locked.”

The Captain of the USS Texas immediately gave the order that weapon system developers, flag officers, and political leaders throughout the United States and her allies had been waiting for, for well over 14 months of research and development.

“Engage the target.”

The weapons officer immediately selected the “Engage Target” option from the new fire control menu on his console and the system activated.

Through the water, at the speed of sound, a special sonic wave was produced by the USS Texas from a new weapons port on her forward starboard side, the side facing the oncoming LRASD weapon. That sonic wave was computer generated and controlled, and was very tightly focused on the approaching Killer Whale. It mimicked perfectly the sonar, acoustic, and transient signature of the USS Texas, and amplified it powerfully.

That amplification was modulated to grow rapidly in volume and presence so as to create all of the acoustic parameters coincident with the terminal phase of the approach of the weapon itself. This was done in such a way so as to fool the weapon into thinking it was actually within proximity striking range of the USS Texas.

Tests on captured Chinese weapons had conclusively proven that the Chinese developers had ingeniously built a capability for detecting and reacting to these acoustic signatures through the cavity created by the passage of the weapon. When the Chinese LRASD proximity detection system gauged that the weapon was going to miss its target, it immediately performed the necessary calculations and detonated the weapon's warhead at the closest approach to its target.

The new American system simulated these acoustic signatures in an effort to get the LRASD weapon to react to it. If the proximity effort failed, the American acoustic weapon was capable of producing sounds, at very high amplitude, that replicated the sounds of the approaching weapon's cavity collapsing as a result of contacting the intended target, which was a condition the Chinese developers also took into account.

In that case, the Chinese had designed their weapon's sensors to detect the collapse of the cavity associated with impact on the target and activate the LRASD detonation timer so as to explode the warhead well within the confines of the targeted vessel's hull.

If all of this failed, the American weapon was capable of focusing a much more intense and focused acoustic wave at the sensors on the LRASD. Computer simulations indicated that this increase in intensity invariably overloaded the acoustic brain of the weapon and caused it to lurch violently to the side, ripping itself apart in the resulting turbulence and trauma associated with the collapse of its cavity.

In this case, the first option succeeded. At a range of over 2000 yards, the weapon, thinking it was well within proximity range of its intended target, but that it was going to actually miss that target, exploded in the open ocean creating a huge bulge and then fountain of water on the ocean's surface, but otherwise not causing harm or damage to anyone or anything.

Over the next week, the USS Texas would conduct extensive tests using all four of the weapons ports that had been installed on the boat. Those tests would be conducted with similar live-fire exercises that simulated attacks from every angle, ranging from engagements of a single weapon at a time, up to as many as six weapons simultaneously approaching the boat from multiple angles.

Every phase of the new American defensive system would be tested, from stimulating proximity fusing, to causing contact detonation, to overload of the enemy LRASD system.

In all, thirty-seven captured LRASD devices would be launched toward the Texas during the week of testing. By the end of the week, the record of the USS Texas in defending itself against all of those attacks was perfect. All thirty-seven enemy devices were destroyed by the new MSWAD (Modulating Sonic Acoustical Wave Device) system.

The USS Texas immediately off-loaded all of the Naval and contract project management personnel who had observed and evaluated the testing. A few contractors remained on the boat to help operate and maintain the system and to train the crew in its use. The rest were soon in Hawaii filing their reports and their recommendations.

By August 13<sup>th</sup>, the USS Texas departed for her maiden assignment with the new defensive system. She was ordered to make flank speed across the Pacific Ocean to the Arafura Sea north of Australia where she would begin interdicting enemy shipping of all types. Soon thereafter, after a completely successful initial mission where she expended all of her weapons stores while destroying eight Killer Whales launched at her, she was ordered to take the fight into the heart of enemy waters. Her next assignment was to conduct offensive patrol operations in the heavily enemy infested waters of the Java Sea and then in the South China Sea itself.

While the USS Texas transited the Pacific Ocean towards her initial assignment, more MSWAD systems were being rushed to forward repair facilities throughout the Pacific and Indian Oceans.

Although they had not envisioned the astounding level of success that the Texas experienced off of Hawaii, and later would demonstrate in the Arafura Sea in combat, the development contractors, the military and the political leadership of the United States had nonetheless anticipated a large measure of success. Because of this, full scale production had been ordered before the testing off of Hawaii even started, and now systems were en route to facilities where other submarines and surface vessels could be rapidly retrofitted with the new, life saving MSWAD systems.

The contractor supplied a large number of personnel to perform the initial training of the naval personnel onboard every vessel fitted with the system. These contract employees began their work as the systems were installed and continued it through the maiden voyage, the contractors themselves going into harm's way for the benefit of the nation.

When the systems and the contractors began to arrive in theater, a large backlog of vessels was already waiting for the work to begin. Within a matter of weeks, while the USS Texas was entering the Java Sea, more and more American and allied vessels were fitted with the system, and sent immediately into battle.

**October 24, 14:55, local time**

**Manila Bay**

**Luzon Island, The Philippines**

The bay was filled with transports of all types. Most of them were older variety military and commercial transports, tankers, cargo ships and container ships. There were also two Alaska class SSTNs and three large C-90B aircraft offloading men and material in the packed harbor.

During the last two months, the growing allied military machine had pushed in towards China on all fronts. Outside of the Chinese forces on the sub-continent, the remains of the shattered Indian political apparatus, along with what remained of its military, had surrendered on August 29<sup>th</sup>. That date was designated as VI-Day and the celebrations in every major allied city were long and joyous. The hope and anticipation of an ultimate VC-Day began to grow throughout the allied nations.

But over two million Chinese troops still fought on to the north in the mountainous Kashmir regions of India. Those Chinese forces were hemmed in by mountains to the north and allied forces to the east, west and south. The allied armies were content to serve as blocking forces by parlaying any major Chinese efforts to break out of the area, while American orbital bombardment and Hail Storm missile attacks destroyed each large concentration of Chinese troops wherever they were found.

Major hostilities ended in Australia on September 18<sup>th</sup> when the Chinese and Indonesian forces there attempted a major offensive near Halls Creek just off the Kimberley Plateau. A combined arms force of one division of American Marines, a brigade of British Highlanders, and elements of two divisions of the reconstituted Australian Army acted as a lure to pull the enemy forces into the trap.

Sensing that this may be their last opportunity to achieve a victory and push the allies back, the CAS and GIR forces had taken the bait. Eight small orbital bombardment projectiles and three Hail Storm missile barrages completely annihilated the Chinese and Indonesian formations and every piece of armor they had left to them before they ever reached the main allied forces.

Despite inflicting minor casualties on the allied scouting and probing forces who lured them into the killing fields, the result was a complete slaughter of the last major CAS and GIR force on the continent. Over eighty thousand enemy personnel lost their lives and over one hundred thousand more were either wounded or captured.

It would be months before all remaining pockets of enemy military personnel or armed enemy civilians were completely destroyed or captured in Australia. But with the engagement on September 18<sup>th</sup> the final nail was hammered in the coffin of CAS and GIR hopes for occupying and controlling the continent. Outside of those small engagements against scattered groups of enemy soldiers or civilians, Australia's long nightmare was over.

On October 6<sup>th</sup>, Indonesia surrendered unconditionally. Major fighting continued on many of the smaller islands and on New Guinea as allied forces rooted dedicated enemy forces out of the dense forests of the island's rough mountains. But the leaders of the last major belligerent Islamic nation, having seen the complete defeat of all other GIR nations, having witnessed personal strike against Hasan Sayeed and his command facilities, and having heard of the utter and ruthless defeat of all fundamental Islamic uprisings in allied occupied territory, wisely decided to take the United States and its allies up on the demand for an unconditional surrender.

The defeat of Indonesia was followed in quick order on October 12<sup>th</sup> by the surrender of all enemy forces occupying the Philippines, even before allied forces could arrive there. So fast and unexpected was the unilateral surrender in the Philippines that the allies could not stage or send any aircraft or vessels to the islands until October 19<sup>th</sup>. Since that date, the numbers of allied forces had been steadily growing on each of the major islands, and particularly around the capitol, Manila.

...and then the People's Republic showed the United States and her allies that there was still a terrible ferocity and viciousness left in the Chinese bite.

Lu Pham and his LRASD engineers had been informed about the new acoustic weapon the allies were employing with greater and greater effect through the Pacific and Indian Oceans. After

studying the issue, they determined that they would not be able to develop an immediate defense against the new American system, but they did make some suggestions on how the Chinese devices might be programmed and utilized to overwhelm it.

Today was the date when those ideas would be put to the test,

The PLAN had seeded literally thousands of the LRASD weapons within the approaches to the South China Sea, approaches to Taiwan, Korea, Japan and elsewhere at strategic bottlenecks, narrows and straits in the area.

These had all worked to good effect up until the time that the USS Texas had entered the South China Sea and begun destroying the packs of devices it ran across. The Texas had been followed by other Virginia class attack subs and two of the Sea Wolf class boats, the USS Connecticut and the USS Jimmy Carter, once it had been recognized that the Chinese had seeded them in all of the strategic approaches to the mainland.

But on this date, approximately eight hours earlier, programming had been completed by PLAN underwater specialists on a large group of forty-eight LRASD weapons that had been seeded in the Luzon Straits. Those weapons had then been launched towards the shipping in Manila harbor.

Because of the success of the USS Texas, and in an effort to make use of these devices before they were all lost, and to find a way to keep them from being lost, the Chinese had rearmed and reprogrammed this group to go up against the ample allied naval forces in and around Manila Harbor.

Within the group of forty-eight LRASD devices were eight devices that been modified to be pop-up air attack variants. These were evenly divided between four separate attack groups that would approach the Bay from different directions. Each attack would consist of two groups following one behind the other, with each group comprised of ten underwater and two air attack variants.

The first group in each attack was slated for any picket or guarding force positioned along its approach path. The second group would follow behind and off to one side in an effort to then penetrate through to the harbor. One approach was along the Bataan peninsula, the other swung further south around past Cape Calavite on the Island of Mindora and was timed to arrive at Manila Bay at the same time as the first attack.

The allies had defended each of these approaches to Manila Bay.

### **October 24, that same time**

#### **East of Bataan Peninsula**

#### **Luzon Island, the Philippines**

Acting in concert, fifty miles from the entrance to Manila Harbor, two Arleigh Burke class destroyers and an AEGIS class cruiser, the USS Monterey, were working with the new Virginia class attack sub, the USS Atlanta. The cruiser and the Atlanta had both already been outfitted with MSWAD, in addition to the SUB CIWS weapons they carried. Both destroyers carried SUB CIWS as well. They were positioned to be able to interdict any Chinese air, surface, or sub-surface attempts to get into Manila Harbor and attack the ongoing landing and supply operations there.

It was the Atlanta that sounded the first alarm.

Positioned fifteen hundred yards in front of the surface action group consisting of the destroyers and the cruiser, the Atlanta's sonar operator picked up the approach of the twelve LRASD devices first, while they were still operating under conventional power. News of the contact was transmitted to the AEGIS cruiser via a secure communications protocol over a line that trailed behind the sub to a small towed pod just below the surface. That pod had a single thin, but very stiff antennae, designed to noiselessly break the surface of the water so it could establish the communications link with the Task Force command ship, the AEGIS cruiser.

All of the American vessels immediately went to battle stations.

At almost the same moment, the lead LRASD unit acquired the Atlanta, communicated its presence to the other devices in its group, and all ten of the underwater attack variants of the LRASD devices activated their rocket engines for a simultaneous, multi-axis attack against the Atlanta.

The weapons officer on the Atlanta immediately apprised the Captain of the situation as other weapons officers on each ship in the task force did the same to their commanding officers.

"Incoming! Killer Whales, seven, eight...nine, no ten devices. Ten thousand yards and closing from multiple vectors."

The Captain of the Atlanta, showing no exterior display of emotion or concern, calmly replied.

"As soon as they are in range, engage the devices with both forward MSWAD stations.

"Ask the Monterey for support if they please."

At 2000 yards, the Atlanta began picking off the attacking Killer Whales two at a time. At five hundred yards, there were still four devices approaching and it looked like the limit for the number of attacking LRASD units a single Virginia class boat could handle had been found.

That's when the effect of the Monterey's MSWAD system came into play. While the Atlanta picked off two of the remaining devices, the Monterey got the other two as they came into range of her system. But those last two LRASD weapons exploded a mere two hundred feet from the Atlanta, causing significant structural and instrumentation damage. She was forced to surface.

And while doing so, she met her fate.

The last two devices, the ones designed to go airborne, lingered behind the wave of the ten devices that had already attacked. Those last two devices continued on towards the Atlanta using conventional power for twenty seconds...and then they activated off their own rocket engines.

At a distance of 2000 yards, they both broached the surface and began flying towards the spot where they would intercept the Atlanta, skimming just above the surface of the water at an altitude of no more than twenty feet.

Weapons officers throughout the group of ships had only seconds to warn of the new threat.

“Vampire, vampire, vampire!

“...two targets.”

The first one sensed the USS Monterey and altered its course towards her, rising to a height of one hundred feet. The second one continued toward that spot on the ocean where the Atlanta was surfacing, still skimming the surface of the ocean, no more than twenty feet above it.

The Monterey and the two Arleigh Burke destroyers, at a range of less than 3500 yards, acquired both LRASD weapons on their radar after they broached the surface. All three immediately fired two of the latest batch of Standard AAW missiles at each target. A total of six American missiles were attacking the Chinese devices as the AEGIS system prepared their CIWS systems to engage the missiles should the Standard missiles fail to intercept them.

But the Chinese devices had no intention of ever coming in range of the CIWS, or of ever even reaching their targets.

As soon as the electronic counter measure circuitry aboard each LRASD sensed the launch of the American AAW missiles, each LRASD device dove towards its target and exploded simultaneously. The first one exploded at a height of twenty feet above the surface, the second one did so just after it penetrated the water.

The explosions were not conventional, they were nuclear.

A light brighter than the sun lit up the sea, the islands, and the ridges on the Bataan Peninsula. The blast and shock wave from the air detonation reached out immediately and engulfed all three surface vessels which were completely destroyed, leaving no survivors. Terrible destruction and death were also caused on the Bataan Peninsula.

The USS Atlanta was no more than eight hundred yards from the underwater nuclear detonation when it went off. Her hull was immediately caved in by the force of the explosion like a tin can crushed by the impact of a sledge hammer. The boiling fireball from that second explosion rose in a huge mountain of water, steam, blast and debris from the wreck of the Atlanta, marking the death of the entire crew of that fine vessel.

While all of this was occurring, a similar episode played itself out beyond Cape Calavite and that approach to Manila Bay. There, two very capable British Type 45, Horizon class destroyers, accompanied by the HMS Artful, an Astute class attack submarine, were patrolling the ocean to interdict any enemy force trying to make a break for Manila Harbor and the anchorage there. All three of the vessels were outfitted with SUB CIWS but none of them were equipped with MSWAD.

They were engaged by the second arm of the Chinese LRASD attack in much the same manner that the first arm of the Chinese attack had engaged the American blocking force.

...and with the same results.

Within minutes, two more nuclear explosions obliterated all three of the British vessels. Those blasts also caused terrible damage on Mindora Island with a significant loss of life.

The path into Manila Harbor was open.

**October 23, 03:02, EST**

**Presidential Bedroom, the White House**

**Washington, DC**

Sandy listened to the one sided conversation as her husband sat up in bed and talked on the phone to the Secretary of Defense, Jeremy Stone.

The call had come through a few minutes earlier, when a Secret Service agent had awakened them so the President could take the call. From the tone of her husband's voice, and from the part of the conversation she was hearing, it was obviously a very tense moment that boded very bad news.

“You have got to be kidding me.

“How the hell could something like this happen, Jeremy?

“I thought we had found a sure-fire defense against those.

“Okay...yes, yes, I know., the enemy we are facing is still very resourceful and dangerous.

“Yea, I do.

“Alright, alright. I'll call an emergency National Security meeting for...let's see, 0430, and get Talbot to do whatever is necessary to ensure that everyone available is in attendance.

“Okay...good, we'll have an update at 0400. I'll make sure Vice President Reissinger and Bill Hendrickson are there if you'll get Ben Ryan and CINC PAC patched in.

“I'll talk to you then.”

The President had a splitting headache by the time he hung up the phone.

Sandy had sat up in bed with a concerned look on her face.

“Honey, is everything going to be okay?”

She knew that it wasn't, but wanted to give him an opportunity to share whatever he could with her. She was prepared to be a sounding board, a listening ear, a confidante...whatever it was that her husband needed at this especially difficult moment in time.

“It's very bad news, sweetheart.

“I had somehow hoped that we were past this type of thing...that the worst of it all was over.

“But apparently I was premature in my optimism. Even in defeat it seems as though Zenim is intent on taking as many of our people with them as possible.

“Our forces landing in Manila Harbor have just been hit by a Chinese nuclear attack.

“Apparently it came from the sea and involved those damnable supercavitating weapons that they have been using against us throughout the war.

“Tens of thousands, perhaps hundreds of thousands are dead in the harbor and particularly on shore there. Manila has been terribly damaged.”

Sandy gently took her husband's hand. She knew him well enough to sense, without another word being spoken between them, that the silent voices of those who perished were weighing heavily on his mind and burdening his heart.

**Rodriguez Home**

**Little Havana, Florida**

Maria Rodriguez knew her husband was in Asia...but she didn't know exactly where.

...and she was okay with that. It was part of being the wife of a military man.

Her father-in-law had told her that he hoped that he was in China directly and hopefully, "taking it to those sorry ChiComm animals directly."

No matter where he was, she missed Hernando so much, and she worried about him constantly. But she had learned over several years to put the bulk of that worry in God's hands. She knew He was involved in all of this and that her faith and trust in Him, whatever the result, was of great help to her, to her sons...as young as they were...and to Hernando. She knew that although her husband was away from her, he was always within *His* vision. Maria regularly reminded herself that worry would serve no useful purpose except to erode faith, that her part in all of this was to earnestly pray for Hernando's safe return, and accept God's will, even if it did not coincide with her wishes.

"I have a good man, who loves his wife, his sons, his parents, and who loves the Lord.

"I could not ask for more," she thought to herself as she contemplated these things.

"He's been home several times during the course of this war, and if those precious visits end up being all I have to remember...well then, that will be more than many people have."

As it was, she was hoping to see him home soon for good.

It was obvious to her that the United States and her allies were on the verge of winning the war. Iran and India had already fallen. The leaders of those nations who had planned this horrific war were dead. China was being hemmed and closed in upon.

It could not be much longer now.

Taking one of her sons into each arm, she looked closely at Felipe and Jose.

They were such beautiful children. She could not imagine the horror of so many in America in Missouri, Pennsylvania, New York and California who had lost so much. Whose beautiful children had died due to the biological attack that summer...and the many who had died from the numerous terror attacks throughout the war.

Yes...she had much to be grateful for.

She thought she would go over to her in-laws and share these feelings with them this evening. She always enjoyed her visits there.

As she made her plans, she could not know, she would not know for several months, that Hernando was in fact fulfilling the wishes of his own father that very day. He had just crossed over the Manchurian frontier into China with his companions.

The front lines had already progressed well into China, over seventy-five miles, in fierce fighting. Word from the front was that there was no shortage of Chinese regular Army and militia who were willing to close with the allied forces now invading directly into their homeland, regardless of cost.

And that cost was a horrific butcher's bill for the Chinese. Orbital bombardment of staging areas literally slaughtered large regular Army groups before they could completely form and advance on the front. Hail Storm missile attacks annihilated the broken formations that were able to advance along with the large local militia that attempted to stand in the way of the allies.

Despite all of this, it seemed either to the front or on either flank that thousands of Chinese personnel invariably closed for direct combat with the vanguard of the offensive. American air support was overpowering, but here near their homeland, the Chinese, who had dispersed thousands of fighters and attack aircraft, were still making a fight of it. Air supremacy had not been achieved. In many cases, air superiority was denied the allies.

Hernando was subjected to air attack on several occasions they advanced into Manchuria.

Even though the Chinese were steadily losing ground, at this point, and in this particular vicinity on the direct road to Beijing, they were giving it up begrudgingly and soaking the landscape in blood. Though Hernando knew, along with everyone else in his company, that China's defeat was sealed-that it was only a matter of time, he also knew that a lot of American and other allied personnel in this area were going to spend their life's blood to make sure it happened.

Like his wife, he placed his trust in God, and prayed that he might live to see his family again.

**December 23, 05:06, local time**

**Two miles west of Hualien, Taiwan**

**Far Western Pacific Ocean**

Billy Simmons was amazed at the technological advances that his nation had made during his long stay in Australia. He had never conceived of going into battle, his attack helicopter and all, in a submarine. He had also never conceived of a submarine so large, or of an entire massive invasion force consisting of entirely submersed vessels.

Yet that was exactly what was occurring here today.

Irrespective of the update training he had received and the exercises that he had been a part of in disparaging for this operation, it was always something else again to actually be conducting the real thing. That was especially so in this case because of the major innovations that were now a part of American amphibious operations.

At 0500 hours the execute order had been given. His vessel immediately surfaced and began disgorging Marines into air cushioned landing craft. As that occurred, an elevator carried his AZ-1W Viper attack helicopter along with him and his crewmate (his backseater) up to the flight deck, which itself had just moments before appeared on the surface of the water.

As he lifted off from his vessel, along with four other attack helicopters, he saw numerous F-35 Joint Strike Fighters providing cover to them from high above. He knew that those aircraft had themselves been launched by six submersible carriers further out to sea. Continuing to climb, Billy could also see that the sea was full of U.S. Navy vessels all around him.

There were ten of the SSLHDN amphibious assault subs, putting forty large air cushioned landing craft into the sea at a time, filled with Marines and their equipment. Those vessels were also filling the air with helicopters and other aircraft. There were six SSCN, cruiser subs, which were filling the air with missile barrages targeting enemy positions and formations near the beach and further inland. The six SSCVN aircraft carrier subs were also filling the air with fighter and attack aircraft in support of the landing.

In addition, though he could not see them, Billy knew that sixteen fast attack subs were protecting the fleet all around them. In all, thirty eight vessels comprised this task force. Their target, Hualien, was fewer than two miles to his west, and he banked his Viper in that direction to attack enemy formations or fortifications that would contest the allied landing.

As he passed over the air-cushioned landing craft speeding towards shore from the Amphibious Assault vessels, Billy knew that historically, despite the most massive poundings imaginable, somehow enemy forces always managed to live through the bombardments to contest the landings.

Today would be no different. Some enemy forces did survive the orbital bombardment, the Hail Storm missile barrages, and the massive attacks of American attack aircraft, and land based bombers from afar. That part of the historical norm held. But the historical norm did not hold in the numbers of enemy forces surviving. In this case, it would not be many, and though the landings were opposed, the Americans were very quickly ahead of schedule.

Within four hours, eight massive C-90B aircraft landed just offshore, taxied up to the beach, and began disgorging more and more American and allied personnel and equipment..

### **December 23, that same time**

#### **In the mountains, 35 miles SE of Kaohsiung, Taiwan**

#### **Far Western Pacific Ocean**

President Chen Shu-bien looked out to sea from his sparse command center. There were sixteen such command centers spread through the mountainous regions of the Island and he had been moving between them for almost six years as his nation was ravished and raped by the Communist Chinese.

All of the more modern facilities had been found and destroyed. The Republic of China had known that, if there was a successful landing and occupation of their island by the communists, traditional warfare and resistance would ultimately be doomed.

Even though they had prepared for such traditional defenses, and fought hard using those plans, they had also planned for long term, more low-key resistance. The President had been leading that effort ever since the last major command facility had been found and destroyed.

That entire time, the free Chinese on Taiwan had suffered terribly. With every act of resistance, terrible retribution had been visited on the people. There had been many times when Chen himself had considered ending the struggle to save his people from the horror.

But each time he had reminded himself that the horror would not end. The Chinese were raping the Island, killing and replacing the former citizens while they brought in their own mainland citizens who were eager to occupy and make use of what the free Republic of China had established.

No, the horror would not have ended with our abdication, President Shu-bien thought.

The only thing that would have ended was hope.

And hope was something that Chen had held out which had allowed him and his compatriots to survive. Despite the overwhelming advantage of the enemy, despite so many brave and loyal patriots for Chinese freedom who had been tortured and killed, despite dissention from within when the times had been hardest...the resistance movement had survived and it had grown.

From these low-tech, barely above stone-age locations, planning had been accomplished and orders had gone out. In the long resistance on Taiwan, strong legs, unflinching loyalty, and endurance had replaced radios and other more modern forms of communication. Bare hands, ice-picks, small arms and any other tool available had replaced jet fighters, cruise missiles and tanks as weapons.

The willingness for his countrymen to suffer untold hardships and to fight with their bare hands if necessary had encouraged and bolstered Chen's hope. But those things alone did not establish his

hope. The communist numbers and ruthlessness were simply too great for that alone to nourish his hope all of these years.

What had given seed and root to his hope was his faith in the principles of liberty, and in the bastion of liberty that he knew was strong enough to someday carry the fight back to the monstrous Dragon that had arisen on the mainland.

...and that bastion was the United States of America.

Chen remembered President Weisskopf's words to his own people in the dark days, to those who were left behind as the United States armed forces were driven far to the east by the Chinese military machine. Back then, the American President, Norm Weisskopf, at that dark hour, sensing what the future would bring, committed his country and himself to that future. He had also addressed those words to all lovers of liberty everywhere, including America's allies.

...and President Chen Shu-bien had committed those words to his own memory and spoke of them constantly amongst his own forces. He did so to bolster them, to help them endure, to help them feed and hold on to their hope.

He recited those monumental words of President Weisskopf now, whispering them to himself this very morning, as he looked over the intervening hills and out to sea to his south and west.

*"I make a commitment before the citizens of America and before God. We will not rest, we will not stop, we will never, ever give up! If it takes us three years, or if it takes us ten years, our nation will overcome your dastardly and cowardly attack. We will produce aircraft carriers like the ones you sank by the dozens. We will produce technology to defeat whatever you may throw at us. We will produce weapons and methodologies that you will never conceive of in your closed, collective society.*

*"To our allies I say, stand with us.*

*"We may have been knocked to the ground, but you can count on us getting back up stronger than before, filled with a righteous indignation that we will pour out on our enemies.*

*"Stand with us.*

*"We will not forsake you. The United States of America makes a solemn commitment and promise to return to liberate any who fall under the blight that is now spreading. We shall return! There will be no iron curtains at the end of this fight. The governments currently prosecuting these invasions and this tyranny will cease to exist...every bit as much as the governments of Nazi Germany and Imperial Japan ceased to exist after World War II.*

*"Stand with us.*

*"And we will stand with you to the end. If you choose not to, then all we ask is for you to stay out of the way. We will do this with, or without help.*

*"To our forces who are fighting on in Asia in the face of monumental odds. Who fight with the knowledge that our relief efforts have failed and that relief is far off, I say: "Fight on.*

*"Fight this enemy wherever you may find him and out of whatever circumstances you may find yourself. Take to the hills if you must, take to the streets, take to the night. They are the enemies of all we believe in and all we as a people stand for.*

*"Fight on.*

*"With your weapons, with your fists, with stones and clubs if you must. Fight with your words, fight with non-compliance, fight with your silence. Like an American hero from the Vietnam War, Rocky Versace. When they captured him and beat him and ultimately marched him off to execute him, he was singing "God bless America."*

*"Fight on.*

*"And never give up. We will make every effort to come for you soon, but if we cannot, do not despair. As surely as the sun rises in the east, we are coming. The time will arrive when like at Normandy on June 6<sup>th</sup>, 1944, you will look out and see the sea and the sky filled with the innumerable host of your comrades come to liberate the captive and put down the tyrant.*

*"To the American people I say, take heart! Yes, armies of tyranny and coercion are on the march in the Middle East and now ominously in Asia. Yes, many of our own have died at the hands of these tyrants. Yes, some of our friends will undoubtedly fall under the control of these tyrants, but our fathers and grandfathers faced the same threats. The fight for liberty has always been so tested. Like them, America will rise to the challenge and again be the vanguard for liberty for the world. We will liberate the captive and destroy the despot."*

President Weisskopf had been true to those words and to that commitment to his dying breath. The new American President, John Bowers, was also true to those words and commitment, as was attested to by this mighty armada which had almost magically appeared today off the coast of Taiwan.

...and President Chen Shu-bien had been true to the words and commitments as well.

Now, Chen saw over eighty huge American vessels offshore, disgorging hundreds of landing craft filled with so many troops, tanks and other equipment. He saw other ships filling the sky with American aircraft and missiles.

"So this is what the attacks of yesterday and last night were all about," he thought.

He now knew what the awesome display of American orbital bombardment and Hail Storm missile technology that had pounded and pulverized Communist Chinese positions yesterday and throughout the night meant. He wondered why it hadn't dawned on him at the time.

But now, this morning, he did know. With this American attack, just as Weisskopf had promised, he knew that the hour of his nation's liberation and salvation were at hand.

He turned to his aide and gave the execute order for the operation that had been planned for so long, but had awaited this day, the return of the Americans for its implementation. Even though millions of Republic of China citizens had suffered and died, many of the remaining millions would now rise up and use the arms and material that had been so carefully hoarded and laagered in the most massive urban uprising imaginable.

Over the next four weeks, millions of the citizens of the Republic of China would willingly put their lives and blood on the line alongside the Americans and their allies to purchase their own freedom. In so doing, the free people of Taiwan, would ensure that many, many more of the enemy would pay for their atrocities with their own lives and blood as they were driven off of Taiwan soil forever, and as liberty was extended across the straits to the mainland.

**February 8, 16:35, local time**

**USSS Weisskopf, High Geosynchronous Orbit**

**Over the South China Sea**

Designated as the SC-01, for Space-going Cruiser, she was the newest, largest, and most powerful American military space craft launched to date. Large and space worthy herself, she could take up position over any theater of war on earth as a space station and control the ground, the air, the sea, and near-earth space in the vicinity of that theater with her laser, charged particle, kinetic energy, missile, and electronic warfare weaponry.

She could also act as a controlling point for multiple other space craft. This included the weaponry on the Corvettes, Frigates and Destroyers the American SPACCOM (Space Command) had already launched, as well as the armaments and weaponry on any of America's space stations that were in range if necessary. Using the latest SPAEGIS systems, her offensive and defensive capabilities were simply unsurpassed by any other available asset.

Captain Floyd Clark thought it very fitting that this vessel had been named for the late President. He also found it fitting that the first deployment for the Weisskopf would serve to assist in the decisive defeat of the Chinese Evil Empire that the late President had dedicated himself to, and ultimately sacrificed his life for. Clark was also honored to serve as the commander of this marvelous vessel and its highly motivated and trained crew of ninety-five personnel.

He wished he had been able to get the vessel launched and operational early for the invasion of Taiwan, but that opportunity had already passed. As it was, he knew the Weisskopf would be decisively involved in the retaking of Japan and the invasion of China across the Formosa Straits to put more pressure on the failing Communist government in Beijing.

He was already providing support to the two arms of the pincer that was advancing on Beijing. One of those was a large and aggressive American force approaching Beijing from the northeast out of Manchuria.

"General Bennett is like a modern day Patton," Clark thought to himself as he considered the bull doggedness of his advance and the manner in which Bennett motivated and drove his forces.

"It's clear that if it is left to him, he'll be through Beijing long before the Russians get there.

"In this case, I don't believe that there's going to be any political forestalling or holding back of Bennett's forces as there was with Patton in World War II."

Clark knew this would be the case because he knew that John Bowers and his administration were most interested in ending this war as soon and as decisively as possible. He also knew that the United States, unlike conditions with Roosevelt towards the end of World War II, was not involved in any political negotiations to hand over liberated peoples to another despot or tyrannical regime.

"There aren't any," Clark said to himself, "and I don't think there will be any for a long time."

The other part of the pincer operation directed at Beijing was a Russian and European Union force, with American support, approaching from the northwest. That one was further away from the Chinese capital, but had succeeded in cutting completely across Mongolia and penetrating over two hundred miles into China from that direction.

Directed laser fire, particle beam fire, and the targeting and controlling of orbital bombardment from his old duty station at Point Solitude were all part of the support he was providing those operations. He was anxious to use the same awesome firepower to help open up a third front south of Shanghai so that the Chinese communist government's fall could be further hastened.

There was another hope he had.

Captain Clark held out the hope and desire, as did many American and other allied commanders, to be the officer who would command the fire mission that would destroy whatever command and control facility or bunker that housed the president of the People's Republic of China, Jien Zenim.

**March 23, 19:35, local time**  
**Observation deck, Sanyo Tower**  
**Tokyo, Japan**

There had been very few targets in the last two days for Leon's sniper position here high above the streets of the Japanese capitol.

After some stiff urban resistance on the streets and alleyways of the city, the fighting had seemed to melt away and now a surreal quiet had settled over the capitol.

Word had it that the commander of all Chinese forces on the island, beset by allied forces and their technology, powerless to stop American space power, and also beset by hordes of Japanese citizens, had surrendered unconditionally. Leon wouldn't believe that until it was official, and more importantly, until he had witnessed with his own eyes the lines of disarmed enemy prisoners.

Campbell had personally witnessed too many of his close friends, and heard of countless others, who were now dead or horribly wounded because they *believed* the enemy was either about to surrender, or already had done so, and had then momentarily let their guard down.

Still, he could believe it was possible while maintaining his guard at the very highest degree of preparedness and alertness. He could believe it might be so because of what he had seen over the last two weeks since they landed on Japan. There had been some Chinese resistance at first even though they had taken a merciless pounding before the landings. Apparently they had mobile reserves that had somehow avoided the attacks. These had created havoc further inland, away from the beaches.

Leon realized that havoc was a relative word. In this case, havoc meant that the allied advance had not gone unimpeded. In times gone by, the level of resistance encountered on this operation, would not have even been considered moderate. It was more like light resistance that was pointed at particular locations. The Chinese reserves, though they had fought hard at specific locales, had fallen victim to American technology and firepower. Any large concentrations in a position to be targeted by orbital bombardment had simply ceased to exist and the fighting over the last several days had devolved to sniping, roadside bombings and minor engagements.

Now this quiet.

Leon was sure that part of it was due to the Japanese civilians who had fought so hard themselves, charging into automatic weapons fire of the smaller Chinese squads and patrols and overwhelming them with their numbers. Many Japanese died that way, but they exacted their revenge on the Chinese soldiers they were able to overcome in this manner.

As the Chinese personnel fell back in what had become more and more of a rout, they were shown no mercy whatsoever by the Japanese civilians. Given the atrocities that he had heard of, and given the large pits of Japanese dead that he had seen himself in their advance...filled with thousands of Japanese bodies at every stage of decomposition, from skeletal remains to new bodies, Leon could understand the Japanese reaction. Just as soon as the Chinese boot was lifted even the slightest bit off their necks, the Japanese had attacked their failing captors.

"Those pits were just like something out of Nazi Germany," Leon thought.

"No, they were much worse than any of the pictures I ever saw in history books about the Nazis...and their atrocities were considered among the worst in history up until their time."

As the sun got lower to the horizon and the time for his relief approached, Leon found that he could finally consider the end of this conflict and his life beyond it.

Although he looked forward to contemplating that, to rolling it over in his mind like a gentle river running through fertile country, he would wait to do so until he was off duty and safely back at base.

To do otherwise would be to let down his guard, and Leon Campbell was not about to do that...even for a moment.

**May 8, 09:20, local time**  
**Main Bridge over the Bei Jian River**  
**Shaoguan, China**

Lu Pham walked briskly with his wife, pulling their rickshaw behind them, dressed as peasants who were leaving the city with the stream of refugees retreating in front of the American advance. He felt that their disguise was adequate, and he knew that with his personal security force of eight Vietnamese guards that he had personally brought to China, that he would be protected from any hoodlums that might otherwise prey on the refugees.

But it was not really the hoodlums that Lu Pham was afraid of.

He was much more concerned about the Chinese security forces that might recognize him.

For him, a hero of the People's Republic, a ranking member of the Politburo, and an Executive Committee member, to be found out here amongst the refugees, dressed like this, would be treated for what it was. Desertion and potential defection.

At this stage of the game there could be little doubt what the punishment would be, particularly for Song. Oh, they would perhaps use Song and the threat of her torture and death to control Lu, but

the ultimate outcome could not be in doubt, and that was because the ultimate outcome of this entire effort was no longer in doubt.

Lu had accepted it. He didn't exactly understand it, but he saw it and accepted it. He, his entire staff...no one...was going to stop the American military machine now. The Americans had successfully turned the tables and overcome their disadvantage and now turned it into an advantage so great that they could not be stopped.

The operation in Manila Harbor had worked flawlessly. Tens of thousands of Americans, their allies, and literally hundreds of thousands of Philippine citizens had been either killed or injured. A lot of the equipment and vessels the Americans were using for the occupation and pacification of the Philippines had been destroyed.

But in the end, it was only a drop in the bucket. More vessels and more of their huge transport aircraft had replaced the men and material within two to three weeks and things kept right on going. Although a few more successes with LRASD devices programmed to overwhelm the American MSWAD system had succeeded, never again would the Americans or their allies leave themselves subject to such massive casualties. They simply adjusted their own procedures and applied their own technology to avoid it...and then kept coming.

With dwindling funds...and personnel, the People's Republic simply did not have the capability to develop counters to the growing American technological edge.

"...and if we did, we would no longer have the capacity to manufacture them," Lu muttered as he walked along.

"What's that, Lu?" Song asked as she turned towards him.

"Shhh, do not address me by my name."

Speaking more quietly now, while looking around carefully to see if anyone had noticed, Lu answered his wife's question.

"It was nothing, I was just thinking as we walk along."

Song realized her mistake and why Lu had said what he did. He had told her of this before and she chided herself mentally and then assured Lu.

"I am sorry husband, I will not do it again."

At the end of the bridge, Lu and Song were directed to the right, to the south down a narrow lane that wound along the river. They continued to follow this path for some miles, the crowds of refugees thinning markedly as they turned toward the American advance.

After several kilometers, they turned to the left and followed a gravel road up into the foothills around the river, ultimately climbing into more mountainous terrain where the road turned into a trail. By that evening, after several turns onto different trails, and some steep climbs, exhausted and hungry, they arrived at their destination.

It was a simple cave that had been boarded up which provided a dry place out of the weather.

Within a few minutes, four of Lu's security personnel were in the structure with them, while the other four maintained a vigil surrounding it.

After a short meal and some water to drink, Song lay down and was soon asleep. Lu stayed up for some time, thinking about events and talking to his security personnel.

Lu Pham, hero of the People's Republic, member of the Executive Committee of the Politburo of China, life-long enemy of the United States...was going to defect.

The contacts had all already been made. An American special forces team would arrive tomorrow evening or, at the latest, early the next morning and take he and Song away.

Lu's had lost his son, his daughter, his grand-daughter, and most of his best friends, including Sung and Ming Hsu, who had been killed in a large American orbital attack on Tianjin. His accomplishments did not amount to much compared to that. No amount of acclaim for the political or military apparatus of the People's Republic could compensate for that loss.

This late in life, Lu realized that he had been trying to compensate for something that could not be compensated for, the loss of his parents to American forces during the Vietnam war. It had been the fuel that had driven him to accept the Chinese offer and work for them those many years. It had led to his great discoveries and accomplishments...but it had not brought back his parents

And now, it had led to the deaths of his beloved children and close friends...and they would not be coming back either.

Very late in life Lu finally learned that the thing he had been doing was not worth the sacrifice of his loved ones. Know, what he had done had not brought any peace, only more sorrow, an even deeper sorrow.

But he was going to try and do something about it, however late.

He recognized now that there was something intrinsic by which the west in general, and America in particular, was driven. It was something more than retribution, revenge, or even ideology. It was something almost spiritual that fueled them and gave them the incentive and drive necessary to persevere regardless of circumstance. It was deep and it had allowed America to return from a condition that he had been certain should have finished them off.

...and yet it had not.

Lu Pham was determined now, after all of his own losses, after all of his own experiences, to discover what it was that drove them.

If he could survive to do so.

**June 2, 09:20, local time**

**Special Hardened Bunker**

**Near Guilin, China**

President Jien Zenim was ready to depart this facility. Liu Liang had made all of the necessary arrangements and he and his staff would be safely departing in the next fifteen minutes.

Of the original twelve orbital bombardment facilities, only three remained. The others had all been found and destroyed by the Americans, one by one, with the Executive Committee members unlucky enough to have been in them when they were attacked.

Now, there were fewer Executive Committee members left than there were specially hardened facilities...and Jien Zenim did not know where the most important (excepting himself, of course) of those members was.

For almost a month now, Lu Pham had been missing. All efforts to find him had been futile. Jien was uneasy about it...but could not bring himself to believe that Lu Pham, after all that had been done for him, after his undying commitment, would intentionally desert the cause or his mentor.

The other surviving Executive Committee member that Jien was aware of was his new arch enemy, Lin Xin. Somehow, Lin Xin had successfully avoided Liu Liang's efforts to silence and destroy him. Though Liu swore that there was no possibility that Lin could have survived the latest attempt, Jien knew he was still alive.

He knew it because he had just received a communiqué from Lin requesting either a personal meeting with the President, or he President's physical location so a video conference could be arranged to discuss future planning.

At this point, Jien was not about to be lured into a trap like that. Jien would handle all of the *future planning* himself.

But a trap by Lin was now the least of Jien's worries.

It was clear that the Americans were going to find all of the special facilities, so there was no use waiting to be pulverized into dust by one of their orbital attacks. Jien knew that there were still plenty of innocuous places in China to hide and still enough loyal troops and forces to continue the fight. Plans had been made against just such conditions as this, and though Jien had never expected to have to implement them, he was content that he could go into the hinterlands like Mao himself, and re-establish a power base and return to eradicate the enemy and drive them from the mainland.

The Chinese people, in their great masses, who had benefited so much from Jien's guidance and planning, would not let him down.

Jien Zenim was certain of that...and Jien Zenim was wrong.

**July 14, 16:17, local time**

**Outside of the Provincial Capitol Building**

**Kunming, China**

Kunming is the Provincial capital of the Yunnan Province. As Chinese cities go, it is relatively small. But it is still a large city, having grown to over one and a half million people. Now, the influx of so many refugees trying to escape the fighting to the east had almost doubled the size of the city.

Kunming was relatively remote, located within four to five hundred kilometers of the Vietnam, Laos, and Burma frontiers, each of which contained many very remote areas, barely inhabited.

Much of its economy was based on the production of items more important to infrastructure, agriculture, and more civil related matters than military ones. Because of all of this, Kunming had escaped most of the destruction of war, and this made it a prime area for refugees to run to.

One of those refugees was President Jien Zenim.

He was operating out of a secure area of the Provincial capital facilities. The Yunnan governor was very loyal to Jien Zenim and was dedicated to using his provincial forces to help protect him.

But events were setting their own course.

Just this morning Liu Liang had indicated that the potential for unrest and insurrection in the city was high and that the President should consider moving his operations towards a remote village on the Burma border where he could continue to consolidate.

Jien Zenim had agreed.

His efforts here over the last few weeks seemed to be progressing nicely, despite the bad news to the east where most of Manchuria was under allied control and Beijing was about to fall.

The Three Gorges Dam had been captured intact by the allied and the PLA forces there to defend it if they could, or destroy it if they must, had simply surrendered and held the facilities until the Americans could arrive.

Even more disturbing was the now confirmed report that Lu Pham had defected to the Americans and had already been flown out of the country. No miracle technological answers to the continuing situation would be forthcoming.

All of this was disheartening, but Jien was certain that he could rise above it. Many of the PLA, COSTIND, Politburo and other agency refugees had been found and were coalescing here. They all looked to Jien Zenim to organize their efforts and strike back at the western aggressors pouring into the country from three directions. It would just take some time.

But with news of the potential of unrest amongst the masses, Jien knew he did not have the time.

The masses had always been the great unknown, the great wild card in Chinese politics. Zenim had learned over the course of decades that they were fickle and had to be guided...but they also had to be respected. There were just too many of them.

"Liu, has everything been prepared?" Jien asked as he and his chief of staff exited the building.

"As well as can be expected, sir.

"We have security along the path we are taking and they will contact us if there is any problem."

"Good, good," Zenim replied.

"Exactly how long should it take for us all to arrive at our destination?"

Liu Liang, who had planned their departure in great detail, down to every last turn on every street, did not have to do any calculations.

"Twenty minutes to the airstrip outside of the city. Two hours of low level flight.

"We should have you and the other leaders on the ground and in your meeting within three hours, Mr. President."

On the way out of town, Liu followed Jien Zenim's armored limo. There were security cars in front and behind. As the four vehicle motorcade approached a turn towards the four lane thoroughfare that would lead them out of the city, there was trouble.

"Mr. President," Jien Zenim heard Liu say in his ear phone.

"A large demonstration has spilled into the streets between us and the highway.

"We are going to divert to an alternate route."

Jien Zenim was not concerned. Liu was a professional and there was no doubt that the alternate route would get them safely to their destination. They always had...and they would today too.

At the next turn, the lead security car led while Jien Zenim's vehicle followed. But Liu's vehicle and the security car behind him did not make the turn. The trailing security car sped up and rapidly exited the area while Liu's car slowed to a stop at the intersection and watched.

Jien Zenim saw the large crowd spill into the street in front of the lead security vehicle. That car stopped as the entire street was blocked by hundreds and hundreds of people who were holding anti-government signs and shouting, repeating some chant that Jien Zenim could not make out.

Jien's car stopped directly behind the first car.

Looking back, Jien saw that more crowds had spilled into the street behind his vehicle and that Liu's car and the trailing security car were nowhere to be seen.

"Liu, Liu. We are surrounded and being hemmed in by a large crowd. We need assistance."

There was no response.

Suddenly, as the crowd approached the first car, all of the doors opened and the security guards came piling out. They were all well trained and veterans of China's special, elite forces. Jien Zenim expected them to raise their weapons and confront the crowd, firing on them if necessary.

But they didn't.

They ran, and to Zenim's surprise, the crowd opened up a corridor for them to pass through.

At that same moment, Jien's driver and personal guard exited his car in much the same manner and ran directly through the approaching crowd, who let them pass.

Jien Zenim, thinking he could reason with the crowd and sway and manipulate them, opened his door. That was when he heard the crowd's chant clearly.

"Kill Zenim, Kill Zenim!"

That's when it finally dawned on him what this was about...the need for the trip to Burma.

A thrown stone glanced off Zenim's temple, drawing blood, as he rapidly got back in the car and closed and locked the doors. Desperately, he looked through the safety glass separating him from the front seat and saw that there were no keys in the ignition. The driver had taken them with him.

The crowd reached the vehicle and began beating on it with sticks, rocks and anything hard they could lay their hands on. Quickly, that beating gave way to a violent rocking and within a few seconds the armored limo containing the President of the People's Republic of China, President Jien Zenim, was turned completely over onto its top. Gasoline from Molotov cocktails was liberally doused over the entire car and then lit.

As the burning pyre produced a column of thick black smoke, and as Jien Zenim was literally roasted alive before the armored limo's gas tank exploded, ending his life, the people surrounded the burning vehicle and continued their chant.

"Kill Zenim, kill Zenim!"

From a block away, back at the intersection, Liu Liang watched from his own armored limo. When Zenim's limo exploded, he transmitted two simple phrases, reporting to his new leader.

"Lin Xin, this is Liu. It is done."

**July 18, 20:00, local time**

**The Oval Office, The White House**

**Washington, DC**

President John Bowers could scarcely believe it was over.

Well, the major fighting was over...the hard task of keeping the peace and reconstituting world affairs still remained. But the President knew that he and the American people and their allies would be equal to that task.

The necessary paperwork had been signed by the lone surviving member of the Executive Committee of the People's Republic Politburo, Lin Xin. The unconditional surrender was in place and millions of allied soldiers were now pouring into China and other remaining enemy controlled lands.

...and it was time to announce it to a waiting, anxious and war weary nation. A nation that would surely erupt into celebration and cheering the likes of which had not been seen since V-J Day so many years ago, before John Bower had been born.

"My fellow Americans, free citizens of the world.

"Tonight I am here to make an announcement of utmost importance to us all. It is an announcement we have longed for, dreamed of, fought for, bled for, and that many of our citizens and military personnel have died for.

"Four days ago, Jien Zenim, the leader of the People's Republic of China and the principle architect for the horrific war we have been involved in was killed in Kunming, the capitol of the Yunnan Province where he had been hiding. Fittingly, he was killed by an uprising of his own people.

"Today, July 18<sup>th</sup>, the remaining government and military leaders of the People's Republic surrendered unconditionally to our forces, finally achieving our V-C day...Victory in China..

"My fellow Americans, the war is over.

"While it will take many years, to completely rebuild and reconstitute our own nation and the nations of those afflicted by this horrific war, particularly the enemy nations, we will carry out that duty in the same manner that we have gone about winning the military conflict.

"Our doctrine will be to stamp out the evils of totalitarianism, tyranny and abject compulsion. No government, no religion acting as government, and no ideology that endorses such tactics and beliefs will stand after this conflict. Our enemies will be reconstituted into Constitutional Republics where basic unalienable rights are recognized and protected by their governments.

"We have persevered in a horrible conflict, but we have accomplished a great work for ourselves, for our children and for our children's children. We will not abandon that work at this hour.

"The road forward will be long and it will be fraught with difficulty...but not as hard and not as difficult as the path we have just trod. We can look forward to brighter days, days filled with peace and hope because of the sacrifice and commitment of so many...indeed, of us all.

"I will not take more of your time. I will not further delay your well deserved celebration. More information regarding conditions and policies will be announced by the various agencies of government in the coming days.

"For now, let us celebrate this victory, this day that we have all longed for, worked for, and suffered for. God be praised that we have survived to see it...and God grant that we shall always be worthy of keeping this peace that He has helped us win.

"With His blessings, I know we shall.

"God bless you all, God bless the United States of America!

"Goodnight."

## Epilogue

John Bowers would finish his term as President and be re-elected to a second term by a landslide.

In addition to establishing the Bower Doctrine for reconstruction and reconstitution after the war, which called for the establishment of Constitutional republics in all defeated lands, the President fulfilled another promise he had made to his cabinet and the people. He turned the awesome research, development, production, and manufacturing capabilities of the United States outward to space.

Before the end of his second term, first permanent bases and then flourishing colonies were established on the moon, Mars and in the asteroid belt.

Later administrations would push that threshold even further. It would expand within ten years to Venus and the Jovian moons, and then out beyond Pluto as stations were established there. But John Bowers would be recognized as the father of Man's expansion into space, and he and Norm Weisskopf, would be remembered as two of the three or four greatest Presidents in American history.

In all of it, he would be supported and encouraged by his wife, Sandy, who would also go down in history as one of the greatest first ladies in American history.

Lu Pham and his wife Song were brought to the United States under the tightest of secrecy and security. After a debriefing that lasted well over two years, and after psychological evaluations indicated that he was sincere in his agreements, he and Song were given new names and relocated to the Houston, Texas area. He worked there for the last twenty years of his life as a chief research engineer for NASA, where his work and activities were, by agreement, kept under tight surveillance and security for the rest of his life.

Based on his theoretical research and the virtual models he created, which models were created using Sandra McPherson's virtual modeling methodologies, Lu proved that faster than light travel was theoretically possible. In so doing, he added so much to man's understanding of quantum physics that his name (his new name) became as renowned and revered as the name of Albert Einstein.

Fifteen years after his death, on a small Jovian moon, a material was discovered that allowed for Lu's theories to be put into practice, making the construction of the first Faster-than-Light (FTL) drive possible. The drive would be named after Lu Pham's new name, Perry Lee, and would be called the Lee Drive. It would allow mankind to finally truly reach for the stars.

Jess and Cindy Simmons, Joseph and Elizabeth Trevor, Hernando and Maria Rodriguez and their boys Felipe and Jose, Billy Simmons and his new sweetheart Patricia Trevor, Leon Campbell and the girl he would ultimately court and marry, Ruth Johnson, Leon's mother Geneva and most other Americans would live out their lives in peace and freedom. That did not mean they would be perfect or without any problems or troubles. Free choice goes hand in hand with liberty and free choice means people are free to make mistakes.

But to people who base their lives and their choices on fundamental moral principles, which principles are based on a faith in a loving and merciful God, mistakes represent opportunities. Such opportunities allow people to learn, to grow and to improve. Improvement through this process, as long as the moral foundation is maintained by the people, allow for those people to become something much more, and much better than what they otherwise might have been.

This was the great secret and ideal that Lu Pham (later Perry Lee) was searching for...and ultimately found amongst those he once perceived as his enemies.

In keeping with this, Medal of Honor winner Leon Campbell was captivated by his late, younger brother's final letter. Over a several month period, he searched for and found Alan's friend from the war, Lonnie Thompson, the one who had taught Alan on the battlefield about Jesus and been instrumental in Alan's conversion before his death. Leon arranged, along with his mother, Geneva, to meet Lonnie and his family and they all became best of friends.

Leon and his wife and mother ultimately joined the church that Alan had joined. He raised his children to have faith in Christ like his mother had, and like his brother developed and shared before his death. Many years later, amidst great honor and respect, Leon became one of the General Authorities of that church, traveling the world proclaiming his faith.

Hernando Rodriguez would ultimately become the Mayor of Miami, and then a U.S. Congressman. Maria made the work of her life her family and home. When her parents became old and infirm, she took them in and she and her family took care of them. Years later she would be named Woman and Mother of the Year.

The Rodriguez's son, Felipe, would follow in his father's political footsteps and one day he would become the Governor of the state of Florida. Their son, Jose, would follow in his father's military footsteps and join the United States Army. He would make a career of his service and ultimately rise to the rank of Major General before his retirement forty years later.

Billy Simmons and his wife Patricia would inherit his parent's Lazy H Ranch, where he would work the fields successfully and expand the ranch until it became one of the largest and most successful operations in all of north Texas. The Simmons would wisely invest their profits into

banking, auto sales, and other real estate until they became some of the wealthiest people in that part of the country...though you would never know it by looking at them.

Billy would never lose his love of taking fishing and hunting trips up and down Clear Creek...and he would teach it to his three sons and two daughters, who in turn would pass it along to most of the eighteen grandchildren the five of them would produce.

All of them would live by the simple motto that Billy and Patricia both adopted after they got married concerning their own parents,

*"If I can be half the person my parents were, and raise my kids to be twice the person I am, then I will have accomplished much good in this world."*

...and they did.

Buhpendra Gavanker became the first elected President of India after the Allied Coalition Occupation Authority once again established free elections there. His good friend, Field Marshall Andrei Nosik, would become the President of Russia at about the same time. Both of them would serve the maximum amount of time allowed by law and they would spend many years working together for the improvement of their respective peoples in peace and freedom.

Reconstruction and reconstitution of the war-torn countries took well over thirty years. It was completed using the Bowers Doctrine, and paid for (or paid back) from the income of the rebuilt nations themselves, as their free market economies kicked in to the solar-system wide free markets.

Every one of the affected nations adopted a Constitutional Republic form of government based as closely on the American model as possible, without exception and without opposition. Those governments all included a clear separation of federal powers and the recognition of unalienable rights for their citizens, including freedom of speech, freedom of religion (as long as the religious beliefs did not deny or advocate the denial of unalienable rights), the right to self and societal defense through bearing of arms, trial by jury of one's peers, and every other right found in the Bill of Rights in the United States Constitution.

The resulting peace and prosperity would hold, in the main, for almost eighty years. Around that time, the lessons learned, and the sacrifices made during the great eight year world war began to be forgotten. The third and fourth generations were too far removed, and those who had experienced it, and those who set at the feet of parents and grandparents who had experienced, all began to die off. A few years after that the same old tired ideologies of elitism, collectivism and absolutism-but with new space-aged names-began to take root among some nations and people, and invariably, those ideologies once again led to tyranny in none form or another..

When they finally did, it would cause the cycles of time to turn and the wheels of history to grind away the golden years of mankind's peaceful expansion into space, leading to yet another military conflict, one that would not play itself out on a world-wide stage alone....no, at that later date, it would play itself out on an interstellar stage.

But the telling of that tale is best left to a future day and time.

## Afterword

The Dragon's Fury novel is a fictional account of a possible World War arising out of current events. The epitaph or summary of that horrific war can best be stated as follows.

First, simply said, *the price of liberty is eternal vigilance.*

Second, free peoples will not pay the price of eternal vigilance for the moral underpinnings of their liberty and its defense against threats both external and internal, then ultimately and unavoidably *the tree of liberty must be watered from time to time with the blood of tyrants and patriots.*

Third, let the following table, that documents the potentially horrific price of the watering of the tree of liberty, attest to what is at stake in a modern, post-911 world unless we remain vigilant:

### WORLD WAR III CASUALTIES APPROXIMATE NUMBERS – DEAD AND WOUNDED

#### ALLIED CASUALTIES

	Military		Civilian	
	Dead	Wounded	Dead	Wounded
USA	3,510,500	4,765,500	9,750,500	14,250,500
Canada	875,000	1,650,500	1,060,000	1,985,500
UK	2,050,500	2,750,500	1,450,500	2,205,500
EU	2,950,500	4,950,500	5,200,500	7,100,500
Russia	6,505,500	9,240,500	14,960,500	18,350,500
Brazil	1,875,500	3,500,500	1,450,500	1,675,000
Australia	1,550,500	2,500,500	1,950,500	3,100,500
Japan	450,000	1,100,500	6,575,000	7,550,000
Israel	980,500	1,700,500	950,500	2,550,000
Taiwan	508,500	2,500,500	3,475,000	4,500,500
<b>TOTALS</b>	<b>21,557,000</b>	<b>34,660,000</b>	<b>44,093,500</b>	<b>63,268,000</b>

#### CAS/GIR CASUALTIES

	Military		Civilian	
	Dead	Wounded	Dead	Wounded
China	49,510,500	85,570,500	75,500,500	98,350,000
India	41,460,000	72,450,500	63,250,000	84,350,500
GIR	25,350,000	41,200,500	42,500,500	55,540,500
<b>TOTALS</b>	<b>116,320,500</b>	<b>169,221,500</b>	<b>181,251,000</b>	<b>238,241,000</b>

Finally, let the words of the ancient Greek philosopher, Sophocles, who spoke them over twenty-three centuries ago, provide historical perspective and reference to the truth of these principles:

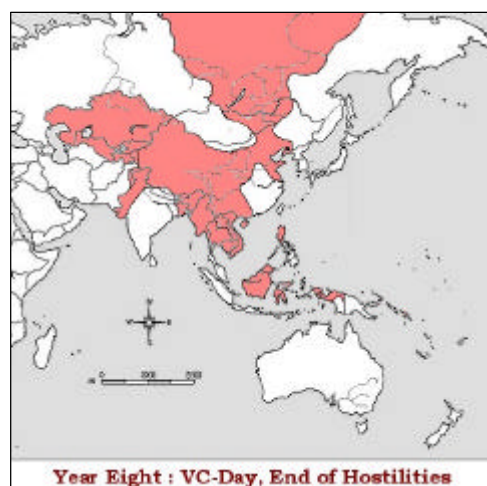

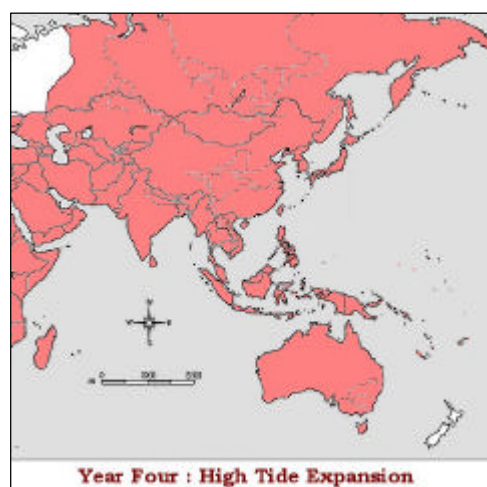

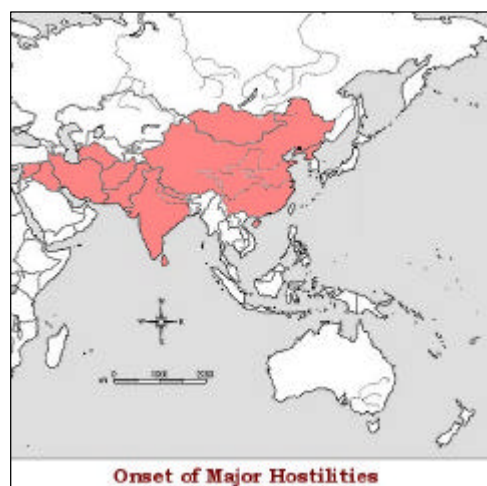

*Far-stretching, endless Time  
Brings forth all hidden things,  
And buries that which once did shine.*

*The firm resolve falters,  
The sacred oath is shattered;  
And let none say, "It cannot happen here."*

The End of the Dragon's Fury

## Glossary of Terms and Acronyms

<b>TERM/ACRONYM</b>	<b>DEFINITION</b>
<b>AAW</b>	Anti-Aircraft Warfare
<b>Abrams</b>	Premier main battle tank designated M1A1.
<b>ABM</b>	Anti-Ballistic Missile
<b>ABS</b>	American Broadcasting System
<b>ADCAP</b>	Advanced Capability
<b>AEGIS</b>	Advanced phased array system for tracking & engaging air
<b>AH-64</b>	Most capable western attack helicopter called Apache.
<b>AIM-999</b>	Advanced, electronic firing cruise missile called Hail Storm
<b>ALCM</b>	Air Launched Cruise Missile
<b>ALRAAM</b>	Advanced Long Range Anti-Aircraft Missile
<b>AMRAAM</b>	Advanced Medium Range Air to Air Missile
<b>Apache</b>	Dangerous attack helicopter designated AH-64.
<b>APS</b>	Armored Personnel Carrier
<b>APSRON</b>	Afloat Pre-positioning Ship Squadron.
<b>ARCM</b>	Anti-Radiation Cruise Missile
<b>ASAT</b>	Anti-Satellite
<b>ASDS</b>	Advanced SEAL Delivery System
<b>ASROC</b>	Anti-Submarine Rocket assisted torpedo
<b>ASV</b>	Armored Security Vehicle designated M117A
<b>ASW</b>	Anti-Submarine Warfare
<b>ATO</b>	Asian Theater of Operations
<b>AV-8B+</b>	VTOL or STOL fighter-bomber used by U.S. Marines called
<b>Avenger</b>	AAW variant of HMMWV carrying Stinger missiles.
<b>AWACS</b>	Airborne warning and command aircraft
<b>B-1B</b>	Advanced supersonic, Long range bomber called Lancer or
<b>B-2</b>	Sub-sonic, long range stealth strike bomber called Spirit.
<b>Backfire</b>	Supersonic, long-range Russian strike aircraft, designated TU-
<b>Badger</b>	Subsonic, 1970's Russian strike aircraft export designated TU-
<b>Bandit</b>	Enemy Aircraft
<b>BATF</b>	Bureau of Alcohol, Tobacco and Firearms.
<b>BDA</b>	Bomb or Battle Damage Assessment
<b>Bear</b>	Prop-driven Russian strike/recon aircraft designated TU-142.
<b>BMD</b>	Ballistic Missile Defense
<b>BRITREP</b>	British Representative
<b>Buddy Stores</b>	Refueling tanks
<b>C-90A, B</b>	Huge surface-wave lift transport aircraft developed by the U.S.
<b>CANTFOR</b>	Canadian Task Force
<b>CAP</b>	Combat Air Patrol
<b>CAS</b>	Coalition of Asian States
<b>CBC</b>	Continental Broadcasting Company
<b>CBG</b>	Carrier Battle Group
<b>CBT</b>	Carrier Battle Task Force
<b>CENTCOM</b>	Central Command.

<b>VLS</b>	Vertical Launch System
<b>VTOL</b>	Vertical Take-off and Landing
<b>WMD</b>	Weapons of Mass Destruction
<b>WNN</b>	World News Network
<b>XO</b>	Executive Officer

### About the Author

Jeff Head is a 50 year-old father of five children living in southwest Idaho. He and his wife of 28 years are also proud grandparents of five grandchildren, two grandsons and three granddaughters.

Mr. Head has worked as a designer, engineer, manager, director, and a consultant in the defense, nuclear power, and computer industries. Among other projects, he has worked on the A-7 attack aircraft, the Multiple Launch Rocket System, the San Onofre nuclear power project, and the Theater High Altitude Air Defense System.

While working as a director at the Structural Dynamics Research Corp., Mr. Head was involved in efforts at the Strategic Operations Division of Thiokol to improve operations in the years following the shuttle Challenger disaster. As a result of that effort, in 1992, Mr. Head was awarded a Vice President's award from Thiokol.

From 1995 through 2000, as a program manager and consultant, Mr. Head traveled overseas on behalf of U.S. firms to help establish product development operations in the Far East, India, and Eastern Europe.

Since September 2003, Mr. Head has worked for the Federal Government helping maintain and protect regional infrastructure in Idaho.

Mr. Head has also been involved in civic events including the "Klamath Basin Water Crisis" in Oregon in 2001. In August of 2002, Mr. Head accepted a "Person of the Year" award from the FreeRepublic web forum as a result of his involvement at Klamath Falls and his 9-11web site, "The Attack on America Site". In October of 2004, Mr. Head was awarded a "2004 Ronald Reagan Gold Medal Award", from the National Republican Congressional Committee, and in 2006 he received a Congressional Order of Merit award from the same organization.

Mr. Head is also active in his Church and involved with the Boy Scouts of America, having attended and helped with rafting trips, winter camps, and wilderness trips in the mountains of southwest Idaho.
