**WORLD WAR**  
**Against America and the West**

**JEFF HEAD**

With Forwards by Larry Schweikart and Matthew Bracken

## *What if...*

*What if a future presidential election in the United States goes entirely and unexpectedly awry?*

*What if the fundamental Islamic nations unite to wage all-out holy war in the mid-East...and then ally themselves with Red China?*

*What if, during all of this, the North Koreans become emboldened to make a massive invasion of South Korea?*

*“Dragon's Fury –World War against America and the West”, is that story...*

# FOREWORDS

## Larry Schweikart

Co-Author of, *A Patriot's History of the United States*

Author of, *America's Victories: Why the U.S. Wins Wars and Will Win the War on Terror*

From the moment an unholy alliance of Asian and Islamic powers forms to make war on the United States, the future of liberty in this thriller is in doubt. Using secretly developed, high speed, super-cavitating torpedoes and mines, the Red Chinese and their allies threaten to do what no power has done in the 20th century-dominate the United States at sea. Jeff Head weaves a story of what World War - perhaps the beginning of which is our war on terror - would be like, and it isn't pretty. It is, however, entirely plausible.

For 20 years, the United States has watched the Chinese communist governments conceal their socialist character and pretend to be free market capitalists, often at our expense. They have acquired high-level technology, especially during the Clinton administration, without any concessions to internal freedom, and have flagrantly constructed a blue-water navy with one sole purpose: to challenge American dominance in the Pacific. Sadly, even in the otherwise erstwhile Bush administration, such advances have not been tempered, let alone reversed, with the likely result being that, barring a remarkable weakening of China from the inside (as occurred with Soviet Russia), a conflict with the Red Chinese is nearly inescapable.

The good news is that, presently, the United States retains a quality edge over our potential enemies, and our submarines are superior by several orders of magnitude. But the Chinese see this as an incentive to improve their own programs. While an alliance such as Jeff describes is unlikely in the short term, the world has witnessed much stranger bedfellows at the drop of a hat.

Jeff's is a story of heroism, sacrifice, pain, and redemption. His analysis and descriptions are so prescient that we must hope it remains a work of fiction and not history before-the-fact.

## Matthew Bracken

Author of, *Enemies Foreign and Domestic*, and, *Domestic Enemies, The Reconquista*

If you enjoy reading big—and I mean big—techno-thrillers, then *Dragon's Fury* by Jeff Head is for you. Imagine a history of World War Two, from the invasion of Poland until Hiroshima: that will give you an idea of the sweeping narrative in this “future history” of the next world war. In Jeff's scenario, communist China forges an alliance with a unified Islamic world, and brings a reluctant India aboard. China leads the way, determined to drive the U.S. out of the Mid-East, the Indian Ocean, Asia, and the Western Pacific.

The war begins with a series of surprise attacks on American naval forces. The Chinese have secretly developed and deployed new classes of weapons the US Navy cannot counter, including hyper-speed super-cavitating torpedoes. With their breakthrough weapons and millions of expendable soldiers, victory after victory goes to the Chinese-led axis, until much of the free world is crushed and subjugated.

The defeat of the United States seems certain, but America and her remaining allies rise to the challenge. The United States deploys its own breakthrough weapons and, without giving away too much of the plot, Jeff's techno-thriller shows that space will be the ultimate “high ground,” to determine the outcome of the next world war.

In such a scenario could today's bitterly divided America unify and rally behind a strong wartime President, and endure the hardships of years of defeat? Could such a war be fought, and not go nuclear in the opening battles? I wondered about these questions, but in *Dragon's Fury*, Jeff Head weaves a complete story line that plausibly suspends the readers' disbelief, and takes him or her along for a wild ride that is the next world war.

## DEDICATION

I must dedicate *Dragon's Fury – World War Against America and the West*, to my World War II combat veteran father. He passed away on January 25, 2004. He was a hard working, all-American, faithful Christian man...husband, father, grandfather and great-grandfather, and my dear friend. In his youth, he volunteered to defend his nation, his liberty, and his way of life, against the Empire of Japan, serving in combat in the U.S. Navy in the Pacific.

His teachings and upbringing, next to that of my Savior, Jesus Christ, have influenced my moral, political, spiritual and career thinking like no other. He was a great fan and supporter of this work and his insights and support made a great difference to it. I only wish he could have lived to read it in its entirety. Dad, I miss you, and am holding a copy in trust for you when we meet again.

I also dedicate this to my older brother, Greg, who died of cancer on July 3, 2004, at the age of forty-nine. He and I were only 15 months apart. We went to the same High School, played on the same football teams, hauled hay in the hot Texas summers together, served missions for our church at the same time, roomed at college together and were close. We both had a great passion for the outdoors, particularly the American intermountain west. In the end, he fought valiantly for life over a two and a half year period when he was expected to only live six months. I respected his stamina, his zest for life, his caring spirit, and his ultimate desire to emulate his Savior, irrespective of any difficulty or shortcoming. He also was a great fan of this work, and I look forward to handing it to him in its entirety over there, across Jordan, when we meet again.

Finally, this novel is dedicated to lovers of liberty everywhere, and to the principles upon which true liberty rests: faith, morality, virtue, honor, free will, commitment, and eternal vigilance. It is especially dedicated to all of those Americans and their families who have served in defense of liberty and sacrificed their time, their efforts, their very lives and the lives of their loved ones for that cause, at home or abroad.

## ACKNOWLEDGEMENTS

Special thanks go to my family for their patience while I produced this work. In particular to my wife of over 28 years for her love and forbearance, and to my two sons, Jeff and Jared for their proofs and input. Also, to my oldest daughter, Katie, who has been one of the biggest fans of this work and who has read all of it as it was written, giving her input and suggestions.

Also to my mother, Georgia, whose Christian love, and dedication to her family have always inspired me. Mom, may we hold firm and true in the faith until we are gathered back together with all of our loved ones in Christ.

Thanks to Chris Durkin of Pennsylvania for his reviews, contributions, edits, and his unwavering support and encouragement.

Thanks to Joanie Fischer of Pennsylvania for her edits, reviews, contributions, for her faith in this work, and for her encouragement throughout the entire project.

Thanks to Matt Bracken of Florida for his reviews, his input, his forward to this novel, for his own patriotic novels, and for his service to our Republic as a U.S. Navy Seal.

Thanks to Larry Schweikart of Ohio for his input, recommendations, for the forward to this novel, and for his own great books and novels which have been an inspiration to me and so many others.

Thanks to Matthew Riley of Connecticut, may God rest his soul, for his reviews and edits and for his military service to our republic.

Thanks to Arthur Hines of North Carolina for his input, which included excellent suggestions for the cover of this novel. Thanks also to Art for his service to our nation on the point end of the sword in Vietnam.

Thanks to Bruce Elmore of Illinois, for his contribution regarding the Arab terrorist, Ahmed Haddad, and for his service as a U.S. Marine.

Thanks to Luis Gonzalez of Florida, for his ideas on a more personal writing style, and his draft sample introducing the Chinese President.

Thanks to Cory Emberson of California for her reviews and edits.

To each of these and all others, who have encouraged me and put up with my ramblings, I say again, a heartfelt thanks.

## WHY DRAGON'S FURY?

I have been the recipient of the very best the United States has to offer. I have lived in prosperous times brought on by the strength and vitality of free enterprise in a free market that is based on liberty and broad-based faith and morality. I have also had the opportunity of world travel in my career and observed many other cultures and people.

Over the last thirty or more years, I have watched, with growing discomfort, as our traditional American society and system of government, and everything it is based upon, has been attacked, compromised, watered down, and corrupted by individuals, institutions, and governments, both foreign and domestic. It's happened gradually, as most Americans have been too busy with professional and material pursuits to notice it.

In the mean time, our most sophisticated technologies have been given away, sold, and stolen, and potential enemies are building up while we "staff down". The wealth of our markets has been ill used by manipulators, politicians, and regimes who are not our friends...who represent the antithesis of our way of life, our system of government, and the values that it is all based upon. In addition, our entire society has been watered down by a form of political correctness and immoral socialization that I believe the founders of this nation would have fought to prevent.

The result is that we have become vulnerable. On September 11, 2001, we were shown how vulnerable in a horrific way. In order to avoid much worse, we must be vigilant and grasp tightly to the heritage and moral values that have made this nation strong, and re-institute them into our lives and society. If we do not do this, then events could lead to a scenario where we risk losing our liberty, our way of life, and our very lives...all of which have been purchased in blood by those who have gone before.

This novel has been produced with the hope, that while reading it, individuals will be inspired to look to the foundations of their liberty, and have a desire to restore the strength and vitality that has kept that liberty alive and shining in America as a beacon to the world for so long. This is the underlying reason for "Dragon's Fury", along with a simple desire to produce a compelling, exciting story that is simply a "good read".

## Prologue

**November 28, 1970, 20:35 local**  
**Naval Headquarters, Research Center**  
**Hanoi, North Vietnam**

Lu Pham rolled back from his workbench, set his slide rule down, and swiveled his stool around. Placing his elbow on the desk and his hand under his chin, he sat, reflecting.

"So", he thought, "it can be done! ... the secret is simply maintaining the wave form that keeps the cavity stable once that cavity has been achieved".

Lu had been working on this problem for over a year, spending uncounted off-duty hours creating the mathematical models, which would prove or disprove his theories. In his capacity as a naval research officer, Lu was working to reduce the noise signature of North Vietnam's coastal craft by studying the cavitation the propellers created and finding ways to reduce it.

He was being funded in the endeavor by monies from the Soviet Union, the USSR having earlier become aware of Lu's remarkable mathematical abilities. In the process, Lu had become obsessed by the cavitation itself. In the environment of his official research, cavitation was a bad, dangerous thing. Cavitation of that sort meant sound, sound that the detection devices of the imperialist U.S. Navy could detect and use to either destroy the craft of his nation, or to avoid them.

But the cavitation that Lu was predicting was a far different matter. Such stable cavitation could only be created at extremely high speeds, and only by a proper, sleek body moving at those speeds...towards the ships of the U.S. 7<sup>th</sup> fleet. Lu only had to document these findings and present them to his superiors. He was sure they would jump at any chance to deliver a decisive blow to their enemies...to his enemies.

In his mind's eye, as so often occurred when he contemplated delivering a blow to the Americans, he once again saw the fertile undergrowth, the moist, dense forest. Yes, there! he could just see the huts of the village...and as soon he saw them, he always caught the same faint, sickly, coppery odors on the wind. In his mind, as he proceeded towards the village, he came into the clearing where he could see more clearly the bodies of his father and his mother. They were in the center of the village, lying on the ground where the US Special Forces "Phoenix" Team had left them after disposing of this particular Vietcong coordinator whom their intelligence had correctly identified as an instrument sent there by the North.

**December 9, 1970 15:30 local**  
**Commandant's Office, Naval Research Center**  
**Hanoi, North Vietnam**

"Comrade Lu, let me understand, you have developed a mathematical model which leads you to believe that a weapon can be developed to attack the US 7<sup>th</sup> fleet off our shores and inflict severe damage on them, potentially even damaging or destroying their aircraft carriers?"

"That is correct", replied Lu Pham to Captain Ho Chien Thom, who was the Commandant of North Vietnam's fledgling Naval Research effort.

"The device I contemplate would travel at 300-400 kilometers per hour and could reach the imperialist's ships before they could respond to it. One of the key difficulties will be designing the shape of the weapon. The leading edge must be precise in order to create and maintain the cavity through which the weapon moves. Another difficulty will be the propulsion system, which must be adequate to achieve and maintain the speed to create this cavity. Finally, we must find a way to deploy the device..."

The Captain cut him off.

"Lt. Lu, did you contemplate that these difficulties make it impossible for us to produce your weapon? Have you forgotten that we rely on our comrade socialist nations for all of our modern devices and conveniences?"

Now raising his voice, Captain Ho continued, "Have you forgotten that the very slide rule you use to make these pipedream calculations was not created here?"

Seeking to quickly respond and to abate the unforeseen anger of his commander, Lu responded...and succeeded in only increasing that anger.

"No, comrade Captain, I have not forgotten these things; but, respectfully, I believe that such a weapon can be developed. I also believe that those nations assisting us in this struggle would be more than willing to provide the resources once they see the potential of what this slide rule has produced."

Unfortunately, at 23 years of age, the young lieutenant was very naïve and not savvy, or experienced in the politics of the so-called "People's struggle" in which he was involved. Capt. Ho, far more experienced in such realities, understood that to propose such a use of resources in the current circumstances would be damaging to his own standing, not to mention the barely adequate funding they were currently receiving.

“Lt. Lu, I need not remind you that most of your associates are involved in this struggle in a far different manner than you. The party leadership and our friends in the Soviet Union have recognized your capabilities and have employed you in important research. The effort to which you must employ *all* of your time and intellect is to reduce the sound signature of the propellers of our existing vessels, while allowing them to operate more efficiently. Such an improvement will help our small navy, and please our socialist brothers who will use it on their ships and send more funding, and more weapons to our navy.

“Instead of considering these facts, you have spent considerable amounts of the People’s valuable time in researching an effort not related to your primary assignment. Comrade, despite your considerable talents, and despite the noble sacrifice of your parents, you are failing the people.

“So, let me make it very clear to you ... if you do not want to be transferred to the forests and mountains of Cambodia, or to the rebel provinces to the south, I suggest you immediately redirect your efforts to your primary assignment. Is this understood? In the mean time, leave the results of your research here and I will find a way to mention it to the party leadership.”

“Yes, comrade, I understand.” Lt. Lu Pham somberly replied as he stood, saluted, handed over his documents and then retired from his commander’s office.

After Lu Pham walked out the door, the Captain momentarily considered the calculations and documentation he now held in his hand. Shaking his head in disgust, he quietly folded them up, and then threw them into his bamboo waste basket and gave them no further thought.

**December 9, 1970, 3 hours later**

**Commandant’s Office, Naval Research Center**

**Hanoi, North Vietnam**

The old man carried out his janitorial duties as he did every evening in the Naval Research Center. Stooped and moving slowly due to the inevitable arthritis of old age, he cleaned the floor and then emptied the garbage from each of the small bamboo wastebaskets into the trash bag on the cart which he pulled. He had been doing this - day in and day out - for years.

... and, as he had also done for years, he ensured that the waste, which tonight included the Lt. Lu Pham’s discarded computations, was placed in a separate, cleverly concealed bag on his cart.

Later that night, the contents of the bag were en route to the old man’s true employer...the intelligence services of the People’s Republic of China.

**Twenty-six Years Later**

**March 23, 1996, 19:00 local**

**Corporate Headquarters COSCO**

**Beijing, China**

Chin Zhongbaio, President of one of the largest shipping companies in the world, and a member of the Politburo of the Chinese Communist Party, watched as the General entered his office.

“General Hunbaio, please sit down. Is it true? Have your people in COSTIND located Lu Pham and brought him here to Beijing?”

The General, who commanded his nation’s weapons research and development efforts, knew that Chin was aware not only that Pham had been found, but that he was here waiting to meet the President of COSCO as they spoke. As the General took a seat in front of Chin, he replied,

“Comrade Chin, as you know, we found him teaching in Hanoi two years ago and approached him. After developing a friendly relationship, our operative showed him a copy of his long lost research documentation on cavitation. From there it was a simple matter to recruit him into our services as he has a long-standing desire to work against the Americans.

“All arrangements were made for him and his family. The importance and secrecy has been explained to him along with the consequences of betrayal. He has accepted and he is waiting outside in your reception area as we speak.”

Chin pondered the General’s words, then without further conversation, he simply said,

“Please, General, have your people bring him in”

The General motioned to his aide standing at attention by the door, and the aide immediately left the room. Presently he returned with a spectacled man in his late-40’s and whose face and build showed his Vietnamese heritage.

“Mr. Lu, or should I say, Captain Lu? How nice to meet you. I hope that your family is well”

Lu Pham, recently given a commission and a Captain’s rank in the People’s Liberation Army Navy (PLAN), entered the room and walked resolutely to Chin and bowed slightly,

“Thank you, sir, my family is still adjusting to being here, but we have been warmly received. I must say, I am honored to meet the man who has helped make the Chinese shipbuilding industry the third largest on the planet and the fastest growing. As you are well aware, maritime applications, particularly naval applications, have always been my singular interest.”

Chin had been engineering this moment for two full years. Ever since the first meeting with General Hunbaio concerning super-cavitation, its possibilities and Lu’s amazing computations from

over two decades ago, he had dreamed of developing and deploying such a weapon, with all of its capabilities, for the People's Republic of China. Since that initial meeting, Chin had made it his personal business to be aware of every like and dislike of Lu Pham. He walked around his desk and surprised Lu with a warm embrace; and then guided him and the General over to a warm grouping of plush chairs in a corner of his office, with a magnificent view of the city. While motioning for the others to sit with him, Chin continued,

"Well, Captain, we have a clear mutual interest, although your words regarding my personal contributions are too kind. More to the point, I believe we are in a position to supply the manpower and overall funding to a project you first contemplated many years ago...almost 25 years ago in fact.

"Simply put, we would like you to begin work immediately with General Hunbaio's agency and a staff of the best researchers, designers and manufacturers available, developing and producing these super-cavitating weapons for the PLAN. How does that sound?"

Lu was as absolutely thrilled at the prospect, and he wanted to let Chin know. But there was an issue nagging him he felt he had to get in the open,

"It sounds almost too good to be true sir, and something I have dreamed about for many years; but, one question if I may?"

"By all means", Chin replied.

"You have had this information for years. Why do you require me?"

Chin thought for a moment, then motioned to General Hunbaio,

"Well, General, why don't you let Lu know why, after all of these years, we require the assistance of the man who came up with these remarkable mathematical models?"

General Hunbaio spoke without hesitation,

"Lu Pham, sometimes there are individuals who are given great insights. All of our researchers, those who have had the clearance to look at your work...and there have been quite a few...agree that the principles are accurate, but they have not been able to bring the work forward into reality.

"Quite frankly, all of their efforts failed. It became apparent that we needed to find the man who developed the models themselves, and now here you are. It is as straightforward as that.

"Of course, I want to stress again that once this work begins, you and your family will live in a secure environment. You will be working in a facility that is very self-contained, in a town specifically built to house that facility. No breach of security can be allowed. Any deviation from areas of research or lines of work specifically associated with your task will be viewed most severely. I know we have covered this with you and your family, but I wanted to re-emphasize it to you."

Hearing this again did not faze Lu Pham. He expected as much, and expected he would hear it over and over again in the future.

"General, I do understand. I understood 25 years ago. I kept quiet regarding this for all of those years. I can do so as I work on it now."

### **Seven Years Later**

**May 13, 2003, 18:30 local**

**Tianammen Square**

**Beijing, China**

As they walked out of earshot of staff, away from the press, and surrounded by a "wall" of electronic security, The Chinese President accompanying the President of India said,

"These talks have been gratifying. I am pleased we have been able to come to an understanding between the two of us, which will ultimately allow our peoples to embrace the "Three Wisdoms" we have discussed, and which will set a pattern for the peace-loving, socially-minded people of world".

Reflectively, the Indian President paused and turned towards the President of the People's Republic of China and replied,

"Ah, it is just so Mr. President. Our understanding, rooted in the fundamental principles of the Three Wisdoms, will move our nations towards the realization of goals which will improve the lives of our people and catapult them to their rightful place on the stage of world affairs. Our current discretion and the arduous road ahead will ultimately lead to the emergence of an economic and social order that will sweep the earth."

After a moment of thoughtful consideration, the Chinese President answered,

"As the leaders of the two most populous nations on earth, it is past time that our people began influencing affairs rather than being influenced by them. We shall employ the same methods that have worked to our benefit with the most recent undisciplined and decadent American national leadership.

"Who would have thought that we could make so many gains in such a short period of time? They have literally given us the keys to produce this vision, and at such low cost. By starting early with decadent leaders in other areas, we will guide them in like manner over the next five or six years.

"In the meantime, China will patiently delay plans for reunifying our nation with our rebellious island province. We will also wait to excise, the corrupting influence of the Americans; not only from the South China Sea, but from all of eastern Asia. While we do this, we will continue to encourage them to pour resources into the "economic development" of our own nations."

The Indian knew that America had been penetrated to the highest levels throughout the 1990's. He had his own operatives working to affect similar outcomes in other regions. He was also tired of the American juggling and posturing in his own region. He had witnessed it for decades, playing off the fundamentalist, terror-supporting Pakistani government against the Iranians...and against his own India. He knew the Chinese, who had historically been one of his own nations largest concerns, had been working to penetrate and turn many within the American government and industry. He had recently decided that it was time to open confidential dialog with the Chinese over these very issues.

Just the same, to hear it put so bluntly...

"You are to be commended, Mr. President, for both your vision and your forbearance. Now, after further reflection, I believe I will enjoy some of that Earl Gray tea you offered."

The Chinese President laughed and patted the Indian on the back while directing him back towards their "official" discussions on "improving relations" and "border disputes".

### **Five Years Later**

**August 6, 2008, 15:30 local**

**Tianjin Olympic Centre Stadium**

**Tianjin, China**

The WNN camera panned across the magnificent stadium during a break in the action on the field. The 2008 Olympic football preliminaries were under way and although the truly massive audiences would not begin tuning in until Friday, August 8<sup>th</sup>, nonetheless, a large audience was watching the live broadcast of these preliminaries.

Amidst much talk and praise of the stadium here in Tianjin, and even more talk as the sports casters compared this stadium to the National Olympic Stadium in Beijing where the opening ceremonies would occur, unheralded in the distance, during one of the camera shots, a large, sleek, and imposing naval vessel could be seen making her way in Tianjin harbor.

The ship was the PLAN aircraft carrier, 83 Shi Lang, and this was the second time she had been underway since her surprise launch four weeks earlier. Originally the Russian Varyag, the vessel had been purchased in 1998 from the Ukraine after the fall of the Soviet Union in 1991. She was purchased under the auspice of a Chinese holding company turning her into a floating casino. At the time of her purchase, the Varyag had been approximately 70% complete. The Ukraine simply had not had the funds to finish her, and her condition was slowly deteriorating.

Sister ship to the Russian, Kuznetsov, which the Russians had completed and made operational, the Varyag was designed to displace 67,500 tons and carry in excess of 40 combat aircraft, making the two sister ships the second largest aircraft carriers in the world, next to the American super carriers.

Ultimately the Ukrainians had removed all propulsion, weapons, communications, and detection systems and the empty carrier was towed to China in 2001 and 2002 where it was taken immediately to the Dalian Naval shipyards and kept under tight security. The holding company had gone out of business by that time and the ship came under direct control of the Chinese Navy, the PLAN, who began working on her. In 2005, after several months in dry dock, she emerged at dock side painted in the standard PLAN colors. Great speculation followed the ship during this entire episode of several years, trying to deduce what the PLAN would do with her. Some felt she was just being studied to prepare for the building of indigenous Chinese carriers, others felt she would be given minimal operational status and serve as a training vessel until China could build her own carriers, and still others believed she would be made fully operational. In a sense, all of these thoughts were right.

The Chinese themselves removed all doubt in July of 2008 when the Shi Lang was launched and sailed away from Dalian shipyards under her own power. This move caught several western military analysts and intelligence agencies by surprise, thinking that the Varyag was at least some months away from any operational capability. What surprised them even more was when, two days into her voyage, a squadron of twelve, advanced SU-33 aircraft landed flawlessly on her decks and began practicing with the large carrier in take-off and landing operations.

As it turned out, the Chinese had secretly purchased the aircraft from Russia in late 2006 and sent twenty-four of their best pilots there to train with the Russians in operating the fighters...first off of training installations on land, and then off of the Kuznetsov.

Now, here the Shi Lang was again, underway in Tianjin harbor, and although she went unnoticed by the sports casters on WNN, military analysts throughout the west saw her, and took note.

## Chapter 1

*"All warfare is based on deception."—Sun Tsu*

**November 3, 10:00 local**

**Politburo**

**Beijing, China**

The figure seated at the head of the table had not moved for the better part of an hour. The only detectable motion came from the flickering lights cast by the two-dozen television monitors on the wall on the opposite side of the room as they danced across his features. President Jien Zenim still personified the "new" China of his creation. Having risen through the ranks, having been the "mayor" of the Capital, having beguiled and wooed the West with the promise of wealth and influence, it was as if he had been born to rule. As a result, Jien Zenim was long used to wealth and power, and he was in possession of both right now.

He whispered a few words into the microphone attached to the tiny headset he wore, and there was discernible motion in the darkness along the side of the great conference room. A few seconds later, a navy-blue suited aide appeared by the Chairman's side.

"Tea."—Said Jien Zenim.

The aide rushed away and moments later the rustle of curtains was heard as the aide returned with a cup of tea. President Jien's preference was Earl Grey tea over the local fare; a taste acquired while attending Oxford years ago. Only his most trusted advisors knew of the secret "passions" the President had for things from the West. Earl Grey tea was not the only one.

On the screens, all of the major U.S. networks were covering the same story. It was always like that on Presidential election night. But this time, the East Coast voting booths would close in an hour, and results would not start coming in until four hours later. The timeworn tradition of exit polling had been one of the casualties of the 2000 Presidential election. As a result, the media was directed by law to only report the official State Board of Elections results. Those results would not be released until after the last precinct shut down in the West. The pundits on the screens sat and made empty talk while doing a re-hash of the two major contender's campaigns.

A soft, electronic chime drew the President's attention to the arm of the soft, custom-made Natuzzi chair. He pressed a button and spoke into the microphone with flawless English.

"Good evening, David - how are Jennie and the kids?"

"Fine, Jien! Everyone's great. And your family?"—the voice on the other end of the line was perhaps one of the best known and trusted voices in America. It was a voice millions heard nightly coming from their televisions, a face they associated with every major news story reported for the last two decades. Some called him "The Conscience of America" for his rousing and thought provoking commentaries.

"Fine, David, thanks for asking. So, do you have money on the Packers again this year, or are you finally getting smart?"

The two men laughed.

"No, Mr. President. As you know, I've decided to back a winner for a change."

Jien Zenim's face registered a hint of repugnance. There were few things he detested quite as much as a traitor; but, they certainly had their uses. And the higher placed the better for Jien's needs. If you promised them money, they take it in the belief that it will make them more powerful in the "new" world they are helping to bring about, and help them maintain a certain lifestyle in that new world. But individuals like David Krenshaw never realize that money will mean very little in the wake of "The Time of the Three Wisdoms", at least not for them. They could not fathom that in the one world to come, only power mattered; and that the power of the largest army in the history of the world was Jien's to command, and all of their money and influence would be forced to bow to that power.

"The Time of the Three Wisdoms" was the campaign Jien had designed many years ago to prepare the Chinese people for the coming conflict. It consisted of:

1. "All men and women are equal."
2. "All share equally in the bounty of a working and industrious society."
3. "One goal, one thought, one people for World peace."

He couldn't believe that these methods still worked. Even after all these years, the "Chairman Mao" method of propaganda was still the best way to manipulate the "people" into action, even if the message had changed somewhat.

That Mao's propaganda had been so effective in manipulating the masses to the near bankruptcy that the People's Republic had experienced was a testament to the success of those methods ... but not as great a testament as the near bankruptcy had been to the failed Maoist economic policies themselves. That's why the message had to change, and that's where Jien had been able to change things ... and he wasn't finished yet, not nearly so. As the Americans might say, "he was only just beginning."

He spoke again.

“So, David, what do you hear?”

“Jien, it looks like our projections were right on the money, so to speak. In a few hours we are going to be calling it for the old man, and by a wide margin. Unlike the last election, this one left no doubt about the winner. The General got almost three votes to every one of hers ... it’s a landslide. The Right is in ecstasy over the victory. After the surprising announcement by President Bush that he would not seek re-election, they are calling General Weisskopf’s entire campaign a “Phoenix-like” come back from the brink of disaster.”

Jien mused on this. After that Presidential announcement by Bush late last spring, the television pundits played nightly dirges for the GOP, and the written media hinted at scandals and vices as possible reasons for the decision. In fact, Jien was certain that his deepest moles had played a part in the misinformation and subterfuge that contributed to the sitting American President not running for a second term. But one of the givens in that business was that in circles of intrigue that ran as deeply as this, one could never know for sure.

On the heels of this coup, however it had come about, they had all quietly laughed at the old General of Desert Storm fame when he announced he would be coming out of retirement to run for the Presidency so late in the race. They were not laughing now.

It was an unexpected complication for Jien, and he was not pleased. He never was when things didn’t go as planned. It had reminded him of his displeasure and unease when bin Laden had prematurely attacked America in 2001. Or of the unexpected ease with which America had defeated Saddam Hussein in early 2003 with their “Operation Iraqi Freedom”. That victory had come in spite of fairly significant clandestine help that the Chinese had given to the Iraqis at the time. As with those instances, through this last summer, Jien had experienced growing concern and anxiety as the General gained support, and as the Right rallied around him like moths to a flame.

In the past, it had never really made any difference to him who actually won the American election because, as far as he was concerned, all of them were weak... though Bush had surprised him with his successful prosecution of the “War on Terror” and his steadfast insistence in defying the U.N. security council and invading Iraq and toppling the Hussein regime. But, in actuality, those events had ultimately served to relieve him, because it had allowed the PRC more time to further develop and prepare the greater plan. Through it all, had not the Americans, even Bush, continued to cow-tow to Chinese economic influence and continued to funnel billions of dollars worth of high tech, manufacturing and trade into the PRC, thereby continuing to fund China’s growth towards complete self-sufficiency and the realization of goals long planned?

But this man, Weisskopf, he was something else again. He was very direct and forthright in his message that such funding, such trade practice must change. He also commanded the greatest respect of the American troops seen in a life time. And so now there was going to be a real Warrior in the White House when the plan which had been set in motion so many years ago, entered into its final stages.

As he thought this, the continuing words of David Krenshaw broke through his thoughts and registered on his consciousness.

“Mr. President, we believe that the incident with his opponent’s husband won the election for the General. I know that the Senator probably wished her husband had been struck dumb when he made that insulting remark about the General’s age. We really believe that the General’s response to that was the key. The last thing any one of us expected was for old Weisskopf to challenge the former President, over an open microphone to a wrestling match, “I’ll take your sorry butt on anytime you’re game” will go down in history as the most effective campaign challenge of all times. When you add to this his selection of the first African-American as a VP candidate, Alan Reeves ... well it turned into quite the coup.”

Jien could not stomach any more of this at the moment, so he politely ended the conversation by saying,

“Well, David, I have a meeting to prepare for. Thank you for the call. As always, your views, advice and information are most helpful. Say hello to Jennie for me. And happy Thanksgiving if we don’t get to talk before then. Tell her I miss her oysters and wild rice stuffing.”

Jien Zenim had visited the United States on many occasions after the 1978 recognition of the PRC by the Carter administration. Some of those visits had helped set the stage for the unbelievable influence the People’s Republic had developed in Washington, D.C. during the 1990’s.

During one of those trips, he had been a Thanksgiving Day guest of David Krenshaw’s. It was then that Jien acquired another of his western “passions”: American cooking. Since that time, on Thanksgiving day, the Chairman would have his chefs prepare a turkey dinner with full trimmings, including Jennie’s famed oysters and wild rice stuffing.

“I will pass the compliment on Mr. President. Thank you again, and goodbye.” —the line went dead.

Jien stared at the television screens for a few more seconds and then spoke to those sitting in the darkness.

“Gentlemen, what are your impressions about the new President?”

The room lights came on behind the President, and illuminated twenty men seated around the great conference table. Some were wearing western-style suits, the rest wore military uniforms. A surprising number were relatively young and in their early to mid-fifties. One by one, they spoke into their headset microphones or read from prepared reports.

One said, “His experience in foreign affairs appears relatively light. He handled strictly the military operations of Desert Storm while the head of their Joint Chiefs and the President at the time handled the foreign affairs and cemented their coalition. We believe his statements regarding his intentions with their relationship with us are principally geared at solidifying his conservative base.”

Another added, “It is unlikely that the American congress and business community will allow him to go too far at this time anyway. Remember, in 2001 with the EP-3 incident, the efforts to develop and maintain any kind of boycott or more severe trade policies against us were just so much chaff in the wind. They have no stomach for it.

“As to his health, for a man of 70 years he is in remarkably good health. He still carries out an exercise regimen each day and appears very alert...”

Chairman Jien stood up abruptly and turned to face the members of the politburo over whom he presided, many handpicked from among his most trusted and committed allies. His face remained impassive, but there was a deadly look in his eyes.

Some members of the politburo shrank back into their seats preparing themselves for one of the Chairman’s infrequent flares of temper.

“You tell me no more than what I can see for myself on WNN!! I want more! Find leverage, find influence which we can use on this American General. He is potentially an adversary of great virtue and strength, but we must still find a way to “convince” him to recognize the inevitability of what is coming.”

“Our plans will go forward. Our official economic alliance with India will be announced in April, and this will certainly give his new administration something to think about. In the meantime, please arrange an official conversation between myself and the new American president as soon after his inauguration as possible.”

**December 16, 19:30 local**

**Jiangnan Shipyards**

**Shanghai, China**

Sung Hsu had worked for the COSCO commercial shipbuilding operation his entire adult life. Although he was mildly envious of the sleek and elegant lines of the two aircraft carriers that his sister Chinese company was building in the yards adjoining those in which he worked, he still took great pride in the commercial shipping he helped his own company produce. He was very proud of the fact that his company had grown to be the world’s dominant commercial shipping company over the last 3 or 4 years.

The completion of these shipyards in Shanghai, and many others like them around the nation, had allowed China to out-produce the Koreans and the Japanese both quantitatively and qualitatively. Originally these yards were meant to produce up to six of those sleek carriers at a time by the Jiangnan Shipbuilding Company, but a decision had been made to build only two such vessels. This meant that COSCO Container Shipping had been able to “lease” the additional capacity from their socialist brothers in 2002 and thus Sung had relocated here with his family.

Sung’s responsibilities as a production crew chief in the modular design bay area, meant he had been instrumental in getting a prominent feature to market for these fine container ships for which COSCO was becoming known. COSCO was touting the robust nature of the modular design of its Container vessels all over the world; a robustness that was focused on multiple uses, either as standard container ships, or, depending on the modularity ordered, as any variety of “RORO” (Roll On – Roll Off) carriers.

Sung was one of several such crew chiefs employed in each yard producing these ships. He was amazed at the various designs. The new modular design bays were set into three separate areas along the almost 300 meter length of the hulls of these great ships. In the normal container ship mode, these bays were filled with the standard container ship ballast and equipment that would allow the containers to be stowed securely on the ship and be handled in loading and unloading. In the various bulk modes, the modules consisted of special “holds” where various commodities like grain could be carried and economically loaded and unloaded from the ship. In the “RORO” mode, the modules represented areas where various types of mechanized equipment, from automobiles to tractors, could be stored with the special ramps that allowed them to be driven directly onto and off the ship. With all of this modularity and ingenuity, the ships’ structure, electronics and propulsion had been significantly upgraded over normal container ships. This made the ships very valuable to both Chinese and foreign shipping concerns.

Sung had spoken often of his love for this work to his family. His wife, and the pride of his life, his 12-year-old son (Yan), along with his parents and grandparents, knew how much he enjoyed his work, and the pride it gave him in his own contribution, and in his nation as a whole.

But there was one thing Sung had not talked about with his family, or with anyone else until today. It had started off as a nagging suspicion through his involvement with the construction of the first ship from these yards. Since then, with the completion of the next two vessels, it had grown into something Sung was fairly certain about. Clearly, the modular designs he had been told of, and for which his crews prepared these ships were not the only modular designs available. It was something he planned at long last to speak of with his superior this evening.

So, as he entered the office of Xien Lin, the foreman for all of the shipbuilding activities for the ship line upon which he was working, Sung said,

"Thank you Xien for taking a few moments to see me this evening before I go home. May I sit down?"

Xien had been a faithful employee of COSCO for over 25 years. He had grown with the company and was in an enviable position, one of great trust. He viewed his subordinates as critical cogs in the machinery of COSCO and in particular, was very impressed with Sung Hsu.

"Certainly Sung, please be seated, how can I help you?"

Now that he was actually in Xien's office to discuss his intuitions, he suddenly wished he'd just ignored the feelings. Nonetheless, he continued,

"Really, it is only a matter of interest I suppose. I have been involved, as you know, with the shipbuilding efforts of our mother company, COSCO, for well over 15 years. I have been involved from the beginning with the manufacturing portion of the new modular design for our container ships ..."

At Sung's hesitation, Xien tried to encourage his subordinate by interjecting,

"Yes, Sung, I am well aware of all of this, and am well aware of the fine job you have done in getting your crew not only up to speed on the manufacturing aspects required to produce the designs, but also in their proficiency under your management. What is it you need to bring to my attention?"

Having unconsciously sought, and now obtained, reassurance, Sung continued,

"Sir, I have always thought I was one of those most familiar with the modular aspect of our designs. However I have begun to realize, as we produce this fourth ship from this line, that there are many aspects of the modular design with which I am not familiar.

"It seems to me, from observing, and then investigating with some of the adjacent work crews, that there must be modular designs which we are not implementing here. If this is so, then I would like to learn about those modules and perhaps train crews in their implementation."

This statement got Xien's attention and caught him off guard. His surprise must have been evident as Sung again paused, this time with an apprehensive look on his face, hoping he had not overstepped his bounds. These very areas of discussion were what Xien had been told by *his* superiors to be on guard for. Having regained his composure, Xien asked,

"What aspects of the design, or what criteria have you seen that has led you to believe this, Sung?"

Now, completely unsure of the terrain upon which he had embarked, Sung could see no other course but to let his concerns spill out in full.

"Well, uh, sir, at first it just seemed that some of the adjoining structure was perhaps over-designed for the modules we employ here. Then, I took a more detailed look at the wiring harnesses and cables, as well as the structure and realized that there were provisions for corridors and electrical and mechanical functions which are not at all necessary to the modules we are building."

Xien sensed that this talented crew chief was professionally interested in the things he had clearly gone out of his way to look into. He hoped for Sung's sake that "professional" interest was all that it was. In that hope, he sought to diffuse the tension that had developed in the room and again reassure Sung.

"Well, Sung, you must keep these thoughts and speculations to yourself. I will raise your questions with upper management and see if there is anything to this, and if so, whether there is any role in it for you. In the meantime, I again caution you to keep these thoughts to yourself. We are not the only shipyard building these ships or adding the modules. Critical state economic secrets, or even national security interests could be involved.

"Your current position carries a lot of responsibility and you are well aware of the security concerns, so I am sure that I can count on you to be completely confidential regarding this. I will let you know at a later date what, if anything, I find out"

Sung knew the discussion was over and that he would have to rely on Xien to "get back" with him. Still, he felt better for having relieved himself of the concern and genuinely hoped his interest would ultimately be satisfied. Therefore, he made every effort to relay his appreciation and sincerity to Xien,

"Sir, confidentiality will not be an issue. I will gladly comply and await your word on this issue."

Relieved at Sung's demeanor and tone, Xien now dismissed his inquisitive subordinate,

“Fine, Sung, fine. You may excuse yourself and go home to your family”.

As Sung left the office, Xien immediately picked up his phone and dialed the number he had been instructed to dial if anyone ever raised such questions. Questions regarding the modular designs were outside the considerations of an individual’s job function, and were beyond that which the company and the state felt were appropriate. As such, they were a matter of national security.

**December 16, later that evening**

**COSTIND Headquarters**

**Beijing, China**

General Hunbaio reviewed the records of Sung Hsu, which had been placed before him. His subordinate had taken the call from the supervising foreman on the shipbuilding line in Shanghai earlier in the evening and the General had immediately been called. Although he rarely became personally involved in the review of potential security breaches, the importance of this project and its ties to other military projects under his organization’s development made this particular issue of utmost concern.

The General had also never been a man to let even a single blade of grass grow under his feet or to hesitate for the slightest instant. Turning to the head of security, the General said,

“I see nothing here that would indicate that this Sung Hsu is anything more than a loyal worker for the people. Yet we cannot risk the slightest exposure regarding the line of questioning he has raised. It is apparent that we have many fine crew leaders performing the standard modularity on our container ships. Therefore have Mr. Sung contacted tomorrow during work and interviewed in depth.

“If it is apparent that he is desirous and capable, we will transfer him to one of the shipyards preparing for the special modules. He and his family will of course have to be made aware of and committed to the security measures necessary for such work.

“If any information is discovered that would indicate that Sung Hsu is disloyal to the people, then handle the situation accordingly and dispose of his remains in such a way as to implicate the gangs which are known to frequent the areas surrounding the shipyards.

“In any case, any necessary measures which would fully contain the information are authorized. Just ensure that they serve to contain the situation, not draw attention to it.”

**January 12, 21:45**

**National Reconnaissance Office headquarters**

**IMINT Directorate**

**Chantilly, VA**

Tom Lawton squeezed his eyes shut and opened and closed them a couple of times. He was trying to keep from developing eye fatigue as he looked at the images on his screen. He cross checked and compared his figures again and continued to come up with the same conclusions.

“Bill, would you come over here and take a look at this? I have six separate airfields here in Southern China, all within 100 miles of the coast, where the PLA has installed what appears to be some kind of new carrier take off and landing facility. Take a look.”

Bill Hendrickson, Tom’s superior at the Imagery Intelligence Office (IMINT) got up from his desk and walked over to Tom’s terminal. “Ok, Tom, show me what you’ve got.”

As Bill pulled a chair behind Tom’s and sat down looking at Tom’s 27” color monitor, Tom started in. “What I have is dual runways installed at these airfields where the Chinese are practicing takeoffs and landings. This is a configuration I have never seen before, and the “landing decks” are set into the ground so SU-30’s make their approach and landing just as if they were approaching a carrier deck. If you look here,” and Tom pointed to an area on the screen with the cursor from his computer, “you can see what can be nothing other than arresting wires.”

Bill held Tom’s capabilities in high regard. Over the last several years, dating back to the EP-3 incident off Hainan Island in 2001, Bill had found he could best stimulate Tom’s critical thinking by playing the “devil’s advocate.” On that occasion, Tom had been the first to observe that the Red Chinese were carefully taking apart and then reassembling the various electronic components of the US naval surveillance aircraft.

“So, it’s no secret that the PLAN is building two large deck carriers in Shanghai. We are watching that closely. Of course they would be training.”

Tom, anticipating Bill’s “devil’s advocate” posture, responded “Yes, but the configuration of these decks doesn’t match what’s taking shape there in Shanghai. In addition, look at the close-ups and markings on all these aircraft (which Tom proceeded to show him through various images he called up on the screen). They appear to be training six to eight new carrier wings here—not just the two new ones needed for those new carriers—and it’s more than the “Flankers.” They are using some of those new navalized J-10 aircraft as well.”

Although reflecting on the potential enormity of this data, Bill continued his role of critic and countered, “Those “landing decks” look for all the world like an “X”; maybe they have them crossing like that to maximize the landings and takeoffs for wind conditions. I have to admit, though, I am

concerned about what certainly appears to be the training of additional squadrons. Still, I do not believe it is any secret that the Chinese are intent on building several carriers. By the way, what's the latest projection on the completion of those two in Shanghai, and when are they expected to be commissioned?"

Tom appreciated his superior's knack of getting him to think on his feet by challenging him; nonetheless he knew he had Bill hooked.

"They say they will launch those two sometime early next year and then will spend a full year getting them qualified and into the fleet, so we are talking about two years. But, come on Bill, they are gearing up for something here. Why train quadruple the air wings needed, when they haven't even announced, let alone laid down, any additional carriers yet? What do you think? Should we go ahead and forward this to the Navy's analysts with our comments and see what their read on it is?"

Bill had been hooked from the moment he saw that there were six airfields involved.

"I'll do more than that, my friend. I want us to meet in person with them. In addition, I am going to pass a note over to that NSA Weisskopf is bringing on. The new administration is going to be anxious to analyze this info as they face off the ChiComms. Prepare a presentation of your findings, analysis and concerns, along with the data, and be prepared to comment on them when we meet. Before I forget to say so—*outstanding* job digging this up, Tom!"

### **February through March**

It was two weeks before Bill Hendrickson and Tom Lawton were able to hold their meetings with the Navy and the new administration's National Security Advisor, John Bowers. The result was a flurry of activity as the new administration and the Navy began to make further requests of the NRO for more satellite photography, and for over-flights by the NRO's most highly classified surveillance aircraft. The satellite imagery began pouring in and the first over-flight was scheduled for late March, to be followed up by a joint NRO, NSA and Navy meeting in early April, which the President himself indicated he would attend.

As the new American administration pointedly indicated its desires to further bolster the US military, it was viewed as extremely hawkish, not only by potential adversaries, but by many of its allies as well. Some of those allies, particularly in Europe, were concerned about the potential for confrontation. In stark contrast, America's allies in Asia, particularly Taiwan and South Korea, viewed such straightforward defense posturing with relief, and a sense of bridled optimism.

In Red China, President Jien Zenim prepared for his meeting with the new US President which was scheduled for late April, after his joint announcement with India on their economic alliance. He intended, in no uncertain terms, to leverage that announcement to let the American President know that the era of US hegemony in the Western Pacific was drawing to a close. He hoped that the two nations could work together to ensure that the transition to the new "reality" in the region was conducted in as smooth and non-belligerent a way as possible.

During this same period, the Chinese shipyard production crew chief, Sung Hsu, having successfully answered all of General Humbaio's security personnel's questions, was transferred to the COSCO shipyards where the military modifications for the Container and RORO ships were taking place under the tightest of security. Sung was introduced to these three "new" modules and immediately assigned to be a production crew chief. His specific responsibilities became the installation of new LRASD (Long Range Anti-Shipping Device) systems on the decks of the Tactical Attack ships and the Amphibious Assault ships. As these systems were newly tested and now deemed production worthy, Sung Hsu was required to work very closely with those who designed the systems to develop comprehensive manufacturing training materiel. This would allow the conversion process to be implemented in a "mass production" environment at several Chinese shipyards simultaneously. In order to accomplish this, Sung attended meetings to develop the strategies and materiel necessary to implement the training. The LRASD planning session was led by Lu Pham, the Vietnamese scientist, who would later be credited with the most revolutionary development in naval warfare in more than a century.

### **March 25, 19:35 local time**

#### **Over the South China Sea**

Colonel "Mac" Mendenhall studied the multifunction display (MFD) immediately in front of him. He was approaching the coast of Red China from the northeast of Taiwan. His navigation or "way " points were all programmed for a run down the Chinese coast, passing just to the east of Hainan Island. From there, he would turn away from the coast towards the interior of the South China Sea where his aircraft would begin the long journey back to Nellis Air Force Base in Nevada. As the airspeed indicator passed into the Mach 4 range, and his altitude cleared 100,000 feet, he addressed his electronics defense and surveillance officer (EDSO).

"Ok, Larry, we're cleared for the ingress. We'll be hugging the coast and getting our "view" of those installations. On my mark, we'll be positioned and you can commence your run...three, two, one...MARK!"

With that, Captain Larry Jenkins activated his surveillance package, which would be looking directly into Red Chinese territory at several of their air bases using light, radio and other electronic wavelengths and bands.

The SR-77 "Pervador" (or "Aurora" as it was mislabeled by many in the public) was a flying wonder. It was the replacement for the aging, but by most nations' standards, still very "space age" SR-71 "Blackbird" that the United States National Reconnaissance Office (NRO) had retired nine years earlier. This aircraft could cruise at Mach 4 at very high altitude and was designed with the radar cross-section of a sparrow, employing radar-absorbing material directly into its surfaces.

The aircraft employed every sensor imaginable, from devices which would pick up any telltale signs of radioactivity, to devices which would detect and categorize any radar emissions, or any conceivable light wave length, and all VHF and UHF communications, whether clear air broadcasts or simple "leakage" into the atmosphere. It also had the most sensitive encryption software and hardware available on the planet, and could communicate real time with satellite relay stations and devices on the ground, or in space. At full speed, it could outrun almost any anti-aircraft guided missile, though in its eight years of active service, none had ever been fired at it.

For potential use against those nations developing detection and missiles defense capabilities which could reach the SR-77 (and Red China was one such nation), the aircraft could also be coupled with the HR-7 "Thunder Dart" hypersonic reconnaissance aircraft.

The HR-7 could be carried "piggy back" by the SR-77 and then launched at a standoff distance. It could also launch on its own from a suitable airfield. The single seat HR-7 carried a similar surveillance package, but would use its turbojet engines to achieve a speed at which its new technology Pulse Detonation Wave Engines (PDWE) could be activated.

Those engines would then boost the aircraft to Mach 7+ and an altitude approaching 200,000 ft. Its endurance was more limited, but the HR-7 could, by virtue of its speed and operating altitude, circumvent even the most heavily and technologically advanced defenses, allowing those installations that they defended to be analyzed.

On this mission, the additional defensive capability was not deemed necessary to take a good look at all six airfields. As a result, this SR-77 had been sent aloft, without its HR-7 companion craft to conduct this mission. Captain Jenkins had just activated a special package of sensors to complete that mission at the first of the suspected airfields Tom Lawton had discovered from the satellite images a couple of months earlier.

Nine minutes later, and 450 miles down the coast, Larry noticed a red indicator on his defense MFD, just as he heard the warning tone in his headset.

"Mac, I've got an "S" band air search radar painting us from 45 degrees off our nose. Range about 80 miles. It's coming from the target airfield just to the north and east of Hong Kong. They haven't made us...but once that operator notices that those intermittent "sparrow" size images are moving across his scope at about mach 4, I bet he sits up and takes notice."

"Do you think there's any chance they'll get a lock on us?" Mac asked.

"Very doubtful. Although latest intelligence reports indicate that with new software upgrades, and other refinements they developed over the last couple of years, they'll be close soon. Still, I don't know what they have that can shoot at us even if they do get a lock," Larry replied.

After thinking this over for a minute, and checking his course relative to the people he now knew were looking for him, Mac said, "Well, you can bet they are working on it. They won't improve their acquisition and targeting without also improving their weapons. Just keep me informed. We'll be past those folks in a minute, and we need another eight minutes to get that last airfield on Hainan Island covered."

Five minutes later, and still some 150 miles from Hainan Island, Larry said, "Okay, someone's been talking. We are now getting multiple radar, multiple bands all down the coast. There's a "Top Plate" signature 30 miles off the coast of Hainan Island too. Looks like one of their new Hangzhou class destroyers out there."

Hurriedly checking their course relative to these new threats, Colonel Mendenhall quickly saw what he needed to do to complete his mission, while protecting his ultra secret and sophisticated national asset.

"Damn! It looks like he's sitting within about eight miles of our flight path, and we'll be there in about two-and-a-half minutes. No way we can fly that close. That KS-2 derivative AAW system they installed on their DDG's has a 42 km range with a ceiling of 25,000 meters and that's just too close."

"I'm adjusting our approach and putting us about 30 miles off that ship. You'll still get a good look at Hainan, but not as good as we planned. If you need to make adjustments, do it now. I'm plugging the new course in on my mark...mark."

With that, Larry quickly studied the information on his MFD, made some quick calculations to determine the optimum settings for his equipment, given the new parameters. Then, as he was keying it in, he replied to his flight commander,

"Wilco Mac. I'll just crank up the "gain" on a couple of these packages and we'll be ready to go. About ten seconds, no biggie."

**March 25, same time****48 kilometers off Hainan Island****On Board PLAN 136 Hangzhou**

Captain Xinhua Zukang, the commanding officer (CO) of the PLAN 136 Hangzhou, one of his nation's most sophisticated warships, watched his defense operations officer retrieve the latest information on the fast approaching, unidentified aircraft.

"Lieutenant, there is no doubt, what we have approaching is an American surveillance aircraft, and not the slow, lumbering EP-3 aircraft which we have seen so often in the past. No, this is not like the one our national hero, Wang Wei, forced to land five years ago. This is their best. We can tell more about this aircraft by what we cannot find out about it, than if the Americans had contacted us and told us it was coming. It is clearly one of their high-speed, high-altitude, stealthy, "NRO" surveillance aircraft. Be sure to record everything you can about it, and attempt to lock onto it with every piece of acquisition and targeting equipment we have on this ship."

The Lieutenant, who had been in contact with other radar sites along the coast, including the airfield outside of Hong Kong which had initially discovered the target, understood the gravity of his Captain's words. The "Top Plate" radar was of the latest Russian design. Although the "target" had not come within its range, it was capable of taking feeds from other systems and selecting targets and firing at them, as if its own radar had acquired them.

All of the information feeding into his computer system was now indicating that the "Unknown" was approaching at something just in excess of Mach 4 and was flying at about 30,000 meters and was still some 160 km distant. Clearly, what the Captain said was true...irrespective of the intermittent nature of the contact...the Americans had significantly raised the stakes by employing their best surveillance aircraft on a mission over his homeland.

"Captain, the approaching target has just entered our acquisition range at 100 km, but has adjusted its course and will pass some 45 kilometers to the east and south of us at an altitude of 30,000 meters."

"Very well," Captain Xinhua said. "Keep trying to acquire the target as it passes. The only thing that I would like more than acquiring that American aircraft with our radar and locking on to him, would be to have a weapon that could reach him and bring him down."

"What I wouldn't give for a battery of those new KS-2+ land based anti-air missiles that I have heard rumors of! Just the same, we are going to be privileged to gather a wealth of information on one of our principal adversary's most sophisticated aircraft. Information our researchers and developers will put to good use."

**March 25, 19:50 local time****80 kilometers south and east of Hainan Island, PRC**

"Alright! We are now egressing the area. What kind of look did you get, Larry?" Mac asked as he completed the turn that would take them away from the coast of Red China and out to sea.

After directing his system to encrypt and send, Larry responded, "Looked good. Would have been nice to be closer, but I am afraid that Hangzhou got about as good a "look" at us as anyone ever has. I tell you, every piece of equipment they had was trained on us trying to get a lock-on...but, they got a definite "no joy" on that. Just the same, I don't relish getting that close to another belligerent if we can avoid it. By the way, the entire "package" has already been encrypted and sent on its way."

**March 27, 17:00 local time****Tianjin Shipyards, Secure Training Facility**

"Therefore, comrades, these conversions must be completed in a minimum of time once the modular components are manufactured, and once the processes are defined and in place."

Turning to the presentation screen, where the slides for the presentation were being presented, General Hunbaio continued.

"Just to reiterate, please direct your attention to the next slide on the screen which summarizes the conversion schedule goals for each conversion type."

PLAN Training		Status: Top Secret
GOALS FOR TIMELY MODULAR CONVERSION		
SHIP TYPE	FROM STD VESSEL	TIME
Tactical Attack	Container Ship	6 weeks
Amphibious Assault	RORO Ship	8 weeks
Sea Control Carrier	Container Ship	10 weeks

"I cannot emphasize enough how critical these goals are for your successful fulfillment of the high responsibility your nation has placed upon each of you as foreman and crew leaders. In addition, our motherland and our ability to secure our national security will depend on your success."

“Remember, you will be spread out over 12 different shipyard facilities. Confidentiality will be an absolute requirement. Our most vital and most advanced national security assets will help maintain security. We will commence within the next three to four months. At that time, we will begin work on three Sea Control Carriers, five Amphibious Assault Ships and four Tactical Attack ships. It is our intent to commission the Sea Control Carriers in the late September time frame, and discreetly deploy the others into their intended area of operations.”

General Hunbaio, about to complete his introductory presentation, paused as he looked across the audience. It was made up of over 120 crew chiefs and foreman, numerous COSCO and COSTIND executives and many military.

“We will now have the lead weapons engineers from each system present to you the basic requirements and specifications for installing and supporting their various systems. These presentations are expected to require the next four full days, during which you will need to direct your utmost attention to them. We will cover everything from the Vertical Launch Systems (VLS), to the Close in Weapons Systems (CIWS), to aircraft, guns, and, most importantly, the LRASD and Ballistic Missile requirements. The basic location of each weapons system is provided in the plan and profile view of each ship which accompany your handouts. For convenience, I will now display them on the screen.”

“Please review these layouts and familiarize yourselves with them and the location of the various components relative to your own areas of responsibility. You will be referring to them often over the next four days, and then for the following ten days, as you develop operational plans and procedures.”

“Unless there are questions, we will take a fifteen minute break before starting the presentations on the LRASD by Commodore Lu Pham.”

Before the General could leave the podium, he noticed a hand raised in the audience. Apparently there was at least one question. Thinking that this individual was a hardy and brave soul, the General recognized him and said “Yes, Comrade. Please stand up. Utilize the microphone at the end of your aisle. State your name and function, and ask your question.”

With that, a relatively young man stood up, picked up the microphone and spoke.

“General Hunbaio, thank you very kindly for recognizing me. My name is Sung Hsu, I am a modularity crew chief for COSCO from our Shanghai facilities. Here is my question.”

“Clearly these modules are for warships for our Navy. I am concerned regarding the overall hull integrity for combat operations, and the decidedly smaller number of watertight bulkheads and compartment hatches as compared to military specifications. Is there a retrofit planned in that regard?”

As Sung sat down, the General thought, Here is a young man unafraid to ask the difficult questions which most of the crew chiefs avoided. The General responded. “An excellent observation and question. The answer is no. We will be able to produce these vessels, and modernize them, well within the cycle time of any adversary’s response, and quickly enough to make up for any shortfalls.”

“Are there other questions? If not, we will reconvene in fifteen minutes.”

### **March 28, 19:00 local time**

#### **Tianjin Shipyards, Secure Training Facility**

“Concluding, we have reviewed the structural requirements based on both the static and dynamic loading for this system. We have reviewed the rotation requirements for bringing the weapons to bear, and we have reviewed the access requirements for reloading and maintaining all components of the systems.”

“Again, I cannot impress on you enough the need for absolute secrecy regarding this. You will all be living, from this moment on, in the most strict of security environments. The very success of our efforts to secure vital national interests will depend on your ability to ensure that this security is maintained both collectively and individually. Failure in this regard will not be tolerated. Success will establish you all as heroes for our cause.”

Recently promoted Commodore Lu Pham looked out over his audience. He would never have imagined the realization of his dreams, or the magnitude to which it was being employed...yet here was living proof before his eyes. He found it difficult to believe that he was managing over 150 scientists, engineers and military planners in the design, test and deployment of these weapons. But he took great contentment in the realization that soon, as a result of his doing, America would reap the gruesome harvest of what they had sown. As he contemplated this, he committed it to the memory of his long-dead father and mother. With hundreds of very qualified manufacturing personnel, like the young Sung Hsu whom he had just met, he could now ensure the deployment of these revolutionary devices on the necessary vessels, thereby satisfying the needs of the People’s Republic of China—and his own.

Having reflected on all of this, he concluded. “This ends our presentation and discussion of requirements for these systems. In a few days, we will begin the ten days of detailed planning and procedure development, which will produce the final manufacturing plans for the modular conversions requiring this system. Thank you. You have been a most attentive and respectful audience.”

**April 4, 13:00**  
**Classified Briefing Room, The Pentagon**

John Bowers looked around the room and mentally surveyed the participants in this meeting. As the newly appointed National Security Advisor to President Norm Weisskopf, Bowers would be chairing this meeting. He thought briefly of the family farm back in Kansas and the cornfields his father and brothers were tending as he sat here. It was to protect those cornfields and the many people like his parents and brothers and their families that meetings like this were necessary.

John Bowers had elected to leave the family farm. He had answered an internal call to serve his country, and for the last twenty-three years he had been doing so in roles of increasing responsibility. He had served well as a Captain in the 1<sup>st</sup> Brigade of the US Army's 3<sup>rd</sup> Armored Division during Desert Storm, commanding a platoon of Abrams tanks. His command had been one of the principal units to take on, and literally slaughter, an Iraqi armored division on February 28<sup>th</sup> and 29<sup>th</sup>, 1991 in the Iraqi desert near Kuwait.

The resulting medals, and the ceremonies associated with them, had led to his first direct contact with the "General." A close relationship had developed, and now spanned the fifteen intervening years. After retiring as a full colonel five years later, John had been called back to "duty" twice.

The first time was to serve during Operation Iraqi Freedom in 2003, where he had served as an advisor to the commander of the 4<sup>th</sup> Infantry Division. That division had planned to assault Iraq from the North, while the 1<sup>st</sup> Marine Expeditionary and U.S. Army 3<sup>rd</sup> Infantry Division invaded from the south. Due to the inability to secure entry and staging rights in Turkey, the 4<sup>th</sup> Infantry Division had ultimately transited the Mediterranean Sea, through the Suez Canal and entered Iraq by way of the Persian Gulf and Kuwait, several weeks behind the Marines and the 3<sup>rd</sup> Infantry Division. They had come along just in time to relieve the 3<sup>rd</sup> Infantry Division and in time to essentially mop-up after the quick and decisive victory of their comrades. A few fire fights and a lot of patrolling and maintaining of order had ensued, but ultimately, after a few months, John was released and returned home to his family.

He once again went into retirement from military service, but John Bowers service to his nation was not over. General Weisskopf himself, now President Weisskopf, had made the next call. He simply and directly asked John Bowers to serve as his National Security Advisor and to help him ensure that American interests were not only protected, but clearly articulated throughout an increasingly threatening world, particularly in the Western Pacific.

So, here he was, surveying the attendees of a meeting, which would prepare a presentation to the President of the United States and the Joint Chiefs the following day. The assembled group included Tom Lawton and Bill Hendrickson from the NRO, Captain Toby "Skip" Pendleton from US Navy Intelligence, Major Tim Lawrence from the US Air Force, and Susan Theigold from the US State Department.

"Okay, let's get this show on the road, shall we? It is my understanding that the photographs and data from the over-flight have been analyzed by everyone here and that preliminary notes, concerns and projections from that analysis by the NRO, the Navy and the Air Force have been copied to and reviewed by you all. Is that correct?"

John looked around the room, receiving either a nod or a simple "Yes" or "That's correct" from everyone there.

"Alright then, that's excellent. Let's go ahead and start with the NRO and proceed from there right around the table, having the Navy, the Air Force and the State Department make their statements in turn. Please try to keep each of your opening comments to 3-5 minutes. We'll have plenty of time for detailed interaction after we hear from each of you. We'll wrap up the meeting with an hour-long session of developing final thoughts as to the meaning and ramifications of this info and what we believe we should do about it, beginning at 3:30 p.m. Bill, will you or Tom please begin?"

Bill nodded to Tom and indicated, according to their prior decision, for Tom to "take point" in this discussion.

"Okay, Mr. Bowers, I will be presenting our thoughts on the over-flight. As you all know, on March 25<sup>th</sup> local time, March 24<sup>th</sup> here, we conducted an over-flight in international airspace off the coast of Southern China. Our aim was to take a hard look at six airfields where our satellite assets had shown us pictures of what appeared to be the PLAN training large numbers of naval aircraft.

"Two things were intriguing: first, the number of apparent airfields being used for this activity, and second, the configuration of the airfield facilities so employed.

"Simply stated, in terms of SIGINT and visible data, our over-flight absolutely confirmed the existence of these facilities and the way in which they are being employed. The data also indicates that the Red Chinese are indeed training between six and eight mixed carrier wings consisting of fighter, strike and even what appears to be a new "Airborne Early Warning" (AEW) aircraft in addition to the two wings they are training near Shanghai. Also, it is clear that they are training these air wings with a

deck configuration that is not similar to the layout of the two carriers they are building in Shanghai. We will save our thoughts on ramifications and on reasoning for later in the meeting.”

As he sat down, Bill Hendrickson quickly interjected, “I would like to add here what Tom is too modest to let you know: that is, that it was his own analysis that led to the discovery of the installations which led to the over-flight itself. Our analysis, particularly after the mission, indicates many more air wings being trained than conceivably necessary for the carriers the Chinese are building.”

As Bill sat down, John looked directly at Tom while stating, “Okay, okay. Thanks very much to our friends from the NRO. Tom, you did a fine job in ferreting this out. Oh, by the way, I would like the two of you, Bill and Tom, to be in attendance at the meeting tomorrow for backup when we discuss all of this.”

Then, looking over to Toby Pendleton, John continued. “So, without further pause, let’s continue. Please Toby, what are the US Navy’s thoughts on the data?”

For the next three hours, the Navy, the Air Force and the State Department first made their initial statements, which to one degree or another basically concurred with the NRO, and then discussed the issues in detail. The fallout of the entire discussion was simply that:

The Red Chinese were training a lot more Naval Air capability than would be indicated by the capacity of the carriers they were building.

The configuration of the training facilities targeted by this surveillance was strange, and not understood, as it represented a somewhat shorter deck in an “X” configuration, as opposed to the longer and more traditional angled configuration building on the new carriers in Shanghai.

The only possible conclusions, given the investment in the unexplained efforts, were that the Chinese were planning on building additional carriers, without divulging any indication to that effect.

The recommendation was to conduct further surveillance, to consider bringing up the question through diplomatic channels and to consider using human intelligence (HUMINT) assets within Red China to determine what was “afoot,” though Ms. Theigold from State strongly disagreed with actively employing HUMINT on the ground in Red China.

“I believe this is a good summary, and I concur with both the conclusions and recommendations. Folks, we are playing a cat and mouse game that is every bit as critical as any of those played during the “cold war” with the Soviet Union—perhaps more so. I believe it critical that we understand what is going on with these developments. Given what we know of the Red Chinese ambitions in Asia, I will not be surprised if your involvement with this, and the ramifications that evolve from it, do not eventually come to require prolonged, full-time commitment.

“Bill and Tom, the meeting is scheduled for 3 p.m. tomorrow afternoon in the situation room at the White House. Let’s meet at my offices at 2:30 and go over together.”

With these comments by John Bowers, the preparation meeting for the next day’s briefing was concluded.

## **April 5, 15:35**

### **Situation Room, The White House**

President Norm Weisskopf had “that” feeling. He had experienced similar feelings from time to time throughout his life and military career. One had occurred several days before the Iraqis had attacked and taken the small Saudi town of Khafji during Operation Desert Storm in 1991. Because he trusted such feelings, and had issued practical general orders accordingly, the US Marine and Saudi forces in the area, although initially surprised, had quickly taken the town back and driven the Iraqis off. The result had been, as he stated at the time, “about as significant as a flea on an elephant’s butt.”

A more recent occurrence had been just a few months earlier, when an almost overpowering feeling had caused him to come out of retirement and unexpectedly run for the Presidency.

Norm the “Storm” Weisskopf had learned to trust such feelings over the years, and he was having an unusually uneasy one now concerning the information regarding the Chinese naval air training.

“Okay gentlemen, from your presentation and our discussions, it is clear to me that the Red Chinese are significantly building up their naval air in a way we do not understand. I want to understand it.”

“So, I would like to ask the following four questions. Mitch, what does the CIA have in terms of options on the ground in China? General Stone, what more can we find out through the use of our strategic surveillance assets? Admiral Crowler, what is the Navy’s assessment of the possibility of the Red Chinese deploying more carriers than we are aware of? And finally, number four, Fred, what can we do diplomatically? Should I raise this issue with Jien Zenim in my meetings with him later this month?”

“We have less than an hour gentlemen. Let’s hear your responses.”

With that, the President sat back and let the Director of the Central Intelligence Agency, the Chairman of the Joint Chiefs of Staff, the Chief of Naval Operations and his Secretary of State take the floor in turn.

“Mr. President,” began Mitch Foley, the Director of Central Intelligence, “ever since the intelligence fiascoes of the late eighties, and additionally those of the nineties, particularly as regards the Red Chinese, we have been building our assets in this regard. We have highly-placed operatives in their industry and within the PLA. Our penetration of their Navy and strategic missile forces is somewhat less impressive, as is our penetration of their Political Apparatus, although we do have a couple of people close to two of their junior politburo members.

“I believe we can set up an operation to delve into these matters, but it will be risky for those involved.”

In response, President Weisskopf simply stated, “Comes with the territory Mitch, as with any job associated with facing down your enemies, whether overtly or covertly. Make it happen, and be prepared to discuss the details with myself and with John Bowers ASAP. I’ll sign off on any directive that makes sense, and that is compartmentalized to the point of protecting our involvement.”

“Mr. President, I must object!” interjected Fred Reissinger, the Secretary of State. “Please do not sign off on any such directive without allowing us in State, at least at the highest levels, to review and respond to possible implications.”

The President responded immediately.

“Fred, your turn in this is coming. Rest assured, if I believe there are any possible holes or ramifications, I will get your read. In the end, I have to make the call, however, and my threat gauge is pegged over on this. Okay, Jeremy, your turn. Shoot.”

Jeremy Stone, a thirty-five year professional soldier and four star General in the United States Army was the current Chairman of the Joint Chiefs. He was committed to strengthening the military technologically, and was also committed to insuring that the Army’s heavy armor remained an integral part of the fighting force in the foreseeable future. This stance, with respect to armor, ran counter to the efforts of the last two CJCS and to the former Secretary of Defense. Nonetheless, President Weisskopf agreed, and he had selected both Jeremy Stone, and his Secretary of Defense, Timothy Hattering, who was present in this meeting, for their agreement with his positions on armor, among other reasons.

“Mr. President, the Chinese reacted quickly to our latest SR-77 over-flight. No weapons were fired and they did not lock on, but our crew was uncomfortable with their ability to track and communicate the whereabouts of their aircraft so quickly.

“I would recommend that we pick our targets carefully and employ the HR-7 on the next mission. If we can get HUMINT or SIGINT from satellites to point us in a direction regarding potential new naval construction, or any other relevant facility or region, we can quickly employ an HR-7 in a surprise over-flight to acquire more information.

“Bill Hendrickson and Tom Lawton are sitting in with us today from the IMINT Directorate at NRO. Tom is the analyst who discovered this activity from some routine satellite photographs. Do either of you have any comments regarding the best use of NRO surveillance assets in this regard?”

Bill stood up somewhat nervously to address the room full of the most powerful people in his government.

“Gentlemen, we have analyzed the data extensively. As has been stated here already, it is painfully clear that the Chinese are planning something, of which we have no knowledge or intelligence, with respect to their naval air capabilities. Our estimates indicate that they would have to be building four to five more carriers to handle the aircraft they are training. Our thought is to focus our attention on all of their military shipyards and see if we can find any indication of activities in this regard. Tom, have you got anything to add?”

Tom Lawton was even more nervous than his boss. While used to making presentations on sensitive and classified material to important audiences, he never quite imagined he would be in a position to stand before the President of the United States and make such a presentation. Nonetheless, Tom had nagging suspicions, so he dove right in.

“Just this: It is clear that the Chinese have announced what they want us to hear: the building of large deck aircraft carriers and training of air wings sufficient for them. The fact that they are training many more air wings at these other facilities without divulging such information, clearly indicates their intention to build more carriers. I would set up a schedule with our satellites and examine every shipyard that the Chinese have, military or otherwise, and then use the HR-7 for detailed looks at wherever that leads.”

As Tom and Bill sat down, Jeremy Stone began wrapping up his comments.

By the end of the meeting, it was agreed that John Bowers would coordinate efforts to utilize three national defense resources to aggressively delve into the mystery of the Red Chinese naval air training efforts. These included a covert CIA mission, more NRO satellite and over-flight assets, and, based upon Admiral Crowler’s (the CNO) recommendation, to use the latest Sea Wolf class SSN for a covert mission near the shipyards. Any actual mission had to be signed off by the President, but the okay to plan such missions and present them to him for a decision was approved.

In addition, Secretary of State Fred Reissinger got a commitment from the President to hold off on any actual CIA or Naval missions until the President met with his Chinese counterpart later in the month and raised the issue as judiciously as possible, and then reviewed and analyzed the results.

After closing the meeting, while everyone was filing out, the President motioned for his long time friend John Bowers to join him for a moment.

“John, find out if Tom Lawton can accompany you and join the first lady and me for dinner next week. I am interested in an “unofficial,” after-dinner discussion with that gentleman on his feelings regarding these moves by the Chinese. Let’s tentatively say next Wednesday, the 13<sup>th</sup>. If it’s going to work, I’ll have the Chief of Staff arrange it and pick you both up.”

John was never surprised at the President’s ability and willingness to “get right down in the trenches” when he felt it necessary. After all, this was how he had come to know the General himself. After he indicated his intention to contact Tom Lawton, John smiled, shook his head and exited the room.

**April 11, 08:00**

### **WNN Broadcasting Studios, New York**

David Krenshaw was not an early riser; he never had been. But the early morning (4 am) call—and, even more so, its content—from China had got him out of bed and over to the broadcasting studios. Several calls en route had gotten the major editors, production crews and general management apprised of the story on which WNN (World News Network) would be getting an exclusive.

Calls had also gone out to their local camera teams in Beijing, New Delhi and Moscow, and they were all standing by now for simulcasts.

“It’s good to know, and it’s even better to be known,” thought David as he sat down for his final makeup as the production crew was hurriedly making final preparations. His ability to find out about and even (at least in his own mind) influence events to the benefit of his network, and more importantly to the benefit of himself, was moving him straight towards the top of his field. In fact, he was convinced he would pull in some type of serious award for this very story and his involvement in it.

Now the production people were queuing him up. 3, 2, 1...*on air!*

“Good Morning. This is David Krenshaw in the WNN newsroom, interrupting with a Special Report. We have camera crews standing by in Beijing, New Delhi and Moscow for exclusive coverage of an unexpected announcement by all three governments. Our sources indicate that an historic economic pact between the People’s Republic of China and India is going to be announced momentarily by the Presidents of those two nations. It is also expected that the President of the Russian Federation will announce an involvement with these two Asian giants in projects associated with the Sino-Indian announcement. Okay, I am told that we are ready in Beijing and New Delhi. We take you now to Beijing for a Special Announcement by President Jien Zenim of the People’s Republic of China.”

On his monitor, David saw the picture of the Red Chinese flag, screened over an evening shot of Tiananmen Square, which was now appearing on tens of millions of TV sets around the world. The block writing across the screen in both Chinese and English stated:

### **Special Announcement**

#### **President Jien Zenim**

#### **People’s Republic of China**

Momentarily, the picture faded to a press conference room where the WNN camera crew was showing a podium in front of a picture of Mao. Standing at the podium was President Jien Zenim. In the lower right hand corner of the screen, another, smaller shot was superimposed, picturing a similar scene in New Delhi, where the Indian president, President KP Narayannen, stood at a similar podium. Although both men began speaking, the words of the Chinese President were carried by WNN.

“Good evening. We are very happy and gratified to announce today the creation of a new economic pact between the nations of India and the People’s Republic of China. This pact has been more than five years in the making and will establish open and free trade between our two countries. It also establishes many agreements on the utilization of our mutual work forces, which, as most people know, are producing a large majority of the products for the various peoples of the world.”

“We are calling this pact the “Coalition of Asian States,” or CAS for short, and we invite all Asian countries to review the basis for the agreements and how they apply to our mutual benefit. It is our sincere hope that more nations will join with us as we proceed with our future hope and prosperity, based on what we call the “Time of the Three Wisdoms.” They are:

1. *“All men and women are equal.”*
2. *“All share equally in the bounty of a working and industrious society.”*
3. *“One goal, one thought, one people for World is peace.”*

We hope to set an example for the rest of the world with these high ideals, showing by example how they can serve as the basis for peace and mutual prosperity between nations. A press and

diplomatic package has been prepared for any network or nation wishing them. Thank you, good night.”

The picture faded back to David Krenshaw in WNN’s New York studios.

“We have just witnessed an historic announcement by the People’s Republic of China and India, announcing a new “Coalition of Asian States” based upon an economic foundation with strong ideological overtones. The governments of the two largest work forces and populations on earth have apparently worked out what were perceived, until today, as considerable differences. I am now told that an announcement from The Russian Federation is ready. We take you now to Moscow.”

Again, the picture faded, and David saw President Vladimir Putin sitting behind his desk in his presidential office, facing the camera. After no more than a second had elapsed, he began to speak.

“This evening we have witnessed an extraordinary economic agreement between two great nations for peace and prosperity. Their ability to rise above their differences and unite in friendship and prosperity has energized our own Russian government, and will do the same for our people.”

“It is therefore with great enthusiasm that I announce today the Siberian Economic Development Treaty. This treaty is made exclusively with the Coalition of Asian States for the economic development of our vast Siberian resources. We look forward to its impact on the people of our mutual regions as we build our economies and our prosperity upon the principles of equality and social justice outlined in the CAS ‘Time of the Three Wisdoms’ which we in the Russian Federation endorse completely.”

“This ends the announcement. There will be no press questions at this time. A full Press Conference will be held tomorrow in the Kremlin at 10 am. Thank you, and good night.”

As David Krenshaw appeared on the screen, his enthusiasm was self evident.

“That was President Vladimir Putin of the Russian Federation announcing a Siberian Economic Development Treaty between his nation and the just-announced Coalition of Asian States, made up of The People’s Republic of China and India. For those of you watching on TV, or listening via the WNN radio network, let me say these are historic and momentous times. What we have witnessed this morning is nothing short of the largest potential economic development in the history of the world. As our correspondents gather more information, and as our analysts review that information with the documentation provided, we’ll broadcast updates. Please stay tuned to WNN for more developments throughout the day, and on your nightly news. This is David Krenshaw reporting, and this has been a WNN Special Report.”

**April 12, 10:00**

**The Oval Office, Washington, D.C.**

“Okay, you’ve each had time to review these announcements and the diplomatic information handed out with them. Let’s start with State and proceed to National Security, Defense and CIA. What are we seeing here folks? What’s the impact to us, economically and diplomatically? What does it mean to our allies, and to other nations in the region?”

As the President finished, he turned to Fred Reissinger and waited.

“Mr. President, this announcement caught us completely by surprise. The Chinese and Indians began having more serious talks, which were geared towards settling border disputes, back in 2000. It was generally agreed at the time that they were making good progress. But an economic agreement of this nature and magnitude did not appear to be on the table, particularly after the closer ties we developed with India during the entire campaign to defeat bin Laden and Al Qaeda. Clearly China and India have been working behind the scenes and very confidentially to put this together. The announcement by the Russians was clearly coordinated and also indicates considerable prolonged behind the scenes activity.”

“As to what it means to us diplomatically, a lot depends upon how serious they are about these agreements, particularly regarding their workforce. Basically, they are going to be charging huge tariffs to utilize their workers in factories within their borders, for corporations that are not part of the CAS. If they implement this as written, it will have the ultimate effect of nationalizing the assets of foreign corporations, without overtly doing so. Basically, those businesses will no longer be able to profitably operate their own facilities and will be forced to look elsewhere. In the meantime, the idled factories, if not paid for, will revert to the nations wherein they exist.”

“Normally, this would be economically devastating to those countries, as they lost the contracts with those companies. But apparently both Red China and India feel that they will be able to continue producing product under a different name, and offer them even less expensively to the western markets. The pricing structures and trade formulas in the CAS agreements accomplish this. In addition, with the opening of unprecedented exploration and exploitation of the Siberian oil, gold, timber and other resources, they apparently feel they can live with whatever sanctions we care to place on them—and they may be right. If so, this is going to put enormous pressure on our friends and allies in the region: most notably Japan, South Korea, Australia, the Philippines, Thailand, Singapore, Malaysia and the ROC.”

As the Secretary of State finished, the President experienced that same unsettling feeling he'd had almost a week earlier when talking about the Chinese issues. Turning to John Bowers and Timothy Hattering, he asked "Okay, John and Tim, what are we getting ourselves into here? I have to believe that the naval air issues and these announcements are related. What other surprise announcements can we expect from the Red Chinese?"

John spoke right up.

"Well Mr. President, although we haven't determined exactly what the Red Chinese are up to in that regard, we do have the three operations we discussed last week ready for you to review."

Before the Secretary of State could interrupt, John continued. "Don't worry Fred, we aren't going to be stepping on your toes. Based on last week's meeting, none of these require any kind of approval before the President meets with President Zenim in Beijing later this month. However, Tim and I both agree that you should at least review them, Mr. President, and be prepared to act based on the outcomes of those meetings."

"My personal feeling is that either the Chinese are developing something on their own which they will announce in due course, or they are working with someone else, maybe the Indians—although I find that difficult to believe—to do the same. The intent would be to establish more military force projection in the South China Sea and surrounding areas."

At this, the Secretary of Defense spoke up. "Mr. President, I believe we would be smart to increase our military presence in the Western Pacific at this time. These developments are disturbing as the Red Chinese continue to build up their forces across the strait from Taiwan, and in general throughout the South China Sea. Their bases in the Spratleys have been well established and garrisoned for some years now, and they still have that satellite monitoring station on Tarawa Island that was handed over to them under Clinton. They have beefed up their electronics there, as well as the dock facilities and airfield."

"In light of what State just said, I believe it prudent to get another carrier in the area, and perhaps a Marine Expeditionary Unit (MEU), and have them temporarily stationed out of Guam, while we monitor developments."

The Secretary of State interrupted. "Oh come on Tim, that will be viewed by everyone in the region as provocative and an overreaction. I do not deny that the developments are disturbing and that there may be a military overtone to them. For that reason we should be prepared to deploy. But I believe deploying prematurely would be playing into their hands, and may even force the issue. I would recommend holding off, Mr. President."

President Weisskopf listened to all of this, and made up his mind quickly.

"Alright Fred, we'll hold off on any deployment; but, Tim, get the orders issued that will ensure that we are logistically ready to deploy from a provisioning, fuel and armament standpoint. We'll set it up to base them out of Guam in support of the Kitty Hawk group out of Japan."

"In addition, John and Mitch, I will review those three operations. The NRO and the Navy operations are probably going to be a 'go' as is, but Mitch, I want to scale back the HUMINT operation and not risk any of our highly-placed assets at this point. What are your thoughts?"

Mitch Foley was actually very relieved. First, the operatives he had placed in the Chinese industrial sector and at the foreign ministry were not something he was anxious to risk. Second, he had expected much more heat to be directed at CIA in this meeting regarding this matter since his Chinese operatives and his other intelligence officers had been taken by surprise.

"Mr. President, I understand and concur regarding those assets. They may be much more valuable to us later. This announcement by China and India was not discussed at their level, but implementing it certainly will be. Regarding finding out more about their naval shipbuilding, I have some ideas and will have our Director of Operations work out the details."

"Great, Mitch, I look forward to the updated plan. The fact that the Chinese surprised both State and yourself is very disconcerting. Something major is going on over there and we need to know what it is. John, we can start on the final review of the other two operations after dinner tomorrow night."

"Finally, Fred, let's finalize the team that will be going with me to Beijing for the summit with Zenim. I want to talk to him directly about these "labor" arrangements and about the Naval Air facilities we have been monitoring. In the meantime, I'd like you to get a read from our allies before the trip so we can factor all of that into the discussions."

**April 13, 22:00**

### **Along the Potomac, Washington, D.C.**

It was beautiful clear night along the Potomac. Even though the Secret Service was arrayed as inconspicuously as possible around them, and even though the two younger men who had dined with them were clearly there in some official capacity, Linda Weisskopf was glad to be out with Norm. Leaving the stuffy and very official Limousine behind and using the black Suburban for this "outing" had been a nice touch, she thought. As she watched Norm walking and talking casually with John and Tom, the young analyst from Virginia, she reflected on Norm's disposition the last few days.

Linda had been with Norm far too many years to not recognize the hints and telltale signs of apprehension and concern. She had seen them when he left for a tour in Vietnam and had then lived with the apprehension that accompanied his return home. She had seen them when he was the deputy task force commander for the invasion operation in the Caribbean. That had been a success, but there had been a cost; as there always was, for any honest and virtuous officer making life and death decisions for his soldiers.

And among his many attributes, Norm was honest and virtuous. He was perhaps a little gruff on the outside, but as she had said so many times, despite that gruff exterior so necessary in his profession, he was a true “burnt marshmallow.” Rough and crusty on the outside, but soft and caring underneath it. Caring for his soldiers, caring for his country, caring for her.

She had seen the same signs of apprehension before Desert Storm and on the TV screens, she had felt it over telephone lines during that epic conflict which had thrust him upon the national stage. She had seen it during his candidacy for the Presidency and she saw it now.

Norm was troubled. He was probably having another of “those” feelings. And though he hadn’t shared it with her yet, he didn’t need to. She knew it instinctively...and he would know she knew it, and take comfort in the thought that she shared it with him.

As if though sensing her thought, he turned away from the young men and came and took her by the hand.

“It is a beautiful night, sweetheart, and I apologize for not being able to spend more of it with you. What I would give to be able to just hold your hand and walk along the river here and properly enjoy this evening. Look at those stars! Even around all these lights they’re so bright this evening.”

Linda knew he could not stay much longer and did not want to make him be the one to break it off. She knew he truly wanted to stay with her and that was enough. She was content with that knowledge.

“You better go on now, Norm. These young men have important business with you, and there is little time left this evening to accomplish it. Let’s go back to the “house” and I’ll wait up for you.”

**April 13, 23:00**

### **The Oval Office, Washington, D.C.**

They had talked for almost an hour about specific technical details of the surveillance regarding the six airfields and the makeup and capabilities of the aircraft that were training there. Finally, the President felt the time was right to ask the pertinent question.

“Tom, I brought you here tonight because you were the one to notice these airfields and were perceptive enough to recognize their potential significance. In addition, John here has recommended you highly. I hope you will speak freely. As an old war-horse, I know that sometimes it’s critical—even essential—to hear the unvarnished truth from the ranks. It’s a lesson I learned and took to heart long ago. What do you feel is going on there with the Chinese and these naval airfields and training?”

Tom was amazed at the President’s disarming, open nature. It begged one’s trust and confidence to a degree Tom had seldom felt. Instinctively, he knew that this President was one of the rare ones who put duty, honor, and country above his own personal feelings and aspirations, and who would lead you right into the jaws of hell if necessary, with himself on point. Knowing this was the case, Tom did not hesitate to tell him, “Mr. President, I cannot prove this at the moment, but I believe the Chinese are putting something together somewhere that will carry those air wings they are working so feverishly to train. I don’t know where. I don’t know when...but I believe it will be soon, though we have no evidence of it outside of those curious training facilities and the aircraft themselves. They are building carriers, lots of them.”

The President glanced at John, who nodded his agreement and approval.

“I tend to agree with you Tom. I want you and your people to work closely with John. You can trust him implicitly. At the same time, always ensure that your superiors at NRO are kept completely within the loop. I am afraid that, if the Chinese have been able to keep this from us, there are any number of other things they are bringing together to move their plans forward. We have to find a way to get out in front of it or I am afraid the surprises will not bode well for us. I hope I can make progress in that regard when I visit and speak directly to President Jien Zenim.”

“Now, if you two gentlemen will excuse me, it’s past my bedtime, and I am going to rectify that.”

**April 26, 21:00 local time**

### **Government Conference Center**

### **Beijing, The People’s Republic of China**

The décor had been tremendous and exquisite. The food and entertainment had been marvelous. The pleasantries had been genuinely respectful. Many of the peripheral issues had been discussed and plans had been set in motion for hopefully amiable solutions. But now, the time had come for the two leaders to speak man-to-man, and place upon the table the true issues between them. President Jien Zenim was prepared, even eager, to do so.

He sensed he had the upper hand in these issues, and although he had personally researched the General's exploits and character, and been briefed by experts psychologically on him, still the feeling persisted to be wary.

"Mr. President, let us, as you Americans say, "Cut to the chase." The announcements we have made with India and the Russians must be uppermost in your mind. I am sure you desire to know our intentions."

President Weisskopf was relieved to hear his Chinese counterpart speak directly, and was anxious himself to address this central issue.

"Yes, President Jien, you have, as we say, "hit the nail on the head." This is a principal concern; particularly the details of the labor arrangements and the new tariffs. To be blunt, we believe this is a move by your government to force our companies out of the factories they have built in your nation."

"It is good to hear an American who will speak directly to principal issues. I respect you for that and hope our conversations can always be so sincere and understood. In fact, we are looking for a significant return on investment. Our workforce has been used by the West to reap unimaginable wealth for the capitalists in your society who own those businesses. We are serious about the ideals and tenets expressed in our 'Three Wisdoms,' Mr. President, and we mean to put them into effect throughout our society."

President Weisskopf could scarcely believe that President Zenim was so bold and direct. His intuition told him that the Chinese President meant every word he was saying, but he also felt he had to be extremely wary; there was much more to this somehow; much more.

"President Jien, while I respect your forthrightness, I must tell you that the United States would view any attempt, even a veiled one like this, to unilaterally foreclose on American interests within your country gravely. It would lead to severe trade restrictions and perhaps even a trade war. Surely there is some way we can accommodate the interests of your people, and your agreements with our business community."

President Jien Zenim did not hesitate. Though other Americans may have been wholly unlikely to speak so directly and to risk so much, from Jien Zenim's perspective, the Americans were caught in a trap of their own making, despite their newly-elected leader.

"We have accommodated those business interests for many years, Mr. President, at extremely low wages for our workers. We want them to now enjoy a higher standard and believe there are those, even in your own business community, who will pay it."

Again, somewhat taken aback by Zenim's direct and challenging speech, and all the more wary, President Weisskopf proceeded.

"This is a troubling attitude, Mr. President; one that will unavoidably lead to severe economic strain between us, and potential damage to our diplomatic relationship. When we couple this with your extraordinary Naval Air buildup, we are extremely concerned."

This train of thought and dialog was unexpected by Jien Zenim. As such, it upset him and he allowed a little of that emotion to creep ever so slightly into his tone, as a warning to the American head of state.

"Of what Naval Air buildup do you speak, Mr. President? We have made no secret of our efforts to build two aircraft carriers, and are openly training them. Why is this such a threat to you? Do you honestly believe that the US Navy is the only Navy entitled to such equipment?"

Norm Weisskopf detected the challenge in Jien Zenim's tone and sought to diffuse it in some way without giving up any initiative.

"No, Mr. President, I do not believe this. However, it is clear that you are training many more air wings than are necessary for the number of carriers you claim to be building. We therefore naturally believe that somewhere, unannounced and unnoticed, you are building more. Such secretive plans concern us. We would like to know your intentions."

Now it was clear to Zenim that the Americans had detected the significance of the training going on at the other airfields. His intelligence people had warned of this possibility and it would be good to confirm it.

"Mr. President, our only intention is to protect our interests. We intend to build a force, whether ground air or naval forces, adequate to that task."

"With our new Asian coalition and with the interest many other nations are showing in it, I believe it is clear that those national interests of ours are growing. We sincerely hope and are in fact confident that the United States and its navy will respect those interests rather than violating them."

Well, there it was, thought President Weisskopf. He might as well have warned us to back off of the Western Rim altogether.

"We will respect any legitimate interests of your nation, Mr. President. But we expect our interests to also be respected, along with those of our allies. In that regard, we maintain a right of free passage on the open seas; whether in the open Pacific Ocean, the Philippine Sea, or the China Sea. We hope that your intentions do include a plan to restrict that passage."

“I trust on these issues, as well as the others we discussed earlier today and yesterday, that our respective trade and diplomatic missions in July will be able to make progress and resolve these differences between us.”

So, the American is done talking, thought Jien Zenim. It’s just as well. Clearly Weisskopf has no intention of yielding. Well, this will produce more strain and will eventually lead to conflict. Although unfortunate, it is acceptable. The preparations are almost complete and, unlike the Americans, the Chinese people are ready for it physically and mentally.

“I sincerely hope for that progress as well, Mr. President. I sincerely do.”

## Chapter 2

*“Few men have virtue to withstand the highest bidder” –George Washington*

**May 5, 10:00 local time**

**Center of Theological Studies**

**Qom, Iran**

Hojjatolesla Hasan al-Askari Sayeed sat quietly, humbly, as the aging Ayatollah Ol Osam (or Grand Ayatollah) Khamenei approached. The other Grand Ayatollahs sat facing him, and behind them were the many other Mujtahids and senior Mullahs and clerics of the Shia Muslim faith. Hasan knew what was about to happen. The event unfolding today had been ordained several years before. There would be no surprises here.

Putting both of his aged hands on Hasan shoulders, and staring intently into his eyes, Ayatollah Ol Osam Khamenei said, “My son, it is time.”

As Hasan reflected on what was about to happen, he looked into the clear eyes of Ayatollah Ol Osam Khamenei and replied, “Allah Ahkbar, I am ready”

What was happening was unprecedented in the history of Shia Islam. Hasan was about to receive his authorization as an Ayatollah Ol Osam from the Ayatollah Ol Osam Khamenei, and be tacitly and explicitly recognized by the assembled clerics as Imam Hasan Sayeed, the grand spiritual, political and military leader of the Islamic Republic. He would be the youngest to have attained the position of Ayatollah Ol Osam in many decades. He would be the first true Imam in centuries.

His entire thirty-nine years of life had led him to this tremendous achievement. But Hasan was far from finished ‘achieving.’

Hasan was born in the city of Arak, Iran in 1965 on the 15th of Shaban, the same day as the mystical 12th Imam, Imam-e Asr. Hasan’s father, himself a senior Mullah in the faith and an ardent follower of the Ayatollah Ol Osam Khomeini, began his son’s teachings early, when Hasan was but five years of age. So effective and strict a course of study had he outlined, and so bright a student had Hasan proved himself to be, that at the unprecedented age of twelve he had been chosen for enrollment in a madrasah for Theological Studies in Arak. There he began his study of Islamic Law in the very place where the revered Ruhullah Khomeini had received similar teachings. His acceptance of, and strict, pious adherence to, the pillars of the Shia faith at such an early age had been a marvel to the older clerics and Ayatollahs who had spent decades obtaining the same levels of single-mindedness and dedication. That such a young pupil could so quickly master shaheda (confession of the faith), namaz (the Shia ritual prayers), zakat (the giving of alms), saum (fasting and contemplation) and Hajj (pilgrimage to Mecca and Medina) was not only unprecedented; it was miraculous. More and more of the clerics and Ayatollahs were speaking of it in those terms as Hasan completed his second year of study in 1979. Many began wondering whether Hasan might represent an actual re-appearance of the mystical 12th Imam, Imam-e Asr (the Imam of the Age) or Sahib az Zaman (the Lord of Time), whom the Shia believe never died, but would one day return as the great Mahdi, or Messiah.

But, the events surrounding the 1979 Islamic Revolution had interrupted all of that speculation, along with Hasan’s studies. The conflict with the Shah forced his family into hiding until the Islamic Republic and its Revolutionary Council could establish order. In 1980, the invasion of Iran by Iraq and the resulting war also interceded upon Hasan’s education. At the age of fifteen, Hasan had joined the Pasdaran, or people’s militia, and marched off to answer what he believed was no less of a ‘calling,’ joining his fellow Shias in defense of their earthly homeland and heritage.

During that war, Hasan had been introduced to another of the seven pillars of Shia Islam: the Jihad, or Holy War, to protect Islam. Even though young, Hasan viewed Iraq’s attack as an extension of the infidel Western cultures, and The Great Satan in particular. As such, it was an attack on the pillars of Islam held sacred by his own Shia faith. He therefore practiced and learned war as he had those other pillars. His unwavering trust in Allah and his absolute dedication to the preservation and defense of the Islamic Republic, even in the face of Iraq’s military superiority, moved his soul and motivated his compatriots. This uniquely unwavering resolve became glaringly apparent at the besieged city of Abadan, where he and his platoon destroyed six fortified enemy positions by direct assault, bringing honor to his nation and much acclaim among the Pasdaran. By mid-1982, the seventeen-year-old Hasan was commanding an entire company of the Pasdaran.

“Allah Mak! Allah Mak!”

As Khamenei began to officially recognize him before the assembled clerics as the Imam Sayeed, Hasan bowed his head soberly and continued his reflections.

He remembered well the day in late 1982, after capturing an entire Iraqi division intact, when the audible words had made their way, unbidden, into his mind. “These are your brothers. Why do you fight them?” From that time forward, though he was as committed as ever to defending the Islamic

Republic and the faith, he vowed to find a way to spiritually, politically and militarily unite his Islamic brothers and break the manipulations of a greater foe.

After the war, Hasan had been given progressive positions of responsibility in the Pasdaran, ultimately being appointed as a commander over a significant portion of that force in 1988. During that entire time, his influence as a spiritual leader had also continued to grow. His strict adherence to the seventh pillar of the Shia faith, to do good and think no evil, was universally recognized by his troops and his superiors alike. Such a commander, they said, could lead them to the gates of Hades and back, returning victorious. No one doubted that with Hasan's influence the Pasdaran would unfailingly fulfill its mission to safeguard the Islamic Republic against any force that would threaten it.

In 1989, when Ruhullah Khomeini died, Hasan, at the age of twenty-four, resigned from his military duties to return to his theological studies. He chose the madrasah at the city of Qom to re-enter the Center for Theological studies, continuing to follow in the footsteps of Khomeini, who had also studied there.

In 1996, he took a three-year pilgrimage and visited many holy sites in Turkmenistan, Uzbekistan, Tajikistan and Kyrgyzstan, impressing many there with his religious knowledge, piety, military expertise and youth. It was during this pilgrimage, while on the southern borders of Kyrgyzstan, that he first heard of the Chinese secular teachings of the "Time of the Three Wisdoms."

Hasan was indeed a pious and a faithful man. He was also a realist. He knew of the rumors concerning his own identity. He recognized, and was wary of, the ambitions of the Chinese. He could neither affirm nor deny the rumors about himself. The One God, Allah, would reveal all in His time. But, that the Chinese were growing in power, wealth and influence was self-evident.

Hasan also knew that it would take a combination of more numbers, wealth and weapons than the entire "faithful" Islamic world possessed to rid Islam of the Great Satan, and his spawns—and succeed in purging the unfaithful from among Islam's ranks as well. Such numbers, such monies and such weapons were available in China. If he could find a way to make some type of an accommodation with these principles of the "Three Wisdoms," then he could possibly form some sort of temporary, mutually-beneficial alliance of sorts with the godless Maoists, and thereby use them to help him accomplish the greater good.

To that end, in late 1999, near the end of his pilgrimage, Hasan spent three very productive weeks on the outskirts of Beijing in confidential preparations and planning, including several very productive sessions with President Jien Zenim of the People's Republic of China. Hasan had no illusions regarding the magnitude of their differences, but there was no denying that the Red Chinese knew how to manipulate people and systems. It was precisely his desire to benefit from their adroitness at manipulation that had brought Hasan to the table with the sitting Chinese President. The godless manipulations of the Chinese had served to bring about Allah's will with respect to Hasan himself. Those same manipulations would also reveal to him who was corrupted by influence and wealth over faith, and who would ultimately find that such corruption bought them nothing in this world—or the one to come.

Then in September of 2001, Usama bin Laden had surprised everyone with the effectiveness of his terror attack on America. Oh, they had all known something was going to be attempted; still the enormity of it and the successful nature of it had shocked the religious and political leaders throughout Islam.

"And that was just the problem," thought Hasan. That fool bin Laden had been too much the maverick. Committed, dedicated to removing western influence, completely faithful...yes. But a maverick just the same, with no close ties to the clerics (outside of the fringe Taliban) and no real connections to Islamic political power. As such, the very surprise of his effectiveness was its undoing. No one was positioned or prepared to take advantage of it. Instead, many had to distance themselves from the very success bin Laden had achieved. Hasan himself had counseled the Iranian leadership at the time to distance themselves from him, to walk a tight rope between how they were viewed by the masses, versus how they were viewed by an American and coalition military machine they were not yet ready or able to face.

And it had worked. When the Taliban was overthrown, when bin Laden's terror network was rooted out and destroyed, when bin Laden ultimately met his fate, and when fools like Hussein had been defeated, it had left leaders like himself in the perfect position to pick up the reins.

"Imam Sayeed! Imam Sayeed!" chanted the Ayatollah Ol Osams, Mujtahids, Mullahs and other clerics of the Shia Muslim faith, in near unison, as the official clerical recognition was made.

Upon hearing it, Hasan al-Askari Sayeed opened his eyes, nodded humbly and looked heavenward, as if seeking guidance, and his followers led him out of the recognition hall and toward their destiny.

**May 6, 08:00 local time**

**Politburo**

**Beijing, China**

Li Peng, the leader of the Chinese parliament and a handpicked supporter of the president, served Jien Zenim well; not only at home in the “parliament,” but as a “quasi” unofficial diplomat. This morning, Li watched as his President absorbed the morning’s report regarding progress in Iraq.

“So,” President Jien mused, “Hasan has already been named Imam...as of yesterday? This is wonderful! We are ahead of schedule. Li, are our “friends” in place, and prepared, in the four former Soviet Republics—particularly Turkmenistan and Kyrgyzstan? And is there any chance that we can capitalize on this situation in order to obtain an earlier solution in Pakistan?”

Li had worked hard over the last several years nurturing the relationship his nation now enjoyed with India. It had taken a mixture of patience, prodding, compromise and hard negotiating, but he believed that the sterling achievement of his life had been the recent announcement of the formation of the Coalition of Asian States between The People’s Republic of China and India. Now his other major area of focus for the past 10 years was also bearing fruit. A great Islamic coalition, which would find itself very indebted to The People’s Republic, now seemed possible. Amazing that it would be so after the campaign by the Americans. But, the fact that it was so in spite of that campaign, was a testament to the effectiveness of their planning.

“President, I believe that we must be patient with Pakistan. The relationship with India is still young, and India’s distrust of her neighbor to the west is long standing. Although we have made much progress, we need several more months before the Indian leaders will accept a unified Islamic Republic along their borders. I would suggest we proceed as your original plan indicated and ensure that the Pakistani agreement occurs after Turkmenistan, Uzbekistan, Tajikistan, Kyrgyzstan and Afghanistan come on board.”

“Then, if all goes as we hope with the Sunnis, it will either serve as the impetus for General Musharraf to see the wisdom of unification with the GIR, or it will serve as the spark for an “uprising” in Pakistan leading to the same, as you have envisioned.”

Jien knew that Li was right, and agreed with his reasoning. He had chosen well in Li, and was certain of his loyalty and his capabilities. He trusted him, without reservation. Jien took great personal pride and satisfaction in his own ability to judge the character and capabilities of those with whom he came into contact. As a result, he allowed only those into his inner circle whom he knew to be loyal and committed to him, and to China, in that order.

**May 15, 17:10**

**Lazy H Ranch**

**Outside Montague, Texas**

Jess Simmons climbed down off his old Case tractor that he’d been using to cut hay all afternoon. He was tired and sweaty, but glad he had finished this field before supper. He thought about the fact that the bank had not approved the loan for the new air-conditioned John Deere. At 102 degrees in the shade, the straw hat and south wind just couldn’t manage to fend off the heat; and if it was this hot in mid-May, it was going to be a real sweltering summer.

Now that it was cut, he’d let this hay sit a few days and dry out before he baled it. Later this evening, he’d start cutting that field south of the house. He’d rather work in the evening anyhow, after the heat had let up a little. If he kept after it, he could be finished putting up this cut of hay by “Saturday week”—Texan for “a week from Saturday,” which would allow him to finish well before the upcoming training exercises. If the Mendoza brothers came through with their “extra” help from south of the border, he shouldn’t have any trouble...that is, if the weather also cooperated, which was always an “iffy” thing this time of year in north-central Texas. As he wiped his brow and climbed into his ten-year-old F250 4X4 pickup to drive to the house, he thought about how good some cold iced tea would feel on his parched lips right about now.

As Cindy heard the back screen door close, she called, “Is that you, Jess?”

“Sure is, hon,” Jess answered. “I’m going to have to go back out this evening for two or three hours after supper and start on that field south of the house. Whew! It was hot out there for a day in mid-May...what’s for supper?”

“Well, I’ve got fried chicken, mashed potatoes and green beans, darlin.’ Come on in and get some of this iced tea I made for you and cool yourself off before we eat. It’ll be another five minutes or so,” Cindy said as she began to lay out the silverware and place settings. As she thought about Jess going back out after supper, she continued, “You must have finished cutting the field over by Clear Creek then. Did you see Billy? He was over that way with the dog, hunting. He was going to try and get a ride back to the house with you.”

“Well,” Jess said as he thought back on his cutting, “I did see the dog an hour or so ago. Looked like he was after something. Didn’t see Billy, though. I imagine he’ll be along in a little while. He isn’t

going to stay away from the dinner table for too long if he can help it. Doesn't he have any homework?"

With a little exasperated sigh, Cindy chided, "You know I have him finish up his schoolwork as soon as he gets home, along with the watering. He's a good boy and you know it...takes after his pa. He'd do it anyway without me reminding him. So he was okay. But I do wish you would talk to him about being on time for supper. It's best if we eat as a family, and it makes it a whole lot easier to keep this kitchen clean. Now come on in here and sit down to eat. Food's on."

Jess, who had picked up his glass of iced tea and quickly dispensed of it, walked back into the kitchen from the bathroom where he had washed his hands. As he sat down, he watched his wife of 18 years as she finished putting the food on the table. At 39, he thought she was still the best looking woman he'd ever set eyes on. He couldn't help but marvel at how she kept up with everything while riding herd on a seventeen-year-old boy, not to mention a forty-year-old boy, and tending a large vegetable garden for the family.

As she sat down, he took her hand. Without a word passing between them, they both bowed their heads and Jess said, "Father, we thank Thee for this food and the hands that prepared it. We thank Thee for our freedoms, this home and the land we live on. Help us always be good stewards of the land so it can provide us a good harvest. Please bless the food to nourish us, and bless Billy to come back in safe. In Jesus name, Amen."

As they ate, they discussed the ranch and the prospects that year for their crops and livestock. They discussed Billy, his upcoming graduation, his college plans this fall and his ultimate aspirations of following in his father's footsteps. When the time was right, Cindy asked, "So, you have everything lined up to get this cut in before those training exercises?"

Jess, sensing her apprehension, replied, "Sure do, and since Billy will be out of school, I have no doubt we can get it in. The Mendoza brothers are going to be helping as well. Besides, those exercises are only scheduled for ten days, and I'll be back before you know it. But enough about that. How was your day? When we finish eating, what do you say I help you with the dishes? Then when Billy gets in and finishes eating, I can have him start that field south of the house, while you and I drive over to Bowie and take in a movie or something."

Cindy, moved to tears by her man's understanding and intuition, could only look into his eyes between bites of potatoes and say, "Jess, I love you!" Then she got up from the table and moved into the loving arms of her man, Jess Simmons, full-time rancher and part-time Major, U.S. Army National Guard—a well-trained pilot of his nation's newest and most sophisticated attack helicopter, an RAH-66 Comanche.

As they hugged, they heard the back screen door open and close, quickly followed by, "Mom and Dad, I'm home. What's to eat?"

**May 19, 15:00**

**NSA Office**

**Washington, D.C.**

John Bowers quickly reviewed the two documents he had put together for the signature of the President. Both of the documents were Presidential findings and would be used to "unofficially" authorize the covert missions being planned over the next several weeks to gather more information about the Naval Air exercises in Red China.

The first mission would be an over-flight of the Tanjin commercial shipyards by the ultra-sophisticated and top secret HR-7 (Hypersonic Reconnaissance) surveillance aircraft. These were supposedly commercial shipyards, but CIA HUMINT assets had tied an internal rumor about military applications to them. That over-flight was scheduled to take place on the 25th of May.

The second mission would take place in late June, when the US Navy was scheduled to send the SSN23 Jimmy Carter into the waters near the Shanghai shipyards and, depending on the outcome of the HR-7 mission, to those near Tanjin to conduct a covert mission. The Jimmy Carter had undergone significant modifications during its construction—modifications which included the addition of a wasp waist, which housed sophisticated underwater launch and recovery technology, suitable for use in SEAL and other classified missions. This launch and recovery technology was made to order for just the type of mission that John and the naval planners had in mind.

Having reviewed the documents and the careful construction of the wording, John was satisfied that "plausible deniability" for the President regarding the specifics of each mission was maintained. Getting up from his desk, which was somewhat cluttered due to the abnormally large number of commitments in which he was currently involved, John put the folder containing the proposed findings in his briefcase and left for his 3:30 p.m. meeting in the oval office.

**May 21, early evening****Near the Harold Washington Memorial Library****Chicago, IL**

Alan Campbell could hardly believe his eyes, but it was true: there went his brother, Leon, into—of all places—the downtown Public Library!

“I wonda what he goin t’ do in there,” thought Alan. “It jus’ don’t make no sense! It jus’ don’t make no sense at all!”

Alan had been worried about his brother for some time now. Ever since Leon lost the vote to lead the “Heat” back in the hood about a year-and-a-half ago, Leon seemed to spend more and more time away. The other bloods were talking, wondering if Leon had just “lost it,” or maybe wondering if he was selling them out. Jerome, in particular, was getting a little too full of himself for Alan, even though Jerome was now the leader—and doing a fairly good job at managing both their territory and their “operations.”

But still, every other day or so, Leon would just disappear from their “hood” on Kildare, a few blocks from the intersection of Roosevelt and Cisero. At first, several of them had tried to follow Leon, but he was on to them, and just too good at shakin’ folks off his tail. That, among other reasons, was why he’d been the “man” for so long in the first place. Well, Alan hadn’t given up. He had to know what his brother was doing, and where he was going. Leon had always been his idol and was a good brother, despite their inevitable differences. For them, as their momma had always taught them, the “blood was thicker than the mud.”

So Alan had continued to follow, and had continued to get shook. But he’d had a “long term” plan and it was paying off this evening. He simply kept track of where he’d been shook each time. Sometimes a little further east, other times a little further north...but each time getting closer and closer to downtown. Oh, Leon was good, and used different routes, but still the pattern developed—and it had ultimately led right here to the Harold Washington Memorial Library.

As he waited, Alan reflected. Leon was seventeen years old. He’d dropped out of school at 14, and Alan, always wanting to follow in his big brother’s footsteps, had dropped out just a year later when he was twelve. Alan was big for his age, and that fact, along with a lot of exercise, helped establish him in the “Heat” next to his brother. But things weren’t the same anymore and tonight Alan was going to confront Leon and find out why.

**May 21, same time****Inside the Harold Washington Memorial Library****Chicago, IL**

Inside the Library, Leon had just finished printing out the most important document to that point in his life. What he now held in his hand was more important than his suspended driver’s license. It was much more important than the many citations, tickets, and complaints which he had received. It was more important that the juvenile court judgments he’d lived under while actively being a part of the “Heat.”

What he held in his hand now was even more important than the High School Equivalency that he’d earned just eight weeks ago, and which he’d kept secret, but also kept with him wherever he went. Until today, earning that equivalency had been the proudest moment in Leon’s entire seventeen years. But what Leon now held in his hand was, like his High School Equivalency, a “ticket” of a different sort. It was his ticket to a new life. It was the paperwork informing him that he had been accepted to Boise State University in Boise, Idaho that fall, and granting him a partial scholarship as well. Leon’s excitement was hard to contain. And it was made doubly hard by the fact that he had only shared the source of it with two other human beings.

“Mrs. Jenkins, would you look here? Can you believe it? I’m really going, Mrs. Jenkins. My momma is going to be so proud! She always talked to us about finding a way to knock on opportunity’s door. She’s told us since we were young that Jesus is waiting on the other side of that door to open it for anyone who is sincere and looking to follow His principles. Well, I finally started knocking on that door and He must have been standing there just waiting to help me. I just wish I’d knocked on it earlier.”

Mrs. Nellie Jenkins was an elderly assistant Librarian. She’d been helping Leon for the last several months as he laboriously studied and learned. It had not been easy for him. She never asked about it, but she knew this young man must have come from a very rough part of town; it was obvious from the way he had carried himself, and talked, in those first months. But he had stuck with it, and she had been impressed. Her husband, Charlie, a retired Marine gunnery sergeant, had come in on several occasions and helped, too. He’d taken quite a liking to Leon, and was convinced that the boy had tremendous potential. While he focused on discipline, honor, and the history of America, and the vision of its founders, she focused on English, writing, math and science. Their hours of involvement with this young man had paid off. Right now, Nellie Jenkins was almost as proud of Leon as if he had been her own son.

“Leon, God bless you. You’ve worked hard for this, and you deserve to take pride in your accomplishment. Boise is a long way from Chicago. But, from everything I have heard and read, BSU is a fine school, and the partial scholarship is a godsend. In addition, Charlie and I want to give you this,” Mrs. Jenkins said, as she passed an envelope over to Leon.

Leon took it and looked for a moment at this old white woman who had helped him so much. He remembered the many times her husband had come in and helped him with history and government. There was something about Charlie that Leon recognized and respected. Maybe he had tasted a little of it on the street, although he now knew that those street experiences had been pointing him in the wrong direction. Still, there was no doubting the qualities of leadership and respect and honor that Charlie possessed, and Leon wanted those qualities to be a part of his life as well.

He opened the envelope and read the congratulations card and the personal notes from both Mrs. Jenkins and Charlie, then he saw the check: a check made out to him for \$5,000.

“Mrs. Jenkins, this is... I don’t know what to say. You can’t give this to me! How can you afford it?”

“Don’t you worry about it, Leon. With Charlie’s retirement pay, and what he brings in on the side, and with my own job here, we have more than we can use. Charlie told me that doing this will not only help you, it will help this country; and I agree with him. Just be sure to write to us often once you get settled in Boise. We figure this will help until you find a job and get on your feet.”

With that, Mrs. Jenkins gave Leon a hug and pretended not to notice the glistening in his eye—or her own. When she was done, Leon put his acceptance letter and the notice for the partial scholarship in the fanny pack he carried with him everywhere he went, and walked over toward the stairs. As he started climbing, he turned and waved goodbye to his kindly benefactor.

**May 21, five minutes later**

**Outside the Harold Washington Memorial Library**

**Chicago, IL**

“Hey, blood! Wha’cha doin in there wit all dem crackers fo’ so long?”

Leon would recognize that voice anywhere, and turned in surprise toward the voice coming from across the street. Sure enough, there was his younger (couldn’t call him little anymore) brother, Alan, leaning against a street lamp on the other side. Leon crossed over to join him.

“Alan, how did you get here? I know I been shakin’ yo’ sorry black hide for the last three months. How’d ya do it?”

“Was simple, bro. You shook me every time, but every time we’s getting closa to somethin,’ and I noticed a pattern. All’s I had to do was let dat pattern lead me here...and now here we is. You gonna tell me what’s hangin’?”

Leon could hardly believe it. He knew he’d shaken Alan and several of the others. Obviously he’d underestimated the willpower, and the reasoning ability, of his brother. It gave him a lot of pride to see it evidenced here, even if its display meant that he had been “found out.”

“Well, I guess it had to come out sometime, bro. So here it is. Let’s sit down on that bench over there and I’ll tell you it all...but fo’ right now, it’s gotta be between us. You’ll have to promise before I go on.”

Alan knew a promise was important on the street. He knew his brother wouldn’t ask him for one unless he needed it. He also had gone to a lot of trouble, to find out what was going on. The decision was simple.

“No problem, Leon. You shoulda trusted yo’ little bro a long time ago, ya know. So, I promise. Go ahead and spill it.”

For the next half hour, Leon explained to his little brother how he’d started thinking more and more about the things their momma had tried to tell them at home about a year-and-a-half ago. At the time, Leon was the man in the “Heat,” but he was smart enough to see that too many of the “men” before him were either spending their time in the big house, or they were dead. He didn’t want such a future for himself or his brother, and he sure didn’t want to see his momma go through that. That had led him to trying to find out what more there was to life. He started spending more time thinking about making some kind of change than about how to sell dope to crackers, or how to keep their rivals off their turf. As time went on, all of those things associated with the “Heat” had started to lose their importance. His change of focus had cost him his position in the “Heat,” but it also ultimately led him to confide in his mother’s brother, Jack, who worked as a janitor downtown.

“Jack told me to find some books about math, and English, and government and history, and to start reading them. We always kind of looked down on him, ya know? Figured he was some sort of black honkey or somethin’—workin’ as a janitor for all those white people. But you know what? He’s got some money and a house of his own...not some “project” rental. And there ain’t no police chasin’ him all the time. He also ain’t fightin’ every other week with his neighbors, an’ watchin’ his friends get cut.”

Alan looked at his brother, he cared for him, but these words were so foreign to him that he was having a tough time accepting them.

“You know what, bro? It looks like Jerome and the others was right. You lost it, bro. You gettin’ soft. When you ever worried ‘bout all this befo’? What’s got into you? You sho’ ‘nough lost it, bro.”

Leon loved his brother. The acceptance and scholarship to Boise State represented what he could do if he put his mind to it. And if he succeeded in breaking out of the trap that life “on the street” had represented, he would be more determined than ever to help his brother do the same. He grabbed his brother’s arm with a fierceness that was born of determination. Alan was surprised. He had gotten to be almost as big as his older brother and thought he was in better shape. But the strength of that grip, and the determination in his brother’s eyes, brought him up short. All he could do was listen.

“You listen and you listen good, Alan. I ain’t lost nothin’ but the ignorance I was in. I’ve been comin’ down here to pull myself out of this trap we livin’ in. The politicians and all them rabble rousin’ folks who always tell us we are owed somethin’ been lyin’ to us. Bro, they want us here. They want us havin’ to count on their programs and handouts. They want us to treat them like some sort of king for takin’ other folks’ money and throwin’ it at us. But, look around! You see things gettin’ better? No, they ain’t! And they ain’t because they ain’t meant to! What those folks really want is us dependent on them.”

“I’ve been readin’ about history and how this country was formed, Alan. I’ve been readin’ about how folks, from all over the world, wanted to come here...and still do. I got on the internet and got me an email account. I’ve been talkin’ to folks from all over. One kid down in Texas I’ve come to know pretty well is white and his family works real hard on a farm. He’s my age and thinks a lot the way I do. Guess what? They ain’t rich, but they have things for themselves. He’s goin’ to Boise, Idaho this fall on a football scholarship. At first I thought it was just ‘cause they was white. Then I learned it was ‘cause they was willin’ to work and learn. Well, I decided I’m willin’ to do that too.”

At this point, Alan interrupted him. “Yea, bro. But what you got from it all? Nothin’ but a bunch of hours in a buildin’ filled wit books. You know how it is, them white folks, even the poor ones, they can get ahead...not you, and not me. We got to take what we can.”

Leon was frustrated. He knew his brother was just spouting the propaganda of politicians and bureaucrats who wanted nothing more than to keep folks like Alan dependent on their programs, to keep them mired in ignorance and poverty and fighting the “system.” But, although Leon was frustrated, he wasn’t about to give up on his brother.

“No! Alan, that’s the trap. They want you to think it’s owed to you. Or, better yet, vote them in and let them take it for you. But that ain’t how it is, and you know it. You are only owed what you earn, Alan...anywhere in life, including the street. Anyone tells you different is a liar and trying to control you. And you know what? The folks that founded this country? Yeah, they made some mistakes. But whatever mistakes they made, they knew what I’m talkin’ to you about, an they didn’t design it to work to keep folks like us down. Well, for me...no more. Look here.”

As he said this, Leon took his High School Equivalency, and his acceptance to Boise State, out and showed them to his brother. Alan wasn’t too good at reading, so Leon read it for him.

“You see, Alan, I did this for myself. Even learned how to talk real English, and learned Algebra and Geometry. There are some folks in that library who took a liking to me and helped me, and I want you to meet them.”

“Guess what, Alan? They’s white folks, and they treated me the way grandparents would treat one of their own. Now I got some learning, I’m going to college to get more, and I got some honest money. I’m leaving for Boise in six weeks. I’m taking momma with me, and I want you to come too.”

Alan was floored. He was thinking on what his brother had said. He could see the fire in his eyes, and when he thought about it, he could see the truth of it.

“But, Leon, what would I be doin’ there?”

Leon looked at his younger brother and knew he was willing, but also knew he was apprehensive. It wouldn’t be easy, but he knew Alan could do it.

“Well, we’ll start by getting you over to this library right now and helping you learn, then we’ll continue over there in Boise. You may go to school Alan, but I promise, it’ll be because you want to, not because you have to.”

With that, Leon put his arm around his brother’s shoulder and they began walking back towards the library to start arranging for Alan’s “ticket.”

**May 25, 23:05 local time**

### **Over the Yellow Sea**

“Well, here we go again,” thought Colonel “Mac” Mendenhall, as he checked his mission parameters. Everything looked good, “Except this time it’ll be solo,” Mac thought, “and we’ll be screaming. Talk about the need for speed.”

Mac was piloting the ultra-secret and ultra-high tech HR-7 aircraft for the NRO toward another over-flight of Red China, which had been ordered by the Air Force Chief of Operations and the Director of the NRO. He had been carried aloft by an SR-77 from Nellis Air Force Base in Nevada. After several refuelings, he had been released over the Yellow Sea. Following a few minutes of Mach

3 flight, he was ready for his 350-mile ingress and would be igniting his Pulse Detonation Wave Engines in 3...2...1...NOW!

As the turbojet engines idled down and flamed out, the PDWE kicked in. The pulsating vibration was tangible in the cockpit as the sharp, black triangular shape of the HR-7 rocketed to its maximum speed of Mach 7, and to its planned ingress altitude of 180,000 ft. for this mission.

At such speed, the leading edges of the aircraft would fail due to overheating, were it not for the liquid methane coolant circulating through the aircraft's ceramic leading edge. This same coolant was then injected into the PDW engines and ignited as fuel. Nevertheless, at such speed, the aircraft literally glowed from the heat of its passage through what little "air" existed at that altitude. During daylight hours, contrails that resembled "doughnuts on a rope" could be seen behind the aircraft.

Mac monitored his defensive MFD, and tracked the status of his monitoring and surveillance packages, as he approached the turn that would take him between Luda and Chengshan Point and into the Gulf of Chijhli. From there, he would fly on a direct line to Tanjin, finally making a 180 degree turn which would have its nearest approach 20 miles from Tianma Shipbuilding.

His defenses consisted of the inherent stealth of the HR7, its extremely high altitude and speed capability all complemented with a suite of electronic counter measures. There was literally no known weapon in that could challenge him. His most vulnerable moment would be when he slowed to Mach 3 during the turn, and reduced altitude to 150,000 ft. for the surveillance packages.

**May 25, 23:21 local time**

### **KS-2+ AAW Battery, South of Tangshan**

Lieutenant Hu Ziyang cupped his hand over the phone and addressed his men, "We have an intermittent inbound contact, approaching and decelerating through Mach 5. We are instructed to take our feed from the principal array at the airfield near Tangshan. Ensure that our own guidance is locked out and enable the missiles for remote guidance and terminal thermal lock from their own seeker heads. Quickly now. move!"

Taking his hand off the phone while his men feverishly made adjustments, he listened for any other instructions from the controllers near Tangshan. Things were happening quickly. He had received the call no more than two minutes ago when the first indications of an intruder were relayed. Incredibly, the initial profile was at an altitude of close to 60,000 meters, and an approach speed of Mach 7! Since then, the contact had slowed, and dropped in altitude, but there could be no doubt whose aircraft this was.

The advanced capabilities of this KS-2+ anti-aircraft missile were classified to the strictest top level clearance within Red China. The only two batteries deployed to date were this battery and another one across the bay near the mouth of the Huang Ho River. They were there for the official, "classified" purpose of protecting Beijing from air attack. But the real, top secret purpose was to protect the work that was going on at the Tanjin shipyards.

Using phased array radar, super computing, new software, advanced infrared and optical sensors and a second stage, the KS-2+ land-based anti-aircraft missile was the most advanced system the Red Chinese had. Many felt it rivaled the American Patriot Missile batteries. (In fact, much of the technology to create these missiles had either been purchased, pilfered, or handed over to the Red Chinese by American firms, American politicians and through "exchange" programs established during the mid to late 1990's).

As a result, the missile could be guided to the anticipated area of the target's approach by a controlling facility, by the launching facility, or in a launch-and-forget mode once lock-on was obtained. In any of the ground guidance modes, once the missile got within range of its advanced infrared/optical seeker, it could lock onto the target and destroy it independently.

Lieutenant Hu reflected that, with a ceiling of 45,000 meters and a speed during 2<sup>nd</sup> stage acceleration of Mach 4, if this American bogey would just continue to slow down and reduce its altitude, there might just be a possibility for his KS-2+ missiles to make an intercept.

"Lieutenant, our weapons are slaved to Tangshan. We have a missile launch—now a second!"

**May 25, same time**

### **Over the Gulf of Chijhli**

Mac had heard the audible alert tone in his headset; a tone that carried the ominous implication that several radar installations were attempting to acquire him. On his MFD, he noticed that the principal threats were near Tangshan, and across the bay near the mouth of the Huang Ho River. Both were painting him with their search radar, but there was no indication of any lock-on, so he felt relatively secure. At this point, Mac was seconds away from activating his surveillance package.

What Mac was not prepared for was the heightened alert tone that sounded in his headset a few seconds later, accompanied by the bright red "MISSILE LAUNCH WARNING" signal that suddenly lit up on his MFD.

"How in the hell?" Mac wondered as his instruments tracked the two missiles that had just been launched from near Tangshan.

It was decision time. He had been briefed extensively about the importance of this mission. The missiles would be coming at him from the rear. Any significant speed increase on his part to outrun them would take him deep into Chinese airspace. This was something that his plan strictly forbade.

The two missiles appeared to be Chinese KS-2's—missiles whose ceiling was around 75,000 to 80,000 feet, and whose max speed was around Mach 3. Lower and slower than he planned on operating.

Mac keyed his satellite transceiver and quickly stated, "Red Dragon! Red Dragon! Charlie Mike! I say again, Charlie Mike!"

The message was encrypted by his communications systems and sent to a US military satellite in gyro-synchronous orbit over the Philippine Sea.

### **May 24, same time**

#### **Secure Video Conference Center, The Pentagon**

"Red Dragon! Red Dragon! Charlie Mike! Charlie Mike!"

Everyone heard the message clearly. Major Tim Lawrence said, "He's been fired on...but he's indicating that he is continuing the mission."

"Fired upon?" asked John Bowers, "How did they manage that?"

"Can't say. We'll just have to wait for further word, but he should be safe. We know of no capability they have that can reach him," replied Major Lawrence.

"Well, we also thought that there was no way they could even acquire him. Apparently, someone forgot to tell the Red Chinese."

### **May 25, seconds Later**

#### **70,000 ft over the Gulf of Chijhli**

As their first stages flamed out, the second stages of the KS-2+ missiles ignited and boosted them to their maximum speed of Mach 4, continuing to increase their altitude.

Then, as the missiles passed through 120,000 feet, their seeker heads scanned the heavens for any optical or infrared source that they could lock on to. 30,000 feet above them, and ten miles in front, they found ample thermal energy from the PWDE and leading edges of "Mac's" HR-7 aircraft.

### **May 25, 23:25 local time**

#### **Over the Gulf of Chijhli**

Mac was getting his share of shocks this evening. The first had come when he had been notified that he'd been fired upon. The next, and greater, shock had come when what he thought were standard KS-2 missiles that his systems were tracking passed right through their supposed 75,000 foot ceiling. That unsettling occurrence had happened only 15 seconds into his surveillance run.

But none of the shocks had been as great as the one that followed a few seconds later, when the audible pitch of the warning tone changed to the unmistakably incessant warning sound of a missile lock, and the message MISSILE LOCK began flashing on his MFD.

Quickly now, Mac keyed his satellite communications and said.

"Combination! Combination...tip over!"

Mac broke off his carefully-scripted mission profile and began evasive maneuvers. First, he turned to minimize the angle of attack the missiles had on him and force them into a pure tail chase. This evasive maneuver also had the effect of tightening the turn he was already in and allowing him to come around for his egress quicker. He also began to increase his altitude.

As he did this, he was warned of two more missile launches from near the mouth of the Huang Ho River. With four missiles in the air, Mac's "pucker factor" increased significantly along with his anxiety.

### **May 24, same time**

#### **Secure Video Conference Center, The Pentagon**

Tim Lawrence spun around in his seat and looked in disbelief at John and Bill when he heard the second secure satellite transmission.

"Unbelievable! The missiles have locked on! He's taking evasive action!"

### **May 25, seconds later**

#### **140,000 ft over the Gulf of Chijhli**

Their second stages already spent, the KS-2+ missiles lost upward inertia and began to turn over at 140,000 ft. Their seeker heads maintained lock on the HR-7 until the missiles began falling towards the Gulf of Chijhli far below.

The HR-7, a mere ten thousand feet higher, and now only two miles in front of the missiles, came out of its turn and began to accelerate rapidly away from the threat of those first two missiles, while gaining altitude rapidly.

**May 25, 23:27 local time****KS-2+ AAW Battery, South of Tangshan**

Lieutenant Hu Ziyang hung up the phone and turned toward his men, the crew of the launch and control unit for his battery of KS-2+ missiles.

“We have served our motherland well this night, my friends. The advanced Yankee aircraft escaped our missiles, but we prevented it from entering our airspace, and caused it to break and run like a guilty dog with its tail between its legs! We have faced the best the Americans have and turned them away!”

The technicians raised their voices as one in a deafening cheer. Perhaps now the Americans would learn to not trifle with the People’s Republic of China.

**May 25, 23:30****180,000 feet over the Gulf of Chijhli**

Mac felt the sweat under his arms and on his forehead. That was far too close! And certainly not what he had expected.

Although the second set of missiles also missed, if he had not gained altitude and accelerated to his Mach 7 maximum speed, he could have been easily swimming in the Gulf of Chijhli right now—or he could have been dead.

Still, he had completed half of his surveillance without a problem. Even though the second half was degraded, he had survived. Now, he was bringing home data about the shipyards near Tanjin and a new Chinese missile system more advanced than anything they had imagined.

Instructing his systems to encrypt and send the electronic data from the night’s activities, Mac once again keyed his voice transmission link.

“Mary Chambers wet feet.”

**May 24, same time****Secure video conference center, The Pentagon**

“Okay, he’s completed the mission and is now egressing!”

As Tim said this, there was an unmistakable note of relief in his voice, and on his face.

John Bowers, himself visibly relieved, leaned back and said, “That’s for sure, Tim, thank God.”

Then, after a moment’s pause, during which they all contemplated the near-disaster the mission might have turned into, he continued:

“Okay, as soon as you have the data, pour every effort into it. The new missile system is probably as important as what we were looking for in the shipyards.”

“Thank goodness they don’t have a naval version of this system or Mac would never have completed that flight in March. Tim, you’d better get this one out on the boards as soon as we analyze it and have some definitive information. The Wild Weasel and Prowler crews are going to have a new threat to plan for.”

**May 28, 17:30 local time****Tianma Shipbuilding****Tianjin, China**

Lu Pham was very satisfied. Work was progressing better than he had expected. He had spoken with General Hunbaio just yesterday regarding their progress, and he knew that a favorable report had been passed on to Chin Zhongbaio, the Chairman of COSCO and a member of the Chinese Communist Politburo. New weapons development, particularly the new LRASD weapons, was a huge priority for the entire People’s Republic right now, and Lu Pham’s team was performing beyond expectations.

After the conversations of yesterday, Lu had determined to come to the shipyards today to convey the thanks of their superiors to the individuals who were making the full production deployment possible, and to review the progress being made in the technical and logistical facets of the work.

He was currently in the company of the top-performing production crew chief, Sung Hsu. As they walked towards one of the six dry dock areas where ships would ultimately be fitted with the modular changes, Lu turned and spoke to Sung.

“You have much to be proud of, Sung. The process improvement plans you have come up with for the placement and onboard maintenance of the LRASD stations are proving to be successful beyond our expectations. When the materiel pipeline for the modifications are ready, we will be able to stay well ahead of schedule with this portion of the refit. Both General Hunbaio and Chairman Chin send their regards and their appreciation.”

Sung took the compliment in stride, although it still was incomprehensible to think that his name was being spoken of in such high circles.

“Thank you, Commodore Lu. It is humbling to have such influential men take note of our efforts. Truly, we are only doing our job.”

Lu smiled knowingly. Although Sung was being reserved, one only had to look in his eyes to know of the pride this bright foreman took in these accomplishments... “and he has every right,” thought Lu.

“Sung, you honor your forefathers with your humility and dedication. Nonetheless, the ideas for the additional pivot points on the traversing unit, and the automated reloading mechanism you suggested, are going to make the ability to install, maintain, and reload these systems much easier and more efficient. You have done your homeland and all her citizens a great service.”

“And that’s the clear truth,” thought Lu Pham as they continued towards the dry docks. With his innovative production processes, Sung Hsu had reduced the time required for the refitting of each Amphibious Assault and Tactical Attack ship by seven to ten days. As they approached the stairs that would lead them down into the first of the dry docks, Lu Pham continued.

“The size and scope of these facilities never ceases to amaze me, Sung. One of my chief concerns has always been our ability to “mask” the logistics of preparing, and then actually refitting, these ships from the Americans. There is no doubt that they are becoming increasingly interested in our efforts. The activities of the other night clearly prove not only that they are determined to understand what we are doing, but that they now know where to look.”

Sung Hsu reflected on those events. He had been preparing to leave for the evening when the night sky to his east had lit up with the launch of the two missiles. They had been some kilometers distant, but it had been easy to see those brilliant points of light as they quickly climbed higher and higher. Then, from the south and west, two more had followed, also climbing so very high. But there had been no explosions.

Well, thought Sung, what was one to expect? The state security issues had been explained to him. These were military conversions he was working on, and his own assignment was to develop the methods and procedures for installing weapons, awesome new weapons, on these ships for his nation. The Americans and other countries should just let them alone. But apparently they wouldn’t.

As they continued their descent to the first of the dry docks, Sung Hsu continued.

“Comrade Lu, you can see here in the upper reaches of the dry dock the first of the new logistic delivery systems we are installing. These “channels,” or tunnels, lead back several hundred meters to entry points at ground level where materiel can be offloaded from rail and truck.”

“It is going to take time to build them all. But, when complete, all major components will be staged and delivered through them directly to the work area for both the Tactical Strike and Amphibious Assault conversions. Cranes and conveyer systems will be constructed to transport the materiel from the delivery platforms at the termination of each channel to the ship itself. This will provide for both stealth and protection for the materials as the conversions are made.”

Reviewing with pride the efforts of those working on the tunnels, along with the progress they had made to date, Lu Pham responded.

“And we have the workforce and the will to complete the effort in time for production in September. Sung, again, in addition to the innovations regarding the systems themselves, this logistical consideration will help immensely. It is just too bad that there is no method for doing likewise for the Sea Control carrier decks,” said Lu Pham as they continued their descent.

“Once we begin actually installing those decks, despite the large housings we intend to erect for their dry docks, our adversaries will know what we are doing. The components for the decks are simply too large.”

Sung Hsu pondered this concern. It was not the first time he had done so, because the problem was apparent to everyone involved. He had an idea regarding it and decided now was a good time to share it.

“Yes, but we will be doing this work at several shipyards. We will have these logistic practices installed at each of those facilities, so the efforts associated with those vessels should be much more difficult to ascertain.”

“I know it is not my area of responsibility, but I have an idea for the Sea Control vessels. Perhaps, we could erect the coverings at all of the dry docks being used for these vessels—except this one. Let the Americans find what they are looking for, but keep them focused here so the magnitude of what we are accomplishing is kept from their view.”

As they reached the bottom of the long staircase and began walking across the dry dock, Lu Pham considered his production crew chief’s words and suggestions, and was reminded anew of his dedication and ingenuity.

The two men had begun to associate with one another and their families in the weeks that had elapsed since their first meeting. The social interaction meant a lot to Lu because, despite his contributions, there were not many who would associate socially with a Vietnamese family. But in Sung, he believed he had found not only talented employee, but also a friend.

“Perhaps such misdirection will help, Sung, but it still does not address the fact that fabrication efforts at each site will be almost impossible to hide.”

Sung respected Lu Pham. He was a brilliant engineer. But Sung Hsu’s expertise was in production and manufacturing, and he had met many westerners over the years at the COSCO

facilities. He believed that such misdirection might work with what he had seen of the western mindset.

"I believe, with the coverings and with these logistical channels for other materials, that they will be less noticeable at those other facilities. By putting the Sea Control efforts of this facility right out in the open, perhaps they may have no reason to look at the others. Perhaps at this point, the best we can hope for is to keep the magnitude of the effort from them."

As they continued, Lu made up his mind to pass these recommendations on to General Hunbaio.

"Your ideas have merit, Sung. Perhaps that is the best we can hope for at this point. I will pass them on to General Hunbaio and we shall see where they lead. Now, let us hurry and view the preparations you are making for those pivot points on the traversing collars. My body tells me it is almost time to eat. We will have to hurry if my family is to be at your apartment by eight o'clock. But I know we can do it. You see, the excellent Chi Ro Mein that your wife makes is calling to me."

## **June 2**

### **White House Situation Room**

#### **Washington, D.C.**

Admiral Crowler contemplated on the import of this moment. The next one or two hours could potentially portend a critical watershed in the history of United States and Chinese relations; perhaps a watershed in world history. Admiral Crowler had been in the Navy all of his adult life. He had come up through the ranks, starting as a "snipe" on a conventionally-powered aircraft carrier. Ultimately he had risen to command one of the premier surface combatants, an Aegis Cruiser. From there he'd been promoted to a Task Force commander as a Rear Admiral. He rose to flag rank six years later. And, as a result of his personal relationship with, and mutual respect for, the President, he had recently been promoted to command the entire US Navy.

He had cut his command teeth during the "Reagan years" when the 600-ship navy had become a reality. He had also lived through the "Hell Years" of the 1990's when political correctness, sensitivity training, budget cuts and what the Admiral considered to be insane policy decisions had all but destroyed the morale and effectiveness of his "fighting" navy.

Now, he intended to ensure that those times were behind them. They were now in the business of seriously putting the whetstone to steel in order to restore the "cutting edge."

"Mr. President, as you know, we had an over-flight of Red China last week. The mission made some startling discoveries, at least four of which made for a very anxious time for all involved."

"I have reviewed the data and ramifications with your National Security Advisor, John Bowers, with the Director of the National Reconnaissance Office, the Chief over the Air Force, General Livingston, with my own boss, the Chairman of the Joint Chiefs, General Stone and with the Secretary of Defense, Timothy Hattering. Are there any general questions before I begin?"

Admiral Crowler patiently waited while the other attendees, in addition to those whom he had just named, considered his remarks. Those additional attendees included President Norm Weisskopf, Vice President Alan Reeves, Secretary of State, Fred Reissinger and Tom Lawton who was attending with the Director of the NRO at the Presidents express request.

Secretary of State Reissinger cleared his throat and spoke.

"Admiral, the launch of those missiles at our aircraft was seen by tens of thousands. The Chinese have lodged an official diplomatic protest and are having a hay day with the press. It is really a diplomatic nightmare as many nations are sending official inquiries regarding the "incident." I thought we were sure that nothing could either detect, acquire or fire upon our aircraft. I need something to respond to these inquiries with."

Admiral Crowler paused for a moment or two, collecting his thoughts.

"Mr. Secretary, we were all surprised by the capabilities of the new Chinese missiles. We will speak more to that later in the meeting. I understand the difficult diplomatic position it has placed us in. I believe we must stick to our guns and officially deny any involvement. As far as we are concerned and as far as the evidence shows...the Chinese launched their missiles at a meteor descending into the atmosphere which burned during reentry."

Turning to his boss and the Secretary of Defense, the Admiral inquired.

"General Stone, Secretary Hattering?"

At this, President Weisskopf spoke up.

"That will not be necessary. Fred, I am afraid there is not much we can do here explicitly other than stick to the explanation that we were not involved...maybe floating Admiral Crowler's explanation would not be a bad idea. In the mean time, let's continue with the briefing."

With the President's definitive word on the matter, Admiral Crowler continued.

"Thank you Mr. President. The agenda will be as follows. We are going to have Tom Lawton review the infrared, electronic and signals data we received as a result of Colonel Mendenhall's flight. Following this, we are going to look at our projections of the capabilities of the new missile system that was fired at our aircraft. Finally, we will discuss the ramifications of both the shipyard data and the new missile systems on our current and future relations with the PRC."

“So, with that said, Tom, would you care to make your presentation?”

Tom was well prepared. With enhanced photographs which were based on infrared imaging and radar imaging, he showed the attendees the significant work going on at the Tianma shipyards.

“They are working three shifts and have a huge number of manual and technical laborers preparing these four dry docks. Historically, at this facility, they have had only two dry docks, and these were used predominantly for shipwrecking. Bringing old hulks in and dismantling them for their metal and wiring and anything else of value that could be obtained.”

“If you will direct your attention at these openings in the sides of each dry dock, it is apparent that an intricate system of access tunnels are being constructed which extend back to the surface several hundred meters away. Each of them is in close proximity to a major transportation corridor, either rail or vehicle. The implication that they are ramping up for serious shipbuilding at these facilities is clear...and in a way that will make it much more difficult for either our satellites or other surveillance missions to determine what is going on exactly once they begin.”

“Though no ships were present, each dry dock is capable of handling a vessel 800 feet in length and 100 feet wide; typical size for their container ships.”

“With respect to the signals and electronic data we analyzed, it is also clear that those missile batteries and additional, lesser capable batteries have been set up in very thick matrix around these shipyards, particularly for any approach from the sea. They are clearly intent on defending this site.”

With respect to the advanced missiles themselves, I have prepared a summary of data regarding their performance against the HR-7 aircraft we had in the area. Please refer to your handout and to the screen.”

*General: Guided, high performance Anti-Air*  
*Guidance: Capable of multiple guidance points and terminal guidance*  
*Range: Fifty to Seventy Miles*  
*Ceiling: 140,000 ft.*  
*Speed: Two stage, max speed Mach 4*

“We do not know if the missile is capable of self guidance once initial lock on is obtained on the ground. We must presume it can because their other high performance missile, the KS-2 certainly can. In addition, it is clear that the terminal guidance includes at least infrared and probably includes radar.”

At this point, General Livingston, The US Air Force Chief, spoke.

“Excuse my interruption, Tom, but I want to emphasize something to everyone here. These are very capable missiles...perhaps as capable as our latest Patriot missiles, although their performance against a true ballistic threat is indeterminate. Somehow we need to determine their full capabilities, as well as their numbers and production status. As it is, we know that they are one of the most capable missiles, outside of our own, that we have encountered.”

The meeting continued and two things were made very clear:

The Red Chinese were gearing up for serious shipbuilding at the Tianma shipyards. Taking into account earlier CIA intelligence regarding the purpose, and eventual military significance, of the projects, the speculation that the Red Chinese were going to use those locations to build new carriers, or some other military vessels, began to assume more and more credence.

It was clear that the Red Chinese had employed a new, highly capable missile system in defense of these very shipyards, along with an entire multi-layered defense of other, less capable systems. This information served as the catalyst in reaching the determination that Tianma was in fact being converted to accommodate extensive military operations.

President Weisskopf addressed the meeting as it was winding down, and as Admiral Crowler sat down after the last agenda item.

“Ok, I want to thank everyone for their fine input. We will go forward with the Jimmy Carter mission early next month. I believe it is imperative, with the creation of the CAS, and given my own conversation with President Jien Zemin, that we gather as much intelligence as possible. Admiral Crowler, just ensure, as we have discussed, that the Commander understands that at no time can his boat encroach into internationally recognized territorial waters of Red China. He is to accomplish his mission without doing so, or he is to abort. General Stone, Admiral, is that understood?”

Both men responded immediately with a definitive, “Yes Sir.”

With that, the President concluded.

“Gentlemen, these are momentous and potentially dangerous times. Fred, we need to do everything possible to bolster the morale, and the confidence, of our allies and friends in the Pacific region, and to maintain civility with the Red Chinese. Spare no effort to ensure that the foreign ministers from Japan, to Singapore, to Australia understand this. Pass the word confidentially to our friends in the ROC.”

“Oh, and one more thing. Alan, I would like you to work with Fred at State and Mike at CIA to coordinate a detailed review of events of the last few weeks in Iran. We have not taken a hard enough look at that, in my opinion. I know there has not been a lot of news emanating from there—and little notice is being paid to what news has been released—but I want to know more about this Hasan

Sayed. His age, and the unusual, almost worshipful, deference that is being paid to him, has me worried. Too many differing Islamic sects saying too many good things. I have a feeling we need to know more. You guys get together off line and arrange to look a little deeper into this man, and his potential significance, both in Iran, and well beyond her borders.”

Alan Reeves liked nothing more than to have a myriad of diplomatic and international state affairs on his plate. It was part of the arrangement that President Weisskopf had made with him before he accepted the invitation to run as Weisskopf’s running mate. Given Reeves’ prior experience under the Reagan administration, the President let it be known from the beginning that he’d rely on Alan for input, and decision-making, where diplomatic and international trade issues were concerned. Alan had liked the offer, and nothing had since given him any reason to regret having accepted it. Weisskopf was not treating his VP in the traditional figurehead manner. He was putting as much as Alan could handle on his plate. And, without exception, Alan had proven capable of handling everything that was placed before him.

Alan operated best under such pressures, and had a “team” who mirrored his capabilities in this regard. The President had just filled their plates yet again, and Alan was anxious to have at it.”

“Mr. President, I will do it right away Sir. We’ll have a planning meeting tonight if that is okay with you, Fred and Mike, and then prepare a detailed briefing with you within the next few days.”

**June 6, 06:00**

### **Wolf Flight, training range**

#### **Ft. Hood, Texas**

Major Jess Simmons was charged up for this morning’s exercises. It was 6 a.m. and he and his back-seater and their flight of RAH-66 Comanches were on the point of the sword and moving forward.

For the last three days he had been in briefings and mission planning sessions in exhaustive preparation for the exercises that actually kicked off in the field today. The exercises would be the culmination of his, and many others,’ efforts of the last three years regarding the full deployment of the new RAH-66 Comanche helicopter.

In fact, for the last 9 years the program had been coming together, from that first prototype which had flown in 1996, to the six operational machines that had been delivered in 2002, when Jess had first been assigned duty with these amazing military aircraft. That was the year he had opted out and gone into the guard, after fifteen years in the Army. Despite his decision to leave the Army, his record in flying the AH-64 Apache helicopter had been so outstanding that Uncle Sam had immediately put him to work evaluating and testing the Comanche.

That work, and the performance of the aircraft itself, had been so outstanding, and so compelling, that the Army had sought, and received, approval to begin low-level production two years ahead of schedule. As a result, thirty aircraft had been produce early and now there were 65 operational.

The exercises kicking off this morning would be putting twenty-five of the RAH-65s through their paces for the next four days, covering all mission capabilities from Scout, to Armed Recon, to Attack, to Air Defense, and all of the tactics developed for them.

Jess was piloting the lead aircraft of his company in the attack role. He would locate and then attack opposing force (OPFOR) tanks and other targets of opportunity.

In some of the heavier units, the Comanches would be operating in the scout and armed recon role, handing off the actual attack to AH-64D “Longbow” Apache helicopters. Jess believed that, in the attack role, the Comanche was every bit as effective as (and, in some ways, even more effective than) the older Apaches. This was because, while with the additional stores pylons the Comanche could carry slightly less ordinance, it could do it more stealthily and more effectively. He was convinced that these exercises would serve as proof of the Comanche’s attack-mode superiority.

“Guidepost, guidepost, this is Wolf,” Jess spoke into his headset on the division’s frequency.

“Go ahead Wolf,” came back an almost instantaneous reply.

“We are at point Bravo. Confirm permission to proceed.”

The operational plan called for his lead element of Comanches to scout well in advance of the division and the other elements of his flight. Point Bravo was the “kick-off” point after which his blue force expected at any time to encounter the OPFOR. From point Bravo, his flight would begin an armed reconnaissance, looking for the lead elements of the OPFOR.

In this case, OPFOR consisted of Soviet block equipment, including T-80 tanks, BMP-3 personnel carriers, AAW support vehicles, Hokum attack helicopters and air support provided by OPFOR F-16s. The Hokums and F-16s were Jess’s major concern. They were very capable of targeting his flight of helicopters and taking them out.

For this reason, his flight of six Comanches included two aircraft operating in the air defense mode, carrying full loads of eight ATAS Block II (air-to-air stinger) missiles. Their call signs were Thresher 1 and Thresher 2.

“Roger, Wolf. You are cleared to proceed.”

With that, Jess spoke over his flight's frequency.

"Okay, flight, follow my lead. We'll scout the terrain over the next rise across the valley to our front. I'm on point. Thresher 1 and Thresher 2, take up positions on our left and right flanks respectively, and cover us for any bandits. Respond in sequence"

As he received the responses, Jess dashed across the small intervening valley and hovered just below the summit of the hills on the far side. He slowly brought his aircraft up so his millimeter wave radar system's FCR (Fire Control Radar) could peer over the tops of the trees. Just before the sensors were ready to "see" over the treetops, Jess spoke over the intercom.

"Okay, Todd, keep your mark 20 eyeballs peeled and all of our electronic eyeballs up to snuff."

As his infrared and other sensors got a good look at the next valley, his back-seater, Todd Christensen, was rewarded with a view of five OPFOR BMP-3's. They were sitting in a small clearing at the edge of a line of oak trees on the far side of the valley, nestled between two of the hills that marked the far side of that valley in this part of the Texas hill country.

"Okay, flight, on my mark all shooters ease up to targeting position. There are five BMP-3's on the far side of the valley. I will take the center target. Each of you take targets to my right and left, in order of sequence. I will take a second shot on the far right. Await my mark and then acquire and engage."

Quickly keying into the division frequency, Jess said,

"Guidepost, guidepost. This is Wolf. We have contact with lead scout element of OPFOR. Request permission to engage and fall back to point Bravo, executing plan Lima."

"Affirmative, Wolf. You have permission to engage."

Now, speaking back on his flight frequency, Jess commanded.

"Okay, gentlemen, on my Mark.. 3.. 2.. 1 Mark!"

The four Comanche attack helicopters rose, acquired their respective targets using their FCR, and engaged each with a special training round that simulated a Hellfire missile. The practice rounds left the launch pylons and homed in on their respective targets.

**June 6, 06:10**

**OPFOR Lead Element, training range**

**Ft. Hood, Texas**

As soon as the incoming fire was noticed, all five BMP-3's rapidly backed into the cover of the woods on the side of the hill. As they did so, their commander, Lieutenant Jensen, spoke to his own divisional headquarters.

"Hightower, Hightower. Vulture one and two execute Pincer three!"

Three of his units, including Jensen himself, made it safely into the trees. But two units were not as fortunate, as the training rounds "electronically" blew them apart, relegating them to "KIA" status in the training exercise.

Concurrent with Lt. Jensen's transmission, two flights of four Russian, KA-50B Hokum attack helicopters rose from behind the hills between which the BMP-3's had been nestled. Each flight angled away from the BMP-3's and up and over the respective hilltops to each side, circling towards the Comanches.

**June 6, 06:12**

**Wolf Flight**

**Ft. Hood, Texas**

"Incoming bandits! Coming over the rise from the left and right. Thresher 1 engaging!"

Jess saw the threat immediately. OPFOR had sprung a trap on his flight. It appeared that all of the aircraft were Hokums, and that they were armed for air-to-air combat, carrying two missiles each. These would be simulations of Russian infrared homing missiles similar to the AIM-9 Sidewinder in the US inventory.

Jess knew that, even though the Comanche had been designed to reduce its engine heat significantly, even over that of the very cool running Apache, trying to retreat would involve turning his engine exhaust to the OPFOR helicopters. This would maximize their chance to use those missiles against him.

Thresher 1 and Thresher 2 would certainly give them a lot to think about since, between the two of them, they carried as many missiles as all eight Hokums. On the other hand, leaving the two of them to engage the Hokums alone, while Jess and the remainder of the flight fled, could get them "killed." These thoughts passed through Jess' mind in an instant, and then he made up his mind.

"Thresher 1 and 2, engage immediately and then encircle. Remainder of flight, on my lead, move forward and engage with guns, then fall back."

**June 6, 06:16**

**OPFOR Lead Element, Training Range**

**Ft. Hood, Texas**

Lieutenant Jensen could not believe what he had just witnessed. The trap had been sprung perfectly and he'd thought that the blue team was toast when the eight Hokums came boiling over the ridges to his left and right.

He expected the four Comanches to fall back. They were outnumbered and did not appear to be armed for air-to-air combat. But that's not how it went down.

Two more Comanches, loaded for air-to-air combat, came over the ridge to his front, and each immediately shot two "simulated" missiles at the Hokums. Three of these four missiles "scored" on the Hokums, taking those three aircraft out of the exercise. At the same time, two Hokums had fired at those two Comanches, electronically eliminating only one of them.

Then, to his utter disbelief, the other four Comanches charged and attacked with their chin guns! In the resulting "fur ball," another Hokum was destroyed before the Comanches broke off and retreated. As they did so, the remaining four Hokums were able to take out one of the Comanches.

At that moment, the surviving air defense Comanche, which had circled around behind the Hokums, came back into the fight with a bit between its teeth. This Comanche scored "hits" on two more Hokums.

As the last two Hokums retreated back over the ridge, the four surviving Comanches regrouped on station. Two Comanches versus six Hokums had been taken out...and the Hokum was the most advanced OPFOR rotary aircraft in the world today.

**June 10<sup>th</sup>, 10:15**

**Debriefing Room, Ft. Hood, Texas**

"Major, I must say that your attack on the Hokum ambush that first day was an extremely gutsy thing to do. It was dangerous, unprecedented and very risky. It also worked, and set the tone for the entire exercise."

"You men listen up. I can not recommend such a move, but I can say that your analytical skills must be top notch to survive on the battlefield. You must know your enemy and their capabilities. You must know how they stack up against your capabilities, without having to "remember" it. It must come naturally."

"If you study, train and live with this in mind, then, when faced with circumstances such as Major Simmons was, you will be able to arrive at the split-second decisions that may well save your command. Equally, and perhaps even more importantly, you will make the decisions that will allow you to complete your mission and save many other commands who are depending on you."

General Jamison looked over the assembled officers and senior non-commissioned officers who had taken part in Operation No Stars. The training exercise had purposely tested US Forces when facing highly capable OPFOR's, where the US advantage in overall battlefield management through digital and electronic technology had been negated. In other words, the units would be left to coordinate through more traditional radio frequency and verbal methods.

This was a part of a policy statement that had been issued by the President, the Secretary of Defense and the Joint Chiefs of Staff soon after President Weisskopf's inauguration. The policy was to ensure that US fighting forces were not overly dependent on the digital technology which had made them so invincible in many of the recent regional conflicts. General Jamison liked the attitude and the challenge. It was part of president Weisskopf's plainly stated "honing" strategy and General Jamison believed it was high time.

And the strategy was proving effective. Facing a numerically superior and very advanced OPFOR, the blue forces had come out on top and achieved every operational goal; though not without losses, some of them significant.

In General Jamison's estimation, though, this was a good thing. He recognized that some foes that the United States would face would have both the technology and the stomach for a fight. Those enemies had the smarts to put up a counter to America's best advantages, and also had the will to slug it out in a war of attrition they hoped would bring America to its knees.

"Major Simmons, do you have any advice or perspective?"

Jess Simmons did not like to be singled out, or held up on a pedestal. He did, however, like to take any opportunity to help train younger and/or less experienced personnel

"I can't really add much except to confirm."

Getting warmed up to the opportunity to teach, Jess continued,

"You know, folks, we didn't have our "God's unblinking Eye," Joint Surveillance and Target Attack Radar (JSTAR), up there giving us the advantage these last few days. We were all briefed on why."

"I can tell you that it is good to train for such contingencies. It is good because it is real. In Desert Storm, the Iraqis may not have been able to do much about such an advantage...and we see what

happens when an enemy can't or won't. But, think back to the Serbs in Kosovo. They did not have any extraordinary electronic countermeasures. What they did have was creative minds and a resolve. The result was that we were bombing ox carts with small engines in them, and other decoys that our "God Almighty" systems couldn't differentiate from the real thing."

"I was involved in both conflicts, gentlemen, and can tell you right now that there are folks who don't like us who are a lot more capable than the Serbs. I hope we never forget it. Study your enemy. Know his strengths and weaknesses. Live them, breathe them. Then be prepared to get right down in the mud and slug it out with him because that is what he is going to be trying to do to you if he can. Thanks, General, for the opportunity to share that."

Jess knew he had said enough, so, to a rousing ovation due to his performance and that of his team, Jess sat down. As he did so, he thought about Cindy and Billy and how the preparations for that next cut of hay were coming. In three days he'd be home and know.

**June 18, 09:00**

**Penthouse Suite, Park Avenue**

**New York City**

The unique tones from his "personal" satellite cell phone immediately got David's attention. His wife, Jennie, who was reading the morning paper, glanced knowingly over the top of the "Lifestyles" page she was reading.

"I'll take it in my study," said David over his shoulder as he got up and walked across the marble floor towards the double French doors that led into his "sanctum."

As he entered the six hundred square foot "study" and stepped onto the plush Italian carpet, David plugged the phone into its desktop receiver and quickly sat down and wondered about this call. It was *extremely* rare that Jien ever used the cell phone that they had presented to him on one of his many visits to China. Something important must be up and it would be best to get right to it. David pressed the answer button and spoke.

"Hello, Jien! What a surprise, and on a Saturday morning no less. What can I do for you?"

On the other end of the phone, and half a world away, but connected at the speed of light over the secure and encrypted satellite link, President Jien Zenim spoke.

"David, good to hear your voice. Yes, it is Saturday morning there, but late here. I have a few critical items to pass on to you—things I am sure our friends at WNN will love to have an exclusive on."

Amazing, thought David. Another exclusive!

"Outstanding, Jien! Please fill me in and I will get right on it. Oh!...and before I forget. Thank you so much for the exclusive tip on the CAS announcement, and the corresponding Russian announcement that Li passed on. I know that I am personally in your debt, as is WNN."

Jien continued.

"David, on the 30<sup>th</sup> of June, you will want to have camera crews on hand at the following national capitals: Kabul of Afghanistan, Ashgabat of Turkmenistan, Tashkent of Uzbekistan, Dushanbe of Tajikistan, Bishkek of Kyrgyzstan and Tehran, Iran. We have arranged for your crews to be in each place to cover the stunning announcements that will be made that day."

"It would be helpful, if as a run up to those special news breaks, you did a favorable piece on Hasan Sayeed of Iran...perhaps a few days before. He will figure greatly into these announcements, and will be making one of his own. We will handle the "arrangements" for your Swiss account as we normally do, and in fact will be transferring double the normal amount for this coverage."

David was dumbfounded. Twice the normal amount? \$100,000?

"Not a problem, Jien. I know I can arrange it. We have done a few stories on Hasan, but they have all been relatively light about how he came to power in Iran.

"Would it help if I forwarded you some information, Dave?" asked Jien.

"Absolutely!" exclaimed David, "What I would really like is to interview him one-on-one and at length. No one has done that yet."

This was precisely where Jien had hoped to lead the conversation. He knew that David would now be maneuvered into reporting things as Jien and his planners wanted.

"David, I will make an arrangement with you. If you broadcast a decent piece on Hasan, and then follow that up with live coverage of the announcements, I will arrange for you to have that exclusive interview, along with another double funds transfer. How will that be?"

David leapt at what he considered to be another tremendous opportunity to get an exclusive on a huge story, and to further enhance his own reputation as America's preeminent news anchor.

"I would move heaven and earth for such an interview. Jien, you just tell me when and where."

David couldn't believe how fortunate he was, or how lucky WNN was to have him and his "contacts." He wondered how long it would be before he would be in a position to take his place in the upper management of WNN. From David's perspective, it could not be too soon. Perhaps the next time he was in Beijing, he could raise the topic with Jien.

Jien, for his part, knew he had Krenshaw right where he wanted him, and he was prepared to maximize the advantage. Such influence over the information being presented to the American public, and to so much of the rest of the world, was easily worth several Army groups to Jien.

“Very fine, David. I knew I could count on you.”

For the next five minutes the two men conversed, with David taking many notes in preparation to plan the news coverage. Their discussion covered everything from recommendations concerning the camera crews in each of the capitals, to details regarding the production efforts at the broadcast studios in WNN headquarters.

When they hung up, Jien smiled...it had gone even better than he had anticipated. Turning to his long-time friend and confidant, Jien said.

“Li, tell our friends that operation “Imam Tiger” is approved, and should proceed accordingly.”

Back in the penthouse apartment in New York City, an exuberant and soon-to-be significantly wealthier David Krenshaw crossed the floor, snatched a paper from his wife's hands, and exclaimed.

“It’s *great* being me!”

## Chapter 3

*“A sly rabbit will have three openings to its den.”—Confucius*

**June 25, 22:00 local time**

**South China Sea**

**USS Jimmy Carter (SSN-23) 40 miles off Shanghai**

“Hold her at one two zero feet, steady as she goes, creep at 2 knots. What are the latest threat indicators?”

In answer to his Captain’s question, the officer on the deck informed him that no military traffic had been detected in the area and only nominal commercial shipping and air activity could be identified, all of which was a minimum of twenty-five miles distant.

“Very well Conn, get Lieutenant Commander Sheffield.”

Captain Simon Thompson was impatient at the moment. He was sitting one hundred and twenty feet below the surface, creeping along at two knots, only twenty-eight miles from the internationally recognized waters of Communist Red China in his nation’s quietest and most sophisticated attack submarine. The problem was, the Chinese claimed another 160 miles beyond his current location and would treat him as an enemy if they found him here. He was determined to minimize his exposure in such conditions, and to avoid being located at all costs. He would not feel some measure of comfort until there were another 100 miles between him and that coast, and another thousand feet of water beneath his keel.

“Sir, I have Lieutenant Commander Sheffield.”

Captain Thompson keyed the handset the officer of the deck gave him, and then spoke.

“Sheffield, are you and your wild Indians ready to get off my boat?”

Thompson smiled at the chuckle that preceded the response.

“Damn straight we are, Captain. But we’ll be happy to hitch a ride out of here with you about twenty four hours from now.”

Keying the handset again, Thompson replied.

“OK, we’ll rendezvous at twenty two hundred hours tomorrow evening at point Charlie. We’ll be there monitoring your frequency from twenty one hundred on. At twenty three hundred, if we have not heard anything, we will clear data and return on the next day for another try. If there are any surprises, we’ll contact you with a UHF SATCOM code on the hour per the OPPLAN. You are cleared to exit, Lieutenant Commander. Godspeed, and good hunting. Thompson out.”

With that, Captain Thompson monitored the departure of the SEAL (Sea, Air and Land) team under the command of Lieutenant Commander Sheffield. He then took the USS Jimmy Carter (SSN-23), third and last of the Sea Wolf class attack submarines, further out to sea and into the deeper waters that were its natural abode.

**June 25, 21:05 local time**

**South China Sea**

**On Board ASDS 3**

Terry Sheffield surveyed his team and their surroundings.

They were on board an Advanced SEAL Delivery System (ASDS)—a small, custom-built submarine, designed for the purpose of delivering SEAL teams to their targets along enemy or belligerent coasts. The USS Jimmy Carter (SSN-23), from which they had just exited, had been specifically modified during its construction to carry up to two of these vessels for just these sorts of clandestine missions. The first six of the new NSSN Virginia class attack submarines had similar capabilities. In fact, the first of that class was undergoing sea trials at the current time.

In addition to the crew of two who would pilot the vessel and himself, Terry had seven other SEAL team members for this mission. They and all of their diving and specific mission gear were housed inside the sixty-foot-long vessel. For communications, they were equipped with the SSIXS (Submarine Satellite Information Exchange System) UHF SATCOM communication systems, as well as the ability to receive VLF (Very Low Frequency) and ELF (Extremely Low Frequency) messages. Each ASDS weighed fifty-five tons and could travel through the water on its electric motor at eight knots for distances in excess of 120 miles...and they could do it while keeping their embarked SEAL team dry.

“A far cry from my early days in the SEALS,” thought Terry, “and a much needed improvement.”

Standing up and getting the entire team’s attention, Terry addressed the men.

“Okay, gentlemen. I will review the mission plan again, and then you might as well get a little shut eye if you can.”

Pulling down an electronic display board from an overhead slot, Terry directed his men’s attention to a diagram of the mission plan depicted on the board.

“Okay, we are en route from point Alpha here, some forty miles off the entrance to Shanghai harbor. We have approximately thirty-eight miles to go before we arrive on station at point Bravo, here. It’ll take us approximately four to five hours to get there if we don’t run into any difficulties. At that time, Ensign Murdock and Jack will remain on station here at Bravo in a low power mode monitoring communications, while the rest of us exit the vessel and proceed in.”

“Once we are in the water, we have a good six-hour swim ahead of us to map and reconnoiter the harbor and set up the gear per the plan. Each swim team will position and activate their eight MUAS (miniaturized underwater, all aspect surveillance) devices at the indicated positions to cover the required area of the harbor. Any need to deviate from the pre-planned position points must be exactly noted for proper correlation of the data. Once back in our little “hive” here, we will head for point Charlie, maintaining a low profile and the rendezvous with the Jimmy C.”

“Gentlemen, we have planned and trained for this over the last four weeks. Neither we, nor the Jimmy Carter, would have been assigned this mission if it were not of extreme importance. We are the “A” team, gentlemen. And it is time, once again, to demonstrate why.”

“Are there any questions? I didn’t think so. Well, you know the drill. Catch whatever rest you can. That is all.”

### **June 26, 6:12 local time Beneath Shanghai Harbor**

“There, the last MUAS device is anchored to the floor of the harbor and now it’s time to turn it on, arm its security package and get out of Dodge,” thought Terry. He had just watched his swim “buddy,” Chief Ben Kowalski complete the job of attaching the device firmly to the harbor floor. Kowalski then activated the device, armed the no-tamper circuitry, closed the access cover and joined him.

Utilizing hand signals, Terry indicated that it was time to make their way back to point Bravo and rendezvous with the other three swim teams at ASDS 3. Both of them then turned away from the device and began swimming towards point Bravo. As they did, Terry considered the high tech surveillance equipment they were leaving on the floor of Shanghai harbor.

The devices would monitor acoustic signatures, using a special low-power setting and extremely classified battery technology. When vessels meeting the criteria programmed into the micro-circuitry were sensed, the device would go into “record” mode. This mode would last only a moment or two as each vessel that met the requirements had an acoustical, photographic, electromagnetic and electronic recording made of it.

Each device was capable of making up to eighty such recordings and storing them digitally. The devices used classified material and circuitry that employed the saline ocean water to generate electrical power. This invaluable characteristic provided a service life of over twelve months.

With thirty-two such devices set on the harbor floor, every conceivable approach to the aircraft carrier shipyards in Shanghai was covered. For the next year, or until the capacity of every device was full, any suspicious or combatant vessel coming into the area would be recorded.

The data could be gathered either by sending more SEALS to recover it, or through activating a small buoy device by ELF signal. The buoy would then rise to the surface, orient a low-power transmitter towards the military satellite in gyro-synchronous orbit over the Philippine Sea and send an encrypted and condensed communication burst of the device’s memory. When informed of an “activation,” the military satellite would orient itself to “watch” the specific location of the activated device to pick up its low power burst. After communicating, the buoy would utilize chemicals to destroy itself as it sank back to the ocean floor. Each device carried five such buoys.

Twenty minutes later, Sheffield and Kowalski were joined by the other three swim teams who had all accomplished their missions. All of them were exhausted from their long swim and prolonged time in the water. They couldn’t help but think, as they cycled through the lockin-lockout chamber, how nice it would be to get back into the dry and relatively comfortable, if a little cramped, interior of the ASDS for the trip back to the Jimmy Carter.

### **June 26, 19:25 local time East China Sea, 88 Miles off Shanghai USS Jimmy Carter (SSN-23)**

“Captain, I have a surface contact, bearing two-three-seven degrees, heading one-nine-five degrees. Mark it as contact “Sierra” “...make that two surface contacts now, bearing two-three-seven degrees. Now tracking Sierra one and Sierra two.”

Captain Thompson swore to himself. That bearing and heading intercepted the course that the Jimmy Carter was taking to point Charlie for the rendezvous with the SEALS. He needed more information and he needed it now.

“Do you have a range on the contacts, speed, type?”

“Can just make out a speed of approximately 23 knots, Sir. Looks like the range is twenty miles...okay, Sierra one just went *active*! I say again, I have active sonar from Sierra one on its location. Mark both contacts, Sierra one and Sierra two, as Jiangwei-II class frigates.”

The Jiangwei-II frigate was a serious threat. Each carried one of the newer Ka-28 Helix derivative helicopters, which were license built in China from Russia, and which carried dipping sonar and anti-submarine torpedoes. The frigates also carried a variety of anti-submarine weapons from torpedoes to the newest sextuple, medium-range ASW rocket launchers. Their sonar, a multi-frequency, bow-mounted S-07H sonar, was effective, though it had not detected the Jimmy Carter which was below a protective thermal layer and was coated with sonar absorbing materiel. Those frigates, or their helicopters, would literally have to be right on top of the Jimmy Carter to get any kind of return.

“Helm, all slow. Make your speed five knots. Take us down another hundred feet to five hundred. Let’s make sure we stay below the thermal.”

Within sixty seconds, the sonar officer updated the situation.

“Captain, active sonar has stopped, but I now have a dipping sonar. Has to be from a helicopter off one of those frigates, bearing one-niner-six degrees, range of sixteen miles. Contacts Sierra one and Sierra two are also slowing to ten knots and coming to a heading of one-two-five degrees.”

“Well, that does it,” thought the Captain. “Those suckers are going to hang around our rendezvous area and we just can’t risk it at this stage.”

“OK, looks like they are in a random search pattern over there in the vicinity of point Charlie. Helm, make your heading oh-seven-two degrees and lay in a course to point Delta. Conn, transmit a UHF SATCOM message to our “friends” at twenty-hundred hours, code “Diane.””

**June 26, 20:00 local time**

**South China Sea, 20 miles from Point Charlie**

**On Board ASDS 3**

“Commander, we’re receiving a UHF SATCOM signal.”

Terry knew that he wouldn’t be getting any message unless there was a problem. Just as he wouldn’t send one unless he couldn’t make the rendezvous or had to use an alternate point. Something must be going down.

“Jack, go ahead and decode as it comes in.”

After a few seconds Jack looked up and said.

“From the Jimmy Carter Sir, one word: “Diane.””

When they heard this, everyone knew that they would have to revert to point Delta for their rendezvous with the Jimmy Carter. This would mean more time and miles since point Delta was twenty miles further to the southwest.

“Okay, Jack, respond in the affirmative to the message, and you and Ensign Murdock lay in a course for us to point Delta.”

**June 27, 01:10 local time**

**East China Sea, Point Delta**

**USS Jimmy Carter (SSN-23)**

As the XO (Executive Officer) of the USS Jimmy Carter reached to hang up the communications handset into which he had been speaking, he nodded to the Captain.

“Captain, ASDS secure and the SEALs are on board. Lieutenant Commander Sheffield reports ‘mission accomplished.’”

Thompson considered this, thankful that they had been able to avoid detection by the Jiangwei-II frigates. Now it was time to move on to part two of the mission.

“Let me see your commset, XO. I’d like to address the crew.”

The XO handed Captain Thompson the handset, and Thompson raised it to his mouth.

“Crew, this is the Captain. We have retrieved our special guests who successfully completed their mission. Great job to all for detecting, identifying and then avoiding those contacts earlier. It allowed us to stealthily and successfully retrieve our friends. I know we have been running silent for the last several days, but we have several more days of the same to complete the remainder of the mission. I want you to know I am proud of your performance and proud to serve with each of you. Carry on.”

Handing the commset back to the XO, the Captain continued, addressing him.

“Thanks, XO. Once you get us underway for the other objective in this OPPLAN off of Tanjin, please find Lieutenant Commander Sheffield and then the two of you join me in my quarters. I’d like to review each of your assessments and factor them into the Tanjin operation. The closer quarters up there have me nervous and we’re going to have to be at 110%.”

**June 27, 19:00**

**WNN Broadcast Studios**

**WNN HQ, New York City**

Looking into the camera with his famous “serious” look, David Krenshaw began the “News Special” regarding the remarkable rise to power of Hasan Sayeed.

“Ladies and gentlemen, tonight WNN news brings you a special broadcast regarding a remarkable individual of whom many of you have heard, but about whom little is known, other than the fact that he has recently come to power in Iran.”

“What is remarkable, at least from the Western perspective, is the age of this new leader. Hasan Sayeed is thirty-nine years old and has taken his position at the pinnacle of a religious, political and military hierarchy where most leaders’ ages are nearly twice his own. Yet these venerable leaders, including the Grand Ayatollah Khamenei, who was the leader of Iran until early last month, have willingly stepped aside to allow this individual to assume power peacefully, and, by all accounts, very effectively.”

“Naturally, we here at WNN are investigating how this came about and why. Tonight, as a result of the type of exclusive sources that you have come to expect from WNN, we believe we can answer some of those questions. Please stay with us for those answers after this break for our commercial advertisers.”

David was excited about the next several weeks. This show would kick off the plans he had made with his WNN producers and management, which mirrored the plans he had made with Jien. Over the next ten days, a virtual whirlwind of activity would take place in the Mid-East with the emergence of a greatly-expanded Islamic republic. And David and WNN would be right in the middle of it—exclusively in the middle of it.

After the break, in a multi-media display that dazzled the viewers, David told bits and pieces of Hasan’s life story. David touched on Hasan’s birthday and how it fell on the same date as that of the mystical 12<sup>th</sup> Imam of Shia faith and the strong beliefs the Sunni’s had regarding the 12<sup>th</sup> Imam. He portrayed Hasan’s remarkable entry into the religious schools and programs in Iran at such an early age. Using old Iranian military film, he showed live clips of Hasan’s death-defying charges at Abadan during the Iraq/Iran conflict. This footage was followed by various still and video clips of his years in leadership positions within the Pasdara, and then some very rare photos of his pilgrimage in the mountains and deserts of the ‘stan regions surrounding Iran.

This was all done through various narratives and interviews by other WNN commentators, and a few Islamic clergy who had spoken of Hasan in the past. The segment neared its end with video footage of the thousands of loyal followers who led Hasan out of the Center for Theological Studies in Qom, Iran after the Islamic recognition and confirmation of him as the Imam Hasan Sayeed. The segment concluded with a video of Hasan boarding a Lear jet, which would fly him to Tehran.

“So, what does this mean to America and to the west in general? This is a question that is difficult to answer at the moment. To date, Imam Sayeed, as he is called, has called for religious unity amongst all Islam, and has preached tolerant and peaceful co-existence with other nations of the world who do not interfere with the affairs of the Islamic Republic. While the message calling for the unification of Islam will give many Americans great unease, reminding us all of the events of September 11, 2001, the message of peace and tolerance is the antithesis of the message preached by those who were responsible for that horrific attack.”

“We at WNN are seeking to understand and report the implications of this story. The history of the West and Persia, and particularly the United States and Iran is a history of mixed signals and precarious diplomatic relations. Perhaps Hasan Sayeed can re-open ties with the West, but to date there has been no indication that this is his intention. Inside Iran, the power of the Islamic faith, and the Shia faith in particular, is consolidating and continuing its hold over virtually every aspect of society. Clearly, the source for the most reliable information is none other than Hasan Sayeed. As we close tonight, we at WNN are proud to announce an exclusive interview with the Imam Sayeed that has been scheduled for 7PM EST on August 9<sup>th</sup>. Please tune to WNN at that time as I interview this dynamic, new leader of Iran.”

“This is David Krenshaw, thanking you on behalf of WNN. Goodnight.”

As the “live” indicator went out and his producer gave him a “thumbs up,” David thought about how well the show had gone. The presentation had come off about as perfectly as possible.

“I wonder what those bozos over at Weisskopf’s State Department thought about that,” David wondered as he got up and began walking towards his dressing room. “Their jaws are probably hanging down to the floor right about now. Ha! Rank amateurs!”

**June 27, 20:05**

**State Department Conference Room**

**Washington, D.C.**

“Where does this guy get his information?”

Fred Reissinger looked around the room at Mike Rowley, the Director of the CIA, and several of their jointly-assembled subordinates.

"I swear, I feel like we're looking at scenes from Baghdad all over again. I remember back then during Desert Shield, and then Desert Storm, when many of us in the State Department and even over in Defense were getting part of our intelligence from the Cable News of the day.

"It's too bad we don't have any *embedded* reporters working this one like we did in Operation Iraqi Freedom."

Mike Rowley was also surprised at the depth of information that WNN had accumulated on Hasan—more than his own operatives had been able to gather for sure. Perhaps it was time that they started checking into Mr. Krenshaw and his "contacts"...if for no other reason than to gather intelligence and be able to be working on it before it was announced over the nightly news. Clearly, somehow, WNN was connected.

But Mike Crowley was also peeved.

"That little fart Krenshaw rubbed this in our face, Fred. The very idea of him calling your deputy like that and "advising" us to take a look at 7 p.m. this evening for 'all we ever wanted to know, but hadn't been able to find out about Hasan Sayeed.'"

"If I thought he was a loyal American and that he made that statement out of concern for our decided lack of intelligence that would be one thing. But of course, in that case he would have shared the information with us earlier. In addition, his commentaries on the President and his clear "longing" for the "good old days" of a couple of administrations ago just don't sit well with me. It was those "good old days" that created the majority of the problems we are facing right now."

Secretary Reissinger nodded appreciatively at the comments of his friend and compatriot in the Weisskopf administration. It was rare that the Secretary of State and the Director of the CIA saw things so similarly...and it was also an indication of the wisdom and capability of the President in putting together his cabinet,' thought Secretary Reissinger.

"Mike, I understand your feelings, but whether it was an intended snub or not doesn't matter at this point. At least we were watching it and can now get our staffs working on this, instead of hearing about it late tonight or tomorrow morning."

"I'd like to suggest we form a couple of task forces to look more closely at the situation: One can analyze things from a potential religious standpoint as it impacts the people in the region...that part about the confluence of Shia and Sunni faiths on this 12<sup>th</sup> Imam. The other can analyze things from a strictly political perspective, to find out how susceptible the surrounding governments are to any unifying influence Sayeed may wield."

**June 30, 11:45 local time**

**Public Assembly Square**

**Ashgabat, Turkmenistan**

Abduhl Selim was seventeen years old, soon to be eighteen. He was not happy about being here in the middle of this hot day in the middle of this big city, waiting for an announcement by his government. Abduhl had been raised in the Kara Kum desert near the Kopet Mountains. What he enjoyed most was being able to sit in the shade of the trees at the oasis in the foothills near his home, watering his father's sheep and looking out over the expanses of the desert. He wished he were doing that right now.

Although raised in a faithful Islamic family, Abduhl had not "taken" to the religious instruction like his siblings and many of his friends. Oh, he believed in Allah and believed that Mohammed was His prophet. He also said his prayers—when he was close to home. When he was away from home and away from the pious adults, he did not think on religion much at all, preferring to learn about the animals or the desert; or, more and more lately, about weapons.

But today, his father had insisted that they be in the capitol, Ashgabat, for the important government announcement. His father had indicated that their leader would announce something today of over-riding political and religious importance, something historic that they would all take great pride in. Something they would tell their children and grandchildren that they had seen and experienced themselves. So, here they were.

"Allah be praised that the fruit markets are open and have plentiful stock this day!' Abduhl thought as the mid-day heat and the proximity of tens of thousands of others kept him uncomfortable. Actually, his discomfort came more from the pressing crowds than the heat. But the fruit was good, so he ate another slice of the tangerine he had purchased and savored the flavor as he let the juice slowly run down his throat.

As he was savoring the sweet taste, and appreciating the juice quenching his thirst, there was movement on the great balcony of the government building that overlooked the large public square where Abduhl and his family were standing. He noticed the western TV personnel with camera crews off to each side and in front of the balcony. He recognized the President and Chairman of the Cabinet of Ministers, Saparmurat Niyazov, standing with several of the leading members of the Halk

Maslahaty and Assembly or Majlis. After a moment, the President began walking towards the podium.

As he did, Abduhl's Father, Muhamet, said, "Son, listen now and pay attention. It is said that this announcement will change all of our lives forever."

"My fellow countrymen. Today we are gathered here in our Capital for an announcement of great import. The proceedings are being televised throughout the nation and the world. My voice is being carried by radio wave to those areas where a television signal is not available."

"As most of you know, or may have heard, Hasan Sayeed became the leader of the Islamic Republic to our south early last month. It is a moment of great import for all Islam as Ayatollah Ol Osam Hasan Sayeed is recognized for his leadership, piety, wisdom and knowledge in all of Islam. He visited our country a number of years ago and shared his views and vision of a truly united Islam with our scholars and religious leaders. I had the opportunity to speak with him at length then, and have done so many times since."

"Early this spring, Hasan and the leading Ayatollah Ol Osams from the Islamic Republic began working with our own Halk Maslahaty and the Assembly or Majlis. As a result, a vote has been cast in both assemblies, and I have expressed my concurrence. On Independence Day, 27 October of this year, there will be a national referendum putting to the will of the people the issue of aligning ourselves with, and becoming a part of, the "Greater Islamic Republic.""

An audible intake of breath was heard throughout the crowd. Almost 90% of the population of Turkmenistan was Islamic. Such a prospect, a truly united Islam, was deeply rooted in the heart of all the faithful. That a true opportunity was presenting itself was both surprising and exhilarating to most of those assembled here. Soon, cries of, "Allah Ahkbar!" and "Imam Sayeed!" began echoing in the square and growing in volume.

Abduhl did not know what to think. Although he recognized the import of this announcement, to him, one government seemed like it would be pretty much like another. At the oasis and in the deserts, little government interaction was required or expected.

The President let the excitement build for a moment or two, then using the power of his amplified microphone, he continued.

"I am happy to announce, that today similar announcements are being made in Kyrgyzstan, Tajikistan, Kyrgyzstan, Afghanistan and Iran."

With this, the cheers and the calls from the crowd climaxed. After several minutes, the President was again able to make himself heard.

"In some of these countries, the transition is being made immediately as of today. In others, like our own, referenda of the people will be held to approve the votes cast by their representatives. The target date is for full alignment and sovereignty as a single Greater Islamic Republic, made up of a constitution of these various republic states, by November of this year, with the Imam Sayeed as our leader."

"What it will mean is the creation of a nation numbering over one hundred twenty million, stretching from the Persian Gulf and the Caspian Sea to the Himalayas. A unified nation of Islam with the petroleum, precious metals, agricultural and moral strength to take its place at the seat of the world's great powers! To this I say, Allah mak! Allah mak!"

Despite his previous reservations, Abduhl joined with the tens of thousands gathered in the square as they shouted their assent along with their leader.

"Allah mak! Allah mak! Allah mak!"

**June 30, 3:17**

**WNN Broadcast Studios**

**WNN HQ, New York City**

"We repeat, WNN has been on the scene in the capital cities of Iran, Afghanistan, Turkmenistan, Uzbekistan, Tajikistan and Kyrgyzstan for the stunning announcements by the respective governments regarding the merger of these nations into a Greater Islamic Republic."

"Each nation, excepting Iran and Afghanistan, has announced referendum votes for the approval of the action being taken by their executive and legislative bodies. It is expected, given the overwhelming majority of Islamic people in each nation, that these referenda will pass."

"One of the surprises here is the actions in Afghanistan. We all remember there the military actions that resulted in the toppling of the Taliban and the routing and dissolution of Al Qaeda's hierarchy. It was thought that the resulting governing body, which was a mixture of democratic process coupled with more moderate Islamic clerics, would have been more resistant to such a merger. Clearly, that was an incorrect impression."

"If all of these referenda pass, as we believe they will, this will result in a unified nation of Islam numbering in excess of one hundred twenty-five million people possessing great natural resources. The on-screen map we have maintained throughout this broadcast in the inset on your screen to my upper right, is a map of the resulting 'Greater Islamic Republic.' Our understanding is that the capital

will be in Tehran, and the President will be Hasan Sayeed, about whom we here at WNN aired a special report several days ago.”

“We expect reaction from the surrounding governments of Iraq, Pakistan, India, Kazakhstan, China and Russia within the next few hours.”

“The reaction from the United States, Europe, and, in particular, from Israel, should be forthcoming as the day progresses. We will inform you of any such announcements as they occur.”

“Again, ladies and gentlemen, this has been David Krenshaw, reporting live on WNN with the stunning announcements which today are creating the new nation of the Greater Islamic Republic.”

**June 30, 8:20**

**Oval Office in the White House**

**Washington, D.C.**

“Somebody tell me why it is I feel like a fellow who hasn’t been invited to a party that all my friends are talking about. Fred, Mike, what in the hell is going on? First this unprecedented Coalition of Asian States, and now a “greater” Islamic Republic, as if we didn’t have a big enough headache with the “lesser” one. Come on guys, we’re not living in a vacuum here.”

“And what is this with Afghanistan? I thought the Northern Coalition, which helped us in the fight against the Taliban was going to ensure that this type of thing did not happen. What’s this with the immediate unification with Iran?”

Clearly, President Weisskopf was upset and frustrated. His own domestic agenda was progressing nicely through both a Senate and a House decidedly in the majority on his side of the issues. His agenda, which included governmental fiscal responsibility, more local control of education, seriously looking at a national sales tax to replace the IRS and the income tax and more emphasis on prosecuting and incarcerating violent criminals while utilizing rehabilitation, detoxification and community programs for the non-violent had broad based support. But achieving success in monitoring potentially dangerous international situations seemed to be an almost futile endeavor for Weisskopf and his cabinet.

Fred Reissinger slowly shook his head and looked at his boss and said, “Mr. President, we have a couple of task forces that are making good progress on understanding Hasan Sayeed and his potential influence in the area. I held a review meeting with them yesterday afternoon before we heard of these announcements. They have indicated a strong possibility, due to Sayeed’s religious instruction, the date of his birth and his stated views concerning Islamic unification that both the Sunni Muslims and the Shia Muslims may unite behind him. I was preparing a report for the cabinet last evening when this news broke. We were concerned that Afghanistan would quickly move to align themselves with Sayeed, and, even more disconcerting, we are concerned that at some point both Pakistan and Iraq may also enter into this ‘alignment.’”

At this suggestion, the Chairman of the Joint Chiefs and the Secretary of Defense began speaking simultaneously.

“Great. That would result in one of our worst fears...a nuclear armed Islamic Republic!” was General Stone’s frustrated comment, while Secretary Hattering exclaimed, “Having a much larger and stronger nuclear power on their borders would scare the living daylights out of the Indians.

“And what’s this talk of Iraq maybe going the same way? What of our *supportive* Islamic democracy there? What of Chaliberi? I mean we put this guy in power...he owes everything he has to us. Can this Sayeed undo Iraqi Freedom just like that? Is the entire world turning upside down on us here?”

Secretary Reissinger spoke again.

“Gentlemen, please let me continue. Diplomatically, I believe it is absolutely critical that we consolidate and reassure our allies with all due haste. This must be an effort on two fronts now. “

“We already started an effort in Asia with the Philippines, Japan, Thailand, Malaysia, Singapore, New Zealand and Australia in the face of the CAS. I might add that we are experiencing good progress, particularly with the Philippines and Thailand, in securing forward bases of operation in those two nations. Secretary Hattering is working closely with me on that. This is occurring in the face of significant protest from the Chinese concerning our efforts in this regard, and over the most recent surveillance flight.”

“In the Mid East we must redouble our efforts to ensure that we do the same negotiating and discussing with Saudi Arabia, Turkey, Iraq and Egypt in the Mid-East. In my opinion, those four nations are the key to heading off this Islamic fervor, with perhaps Iraq being the lynch pin. What we have accomplished there since Iraqi Freedom in 2003 is viewed by everyone as our own proof of concept. We cannot afford to allow Iraq to be pulled into this. We have done all in our power to establish Chaliberi in a position that is autonomous of our direct influence, while at the same time helping him develop a moderate, secular democracy in Iraq that we can work with. I cannot believe that he will be pulled away from that.

"If we can keep working with those other three nations to influence him and keep them all strongly "in the fold," I believe we can counter the growth and influence of Sayeed. It goes without saying that Israel remains our closest ally in the region."

The President agreed with what his Secretary of State was saying, but was still uneasy. He had met Jien Zenim and could not shake the feeling that his Chinese counterpart was somehow deeply involved in all of this.

"What are the Chinese saying, Fred?"

Fred had expected such a comment, and was prepared to discuss it.

"Mr. President, they issued a prepared statement this morning, about three hours after the announcements. Basically, they are saying that they welcome the developments. Their official comments were, as I recollect, 'The People's Republic of China welcomes and approves when any poor and oppressed peoples join together in unity and social equity to raise themselves above their circumstances and sit proudly at the table of world events.' Apparently, they plan to change their embassies in these nations to consulates, and then have the main embassy in Tehran serve as their embassy for them all as soon as the referenda are held."

At this juncture, Mike Rowley, the Director of the CIA, spoke up.

"Mr. President, we at CIA are involved with Fred's people in the task forces looking into the potential influence of Sayeed on the governments and people in the area. It is important to note that these countries are peopled by large majorities of Islamic. The largest non-Islamic population is in Kyrgyzstan, where the Russian Orthodox population numbers 20%."

"Apparently there is some resistance in that nation to this announcement. In fact, there was some violence in Bishkek during the announcement. From all accounts, the uprising has been apparently quickly and brutally suppressed. We have received reports of refugees already heading towards the Kazakhstan border. This is important because Kazakhstan was the focus of heavy Russian immigration during the Soviet years—which resulted in that nation's population being almost equally split between Europeans and Asians, and between the Russian orthodox faith and Islam. Not surprisingly, the people of European heritage hold most of the power there. We could be looking at a potential trouble spot in the region."

The President had heard enough. His press secretary was due to make an announcement at 9 a.m., and he wanted to obtain a consensus on the wording.

"Okay, Mike and Fred, keep on it. I want this situation to be emphasized in the daily briefings. Right now we have to announce something to the world. I am inclined to use the opportunity to suggest we normalize relations with Iran, and ensure that American companies and citizens in these other nations are reassured. Fred, please work with my press secretary to come up with wording to that effect and let's review it here at eight forty five."

"In addition, Fred, please move forward with the plans you spoke of regarding our allies and friends in Asia and the Mid-East. In that regard, I would like you to arrange for me to speak with King Fahd of Saudi Arabia, Prime Minister Netanyahu of Israel and President Sezer of Turkey ASAP."

"Tim and General Stone, I would like you to work up an assessment of the military strength of these aligning nations and how quickly they can combine, both logistically and operationally. Include a worst case scenario that takes into account Pakistan and Iraq. Please schedule a meeting for early next week to review and discuss the implications."

**July 4, 21:45**

### **University of Wyoming football stadium**

#### **Laramie, Wyoming**

"Whoa, dude, look at that!"

Alan was really getting into this fireworks display.

"It sho' is somethin. I never would've thought to be here. Leon, we got you to thank fo' it. Mmmm, but I love this cool air up here."

Leon Campbell looked over at his mother. They had arrived in Laramie yesterday evening pretty late, and upon hearing about the big 4<sup>th</sup> of July celebration, had decided to stay an extra day to take it in. He was glad they had. What a great time they were having. In fact, the last week had been the best time he could remember. He, his brother Alan and his momma, Geneva, all traveling out west together, seeing things none of them had ever seen before.

It hadn't taken long either. As they drove west on Interstate 80, they left the city of Chicago behind soon enough. As soon as they got 20 miles outside the city, they reached the furthest extent that any of them had ever traveled. It was such an experience seeing all of the open farmland right there in Illinois. They had never imagined it was like that so close to them.

Then, they had crossed the Mississippi River at Rock Island. They had all heard of the Mississippi and how it was a large river, but nothing compared to driving almost a mile across the biggest bridge they had ever seen, over water the entire time.

The further west they had gone, the more amazing the experience had been to them all. As they traveled across Iowa, they were amazed at the cornfields. Row after row, field after field.

“Now I knows where all dat corn a fixed for you boys growin’ up came from,” had been their mother’s comment after passing by one extremely large field. They had all laughed together at the statement. Surely, they thought, no place on earth could grow so much corn.

Then had come Nebraska. The sheer magnitude of it, the open spaces, the scenery of rolling hills for mile after mile. They had stopped in North Platte and visited the Buffalo Bill Ranch State Park near there and had purchased some souvenirs. Trying to imagine a time when buffaloes by the millions roamed that land was not as difficult when you were driving across its great expanse.

The further west they went, the more the scenery changed. Soon, they weren’t looking at all of the green grass or fields of corn. There were more and more wheat fields as the land became progressively drier. There were more and more hills and rock outcroppings.

Although Nebraska seemed to go on forever, soon enough they came to the Wyoming border. Not long after entering that state they got their first glimpse of mountain ranges off in the distance. When they did, Leon stopped the car and got out. As he was gazing into the distance, he spoke to his brother Alan.

“Would you look at that, Alan! Who would have imagined it? Those mountains must be over sixty or seventy miles away. The pioneers must have felt something like this!”

Alan couldn’t say he was as excited as Leon, but he had to admit that this first glimpse of the Rocky Mountains was quite the experience.

“I know I feel like a pioneer, Leon. This is all new to me, bro. I never would have thought there was so much open space in the whole world!”

After passing through Cheyenne, they had begun to climb into the mountains themselves and were soon passing by the higher peaks of the Continental divide.

They stopped at the pass above Laramie and spent several hours walking and talking and enjoying the moment. One family from Utah had stopped and engaged them for over an hour in some really pleasant conversation. The family was on their way home from a vacation in Illinois. They had visited a small town of Nauvoo on the Mississippi River. Apparently that town carried some sort of significance for their religion. Upon hearing of the Campbell’s story and travels, they had been sincerely excited for them and spoke of how great it was for them to be making such an effort as a family. Before they drove off, the father and son had shaken Leon’s and Alan’s hand and the wife had given their mother a hug. It wasn’t the first time on this trip that people had spoken to them kindly, and had taken an interest in their circumstances. They weren’t used to such friendly behavior, but it felt good, and they knew they could easily become accustomed to it.

There on that pass, when the sun had gone down, it got cool quickly and they had returned to their car, driven into Laramie and found a hotel room for that first night. Now here they were, the next day, Independence Day, sitting in a full football stadium watching fireworks.

Leon thought about that. How fitting, he thought to himself.

For him and his brother and mother, this was like their Independence Day. As surely as those colonial folks had thrown off the chains of their English bondage, he and his family were throwing off the chains of their lifestyle and circumstances. The prospect had Leon both humbled and excited.

A local civic organization and a local church had gotten together and organized a choir for the holiday event. Now, as the fireworks continued to light up the night sky, the crowd began to sing patriotic songs in the background. As they sang *America the Beautiful*, all three of the Campbells were mesmerized by the words—words they had all heard before, but had never really listened to, or appreciated.

*“Oh beautiful for spacious skies,  
For amber waves of grain,  
For Purple Mountains majesty,  
Above the fruited plain.”*

*“America, America,  
God shed His grace on thee,  
And crown thy good  
With brotherhood  
From sea to shining sea.”*

“I never knew it before, momma, but America sure is a rich, blessed and good land. Talk about your ‘spacious skies,’ we know that’s the truth now don’t we? Guess we’re going to discover how much more truth we’ve missed out on. Who would have ever thought it?”

Geneva Campbell looked over at her son. There were tears in her eyes. This boy, this good bright son, he had been their ‘explorer,’ their ‘pioneer.’ ‘God be praised for the likes of Leon,’ she thought.

“Leon, I expect we goin’ to find out a lot more. Just like you say. Yo daddy had a lot of good in him, God rest his soul. I wish he could see us now. He would have been proud of you, Leon...and you too, Alan.”

“It takes a real man, a real special man, to be able to pull hisself up and break out of a no good mold. Leon, that’s just what you are doin, and Alan, you’s helpin’ and had the strength to see it fo’ yo

self...and you's bringin' you old momma wid you. We got a long ways to go to this Boise, Idaho...but we got someone special wid us...I do believe the good Lord's along for this ride."

**July 7, 15:30 local time**

## **Islamic Republic Government Offices**

### **Tehran, Iran**

Imam Hasan al-Askari Sayeed considered his growing inner circle of government, military and religious figureheads. He knew he would be wise to consolidate and keep this number manageable. At the same time, he had to remain careful. He was riding high on a wave of public acclaim and great expectation. His message of Islamic unity and a basic application of the Three Wisdoms to the world of Islam were falling on very receptive ears.

Hasan turned to his closest advisor and friend, Ayatollah OI Osam Sadiq Shiraziha, whom he had appointed as the foreign minister and asked.

"And what of General Musharraf in Pakistan? Are the overtures continuing?"

Sadiq reviewed the notes on his Palm computer and responded.

"Imam, the Pakistani's are very interested in aligning with us and thus extending the Greater Islamic Republic. They recognize the wisdom in this unification, the power and influence it will bring Islam overall. They marvel at the success you have had thus far. You are receiving widespread approval and support amongst the people of Pakistan and I believe this is fueling Musharraf's overtures."

"General Musharraf is insisting, however, on Pakistan being given a voice equal to the current number of seats in our Parliament, due to the size of their population. He is also insisting that he be named as overall Defense Minister for the entire Greater Islamic Republic."

Hasan considered this. The Pakistani had a point from a representation standpoint, but Hasan was more interested in Musharraf's acceptance of his Imamate. The acceptance of this, and most importantly, the people's acceptance of this, would negate any influence in the Parliament.

Military Minister was another issue altogether. Hasan had no intention of having anyone supplant him in that role, particularly not someone who had made overtures to the west the way Musharraf had during the US action against the Taliban. Hasan understood the position Musharraf had been put in, but it had been a true test of his commitment to Islam, and he had failed when he allowed America to use his airspace and bases. Besides, Sayeed believed that multiple military subordinates could always be used to ensure that no individual ever accumulated the power to challenge his authority.

"And what of the Imamate?"

"Imam, Musharraf is indicating that he and his ministers are willing to accept the reality of your Imamate and recognize you publicly as the true ruling Imam for all of Islam, both Sunni and Shia, as you have desired."

Ah! There it was then, a public recognition. Hasan bowed his head and meditated for a moment, awaiting the inner voice. When he was satisfied that he had heard the promptings from within, he lifted his head and spoke to his long time supporter and confidant.

"Sadiq, tell General Musharraf that we will accept his terms regarding the Parliament, but that his request regarding the Defense Minister position will have to be put to the Ayatollah OI Osams and the collective senior Mujtahids and Mullahs several weeks after the unification in August."

"Sadiq, as you well know, the vote will go against him. Musharraf, in requesting the position of Defense Minister, has shown his lack of faith regarding the Imamate. We will remember this, and deal appropriately with it later. In the meantime, begin making arrangements with the clerics."

"Now, what is the position of Chaliberi Iraq?"

Sadiq did not have to refer to his Palm computer. The question regarding Iraq was a touchy one. It was absolutely necessary to bring Iraq into the fold of the Greater Islamic Republic. Sadiq knew this. But the new moderate leader of Iraq, who owed his existence to the West—and from the entire Islamic world's perspective was being used by them—was not willing to surrender his role as the leader of Iraq to the Imam, or consider the urgings of the Shia clergy to do so.

"Imam, Chaliberi continues to insist that the only offer he will consider is that he share power with you in some form of moderate, secular government my Imam. He indicates that without him we will never be able to reverse the growing influence of the Americans on all of the Arab nations, not to mention, he says, the Iraqi people themselves. He feels he is the key to unification you are urging."

Hasan knew that Chaliberi was a cunning leader. He also knew that he was not pious or committed heart and soul to the one faith, outside of using it as a tool to help advance his own ambitions. It was clear however, that support of the west was his mainstay to power, and this was something that could be used against him.

"Chaliberi overestimates his influence in all of these areas, including and especially the loyalty of his own people. It is because his faith is not pure. He uses it only as a tool to rationalize his own actions in being the harlot and whore to the West."

“Very well. He has made his decision, and established the course. Are our contacts and arrangements with Hamas complete? Are our own operatives in place and prepared to act?”

Sadiq, aware that with this line of questioning the decision to act had been made, affirmed to his Imam that all contacts with Hamas were secure, and that their own special operatives and sleeper agents in Iraq were in place and prepared to carry out their assignments.

“Very well, my loyal and trusted friend,” replied Hasan. “Then I will issue the necessary orders to have Operation Zakat proceed as we have planned. May Allah be with the faithful.”

**July 15, 09:30 local time**

**Along the Yenisey River**

**Krasnoyarsk, Russia (Siberia)**

“Stop right here, don’t go any further.”

Colonel Andrei Nosik could not believe his eyes. His battalion of 40 BTR-80 personnel carriers had offloaded here in Krasnoyarsk to “assist” with the Indian and Chinese workers streaming into the Trans-Siberian region. But no provisions had been made for their billeting or maintenance.

So, the Colonel had picked an open “park” area along the Yenisey River near the Trans-Siberian railroad and directed his vehicles and men to park there. But the civilians and the “foreigners” were all getting in the way.

“What garbage this is! This is no way to use the Motherland’s military might”, thought the Colonel as his company commanders and their non-comms began to organize the mass confusion.

He had forty of the “special” light recon version of the BTR-80, fitted with a crew of two (instead of three), lighter armament and better communications, and capable of carrying eight combat soldiers and their gear. In this case, he would be carrying ten of these filthy foreigners whom the President had seen fit to invite into the Motherland.

The Colonel understood the reasons for this mission. He understood the value of the currency and resources the vast number of Indians and Chinese would bring his financially-strapped nation, but he didn’t have to like being the one picked to be the nursemaid for them.

He had 600 men. Eighty crew members, forty back-up/reserve crew members, a security detachment of 200 men and logistical personnel numbering 280 and all of their vehicles and equipment. He also had twenty special trailers to house and transport the research, exploration and initial production equipment they would be hauling into the wilderness.

If all went well, he would be taking the initial load of 300 engineers and workmen by rail 800 kilometers north and west of Krasnoyarsk. There they would disembark and run another 200 kilometers off road to the west in their BTR-80’s to their target exploration and production area.

He was scheduled to make a total of three trips, bringing a total of 600 of the miserable excuses for humanity to their “base,” and then providing for their security, transportation and communication needs.

Eventually, they were ordered to cut a rough airfield out of the wilderness so more supplies and materiel could be brought in by air.

“Well, it could be worse. The devils could be strolling around the countryside without supervision”, thought the Colonel as he summoned his company commanders for a planning meeting.

As he waited for them, his mind wandered to his earlier service experiences in Chechnya, when his personal feelings for foreigners and their influence took root. The Muslims there fought so rabidly. There was nothing sacred, nothing honorable; not that war can ever really be honorable.

Just the same, there are certain lines which, when crossed, turn the combatants more into animals than men. The Muslims in Chechnya had forced that on them; and Chechnya had been too close to home. Far too close to mother Russia to not understand that one had to prevent at all costs such terrors being introduced to ones homeland.

The Colonel was determined to do his duty, to do it professionally, to obey orders, and to ensure, at all costs, that the Rodina was defended from such horror. That’s what had him worried now. In the Chinese and the Indians, he saw foreigners, with foreign cultures and foreign ways of thinking. More opportunities to unleash the horror on his homeland.

Well, he would help them develop. He would help them pull money and resources out of the ground to secure his nation. He would also watch them. Their “security” ran two ways. Like a two edged sword, it was sharp on both sides.

As his commanders entered his tent, which was set up and ready now, Colonel Nosil began.

“Good morning, gentlemen. We have a busy day in front of us, and an even busier tomorrow. Let’s review the operation plan as it exists today. Given the godforsaken conditions we found here, we will have to modify things from a logistical standpoint. Once we determine the actual status of our civilian guests and their equipment, we may have to revise it from a personnel and/or operations standpoint as well.”

“I expect this information to be available this afternoon by fourteen hundred hours. We will meet then to review it in detail. After that, I want each of you to get back with your teams and develop your

final operation plans that I expect to see here on this desk no later than nineteen hundred hours. Understood? Good. This meeting is over.”

**July 16, 13:15 local time**

**Along the Trans-Siberian railroad**

**50km outside of Krasnoyarsk, Russia (Siberia)**

Dr. Buhendra Gavanker was standing on the flatcar outside of the BTR-80 to which he had been assigned. Even though July, it was cool this far north, at least by his Indian standards.

Dr. Gavanker had been raised in Madras, on the southern coast of India. After a tour of four years in the army, he had completed his undergraduate schooling in Bangalore in Mechanical Engineering and had then gone on to obtain a masters of science in Geology and a Ph.D. in Fossil Fuel Exploration. Those advanced degrees had come while he worked for Larsen and Tubro in Bombay.

While working at Larsen and Tubro, he had been approached by the Minister in charge of the Energy Directorate for the Indian government. An offer had been made and Dr. Gavanker, fiercely loyal to his nation, had accepted. For the last ten years, he had worked in analyzing geological formation in India and surrounding friendly nations to search for more petroleum production. He had been quite successful.

So, when the People’s Republic of China and India had announced their economic coalition, Dr. Gavanker had been a natural selection to lead the teams of Indian scientists, engineers and workers into Siberia in search of more petroleum. His initial studies had indicated that hundreds of kilometers to the north and west of Krasnoyarsk, there was a potential for a large, untapped reserve of petroleum. Initial samples had been promising and had indicated where the test bores should be drilled. Dr. Gavanker had decided to lead the team that would sink those bores and then set up initial production operations once the reserves were located and being pumped out of the ground. If his calculations were even close to being correct, this find had every chance of being a major oil field, perhaps rivaling the Baku oil field in the Crimea.

“Colonel Nosik, I could not help but notice that all of these personnel carriers remain armed, and that a number of them are fully armed with larger weapons systems. Why?”

Colonel Nosik recognized the intellect of the Indian standing next to him. He had been fully briefed on the Doctor’s capabilities and what a large find could mean to Russia in terms of their share of the oil, and in terms of the capital that would be realized as a result of India’s and China’s royalty payments on their shares. This consideration allowed him to overcome somewhat his aversion to so many foreigners entering his nation.

“Doctor, this country is wilderness. We lose smaller convoys and supplies to bandits and armed insurgents each year. This joint effort to develop these hinterlands is too important to risk to such. I hope that helps you understand. If the bandits see power in overwhelming numbers, they will not think of interfering with us in any way.”

Dr. Gavanker had not imagined that such concerns would be his. He knew that in the mountainous Kashmir regions of his own country there were similar problems, but had not thought to consider that anything like that would exist where his government had sent him. On the other hand, he had skipped several of the orientation meetings as he was immersed in his research.

“I understand, Colonel. We have similar problems in the Kashmir in India. How long do you expect it will be before we arrive on location at the base camp?”

Mentally reviewing the schedule, and then doing a little quick math, the Colonel responded.

“The train will be fairly slow. There will be several stops at small towns along the way. I expect we will get off the train sometime tomorrow evening. We will then check our equipment and start out overland the following morning. With no problems, I expect we may arrive late the next day—that would be the nineteenth—or, at the latest, early on the twentieth.”

Dr. Gavanker did not relish another day-and-a-half on this flat car, followed by a day-and-a-half cooped up in the cramped confines of the BTR-80. But given what the Colonel had described, given the fact that no airfield existed in this country at this time of the year, and given the great potential for his nation represented by the petroleum. He was content with the schedule and the discomfort; he had little choice in any event.

“Very well, Colonel. Thank you for the information. I look forward to working with you and your men. I know it is not what military men are accustomed to, or like to do. I served in India’s army for four years. Though it was over twenty years ago, I remember what soldiers liked and what they didn’t like. I hope you and your men will be patient with us. In the end, it will pay off handsomely for both of our nations.”

As the Indian walked over to a group of his own people who were sitting on one of the vehicles, the Colonel thought to himself, “He might be a foreigner, but at least he understands and appreciates our position. Perhaps this duty will not be as unpleasant as I had imagined.”

**July 18, 10:00**  
**White House Situation Room**  
**Washington, D.C.**

General Jeremy Stone pressed the advance button on his hand held controller and went to the next slide in his computer generated presentation. This slide was the key for the entire meeting and one he would spend several minutes explaining to, and discussing with, the group.

"Now I will direct your attention to the screen and the projected Force analysis for the emerging "Greater" Islamic Republic. As you can see, the numbers are significant, particularly in the worst case scenario where Pakistan and Iraq become a part of Sayeed's growing confederation. Overall they represent an order of magnitude greater than what we faced in Iraq in either Desert Storm or Iraqi Freedom. Our big concern is that they also represent a force that is much more dedicated to their cause than in either of those cases as well. In other words, they will fight.

"And this does not take into consideration their strategic nuclear assets. So, please turn your attention to the screen and let's run through these numbers."

**GIR ARMED FORCE**  
**ANALYSIS ARMY AND AIR FORCES**

Country	IDiv	ADiv	Tanks	APC	AHelo	Aircraft
Iran	35	15	1350	900	250	250
Afghanistan	5	3	250	300	100	100
Turkmenistan	2	3	500	800	20	150
Uzbekistan	3	1	200	400	20	100
Tajikistan		1	100	100	10	50
Kyrgyzstan		1	100	100	25	100
<b>Best Case GIR</b>	<b>45</b>	<b>24</b>	<b>2500</b>	<b>2600</b>	<b>425</b>	<b>750</b>
Iraq	10	5	1000	1000	200	100
Pakistan	35	20	2000	900	150	200
<b>Worst Case</b>	<b>90</b>	<b>49</b>	<b>4500</b>	<b>4500</b>	<b>775</b>	<b>1050</b>
Modern Equip	50	25	2000	2000	300	500

**Naval**

Country	FFG	Subs	Aircraft
Iran	16	6	32
Pakistan	14	12	24
<b>Worst Case GIR</b>	<b>30</b>	<b>15</b>	<b>56</b>

"We expect that these numbers will be pared down some as they consolidate their offensive capability to a number closer to the modern and effective numbers you see at the bottom of the first chart. Still, these are significant numbers and they will end up with perhaps as many as seventy-five infantry divisions and thirty armored divisions, with the older units being used in-country for internal security. They can organize this into twelve army groups of approximately six infantry and three armored divisions each. We expect the India-China-Kazakh border—with their perceived threat there being Russia—and Saudi borders to get two of those army groups each.

"They have a sufficient number of high-quality airfields that they can disperse their fighter and attack aircraft accordingly in support of these army groups. As I indicated, we expect the two to four Army groups to be dispersed internally in support of their internal security units.

"We'll have to watch their training and their disbursements, but we are already seeing signs of movement to training areas in the six combining Islamic nations that support these conclusions.

"With respect to their naval assets, we expect that they will be concentrated along their coast at the entrance to, and along, the Persian Gulf, with Pakistani units being stationed along the Arabian Sea in the vicinity of India. Although the total force is relatively small, the subs have us worried. It was bad enough having to worry about those three Kilos the Iranians had, but the Pakistanis have four or five very effective and modern diesel/electric boats in their inventory that we will have to be more concerned about now.

"A force of eight to ten diesel/electric subs could wreak havoc in the Persian Gulf, Mr. President if they ever got the mind to, particularly with the addition of any significant land-based air support out of Iran. They could shut the Gulf down and we would be obliged to go in and clean them out under very difficult circumstances, either from land bases in Saudi, Kuwait and Bahrain, or from carrier-based air.

"All in all, gentlemen, the combined arms of this emerging "Republic" will make them the 4th strongest conventional military force in the world. That puts them behind ourselves, the Russians and the People's Republic of China. And with the financial and maintenance difficulties the Russian have been having, they could arguably be called the third strongest conventional force.

“Strategically, we already know Pakistan has nuclear capability and we have long suspected it of Iran. If Pakistan joins in, then we will know for sure. In addition, both Pakistan and Iraq, if they should swing towards the GIR, have significant manpower potential. Bottom line is this: They have theater-capable missiles and doubtless will be able to hit Israel or any of our allies in the region. One of our major concerns is how the Israelis will react. The Pakistani installations are too numerous, and too distant, for Israel to expect to be able to pull off a large enough conventional, unilateral strike to take them all out.”

President Weisskopf was taking all of this in. It was pretty much as he suspected, but nonetheless extremely sobering to hear. In fact, everyone in the room was unsettled, from the Vice President on down. The long-standing and delicate stability that the west had maintained in the Middle East which was only maintained by playing rival Islamic factions off against one another, was being undone by Hasan Sayeed. This was extremely concerning to the President and all of his foreign policy team. In 2001 through 2003, in addition to the clear need for retribution for the terrible attacks on America of September 11, 2001, the message of Usama bin Laden, one of uniting Islam and doing it with terror, had been the compelling strategic reason for stopping him and his Al Qaeda. The emerging Greater Islamic Republic provided an even more compelling strategic reason because of the unquestioned success in that unification that Sayeed was having. But Sayeed was not giving them any pointed reason to take action and he appeared poised to upset the entire balance of power in the Middle East. Thinking of this, and what such goals had produced back in 2001, took the president off on a tangent for a few minutes.

“Okay, I want to make sure that all of our security arrangements at the airports and on domestic flights remain in place, as well as what we are doing for other major infrastructure, water supply and power. I believe with Federal officers running airport security checks and with Marshals on the airplanes, that we have effectively curtailed terrorist attacks using our airlines. But what we have here is a situation where Islamic fundamentalists are coming to power on an unprecedented scale. Before we continue with the discussion regarding the GIR military capabilities, I want to ask Stewart to address our overall Homeland Security initiatives.”

Stewart Langstrom had been appointed by the President to direct the office of Homeland Security. It was a new position, having come into being in the wake of the 2001 terror attack, and was only the second person to ever fill the office. Stewart had been raised in the mid-west and was extremely conservative. He had served eight year in the US Army, rising to the rank of Captain. He’d been deployed in Desert Storm, but saw no combat as he led a logistics detachment that supplied materiel to the front. After his service, he had done well in business, running his own small textile business in St. Louis, before running for Congress in 1998. He had been there ever since, being given some fairly plum assignments on Defense and transportation committees. But then President Weisskopf, had selected him to fill the position as the Director of Homeland Security.

“Mr. President, my predecessor was very successful in getting the FAA to control and run airport security and in getting Air Marshals on every flight. As you know, there has not been another successful terrorist hijacking of a US airliner since that time. In addition, he worked with the Coast Guard, the National Directorate of the National Guard and with the fifty governors to establish security at our major infrastructure sites such as Hoover Dam, the Grand Coulee Dam and other sites inside our borders.

“Still, we have a long way to go. I am hoping to be able to implement security communications and procedures to the county level, such that the local county Sheriff’s work with their own people to establish “Home Guard” units to watch the local infrastructure. There are many small sub stations, dams and other sites that would have a large impact on our nation if they were taken out. I would like to pattern the program after a successful grass-roots program already implemented in Idaho.”

The head of FEMA, Curt Johnson, who was also attending, spoke up at this.

“Come on Stewart. You’re talking about old men and boys who have no training trying to do a professional’s job. We’ll spend more money on false alarms and cleaning up after them than we would...”

Stewart didn’t flinch. He felt Curt was competent, but also did not particularly like his “us or them” view of the civilian population, the people who paid his salary.

“No, Curt, I am talking about having this thing controlled at the level it should be controlled, the local level. The Sheriff’s know their people and they are the ones best suited to establish the small, volunteer units. If we went the way your tone is indicating, not only could we not afford it, but we would create far too many “Federal Police” interacting with the local people. They would resent it. This way, we have the people who are apt to have the most personal buy-in, involved in the protection of their own communities.”

The President didn’t want to get too sidetracked. He particularly did not want Stewart and Curt clashing here. There were still too many procedural issues to clear up regarding command and control of the nation in the event of a wide scale national emergency. Under many executive orders, the head of FEMA accrued significant power in such a circumstance. The President was very committed to spreading that power around, as he felt it should be. Stewart would be one of those, along with the rest

of his cabinet, who would lead in such a circumstance. But Weisskopf was committed to having full executive powers centered on him, the President, as it should be according to the Constitution. But those things were all in the works and could be handled at a different date.

"I like it Stewart. I'd like you to proceed in that direction, but let's make sure there are enough training dollars at least so that Curt's fears can be addressed. Something the Sheriff's can elect to use or not as needed.

"Now, turning back to the principal topic we were discussing, and forgive me for sidetracking the meeting like that, but General, how quickly before the GIR can consolidate all of these personnel and equipment and become an effective force? The numbers are impressive, but we all know that the logistical and training challenges they face are enormous."

General Stone turned to the Director of the CIA.

"If I may Mr. President, let me allow Mike to answer that, as his assets are already in place and reporting on these very things. Mike?"

Mike Rowley looked up from his seat over on the far side of the table from General Stone.

"Mr. President, the fact is we have had people in many of these nations since the wall came down and the Soviet Union split up. We are weak in Iran, Afghanistan and Iraq, but have good assets in place in all of the others. What they are already telling us is troubling."

"Within ten days of the announcements, Iranian military advisors were in each of these nations. They are also already in Pakistan even though there has not even been an announcement there yet. They are setting up a rigorous training program for the officers and senior non-commissioned officers that will then be rolled out to their troops in general. This program looks like an Iranian version of a combined arms tactics course, and it emphasizes increased communications and mobility.

"In addition, they are setting up the training and military infrastructure to allow for fairly dynamic logistical flexibility. In the commercial or at least non-military sector, we are seeing a similar ramp up in terms of preparing for the civil infrastructure to support this.

"Bottom line? Mr. President, we feel that within twelve months they are going to be fairly cohesive. Within twenty four months, if they continue on the path they are on right now, they will have strong mobility and logistic capability throughout their area of influence."

Fred Reissinger, the Secretary of State, interrupted at this point.

"Come on, Mike. Isn't this forecast a little aggressive? I mean we are talking about desert wasteland and terribly rough mountainous terrain. It would require an effort on their part that would be something equivalent to our effort to get to the moon. I can't believe they have the expertise, equipment or money to pull it off."

"Mr. Secretary, they certainly have the money—and money talks. In order to prevent the realization of this scenario, what we need is to convince our European allies, and even our own corporations, not to help the Islamic effort. We also need this necessary allied understanding in place soon, or we need the necessary trade restrictions in place to prevent what you have described from coming to pass. Our major concern is that the Coalition of Asian States will decide to get involved in helping this from an infrastructure and construction standpoint. If that happens, then there may be very little we can do to prevent it, and it may accelerate their capability."

The President interjected.

"That's exactly my concern, Jeremy. What we are seeing here is a tremendous shift in power and influence in Asia, the subcontinent and the Mid-East. It is one we have little hope of influencing or controlling unless we act very quickly to find some leverage or division that we can exploit and use to fracture it. Fred, Mike and John, we need some answers on this. If it builds up too much momentum, and if somehow this Greater Islamic Republic and the Coalition of Asian States get together...well, with Russia playing footsie with them, we could have a huge problem in Asia and the Mid East. I mean a *huge* problem."

Fred Reissinger had been thinking about just these things.

"Mr. President, I believe that the long-standing enmity between India and Pakistan is one of the keys in what you just mentioned. I believe that the friction between Iraq and Iran is the other one. There are enough ideological differences and long-term animosities in those areas right there, if we exploit them, to fracture this."

John Bowers, who had been quiet the entire meeting, now took this opportunity to speak up.

"I agree, Mr. Secretary. But, Mr. President, we are behind the eight ball on this. Things over there have taken on a life of their own. The religious unity that Sayeed is bringing to both the Sunnis and Shias in all of these nations is unprecedented, and it is breaking down some of those animosities. If we expect to capitalize on any of their historical differences, I believe from a diplomatic and economic standpoint we are going to have to do it in a hurry."

President Weisskopf nodded his agreement.

"I agree, John. Ok, here's what I would like to do. Alan, I'd like you to head up a working team with Fred, Mike and John to develop some options here in the next five to seven days. Let's plan to get back together on the 25<sup>th</sup> with the idea of deciding on some firm options in the diplomatic and

economic areas that we can move forward with by the first of August. It's time we had a surprise "announcement" of our own, perhaps by the 28<sup>th</sup>. Alan, keep me apprised of the group's progress."

"Thank you all for attending, and thank you, Jeremy, for an excellent briefing."

**July 18, 23:10**

**Private presidential quarters, The White House**

**Washington, D.C.**

The First Lady, Linda Weisskopf, was sitting up in bed, reading an historical novel about colonial America, waiting for her husband.

"Norm, could you get me a glass of water when you come to bed?"

President Weisskopf had been sitting in his lounge chair in the living room, winding down from the day somewhat, but still reviewing in his mind the developments in the Mid East and the Far East and how they were fitting together. He knew there was a "plan" and that the Chinese were somehow behind it, but what was the end game?

"Sure, honey. I'll be in there in just a second."

Linda loved her husband so much. No matter how high his career and capabilities had taken him, he never forgot what she considered to be the "important things." Things like being willing, without question or reservation, to get a glass of ice water for his wife, or taking walks along the river in the moonlight. She thought, "Norm Weisskopf is as capable a leader, thinker, strategist and warrior as his nation has probably ever produced, but he never lets it go to his head, and he never, ever forgets any of those who have helped him get there."

As the President handed his wife the ice water and then climbed into bed beside her, she sensed his continued unease.

"You're still worried about a Zenim/Sayeed alliance aren't you?"

Having discussed his apprehensions with her somewhat on the night of the WNN Special Report on Sayeed, and then again when the various surrounding Islamic nations announced their alignment with the "Greater" Islamic Republic, Norm Weisskopf was not surprised that his wife had taken note. He was also not the least bit surprised that she had pegged his continued and growing apprehension in that regard.

"Alliance? Perhaps not that strong. But am I worried about an alignment of convenience? Yes I am, very much so. Despite the unlikely nature of it, there are just too many unprecedented things happening, and I can't help but feel that they are not coincidental."

"Someone is going somewhere with this, and I believe Jien Zenim and Red China are involved. I just can't put my finger on exactly where they are going. It's clear that our best interests are not a part of that equation, and I am feeling this urgent need to get those interests out front and center, and to make sure they are accounted for as this picture comes into focus."

Linda was not an expert on foreign policy or the strategy associated with all of the economic, diplomatic and military pieces that populated the game board in Norm's mind. She was, however, an expert on Norm. And she knew that, whether she understood the game or not, it was critical to have people like her husband who did understand it in leadership positions—people who played the game with the understanding that "American interests" served as the game-piece that would not be sacrificed under any circumstances. It seemed to her that Norm was the first President squarely focused on those interests since the early 1980's, almost twenty-five years ago. She also knew that Norm had a basic religious faith, and that a higher power often guided his good heart through those feelings he experienced and the ideas that germinated as a result of them.

"Norm, listen to your heart and the feelings you've been blessed with. They have never led you astray. I believe they come from God."

"Also, listen to the good, honest people you have been impressed to surround yourself with. I have faith in you, honey. If anyone can see clearly how to keep the peace and maintain our nation's interests, it's you. You're not in this position alone—or by accident—and we both know it."

The President regarded his wife's wisdom and forthrightness with awe on many occasions. This was one of those occasions.

"Thanks, sweetheart. What you say is true. I believe in my heart that America is guided by the hand of God. It's just difficult to keep that belief in perspective in the middle of a long day with so many issues mounting.... Good night."

As he closed his eyes, and laid his head back into his favorite feather pillow. Before sleep took him, he voiced this simple request in his mind.

"Dear Father, let Linda be right. Just point me."

A few minutes later, Linda finished her small glass of water. She noticed that Norm's breathing had become deep and regular and he was asleep. As she turned out the light, she uttered her own prayer.

"Please, Lord. Just show him the right direction. He can take it from there and, with Your help, accomplish what needs to be done."

**July 21, 02:10 local time**

**Near the entrance of Shanghai harbor**

**Shanghai, PRC**

The leading escort cut a fine line through the water as it entered Shanghai harbor. It was an updated Jiangwei frigate, the 540 Huainan, and it entered the harbor first and feathered off to one side to stand as a sentinel for the procession that followed. Behind it, in a much tighter group than they had formed during the early evening hours, came three of the most modern and fastest container ships in the world.

Trailing them was a single Luhai guided missile destroyer, the 168 Shenzhen, bristling with modern weapons systems, sensors and two modern anti-submarine warfare (ASW) helicopters. One of those helicopters hovered near the mouth of the harbor as the convoy entered, using its dipping sonar to ensure that no unwanted guests were lurking nearby.

As the Shenzhen loitered near the mouth of the harbor, the three container ships slowly moved towards their pre-assigned dry docks. By morning they would be secured in them.

What the ASW helicopter and the escorts did not pick up were the small surveillance devices anchored to the bottom of the harbor. As each of the Chinese ships maneuvered into the harbor, they passed over these devices that were hidden in the silent blackness 40–60 meters below. These were the MUAS devices that the SEAL team from the USS Jimmy Carter had ‘planted’ almost a month before. Each of them faithfully recorded the presence and movement of each ship that passed close enough to activate its sensors.

The same scenario played itself out several hundred miles to the north/northeast, as a similar convoy of two military escorts and three container ships entered the harbor at Tanjin. There, the faithful MUAS devices activated and recorded the presence and passage of each ship as well.

But what was not recorded by any American surveillance device were the other two, separate convoys that entered different harbors that night. Nor would any recording be made of the passage of convoys, over the next several weeks, into eight other harbors not covered by MUAS devices around the People’s Republic of China.

Within twenty-four hours of the passage of the convoys, the first signal was transmitted from the ELF facilities stretching across Michigan to the MUAS devices in Shanghai and Tanjin harbors. That signal activated the release of the first communication buoys from each of the devices. The release occurred on a staggered, thirty-minute schedule between releases. This was a safeguard against detection by the Chinese as a result of too many devices communicating at once, even at the low power setting. Once the buoys reached the surface, they transmitted the information to the waiting satellite.

**July 31, 10:45**

**WNN broadcast studios**

**New York City**

“Summarizing then, our guest today on “Meet the Nation” has been Secretary of State, Fred Reissinger. Mr. Reissinger made surprise announcements regarding diplomatic relations in the Mid East and in India.”

“In the initial announcement, the Secretary announced new and much more aggressive relief and aid packages directed at Iraq. Food, agricultural initiatives, economic development initiatives and significant incentives to American companies to take the lead in implementing them have all been announced. Secondly, in a startling and important announcement, the Secretary of State outlined new proposals for economic, diplomatic and military initiatives with India. This is an announcement of great surprise coming so soon on the heels of the formation of the Coalition of Asian states by the People’s Republic of China and India.”

“Just how China will respond to the Indian initiative of the United States is yet to be seen. In addition, the reaction of the Greater Islamic Republic and its leader, Hasan Sayeed, is awaited with equal anticipation.”

“Speaking of Hasan Sayeed, WNN is proud to announce that the Imam Sayeed’s first western interview will be held by WNN’s own David Krenshaw one week from tomorrow night at 7 pm EDT. As world events continue to unfold, we know our viewers will not want to miss such an important interview.”

“Mr. Secretary, thank you for agreeing to appear on “Meet the Nation.” We look forward to the press conference the President will hold regarding these announcements tomorrow. Now, as is our custom on “Meet the Nation,” the last word is yours, Mr. Secretary.”

From years of experience dealing with on-air interviews, Secretary Reissinger expertly turned and faced the active camera.

“Thank you. Let me just say that the United States has shown its willingness to help the peoples of the world, even its own adversaries, when they are faced with hardship and trial. Today, we have offered to significantly escalate our efforts in Iraq, hoping they will accept our outstretched hand and

continue along the path started in 2003 and Operation Iraqi Freedom, to improve the quality of life and the liberty of the Iraqi people.”

“At the same time, the United States is known for its ability to enhance a nation’s Gross Domestic Product (GDP) and standard of living through trade, technology exchanges and strong diplomatic ties. In the sub-continent region, it is past time that America strengthen its ties with the largest Republic in the world: India. With today’s proposed initiatives, we have taken important steps to accomplish this alliance. We look forward to the opportunity to work with our friends in India to make it a reality.”

As Secretary Reissinger finished, the host of WNN’s “Meet the Nation” turned toward the camera and closed the show.

“Thank you, Mr. Secretary. Folks, that’s all we have time for. This has been Sunday Morning’s “Meet the Nation” on WNN. Thank you and good day.”

**July 22, 13:15**

**National Reconnaissance Office headquarters**

**IMINT Directorate**

**Chantilly, VA**

The signals from the MUAS devices were processed from the military satellite in gyro-synchronous orbit over the Philippine Sea and relayed to CINCPAC (Commander in Chief Pacific) naval headquarters in Hawaii for analysis. Simultaneously, they were transmitted to the Office of Naval Intelligence (ONI) in the Pentagon, and to the NRO offices in Virginia.

Tom Lawton had received the information almost an hour-and-a-half ago. He had been waiting for it impatiently. Once he received it, he immediately processed it into an analysis program he had written himself for this very purpose. The program had plotted the location of each MUAS device onto digital images of the two harbors. When the data was processed, the program would plot the tracks of any ships recorded by the devices that fit within the parameters of their sensor algorithms.

Tom Lawton was studying the printout of data from the recordings made early on the morning of July 21.

“I believe we have something here, Bill. Looks like, that early on the morning of the 21<sup>st</sup>, we had convoys that appear to have been escorted by military vessels enter both Shanghai and Tanjin harbors. The ships they were escorting were large container ship varieties, and all of them moved immediately towards the dry dock facilities we have been observing at Shanghai and Tanjin.”

Bill Hendrickson had assisted Tom in writing the analysis program through which Tom had just run the data. After taking in what Tom had said and considering it for a moment, he knew exactly what they needed to do with this information.

“Have you run that part of the data through the second stage analysis to identify the specific ship types?”

In fact, Tom had just submitted the data for analysis. Once something of interest was located using the initial portion of the program that plotted the time, location, size and basic type of ship, it could be run through a second analysis which compared the acoustical and electronic data against known signatures for various ships. The result of that analysis could deliver specific ship classes, and even the name and designation of each specific ship.

“I just entered it, Bill. Should have the results in a couple of minutes.”

“Ok, here it comes now. We’re looking at a Jianwei frigate and a Luhai destroyer escorting three of...what looks like their newer large container ships. Each of those container ships made for individual dry dock facilities in each harbor.”

Bill Hendrickson considered this. Those dry dock facilities had been logistically set up for significant conversion and, from their prior surveillance and analysis, had significant underground storage areas for the materiel that would go into those conversions.

“This looks like it’s developing into something significant. We need to continue to watch the satellite imagery, and maybe schedule more time if we see them doing anything to those container ships that could be remotely related to their naval air activities.”

“Let’s go ahead and document these findings as soon as possible. I’ll set up a conference call with the Naval folks at CINCPAC and the ONI. I expect they will come to similar conclusions, but let’s go through the motions to make sure. After that, it’ll be time to get Mr. Bowers involved again and see where they want to take this.”

“It’ll be interesting to see what takes shape in those dry docks. Tom, I don’t know why I didn’t think of it before, but take the deck configuration from those airfields and overlay it on one of those container ships going into the dry docks up there at Tanjin. Let’s see what we get.”

## Chapter 4

*“He who sells his next life for life in this world, loses both.”—The Prophet*

**August 2, 14:00 local time**

**Presidential bunker complex number A312C**

**Outside of Baghdad, Iraq**

Isam Chaliberi contemplated the meeting that was about to be held. Here, in one of the ten remaining presidential bunkers, fifty meters below the ground, more very secretive attacks on the Israelis, the “Little Satan,” would be planned. Despite the best efforts of America, and despite their victory in Operation Iraqi Freedom and installation of what they perceived to be a pro-American, pro-western regime, that same regime had quickly continued funding and planning retribution and violence on the Jews who continued to occupy Palestine and who continued to persecute what almost all Muslims considered its rightful citizens, the Palestinians.

Today, Sahid Ibrahim, the operations officer for the Hamas, one of the principal organizations conducting operations against the Israelis on the West Bank, was meeting with Chaliberi and his closest and most trusted aides. Chaliberi was really his own council, particularly since being backed by the Americans and most of these men simply carried out his wishes. The subject of today’s meeting would be the funding of the next month’s operations for the Hamas. Chaliberi funded these activities out of accounts which, if ever fully traced, would lead away from Iraq to Iranian off-shore commercial interests.

In this thing, Chaliberi trusted no one. He had survived for several decades as an exiled opposition leader for Iraq, surviving the very worst that any enemy, particularly the ruthless Hussein, had attempted against him. He had done so by being cunning, ruthless and completely thorough in his security arrangements, while convincing in his support for whomever he felt could advance his cause...in that case the Americans.

Anyone gaining access to him in one of these secretive meetings had to pass through metal detectors, dogs trained to find explosives and a complete body search, including a thorough x-ray. At all times, when within fifty meters him, any visitor was covered by no less than three locked and loaded weapons. The guards carrying these weapons were prepared to defend Chaliberi at all costs. They were extremely loyal to him due to the promotions and favors that Chaliberi had showered upon them since coming to power—and due to the imminent threat of death that hung over their entire families should there be even a suspicion of disloyalty.

Even those armed and primed guards, whose loyalty was thought completely secure, were themselves under the eye of other hidden and completely compartmentalized snipers whose loyalty was similarly ensured.

All of these security arrangements were complemented by the presidential bunkers that Chaliberi had taken over and applied to the use of his own government. It had been a rather simple thing to convince the Americans of the need, so long as they were allowed regular access.

No matter, words were all that were spoken here, and Chaliberi had been able to outfit at least one room in each facility to be completely free of any outside eavesdropping.

In truth, Chaliberi’s greatest anxiety was caused by the protracted “war on Terrorism” that the United States was continuing to conduct. It required more of a presence of American military and state department personnel in Iraq than Chaliberi was comfortable with. But there was little he could do about it...and in truth, knew that he needed the additional protection against the more fundamental segments of the population, at least until he could consolidate the government and his hold on the system of democracy as it was developing here in Iraq.

That consolidation would ultimately hold because it was thoroughly understood and completely compromised by Chaliberi’s operatives. It also worked in this instance, in such a risky and secretive meeting because the security was rigidly enforced. Today, after they were cleared for access to meet with him, Ibrahim and his aid would not be allowed to bring their own pens, pencils, notebooks or any other article to the meeting. Despite the fact that Chaliberi had known Sahid personally for over fifteen years and had held many meetings with him, security could never be compromised or taken for granted.

“No,” Chaliberi thought, “I have not survived the best attempts of my many adversaries for so long by being lax on security measures.” To date those measures had allowed him to outlive his principle antagonist, Saddam Hussein, and live to take his place as the leader of Iraq. He felt certain they would continue to protect him today.

But he was wrong.

Chaliberi took notice of the movement at the door. As he watched, Sahid and his aid were brought into the conference room. As the door was closed, Chaliberi rose and greeted his longtime compatriot from the head of the table.

“Is-salaam maleekum , my brother, keef Haalak.”

Sahid returned the classic Arab greeting as he was guided towards his chair.

“Wa maleekum is-salaam, il-Hamdulillaah!”

As he was moving towards his seat, Sahid took note of his surroundings. There were ten armed guards in the room, his own aid, eight of Iraq’s military council, and, of course, Chaliberi. Sahid thought for a moment about his mission and all of the planning that had gone into it—all of the faith that was vested in it. The truth was, he had always thought highly of Chaliberi and amazing ability he had to influence the west towards his own ends.

But, despite this admiration, over the years it had become clear to Sahid that little if any progress was being made in the holy cause of Islam. In fact, Sahid had become convinced that the Great Satan was using Chaliberi much more than Chaliberi was using the Great Satan. They were using his position and their military might to keep the Israelis strong and to keep their own people and industries focused, united, against Islam and blinded to the travails of his people.

Although Sahid had firmly come to these conclusions, until recently he had felt that these difficulties were Allah’s will, and he was content to await the hand of Allah in showing how they should fight their enemies more effectively. That “hand,” and the long-anticipated answer for Sahid, had finally come in the form of the great Imam Hasan Sayeed.

Faithful Arabs in many countries were calling him the “Great Uniter,” the modern messenger of Allah. Sahid believed he was the 12th Imam who had returned to lead Islam to victory over the infidels. Sahid was prepared to sacrifice his all, his very life, to help ensure that victory. Right now, that victory required Iraq to join with the Greater Islamic Republic for a mighty Jihad against the unfaithful, and then against their enemies. But Chaliberi had chosen to place his own thirst for prestige over the will of Allah, and this self-aggrandizing behavior was thwarting the growth of the Greater Islamic Republic.

This state of affairs could not be allowed to continue.

As he was taking his seat, Sahid thought about the carefully-scripted role he would play over the next few minutes in bringing Islam together, and how what he was about to do would ensure his own entry into the great paradise of God. His aid, a good and valiant defender of the faith, would join him there, though the aid was completely oblivious to what was about to happen.

As he dragged his chair up to the mahogany conference table, Sahid began to put pressure on the lower back molars on each side of his jaw. Those molars had been filled and crowned years ago and were taken for granted by the security detachments in these facilities. After all, they had seen them on their x-ray machines many times.

Three days before coming to Iraq, the crowns covering those two molars had been removed and the fillings drilled out and filled with small, pressurized cartridges that were coated with the same material from which the fillings were made. The crowns had been replaced, but not glued in. By exerting the right pressure, Sahid could remove the crowns and activate the pressurized gas within each cartridge.

By the time Sahid was seated comfortably at the conference table, he had already removed the crowns with practiced precision. After Chaliberi had finished with the introduction, which consisted of his carefully scripted and flowery words about how he was in fact taking advantage of Israel and America, he invited Sahid to stand and speak concerning the plans that were to be the object of the meeting.

Sahid stood and looked around the room. He took a deep breath and then, to everyone’s complete astonishment, he uttered the following words:

“Isam Chaliberi, on behalf of the United States of America, I find you guilty of treason against the new government of Iraq and treachery against the united States government that has placed you in this position!”

At the mention of the “United States,” “guilty” and “treachery,” the guards began to bring their weapons to bear on Sahid. But it was too late. A small cloud of mist erupted from Sahid’s mouth and shot towards Chaliberi, while diffusing around the room. It was a mist filled with an extremely toxic nerve gas that did not have to be inhaled to produce its deadly effects. It was absorbed into the body upon contact with the skin of the victim.

Even as the subsonic bullets from the guards standing behind Sahid began to rip into his body, the first tiny particles of the mist began to fall upon Chaliberi’s exposed face and arms. In an effort to avoid the gas, Chaliberi had thrown up his arms to protect his face and fallen back in his chair, but the desperate action proved futile.

Chaliberi rolled back in his chair in shocked surprise. A stunned silence fell over the room as Sahid’s lifeless body thudded to the floor. Looking around the room, a wry smile appeared on Chaliberi’s face for an instant as he thought there would be no ill effect from the mist—but the instant was fleeting.

Suddenly a terrible, almost animal-like scream erupted from his throat. His entire body began to writhe in horrific spasms and convulsions as the nerve agent began to destroy his central nervous system. Over a few seconds, the spasms, the convulsions—and the screams—got worse, much worse.

Similar screams began to erupt from all around the room as others began to experience the same effects.

Two of the guards standing in the back of the room, and three of the council members who were sitting in the back, were quick-witted enough to exit the room at the first hint of any untoward action and with the gunfire. They were able to do so before any of the expanding and diffusing mist particles touched their skin. They proved to be the only survivors.

As the shocked guards who were monitoring the audio and video feed watched, the hapless victims thrashed around in unbelievably violent contortions as their spasms worsened. Horribly, three or four audible “cracks” were heard as convulsions wracked the spinal cords of the victims into unnatural backward aches—so unnatural that their spines literally snapped. The screams were beyond description; the sight beyond imagination and, ironically, every minute of the grotesque human horror was recorded in full by Chaliberi’s own audio and video security equipment.

Within five minutes it was over. All sixteen individuals who remained in the room were dead and sprawled about the room in a most grotesque manner. The five who had gotten out were not allowed to exit the outer room to the conference center for many hours.

Iraqi toxicologists, scientists, medical doctors and investigators would secretly and carefully analyze the scene, while protected by full bio-chemical suits, for several days before announcing their preliminary conclusions to the new Iraqi hierarchy and before Chaliberi’s absence became a cause for concern amongst the Americans. The discovery of the cartridges in Sahid’s mouth from which the gas had erupted would play heavily into the reaction of the Iraqi leadership. Upon performing a microscopic examination of each of these cartridges, astonishingly, they would find the following letters stenciled on the side of each in tiny script: “MANF. TO US MIL SPEC-0602.”

In addition, the Iraqi investigators, and later independent investigators, would find clear forensic evidence that Sahid’s fingerprints had been medically altered. The Iraqis surmised that this had been done with a technology and precision that could only have originated in the west, and which was reserved for the highest level clandestine operatives.

**August 2, 20:00 local time**  
**Islamic Republic government offices**  
**Tehran, Iran**

Minister Sadiq Shiraziha gently knocked on the door to Imam Sayeed’s personal office. After a moment or two, during which Sadiq waited patiently, he heard Hasan give him permission to enter.

As Sadiq entered the room, Hasan rose from where he had been praying. After exchanging Arabic greetings, Hasan spoke.

“I take it there is news out of Iraq?”

Respectfully waiting for his Imam to get to his desk and be seated there, Sadiq then answered.

“Yes, Imam. We have received word. Operation Zakat has been successfully completed. President Chaliberi is dead. Our operatives report that five of his eight closest aides died with him, along with a number of personal guards. Sahid Ibrahim and his aid were also amongst the dead. God rest their souls.”

Hasan thought about the guards and some of the military council in Iraq. Some of those men had been faithful Muslims and would now be with Allah in paradise. A special place was surely reserved there for the faithful and patriotic Sahid.

Hasan also thought of individuals like Chaliberi who aligned themselves with the west out of personal interest and lust for power, wealth and decadent western vice.

“Allah be with Sahid and all of the faithful who entered into paradise today.”

“Their sacrifice has not been in vain. Today, with his great act of martyrdom, I believe that the faithful servant Sahid Ibrahim did more for the cause of Islam and its unification, than all of the combined acts of the great Ayatollahs of the past hundred years. I say this with no disrespect whatsoever meant for those faithful servants.”

“But, we must move on. Sadiq, what of the political and civil situation within Iraq in the aftermath of Chaliberi’s death?”

Sadiq reflected just a moment as he recollected the communiqués and conversations to which he had been privy during the last several hours.

“Imam, as instructed, our agents in the Iraqi Foreign Ministry have announced Chaliberi’s death to the world, along with the allegations regarding the West. A video of the entire incident that was made as a standard security procedure has been released. It will be the major news story in the west in their afternoon editions and their evening news.”

“As for the local, civil situation in Iraq: surprisingly, on the streets there is great chaos amongst the common citizens. This is perhaps as clear an indication as one could imagine of the true feelings of the people towards Chaliberi and his western regime. There are many anti-western and anti-American demonstrations forming.”

“There is also some indication that the surviving governmental council is trying to consolidate power. But our efforts amongst the people are already producing significant progress in developing a

popular movement to join the Greater Islamic Republic and face the West in solidarity. I believe our people in the Foreign Ministry and mounting public pressure will give us the opportunity we need, within the next few days, to formally offer a proposal for alignment, in order to calm the situation and prevent anarchy, chaos and further bloodshed.”

Hasan was pleased. Allah’s will for a unified Islam was pressing forward. It would press forward through all obstacles, both those thrown in its path by the infidels as well as by the unfaithful.

“Excellent. Keep me informed of the developments, Sadiq. Perhaps I can make this announcement during the upcoming WNN interview. It would come just two days after the Pakistani announcement and would serve to keep the West all the more off balance.”

“Though I have been troubled by the recent efforts of the Americans with respect to Pakistan and Iraq...those efforts have been seen for what they are, very transparent and belated attempts to divide a solidarity that is blessed by Allah and growing rapidly.”

“Nonetheless, it is indicative that the American leadership is awakening to what is happening around them. I believe that the reality of a united Islamic Republic stretching from Syria to the Himalayas will quickly remove any remaining sleep from their eyes. We will have to proceed carefully once they begin to see things clearly.”

**August 3, 07:50**

**News Stand, Central Park**

**New York City**

**Herald Post**

**Special Edition**

### **Isam Chaliberi Assassinated!**

**Iraqis Blame United States CIA Operation**

**Video of Assassination Released**

*Baghdad, Iraq—August 2—(UIP) In horrific detail, the death of Iraqi President, Isam Chaliberi, who returned from exile after Iraq was liberated by the United States, and a long time ally of the United States, was captured on video yesterday as it occurred in one of the nation's remaining Presidential Bunker facilities. The stunning video captured the final words of the assassin, a terrorist leader in the Hamas organization, which preceded the death. These words, and other alleged circumstances surrounding the killing, have led the Iraqi Foreign Minister to blame America and the CIA for the assassination.*

*The statement by the terrorist, “Isam Chaliberi, on behalf of the United States of America, I find you guilty of treason against the new government of Iraq and treachery against the United States government that has placed you in this position!” preceded the release of an unknown mist from the speaker’s mouth. This mist, which spread throughout the room, killed Chaliberi and many members of his executive council who were present at the time. The Hamas leader was shot and killed by Iraqi guards before the effects of the mist resulted in the other deaths. Experts speculate that the mist was some form of nerve gas.*

Amazingly, in an era of almost instant news gratification via the internet, email, connected wireless phones and Palm computers...tens of thousands of people were flocking to the newsstands to pick up their copy of the Special Edition news print.

And this was not just occurring in America, where the passing of the supposed ally was greeted with significant angst...and with a question of what now would become of Iraq. Newspaper stands all over the world were swamped with people anxious to “read all about it.” Web sites that carried the story experienced unprecedented traffic. Online newspapers and news service sites were so overloaded that some of their servers could not effectively handle the increased load.

Everywhere, the world held its collective breath, wondering what would occur as a result of the death of Isam Chaliberi. Everywhere, people sensed that great changes in political and ideological alignments were afoot in the world.

In the Arab world, outside of his ruling party and many of the Palestinians, Chaliberi had been feared and maligned because of his ties to the west. Nonetheless, the prospect of a potential assassination of an Arab leader by a western power generated animosity, mass demonstrations and calls for independent investigations.

In the West and Far East there had been more concern about Chaliberi’s uncertain future. Yet, despite this, people had recognized him as a great hope for the Middle East and a real test of American policy in the region. His absence now created a dangerous vacuum—and nature abhors vacuums. Inevitably, the void created by Chaliberi’s death would be filled by something else, something as yet unknown.

**August 3, 14:20**

**White House press briefing**

**Washington, D.C.**

“In closing, let me assure you all, that under *no* circumstances did the United States government or any of its agencies take part in, plan, or in any way instigate the assassination of Isam Chaliberi.

The United States viewed Chaliberi as an ally—and as a leader who had the first real hope of significantly contributing to peace and stability in the entire Middle East. Under no circumstance does the United States condone assassination as a means of promoting or realizing global political stability.”

President Weisskopf looked at the sea of hands that were immediately and impatiently raised as he completed his statement. The chorus began at once.

“Mr. President! Mr. President!”

“Bill.”

“Thank you, Mr. President. What is the United States response to the video of the assassination in which the killer specifically referenced the United States?”

President Weisskopf had asked a similar question earlier in the day of his own advisors, particularly Mike Rowley, Director of the Central Intelligence Agency. The answer had satisfied him, but the explanation offered for public consumption had to remain less forthright for the time being.

“Until we have a chance to analyze this video in detail, and until more information is forthcoming, we will withhold our comment. However, I can once again reiterate that the United States had nothing to do with this.”

“Mr. President! Mr. President!”

“Judy.”

“Mr. President. You indicated that our government had nothing to do with this assassination. Yet how can you reassure the people that our government is being forthright? In light of past activities, both domestic and international, from presidential activities to the activities of law enforcement and the military, the government has been caught lying time and again. How can the American people believe you, Mr. President?”

Norm Weisskopf did not like having his honor or his integrity called into question. He had learned a long time ago at West Point to personally maintain nothing but the highest standards in this regard. It was an integral part of his character. And one he took seriously.

“Judy, I am not one of the former Presidents to which you refer. My own military record and stance on the issue of integrity is open to the public and well documented. A government that will directly lie to its people in an effort to cover wrong or illegal activity is a government not worthy to rule a free people.”

“I will say it again: the United States had nothing to do with this assassination. Thank you.”

“Mr. President! Mr. President!”

The President’s press secretary had stepped up to the podium as the President exited the room.

“Thank you, the press briefing is over. Good day.”

**August 5, 10:35 local time**

**Office of the president**

**New Delhi, India**

“Mr. President, the People’s Republic of China has every intention of insuring the peace between the United States and the Greater Islamic Republic (GIR) once Pakistan carries out its intention of uniting with the GIR. We are willing to sign a treaty with all involved parties to that effect at any time you would desire.”

“In addition, we are hoping that at some date in the near future our peoples in the PRC, the GIR and India will come together in an even greater coalition, despite any religious or ideological differences, and in the spirit of the Three Wisdoms. Such an alignment would affect an economic and political coalition that would rival anything the west can put together. Can you imagine it? Having the economy, the buying power, the influence to challenge the United States or the European Union on our own terms, eye to eye, without the need to blink at all?”

President KP Narayanan of India listened with respect to what Li Peng had to say. He knew that Li was President Jien Zenim’s closest advisor and spoke for him. He knew that the coalition that he and Jien had announced and implemented was surpassing their economic and political aspirations. Now it was time to invite others to the table...but the Pakistanis? Could it be true that Hasan Sayeed had so much influence that he could break down those barriers? More importantly, does Jien Zenim believe that he possesses both the necessary trust, and the necessary power, to be able to incorporate Hasan and his minions into his overall plans?

“I believe we will avoid a direct “military” alliance or commitment at this time, Minister Li. However, we are open to expanding the CAS. At the same time, we are concerned about the growing power of the GIR, particularly now that it will be moving to our borders by encompassing Pakistan. Although a nation’s name may change, the old rivalries and animosities are still there and are difficult to forget about.”

“Still, we feel that we are strong enough to preserve the peace on our own borders and will wait to see how the GIR conducts itself. Becoming a member of the CAS, and committing to the economic and social principles that form its basis, would be an initial step in the right direction, and one we

would welcome—albeit, as I say, due to historical precedence, it is a step of which we would be wise to remain somewhat wary.”

“Inasmuch as the PRC is working with us in the CAS towards our mutual goals, we would welcome your efforts as an arbitrator from a diplomatic standpoint with any issues that arise that we cannot mutually resolve.”

Li Peng sensed some of the reservation, and had to admit that there was good historical precedent for it. At the same time, he knew that his leader’s goals and directions in this regard were critical, and explicit. The latest US efforts to keep the wedge driven deep between Pakistan and India could not be allowed the slightest prospect of success.

“President Narayannen, allow me to address a critical point, and, with your pardon, let me do so very directly. What of the recent overtures by the United States, and their attempts to draw India away from our developing CAS relationship?”

President Narayannen considered this point carefully. He and his advisors had discussed this very subject in great detail. Some were for opening their arms to the Americans. An alliance with the United States was something many in India had wanted for a long time. But others, Narayannen included, argued that America’s attention was not sincere. They argued, quite convincingly, that American overtures had occurred only as a result of shifting economies and balances which appeared to threaten them. In short: America was fickle, and could not be relied upon. The counter to this had been that the new administration under Weisskopf was strong, and could be trusted. But the inevitable response to that argument had been that the Reagan administration, too, was a strong and trustworthy one—and look at what had followed a few short years later.

“Minister Li, we have discussed this in detail in our cabinet meetings. We feel that the American overtures are insincere. We are very happy with, and committed to, our CAS responsibilities and agreements. We view the CAS, and its basis in social equity, to be in the best long-term interests of the people of India.”

“Having said that, we will take advantage of any offers the Americans make that do not hamper or interfere with those long-term commitments and responsibilities to the CAS. We will ensure that the Americans understand this, and if they wish to make equitable trade agreements and concessions to us in spite of it. . .well, we would be foolish to not take advantage of them.”

“But, please be sure to convey to President Jien in no uncertain terms our commitment to the CAS and to the plans he and I have discussed for the last several years.”

This is what Li had hoped to hear. The Indians were not buying the American plans, and with the announcement by Pakistan’s General Musharraf on August 7<sup>th</sup>, now only two days away, it would be clear to the world that the Pakistanis weren’t buying them either.

“I will certainly convey that message to President Jien. I know he will be gratified to hear of it. On behalf of President Jien, and on behalf of the People’s Republic of China, I offer my thanks for your hospitality and your commitment. May the success, well-being and prosperity of our peoples remain linked through such bonds of friendship and commitment to social equity.”

**August 7, 13:35 local time**

**National Security Council pressroom**

**Islamabad, Pakistan**

General Pervez Musharraf looked out over the assembled news reporters, heads of state and their representatives, his own eight-member National Security Council and the many others who had been invited to hear this announcement. They were all waiting expectantly in the large pressroom. The announcement he was about to make had been discussed by him and the Security Council (every member of which he had personally appointed after his military coup seized government power in 1999) for many weeks. Every possible angle had been debated.

There was no doubt that Hasan Sayeed represented the best opportunity for Islamic unification since the Prophet himself. The trouble with this was that it was so obvious, and had been discussed so much, that the people themselves knew it and were demanding it.

This left the General in a quandary. He had been successful in his coup. He had successfully played the competing western, eastern and religious influences against one another. . .even during the Americans terror war that had placed him in such a tenuous position and caused such upheaval. In the process, he had demonstrated to the world the new nuclear capability the Pakistanis had obtained in response to the Indians. He had been able to modernize his military with both American and Chinese hardware. And he had, at least from his perspective, improved the standard of living for many of his people in the process. But the quandary was that the people were now looking to Hasan and not to him.

Trying to walk a tightrope between the competing ideological influences of the west and east had been a dangerous game and a “touch and go” proposition for his governmental position. To go against the will of the Islamic people in his Islamic nation could prove fatal to him personally—he took note of the demise of Isam Chaliberi with special interest in this regard. The various news media around

the world might buy into the propaganda regarding the cause of Chaliberi's death, but General Musharraf knew better.

Contemplating this precarious situation caused the General to realize again that he had little choice in the matter. He placed his hands on either side of the podium, looked directly into the camera, and began.

"Today we in Pakistan make an historic announcement to add to those of the last several months. We of the National Security Council of Pakistan have reviewed the growth of the Greater Islamic Republic with growing interest and excitement. The prospect of a unified Islam has touched our hearts and our spirits. It is truly the dream of ages—but one that cannot be contemplated lightly or without serious reflection."

"Therefore, we have spoken with, counseled with and negotiated with the leaders of the GIR, and with Imam Hasan Sayeed himself, over the last many weeks. We have considered the impact of a unified Islam on our people, their security, their potential for growth and prosperity and their physical, social and spiritual well-being. As a result, we have made important decisions on behalf of our people which we wish to announce today."

"First, we are convinced that Hasan Sayeed represents a true Imamate for all Islamic people. Today we recognize him as such and proclaim to all true believers everywhere that they should similarly consider the meaning of this reality for themselves."

"Second, we announce today the alliance and merging of the Islamic Republic of Pakistan with the Greater Islamic Republic. It is the will of the people. It is the will of Allah—we can but follow."

"The details of the agreement between Pakistan and the Greater Islamic Republic are provided in the packages you have been given. These same details will be voted on by the people in a national referendum on September 1st. We expect the agreement to be overwhelming approved by the people of Pakistan and will proceed diplomatically on that basis from this date."

"This completes the announcement. There will be no questions."

**August 7, 09:35**

**Oval Office, The White House**

**Washington, D.C.**

"OK Fred, let's hear it."

The Secretary of State, understanding full well the gravity of the developing situation, began his comments.

"Mr. President, the unification announcement by Musharraf will create a serious situation in the region. Not only does it significantly add to the size, influence and overall capability of the Greater Islamic Republic, but it exasperates an already delicate situation in the Kashmir bordering India."

"Our efforts regarding India are making progress. They have made clear to us their intent to remain committed to the CAS, but the fact that they are willing to conduct and accept some trade and diplomatic negotiations indicates a potential for making inroads into that commitment. In addition, I believe they want to "hedge their bets" in terms of continued awareness of the growing threat across their eastern border. I believe, if we play our cards right, we can make progress with India and perhaps create a wedge in the CAS, and any potential for development of the CAS with the GIR."

Tim Hattering listened with increasing concern. He believed that the Pakistani announcement was an unmitigated disaster and he could not stand by while it was soft-pedaled to his President.

"Excuse me for the interruption, Fred, but wait just a minute. This thing with Pakistan is a disaster! We have sunk hundreds of millions of dollars, maybe billions, into Pakistan's military hardware and into the research that led to their nuclear capability. Now, all of that, every damn penny of it, is in the hands of a fundamentalist Islamic state that has sponsored terrorism against the United States, and has made its intent clear regarding all of the Middle East. Sooner or later that is going to mean an abject threat to our friends and our own strategic interests in the area."

"The CAS is an equal threat and I appreciate our efforts diplomatically with India to undercut it. But, I am more interested in the immediate threat and ramifications of the ideological and military impact of Pakistan being gobbled up by the GIR. I thought our efforts with India and Pakistan were supposed to help prevent this very thing."

Fred Reissinger was not swayed by Tim's outburst. In fact he had expected it. There was no doubt that the military implications of the growing GIR were weighing heavily on the minds of military leaders around the world.

"Tim, let me remind you that in our last meeting we discussed this very eventuality. We have only had a short amount of time to dissuade and prevent something that appeared to be on the verge of happening anyway. If you remember, General Stone indicated that GIR "advisors" were already on the ground in Pakistan. No, our best bet with respect to Pakistan and the GIR is to keep India nervous and looking to us for help if at all possible."

"But, let's jump to the GIR and talk about that. The Iraqi situation has me very concerned. We are trying to influence Saudi Arabia, Turkey and Syria, but everyone is nervous. The GIR influence is growing and right now, Iraq has almost gone into a state of abject anarchy, despite the three brigades

we have maintained in the country. There is little we can do diplomatically there at this point. What little political infrastructure remains believes we are guilty of murdering Chaliberi.”

As President Weisskopf listened, he realized that the unease he had been feeling since before his initial meeting with Jien Zenim of China had continued to grow. It was like an ever-present mole eating away beneath the surface. If you weren't careful, you'd step in a hole and fall and break a leg, or worse yet, eventually the complete foundation of your entire surface world would be undermined and lead to a massive collapse. That's how the President felt as international conditions continued to deteriorate.

“Fred, or Mike, what is the likelihood of any group in Iraq allowing us to help them come to power?”

Fred Reissinger was aghast.

“Mr. President, from a diplomatic standpoint, I have to advise against such a course of action. If we now blatantly help any group in Iraq, it will be viewed as an admission of guilt with respect to Chaliberi's death.”

The President wasted no time in replying.

“Fred, they already think we are responsible for it, and things are going to hell in a hand basket. We cannot afford to allow the GIR to occupy Iraq, and I promise you, that is where this is headed. America did not allow a fundamental Islamic regime to come to power in 2003, and we are not going to allow it now.”

Very concerned about the current situation, the Secretary of State did not relent.

“What you say is absolutely true, Mr. President, but the difference is this. The first time we deposed a ruthless tyrant. This time we are talking about an individual that we placed in power.

“To all the world it will look like we are now in the business of removing one leader, any leader, by military invasion or assassination whenever it suits us. I must warn that the consequences of that perception being allowed to take root will be disastrous.”

The president had known and trusted Fred Reissinger for years. He did not take his advise lightly.

“You're right Fred, I understand we cannot just waltz in there and once again take over Iraq in these circumstances. But the consequences of a fundamental Islamic government that either leans toward or joins the GIR would be equally disastrous.

“I am going to need your help to assist me with the Saudis and the Turks especially, so whatever options we have can be accomplished with their support. What about it, Mike? Is there anyone we can work with over there? What about the Kurds?”

Mike Rowley had been polling his CIA assets for days. He had a pretty good picture of the conditions, and the prospects weren't good.

“Mr. President, despite our use of them in Operation Iraqi Freedom, many of the Kurds in the North of Iraq are still wary of us. The same holds with many of the Shias in the south, who are more and more disposed toward Sayeed. Despite Iraqi Freedom, many of them remember still that we gave them the “green light” back then to go after Saddam and implied we would help them. Then we stood back and watched while the army we had just defeated slaughtered them. I can have our folks in country give it a try, but prospects are not a sure thing at all. In such an environment, there will be a real threat to our operatives.”

President Weisskopf never took his command authority and its potential for mortal impact on those he commanded lightly. But he couldn't shake the feeling—no, the almost sure knowledge, that this entire affair was getting away from them. If they allowed it to do so, the consequences could be much more deadly than even he wanted to contemplate. He simply would not allow the realization of such a scenario.

“I know Mike, but this is one time we are going to have to risk it. Tell our own people to get ready to earn some hazardous duty pay and have the contacts we maintain on the ground in Iraq make the effort.”

“John, what's the opinion of the NSA regarding the impact of Iraq coming under the GIR? Give me a best case and a worse case scenario from your people's analysis.”

John Bowers had been busier than at any point in his life. The planning sessions with respect to his own combat involvement in Desert Storm and Iraqi Freedom had been a cake walk compared to trying to keep up with the CAS and GIR developments and their potential impacts. But he and his people had made the effort, and they had good people in all branches of the military helping them.

“Mr. President, the best case is that everyone in the region is made extremely nervous and that the influence of the GIR is used to impact oil prices, production and delivery to our detriment.”

“The worst case is that the GIR continues to grow and that other Islamic states continue to come under their influence to the point where we are totally pushed out of the Mid East.”

This was just about what the President had expected, though having it put in those clear, stark terms was like a slap in the face.

“John, let's continue down this path. What is our dependence on Mid East oil at this point, and how long would our strategic reserves last if our Mid East supply were cut off?”

“Mr. President, since we began drilling off the west coast, and added more drilling in Alaska under the last administration, we have cut the dependence down to about 30%, but we are still very reliant on them. Without those measures from the last administration, the current situation would be much bleaker. Even so, my analysis indicates that with no Mid East oil, but continued production from other sources, our ninety-day emergency reserve could be stretched to about six months.”

Six months in normal, peacetime circumstances. It's not enough, but is all he could hope for. Clearly, in a wartime scenario, those numbers could only be stretched one way. Turning now towards his Federal Emergency Management Director, the head of FEMA, Curt Johnson, the President said: “You all know Curt. I asked him to attend this meeting today specifically because I feared these types of developments. Curt, I want you to work with John Bowers and write up and Executive Order (EO) for me to sign which will accomplish the following:

I want to be able to quickly treat our energy supply situation as a National Emergency and allow the government to restrict consumption by government agencies and establish quotas for non-critical agencies.

I want to open up to petroleum exploration and production all Federal Lands that any of my Executive Agencies manage.

I want the Department of Energy to relax requirements on the construction of nuclear power plants, so that they must only adhere to the Nuclear Construction Code at the date of approval of construction, as opposed to having to retrofit construction to newer codes while the plant is being built. This act alone will spur the Bechtels and Brown and Roots to immediately look at building more plants here in this country.

“Please have such an order on my desk prepared to be signed within five days. I hate to say this, and it can go no further than this room, but what is taking shape here could well turn into as great a crisis to our nation and its interests as anything since the second world war. It is time we began putting in place some preparations in that regard.”

“Tim and General Stone, please work with our friends in Kuwait to arrange for a “training exercise” involving two additional wings of F-15E strike eagles, a Marine Expeditionary Unit (MEU) and all of the logistical support necessary to maintain them there for a six month period at least.”

At this point, Curt Johnson spoke up.

“Excuse me for the interruption Mr. President, but while I understand the need for the provisions in the EO for the restrictions and quotas for governmental agencies, why is there nothing in your instructions for the private sector? That is where the vast bulk of the utilization lies. Unless we curb usage there, we will buy very little.”

President Weisskopf had expected such a question. The measures he was taking were necessary, but many in government felt that their “duty” would be to extend such provisions to the public. But Norm Weisskopf knew the limits of his powers, and he had taken an oath to abide by them.

“Curt, I am only going to say this once, and I want all of you in this room to understand it completely. We are the servants of the people, not their masters. Our duties and powers are very explicitly laid out in a training manual we all took an oath to bear true faith and allegiance to. It's called the Constitution. I intend to do just that: bear true faith and allegiance to it, so help me God, even when the going gets tough.”

“The reason I do not include such provisions in my executive order is that I have no power or authority to do so. I would be violating my oath of office to presume to do so—irrespective of whatever “Acts” congress has passed, or whatever rulings the Court has made. Simply put, they cannot pass an act, or make a ruling, that supercedes the Constitution any more than I can write an order that does so...and have it be legitimate. If it's not legitimate, it's illegal and a violation of our oath of office.”

“This EO will be preparatory. It is a “just in case,” which will allow us to be better prepared as a government should things get worse. If they do, at that time we will work with the governors, the Congress and with the people to extend such provisions as necessary, but we will do it according to what the Constitution dictates. We will not become, in any way, shape or form, suppressors of individual freedom ourselves, irrespective of the bad precedent established by prior administrations. Is that understood? Is that understood by everyone in this room?”

As Curt responded in a quick affirmative, and as everyone else in the room did likewise, John Bowers glanced over to General Jeremy Stone and both men gave one another a knowing, but barely perceptive, nod. John and General Stone both felt, at that moment, that whatever else happened, a real American patriot and hero was in the saddle for this ride, regardless of how rough it got. They would spread the word through the ranks that the “Old Man” had what it took to see them through.

**August 9, 17:00 local time**

**Presidential offices**

**Tehran, Greater Islamic Republic**

As the red light flashed and David knew that they were back on the air after the commercial break, he continued.

“Welcome back. We are here in Tehran conducting an exclusive live interview with Imam Hasan Sayeed. We have discussed his roots and education. We have discussed his military experiences during the war with Iraq and his amazing exploits during those years...exploits which established Hasan’s bravery and remarkable leadership skills.”

“We have discussed his rise in power and influence within Iran and his ultimate recognition as Imam by the Iranian clerics and Ayatollahs. Finally, in the last segment, we discussed with the Imam the amazing growth of the Islamic Republic. Now, Imam Sayeed, we would like to discuss current events and ask for your perceptions regarding them. Let us start with the Coalition of Asian States. What are your views and intentions towards that unprecedented and developing influence?”

Hasan felt that the interview was going extraordinarily well. This American, while clearly in love with himself and his perceived influence, was giving Hasan every opportunity to tell his own story and relate things from his own perspective, just as Li Peng had indicated he would when the interview had been suggested by Li on behalf of Jien Zenim.

“Well, David, the CAS is, as you indicate, an unprecedented coalition. Who would have thought that, with their past differences, the Indian Republic and the People’s Republic of China would have bridged their gaps and created such an alignment? But, on the other hand, when one reflects on the basis for that agreement, namely the Three Wisdoms, it is not so unlikely or unprecedented as one would think.”

“All men and women are equal.”

“All share equally in the bounty of a working and industrious society.”

“One goal, one thought, one people for World peace.”

“These are tenets that much of your own nation’s amazing productivity, longevity and success have been based upon. Is it so surprising then that other nations who embrace these philosophies are also successful?”

“As to the intent and views of the Greater Islamic Republic regarding the CAS, we welcome on our borders a coalition that embraces such views. Islam embraces many similar views. The Prophet taught us that we should treat others as we would be treated; that we should look to do good and not evil. Equality, sharing and peace are all good things that we should all seek. The Greater Islamic Republic can live in peace with any people who truly seek these things.”

David Krenshaw had been amazed throughout the interview at how smooth and well-spoken Hasan was. He continued to have that impression.

“Yes, but if I may, I take some issue with what you have just said. In the American system all do not share equally in society. The principles of capitalism are more geared towards the hope that everyone has equal opportunity to share, but that anyone can rise as high as their individual efforts will take them, while others who are either not inclined, or unable, do not rise as high. Also, in the Islamic world it cannot be said that men and women are equal.”

“It is true, David, that capitalism—the system of government in many of the western nations, the United States in particular—does represent a differing political and social philosophy from the system of social equity that the CAS is focusing upon. But, when one considers the numbers of people in the CAS, and the potential for suffering amongst two billion people, it is a difference that can be understood, and one that can be accommodated.”

“Within Islam, we prefer to look upon equality as something that exists within the sexes as opposed to between the sexes. For example, anyone with a perceptive eye can tell that men and women are not really “equal.” In this way, the nations of Islam try to follow a path that embraces the best of both systems, while desiring to live in peace with all.”

David noticed that his time was running short, and he had saved what he felt to be the most pressing topic until last. If he began now, he felt he had just enough time to have a healthy discussion regarding it.

“Thank you, Imam. As our interview winds down, let us move on to the topic of Iraq. As you know, Isam Chaliberi was assassinated one week ago today. There are serious allegations regarding that assassination and my own government’s possible involvement. In addition, Iraq appears to be in a state of anarchy, and what is left of Chaliberi’s government is having a difficult, if not impossible, time of ruling the nation. What are your thoughts on this state of affairs? And what, if anything, are the intentions of the Greater Islamic Republic in this regard?”

Hasan had patiently waited for this opportunity. The time was at hand to bring the rest of Islam together, and Iraq was a major remaining keystone in that effort. With this interview, at this moment, Hasan had been given the perfect audience by Allah to make that appeal, and he intended to seize the opportunity.

“David, the death of Isam Chaliberi has been felt with sadness and remorse throughout Islam. Whatever else you may say about him—and as you know I did not trust his ties to, or his dependence on the west— Chaliberi was a talented and dedicated leader. Throughout his life, he fought to advance what he considered to be the cause of his people. We will miss that strong voice, that relentless effort to improve the lot of our brothers and sisters in Iraq.”

“As to the allegations regarding his assassination...they are serious and would be viewed seriously by any nation if they are proven correct. We will not pass judgment in that regard until more information is available, to allow for an informed and sure determination.”

“The civil conditions in Iraq are difficult. What little economy was returning after years of warfare and sanctions, has been injured all the more by the current circumstances. These dire circumstances affect the children and the widows and the infirm the most. We desire to see such suffering stop. We call on the west to lift all sanctions and send what humanitarian aid they can. We are doing the same.”

“As you know, David, there is a significant percentage of the population in Iraq which is calling for unification with the Greater Islamic Republic. Although we make no secret or apology for our stated intention to unite all of Islam, we will not presume to take advantage of such conditions by coercion or deception.”

“At the same time, we feel that, in the American tradition, the voice of the people should be heard. As a result, we have met with, and obtained the approval of, various NGO’s and agencies in the UN to call for a UN-sponsored referendum in Iraq. Since their own government is not in a position to do so, this will put the option for unification with the Greater Islamic Republic before the people. We are proposing that such a referendum occur on September 1<sup>st</sup>, in conjunction with the similar referendum in Pakistan.”

“The Greater Islamic Republic, outside of proposing to the general assembly such a referendum, will in no way be involved with the actual voting or its administration.”

David Krenshaw was dumbfounded. Here was the leader of what was developing into one of the superpowers of the world announcing during his exclusive interview such a politically and diplomatically explosive proposal. Although he knew he should feel used, his unease was counterbalanced by the fact that he would be remembered as the one who ferreted out such news.

“Imam, I, of course, am not in a position to render official judgment or approval for such a proposal. I am sure my government will respond officially, and that the UN will render its own decision. I can say that this is an unprecedented venue for such an announcement, and I thank you for the opportunity to bring such “news” to the world. That is, after all, the primary purpose of WNN, and the focal point of my own career.”

“One more question if you will. Imam, what can you say to the west today, to America in particular, to ease their mind regarding your clear call for a united Islam. Just a few years ago, another very charismatic leader called for the same, and he then proceeded to kill many thousands of Americans in the infamous 911 attacks?”

Sayed had known that this question was certain to come up. Everyday Americans would indeed be concerned. He meant to put their fears to rest.

“I can simply say this. There are vast differences between that individual and his terrorist organization that called for Islamic unification and our current efforts. The foremost is the message of peace and tolerance we not only preach, but practice when it comes to the western nations. Surely the west, surely no one anywhere would deny us the opportunity to unite in peace and tolerance. We have no intention of attacking anyone as long as our borders and strategic interests are not violated”

David Krenshaw was pleased with the answer.

“Okay, Imam, I must say that what you have stated is a clear difference in message and rhetoric. Unfortunately, we are out of time. I want to thank you, Imam Hasan Sayeed, for this interview, and thank everyone at WNN and within the Greater Islamic Republic who worked so hard to make it possible. This has been David Krenshaw with WNN from Tehran. “

**August 15, 18:20**

**Ann Morris Park, on the Boise Rover**

**Boise, Idaho**

It was a warm day, about eighty-nine degrees. But in the shade of the trees by the river and with a steady breeze, it was quite comfortable. Geneva Campbell was enjoying herself in Boise. This park was so lovely and peaceful. The weather was simply grand. Even when the temperatures hovered near ninety degrees, with the low humidity in the western part of the nation, and with shade and a breeze, it was quite comfortable compared to Chicago.

She watched her two sons. Reflecting on fond memories of her deceased husband, a thought came unbidden into her mind. “Lord, Jerome, I wish you could see your boys now.” She continued in that vein as Leon and Alan threw a Frisbee back and forth to each other in a small meadow near where she sat, “Maybe you do, Jerome, maybe you do.”

“Hey Leon, what time did you say those folks from Texas was supposed to be here?”

Leon made a dive for the Frisbee, caught it in his outstretched fingers, rolled and rose to his feet in one fluid motion.

“Mom, the Simmons said they’d be here about six thirty. I expect we’ll see them any time. Billy said he’d be wearing a big cowboy hat and we couldn’t miss him.”

Geneva was a bit apprehensive. She still wasn't used to meeting all of these people. But Leon had assured her that the Simmons were good folk who worked the land and were God-fearing. Thus far in Boise, the Campbells had fared very well in the people they had met. So many had been kind to them and anxious to help the "newcomers." "So," she concluded to herself, "perhaps it won't be so bad after all." Best to just enjoy this cool breeze and clear dry air until these folks get here.

One hundred yards to the north, along the paved path in the park, Jess, Cindy and Billy Simmons were walking towards the south and looking for the Campbells. They had driven from Texas to Boise, arriving yesterday evening, and it had been a long but beautiful drive.

They left Montague County, Texas on August 12th and drove to the northwest along US Highway 287 all the way through Amarillo to Dumas, Texas. There they had taken US Highway 84, which they followed all the way to Raton, New Mexico. Along that portion of the trip, they stopped for an hour at the Capulin National Monument in northeast New Mexico and viewed the inactive volcano cone there. It was a beautiful view from the top and they could see the Rocky Mountains clearly. It had only been a forty-five minute drive to Raton from the national monument.

At Raton, New Mexico, they had taken Interstate Highway 25 north over the beautiful and historic Raton Pass into Colorado to Trinidad. They spent that first night in Trinidad.

The next day they rose to a cool (by Texas standards) morning and continued their journey. They followed Interstate 25 further north along the majestic "front range" of the Rocky Mountains. They passed through Colorado Springs about noon and ate lunch there and took some pictures with the mountains as a back drop. North of Colorado Springs, they came upon the US Air Force Academy. Both Jess and Billy wanted to stop there, so they had spent two hours touring the campus. As summer cadets and some of the staff there learned of Jess Simmons' military status and his "flight" capabilities, it had led to several interesting and enjoyable conversations. Late in the afternoon they passed through Denver. At Fort Carson, they got back on US 287 and drove across a beautiful mountain pass into Wyoming. At the bottom of that pass they came to Laramie, Wyoming on Interstate Highway 80 where they spent the second night.

The next morning, another brisk one for these native Texans, they followed the same path the Campbells had taken a little over a month earlier along Interstate 80. Around 5 p.m. yesterday, August 14<sup>th</sup>, they had arrived in Boise. After staying in a nice hotel right off of Interstate 84 last night, they had found Boise State University (BSU) in the morning, met the coaching staff, who treated them to lunch, just before noon, and then got Billy checked into his dorm by 2 p.m..

Now, as they walked through the beautiful Ann Morris Park, they hoped to soon find the Campbells and make acquaintance with Leon and his family. They did not have long to wait.

"Hey, Leon! Look down there. Here comes a big white guy with a big ol' white cowboy hat just like you said. Looks like his parents are with him. I bet it's your friend Billy."

Leon turned and looked up the path. Sure enough, just coming around the bend were three people, one of them wearing a big white cowboy hat. "Whew," thought Leon, "if that's Billy, he's a monster."

"Momma, let's get up and walk down that way and meet the Simmons. I'm positive that's them."

As Geneva got up from the bench and joined her sons, almost a hundred yards away, Billy noticed the movement and turned to his Dad.

"Dad, that must be them down there near that clearing. Look, I bet that colored guy waving to us is Leon!"

Billy waved back and started to jog towards the three Campbells.

"I hope this works out, Jess." Cindy Simmons said to her husband. "Billy seems real excited, but I'm just a little nervous. I mean this young man was a gang leader in Chicago and has been involved in who all knows what."

Jess considered his wife's remarks. Jess could understand her concern. Fact was, he had been concerned himself. But he had talked to Billy and trusted his son's instincts, his ability to handle himself in difficult circumstances and his commitment to doing what was right.

"Cindy, I know what you mean. I have had similar concerns. But, you know, Billy is eighteen now. He's a man and has to make his own way. I believe we've raised him right, and I believe it'll show. I think, from what I have heard, he and Leon are going to get along just fine.

"Leon's story is quite remarkable, you know. Very few have the strength, or vision, or faith in themselves to pull themselves out of a situation like he was in, let alone to pull their entire family out with them. Some get pulled out of it by parents who have the strength; some get pulled out by a teacher along the way; some come out of it after going through the discipline and structure of the military. I have seen quite a few of those cases myself. "

"Most never come out of it. It's too bad, because it's no secret that many of the government programs perpetuate the conditions—and many of the politicians know it—but they feel their agendas and political careers are empowered by those same conditions, so they keep it up. No, honey, it's rare that an individual like Leon comes along and pulls himself up by the bootstraps on his own. That being the case, I believe Billy and Leon are going to get along just fine."

With that conversation complete, the two families met and introduced themselves. There was a lot of laughter, and back-slapping stories to share on all sides. In this fashion, for the next two and half hours they enjoyed a wonderful and pleasant evening getting acquainted next to the clear running waters of the Boise River.

**August 18, 14:37 local time**

**Jiangnan Shipyards, Special Conversion dry docks**

**Shanghai, PRC**

Lu Pham was glad to have Sung Hsu with him on this trip. Sung had developed so many excellent procedures and manufacturing processes in Tanjin that he was now a supervising director over construction foremen for the overall conversion process. As such, he was reviewing the implementation of those practices and processes in the various shipyards where the conversions were taking place. Lu was reviewing the LRASD weapons systems and their logistical preparations at each shipyard.

As a result of the growing friendship between themselves and their families, it made for a much more pleasant trip.

“Lu, we are over a week ahead of schedule at all the other shipyards. But here in Shanghai, we are several days behind. This morning I think I found out why.”

“It’s simply a matter of the process for installing the LRASD pivot assembly. For some reason the crews here have gotten two of the initial installation instructions reversed. While the systems can be assembled successfully with these two steps reversed, it is causing a work flow issue.”

“Materiel that has been logistically staged to be handled last is being retrieved first, before it can be moved into a position to be picked up most efficiently. The extra time in transit, repeated over and over again, is impacting the schedule.”

“I spoke with the foreman and had the procedure re-written to the correct sequence. They are going to try to add additional individuals working during the swing and midnight shifts to make up for the time loss.”

It never ceased to amaze Lu how Sung fit so seamlessly into the large scale manufacturing role. Of course he had been at it for over fifteen years, but Lu knew others who were outstanding managers, who had been at it even longer than Sung, but who did not have the gift for it that Sung had.

“Outstanding, Sung. You have a way of analyzing, locating, deciphering and resolving issues that would put most doctors of research to shame, my friend. For my part, all of the weapons systems and their logistics are in order. The testing is completed and the systems have but to be installed and integrated into the fire control and PROM (Programmable Read Only Memory) processors on board each ship. All is progressing most excellently!”

“Oh, by the way, Sung. The suggestions that you gave several weeks ago regarding the Sea Control ships have been studied and implemented. A single dock in Tanjin is going to be making conversions in the open, where the prying eyes of the Americans are sure to take note.”

“The other facilities will do their conversions under the cover of the housings we have built for those dry docks. In those cases, the landing decks are being cut up to move by rail so they can be delivered to the other sites in such a manner as to avoid detection by the American surveillance satellites and aircraft. The decks will then be reassembled on site.”

Sung was very gratified at hearing this. He was extremely satisfied in his new work on these “special” conversions. He was proud to be contributing to the success of his nation in such a manifest way.

“Lu, what decision was made on how to transport the decks on those Sea Control Ships being converted at Tanjin?”

“They will be transporting them by large barges, pulled behind two of our large sea-going tugs. In fact, tomorrow evening, the first deck is scheduled to be loaded up and transported. I expect the Americans will quickly discover the transit with their surveillance satellites and hopefully have their full attention riveted to it. I would love to be a fly on the wall in their planning sessions when they see that.”

**August 19, 23:37 local time**

**Yulin Naval Base, near Haikou**

**Hainan Island, PRC**

The Yulin Naval Base was one of the People’s Republic of China’s most extensive facilities. It had originally been built by the Japanese, but had been extensively expanded and modernized by the PLAN.

The base was capable of making the most extensive repairs to any ship in the PLAN. In order to accommodate this, it had extensive repair facilities, two large dry docks and ten large crane systems capable of lifting several hundred tons each. Tonight, these cranes were going to be utilized for the largest lift job in the history of the naval base, or in the history of the People’s Republic of China.

The special carrier deck had been installed near the airfield portion of the naval base. The deck was two hundred and fifty meters long and forty meters wide. It was constructed of steel and had been strengthened against blast damage. It weighed almost five thousand tons.

Each of the ten cranes would lift a little less than five hundred tons. Since they were rated at five hundred and fifty tons each, the system had the capacity. Still, it was a complicated effort. The cranes were positioned along a rail system that had been built so they could move virtually anywhere along the waterfront. They had been aligned on two specially built rails, fifty meters apart. Five cranes were situated on each side of these rails.

The deck had been moved there by a large multi-tracked vehicle, specially built for this purpose, which had been constructed in an underground facility where it had remained until needed. Two days earlier, the transport vehicle had been driven under the deck through a specially constructed access path specifically built with this day in mind. Once under the deck, it had used its own hydraulic lifts...two hundred of them, to lift the deck clear of the anchoring sub-structure and start it on its way to the harbor. It had taken a full twenty-four hours to cover the two miles.

Once the deck was in position between the cranes, the cranes were attached to the deck at special hoist points and they began to slowly and carefully lift the deck. Once the deck came clear of the transport vehicle, the cranes themselves began to move slowly along their rails towards the harbor inlet where the barge awaited.

The barge itself was three hundred meters long and thirty-five meters wide. It had a carrying capacity of seventy-five hundred tons. Earlier in the evening, at seven thirty, the cranes arrived in position with the deck suspended above the barge.

At that time, the deck was slowly lowered onto it. Once this was done, and the deck was resting on its support points, but still held by the cranes, workers spent four hours attaching the deck to the barge at each of the support points. Once this was accomplished, the cranes were moved away from the barge and the deck was finally ready to be towed away.

Around midnight, two Dinghai class sea going tugs of the PLAN came alongside the barge. Once they were attached, they began towing it out of its berth and out of the harbor. At eight knots, it would take four days to tow the deck to Tanjin shipyards where it would be permanently installed on one of the container ships.

Early the next morning, the tugs and their barge were some ninety kilometers up the coast towards Tanjin, steaming about ten kilometers off the coast. At this point, not long after first light, they were observed by a US reconnaissance satellite as they continued to slowly made their way north, up the coast of China.

The images recorded by the satellite were immediately communicated to CINCPAC in Hawaii, to the ONI in the Pentagon and to the NRO in Virginia, according to the procedures already in place for any reconnaissance coming in from the South China Sea that dealt with the PRC.

**August 20, 09:12**

**National Reconnaissance Office Headquarters**

**IMINT Directorate, Chantilly, VA**

"I'd say that about ices it, Tom. Just ensure we get a track on that barge and the two tugs and find out where they are going. My bet is Tanjin. Those crafty devils are going to create some conversion aircraft carriers from their friggin' container ships. Who would have thought it?"

Tom was sure his boss was right. Ever since they had overlaid the deck design onto the Container Ship plan view, it was clear that those deck configurations were made for these ships. The only question had been, how were they going to get those decks, or ones like them, fitted onto the ships?

Well, this morning that had become clear as the semi-weekly photographs of the Hainan Island area had captured what appeared to be a small aircraft carrier moving up the coast. Once Tom had analyzed the information, it became clear that two large tugs were towing a barge which had the deck attached to it.

"The photographs of the Yulin Naval Base show that the deck is gone, and we already know where. This is interesting, though. I have checked the other airfields where these special naval "decks" had been installed and the only one that is missing is the one from Hainan."

Bill was not concerned about this fact. The other decks would move as the PRC was prepared to add them to container ships. "Boy, that must be a heck of a conversion," he thought.

"They're probably just biding their time, Tom. Let's go ahead and report on all that we have deduced at our 10 a.m. video conference. I am sure CINCPAC and ONI have seen this and have come to the same conclusions. Anyhow, now that we know how the Chinese are going about it, there'll be no problem keeping track of it."

Or so they thought.

## Chapter 5

*“To command a group requires truthfulness.”—Sun Tsu*

**August 25, 03:50 local time**

**Along the Great Zab River**

**Near Irbil, Iraq**

“The insertion had gone almost perfectly,” thought Will as his team gathered around him.

Having flown into the northern area of Iraq from Turkey aboard a specially configured C-17 Globemaster aircraft owned and operated by the CIA, the eight-man team had made a “HALO” (High Altitude, Low Opening) drop.

They had parachuted into a remote wash two hours ago and made their way to their designated rendezvous point near the Great Zab River. Now, they were concealed and waiting for their contact.

Will Peterson was a senior CIA field officer and a former Delta Force Company Commander. He had six special-forces non-commissioned officers and his XO with him. All of them had spent years in the elite Delta Force and all of them had been recruited by the “Agency” to help conduct America’s foreign affairs in places where the bright lights of cameras were never meant to shine.

Will heard the slight sound of someone moving stealthily along the dirt path below them. The sound stopped and after a moment a single phrase was whispered.

“al-Mustaqbal”

Will’s point man, and the most fluent in Arabic among them (though they all looked Arabic and could speak fluently) responded.

“Shaheda.”

Within fifteen minutes their guide had led them further up the canyon of the Great Zab River where they branched off on a small footpath into a feeder canyon. After another twenty minutes of rather steep ascent, they moved to one side of the canyon where the team waited while their guide removed brush from the expertly concealed mouth of a cave and exchanged whispered identification and greetings with two well-concealed sentries. Upon entering the cave, and after following it through several turns, they found that it widened into a rather spacious, natural room. Several men attired in unremarkable desert dress were in the room gathered around or sitting at a table. One of them looked up as Will and his team entered.

“Will, how good to see you after so many months! Please, bring your friends and join us here at the table.”

Will’s team looked to him and he nodded his head back to the entry. Two of the team silently walked back and took up positions between the gathering and the entrance to the cavern. Will and the other five team members then walked over to the table.

“Jabal, it is good to see you my friend. I take it Badar bin Sultan arrangements for the delivery have been successfully completed and your people are prepared?”

Jabal Talabari’s Patriotic Kurdistan Front had been fighting for an independent Kurdistan for many, many years. He had known Will Peterson, if that was his real name, since just a few months after the 1996 fiasco in Irbil.

Jabal had great reason not to trust the Americans and be wary of them. Many of his friends were dead as a result of American promises that had not been kept. First one American president and then another had sent men like Will to help overthrow the Iraqis...only to have them pulled out when the heat was turned up...which is exactly what had happened in Irbil in 1996.

Perhaps this time, with Weisskopf as President, with so many new weapons and with the Saudi and Turkish backing, they could be successful.

“Yes, we have the weapons; we have the ‘ballots;’ we have the polling locations and we have made our plans. Kurdistan will not vote to join Iraq in their alignment with the Iranians, and the voting in Baghdad and other areas will not go as they envision. I was reviewing our plans just now with each of these division commanders as you arrived.”

At Jabal’s direction, Will’s team members were paired off with Jabal’s division commanders. Will worked directly with Jabal. Over the next several days their specific operational plans were reviewed and modified and the timing between events and the various elements of the PKF was worked out. Then the entire OPPLAN was relentlessly rehearsed with the division commanders and their subordinates.

**August 28, 11:50 local time**

**The Knesset**

**Tel Aviv, Israel**

“Summing up then, we must recognize that a tremendous and mortal threat to our very existence is developing in this Greater Islamic Republic. Adding Pakistan’s mature nuclear program to Iran’s elementary capabilities will add up to as great a threat to our survival as we have faced in our history.”

Prime Minister Benjehmin Netanyahu sat down. He had poured out his soul to his compatriots and he was as worried as he had ever been.

“Mr. Prime Minister, while the potential for a threat is real, we have yet to see any clear indication from Sayeed or any of his ministers that they intend us any harm. I believe, if we work with their Foreign Minister and seek to live in harmony with them, we can avoid conflict. They know we are similarly armed and they know we are willing to use those arms.”

“If we rattle our sabers in their face, if we provoke them when no reason has been given, then we risk causing the very confrontation you want to avoid.”

Netanyahu considered the words of his rival, Isaac bin Ammon, the leader of the opposition Labor party. The words were not new; the logic was as old as history, and history had proven it incorrect on countless occasions.

“You sound for all the world like one of the doves in the American Senate, Isaac. Have we learned nothing? We must send a message of strength and resolution to Sayeed. We cannot afford to allow him to think for a moment that we are weak, or that we fear him. Iran, which is the focal point for the Greater Islamic Republic, has financed and trained many of our worst enemies. I have seen no reduction in that effort.”

“Now Afghanistan has joined their ranks and it appears that Pakistan and Iraq will soon follow. All of these “states” have spent untold billions to train and equip those terrorists and themselves to fight and destroy us. We dare not forget this. The American President issued us a warning a few weeks ago. He felt strongly enough about it to call and talk directly to me. I believe we should take this warning and his recommendation to establish and maintain our readiness seriously.”

Isaac bin Ammon rolled his eyes. He certainly believed in their nuclear deterrent. He believed in remaining strong. He was simply tired of these so called “hawks” who were intent on provoking every nation around them with their “in your face” attitude.

“Benjehmin, we have gone around and around on this over the years. I believe that Hasan Sayeed is reasonable...certainly more reasonable

“Save us from the naiveté and incompetence of fools,” Netanyahu thought.

“Isaac, I believe that Sayeed is responsible for the death of the Iraqi leader. Our latest intelligence documents a direct tie between Hamas and Sayeed, and between the Hamas operative and the Iraqi leader. What more do we need?”

He turned to his defense minister.

“Jacob, increase our readiness, across the board. Also, request more time from the American satellites and utilize our own assets to monitor the Army groups that are training near Ahvaz. I want the anti-aircraft missile defenses and our artillery on the Golan Heights strengthened too.”

“Let’s pray that somehow the “elections” in Pakistan and Iraq do not turn out as our predictions indicate.”

### **August 30, 17:50 local time**

### **Israeli Defense Force (IDF) positions**

#### **Golan Heights**

Colonel Abraham Eshkol had been monitoring the placement of new AAM batteries all day. It had been a hot day, too. Even here on the heights the temperature had hovered at forty degrees Celsius most of the afternoon.

The new Arrow missile system, developed and manufactured by Israel, was impressive. “Every bit as capable as the newer Block 3 Patriot systems,” the Colonel thought, even if the altitude capabilities are a little less. When complemented by the new American system firing the ground-based version of the AMRAAM (Advanced Medium Range Anti Aircraft Missile), the Golan Heights would be as well protected against air attack as possible.

Now the Colonel turned his attention towards the perimeter defenses and the new artillery that was being added to his position. As he did so, he summoned his executive officer.

“Major, I want a report of your progress today on my desk by nineteen hundred hours. Just make sure that our perimeter defenses are completed within the next three days. I want that new line of bunkers dug in below and forward of the existing defenses. As we discussed, also ensure that the extra batteries of the 155’s and those new MRL’s (Multiple Rocket Launchers) are positioned in their revetments. Carry on.”

As the Colonel turned and walked toward his command vehicle, he contemplated his latest improvements and orders.

“Threat Condition Three and significantly increased strength. Must be concerned that this Hasan Sayeed’s influence will continue to spread.”

The prospect of a united Islam spreading closer and closer to his homeland was enough to cause him serious consideration and consternation.

As he gazed from his elevated position to the west and north out across Syria, he was reminded of the Masada where long ago his forefathers had been besieged by the Romans. That siege had ended with mass suicide.

“Well, we will not end up in such a position here. Any enemy trying to assault these heights will find their own death waiting here, not ours.”

**September 1, 14:23 local time**

**Voting precinct**

**Islamabad, Pakistan**

The lines went on for hundreds of yards outside of the building housing the voting booths. Tens of thousands were lined all across the city, as they had been since before the polls opened at this morning.

The same scene was being played out across Pakistan in all of the major cities, as well as smallest villages.

Here in Islamabad, and at a few other high profile places, the camera crews of WNN and other major media outlets were recording it all and broadcasting it across the world. No exit polling was allowed, but it was clear beyond doubt what the results were going to be.

The population and military power of the Greater Islamic Republic would more than double this day. In truth, preparations for insuring this pre-ordained victory, and capitalizing on it, had been ongoing since the announcement by President Musharraf several weeks ago.

**September 1, same time**

**UN monitoring station outside of a voting precinct**

**Baghdad, Iraq**

The stooped and crippled old man was in line, waiting his turn to vote like the thousands of others. He was within fifteen meters of the entrance to the building that housed the voting booths, and was just passing the UN monitoring station. The UN had a contingent of officials with side arms at the monitoring station, and several others within the voting facility.

The UN-provided monitoring and light security was backed up by Iraqi troops who manned a security station at the entrance to the voting facility itself. The Iraqi contingent was more heavily armed and was using a UN-supplied metal detector to prevent weapons from entering.

As the stooped old man approached the security station, he noted carefully the position of the alert guards: two men with automatic assault rifles standing to either side of their compatriots at the metal detector, and one UN officer just outside of the station whose hand rested lightly on his side arm.

Underneath the stooped frame and the wrinkles of the old man in line, was the heart of a fighter. Concealed by the robes, and belied by the stooped posture, was the body of a twenty-four year old Kurdish freedom fighter, along with an AK-47 rifle and three hand grenades.

When he was within five meters of the security station, the Kurdish militant armed his first grenade while holding it under his robes with one hand. His other hand had already charged his assault rifle. Pretending to stoop even lower, as though looking at something on the ground, he gently tossed his hand grenade back towards the UN monitoring station while lifting his AK-47 towards the security station. Grabbing the rifle with both hands now, he expertly pulled the trigger while he swept the muzzle across the security station, cutting down the two guards and one of the Iraqis manning the metal detector. An instant later, the grenade detonated with a thunderous report, directly in front of the UN monitoring station.

In the pandemonium that was breaking out around the voting facility, the Kurdish freedom fighter calmly walked up to the security station and fired a three-round burst into the heads of each of the downed Iraqis and then tossed another of his hand grenades into the voting facility. Hurrying now, he ran back towards the UN monitoring station where several UN officials were staggering out of the ruined doorway.

As the blast of the second grenade tore through the polling place, the young Kurd again pulled the trigger of his AK-47, knocking down two of the UN officials and driving the others back into the building.

Lobbing his last grenade into the UN monitoring station itself, before it could explode, he discarded his AK-47 and disappeared into the crowd that was fleeing the scene in terror.

As he melted into the stampeding throng, he whispered to himself in Arabic: “For the liberty and sovereignty of Kurdistan!”

**September 1, 19:42 local time**

**Patriotic Kurdistan Front cavern**

**Near Irbil, Iraq**

“Things have gone as well as can be expected. Here in the Kurdistan area, the referendum has been defeated and our “write-in” ballot efforts will make it plain that we have voted for our own independence.”

“In the more southern areas, there has been significant disruption by our personnel, but the vote is overwhelmingly for unification with the Greater Islamic Republic.”

As Jabal completed his thoughts and status report, Will felt he had to interject.

“Don’t be too optimistic yet, my friend. While the election here has certainly gone as we hoped, and while our efforts at disruption in other areas were mildly successful, you can bet that there are Iraqi armed forces gathering to move against us as we speak.”

“And I’ll tell you what I think. Though we may be prepared to take on the revamped Iraqi military forces, I am concerned about the much more massive forces of the Greater Islamic Republic. We need to be prepared for them. They will certainly only look at the overall voting totals which will indicate that the Iraqi people have chosen, by a significant margin, to unify with Sayeed.”

Jabal considered this analysis. What Will said was true: the GIR would certainly try to get the UN to recognize the overall results of the voting only. Furthermore, even though, thanks to the Americans, there were substantial weapons caches and significant intelligence, reconnaissance and planning assets at his disposal, Jabal was not as optimistic as his friend about standing up to the Iraqi armor. After all, they had tried several times in the past and failed.

But, with the continued attacks by his forces in the south diverting significant Iraqi assets in that direction, perhaps they could indeed hold off the Iraqi armed forces. But the combined forces of the Greater Islamic Republic would be a different matter altogether. The GIR’s military capabilities were not something to be taken lightly. They represented a viable and committed military entity the likes of which Jabal was not eager to reckon with, but he was fairly certain that the day of reckoning was not far off.

“What of your nation’s commitment and help, Will? Will your President Weisskopf diplomatically support us? More importantly, if it requires it, will he militarily support us?”

From everything he had heard, Will had no doubts what President Weisskopf’s inclination would be. The question was, what would his party...what would the congress...what would the people in America allow Weisskopf to do?

“Jabal, if it goes that far, our intent is to do just that. We must protect your people’s sovereignty and we must keep the growing Greater Islamic Republic contained with every means at our disposal.”

“Let’s review your defensive posture now, and see if we can be ready to repel those Iraqi columns should they head this way.”

**September 2, 14:18**

**Oval Office, The White House**

**Washington, D.C.**

Vice President Alan Reeves could appreciate his boss’s special “feelings” that guided his policies and many of his major decisions. The Vice President was in fact having one himself regarding the current situation with the GIR.

“Who would have thought that in the space of a few short months we would be looking at a unified Islamic Republic of this magnitude?” he thought.

“Mr. President, the Pakistani vote was overwhelming. Although only some 70% of the vote is counted, the decision to unite with the Greater Islamic Republic is enjoying an astounding 94% plurality.”

“In Iraq the vote is somewhat less impressive, with only about a 68% unification vote, with 62% of the vote reporting. These results are not without incident either. We have at least half a dozen reports, at least two of them confirmed, of violence at voting places.”

“The Kurds in the north have voted overwhelmingly to establish their own Kurdish homeland, inviting Kurds from Turkey and Iran to join in. They utilized ballots covertly supplied to them in place of the UN-supplied ballots. Those “new” ballots looked very official, but added the choice to create a Kurdish homeland, Kurdistan. That choice, or option, is passing in those northern areas by 84%.”

“Kurds from both Turkey and Iran are streaming into northern Iraq and they are preparing defensive positions against any attempt by the Iraqi army to intervene. In this regard, the Kurdish ruling council, which has been in place since their vote for autonomy in the 1990’s after the Gulf War, and which continued into the new regime after Hussein’s fall in 2003, is already making official inquiries to us and other nations regarding recognition and assistance. Yesterday, they officially declared their independence.”

President Weisskopf carefully considered this information. Things were going as they had hoped in the North, but the election overall had not been disrupted and the results were convincing. Recognition of Kurdistan would be a very risky business and most probably a somewhat isolated position. England, Australia and Israel would possibly join in such a recognition, and it was hoped that Saudi Arabia and Turkey, who had covertly been a part of the “help” given the Kurds, would also join in. But the real question was what the reaction of the GIR would be.

“How has the GIR officially reacted, and what are we seeing regarding any troop movements?”

Vice President Reeves turned to the Secretary of State, Fred Reissinger.

“I’ll let Fred address the GIR reaction, Mr. President.”

“Mr. President, the GIR, as you can imagine, has officially applauded the current results. They have indicated that there would be an official announcement by Hasan Sayeed himself once the figures are final. We expect the final results will be in by tomorrow or the next day at the latest.”

“To date, they have been silent on the issue of the Kurds in the north, although the provisional Iraqi government is loudly condemning the vote, and publicly indicating that no attempt to split the traditional Iraqi nation will be tolerated.”

“John, what are we seeing regarding GIR troop movements?”

John Bowers had checked with the NRO and with the Pentagon before the meeting regarding this very issue.

“The GIR has had military advisors in increasing numbers in both Pakistan and Iraq since the announcements of the referenda. They have stationed one entire Army Group and fairly large numbers of aircraft near their border with each country. As of this morning, no movement has been noticed from those Army units, although there can be no doubt that they are logistically preparing to move.”

Well, there could be no doubt as to how the GIR would react. Hasan Sayeed had made a mission out of uniting the Islamic world. Incredibly, he had succeeded beyond anyone’s wildest imaginings...and now there would probably be hell to pay. Norm Weisskopf knew that now was the time to make clear America’s resolve in the area, rather than to simply allow all of Islam to be consolidated under Sayeed.

“OK, Fred, let’s start moving towards an initial diplomatic relationship with Kurdistan. Other nations, outside of Israel, are going to await our lead. I’d like a diplomatic mission established in Irbil and an announcement that we are sending a diplomatic team over there to discuss Kurdistan’s future amongst the family of nation. Perhaps this kind of pre-emptive diplomacy will forestall the Iraqis and the GIR for a short time.”

### **September 4, 15:00 local time**

#### **Islamic Republic Government offices**

#### **Tehran, The Greater Islamic Republic**

“We are pleased to announce the overwhelming results of the referenda in both Pakistan and Iraq regarding the people’s choice in those two countries to unite with our Greater Islamic Republic. The voting in Pakistan resulted in an astounding 94.6% of the voters choosing the path of unification.”

“In Iraq 72.3% of the people chose to join in our efforts to unite our Islamic brothers and sisters everywhere. Sadly, the voting was marked by some violence and the results would have been higher had extremists and terrorists not attempted to thwart the will of the people. Such interference will not be tolerated and will be ruthlessly put down.”

“Nonetheless, the results are clear: the former nations of Pakistan and Iraq have voted, by overwhelming super majorities, to become a part of the Greater Islamic Republic. We will move quickly to consolidate these regions and peoples into our peaceful and prosperous Republic.”

“To this end, I have two important announcements to make.”

“First, after serious and in-depth negotiations over the last several weeks, we announce today that the Greater Islamic Republic is officially joining the Coalition of Asian States. I must thank our Foreign Minister, the Ayatollah Ol Asam Sadiq Shiraziha, for his unceasing efforts in this regard. We proudly join with India and the People’s Republic of China in the tacit recognition of the “Three Wisdoms.” Here in the Greater Islamic Republic, they shall be phrased as follows:

1. “All men and woman are created equal in their distinct roles in society.”
2. “All share equally in a working and industrious society.”
3. “One goal, one thought, one people for World peace.”

“This economic and social coalition is sweeping the world and we invite all to join with us in our commitment to social equity for all people.”

“Second, with respect to attempts to break apart the traditional nation of Iraq which has voted to join with the Greater Islamic Republic, we announce our unwavering commitment to the integrity of our borders and our people. Outside interference will not be tolerated. I have ordered elements of our national defense forces to prepare to put down any attempt to split off a portion of our nation and thereby thwart the will of the people.”

“To the Kurdish people we say, join with your countrymen in our quest for social equity. This is not the old regime in Iraq, which I, too, fought against. This is a new day for all Islam—a day we should mark by living in peace with one another and moving forward in the spirit of Shaheda and Sarum in our Islamic faith. For those who would attempt to subvert our nation and the will of the people, the answer will be the Jihad. There is no independent Kurdish state.”

“In this spirit, we announce a moratorium on action in this regard until November 1st. We will work with the autonomous Kurdish region to negotiate a peaceful unification with our Republic until that date. We will be prepared to enforce the will of the people after that time. We warn foreigners seeking to influence events to their own advantage to not meddle in the internal affairs of our nation. Outside influence and moves toward diplomatic recognition of a break-away state will not be tolerated.”

**September 8, 10:25**  
**UN General Assembly**  
**New York City, USA**

“The resolution passes by a vote of 95 in favor and 12 against.”

Ambassador Wong Yingfong sat back with pride and satisfaction. The issue had never really been in doubt, but to have won such a lopsided victory was all the more gratifying. When introduced to the general assembly the day before yesterday, it had taken favors and promises to get the resolution to the floor so quickly, but Wong had been a diplomat for many years and knew the ways of the United Nations. Now, the resolution has passed. A Resolution recognizing the passage of popular referenda in the former nations of Pakistan and Iraq uniting both with the Greater Islamic Republic.” An article of that resolution specifically condemned efforts by any portions of the nationalities to ignore the will of the people and break away from their former nations. The Article did not describe specific action that would be taken in response to de-unifying efforts, and there were no binding commitments. It was more of a “sense of the General Assembly.”

But, the United States, Turkey, Saudi Arabia, Great Britain, Australia, Japan, Canada, Israel, Brazil, South Korea, Thailand and Egypt had voted against the resolution. The United States, Turkey, Great Britain, Canada and Australia had already made diplomatic contact with the leaders of what they were calling Kurdistan, though this contact had stopped well short of official recognition to date.

With The People’s Republic of China, India, Russia and the Greater Islamic Republic voting for the resolution, the growing economic and ideological influence of those combined entities had swayed many nations. Others had been content to remain on the sidelines with Germany, France, Greece, Italy and twenty other nations abstaining.

As he made his way out of the general assembly hall, Wong saw that his counterparts from India, the GIR and Russia were waiting for him. Shaking hands with the Ambassador from the GIR, Ambassador Wong addressed the others.

“Greetings, my friends! Let’s now retire to the conference room in my mission where we can discuss developing some method to give this resolution some teeth.”

**September 11, 19:25**  
**The Oval Office, The White House**  
**Washington, D.C.**

“Imam, I understand that the resolution has passed, and I understand your offer which expires at 12 a.m. on November 2<sup>nd</sup>. My point is simply that the Kurdish people are already autonomous and that they have voted to not unite with the GIR. The issue here is an intrinsic change in the nation of Iraq and its people. The people in the “Kurdistan” area have chosen to make their autonomy permanent.”

President Weisskopf had agreed to this call at the insistence of his Secretary of State. Normal communications and contacts were not producing any results and time was short. But Hasan Sayeed felt he was holding all the cards and he was communicating accordingly.

“President Weisskopf, with all due respect, there is no Kurdistan. Neither was there any provision for independence for the autonomous regions of which you speak. What there is, is a commitment by the GIR to keep things as they were, with the existing autonomy conceded by the former Iraq. This is all we are willing to agree to, and it is what the UN General Assembly has voted to support.”

The President had to suppress his growing ire. Sayeed was determined to have all of Iraq and with the help of Red China, India and Russia he felt he was in a position to force the issue.

“Imam, first of all, as you know, the UN resolution is non-binding. Second, referring to the former Iraq, I am speaking of the Iraq prior to the 2003 war which brought that regime down, and its “concessions” does not impress the United States. Quite frankly, as you know, Saddam Hussein was a tyrant. The fact is this: the people of that region have spoken anew; they have declared their independence. I want you to understand our commitment and firmness in this regard. We, along with several of our allies, intend to recognize Kurdistan as an independent nation.”

Now it was Hasan Sayeed’s turn to restrain his growing ire. Wasn’t it just like these infidels to go against the prevailing feelings of the world and attempt to force their will on entire nations?

“Mr. President, from your time as a youth, you are familiar with the people of my nation. You know that, for the most part, we are committed to our faith and to the people of our faith, as well as to the people of our nation. Iraq is now a part of our nation—all of it. If we are allowed, if we are not interfered with, we are certain that the people in northern Iraq will recognize our commitment and embrace it. It is the interference of other nations, including your own, which has led to the current conditions.

“I do not intend to debate this with you. We are convinced from our own intelligence sources that the irregular ballots in the north, and much of the violence in other areas, was instigated by your CIA and the operatives of other nations. We have said nothing of this publicly, but we insist at this time that such interference cease.

“With respect to your commitments and firmness on the matter, I assure you, Mr. President, we are equally committed and firm. If the Kurdish population persist in their efforts to divide Iraq beyond November 1<sup>st</sup>, our response will be swift, devastating and decisive. Good day, Mr. President.”

Click.

Everyone in the room was surprised at the abruptness with which the call was terminated. Fred Reissinger had hoped that a direct exchange between the two leaders could produce some opening, some chance to avoid confrontation. That hope was now all but gone.

“He’s serious. First of all, the CAS is hurting us economically, even more so our allies in Western Europe. The Chinese, the Indians and now the GIR are exclusively exploiting Russia’s Siberian resources. American and European efforts in the region have been shut down, contracts have been reneged upon, and hundreds of millions, if not billions, have been lost. Now, we are being faced with an ultimatum regarding the Kurds and Sayeed feels he has the international support and military power to stand us down.”

Interjecting at this point, Russell Gage, the Secretary of the Treasury, and leader of the National Economic Council (NEC), whose principal function was overseeing the Administration’s domestic and international economic policy-making process, spoke up.

“Mr. President, as we discussed when the CAS first announced its objectives, we are seeing significant weakening in our petroleum, precious metals and natural gas industries. This undercutting is due to the adverse effects that most of the large players in these markets are experiencing as a result of CAS actions and policies.”

“As Fred has said, they have simply reneged on contracts already in place, forcing our firms to eat huge capital investments. This is beginning to have a very real impact on the stock markets in those sectors of the economy, and has every potential of impacting other sectors as well. With the vast petroleum reserves and resources of the GIR being added to this scenario, economic prospects are not good. In a very real sense, we will be vulnerable to economic warfare every bit as serious as the military kind.”

Secretary of Defense Tim Hattering considered the Secretary of State’s and the Secretary of the Treasury’s pronouncements. He agreed with both, but wanted to ensure that the meeting stayed on track in focusing on addressing the immediate Kurd situation.

“Excuse me, Russ, but, Mr. President, I agree with the warnings and comments of both Fred and Russ and have to add to it my own with respect to the immediate issue of the Kurds. Over the last several days, we have tracked several Iraqi divisions taking up “jump off positions” at critical junctures leading into “Kurdistan.” It is apparent they are staging supplies and aircraft to support a quick and overwhelming strike toward Irbil and then Kirkuk, and another towards the west along the Turkish frontier.”

“What’s of even greater concern is that the GIR is moving two entire Army groups and their air support towards the former border with Iran. We believe one of them will support the Iraqi units to the north in their plan for keeping Kurdistan in line, while the other will secure their border with Kuwait and Saudi Arabia.”

The President took this in.

“What strength are we talking about here?”

Tim consulted his notes.

“Mr. President, I do not have precise numbers, but right now Iraq is amassing fifty to sixty thousand combat troops, two to three hundred tanks, more APC’s and about a hundred combat aircraft. Following behind that are perhaps one hundred thousand GIR combat troops in each Army group supported by six to eight hundred tanks and three to four hundred combat aircraft... that is, that many aircraft for each group.”

They are serious indeed, thought the President. Such numbers are more than enough to handle the Kurds in the north, and far more than enough to secure their borders with Saudi and Kuwait, unless of course they are assuming we are going to contest this militarily, or...

“OK, I want everyone to listen very carefully. I’m afraid that there is a very real possibility that the GIR is not just planning to secure their borders with Kuwait and Saudi. They have assembled a force that would be capable of crossing those borders. I want us to start looking at that possibility right now.”

Turning to the grouping of chairs where the Secretary of Defense, the Chairman of the Joint Chiefs of Staff and the Secretary of State sat, the President continued.

“Tim, work with General Stone, the Joint Chiefs, John, and Mike to start analyzing and planning from that perspective. General Stone, you’d best look at very inconspicuously calling up the reserve units associated with Central Command and the 24<sup>th</sup> Mechanized Division to augment the MEU we have already sent over there to train with the Kuwaitis. Get the ready brigade of the 82<sup>nd</sup> Airborne prepared to airlift over to Kuwait on my order. Jeremy, make sure General Horton of Central Command understands our need to field a force capable of defending Kuwait and Saudi and have him start the planning. I know exactly what he’s going through and will give him the full support of this Presidency. Make sure he understands that.”

“Fred, begin working with Kuwait, Saudi and Bahrain and get the necessary agreements in place to activate our pre-positioned equipment and allow for the manning of that equipment. In addition, prepare an official diplomatic recognition of Kurdistan and coordinate it with Great Britain, Canada, Australia, Turkey and Saudi Arabia.”

“Also, work with Russ and the NEC to analyze the numbers and consequences in anticipation of a possible revocation of Normal Trade Relation Status for all of the CAS, including Russia. I know this can be a potential bombshell to the economy and the markets, but we may have to experience such difficulties to extract ourselves from a very compromising position. We have simply allowed ourselves to become too dependent on a potential adversary. Review this analysis with Alan and brief me on how best to communicate it to our friends and allies. I will make an announcement to the nation regarding all of this on Friday evening, September 15<sup>th</sup>, and I want to ensure that we coordinate it with whatever similar announcements and actions our allies can take in concert with us.”

Finally, turning to his right where his Vice President, Alan Reeves, was seated with his National Security Advisor, John Bowers, the President concluded.

“Alan, please work with Fred, particularly in preparing the way with our allies who abstained in the general assembly vote regarding Iraqi. I’d like to think that we could get at least Germany and Italy behind us on the recognition of Kurdistan. In addition, we want to make sure that Japan, South Korea and the others who voted with us, but are not yet prepared to recognize Kurdistan, don’t vacillate.

I also want frank discussions on the potential need to utilize our trade relations with all of the CAS and Russia as an incentive for them to ensure continued free trade with respect to the Siberian resources, and in particular the outstanding contracts and commitments that have been unilaterally terminated. We should probably also include in that discussion the CAS policy regarding the labor tariffs. If necessary, Alan, visit their heads of state personally to discuss these issues frankly, or arrange meetings between them and myself.”

### **September 12, same time**

#### **Presidential Offices**

#### **Tehran, The Greater Islamic Republic**

“Instruct our 1<sup>st</sup> and 2<sup>nd</sup> Army group forces to immediately initiate operation Mongoose and proceed beyond the borders of the former Iraq and take up staging positions. Make it clear that there are to be no accidents, no provocation. Just move to the staging areas and await further orders.”

“Sadiq, arrange personal calls with President Zenim of the People’s Republic of China and President Putin of the Russian Federation. I believe it is time we expend further funds on more weapons systems and supplies.”

“Then, call for a meeting of the ruling Mujtahids and senior Mullahs within the next three or four days. We must request the faith of our people in this and seek Allah’s will in the measures that will be necessary to complete our task of uniting all of Islam. After that meeting, within one or two days, I would like to hold a meeting of the entire military council.”

Hasan Sayeed watched his Foreign Minister and devoted subordinate leave to make the arrangements he had directed. The culmination of his primary mission, the unification of all of Islam, was within grasp. But before that mission would be realized, Hasan knew a testing would have to be endured. The time for that testing would begin in earnest appeared to be close at hand.

### **September 13, 10:25**

#### **College of Engineering, Boise State University**

#### **Boise, Idaho**

Both Billy and Leon had noticed him when he came in. He quietly took a seat in the back row of the lecture hall, took off his cap and sat quietly as the professor explained first order derivatives to the class.

School had been in session for just a couple of weeks and Billy and Leon were in two classes together, one of which was this Calculus class that was required for Billy’s Mechanical Engineering major and for Leon’s Physics major. The two of them had become close friends and Billy enjoyed the opportunity for some home cooking as Leon invited him over to their apartment to eat three or four times a week.

They had talked about everything. From the inevitable talks about girls, to long discussions on cars, to their thoughts about politics and finally to their mutual desire to get into the military. Although Billy’s father was in the U.S. Army, both Billy and Leon were more drawn to the Marines, Billy as a result of his studies of all the military service branches (he thought he would like infantry operations, ships and helicopters and he could get all of them in the Marines). Leon was drawn there as a result of his experiences with Charlie Jenkins, the retired Marine husband of Nellie Jenkins, the librarian back in the Harold Washington Memorial Public Library in Chicago who had helped him so much.

The lecture went on. As they took notes and listened to the professor, both boys stole glances to the back of the amphitheater style lecture hall. He was still there. Dressed in what looked like a service

“C” Uniform, a Gunnery Sergeant of the United States Marine Corps for some reason was sitting back there in their Calculus class.

When the lecture ended and the professor dismissed class, the Gunny moved to the double exit doors and simply stood there as the students left the lecture hall. As Billy and Leon approached the doors, the Marine looked straight at Leon and spoke while stretching his hand forward for a handshake.

“Leon Campbell? Hi, my name is Sergeant Ken Bennett. My friends either call me deadeye, or just Gunny “D.” Sergeant Major Jenkins gave me a call a week or so ago and said I ought to look you up, so here I am.”

As Leon shook the firm hand, he had to think a minute. Sergeant Major Jenkins? Oh! He must mean Charlie!

“You mean Charlie? Well that’s great! Charlie taught me a lot about our country and what it is really all about...he also spoke a lot about the Marines.”

“Oh! Excuse me Sergeant. This is my friend Billy. He’s from Texas and his Dad flies the most advanced attack helicopter in the military.”

Gunny “D” turned and shook Billy’s hand.

“So your Dad is a Marine? He flies the AH-1Z Super Cobra?”

Billy had studied everything he could about every active attack helicopter in the world. He was very familiar with the debate.

“No, Sir. My Dad is in the U.S. Army reserve and flies the RAH-66 Comanche. It’s a great bird with unbelievable stealth characteristics, and very maneuverable—but it can’t carry the ordinance the King Cobra can.”

Gunny “D” was impressed.

“Well, Billy, you sure know your helo’s. And from what Sergeant major Jenkins told me about you, Leon, you’re anxious to look at how to become a Marine while taking advantage of your scholarship.”

“Tell you both what. Why don’t you come over to my office and I’ll show you some films. Some of them will knock your socks off because of the neat, intense scenes of our equipment in action... tanks, LAV’s, helicopters, jet aircraft, amphibious assault ships, aircraft carriers, etc.”

“Others will tell you a lot about the Marine Corps and the various ways to sign up. Either way, you are both welcome any time. How about this afternoon, or right now if you have the time?”

The Sergeant had taken the liberty of looking at Leon’s schedule before coming. He knew Leon was free this afternoon and now hoped that his friend, Billy, was too.

“Sounds *great* to me,” said Billy, “I wouldn’t miss it and I can come over right now.”

Leon also agreed, and all three left the Engineering building for Sergeant Bennett’s office.

**September 14, 20:30**

**Lazy H Ranch**

**Outside Montague, Texas**

“OK, that’s great, honey. Glad to hear you enjoyed it so much. Yes, you bet, I’ll be sure to pass that on to your father. Please wait for him to talk to you before you make any final decision. I know, I know; that’s the main reason you called.”

“Tell Leon and his family hi for us. Good luck in the game this weekend...we hope you get to play. Don’t forget your studies. Yes, I know you do. Ok, honey. Bye.”

Cindy hung up the phone. Billy sure had been impressed by a Marine recruiter there on the BSU campus. Well, this was no big surprise. He had always indicated a preference for the Marine Corps. But Cindy sure wanted him to take advantage of his education before he joined up. Well, Jess would talk it over with him and give him the best advice possible. She was confident Billy would then make the best decision. As she thought about this, she heard the pickup pull into the driveway and the engine stop. A few seconds later, the front door opened.

“There you are. I was beginning to wonder if you had gotten lost.”

Jess crossed the room and gave his wife a hug and then walked into the kitchen with her.

“Nope, just had to dicker with old long-winded Harv Harberson about that hay he wants to buy. In the end that was alright, though, because he ended up settling for more than I was going to ask. Sort of talked himself into it. Anyhow, sorry I was late.”

As they sat down at the table together, Cindy reassuringly put her hand on Jess’s arm.

“Well, it was no big thing. Too much longer and I honestly would have started worrying, though. But you did miss a call from Billy.”

Jess had thought a lot about his son over the last few weeks since he and Cindy had returned from Idaho. He wanted to know what was going on...wanted to know how his son was faring...what was the football program like...whom was he befriending...how were his classes. Jess trusted his son implicitly. He just wanted to share these things with him. Cindy wanted to know all of this too, and even more. But wisely, they knew that their son was off on his own and needed some independence and space to let him stand on his own two feet. He would call them if he needed help or had news.

“Now,” Jess thought, “I’ve missed one of those calls.”

“What did he have to say?”

Cindy watched Jess’s eyes carefully as she told him of Billy’s meeting with the Marine recruiter and Billy’s excitement at the films he had watched. She particularly watched Jess as she told of Billy’s excitement as he learned of the capabilities of the AH-Z King Cobra helicopter the Marines were deploying.

“He’s talking about trying to find a way to join the Marines now and get his basic training out of the way after football season or next summer. He says he thinks he can work it out between the school and the Marines to defer his active duty until after graduation, or something like that.”

“Jess, he sure sounded excited. I could hear it in his voice. He has the eyesight and the smarts for it. He wants to be a pilot like his Dad.”

Jess’s eyes never betrayed any hint of disappointment regarding a possible Marine career for his son as opposed to the U.S. Army. There was none. Jess knew it was an honorable thing to desire to serve your nation in any capacity and Jess already had great respect for the U.S. Marine Corps.

“I’ll have to look into whether the Marines have such programs and what the particulars are for them. My guess is they will help him with some of his expenses, although the football scholarship is full ride.”

“That new Cobra is a nice bird. He could do a heck of a lot worse. I’m glad they are on our side, although the Comanche is still the hottest thing flying under a rotor.”

As Jess said this, the phone rang.

“I’ll get it, honey.”

“Hello. Yes, this is he....I see. When? Yep, that’ll be more than enough. Ok. Ok. Not a problem, I’ll be there. Thanks. Goodbye.”

When Jess hung up the phone, Cindy stood and walked over to him. They had been together too long and she had heard too many similar calls to not recognize the inflection in his voice or the types of answers he had given. She could recognize in an instant his “military” voice and knew he had just received some type of call pertaining to it.

“Jess, I already know. When do you have to report?”

“It’s a call to active duty. Couldn’t go into any details over the phone, but I am to report to Tampa, Florida next Wednesday, the 20<sup>th</sup>. It’s a minimum of three months.”

**September 15, 9:50 local time**

**Former Iran/Iraq frontier**

**Between Abadan and Basra, GIR**

Abduhl Selim was exhilarated as his squad leader announced that they had just crossed into the former nation of Iraq. So much had happened in the last four months since his country of Turkmenistan had united with Iran and helped to form the Greater Islamic Republic.

Abduhl had turned eighteen years old soon after the announcement of that unification. That announcement had changed his life and stirred his soul. It had been almost a religious event for him as he had cheered the announcement of unification and the creation of a greater Islamic Republic. Although not overly religious himself, that event had given birth to a keen desire within his soul to be a part of the historical events unfolding around him. When they had returned to their home after the announcement, he had gone to his father and shared with him his love for weapons and his desire to join the armed forces of this blossoming new world power.

His father had shared much with Abduhl. To Abduhl’s utter shock and amazement, his father had not only assented, but had talked long hours with him about Abduhl’s feelings, and what his father considered his strengths and weaknesses. It turned out, his father knew more than he would have possibly imagined...and his father understood him.

From that point, he had gone into the basic training with the former Turkmenistan armed forces. That very training was in the process of being modified and updated by representatives from Iran, now the Greater Islamic Republic. During his six weeks of training, Abduhl had proven so phenomenally proficient with a rifle that he had been recommended and approved for transfer to one of the more elite regular GIR units. As a result, upon completion of his basic training, Abduhl was on his way south into the former Iran and to his new unit, an assault company in the 2<sup>nd</sup> Army group of the Greater Islamic Republic.

Now, a month later, here he was, traveling as a part of a scout squad for his company, riding in a eight-wheeled BTR-80 armored personnel carrier. Every few moments the sound of low flying attack helicopters or jet aircraft could be heard passing overhead.

“Abduhl, come forward. It’s your turn to take watch.”

The BTR-80 had several firing and observation ports through which the embarked infantry could observe their surroundings and fire their weapons in response to combat situations. While in transit, in non-combat areas, the soldiers had been trained to keep a regular watch through a few of the observation/firing ports in an effort to avoid their being surprised by enemy forces or insurgents.

Although many of the soldiers did not like this duty, Abduhl enjoyed it because it provided a break in the monotony of riding in the canvas seats, and it let him see glimpses of the countryside through the clouds of dust raised by other vehicles.

“Yes, Sir! Right away, Sir!”

The sergeant hid a smile at the enthusiasm and willingness of this young soldier.

Allah be praised, he thought, I pray this youngster’s attitude is infectious.

“Just make sure you keep your eyes open. As we approach closer to Basra, there will be more buildings and we want to be on our guard. In Basra, our column will be taking the “E” highway to the north towards Baghdad and support of the Iraqi forces preparing to reclaim the regions in the north, should the rebels continue in their rebellious ways. We’ll change watch in Basra. That’s about two hours from now.”

Abduhl smiled as he cradled his AK-74 assault rifle in his arms and took up his position at the observation port. Two hours to Basra! Baghdad by tomorrow evening! And all of it as a part of his nation: one people, one faith and one leader.

That leader was one Abduhl was coming to trust and respect more as the days went on. He was a leader who had the will to secure their nation’s place in world affairs...a leader who would not let any other power, particularly any western power, interfere in the affairs of their nation. Although Abduhl was mature enough to understand that it would be better for the Kurds to align themselves with their Islamic brothers peacefully and willfully, a part of him hoped they would try to maintain their rebellion. He wondered if the Americans would be inclined to interfere.

Abduhl did not have to wait long to find out.

**September 15, 19:00**

**The Oval Office, The White House**

**Washington, D.C.**

“Good evening, my fellow Americans. I come before you this evening to inform you directly of certain actions your government is taking in response to world events. I believe it is imperative that the people of this nation are as informed as possible regarding the state of international conditions worldwide. It is equally imperative that the citizens are informed regarding our national interests and how we, as your elected representatives respond to them on your behalf. We are a nation governed by the people and for the people, and it is, and will continue to be, this administration’s policy to never forget that critical and fundamental principle.”

“As most of you are aware, there have been extraordinary developments in world affairs over the last several months. In the Far East a very strong Coalition of Asian States formed several months ago with the idea of uniting dissimilar cultures, governments and peoples along ideological and economic lines that are extremely socialistic at best, and Marxist at worst. They are attempting to accomplish this coalition by entering into exclusive trade agreements with several nations, Russia in particular. These relations have harmed many corporations based in America and Europe, as well as many in Asia, which are headquartered in nations outside of the CAS. This is because in those areas being exploited by the CAS, the arrangements are exclusive to CAS member states and, accordingly, the host countries have canceled contracts and arrangements of long standing with our corporations and many corporations of our friends and allies.”

“In addition, within the CAS, a new tariff has been attached to the labor force of the member countries. This high tariff has driven many more American and other firms out of the market, forcing them to abandon significant capital investments which the CAS nations then pick up for pennies on the dollar at best. Many of our companies are going out of business as a result.”

“Inasmuch as these practices violate the very essence of free and fair trade, we are taking the following action by way of response.”

“First, we are asking the National Economic Council, headed by the Secretary of the Treasury, to examine the impact of removing normal trade status from the nations of India, The People’s Republic of China and all members of The Greater Islamic Republic. Unless these nations indicate a clear commitment to reverse these unfair and confrontational trade practices, as President I will recommend revocation of normal trade relations for these countries by November 1<sup>st</sup> of this year.”

“Such measures, if they are implemented, will create hardship for some American companies. We will offset these hardships through short-term subsidies to encourage economic development and the opening of markets in other areas more favorable for US trade. Conditions for said subsidies and areas targeted for companies desiring to qualify will be announced in concert with any suspension in normal trade relations with the aforementioned nations.”

“My fellow citizens, it is past time that we step forward in our fair and free trade efforts and ensure that said trade is always fair to American firms and in keeping with American national interests. In so doing, we will not impair nor impede the free market. We will apply normal trade relation status with all three of these criteria in mind...free, fair to America and not at odds with American national interests. It will require the efforts of all of us, working together as individual

citizens, to ensure that these measures work. Send a personal message to these nations with your pocketbook.”

“Second, on the agenda tonight, is a matter of utmost importance, and one that strikes at the heart of our most cherished national principles. It is the principle of self-determination and sovereignty. As most of you are aware, the nation of Iraq has virtually ceased to exist. Our ally in the region, President Chaliberi, was recently assassinated, and the nation of Iraq fell into a state of virtual anarchy. The resulting atmosphere in the Mid East has been one of extreme tension, and we have been monitoring that potentially volatile atmosphere closely.”

“We have supported the UN initiative to allow the people of Iraq to hold a referendum to establish the direction of their peoples. The results of that election sent two very important and distinct messages to the world.”

“First, the peoples of central and southern Iraq voted clearly to unite themselves with the Greater Islamic republic. We support their will in this decision, although we would rather have seen them remain independent.”

“Second, the already autonomous Kurdish areas of northern Iraq voted to establish their independence. This is something they have sought since World War I when the current borders of Iraq were imposed upon them. They have never ceased working for their independence and were kept from it by one of the most brutal tyrants of the last fifty years. The suffering of the Kurds has been well documented.”

“Now these people have voted overwhelmingly for self determination and independence in creating the Republic of Kurdistan.”

“Ladies and gentlemen, my fellow citizens and all those listening across the world. Tonight, as President of the United States, and in concert with the nations of Great Britain, Canada, Australia, Israel, Turkey and the Kingdom of Saudi Arabia, I announce the official recognition of the Republic of Kurdistan as a free and independent, sovereign nation.”

“In the weeks to come, we will establish our embassy in the capitol of Irbil.”

“We urge calm and peace in the region. We especially urge the Imam Hasan Sayeed and the Greater Islamic Republic to honor the express wish of the people of the Republic of Kurdistan. The borders of the Republic of Kurdistan and its sovereignty must be respected.”

“To help ensure the integrity of this sovereign nation, the United States will present a resolution to the security council and the general assembly of the United Nations calling for the establishment of observers on the border and calling for mediation between the GIR and the Republic of Kurdistan. These resolutions will also propose creating a “buffer” zone between the two forces until a diplomatic resolution is reached. For your information, the map being displayed on your TV screen and on our live broadcast site on the Internet, portrays the location of the new Republic of Kurdistan, the proposed buffer zones, and the final vote counts according to the UN monitoring teams.”

“As a precaution against coercion by outside forces, and as a demonstration of our own commitment, I have activated a number of U.S. Army reserve units to be available to support our Marine Expeditionary Unit which is in Kuwait training at the moment. These forces will also be available to support our forces on the ground in Turkey should they require such support for any contingency. The specific units and their function will be announced tomorrow morning at a press conference to be held by the Secretary of Defense, Tim Hattering, and the Chairman of the Joint Chiefs of Staff, General Jeremy Stone.”

“We believe these measures constitute an appropriate response to conditions which pose risks and challenges to our national interests and our ability to conduct free and fair trade. We urge the nations of the CAS to carefully consider their economic policies, and to work to meet us half way in developing fair trade policies between the CAS member nations and America and her allies.”

“Again, we urge restraint on the part of the Greater Islamic Republic in dealing with the new nation, the Republic of Kurdistan. In the spirit of our own independence, we in America, along with several of our allies, have taken the step to recognize them as an independent nation because of the historical nature of their struggle, and because of the ideals they embrace.”

“We state in clear and unmistakable language, to any nation that would attempt to coerce a free people: the decision we have made to recognize the Republic of Kurdistan is not a step we have taken lightly. Nor is it one from which we will walk away.”

“Now, my fellow citizens, goodnight, and may God bless our great Republic; may God bless the United States of America.”

**September 16, 08:03**

**WNN Broadcast Studios**

**New York city, New York**

“Continuing with our top story.”

“Reactions to President Weisskopf’s dramatic announcements yesterday are pouring in from around the world. Impact on Wall Street has been mixed as the Blue Chips have been steady to higher while the Technology sector is taking a beating. The volatility is due to the large investment in high

tech design and manufacturing in the People's Republic of China and the impact that cessation of normal trade relations will have on those investments.”

“On Capitol Hill, many on both sides of the aisle are condemning the announcement by the President as being too harsh and too reactionary. Others, predominantly conservatives, are hailing the President's actions as long overdue, given the continued military build-up of the People's Republic of China and its expanding unfair and unfriendly economic influence in the region.”

“Reactions from overseas are mixed.”

“The most severe reactions, as might be expected, are coming from The Greater Islamic Republic, India and The People's Republic of China.”

“President Jien Zenim of the People's Republic of China was quoted this morning in the China News with this response:”

“It is unfortunate that the United States has chosen to react in this fashion. Economically and diplomatically, President Weisskopf has embarked on a path of confrontation and vilification instead of understanding. The People's Republic of China will not follow suit. We will work both with the United States and with our CAS partners and come to as amiable a solution to these difficulties as possible.”

“Harsher words were quoted by the Imam Hasan Sayeed, the leader of the Greater Islamic Republic:”

“How dare the United States interfere with our internal affairs as a sovereign nation? The people of Iraq have spoken, in the American tradition of democracy, and have voted to unite themselves with the Greater Islamic Republic. The elections were monitored and certified by the United Nations and sanctioned by the general assembly of that body, despite violence that attempted to disrupt and destroy the election, perpetrated by the very people whom the United States claims it is backing.”

“We repeat to the United States and to the world: we will not tolerate outside interference in our internal affairs. We are negotiating with the leaders in the autonomous northern regions of the former Iraq in good faith. We offer amnesty to those involved with the independence movement, other than those we intend to identify who committed violence during, or attempted to defraud, the election process itself. We guarantee the continued autonomy of the region within the Greater Islamic Republic. We urge all citizens in the region, both Kurds and those of other ethnic or cultural backgrounds, to maintain order and avoid outside influence and attempts to divide our nation and our faith.”

“We repeat. Any efforts, after November 1<sup>st</sup>, to divide our nation will not be tolerated. We warn those nations establishing diplomatic ties with this break-away region: you will not be accorded normal diplomatic protections should the revolt continue. We do not recognize the rebellion or any of the institutions which are trying to legitimize it.”

“Other nations either condemning the moves by the U.S. President, or responding negatively to them, are India, Russia, Libya, North Korea, Vietnam, South Africa, and the Western Hemisphere nations of Cuba, Venezuela and Panama.”

“Finally, reactions from America's allies and friends are cautious. Support ranging from cautious to unqualified comes from England, Canada, Australia, Saudi Arabia, Israel, Turkey, South Korea and Taiwan. Germany, Italy, France, Greece, Brazil, Egypt and Japan have all expressed their reservations and their intent to await further developments.”

“With the response around the world varying so widely, it is highly unlikely that the United States will realize its desires for a UN monitoring force in the region to establish a buffer zone between the former Iraq and the break-away Republic of Kurdistan. We will update our viewers immediately with breaking news from the region.”

“Now, for other news.”

**September 19, 15:28 local time**

**COSTIND Headquarters**

**Beijing, PRC**

Seated in the plush corporate management conference room were:

General Hunbaio, the commander of all of The People's Republic of China's weapons development, along with several of his deputies,

Chin Zhongbaio, the CEO of Red China's COSCO shipping company, the largest ship builder in the world, along with his managing directors,

Lu Pham, the mastermind behind, and designer of, Red China's newest and most secret weapon, the LRASD and,

Sung Hsu, the ingenious head of COSCO manufacturing.

The General was addressing the group, and was completing a review of the status of progress on the COSCO shipping military conversion project, and building towards two special presentations.

“I am pleased to announce that as of this morning we have launched the Beijing, our first Sea Control Carrier from the Tanjin shipyards. This is a proud day for the People's Republic of China and her people. We have entered a new era of Naval Power and Naval history for the People's Republic of

China. And we intend to continue along that path. We expect to begin launching more of these ships from our more secure facilities by the middle of November.

"In addition, over the next two weeks, we will launch our first Amphibious Assault ship and our first Tactical Attack ship from our other conversion facilities. These ships will not only allow us to extend our capacity to project our nation's foreign policy around the globe, but the new LRASD weapons systems which they carry will also allow us to do so without fear or concern of how our adversaries might attempt to interfere."

"In addition to this review, today we have gathered ourselves together to recognize the tremendous efforts and roles of two of our most talented personnel in the achievement of these accomplishments. One of these two individuals is Commodore Lu Pham, the designer and developer of our new LRASD weapon system. The other individual is Sr. Manager Sung Hsu, the brilliant manufacturing manager who has seen to it that the conversion of these vessels proceeded smoothly and ahead of schedule."

"In recognition of those efforts, Lu and Sung, please stand up."

Sung Hsu was embarrassed, proud, moved and patriotic all at the same time as he stood next to his friend, Lu Pham. He was glad that Lu was here to experience this with him. He only wished his wife and children could also share it with him. No matter, he would spare no description in sharing it with them (at least as much as security would allow) when he got home.

For his part, Lu Pham was proud and richly gratified as he stood. He was fulfilling his dream of creating an extremely complex and revolutionary weapons system that would be used to pay back the United States for its crimes against his family. He had never allowed this underlying desire for retribution to affect or taint his work, but it had been a fundamental motivation for him the entire time, nonetheless.

"Commodore Lu Pham, in recognition of your contributions and command performance, I am proud to promote you to Admiral in the Navy of the People's Republic of China. From this point, you will report directly to me in your efforts on the LRASD weapons system and its integration into the fleet. Congratulations in your new responsibilities Admiral Lu."

As the General shook Lu's hand he presented his new insignia.

"Chin Zhongbaio will now make the presentation to Sung Hsu."

Chin Zhongbaio stood and approached Sung Hsu. Chin was one of the most powerful men in the People's Republic of China. A member of the politburo with the confidence of, President Jien Zenim, he was also the Chief Executive Officer of the largest shipping company in the world, which he had personally managed the growth of since its inception.

Chin prided himself on the prestige, honor and power his accomplishments brought COSCO and his homeland, and on his ability to recognize and develop talent which served COSCO and the PRC. In Sung Hsu, he had discovered and developed one of the most promising of talents...in truth, with Sung, there was little development necessary. Sung developed himself.

"Sung Hsu, in honor of your accomplishments on the Amphibious Assault conversion project, and further suggestions which have benefited all of our military conversion projects, today I promote you to the position of Senior Vice President of Manufacturing, Military Conversion Projects. In this position of responsibility, you will report directly to me. Congratulations."

**September 20, 08:15**

**National Reconnaissance Office Headquarters**

**IMINT Directorate, Chantilly, VA**

More satellite photos had come in early this morning. What they showed was not a tremendous surprise, but was stunning nonetheless. There, with tugs to either side moving her towards the harbor entrance (and being recorded faithfully by the SEAL MUAS units as it did), was the first Chinese designed and built aircraft carrier to enter the service of the People's Republic of China.

"Bill, you might want to take a look...they've launched her. We knew it was coming, but now it's official. As of late yesterday China time, she was moving out of the Tanjin harbor."

Bill had expected it would be soon. The Chinese had moved with stunning speed in the conversion of this very impressive VSTOL (Vertical and Short Take Off and Landing) Aircraft Carrier. They had clearly been planning it for several years and had executed the plan almost flawlessly. Bill had to respect that effort, but it concerned him just the same.

"And what of the shipyards?"

Tom and Bill had discussed their opinions of how quickly the Chinese would turn things around and begin converting another ship. The answer had largely been answered several days ago when another COSCO container ship had been photographed pulling up near the dry dock shipyard into a position which would allow it to quickly be placed in the dry dock and worked on. Today, all of that was confirmed through satellite imagery.

"Already in the dock, Bill. In the last two-and-a-half days, they floated the first out and have the second in there ready to go for round two."

Bill had expected as much. It looked like the People's Republic of China was going to be able to launch Sea Control Aircraft Carriers every few months. The question now was how long it would take for them to make these things operational.

"We'd best get this together and get with John Bowers and the Navy. The Navy has already got an advanced LA Class SSN over there ready to track this lady through trials. With everything else that's going on in the Mid East, though, our ability to focus on this will be impaired. We're going to have to find a way to stay on top of it anyway, between all of these Central Command requests we are getting."

### **September 20 through November 1**

Bill Hendrickson was right. The focus was on the Middle East, and over the ensuing six weeks conditions there continued to deteriorate as diplomatic efforts increased dramatically and military preparations began in earnest.

On September 22, the United States introduced its resolution to the General Assembly of the United Nations for a monitoring force and a buffer zone between the Greater Islamic Republic and the Republic of Kurdistan. This resolution, after two days of heated debate, was defeated by a vote of 47 in favor and 65 against.

Thereafter, visits by the Vice President of the United States and the U.S. Secretary of State proceeded at a rapid pace. The Vice President ably assumed the task of reaching out to allies and friends and putting together a coalition of nations who favored the independence of Kurdistan. Along with Great Britain, Canada, Australia, Israel, Turkey and the Kingdom of Saudi Arabia, by October 10<sup>th</sup> the Vice President was able to convince South Korea, The United Arab Emirates (UAR), The Republic of China (Taiwan), Egypt, Germany and Brazil to officially recognize the new nation.

In the meantime, the Greater Islamic Republic was able to gather significant support for its position that the Republic of Kurdistan was a region rebelling against the legitimate wishes of the people of the Greater Islamic Republic. The nations of Libya, Syria, Jordan, North Korea, Vietnam and Uzbekistan stood firmly behind the GIR's deadline of November 1<sup>st</sup> for the use of force. The People's Republic of China, India and Russia did not recognize the new Republic of Kurdistan. But they supported GIR efforts to end what they called the "rebellion." They also made a great show of volunteering to mediate the "crisis" between the United States and the GIR.

Militarily, the United States activated its pre-positioned equipment (consisting of armor, ammunition, fuel and other logistical supplies) in Kuwait, the UAR, Saudi Arabia and in the Indian Ocean at Diego Garcia. The U.S. Central Command, under four star General Lyman Horton, was given overall theater command for what had been labeled Operation "Desert Sentinel" and began beefing up its troop strength. The 82<sup>nd</sup> Airborne ready brigade, the Marine Expeditionary Unit already in Kuwait, and initial elements of the 24<sup>th</sup> Mechanized Division's armor and infantry brigades were all deployed. Other reserve and regular units in lesser numbers were sent to Turkey to strengthen the airfields there.

The 9<sup>th</sup> Air Force began flying in squadrons of F-15E, A-10 and F-16 strike fighters along with F-15 air superiority fighters and all of the supporting aircraft to airfields in Saudi Arabia, Kuwait and Turkey. Turkey augmented the already strengthened U.S. security around the airbases with its own forces.

In addition to the MEU and its supporting ships already deployed in the area, the U.S. Navy also deployed one Carrier Battle Group (CBG) in the Persian Gulf and another off the coast of Turkey as a show of force and commitment, and to support Operation Desert Sentinel. In addition, two Surface Action Groups (SAG's), consisting of one Arleigh Burke class guided missile destroyer (DDG) and two new Littoral Combat Ships (LCS), were deployed to the Persian Gulf and the Mediterranean Sea. Four Los Angeles class nuclear attack submarines (SSN) were also deployed to the area.

Most of the U.S. ground strength and that of its allies of England, Australia, Canada, Saudi Arabia and Kuwait, were located along the Kuwait and Saudi Arabian borders as a shield for the Kingdom of Saudi Arabia.

Arrayed against them were the much larger numbers of the GIR 1<sup>st</sup> Army group, which were augmented by the former Iraqi Army units in the southern areas of former Iraq, south and west of Basra near the Kuwait and Saudi Arabian borders. These units had continued to pour into Iraq along with the GIR 2<sup>nd</sup> Army Group. The 2<sup>nd</sup> Army Group moved north to augment the Iraqi Army units there that had taken up positions along the Kurdistan frontier between Baghdad and Irbil. All units made a point of deploying to staging areas well off the border.

Hundreds of military aircraft including modern SU-27, MIG-29, SU-24 and SU-25 aircraft were also ferried to airfields in, Southern and Central Iraq. As air patrols of the GIR and air patrols of both the U.S. and its allies began to fly in proximity to one another, tensions escalated.

In mid-October, Hasan Sayeed issued a general call up for reserves and volunteers to augment the already massive ground forces of the GIR. The answer was unprecedented as hundreds of thousands of young to middle-aged Islamic men flocked to military training facilities in every major town across the broad expanse of the Greater Islamic Republic. Arms shipments from both Russia and

the People's Republic of China were arriving daily as the oil wealth available to the GIR was used for expedited shipments.

By October 25<sup>th</sup>, one week before the deadline established by Hasan Sayeed was set to expire, the entire world again held its breath as belligerent forces were arrayed facing one another in the Middle East.

By that date, more than 200,000 GIR forces were prepared to occupy Kurdistan, supported by 800 tanks, 200 attack helicopters and 500 combat aircraft. In the south, along the Kuwait and Saudi borders, the GIR had an even larger force of approximately 225,000 troops, supported by 1200 tanks, 250 attack helicopters and 800 combat aircraft.

By comparison, the coalition put together by the United States had 200 aircraft in Turkey, supported by 50,000 Turkish troops and 15,000 U.S. forces which were there to act as a final defense for the air bases out of which the U.S., English and Canadian aircraft were operating.

In the south, the U.S. had amassed 50,000 combat troops supported by another 25,000 coalition troops. The ground troops were established in a defensive posture along the border between the GIR, Kuwait and Saudi Arabia, along with their equipment, which included 400 tanks, 200 attack helicopters and 300 combat aircraft. All of these numbers were growing daily and as the days of October dwindled, the feeling of anxiety hung palpably in the desert air.

## Chapter 6

*“Never interrupt your enemy when he is making a mistake.”—Napoleon*

**October 30, 06:50 local time**

**Republic of Kurdistan Military Headquarters**

**In a cavern near Irbil, Iraq**

With the move towards independence, Jabal Talabari had been appointed the commanding General for all of Kurdistan’s military forces. Over the last weeks, in addition to the fifteen to twenty thousand members of Jabal’s original Patriotic Kurdistan Front, Jabal, along with help from Will Peterson and his American CIA compatriots, had been able to recruit another thirty thousand personnel. The Kurdistan people were anxious to defend their new nation, but given the time constraints, only very rudimentary training could be conducted. Despite the lack of “formal” training, they were willing to fight for their new republic and Jabal felt they could make up in commitment and desire what they lacked in training. Unfortunately, the only way to do that when facing a well-disciplined and well-trained enemy was to pay the butcher’s bill.

Forty-five thousand personnel, with no heavy armor and only minimal anti-tank and anti-aircraft, were facing over 200,000 of the enemy with hundreds of heavy tanks, hundreds of modern attack aircraft and attack helicopters. The weapons that had been provided to them by the United States were modern and would function well. Ultimately, the support they received from the U.S. Air Force out of Turkey and its effectiveness would be the key to the coming battle. In addition, in the end, it would come down to whether the U.S. and its allies were prepared to commit ground troops to support his new nation should the tremendous numerical advantage the GIR enjoyed overwhelm his forces.

Using his pointer, Jabal began the briefing, indicating the major bridges along the Tigris River within the Republic of Kurdistan territory.

“Will, we are as prepared as we can be given the training and disposition of our forces. The bridges along the Tigris here at Bayji where large number of Iraqi and GIR forces are located, here, here—and here are all ready to be destroyed. This bridge in the city and this one near Bayji will be the most difficult to take down.”

“We have our 2nd and 3rd infantry divisions between the Great and Little Zab rivers in defensive positions. They will protect the Capital and hopefully spring the trap should the GIR take the bait.”

“Our 4th infantry division is placed before Karkuk in a defensive mode and we expect them to take the brunt of the initial assault from the GIR units now staging northwest of Khanaqin. Our people will fall back rapidly under what we believe will be a major attack, and allow the GIR to push them hard towards the Little Zab river. Although admittedly a very risky strategy, we plan to allow the capture of two of the bridges over the Little Zab, here, and here as the GIR continues the pursuit of our “routed” 4th infantry division. When they enter these canyons to the north and west of the bridges, the 2nd and 3rd divisions will spring the trap.”

“Our reserves consist of the 1st mechanized division, which is located in the hills outside of Mosul. Once the 4th infantry division begins its retreat, the 1st mechanized division will rapidly perform an encircling movement to approach the GIR forces from the rear as they pursue our retreating 4th, about the time they cross the Little Zab River.”

Will Peterson reviewed and carefully considered the plan. The whole thing would depend on the U.S. Air Force keeping the GIR aircraft from conducting ground support or reconnaissance to discover the positioning and disposition of the reserve division, and the specific location of the 2nd and 3rd infantry divisions. It would also depend on the GIR making its primary push up towards Karkuk, which meant the U.S. Air Force would have to locate and subvert any other “thrusts” by the GIR, particularly any major push to the west on that side of the Tigris river towards Mosul. Will was certain there would be just such an effort by the GIR in that regard, and U.S. reconnaissance seemed to confirm his suspicions: the GIR was staging its forces at Bayji and on the north side of the Euphrates river near Al Qa’im. Locating and thwarting that western thrust would also be one of the primary keys to the upcoming battle.

Though it had been discussed here in Kurdistan, Will was certain that, other than a few Special Forces squads, the U.S. would not commit significant ground forces in the Republic of Kurdistan; too risky at this point. The missiles—Javelins, Stingers and LAWS—provided to the Kurdish ground forces would have to be complimented by the U.S. Air Force destroying GIR armor from the air.

“Jabal, the plan looks good, though I remain concerned about any major GIR thrust towards Mosul from west of the Tigris. If our aircraft do not find and stop such an offensive, it could easily catch our mechanized reserves in a vulnerable position. I am in touch with U.S. Air Force personnel out of Turkey and will have my people coordinating air support with each of your divisions. We need to make sure that your forward controllers are tied into my men and that we have multiple backups for

that communication. It will be one of the primary keys to success on the battlefield. How are the anti-tank and anti-air defenses distributed?"

Jabal consulted his notes briefly.

"The 4th infantry division at Karkuk has our older Soviet block anti-tank weapons and shoulder-fired anti-air missiles. They have been well instructed in purposely minimizing their effectiveness so as to draw the GIR forces in, while not allowing themselves to be over run. We have about half of our most seasoned soldiers and NCO's in that division. The others are split equally between the reserve mechanized division and the divisions who will represent the jaws of our trap."

"The 2nd and 3rd infantry divisions have almost all of the Javelin and LAWS missiles. We have 100 Javelins and 150 LAWS split between those divisions. They also have roughly half of the Stinger missile systems; 75 in all. The 1st mechanized division has only a few of the anti-tank missiles since they will be depending on their mounted chain guns and light cannons taking the GIR vehicles from the rear. They are carrying the other half of the Stinger missiles for anti-air."

Will knew that the strategy was risky, but it was the best he, Jabal, and the planners back in the states could come up with given the forces at their disposal. Upon this plan, and upon the U.S. support of it, the future independence of the newly formed Republic of Kurdistan would hinge.

"Well, continue reviewing the plan and refining it with your division commanders, and they with their brigade and company commanders—all the way down to the squad level. We won't have too long to wait. My guess is that the GIR is going to come boiling out of their staging areas tomorrow and be right up on the border on the 1st."

**October 31, 06:50 local time**

**Incirlik Air Force Base Ready Room**

**Near Adana, Turkey**

Brigadier General Wesley Howell, the commander of the U.S. Air Force Expeditionary force in Turkey, reviewed the assembled pilots and logistical officers assembled before him. They were assembled in the largest briefing room on base, not far from the Command Center.

The General had allowed photographers and reporters in this briefing. As a result, he was to the point, and very upbeat. As the flashes went off on the cameras around him, the General began.

"OK, we're on 24 hour alert status as of this morning. Our operational goals are simple in the event of an invasion of Kurdistan. Our part of Operation Sentinel, as you all know, is simply to:

1. Prevent GIR air from penetrating Kurdistan air space.
2. Maintain air superiority over Kurdistan.
3. Provide air support to Kurdistan forces as requested.
4. Destroy any GIR anti-air assets directed at our forces.
5. Destroy any GIR AEW assets tracking our forces."

"In order to accomplish this, we will have combat air patrols increased to an around-the-clock basis starting this afternoon. Three flights of F-15 Eagles will maintain CAP over Kurdistan at all times with two flights of ready-air birds here on the ground at all times. The CAP flights will be directed by two E-3 AEW aircraft, and each one of those will be escorted by two F-15s."

"In addition, we will have two flights of Wild Weasel F-16 aircraft up at all times, who will vector in to any GIR anti-air assets encountered."

"Finally, there will be one flight of four F-15E Strike Eagles and one flight of British Tornados airborne at all times with matching flights on ready alert status here at the base. These will provide ground support to Kurdistan forces as requested, or be used to interdict GIR ground forces as they cross the border into Kurdistan. Control for these flights, will be provided by one JOINT STAR aircraft and its escorts which will be on patrol near the border."

"Folks, the pilots and aircraft you will encounter and the anti-air you are apt to meet are considered several notches above the opposition we faced in Iraqi Freedom. Be cognizant of this at all times. We will have a final briefing at 0400 hours tomorrow morning."

**November 1st, 12:00**

**WNN Broadcast Headquarters**

**New York City, New York, USA**

"As we report the top news at noon, all eyes are on the Middle East where in just an hour the deadline, the "line in the sand" established by Hasan Sayeed, will expire. This deadline represents when the Kurdish citizens in the northern provinces of the former Iran must cease their efforts toward achieving independence, or face military reprisal by the GIR."

"Tensions are running extremely high in the region as the deadline approaches. U.S. President Norm Weisskopf has indicated that the United States and its allies will support the new Republic of Kurdistan. To that end they have been moving troops and equipment to the Middle East over the last several weeks. These recent maneuvers have been eerily reminiscent of those which preceded the Desert Shield effort in Kuwait and Iraq so many years ago. WNN conducted a live broadcast of a briefing from the U.S. Air base at Incirlik, Turkey last evening where the Commanding General,

General Wesley Howell, laid out in clear terms what the U.S. Air Force goals will be should hostilities erupt. He indicated that the primary goals are to maintain air superiority should GIR aircraft attempt to enter Kurdistan airspace, to provide air support to Kurdistan forces as requested and to destroy any GIR forces, including airborne early warning craft, which appear threatening to our forces.”

“WNN has news crews on the scene in Baghdad, Irbil, the U.S. Air Base at Incirlik, and near the GIR front lines in Bayji. We will update you immediately with any breaking news and will include on-the-spot, real time coverage wherever possible.”

“Now, on to other stories around the nation.”

**November 1st, 23:50 local time**

**GIR forces**

**Kurdistan Frontier**

The GIR Operation, “Veiled Sword,” had been planned in great detail. At 0500 on November 2nd, from Bayji an entire GIR corps would feint towards Karkuk and then wheel north towards Mosul. With two hundred main battle tanks, four hundred armored personnel carriers, six hundred troop-carrying trucks, two hundred pieces of artillery, fifty attack helicopters and the support of one hundred and fifty fighter and attack aircraft, it was a thrust the Americans and Kurds could not ignore.

Four hours after this thrust began, an even larger mechanized thrust of three hundred main battle tanks, five hundred armored personnel carriers, three hundred artillery pieces and fifty attack helicopters, supported by two hundred fighter and attack aircraft would strike towards Mosul from Al Qa'im in the western desert.

The GIR's operation plans called for Mosul to be taken at all costs, so that any forces protecting Irbil and Karkuk would be cut off. In order to hold those forces in place, a large corps-sized thrust would also be made from the frontier north and west of Khanaqin. This thrust would include one hundred main battle tanks, two hundred armored personnel carriers, five hundred trucks, three hundred pieces of artillery (one hundred of which were Multiple Launch Rocket systems) supported by one hundred attack helicopters and another one hundred and fifty fighter and attack aircraft. This part of the attack would begin coincident with the attack originating from Bayji

In order to neutralize American air, the GIR was also diverting three hundred fighter and attack aircraft from its bases deep within the former borders of Iran. These had been flown to five different air bases in the eastern part of the country and were already taking off to form up into their combat groups. They would be refueled over GIR territory in the former Iran and then would fly nap of the earth through the darkness to the north of Tabriz before turning west into Turkey north and east of Lake Van. From there they would proceed directly to attack Incirlik Air Force Base.

It was anticipated that the Americans would respond strongly to this large force out of the GIR. When they did, Veiled Sword called for half of the fighter and attack aircraft supporting the thrusts toward Mosul to break off and fly directly to Incirlik to attack. It was expected that this massive four hundred and seventy-five aircraft attack on Incirlik would overwhelm the defenses and lay waste to the airfield and other aircraft parked there.

All of the GIR aircraft, would be controlled by three GIR Ilyushin Il-76 “Mainstay” AEW aircraft. These aircraft had been purchased by the GIR from Russia, and were dedicated to the Veiled Sword operation. They were crewed by volunteers Muslims from the Russian Federation as a part of the overall deal for the aircraft.

**November 2nd, 04:30 local time**

**E3 Sentry “Overseer,” 35,000 ft over Zakho**

**Kurdistan Frontier with Turkey**

“Bravo flight, Bravo flight, this is Overseer. We have many unidentified aircraft approaching Bayji from the south. Count is forty aircraft and climbing—make it fifty-two aircraft and climbing. Vector two-seven-niner degrees, angels forty to intercept.”

The controller on the U.S. Air Force E3 aircraft was observing the approaching GIR support air for the GIR 4th Corps thrust north of Bayji. He had just vectored one of the flights of F-15 Eagles to intercept this force and he was in the process of vectoring a second flight of F-15s and calling for reserves.

“Aircraft identified as bandits. I say again we have bandit aircraft approaching from the south and entering Kurdistan airspace. Weapons free. Charlie flight, vector one-one-three degrees, angels forty to intercept.”

“Home plate, this is Overseer. Release Delta flight and have two more flights go to ready standby status. It's going to get thick up here.”

In answer to a request from Alpha flight to also vector them towards the action, the four F-15s further to the north and east, the controller on board the E3 elected to have them maintain station.

“Negative Alpha flight. Maintain position.”

Now eight of the twelve airborne F-15s were converging on the over one hundred fighter and attack aircraft that were supporting the GIR 4th Corp thrust towards Mosul. Each Eagle carried eight

missiles, four AMRAAMs and four Sidewinder air-to-air missiles. The AMRAAM - radar guided with a range of about forty miles, the Sidewinder—a close in infrared homing missile, with an effective range of ten to twelve miles.

Very quickly the lead element of F-15s was in range.

**November 2nd, 04:42 local time**

**F-15 Eagle Bravo flight, 40,000 ft over Kurdistan**

**Between Mosul and Bayij, Kurdistan**

“Fox-1, Fox-1.”

The leader of Bravo Flight launched two of his AMRAAM radar guided missiles and continued in towards the approaching GIR aircraft. At 35,000 feet and about 30 miles in front of him, the initial flight of MiG-29 aircraft was approaching. There were twelve of them and they were all painting him and his flight with their N-019 radar in an attempt to get a “lock on” and prepare to launch their own missiles.

As his wingman and the other members of his flight each launched two missiles, the approaching GIR flight attempted to perform a splitting maneuver to evade the eight missiles launched at them. But two of the aircraft collided and exploded in flames and the other ten had to break their maneuver to avoid the debris. The more deadly condition for the GIR pilots was the oncoming flight of AMRAAM missiles. The AMRAAM was the most advanced radar-guided air-to-air missile in the world. A true “fire and forget” missile that had its own internal radar and homing guidance, the missile had an effective range of over forty miles. When the AMRAAMs arrived, six of the remaining ten MiG-29s fell in flames. At this point the distance had closed to 20 miles and the second flight of GIR fighters, this time twelve SU-27 Flankers, was also approaching.

The four remaining MiG-29s launched two of their long-range R-27 missiles each, and eight missiles were coming at the four F-15s. At the same moment, the F-15s launched another AMRAAM each at the oncoming MIGs. Half of the GIR missiles were the R-27R semi-active radar homing missiles; the other half were the R-27T infrared homing missiles.

“On my mark, break. Mark!”

Upon command, each of the four American fighters performed its breaking maneuver flawlessly and attempted to change its aspect ratio to the oncoming missiles and reduce its radar cross section, while actively jamming the missiles. This worked for the R-27R missiles and only one of those four missiles found its mark as an F-15 took a hit. That pilot ejected safely as he lost control of the aircraft. Not fooled by jamming or aspect ratio changes, two R-27T infrared homing missiles impacted two American aircraft, both of which exploded. There were no chutes. The two F-15 pilots were the first Americans lost in this first battle of what later would evolve into a very long and horrific war. Only one of the Americans, the wingman to the flight leader, was able to employ his infrared defensive flares to draw the heat-seeking missiles away from his aircraft.

Meanwhile, the four AMRAAM missiles had destroyed another three MIGs. Now, one MiG-29 faced one remaining F-15, a mere twelve miles apart.

The last F-15 launched its last AMRAAM at the MiG-29, and then turned away from the oncoming SU-27's in an effort to egress the area as more missile launch warnings appeared on the pilot's HUD.

“Overseer, this is the Jinx from Bravo flight. Be advised we have three aircraft down, bandits still approaching. I am attempting to disengage.”

But the warning was too late. The SU-27's had already launched four R-27 missiles and before it could complete its turn it was destroyed.

At this point, the second flight of F-15s came within range.

**November 2nd, 04:55**

**SU-27 GIR Flight, 37,000 ft over Kurdistan**

**South of Mosul, Kurdistan**

“Missile launch! Perform evasive maneuver three on my command...Now!”

The flight leader for the twelve SU-27's, a more capable fighter aircraft than the MiG-29, quickly had his entire flight of twelve aircraft perform their evasive tactics in the face of eight oncoming AMRAAM missiles. The maneuver was performed successfully, but the deadly AMRAAM missiles found their marks and SU-27's fell in flames.

As the remaining eight SU-27's turned to continue their approach, the Americans launched another eight AMRAAM missiles. By this time, the distance had closed to the point where the SU-27's could lock onto the Americans and launch their own radar and infrared-guided missiles if they chose to press the attack. In the face of the deadly threat of the oncoming AMRAAMs, the disciplined and well-trained GIR flight leader made a fateful decision.

“Do not evade. I repeat do not evade. Obtain lock and launch two missiles each at the oncoming targets.”

The SU-27 carried a longer-range version of the R-27 missile than the MiG-29, which included a radar homing version, R-27R1 and an infrared version, R-27T1. Quickly, twelve of these missiles were in the air, targeted on the F-15s from Charlie flight.

**November 2nd, 05:05 local time**

**E3 Sentry "Overseer," 35,000 ft over Zakho**

**Kurdistan Frontier with Turkey**

"Home plate, this is Overseer. I am declaring an air emergency! Repeat: air emergency! We have just picked up many bandits approaching from the east over Lake Zan. Count is over one hundred and growing."

"Alpha flight, vector oh-niner-three, angels 20, weapons free."

"Home plate, scramble all ready aircraft. We now have a massive raid approaching from the east in addition to those approaching from the south. Bravo and Charlie flights are down. I repeat: both flights are down. Bandits continue to approach."

As the controller communicated this warning, he noticed that twenty aircraft had broken from the formation approaching over Lake Zan, and were vectoring towards his aircraft. Keying the local frequency, he informed the pilot and his own escort.

"Colonel, we have a flight of twenty bandits vectoring towards our position. Our escorts should vector at one-two-five degrees at angles 20 to intercept. We are going to have to evade back towards Home plate ASAP."

Colonel Frank realized he and his crew were in mortal danger. The GIR was pulling out all the stops to overwhelm their layered defense. Nothing remotely similar to this had ever occurred in Desert Storm.

"OK. Get strapped in back there. We are headed for the deck. Inform Home plate and alert Starlight and their escort that they'd best RTB."

**November 2nd, 05:20 local time**

**Control Tower**

**Incirlik Airbase. Turkey**

"Sir, we have that large raid approaching from the east and the two smaller groups approaching from the southeast. Overseer is off the air. Alpha, Bravo and Charlie flights are all down, Sir; 100% down. Our two reserve flights have engaged and expended all missiles. Of those eight reserve aircraft, two are left and they are attempting to RTB. Our strike aircraft are engaging the mechanized columns that are moving towards Mosul, but they are suffering significant attrition due to GIR air in those areas. After their munitions are expended, or when their position becomes untenable, they are going to egress to the Turkish airfield at Diyarbakir.

"Enemy strength remains high and they are continuing to press their advantage. Our current analysis indicates that our own efforts and the two intercepts performed by the Turks have eliminated over eighty of their aircraft at a loss of eighteen of our own fighters and twelve Turkish. In addition, Overseer is off the air and presumed down and we have lost Starlight, the JOINT STAR aircraft. The raid strength from the east appears to be at over two hundred and fifty aircraft, and there are over one hundred and twenty combined aircraft approaching from the southeast."

At this report, General Howell looked grimly at the screens and reports. The loss of the E-3 Sentry and the E-8 were tragic, and would have made the entire GIR effort worth it from their perspective. But the GIR was clearly intent on more than eliminating critical assets over the battlefield. They were intent on eliminating U.S. air superiority altogether in the region. Within twenty minutes all hell was going to break loose at Incirlik.

The General considered his remaining assets. He had his remaining fifteen F-15s up on a barrier CAP forty miles out from the base. His B-1's, KC-135s and remaining two reserve E-3s were supposed to be airborne already, and en route away from Incirlik. His last remaining E-3 was airborne and fifty miles to the west of Incirlik with an escort of four F-15s. That E-3 AWACS aircraft would help control the coming battle.

As the raid approached, the General was trying desperately to rearm his F-15Es and F-16s for air-to-air, but the raid was going to arrive before he was complete. Still, it would be a near thing and if those F-15s could delay things for even a few minutes, there was a chance.

"OK, ensure that our airborne F-15s remain well outside the twenty mile free fire zone we have set up for our ground-based AAW defenses. Make sure the Hawk and Patriot batteries understand that they will have free fire authorization from us within the next few minutes. Make sure our ground defense forces understand the same with their shoulder-launched Stingers and their Avenger air defense systems."

"Are the B-1's, E-3s and KC-135s and their escorts away?"

Before replying, the Major checked his notes and information on his palmtop computer. Then replying to the General he said,

“Yes, Sir. Those aircraft and their escort have cleared the free fire zone and are en route to Izmir. Izmir is providing a CAP two hundred miles out along the axis of their approach. Between that CAP and their own escorts, I feel they are as safe as we can make them”

“Good, pass the order on to the air defense batteries informing that they are weapons free within the free fire zone, and get everyone into the shelters—particularly those news people. I’ll be down in the command center.”

**November 2nd, 05:40 local time**

**25,000 ft., GIR Raid,**

**110 Miles East of Incirlik Airbase. Turkey**

General Mahdavi Ardakani, the commander of the GIR raid on Incirlik and the individual responsible for developing the plan, surveyed his accompanying aircraft. The four U.S. Air Force F-15s had taken out five of his MiG-21 and seven of his MiG-29 aircraft, but all of the F-15s had been destroyed in the process. The two Turkish attacks had destroyed another eight of his MiG-21 aircraft and seven of his MiG-27 attack aircraft while all twelve of the Turkish F-16 and F-5 aircraft were destroyed. This left the general with two hundred and sixty-two aircraft for his raid on Incirlik.

He knew that there were approximately ten to fifteen F-15s prepared to meet him, and then there would be the air defense at the base itself. As a result of the heavy jamming from off to the west, it was difficult to tell at this point. For the ground attack, he had twenty SU-24 Fencers, twenty-four SU-27’s, twenty-four MiG-29s, sixty MiG-21s forty MiG-27s and forty of his own American built F-5’s. Escorting all of these he had a total of fifty-four other MiG-29s, SU-27’s and MiG-21s outfitted for air-to-air combat.

It was the latter that he was about to employ against the F-15s that were defending the air base. It was the General’s hope to blow a hole through those defenses and allow his attack aircraft to pulverize the base.

“Flights C through G, this is command. Perform pincer three on my mark...three, two, one...mark!”

“Attack flights A and B, and flights L through Q, await my order for execution of OPLAN order four C.”

On his order, eight SU-27’s and six MiG-29s split to the north while ten SU-27’s and six more MiG-29s split south. They all went to full combat throttle and wheeled around to come at the defending F-15s from the resulting pincer positions. As this was occurring, twenty-two escorting MiG-21s went to afterburner and shot ahead of the attack group towards the F-15s. Over two hundred attack aircraft continued relentlessly towards Incirlik.

Each of the attacking SU-24s carried two Kh-59 TV-command guided missiles, which had a range of sixty miles. The General was betting that all of them could get within range of Incirlik and launch those missiles before being intercepted by any surviving F-15s. He had positioned the SU-24s forward, near the center of his attack formations. In the next few seconds, the General would order them to full combat throttle so they could dash forward, launch their Kh-59 missiles and then egress quickly towards GIR territory with an escort of six SU-27’s.

**November 2nd, 05:45 local time**

**30,000 ft., Barrier CAP F-15s**

**30 Miles East of Incirlik Airbase. Turkey**

Colonel Jim Phillips immediately saw the developing situation. The GIR was trying to run a classic pincer maneuver on him. In addition to the advantageous positioning they were attempting, they had overwhelming numbers on their side. He desperately needed to break through the oncoming fighters so he could get to the attack aircraft and perform some significant attrition on them before they could reach the base.

Things were going to be desperate for their base and they all knew it. The sheer numbers of the oncoming GIR raids were going to inundate the defenses well past the point of saturation. The desperation was beginning to show somewhat in their voices and in their protocol.

“Bob, on my mark take your flight and break left to those bogies coming down from the north. Jerry, take your flight and break right to those bogies coming in from the south. Everyone else, follow me. On my mark we’re going to attempt to break through the middle and get to those attack aircraft.”

“All units, use Watchtower for targeting and guidance as long as possible. Watchtower, Home plate, do you copy?”

The E-3 Sentry did indeed copy, as did the controller at the tower at Incirlik.

“We copy, Lone Star. Good luck. Even up those numbers for us.”

Setting his resolve and focus, Colonel Phillips concentrated on the timing of his ordered maneuvers.

“...three, two, one...mark!”

“Good shooting, and may God have mercy on us all.”

**November 2nd, same time****WNN Broadcast Studios****New York City, New York, WNN**

“We interrupt this program to bring you a *Special News Report*.”

On TV screens across America and around the world, David Krenshaw’s face appeared as WNN interrupted normal programming.

“Incirlik Air Base, Turkey. We have reports of military activity and are cutting live to our on-scene reporter, Maria Gomez. Go ahead, Maria.”

The feed cut to a night picture of a young Spanish American female reporter. Her hair was blowing in a gusty wind and she had her ear to her headset. In the background, crews were seen feverishly working on an F-15E Strike Eagle. Maria looked up into the camera and began speaking.

“Yes, David, this is Maria Gomez at the U.S. Air Force base at Incirlik in Turkey. We are about one hundred yards away from the command center here in an area that has been set up for the press to view aircraft as they taxi and then take off. Earlier this evening there was significant activity on the line which we have on video and will share with you later.”

“Right now, we are experiencing high tension and frantic action here as many aircraft are being feverishly readied in the background.”

“Within the past five minutes we have witnessed the launch of several dozen missiles from what we presume to be anti-air batteries. Several of them were Patriot missile launches. Incirlik base appears to be under attack.”

“BLAMMMmmm”

“Joe, get that explosion over to our right, about one half mile over. Several of the missile launches earlier originated in that area. Apparently one of those batteries was just destroyed after what could only be a missile streaked in at unbelievable speed and exploded.”

“You can hear the sirens in the background which have been going off incessantly for the last ten to fifteen minutes. As they started, we were stopped by Air Force security and asked to seek shelter, but when they had to rush off to another location, Joe and I made our way back here to get as much of the attack as possible on video.

“Oh! Another set of missiles is coming in! Joe, pan left!”

As the camera panned left, two exhaust trails were clearly visible, leading from the ground about a mile distant and trailing up behind two rapidly climbing missiles. As the missiles got higher and more distant, the cameraman expertly zoomed in and videoed the destruction of a GIR MiG-27 “Flogger” aircraft in a tremendous explosion when its fuel and ordinance ignited simultaneously with the impact of one of the missiles.

“Unbelievable! David, did you catch that? Ladies and gentlemen, we are witnessing a live GIR air attack on Incirlik airbase. Quickly, Joe, over there on the runway, there’s a flight of four Strike Eagles just taking off.”

Again the cameraman panned and caught four F-15E Strike Eagle aircraft as they took off under full afterburner thrust and rocketed almost straight up into the night sky. They had risen no more than three thousand feet when the aircraft on the far left of the formation was hit by a missile and exploded in a brilliant flash of light and burning debris. There was no chute.

“My God! They took out one of those F-15Es!”

The scene became more hectic as the cameraman swung back to catch as much of the action on the flight line as possible. There were numerous explosions on the taxiways where aircraft were being rearmed and several ejection seats lifted off from those positions. Many more didn’t.

“Look, Joe, quickly pan towards the far end of the runway. Do you see them? Those are unmistakably MiG-29 aircraft coming towards us. Look, they are releasing some type of missiles or bombs. Joe, are you catching this? Now, they are rocketing almost completely vertical. Oh. No! Joe, get down, one of those bombs is homing in on the Command Center!”

On the screen, the unmistakable image of a bomb came flying towards the news crew as Joe zoomed in directly on it. The weapon flew off at a slight angle towards the Command Center when suddenly there was an incredibly bright flash, and then nothing but static.

“...Ladies and gentlemen, we seem to have lost our feed from Incirlik. We will try to reconnect with Maria momentarily and continue with the on-scene report of the action there in Turkey.”

**November 2nd, 06:15 local time****Incirlik Airbase.****Turkey**

Within the thirty minutes, it was over.

Colonel Phillips’ force on barrier CAP gave an excellent account of itself. The GIR pincer movement failed to capture and destroy all of the American aircraft before they could engage the GIR attack aircraft formations. All eight of the F-15s sent to foil that pincer maneuver were destroyed, but not before they shot down eight GIR MiG-29s and ten SU-27’s. This still left four MiG-29s and eight

SU-27's to fly CAP over the attacking forces as at that moment no more U.S. defenders were in the air, outside of the four F-15s protecting the last E-3 Sentry.

Colonel Phillips himself penetrated the main GIR formation with his seven aircraft and was able to get into range before the twenty-two MIG-21s and their R-73 missiles could counter them. Colonel Phillips and his flight launched twenty-eight AMRAAM missiles into the oncoming horde of GIR aircraft. The AMRAAMs were launched just as the SU-24 aircraft, which had surged slightly ahead of the main attack group, launched forty-eight air-to-ground Kh-59 missiles and then turned away. While the American AMRAAMs were flying towards their targets, the MIG-21s came into range and launched eighteen R-73 "Archer" infrared missiles at the F-15s. In the resulting "dog fight," five of Colonel Phillips' aircraft were destroyed, including the Colonel's own. His last living thought had come while sighting on a MiG-29 attack aircraft. He announced "Fox-2" as he launched a Sidewinder missile, just an instant before being destroyed by two "Archer" missiles launched from two of the four MIG-21s that were targeting him.

Altogether eighteen GIR attack aircraft and ten of the escorting MIG-21s were destroyed by Colonel Phillips' attack. His disregard for his own life in the face of overwhelming odds would later earn him, posthumously, the Medal of Honor.

As the WNN news crew observed, the longer-range Patriot missile batteries and the Hawk missile batteries engaged the Kh-59 missiles first. These were fast, anti-radiation (or anti-radar) missiles that had been designed specifically to attack anti-air missile defenses. The resulting "engagement" destroyed 50% of Incirlik's Patriot and Hawk missile sites, and caused another 25% to expend their missiles defending themselves. Nonetheless, the remaining Hawk systems and the Patriot systems exacted a heavy toll on the GIR attack aircraft before they reached the base, destroying twelve MIG-27s, eight F-5's and fourteen MIG-21s. At this point, the shoulder-fired Stinger missiles and the Avenger missile systems came into play.

Just as the GIR attack aircraft appeared over the base proper, the first flight of re-armed F-15E strike eagles took off. As related in the *Special Broadcast*, their takeoff and the vivid destruction of one of their number was seen around the world as a result of Maria Gomez's reporting and the live video captured by her cameraman, Joe. The three remaining aircraft, armed with four AMRAAM and four Sidewinder missiles, had to fight their way to altitude in order to launch their missiles. They succeeded and engaged the first wave of MiG-27 "Flogger" attack aircraft which were making their bombing runs on the runways. These Strike Eagles destroyed fourteen aircraft in a wild, twisting and confusing dogfight, before they were destroyed themselves. These were the last American aircraft to get into the air from Incirlik that day, or for the remainder of the battle for Kurdistan.

The MIG-27s caught twenty F-16s and twelve F-15Es on the ground at Incirlik as they were rearming. Tremendous secondary explosions occurred as GIR munitions exploded amongst these aircraft on the taxiways and runways. Several pilots were able to eject from their aircraft and survived, but most were killed where they sat. While performing these ground attacks, another eighteen GIR aircraft were destroyed by the shoulder-fired Stinger missiles and the Avenger missile systems among the defense forces.

As the MIG-27s completed their work on the runway, two flights of twelve MIG-29s, fitted for ground attack, appeared unmolested over the airfield. These were the fateful aircraft that Maria Gomez described. Each carried one Fuel Air Explosive (FAE) device used to attack the command and control facilities, the fuel dumps, the barracks, the hangars and revetments.

FAE devices create huge detonations by spraying a fine mist of highly explosive liquid into the atmosphere, and then igniting it to produce extremely large, lethal explosions. Such detonations could level almost any structure within hundreds of yards. The resulting twenty-four massive detonations destroyed most of the structures on the base, killing the entire command staff in the command center, including Brigadier General Howell. That same explosion also killed Maria Gomez and her cameraman, Joe, of WNN as they caught their own impending demise on film.

While these ground attacks were going on, the dozens of remaining MiG-21 and F-5 aircraft were making run after run against the ground defense forces and more attacks against the air base's runways. This resulted in numerous US casualties on the ground.

When this large raid from the East completed its attack and departed, right behind it came the one hundred aircraft from the Southeast. These aircraft were completely unopposed, except for the remaining light, but effective, Stinger missiles defenses among the ground forces. These defenses accounted for ten more GIR aircraft, but another dozen FAE explosions and scores of bombing and strafing runs ensured the already definitive results of the earlier attack. For all intents and purposes, Incirlik was completely out of commission.

## **November 2nd**

### **Republic of Kurdistan**

The result of the massive pre-dawn raid on Incirlik was that the GIR, with the exception of some early morning engagements, enjoyed total air superiority in its operations against Mosul and against Karkuk that day. Both assaults on Mosul, the one from Bayji and the one from Al Qa'im, achieved

their goals with little impediment, once the initial F-15Es and F-16s had expended their munitions. In these attacks, and the resulting dog fights with supporting GIR aircraft, another eight F-16s and six F-15Es were lost, along with twelve MiG-29 and eight SU-27 aircraft.

The Kurdistan 1st Mechanized Division near Mosul, with no air support, and little chance for effective reconnaissance, was caught out in the open as it made its enveloping move towards Karkuk. Their light armor and APC's could not compete with the heavy armor divisions in the corps-sized GIR assault on Mosul. Well before the end of the day, except for a few straggler units which had been lucky enough to escape, the Kurdish 1st Mechanized Division ceased to exist as a fighting force.

Given the air support the GIR mechanized columns experienced, damage to them was limited to the loss of twenty-two tanks and approximately thirty armored personnel carriers and trucks. By the end of the day, the two assault forces had combined into a massive force that took up positions within, and to the north of, Mosul. GIR aircraft were landing and being refueled and rearmed at the former Iraqi air base there that night.

The GIR assault on Karkuk also enjoyed tremendous success and was carried out completely unhindered by U.S. or allied air forces. Although much of the rapid advance by the GIR was due to the Kurd plan of falling back in a mock retreat, nonetheless, the speed of the advance was so great that it almost caused the "mock" retreat to fail. The Kurd forces were almost overrun, as they could not "retreat" fast enough.

Despite this, the Kurd forces did inflict some damage on the advancing GIR armored columns. These losses added up to a dozen tanks and eighteen armored personnel carriers.

When night fell, except for local resistance in and around Karkuk, the GIR forces had bypassed the city and reached the Little Zab River where they stopped to re-provision. Their plans called for the crossing of the Little Zab to occur very early the next morning using the two bridges they had captured intact, and to proceed towards the Kurdistan capital of Irbil.

**November 2nd, 07:30**

### **Situation Room, The White House**

#### **Washington, D.C.**

It was General Jeremy Stone's sad duty to brief the President and his closest advisors on yesterday morning's engagements in Turkey and Kurdistan. He didn't look forward to it. Quite frankly, he was somewhat shocked by the disturbing content of his briefing, but it was nonetheless his duty and one he was bound to fulfill.

"Sir, we have reviewed what we know and the results are devastating."

"Incirlik has been destroyed. We physically hold the base and there has been no ground incursion into Turkey, but the base is completely non-functional, and anticipating further air attacks tomorrow."

"The first indications of the attack came from large numbers of aircraft coming up from the south, from bases north of Baghdad, in what appeared to be supporting air for ground assaults into Kurdistan from Bayji and Al Qa'im. When our aircraft crossed the border to intercept, roughly half of those aircraft engaged our aircraft."

"When they did, a massive raid of what appeared to be approximately three hundred aircraft was picked up coming out of the GIR over Tabriz and then Lake Van. This group caught our aircraft out of position and was able to destroy both the forward E-3 Sentry and our Joint Star aircraft and their escorts while en route to Incirlik."

"From there, things developed into essentially a two-pronged attack on Incirlik. As the second larger group proceeded towards Incirlik, the first group overwhelmed the twelve aircraft we had sent to intercept them. These two forces then converged on Incirlik, one after another, from two different directions in a massive and well-coordinated attack."

"Regrettably, General Howell was killed in that attack and we lost approximately three hundred and fifty personnel on the ground."

"Of the over four hundred aircraft used by the GIR to attack Incirlik, we estimate that we destroyed over one hundred and sixty. Our losses amounted to forty-three aircraft in the air and thirty-two more aircraft on the ground. The British lost a total of twelve of their Tornados."

Audible intakes of breath could be heard all around the table. The President's face was impassive. This was the worst day for the U.S. Air Forces in its entire history. It was the worst day for U.S. Air Power since World War II when it had been called the Army Air Corps. Although they had inflicted severe damage on the GIR's attacking forces, the GIR had achieved all of its operational goals and prevented the United States from achieving any of theirs. In addition, a pivotal base had been destroyed and it would take time to rebuild it...a rebuilding that would have to occur under fire. The real loss to the United States and its allies was in their ability to inflict damage on the forces that were occupying Kurdistan, and the loss of time...of which Kurdistan had precious little.

"OK, this is devastating and I will have to talk to the American people this evening. We will miss General Howell. His loss, in itself, is a national tragedy. I want to ensure that the sincerest of condolences are passed to his wife and family. Jeremy, please see to this personally, and, if need be, I will also speak with Joan."

“In the meantime, what can we do from the south? Can we send aircraft from the south around the eastern border of Saudi to get at the GIR in the north? How about escorted B-52 strikes from Diego Garcia or Carrier strikes from the Reagan in the Gulf? What can the Turks do to help us?”

Secretary of State Reissinger took the opportunity to answer the President’s questions regarding Turkey.

“Mr. President, regarding the situation with Turkey, I was on line with their Foreign Minister this morning. They condemn the actions of the GIR, and will beef up their air defenses in their eastern provinces to more capably intercept any future GIR incursions. They are moving forces to help ensure this now. They are also calling up reserve units and moving ground forces to ensure that their borders are secure. But, one thing they will not do is attack GIR forces in Kurdistan. But they continue to fully support our efforts to do so through the use of forces now based in Turkey.”

General Stone assessed the military options.

“Mr. President, we could probably put together a package from the Ronald Reagan supporting heavies from Diego Garcia. The problem is, they would be fighting their way through, both coming and going.”

“The GIR is not asleep at the wheel. They have significant forces in Theater, and they have proven themselves willing to carry the fight to us. I believe such an effort would suffer terrific attrition, and may not effectively provide the support we desire.”

“I recommend that we not bring the Ronald Reagan any closer in towards the Gulf. In fact, I believe we should move the Reagan and its battle group away from the Gulf and give them more room to maneuver in the Arabian Sea. With the number of aircraft the GIR is apparently willing to lose, it is not worth the risk.”

“We are putting up a significant CAP over Incirlik and believe we can have planes launching from there inside of three days. They would be controlled by portable facilities on the ground and from E-3 Sentry AWACS flying out of Izmir, until the runway is sufficiently repaired to allow for the larger aircraft—that’s about three to five days out.”

“We can launch sorties out of Izmir earlier, refueling them in flight, to attack the GIR forces our satellites are showing massing for their push on Irbil. I believe this is the course we should pursue. We have already weakened their air capability in that area, and this will provide the best chance for us to break through. I recommend that we do this immediately, if we want to have any hope for our plan to support the Kurdistan divisions around Irbil to succeed.”

The President considered his options. He had a strong blocking force to the south that he had to maintain in case the GIR also decided to attack Kuwait and/or Saudi. He had to keep the majority of his supporting air forces there on hand and ready to help defend against such an attack. Trying to use part of them to fight through to the north did not seem feasible or practical.

The sorties out of Izmir were clearly the best method of bringing force to bear on the GIR forces in Kurdistan. And the Kurdistan defenders would be in desperate need of that force early tomorrow.

“OK, Jeremy, make it happen. Have the Reagan stand off further into the Arabian Sea, and have our aircraft out of Izmir conduct operations against the GIR in Kurdistan.”

# **DRAGON'S FURY**

**WORLD WAR  
AGAINST AMERICA  
AND THE WEST**

## **YEAR TWO**

**J E F F  
H E A D**

[www.dragonsfuryseries.com](http://www.dragonsfuryseries.com)

**November 3rd, 05:30 local time**  
**Little Zab River, GIR**  
**Outside of Karkuk, Kurdistan**

Yesterday had been Abduhl's introduction to battle. It had not gone at all as he had imagined. His unit's advance had been so swift, and so unhindered for most of the day, that they had scarcely been able to stop and get out and stretch their legs, much less engage any enemy units.

At one point, during one of the rare occasions in which the enemy had stood and fought, Abduhl had seen men die horribly. A BTR-80 in their formation had taken a direct hit from a Kurd anti-tank weapon of some sort. His NCO had called it an American Javelin missile, but Abduhl did not know one enemy missile from another. What he did know was that the armored personnel carrier next to them, with eight soldiers and three crew members, had suddenly become a blazing, hellacious funeral pyre.

They had stopped their own BTR-80 and dismounted while its machine guns provided covering fire. In the distance, Abduhl could see two of their support helicopters circling back to try to locate the attackers. Abduhl and his squad, under the direction of their NCO, had scrambled to the cover of a small levy on the far side of the wash they had been following. The smoke track from the missile that had destroyed the other BTR-80 still hung in the air, and at least two of the men in the fiercely burning BTR-80 were dying horribly, their weakening screams still audible to those who allowed themselves to hear.

"Abduhl, take your sniper rifle and circle over to that rock out cropping to the left. Get as high in those rocks as you can and see if you can spot the enemy who fired that missile."

Abduhl immediately sprang to obey.

"Yes Sir!"

In his desire to anxiously obey, for a moment he forgot his training and began to rise. Simultaneous with his feet being kicked out from under him by the NCO, a small "*crack*" sounded just above his now prone body.

"Dear Allah, Abduhl! I didn't ask you to kill yourself. *stay down* and get your butt over to that outcropping. This time *keep low!*"

Kicking himself mentally, and at the same time grateful to the NCO for saving his life, Abduhl made his way to the rocks and began climbing.

As he neared the top, he remembered his training and moved off to the side of the "summit" of the rocks so as to not be "profiled" against the skyline. He began to gaze across the scrub brush covered hill that lay in front of him. After no more than five seconds, his peripheral vision caught sight of a group of men, located at a distance of about five hundred yards, who were slowly moving up the hillside towards a small saddle.

"Once they reach that saddle, they'll disappear over into the next drainage" thought Abduhl.

Carefully bringing his rifle up to his shoulder, Abduhl took aim at the back of the individual leading the group, adjusting for the range and the slight breeze. He took a deep breath, and as he slowly let it out, he squeezed.

"BANG!"

The leader and the man behind him both fell. The third individual in the group began to scurry towards the summit at a much quicker pace. Again taking aim, this time at the lone survivor, Abduhl pulled the trigger. As the man scrambled for the saddle, Abduhl took three more shots, adjusting for what he anticipated the man would do to avoid getting hit. On the third shot, some twenty feet below the saddle, Abduhl connected again.

Later, it was discovered that Abduhl had severely wounded the leader of the group and killed the second man with his first shot. It had been too low for the first individual and had hit the second man high on the back near his neck, breaking his spine. Fragments of bone and bullet from that shot had severely injured the leading individual.

The NCO had been able to gain some valuable intelligence from the mortally wounded man before mercifully ending his life with a quick shot to the head. "God rest his soul," Abduhl thought, barely keeping from retching.

This event had initiated Abduhl as a fully functional part of the squad. Despite his age, and despite his origin, such shooting skill was a valued commodity in any combat situation—one that could make the difference between life and death for any member of their team.

Now here they were, as the darkness yielded to the brightening sky of the next morning, winding up a steep road from the Little Zab River, making their way to the rebel capital, now less than 50 kilometers away.

### **November 3rd, 06:55 local time**

#### **Kurdistan blocking position**

##### **One valley over, Kurdistan**

Jabal surveyed his intelligence once more. The air disaster that had befallen the United States the day before was sobering and had created a serious situation for his forces. Although the US had destroyed larger numbers of GIR aircraft, it was clear that the GIR had gained the advantage by sheer numbers and was advancing rapidly towards him.

His spotters and forward scouts had indicated that the enemy's initial assault division was just over the rise on the far side of the valley, about 6 kilometers away, and that they had the additional benefit of attack helicopters and close air support. There was audible and visual evidence of both. Jabal had heard the rotors already this morning, and he could now make out the contrails in the lightening sky above him.

"Just light enough to see," he thought.

"Will, we are going to be needing that air support soon. The GIR forces are going to come over that ridge any minute and..."

As Jabal said this, there was a "WHOOOSHHHH" sound followed by a large explosion about fifty meters downhill from them in the vicinity of some concealed bunkers, followed by yet another "WHOOOSHHHH" and explosion, then a third, and a fourth. The numbers of impacts and explosions increased to a crescendo where one could hardly discern between one explosion and the next.

In a few moments it was over. Jabal rose from his prone position in the bunker, thankful that none of the multiple rocket impacts had scored a direct hit on his position.

Almost immediately, there was the sound of a low-flying jet aircraft overhead, followed by a thunderous explosion somewhere up the hill from his position. Almost immediately after the initial explosion, several more jets came into view over the top of the rise, from the other side of the valley.

"Hold your fire! Hold your fire! Do not engage any aircraft or helo's until you get my order!"

Jabal turned back to the American Special Forces commander, turned CIA field team leader.

"Will, we need those support aircraft now!"

Will Peterson understood their need. He also understood that, without air superiority, any assets coming into Kurdistan had to fight their way in, and then fight to remain on station.

Just such an effort was in the process of occurring, but it was meeting resistance in the form of many GIR MiG-29, SU-27, MiG-25 and MiG-21 fighter aircraft.

"We're going to have to hold another five minutes, Jabal. We have F-15s and F-18s attempting to sweep the GIR aircraft out of the way so our attack aircraft can hit those advancing mechanized columns."

"There's a big dogfight, that our boys are about to win, going on right now over the Great Zab River Valley. But until that happens they cannot risk sending the attack aircraft in."

### **November 3rd, 07:00 local time**

#### **Anvil Flight 42,000 ft**

##### **Over the Great Zab River, Kurdistan**

"Fox-2, Fox-2. Tracking...scratch another MiG-29!"

"Okay, Anvil flight. Re-form on me. Control indicates the other bandits are punching out of this one. Proceed to point Echo and take up a CAP position at angels forty."

The remaining F/A-18Cs of Anvil flight proceeded to point Echo over the Little Zab River drainage above Jabal's blocking position. They had started the day with three flights of four F/A-18C aircraft. Now the remaining five were taking up CAP positions over the battlefield to protect the attack aircraft, F-18s, F-16s and F-15Es that were now approaching and would be used against the advancing GIR armor columns.

Ten miles to the east, a similar condition developed as three F-15 Eagles destroyed the last MiG-29 and took up CAP. These three were from an original group of eight.

"Seven Hornets lost in one engagement!" thought Anvil flight leader. "Well, those rag headed bastards paid dearly for our losses."

In fact, the GIR had lost another eight SU-27's, nine MIG-29s, six MIG-25s and eleven MIG-21s in attempting to hold up the American fighter sweep and trailing attack aircraft formations. Although their efforts had diminished the US Navy and US Air Force ranks by a total of twelve aircraft, they had failed to stop them.

Now, twelve F-15Es, twelve F-16s and eight F-18s were barreling in on the Little Zab drainage and the advancing GIR mechanized Corps.

Even as they approached, the GIR was launching a massive retaliatory raid of its own from GIR bases to the east in the former state of Iran. Within twenty minutes, over one hundred GIR fighters would descend on the attacking American forces.

**November 3rd, 07:07 local time**  
**Kurdistan Forces blocking position**  
**Outside Irbil, Kurdistan**

The mechanized assault on Jabal's position had gotten very intense in just the last few minutes. He was losing positions too fast to the mortar, artillery and now the direct tank assaults on his bunkers and fortified locations. Clearly the GIR was not surprised that they were here, though perhaps they were still not aware of their full numbers and disposition.

Although the Javelin and LAWS missiles his men employed were having a telling effect on the GIR armor and personnel carriers, there were simply not enough of them. Where was that American air support?

"Red dog, Red dog! There's a platoon of T-80s moving towards your right flank. Say your status."

Jabal knew that the numbers would soon tell on his forces. Without immediate air support, he was going to have to fall back very soon. At least the air assault on his position had finally ceased and he took this as a good sign, particularly with those lazy contrails now weaving and circling overhead. If they weren't firing on him, he figured they must be friends, and if they were friends, perhaps help would soon arrive.

Even as he surveyed the advancing GIR T-80 platoon off to Red-dog's right, he saw a number of missile launches from among the GIR forces. At first he was about to issue orders for his forces to respond, but then he saw that the missiles were traveling up into the air beyond his position. As this occurred, several vehicles that had fired those missiles exploded in bright flashes of light, followed seconds later by the sound waves from those explosions.

Above and behind him there was an explosion in the air as a US F-16 aircraft was hit. This produced fiery wreckage that rained from the sky on his positions. It also produced a parachute as the pilot ejected and came floating down behind his lines.

Within a minute, the leading echelon of GIR tanks and armored personnel carriers began exploding as more US Aircraft streaked in at low altitude and attacked the advancing columns. More and more tanks and armored personnel carriers began exploding and being ripped apart by U.S. air-launched munitions, including AGN-65A and -65C Maverick missiles, GBU-12D Paveway II laser-guided bombs, 30 millimeter cannon fire, M20 Rockeye cluster bombs, IAU rockets and MK82 general purpose bombs.

"Well, Jabal, there's your air support. Look at those fly-boys hammering them! We'd best make the most of it."

Jabal looked at his American "advisor" and nodded his head. The firepower was truly awesome and as more GIR vehicles were destroyed, and the rest veered off to unload their troops and take up defensive positions, Jabal began to have hope that their plan might work after all.

Just as this thought was forming, his radioman indicated he had a call from the government headquarters in Irbil. Jabal listened intently for a moment, put the radio hand set down, and then, with a sober look, he addressed Will Peterson.

"The large GIR forces which took Mosul yesterday are on the move. According to our intelligence, those forces completely destroyed our reserve mechanized division and are now advancing on Irbil and our undefended rear. Can U.S. Air Force attack missions be called in against those forces? It appears to be an entire armored corps."

Will knew that missions could be planned, but he also knew that such planning took time—a precious commodity of which they were running precariously short. Any aircraft devoted to such a mission (if there were any available) would have to fight their way in, just like the group that was supporting them right now. It was also likely that the GIR would soon be delivering another air attack. It was clear that neither side was able to maintain air superiority at this point in the battle.

"I'll get on the radio right now, Jabal, and try to arrange it. But I do not believe there are many assets close enough to get it done very quickly. We dare not divert any of these aircraft if we want to have a chance to hold this line. My recommendation is to presume that this is all we are going to get, and to make the most of it while we have it."

**November 3rd, 07:25 local time**  
**GIR assault forces**  
**Outside Irbil, Kurdistan**

Abduhl had never been so scared in all of his life. In the midst of exploding tanks and exploding armored personnel carriers, his unit and several of those around him had somehow been spared. They had dismounted in a rocky gully and had taken up defensive positions as the American attack aircraft pounded the lead elements of the assault division to which he was attached.

Just when he thought they might come away from the air assault untouched, one of the American aircraft found his group and started a steep bank to come around and attack them. His NCO indicated it was an American F-15E Strike Eagle.

“Everyone down! Hit the dirt now!” yelled the Abduhl’s NCO.

As the F-15E made its attack run, it used its GPU-5/A Gun pod which housed a GAU-13/A 30 mm cannon, to strafe Abduhl’s unit. There was a sound in the air like a large buzz saw, and scores of large “thuds” impacted all around him. The left side of Abduhl’s head was severely cut by a chunk of rock that exploded to his right. After the aircraft passed, when Abduhl looked up, he could hardly see anything because of all the dust in the air. As it cleared, he saw that his NCO was ruined, destroyed, turned into a bloody mass of meat with no appendages.

“Alright, form up on me! We have orders to move out.”

The Junior NCO took command and they got into their BTR-80, which had been shielded from the attack by two large rock outcroppings between which it had been parked. There were only four of the assault team and two of the crewmembers left to respond. The others had just been killed.

Five good men gone; in just a few seconds, thought Abduhl.

As he was stepping into their idling BTR-80, Abduhl noticed a number of flashes to his west and saw two American aircraft fall from the sky. As this occurred, several GIR MIG-29s streaked over their position.

“Our aircraft are back! Sir, look!”

The Junior NCO, demoralized by the extensive losses his squad and division had taken, was heartened as he stuck his head out and watched numerous GIR aircraft fly by.

“Yes, it seems help has arrived. I wish they had been here ten minutes ago. Come on, Abduhl, this day’s work is far from over.”

### **November 3rd, 18:00 local time**

#### **Outside of Irbil, Kurdistan**

With the return of large numbers of GIR aircraft, the American aircraft were forced to retire. The five F/A-18Cs and three F-15s flying CAP for the ground attack aircraft fought hard, but in the face of overwhelming numbers, and forewarned by their AWACS aircraft, they quickly broke off and retreated after a brief engagement.

Some of the American “ground pounders,” who were in the midst of making “last” attack runs, remained on station a little too long against the now disorganized 1st echelon of GIR ground forces. In so doing, they ensured their own demise, being caught off guard as scores of GIR aircraft filled the air above the valley, leaving them no place to run.

Even so, the numbers were lopsided as the US forces lost two more Hornets, two F-15s, three F-16s and two F-15Es in this engagement against six MIG-29s, four SU-27’s and five MIG-25s. The number of aircraft lost made no difference on the ground once the Americans departed. The GIR had regained air superiority over the battlefield. As the 2nd echelon of GIR mechanized forces pressed the attack, they were able to quickly drive Jabal and his Kurdistan forces from their positions defending Irbil and then begin advancing towards the city.

### **November 3rd, 17:00 local time**

#### **GIR Forces**

#### **Outskirts of Irbil, Kurdistan**

The Junior NCO who was now commanding Abduhl’s squad listened intently to his company commander over the radio. After a few seconds he hung up his hand set and turned to what was left of his squad in the BTR-80 that had carried them so far this day.

“By order of the Imam, the assault on Irbil has been unilaterally suspended.”

There were a number of audible moans, and a couple of “but why’s and: “but we have this scum in the palm of our hands. The NCO continued.

“Imam Hasan Sayeed will make a national statement at 20:00 hours explaining his intent. Apparently, his statement will be broadcast internationally. We will receive it over the command frequency right here in our unit.”

“Until then, we have been ordered to take up defensive positions above Irbil in these ridges south and east of the city. Apparently, our sister divisions, which have advanced to within fifteen kilometers of the city from the west, will take up positions there.”

“So, let’s get our gear in order. We will be able to restock ammunition and provisions at 22:00 hours. Until then, let’s set up our camp along the ridgeline, dig into our positions and await further orders. The Imam will address us at 20:00. Let’s get finished before then.”

### **November 3rd, 18:45 local time**

#### **Retreating Kurdistan force**

#### **North of Irbil, Kurdistan**

Jabal was leading his men overland to a strong defensive position in the mountains between Rayat and Aqrah. From there, if driven off again, they could quickly retreat into Turkey to continue the fight from exile.

Who would have thought that the mighty US forces would be pushed from the air twice in as many days? It was true that they had decimated many of the GIR’s aircraft in an awesome and terrible

display of firepower, but the GIR was apparently ready and willing to suffer such losses to achieve its goals. Now, the dream of an independent Kurdistan was drifting away like smoke in the wind.

As he pondered the best way to keep up the fight, Will Peterson, who had been talking into his satellite set, hung up and spoke.

“Jabal, US intelligence is reporting that the GIR has stopped its advance on Irbil. Apparently, Hasan Sayeed has made a unilateral decision and intends to deliver an address to the world in about an hour.”

Jabal was shocked. Irbil was the GIR’s for the taking. Its fall would spell the end of the push for Kurdistan independence. Outside of some harassing forces he had left behind to slow the advance, Jabal knew that the GIR forces could be in Irbil tonight.

“It will be interesting to find out what he has to say. I can think of no military reason for him to stop his advance and take the pressure off of us. Perhaps something has occurred on the diplomatic or economic front. Maybe your people have finally found some threat or lever that has influenced him.”

Will did not know, but he doubted the accuracy of Jabal’s speculation. The people at the Agency he had been talking to were as mystified as Jabal, which meant that whatever Hasan Sayeed’s reasons were, they were not being forced upon him by the United States. It was more likely that Sayeed saw some advantage to the GIR in taking this action, though what advantage could be gained by “pulling back” when one’s forces had the strategic momentum was hard to comprehend. Jabal, Will, and many others, particularly those in US intelligence, were left scratching their heads.

“Well, we’ll be able to listen if you want. The entire message is supposed to be only ten to fifteen minutes long, and they are going to pipe it through the satellite so we can hear it here.”

**November 3rd, 20:00 local time**

**Presidential Offices**

**Tehran, Greater Islamic Republic**

“Good evening. I have come before the people of the world this evening, and before my brothers and sisters of faith throughout Islam in particular, to express my deep sorrow for the hostilities gripping the northern regions of the former Iraq, and the attendant loss of life over the last two days. I express my sincerest sorrow to the families, friends, and countrymen of those who have fallen in combat, and those innocents who are inevitably displaced, injured, or killed by the ravages of war.”

“It is easy to indicate that such actions were appropriate and necessary due to the actions of a rebellious few. But, despite whatever justifications, despite whatever provocation, the loss of a father, a brother, a husband...or the tragic death and suffering of a sister, mother, or children, cannot be soothed or reconciled by such talk. Therefore, in an effort to end such tragedy in these regions, I have ordered all GIR forces to unilaterally cease their offensive operations. We will look to diplomacy resolve this issue now.”

“In that spirit, I will personally become involved with the negotiations.”

“Let me explain to those of my own faith more of the detail of my heartfelt reasons for doing this. It goes beyond the worthy desire which all the world recognizes to soothe the brokenhearted. There is a reference in the Holy Koran to the writings of the ancient prophet, Jasher, wherein Jasher speaks of the days during the rise of the Mahdi. It may interest many listening tonight that the prophet Jasher is also mentioned in the Jewish Talmud and the Christian Bible. Within the Shia faith, our Mullahs, senior clerics and Ayatollahs have had access to these writings for many centuries, and have used them as reference material to the Holy Koran. With respect to the current situation in which followers of Islam are warring against one another, let me quote the following from the words of Jasher:”

“In those days will the Mahdi arise and punish the infidels and the unfaithful with the heavy hand of Allah. But ere he can accomplish this, he shall make peace between his warring brothers and sisters.

“Yea in the midst of battle will he call a halt and himself become as a dove to them, uniting them and restoring them to the house of unity and faith. From thence will he then go forth, gird about with the armor of truth, like a stone breaking forth from the mountains, until it has cleansed and filled the entire earth.”

“My brothers and sisters in Irbil, Karkuk, Mosul and all of the regions round about. We must stop warring among ourselves! Can you not see that we are being manipulated by the decadent powers of Europe and America into this quarreling, so that we remain weak and divided before them? It is they who seek to keep us at odds. We must resist their manipulation. We must not fall prey to it.”

“Irbil, the capital, lies before the forces of the GIR. It is within our power to destroy it and ruthlessly put down this rebellion. But I shall not do it. No more shall the faithful kill the faithful. I call a halt. We represent the *Greater Islamic Republic!*”

“I will personally make a pilgrimage from Karkuk to Irbil, beginning next week, to resolve this issue through negotiation and diplomacy. I call on all the faithful leaders in the area to meet with me. Together we will resolve this issue peacefully.”

“For those who would interfere, I warn you: Though our aim is peace, though we seek not the invasion or destruction of other lands, we have proven our ability to resist your interference and to deter you in your vain attempts to divide us. We will not brook interference. We will resolve our issues among ourselves with peace, dignity and honor.”

“Good night, and may Allah rest your spirits and soothe your souls.”

**November 3rd, 10:16**

**Broadcast Studios, WNN Headquarters**

**New York City, New York**

As the final touches of makeup were applied in preparation for another Special Report, David Krenshaw reviewed in his mind the events of the past few days.

The many weeks of U.S. and allied buildup in Saudi Arabia and Turkey had culminated in hostilities two days ago. The surprising audacity of the GIR and its willingness to incur casualties as it met its objectives had surprised the world. The videos and reports from Maria at Incirlik Air Base in Turkey, as it was attacked by GIR aircraft, resulting in the destruction of that U.S. Air base—as well as the live feed of the deaths of Maria and her crew—were unsettling, and unprecedented.

How could one reconcile the expensive (in terms of human life and materiel) victory as GIR forces bore down on Irbil, followed by the shocking unilateral halt in that offensive, which seemed to be on the verge of accomplishing its costly mission? And now there was the amazing, unprecedented announcement that had just been made by Hasan Sayeed...Hasan Sayeed who had only been interviewed once by any western media organization...Hasan Sayeed who had given that exclusive interview to David Krenshaw himself.

In response to an urgent indication from one of the producers, the make up personnel moved away.

“Three, two, one...On Air!”

“Good morning. This is David Krenshaw with a Special Report from WNN. The leader of the GIR, Hasan Sayeed, has just made a startling announcement indicating a unilateral cessation of hostilities in and around the northern provinces of the former nation of Iraq.”

“With the success of the GIR offensive to bring these same provinces into line with the unification election results of two months ago, it was expected that the GIR would only have a mop up operation left after the capture of Irbil, the capital of the breakaway provinces. But, moments ago, Hasan Sayeed called a unilateral halt to that offensive and now indicates that he personally will lead a diplomatic delegation to Irbil. In his internationally broadcast announcement, which WNN aired earlier today, Sayeed appealed directly to the Islamic faithful in those provinces to join with him, indicating that this gesture of halting the offensive was tied to obscure and ancient prophecies in the Islamic faith.”

“Officials from the Republic of Kurdistan immediately accepted Sayeed’s cease fire proposal and his request for negotiations. In truth, given the tactical situation and defeated condition of their armed forces, they had little choice.”

“We are still awaiting the official U.S. response. There is no doubt that the GIR has the upper hand, both militarily and diplomatically, as a result of Hasan Sayeed’s humanitarian gesture. The real question now is whether he can maintain the advantage he enjoys.”

**November 3rd, same time**

**Situation Room, The White House**

**Washington, D.C.**

The President sat listening to the WNN report with his closest advisors and cabinet members. Alan Reeves, the Vice President, Fred Reissinger, the Secretary of State, Tim Hattering, the Secretary of Defense, John Bowers, the National Security Advisor, General Jeremy Stone, the Chairman of the Joint Chiefs and Mike Rowley, the Director of the CIA, were all listening with the President.

When the broadcast ended and the normal programming resumed, the President broke the quiet and somber mood of the gathering.

“Well, this Hasan Sayeed is a very shrewd operator. He has presented the Kurd leaders with a way out short of abject defeat, and he is effectively forestalling our “knock-out” punch to his air assets within his borders. Jeremy, have we got those airfields targeted?”

Over the last two days, General Jeremy Stone had spent many hours listening to advisors and planners of all types. Personnel at the War College, personnel from the School of Advanced Military Studies (SAMS), national security advisors, advisors from every branch of the armed forces at the Pentagon and, of course, the planners from Central Command themselves had all participated.

After the first day of failing to achieve any of their objectives, the second day had been a partial success. More importantly, the second day had helped pinpoint the location of several of the airfields within the former borders of Iraq and Iran from which the massive numbers of GIR aircraft were originating. Analysis of the last two days had given America and her allies a pretty good idea of when the aircraft were launching each day. This intelligence had led to the planning of massive raids on

those airfields for the next morning. Those raids would include cruise missile launches from the Navy and from Air force B1-B Lancers, followed by the launching of strike packages from the USS Carl Vinson in the Mediterranean and from the Izmir Air Base.

"Mr. President, Central Command is prepared to give the launch order for this evening's raid at 3:30 this afternoon. I recommend we give the order in spite of the unilateral cease-fire by the GIR. We need to thin the GIR aircraft numbers out faster. The best time to do that is while they are on the ground. Besides, we need to teach these bastards a hard lesson about messing with the United States of America."

Norm Weisskopf knew his Secretary of State wanted to respond to the General, but he held his hand up to indicate that he, Weisskopf, had the floor, and he was not about to relinquish it.

"Fred, I know what you are going to say, and at this point I have to agree with you, irrespective of how much I would like to allow the General to carry the fight to those airfields for both of the reasons he gave."

"However, we would be hard pressed to defend such an action in the face of Sayeed's proposal. Particularly since we are not in a declared state of war, and particularly since his forces have stood down."

"Believe me, from my own time over there, I have heard this rhetoric from the more fundamental Muslims over and over. Such cunning strategizing has been going on a long time, and was a major concern before and during Desert Storm. Hasan Sayeed considers the "unfaithful" to be Saudi Arabia, the UAR, Turkey, Egypt and anyone else who is willing to work with the west. In this regard, Sayeed is no different than Saddam Hussein, except that he is not corrupt, and he is much more dangerous than we ever conceived Hussein of being. In a similar fashion, his desire to unite all of Islam under his fundamental interpretations are no different that Usama bin Laden's were, except Hasan Sayeed is not off trying to do it on his own. He has the full support of the main stream clerics and several Islamic governments behind him. He is going about his goal to unite Islam in a much more strategic manner. Despite the death and destruction Usama bin Laden caused, I believe Hasan Sayeed has the potential of being much more dangerous to this country."

"Mike, what is your intelligence telling you about Sayeed? Where's he taking this thing? What is "punishing" the unfaithful going to mean?"

Mike Rowley had anticipated this line of discussion. His people had been analyzing Sayeed specifically. What the President really was asking was, "How big a threat is Hasan Sayeed himself?"

"Mr. President, as you know, Sayeed has the unparalleled and unprecedented support of both the Shia and Sunni sects of Islam. The people see him as their Mahdi—in plain English that translates pretty much into "Messiah." An analysis of their prophecies and beliefs, shows us that the majority of Muslims believe that the Mahdi will unite the faithful in Islam in a massive Jihad, or Holy War, against the unfaithful and the infidels."

"We at the Agency believe that Hasan Sayeed, on his own, will develop into a very dangerous threat to world stability, world peace and to our own vital national interests. When coupled with his ties to the CAS in general, and to Beijing in particular, the situation has the potential of developing into a bigger threat to the United States than the Axis powers of World War II, or the Soviet Union of the Cold War era."

President Weisskopf had already come to this conclusion, especially the part coupling Jien Zenim and Hasan Sayeed.

"Let's talk about Red China in a moment. Mike, we still have that team on the ground in Kurdistan, right? What is their location and status?"

Mike Rowley thought about the team he had in Iraq.

"Yes, Sir. Eight former Special Forces personnel, most of them former Delta Force. The leader is one of our best field operatives. During the blocking actions they had been divided up between the various divisions as forward air controllers for our aircraft, but are now all reunited with Jabal's headquarters company north of Irbil."

The General mentally envisioned a map of the region.

"Good, Mike. I would like you and John to meet with me after this meeting to discuss the most expedient method of extracting that team. Let's meet right here."

"Beyond that, Fred, I believe that we need to prepare for the eventuality that Kurdistan is going to capitulate, and agree to relinquish its independence and unite with the GIR. I want to know what diplomatic and economic steps we can take to demonstrate our firm disagreement. Clearly the Kurds are being coerced into this. In addition, discreetly arrange an offer for the existing leaders there to have the opportunity to take refuge under our protection and continue their efforts from exile. Please coordinate this."

"Now, a final point I want to make before we adjourn. The Red Chinese are continuing to build their military at a break-neck pace. Their launching of this new "Sea Control Carrier" is indicative of their intentions."

"I know everyone is busy and extremely preoccupied with the situation in the Mid East. That is understandable, particularly given our buildup there, and the current confrontation. At the same time,

we cannot afford to take our eyes off of what China is doing. John, make sure the NRO and our other reconnaissance assets don't forget that."

"Specifically, I want to know how quickly they are going to launch these new carriers, and I want to know how in the world they are going to support them. Somewhere there's a logistics chain built up to maintain these vessels and their carrier wings. I want to know the weak links in that chain."

**November 3rd, 10:37**

**Situation Room, The White House  
Washington, D.C.**

"OK, Mike. What is the likelihood that your team can get into position along Sayeed's intended path and observe his "pilgrimage" before we extract them?"

Mike Rowley weighed carefully what his President was asking him.

"Mr. President, I can order them to accomplish such a task very quickly. I have full confidence that they could take up the best possible position for such observation within twenty-four hours. But Mr. President, what is the purpose of such an observation? WNN and every other major media outlet will probably carry Sayeed's "walk" live."

The President understood exactly what he had to order, and he knew these two men were among the most trusted whom he knew.

"Mike and John, I want this perfectly understood. Our duty is to protect and defend the Constitution of the United States and bear true faith and allegiance to the same. We have all served in the uniform of our country in allegiance to that oath. We are to defend said Constitution, and, by extension, the life, liberty and well being of our nation and its citizens against all enemies, foreign and domestic. Do both of you concur? John?"

John already had deduced what was coming. From the moment the President had asked about Sayeed's personal threat, he had guessed where this was leading. When the President asked about that CIA team in Kurdistan, it had removed all doubt.

"Yes, Mr. President. That is exactly how I perceive it."

The President turned back towards Mike.

"Mike?"

Mike knew where this was going as well. He had personally known Tony, whose cover name was Will Peterson, for eight years, and had known of him for long before that. There wasn't a better field operations man to have on the ground over there.

"Mr. President, of course I agree 100% with your assessment."

The President was gratified at the unwavering dedication of these two men. They knew where he was going—where he *had* to go, and they were steady as a rock in the face of it.

"OK, then, with that understanding, I want your team led by... is it Tony?"

At Mike Rowley's nod, the President continued.

"Yes. Well, inform Tony that he has NCA approval to take whatever measures he deems necessary to protect and defend the vital interests of this nation against its enemies while he is observing near Irbil."

Mike Rowley had to be sure of the full implications. He had to voice his need for complete comprehension.

"Mr. President, you understand the likely implications? The likely consequences for these men?"

Norm Weisskopf was no stranger to command decisions, or the mortal consequences they could carry. He had agonized over such decisions involving hundreds of thousands of young Americans sixteen years earlier. But he had never wavered or faltered in that decision-making capacity. Any man who had ever served under his command, who had any knowledge of him, knew that the "General" would gladly stand in for them in *any* duty he ordered them to fulfill. It was no different now.

"Yes, Mike. I understand all too well the likely consequences. Pass the order along. After making the observations, and executing any measures he deems necessary, have them get out of there and egress to the nearest pick-up point—and, Mike, tell Tony directly from me, God's speed."

**November 5th, 15:37 local time**

**A bluff above the main highway to Karkuk  
Irbil, Kurdistan**

There was a *lot* of security. Anything within about a thousand meters of the highway was literally blanketed by GIR security forces. Infantry, APC's, tanks stationed at critical junctures and a lot of helicopters flying up and down the route on both sides. Although the vast majority of GIR troops in the vicinity had not advanced beyond the lines established by Hasan Sayeed's unilateral cease-fire declaration. He apparently was more than willing to allow a strong contingent to line the road to ensure the security aspect of his intended "pilgrimage" into Irbil.

Will Peterson viewed the scene from 1800 meters away. He was clad in a complete desert ghillie suit and had his egress route planned. Jabal had insisted on serving as his security, and they were both in the firing position they had chosen the day before—a location that overlooked the main road. The

rest of Peterson's team, along with Jabal's men, were waiting another four hundred meters behind them, further into the hills. They would serve as additional security during their egress, if required.

Very early in the morning on the day before, the orders had come in over the satellite set, direct from Washington. It had not taken Will more than an instant to understand exactly what he was being ordered to do. He contemplated those orders now as he awaited Hasan Sayeed's entourage.

"You will take up a position to observe the advance of GIR military and Command and Control (C&C) assets towards Irbil. You are authorized to act with extreme prejudice in engaging any high-value targets that pose a threat to the national security interests of the United States. After observing the passage of GIR C&C, and taking any action deemed necessary, egress the area and arrange for pick-up at the nearest landing zone (LZ)."

Will's weapon of choice in very long-range situations like this was the "Windrunner" .50 cal. Compact Tactical Sniper Rifle (CTSR). He had arranged for the CIA to purchase one for him some years ago. Will believed this weapon to be far superior to the military's M82A1A .50 cal. sniper rifle. The CTSR was more accurate at longer range than the M82A1A. In tests at the Aberdeen Proving Grounds it had recorded an incredible 1/2-minute of angle (MOA) at over 1000 yards. In addition, the CTSR had a removable barrel with fixed-head spacing, was made of 4140 chromoly heat-treated steel, had an adjustable sliding stock with adjustable cheek rest, and weighed in at less than thirty pounds—including the rifle, bipod and scope. Will had a standard M14 bipod mounted on the rifle and used a Leupold SN-1/TAR Long Range Precision Sniper Optical System.

"I have them, Will. There are two T80 tanks followed by a BTR-80 command vehicle just coming out from behind that hill to the south. There are BMP-2's on either side of the road and another BTR-80 and two tanks bringing up the rear. They're moving slow, and there is definitely a group of individuals walking on the road in the middle of the formation."

"Yes! There's Sayeed. He's dressed in the lightly colored, robe walking in the middle of a number of Mullahs and a security detachment."

Jabal thought about what he'd just said. A number of Mullah's, probably even Ayatollahs, were with Sayeed; men of the faith: Jabal's spiritual leaders. But of course they would be. They had officially recognized him as the Imam for all of Islam.

"OK, Jabal. Great. I've got him. I make the range just under two miles. He'll come to us."

**November 5th, 15:42 local time**

**On the main highway to Karkuk**

**Irbil, Kurdistan**

Hasan Sayeed was closer to Irbil and his dream of a united Islam. Thus far, his plans had gone amazingly well. Surely the hand of Allah was with him.

Jien Zenim, the Chinese leader, had called him personally and asked him to reconsider this "pilgrimage." But Jien Zenim did not understand matters of faith. He was a godless infidel, but he was a very powerful and wise infidel whose influence had opened many doors. Nonetheless, Jien Zenim had not been happy at Hasan's insistence that this pilgrimage, and direct involvement, was necessary if Hasan was going to bring closure to this "rebellion," this fracture with the Kurds.

Of course Hasan's own staff and many of the faithful had also asked him to reconsider, fearing for his life. He understood their concerns, but did not share them. His objective was to see the fulfillment of the burning desire in his breast, the fulfillment of what the internal, eternal voice whispered to him: Unite Islam! Purge the unfaithful! Excise the infidel! All else, even his own life, or at the least the risks to his life, were secondary.

In Hasan's mind, the choices were simple. If Allah wanted him to complete his calling, he would. If, in Allah's wisdom, he was not to complete it, but was to die in the attempt...well, what of it? He would not try to defy the will of Allah. He had learned long ago the useless nature of such a fight by seeing others engaged in it.

So, here he was within five kilometers of the outskirts of Irbil. Tonight he would be in the city, preparing for tomorrow's negotiations with the defeated Kurd leaders. He had every confidence those negotiations would go well, and he intended to show great compassion and mercy to the Kurds in general, although a few harsh examples would have to be made.

As these thoughts passed through his mind, he turned to get a better view of his surroundings. This close to Irbil, more and more people were beginning to gather along the security perimeter that had been established by his forces. In addition, a number of western news teams were present.

Viewed from this particular location, to his right there was a long sloping rise to a bluff overlooking the road a little less than two kilometers away. The bluff itself appeared to be outside the direct security area. Strange, Hasan thought. Looking up there just now he could have sworn he had seen a glint of sunlight reflecting off of something for just an instant.

Hasan Sayeed had been in mortal danger too many times not to give heed to the sinking sensation that suddenly called out for recognition from the pit of his stomach. While he continued to gaze, he spoke to his good friend, the foreign minister.

“Sadiq, have the commander of the security attachment notified. I want him to send a squad of men up to that bluff. I just saw a glint of sunlight up there that is very out of place.”

**November 5th, 15:43 local time**

**The bluff above the main highway to Karkuk**

**Irbil, Kurdistan**

As Will Peterson saw the upturned face, he took a deep breath and slowly began to release it as he prepared to apply pressure to the trigger. As he did so, Jabal, who was kneeling behind him, thought, “The 12th Imam...he will make peace with his brothers...he will call a halt to the fighting amongst the faithful...he will unite *all* of Islam. Yes, he *will* unite all of Islam!”

As Jabal thought this, Will was just beginning to apply pressure to the trigger as he focused through his scope and became “one” with his rifle. While doing so he thought, “There, just like that, you SOB. Come on now. Hold that pose and I’ll...”

“BANG!”

Those were Will Peterson’s last living thoughts as a 9mm bullet from Jabal’s pistol slammed into the back of his head, destroying his brain stem, killing him instantly.

Jabal knelt over the now-dead body of the CIA operative and former Delta Force commander, as the report of the pistol echoed down the valley and reached the road. The procession abruptly stopped. Security guards jumped on top of Hasan and rode him to the ground, covering and protecting his body with their own. Others, both from the road and from the surrounding security forces, looked towards the firing position, searching for the source of the shot.

“Will, you were a good soldier, but I have finally come to see you for the infidel you were in the service of the Great Satan.”

Laying the pistol down, Jabal laid out spread-eagle on the ground as the nearest soldiers, APC’s and helicopters converged on his position.

**November 5th, 15:45 local time**

**Behind the bluff above the main highway to Karkuk**

**Irbil, Kurdistan**

As soon as the shot rang out, the other members of the CIA team knew something had gone horribly wrong. That was no rifle shot. Their training and instructions kicked in immediately. At a signal from their second in command, Lt. Riley Adams, the team quickly issued orders to their Kurd compatriots and quietly turned away, back into the scrub-covered hills. Using the cover of the scrub brush...they successfully moved away while the attention of the security forces was focused on the firing position where Jabal now lay on the ground.

Within two days, the remainder of the team would be picked up by a specially configured CV-22 Osprey tilt-rotor aircraft which had been outfitted for the CIA. In it, they were carried away from the short-lived Republic of Kurdistan, which by the time they landed in Turkey, no longer existed.

**November 5th, 22:55 local time**

**Special Conference Room, University of Salah al-Din**

**Irbil, Kurdistan**

“My Imam, there is no identification on the body of the shooter. The body itself is that of a male in his late thirties whose exact origins are indeterminate, though his dental work would indicate western origins, probably the United States, perhaps England or Israel. The weapon is an American made .50 cal sniper rifle, but not the type normally carried by U.S. military personnel.”

“There is no doubt that this individual was positioned to make an attempt on your life. If the rebel, Jabal, had not killed him, it is likely that the assassin would have succeeded in his attempt.”

Hasan Sayeed considered the report from the commander of his security detachment. Someone, probably the Americans, perhaps the Israelis, was getting very concerned about him. Clearly, Allah was watching over him and his call to unite the faithful.

“And what of this Jabal? Is he talking?”

The security commander had spent several hours watching the interrogation of Jabal, who was well known as the military leader of the people they had been sent here to subdue. The interrogation had gone smoothly. Jabal was more than willing to cooperate. There had been no need for extra persuasive measures or threats. Everything Jabal was telling them checked out, in as far as their own security and intelligence apparatus allowed them to verify it on such short notice.

“My Imam, Jabal has indicated that this was a CIA attempt on your life, and that he could not allow it to proceed. He indicated that the name of the dead man is Will Peterson, but we have found no such name in our records, or in any review of the data we have on known American operatives. It is likely that this name was a cover.”

“Nonetheless, Jabal pointed out to us where other members of this team had been in hiding and his information has already allowed us to capture a number of the rebels, although any other Americans are still at large. Jabal insists that he would like to speak with the personnel we are

capturing. In fact he wants to speak to all of the Kurds, to convince them of the need to take up your cause and join in a united Islam.”

Hasan could see that, if this turned out to be true, and Jabal had indeed made a decision based on the true faith, there was a potential political, spiritual and international coup of major proportions to be enjoyed here. Jabal had been an effective leader for so many years in the Kurd efforts to gain their independence from Saddam Hussein. He had led well in this encounter with Hasan’s own GIR forces and, if the American plans for air superiority had materialized, he probably would have been successful in preventing the GIR victory. If he was indeed convinced that the call to unite Islam was divine, and of Hasan’s own role in that call as Imam...

“Commander, I would like you to bring Jabal here now so that I can speak with him and interrogate him personally. The Ayatollah Ol Osam Sadiq Shiraziha and I will talk with him here in private, while you and your men wait just outside the door. Leave one of your side arms here with us, but I do not believe we will find use for it.”

Later that night, after much discussion and a lot of pointed and in-depth questioning by Hasan, the plans for the Kurds were complete. With Jabal’s unqualified support and urging, the unification of the Kurds with the GIR would be a foregone conclusion. Considering Jabal’s knowledge of the Americans, and his leadership and strategy capabilities, the leadership role for GIR forces in this region was also settled.

On the 5<sup>th</sup> of November, when Hasan made his announcement regarding the whole of Iraq becoming an official part of the GIR, closely followed by Jabal’s speech to the world’s press, the American’s would know. They would know that their plans to thwart the will of Allah were in complete disarray and a total failure. They would also know that Hasan Sayeed knew exactly what they had attempted today on the road to Irbil. Hasan vowed before Allah that those actions would come back to haunt them.

## Chapter 7

*"It is more honorable to repair a wrong than to persist in it."- Jefferson*

**November 6th, 10:55**

**CBC, "Face the Press"**

**New York City, New York**

"...this President, like so many other Presidents from his party, has found it necessary to go sticking our nose into the affairs of other nations. The United Nations' General Assembly voted overwhelmingly to allow the elections in Iraq and Pakistan to stand. Many of us in the Senate and in the House opposed the recognition of Kurdistan. If it was so important, why didn't this same President, when he was the General in charge of all armed forces in Desert Storm, demand his President allow the creation of the so called "Republic of Kurdistan" back then? Or why didn't he insist on it as an advisor at the conclusion of the Iraqi Freedom Operation a short two and one half years ago?"

"I'll tell you why he didn't. It's because the world community would no more accept it then than it does now. So, instead of allowing a nation of people to vote their conscience and unite with people of like faith and culture, this President too quickly sends in the "Marines" and we get our nose bloodied in the worst air battle disaster since World War II, and for what? The Kurdish people are now willing to unite with the GIR anyway!"

"I'll tell you, it's preposterous. I am calling on my colleagues in the Senate and the House to conduct a full investigation. I believe we have the votes in the Senate to force a vote on censure, and that's exactly what I intend to do.

"The American people I represent are not interested in us forcing our will and our interpretation of the world view on other peoples. They are interested in maintaining low interest rates and high stock values, and in expanding our trade relations with the emerging nations, with organizations like the Coalition of Asian States. This president has taken actions that are damaging to all of these interests."

As the senior Senator from Massachusetts completed his comments, the commentator on the popular Sunday morning news show turned to his other guest, the Secretary of State, Fred Reissinger.

"Well, Mr. Secretary, there you have a fairly stinging rebuke and a threat of censure by one of the leading opposition Senators. How is the Administration reading the apparent disapproval of its actions in the Persian Gulf by many in the Congress, and, according to the polls, a growing percentage of American citizens as well? How does the administration plan to respond?"

Fred Reissinger was a consummate negotiator, but his loyalties were immovable, not only in relation to his friend and boss, the President, but also on principle. This was something he felt sure could not be said for far too many of the career politicians on both sides of the aisle with whom he rubbed shoulders on an almost daily basis. In the Secretary's opinion, the lack of steadfastness to principle was especially true of the inhabitants of the other side of the aisle, and was most particularly apparent in this individual with whom he shared the stage on this morning's show.

"With all due respect to the Senator from Massachusetts, the people of the Kurdish region also voted, and overwhelming I might add, to declare their independence. I find it ironic that the Senator would refer back to the Gulf War, and actions taken during that time by then General Weisskopf. At that time, General Weisskopf was under a Constitutional requirement, as are all of our service personnel, to obey the lawful orders of his civilian leadership. Would the Senator have had him disobey those orders? No...Norm Weisskopf knows where his duty lies, and I defy anyone, including the good senator, to compare their record with that of the President in this regard.

"Well, we're now fifteen years removed from that conflict and Norm Weisskopf is the civilian leadership, the National Command Authority. He recognizes, along with many leaders in our nation and around the world, the great threat that is building in the Middle East. We have an Islamic union comprised of many states, a number of which have trained and harbored terrorists who have killed innocent Americans in cold blood. An Islamic state with nuclear weapons and rapidly expanding borders. Their influence and rapidly expanding military capabilities are perilously close to interfering with our own vital national interests and those of our friends and allies.

"With respect to the economic conditions, we are at a crossroads and have important choices to make. We can either continue a self-destructive policy of open trade with those nations who show by their actions that they use our generosity against us, or we can take a position to ensure that those trade relations are consistent with America's best interests, both now and in the future. I will not attempt to intrude on Secretary Gage's turf, or to speak for him. But I can say that Russell Gage is a recognized scholar of economics. He understands the relation between trade issues and international politics perhaps better than anyone who has ever served as Secretary of the Treasury. It is his contention that the policy of appeasement and "free trade," at the expense of "fair trade," is ultimately destructive to our economy. The NEC to my knowledge has his full confidence."

At this point the CBC commentator interjected.

“Yes, but isn’t it true, Mr. Secretary, that the European Union, outside of our historically close ties to Great Britain, is very nervous about the current situation in the Mid East? In addition, what of the Senator’s contention regarding the announcement from Irbil this morning that they will unite with the GIR? In fact, one of our former staunchest allies in the region, a man your administration has backed, supported and depended upon, has now announced his support of unification. Jabal Talabari was the head of the Patriotic Kurdistan Front, and then, after their declaration of independence, he served as the General in charge of the Republic of Kurdistan armed forces. Let me quote from his announcement yesterday:

“I accept the appointment by Imam Hasan Sayeed as the military leader of this region of the GIR. I announce my loyalty to him and to the goal of Islamic unification. I urge all Kurdish people and others living in the region to support our decision to unify with the Greater Islamic Republic and vote “yes” in the referendum vote next week.”

“Now, let me say just a word about the drastic change I personally have made. I was raised as a faithful Sunni. I am devout in the faith. I am also of Kurdish descent. I have fought hard for many years for what I believed to be best for the Kurdish people. We fought the tyrant Saddam Hussein, and we were supported in that fight by other powers, principally the United States. I was led to believe, and indoctrinated by those supporting us, that Hasan Sayeed was just another Hussein. But, to use the western saying, “actions speak louder than words.” Hasan Sayeed’s actions have spoken louder than all the words Hussein ever uttered, and louder than the foreign voices from the west.”

“His unilateral cease fire and his personal involvement with the negotiations ignited a spark within my heart. He had it within his power to rout us, to utterly destroy us, and yet he chose, even as prophesy indicated, to bind up the wounds and make peace with his brothers and sisters. Peace and unity in the faith are the best things for the Kurdish people. Hasan Sayeed offers this. The west offers us only more conflict and division. I came to the conclusion that I must reject what they now offer. I warn them, and their agents, to cease seeking to instigate divisiveness and conflict amongst our people.”

“It is our intent to defuse the military situation and deploy the forces of this region of the GIR in a defensive posture. Those forces necessary to secure our borders and rebuild our infrastructure will remain. Other forces will be re-deployed throughout the GIR as indicated by our supreme military council, led by the Imam himself. The movement of troops and equipment and materiel with respect to these goals will begin in the next few days. Thank you.”

“Secretary Reissinger, how does the administration respond to this? Here you have a former ally, a key player in this administration’s hopes to limit the growth of the GIR, turning one hundred and eighty degrees and now supporting the GIR’s expansion?”

The Secretary of State had been up since the early morning hours as news of the agreement in Irbil filtered out. He had spent several hours with the President and his key cabinet members and advisors mapping out their strategy and response. He had, in fact, already voiced that response just a few minutes ago in answer to the liberal Senator from Massachusetts.

“I have already addressed this issue. We are, of course, saddened by this turn of events. Jabal Talabari and his people were staring down the barrel of a loaded GIR gun. I view any of the so-called “agreements” coming out of Irbil as decisions made under duress. Clearly, when not under such duress, the people of Kurdistan voted overwhelmingly to be independent. I believe that is what we should focus on.”

“I cannot speak for the Secretary of Defense or the Joint Chiefs. We will watch the diplomatic scene carefully and continue to offer the leaders in the Republic of Kurdistan safe haven and sanctuary with our forces.”

With the flashing of the red warning light indicating that there were only two minutes left in the program, the commentator interjected.

“Thank you Mr. Secretary. This crisis has once again captured the attention of our nation and its people. It has also sharply divided many.”

“WNN will continue to carry live updates along with our interviews from both sides of the political aisle. Again, Mr. Secretary of State, Mr. Senator, we thank you both for your time and your comments.”

### **November 14th, 16:12 local time**

#### **Off the coast of India**

#### **80 Kilometers west of Cochin**

The two fleets sailed in formation a little less than 10 kilometers apart. These joint operations were a first, and many interested eyes were observing. Peering from above were the satellites: American, Russian, Israeli, French and Japanese. On the surface of the ocean, two American Perry class frigates and an improved Los Angeles class attack submarine were shadowing the battle groups, along with several ships and submarines from other nations.

The object of all of this interest was the joint naval exercise between India and the People's Republic of China. This was a major exercise that included the largest and most modern combatants from each nation.

The Indians had both of their carriers involved. One was the older jump jet carrier, Viraat, which the British launched as Hermes in 1953 and the Italians purchased in 1986. The Viraat had recently completed a service life extension and been modernized extensively.

The other was the new Indian carrier, Cochin, which the Russians had launched as the Baku and the Indians purchased in 2000. The Indian government had spent three years rebuilding and refitting the former Russian VTOL carrier into a Short Take-off and Landing (STOL) carrier with a ski jump bow. Now, the Cochin was on her sea trials and would ultimately replace the Viraat after a second modern carrier was completed.

The Viraat carried a complement of twelve Sea Harrier VTOL aircraft, while the Cochin carried eighteen MIG-29 attack/fighter aircraft. Escorting the two carriers were eight very capable surface combatants.

These included two of the modern Delhi guided missile destroyers (DDG's), two Rajput class DDG's (which had been upgraded from former Russian Kashin class DDG's), two of the newer Kashmir class guided missile frigates (FFG's) and two of the improved Godavari class FFG's.

All of these destroyers and frigates were the most modern classes in the Indian navy and were equipped with the latest radar and sonar, as well as modern anti-aircraft and surface to surface missile systems. In addition, the Indians had the Rajaba and Jyoti replenishment ships taking part in the exercises.

The centerpiece of the Chinese group was the brand new Beijing sea control carrier, which was also conducting her sea trials. The Beijing was carrying a minimal compliment of twelve SU-33s, but was capable of carrying a total of thirty attack and support aircraft. These included the SU-33 derivatives now being license manufactured in China, as well as SU-25 "Frogfoot" attack aircraft and a new STOL early warning (AEW) aircraft the Chinese had recently developed. The Beijing was accompanied by two of the new Hangzhou class DDG's, which were upgrades of the most modern Russian Sovremenny designs, two of the indigenous and very capable PRC Luhai class DDG's and four Jiangwei-II class FFG's. With the aircraft carrier and its eight escorts, this was the most powerful Chinese naval group ever assembled.

The exercises were scheduled to last for ten days. During that time, joint air operations, joint anti-submarine warfare (ASW) operations, joint oceangoing maneuvers and joint replenishment exercises would all be conducted. Early on in the exercises, a joint CAP was established over the fleets that consisted of two close-in Indian Sea Harriers and MIG-29s augmented by three SU-33s flying out further from the fleet (40–70 kilometers) along the primary and secondary threat axis. These units were rotated and configured differently depending on the type of exercise being conducted. Scenarios representing cruise missile defense, air defense, war at sea, ground support and forced transit were all exercised.

### **November 16th, 16:12 local time**

#### **COSCO Fabrication Facilities**

##### **Port of Macua, PRC**

The original fabrication had occurred several months ago in the small city of JingCheng near the confluence of the Yenshi Xi and Xingiao He Rivers in southeastern China. There, in a small fiberglass research and manufacturing facility owned by COSCO, a mold had been developed using rigid polyurethane foam as the primary material. No gelcoat was required, which made the entire process less expensive, in keeping with the planned disposable nature of the finished product.

Once composition and design of the principal product had been decided upon, the engineers in JingCheng began testing various inserts to help strengthen and provide hard points for the addition of various types of equipment—and weapons. As a result, the product had numerous strengthened areas where various types and sizes of steel plate inserts could be fitted for the desired purposes.

Now, after significant testing and further cost reduction and manufacturing improvements, the master mold was complete and the process was ready to be implemented into mass production at many facilities. That production would occur rapidly in various places along the Chinese coasts and along several rivers that emptied into the South China Sea. Literally scores of production facilities were being prepared to mass-produce these products by the thousands.

There would be four principal production regions, with a principal gathering and outfitting facility for each region. These principal gathering and outfitting facilities were established as follows along the South China Sea Coast of the PRC: One of the facilities was at Shantou, which included twenty feeder facilities along the Han Jiang River. Another facility was at Mawei, which included thirty-seven feeder facilities along the Min Jiang River. A third facility was at Xiamen, which included forty-three facilities along the Jiulong Jieng River. Xiamen also included the research facility at Jingcheng. The final facility was here at Macua which included its thirty-six feeder facilities along the Xi Jiang River.

Now, at long last, the molds and materiel were in place. The senior Director over this project looked at the manufacturing and gathering facilities that had been erected here in Macau.

“So, Tang, when will your production crews be ready? Your facility will kick off the mass production and will generate the initial quality benchmarks and other test results that will serve as a template for the other three principal gathering points. The schedule calls for initial production to start on November 30th, but it appears that you are ahead of schedule.”

Tang Xinsheng was indeed ahead of schedule. He was proud of what his workers had accomplished, and he believed that the quality metrics would prove their competence and expertise once production started. He planned to achieve the highest marks both for quality and for quantity.

“Minister and Senior Director Qiao. We are ahead of schedule and will commence phased production next Monday, the 21st. We expect to reach full production by December 12th.”

In addition to being a Senior Director within the COSCO Group, Qiao Wenzhong was also the Assistant Vice Minister of internal production for the Guangdong Province of the People’s Republic of China. He was impressed and satisfied that Tang had this critical portion of the project under control. The other ministers and the Politburo itself would also be gratified and impressed.

“This is very good news, Tang. What rates of production do you foresee when your facility is fully completed and functional?”

Tang had those figures with him. He opened his notebook and pulled out a production folder. After looking at several lines of printout on a number of pages, he answered Qiao.

“Minister Qiao, the addition and testing of the removable turbine engines, the water jets, the navigation and communication controls and equipment, defensive electronics and radar, the living facilities and plumbing, the ramp controls and the weapons will occur in final assembly. As you know this adds several days to the entire process. But once we get the production lines fully operational, I anticipate we will be producing one hundred of these landing craft per week here in the Macau operation.”

For Qiao Wenzhong, this was excellent news. If the other three facilities could approach similar production rates, then the People’s Republic of China would be turning out between four and five hundred thirty-meter-long landing craft per week by mid December.

These landing craft, officially designated as the Project 071, Yunana II class, would be armed with one HQ-7 SAM system containing eight missiles, one multiple 122mm barrage rocket launcher and two 25mm DP (dual purpose) guns. They would be capable of carrying 150 tons of materiel. This could consist of two tanks and two squads of soldiers, two APC’s and three squads of soldiers or six squads of soldiers, over a range of 150–250 km for up to ten days of endurance.

The Yunana II class could also be carried on board numerous ships of the PLAN. Four of them would fit in the well deck of the new Amphibious Assault ships that were just beginning to come off their production lines. With the use of large davit systems or cranes, they could also be carried on most cargo and container ships available to the PLAN from COSCO’s large fleet. The design was essentially a lengthened version of the Yunana class, made of fiberglass construction with metal reinforcement and turbine engines. They were designed to be very seaworthy in wind force 6–7 and to be expendable and easy to manufacture in mass quantities.

“Outstanding, Tang. You are doing excellent work here and it will not go unnoticed or unrewarded. Please, carry on with the tour.”

**November 19, 18:35**

### **Sea King Boat Company, Mid West Region St. Louis, Missouri**

Marge Basar stared at the monitor of her computer as she read the latest sales figures for the mid west region of the Sea King Boat company. Marge was the regional director of sales, and this year was going to be the best year she had experienced while working at Sea King, as well as one of the best years in the company’s thirty-seven year history. Dealers all over the mid-west were selling Sea King boats at a record clip.

Sales of the thirty-two foot cruiser model were up fifteen percent over the previous year, and, on average, the cruisers being ordered were being outfitted with many of the higher-end options. Each of these boats was powered by two Cummins turbo diesel engines and could cruise all day long at over thirty knots, while carrying six passengers and over a ton of gear.

In addition to the sales of the cruisers, in the last three months five of Sea King’s very expensive, top of the line houseboats had been ordered. These forty-two foot behemoths were powered by twin Mercury 250 horsepower outboards and were the apex of the luxury boat builders’ craft. Each one was capable of sleeping eight passengers and could carry a load of over three thousand pounds, all while maintaining a steady twelve knots.

The orders had come in from dealers all along the Mississippi River. A few phone calls to the owners of those marine dealers had verified additional reasons for Marge to be pleased. The buyers of these boats had all ordered top-of-the-line communication equipment along with some very

sophisticated navigation equipment to go with their “package.” All of this would add very nicely to the mid west region’s bottom line.

If Marge could manage a sixth houseboat in the region before the end of the year, the mid west region would have sold more of the 42-foot houseboats in the second half of this year than the entire company had sold in any entire preceding year. The bonus money alone would be great, and the credits she accrued towards the company’s annual sales trip would ensure that she would earn one of those outside cabins on the luxury deck on her way to the Bahamas.

“I’ll just have to keep those dealers hopping for another six weeks or so to make this a sure thing,” she thought.

Marge picked up the phone to call the CFO of Sea King Boats and give him the good news.

“These sales are just dynamite,” she thought to herself as she dialed the correct extension.

Marge Basar had no idea how prophetic that would turn out to be.

**November 22, 10:25**

**Marine Recruiting Office, Boise State University**

**Boise, Idaho**

Sergeant Ken Bennett put his hand over the phone and leaned over his desk.

“Leon, this is Charlie Jenkins on the phone. He wants to talk to you.”

As Sergeant Bennett handed the phone to Leon, he turned his attention to Billy Simmons.

“Well, Billy, why don’t we move over to the conference room and sit down and talk while Leon is on the phone? How’s your Dad? It seems like his unit got over to Saudi just in time for them to watch the end of the show and come home. That’s too bad, too. We needed to open a can of “whoop” on those folks real bad, and your Dad sounds like just the man to have gotten it done, too. You pretty glad he’s coming home?”

Billy had thought a lot about his Dad over the last few weeks. He had been called up and then deployed over to Saudi Arabia so quickly. But that was part of the program. He was glad his Dad hadn’t been sent to Turkey where the air battles had been fought...and yes, he was glad his Dad was coming home. Even though America was taking a hit over the inability to preserve Kurdistan independence, Billy was proud that the United States had made the attempt, and that his country was willing to stand forthrightly behind its promises.

“You bet. I’m glad he’s coming home and that he’s safe. He is currently slated to rotate back to Florida around December 1<sup>st</sup>, and then will be officially back in reserve status and home by New Year’s day.”

As Leon continued to talk with his friend and mentor, Charlie Jenkins, who was calling from Chicago, the Sergeant continued.

“I can sure understand that. I spent several months over there back in Desert Shield and Desert Storm. I’m glad Weisskopf is the President right now, irrespective of those talking heads on the boob tube and cable. I have a sneaky feeling we haven’t heard the last of Hasan Sayeed in the Mid East...and I know we are ultimately going to have to face down Red China. Did you hear about that new carrier they surprised us with and are using to conduct exercises with the Indians? Sounds like a tough ship. And I can promise you, they aren’t building them as show boats.”

Billy had heard about the new carrier. The surprise had been that it even existed because everyone thought the Chinese were working on the larger carriers near Shanghai. Those weren’t supposed to be launched for another year or so. The one Sergeant Bennett was referring to had seemed to come out of nowhere.

As a result of all of these surprises, the media and certain elements of Congress were really down on President Weisskopf. That vote in Congress to censure him, even though it had failed, was an embarrassment. Despite the losses in the Mid East, and despite the surprises, Billy agreed with the Sergeant, and he agreed with his Dad...America was lucky to have President Norm Weisskopf at the helm in these perilous times.

“I have heard about it. Even saw the pictures. It’s a pretty radical design with the crossing deck pattern and the island in the back. Makes it clear it’s a conversion. If the time to fight comes, though, we’ll be putting them down and under. That thing may be good for regional activity against their regional adversaries, but a Nimitz class carrier with its battle group will take it down.”

“But let’s talk about why Leon and I came over today. We can go into more detail when he gets off the phone, but Sergeant, we’ve decided. With what all is going on, we’re ready to join up: now, today.”

Bennett was surprised. It was the middle of the school year. Football season was still on. Billy was on a full ride scholarship.

“Wait a minute, Billy. This is pretty abrupt. Don’t get me wrong. Your country wants your service and will be proud to have you in it. But we can wait until the semester break at least. What about football and your coaches? Have you talked with your parents?”

Fact was, Billy had considered all of these things. With the benefits offered, Billy figured he would finish his education while he worked his career. His coaches were not happy and wanted him to

wait at least until the season was over. Billy had worked with his professors and instructors to take tests and finish the semester early. By doing so, he could also accommodate his coaches' wishes. His mom was supportive, but Billy could tell she was worried. She had indicated she would talk to his Dad about it, but Billy knew his Dad would support him. His Dad trusted him. Oh, he might offer some advice, but he had nurtured Billy's independence through high school and had plainly stated that once Billy turned eighteen, he was a man in his Dad's eyes. His Dad had treated him that way, too.

"Sergeant, I appreciate your concerns and your questions. But I have thought it all out. I want to join now and get started. I am going to fly the Super Cobra and make a career out of serving my country. Leon can tell you his own reasons, but he's made the same decision."

In the middle of that exchange, Leon had finished talking with the retired Sergeant Major Jenkins. He had walked into the conference room just as Billy had finished his last comments.

"That's right, Sergeant. We're signing up. I talked to my Mom and she's proud. I figure it will also set the right example for my little brother. I just told Charlie and he's already congratulated me."

"I figure I'm going to ultimately work towards Long Range Reconnaissance Patrol (LRRP). I got a knack for sneaking around and doing it quietly. I also figure I am going to be a crack shot."

"So, both of us have all our affairs with schooling worked out. We're both ahead in most of our classes and can test out and get the credits for this semester so we can apply those later on down the line. We'll be done with our testing by December 5<sup>th</sup>, and from then on it's going to be Semper Fidelis!"

Sergeant Ken Bennett had been in the Marines for many years. He had been recruiting all over the country for the last four years. There had been many times when he came away disillusioned with today's American youth. But experiences like this one made up for that, and then some. Whenever he saw young men like Leon and Billy, who were willing to give up their lifestyles and willing to serve their nation, he knew America would always survive and that there would be good hands to which he could pass the torch.

"Well, it seems like you vermin have everything all figured out. Sounds like you got it planned down to the last detail, with all of your I's dotted and all of your T's crossed. You know what? I don't see any holes in your OPLAN either. Let's sit down and map out both of your strategies. One towards aviation and Super Cobras, and the other towards reconnaissance, sniper school and that LRRP spot."

"But before we do that, let me tell you that you boys have made my day. This deserves a real celebration and I'm going to tell you that a Marine takes advantage of such opportunities whenever he can. Yep, I feel a big feed comin' on and this one's on me!"

**November 24, 20:45**

**National Reconnaissance Office Headquarters**

**IMINT Directorate**

**Chantilly, VA**

John Bowers looked at the assembled technicians and analysts. "Wow!" he thought. "They really have staffed up over here." It didn't surprise him. With all of the requests coming in from the Middle East, and with the continued demand for information on the Chinese, plus the normal activities, it was little wonder they didn't have more people than they did.

"Tom, let me first offer my congratulations on your promotion. You're going to do a heck of a job managing this operation and I cannot think of a more deserving person. Now, let's see what got you so fired up that you needed to call me over here this evening."

Tom Lawton had been promoted to Manager, Imagery Intelligence Analysts just a couple of weeks ago. His old boss, Bill Hendrickson, had also moved up the food chain and was now a Director of Imagery Intelligence. The promotion had not kept Tom from continuing to work like an analyst, though. He spent several hours each day personally reviewing imagery from the latest hot spots, and, in particular, from Red China—where his observations and analysis ten months earlier had warned the United States of Red China's extraordinary efforts in the Naval Aviation area. It was his recent discovery of further developments in this area that Tom wanted to show the National Security Advisor.

"John, take a look at this image."

Turning to his computer, Tom typed in a few commands on his keyboard and an overhead view of a Red Chinese Sea Control aircraft carrier was displayed on the screen.

"OK, Tom, that looks like the new Chinese aircraft carrier, the Beijing. It's a good shot of it for sure, but what is so special about this particular image?"

Tom typed in a few more commands. In the upper left-hand corner of the image, some text appeared, identifying the time the image was made, and its location. That text simply read:

11/22/05 03:25.34 Zulu

21:13:45 N 116:26:15 E

South China Sea

"John, notice the date and location."

John Bowers took just an instant before realization dawned on him.

“What! Wait just a second. Tom, those figures can’t be right, can they? The Beijing was supposed to be off the Indian coast—in fact, I know it was off the Indian coast on that date. I remember the briefing. How on earth could that date and location be correct?”

Tom had already gone over this same question in his mind several times. In resolving the dilemma, he had decided that the evidence pointed to the only conclusion possible.

“The picture and time stamp is correct, John. The answer is simple. That’s not the Beijing. It’s a second Red Chinese Sea Control aircraft carrier.”

Taking a seat next to Tom, John’s mind went into overdrive.

“But just last week we saw pictures of the second one still in its dry dock in the Tanjin shipyards. How could they have possibly completed, outfitted and rigged that ship in this amount of time?”

Tom displayed another image on his screen. This one showed a similar ship, still in dry dock, but nearing completion. The date stamp on this image was two days after the first picture, and its location was the Tanjin shipyards.

“John, that ship is still building in Tanjin. The first image is an entirely different vessel that the Chinese built and launched without our knowledge at all. What it means is that very soon the Chinese are going to have at least three of these things launched and on trials.”

“And here’s the shocker; at least a possible shocker. We know they were training eight air wings on those temporary landing decks they had installed at several airfields. We know that they are capable of moving these decks and then installing them on these container ships, which they then structurally and electronically modify to produce these sea control carriers. Based on what we are seeing here, we’re going to have to presume that the Chinese are building six to eight of these vessels, not just the two.”

John absorbed this information, almost reluctantly. It was incredible. But it looked to be exactly what the Chinese were doing. If you added the two larger deck aircraft carriers the Chinese were building in Shanghai to the potential eight, it meant that the Chinese would have ten aircraft carriers operational within the next eighteen to twenty-four months!

“OK, Tom. You don’t need to do any further convincing. This is a major development. Almost beyond belief, but the images don’t lie.”

“We’re going to have to either divert more of our existing resources, or, more likely, launch more satellite assets to watch this twenty-four/seven. I want to find where these other carriers are being built. We may need some HUMINT help from the Agency. I also want to do a much more thorough analysis of all of the PRC’s shipbuilding activities, commercial and military. I’ll get Bill into the loop, as well as the NRO Director himself. Use the equipment resources that you have available now, and request whatever overtime or additional personnel you feel you will need, so we can prepare a preliminary briefing for the NCA day after tomorrow.”

“I’ll set up the meeting with the President, the SecDef, the Joint Chiefs, CIA and State. We’ll make the request for more equipment to be launched out of Vandenberg at the earliest window of opportunity. Given what we are seeing here, I expect that particular request will be approved without delay. In addition, we’ll discuss the potential for HUMINT operations during the meeting.”

**November 27, 22:47**

**WNN Broadcast Headquarters**

**New York City, New York**

David Krenshaw was ecstatic. Here he was, sitting in the CEO’s office being offered the position of which he had always dreamed, and which he had worked so hard to attain.

“David, I can’t tell you how excited we are at your acceptance of our offer of a position on the Board of Directors at WNN, as well as your acceptance of the promotion to President and General Manager for our World Wide News Operations. In that role, in addition to our agreement to have you continue as an anchor and producer of Special Reports, your expertise, contacts and historical capabilities will help you in your management responsibilities. You will be responsible for the network’s day-to-day news operations for Cable, TV and the net, including all aspects of programming and production. You have a very capable management team made up of Vice Presidents and Directors, most of whom you have known and interacted with for several years.”

“Both your position on the Board of Directors and as President and General Manager of World Wide News places you on the WNN Executive Committee. It is an exciting day here at WNN, David, and we congratulate you.”

“Finally, although the offer is not affiliated with WNN, my position in this organization allows me to extend to you another offer. On behalf of the Council on International Relations, and as a result of your significant ties with, and involvement in, international affairs, I would like to offer you membership in the Council. As you know, membership is an honor and a very prestigious form of recognition...it is also by invitation only. At the director level on the CIR, we have discussed you

many times, David, and my recommendation on your behalf has been tendered several times. Your work over the last year has caught everyone's attention, and last week the application was approved."

David had desired a position on the CIR for several years. He knew he had to be recommended, and that an offer had to be made, but he had liberally spread the word that he was interested in being a part of the group, dropping the hint, whenever appropriate, to every member he knew. Apparently his behavior had finally "paid off." This new position of influence-wielding responsibility was going to give him the opportunity he desired to not only report the news and help shape it through that reporting...but to actually help *make* the news.

"Of course I accept, Phil. As you know it is an opportunity that I have wanted for a long time. I look forward to working with the Council in all its efforts to promote sound world wide foreign relations and to stimulate conditions throughout the world towards those ends."

Philip Rheinholdt was the Chairman and CEO of WNN. He had been helping mentor David for several years. Although, based on David's uncanny ability to break and then produce major news events on the international scene, David's spot on the Board of Directors had become a forgone conclusion, and quite frankly, Philip probably would not have placed him in the management position over World Wide News. Really, it had been a purely political move. David's Asian and Near East allies and mentors were influential and had invested greatly in WNN. Promoting David over the heads of other Vice Presidents and Directors who had better management skills and more seniority would be a management issue he and David would have to deal with. But, all in all, it may not be a bad thing. Keeps the troops honest and a little off balance.

Having David on the CIR would also be a mixed blessing. David was very connected, so much so that sometimes other members were worried about that influence on his loyalty. Phillip shared their concerns. The CIR was interested in people loyal to promoting foreign relations and the network of ties that bound such relations together. In Philip's view such networks transcended ideology and nationalities. This was also the view of many of the senior members of the Council. There was concern that David's commitment to membership in the CIR would be much more a matter of David's desire to promote himself than it was a commitment to promote the goals of the Council.

Philip knew that, to one degree or another, the same was true of all individuals and he was confident that David's other positive and valuable assets could be used to advance the goals of the Council and of WNN, despite the drawbacks. After all, the CIR had been using all types of individuals, from Presidents, to University Chancellors, to Network CEO's, to Senators and military leaders for decades to formulate and build the international community and network as it existed today and as it would exist in the future.

Many of the members of the CIR were very self-centered and ambitious individuals. In a few cases they were downright despicable and sorry excuses for humanity outside of their brilliant abilities in specific areas. The Council used them all, just as it would use David Krenshaw. Just the same, his ambition and loyalties would bear watching, and Philip would relate as much to the Council along with Dave's acceptance.

"Great, David. Congratulations on your acceptance of membership in the CIR and all of your other achievements. I know it is a big day for you. We are going to have a small celebration tomorrow evening on your behalf in the corporate banquet room on the top floor...just down the corridor from your new office, in fact. Many of our WNN executives will be there along with quite a few members of the Council. Please extend the invitation to your wonderful wife, Jennie, too."

**December 2, 06:20**

**30<sup>th</sup> Air Wing Operations, 2nd Space Launch Squadron**

**Space Launch Complex 4E**

**Vandenberg Air Force Base, California**

The 2nd Space Launch Squadron of the 30th Air Wing of the U.S. Air Force existed to conduct safe, reliable, and timely launch operations in support of Department of Defense and other governmental and commercial launches into space. Its location at Vandenberg Air Force base near Lompoc on California's central coast allowed the 2nd Space Launch Squadron to be the only squadron in the U.S. Air Force capable of launching payloads directly into low-earth polar and sun-synchronous orbits. Using the Titan IV heavy lift vehicle, the Atlas IIAS medium-heavy lift vehicle, and the Titan II and Delta II medium lift vehicles, the 2nd had the capability for diverse space launch missions unmatched by any other Air Force Squadron.

On this date, the operations personnel were monitoring the impending launch of a KH-12 (formerly known as the KH-11B or KH-11/I) reconnaissance satellite from Space Launch Complex 4E, as ordered by the NCA and carried out through the NRO and the Chief of Staff of the Air Force. The KH-12 weighs over thirty thousand pounds at launch and requires a Titan IV B heavy lift booster to insert it into orbit. That is what today's launch called for, and the 2<sup>nd</sup> of the 30<sup>th</sup> was prepared to make it happen.

As to the capabilities of the satellite itself, the sensors of the KH-12 operate in visible and near infrared light, as well as thermal infrared for detection of heat sources. They also incorporate low-

light-level image intensifiers to provide for imaging during night operations. The KH-12's have an infrared capability superior to that of the earlier KH-11 satellites, which is used primarily for detection of camouflaged targets and for observing differential thermal inertia in the target area. It is also used for looking at structures or targets buried underground, and for differentiating operating production factories from those that are not.

In addition, the KH-12's sophisticated electronics package provides sharper images than the older KH-11, with a resolution approaching ten centimeters. A periscope-like rotating mirror on the satellite reflects images onto the primary mirror, enabling the KH-12 to take pictures at very high oblique angles. This means that the KH-12 can provide high resolution images of objects hundreds of kilometers to either side of its flight path.

All of these traits would serve this satellite well as it was launched into orbit to provide much more in-depth coverage of the Chinese coast and Chinese shipbuilding activities. Its mission would be to search for those shipbuilding activities related to the new Sea Control aircraft carriers the PRC was producing. Since noticing the 2<sup>nd</sup> at-sea carrier, the NRO had discovered yet another, this one conducting trials between the East China Sea and the Yellow Sea.

The information regarding the 3<sup>rd</sup> Sea Control Carrier had produced rapid results when it was presented to the president and his key advisors by the National Security Advisor, John Bowers, and Tom Lawton of the National Reconnaissance Office. The concern it evoked at the highest levels of government in the United States was expressed by this expedited launch of a very sophisticated and expensive KH-12.

"We are a go for launch. All systems are checking in good to go. I repeat, we are go. T-minus 15 seconds and counting."

"10, 9, 8, 7, 6, 5, 4, 3, 2, 1...Launch!"

Out on the launch pad, the gantry suddenly became visible in the darkness as the Titan IV B's three massive stage "O" solid-rocket motors ignited. Slowly, then with increasing speed, the rocket lifted its payload into the air trailing a massive gout of flame.

"All systems are nominal. Down range tracking is on. Stage "O" separation and Stage 1 ignition coming up on my mark...mark!"

Approximately two minutes into the flight, the first stage LR87 liquid-propellant rocket ignited as the solid rocket boosters fell away. Then, Stage 2, using a LR91 liquid-propellant engine ignited. Mission parameters used a final Boeing Aerospace inertial upper stage to lift the Kh-12 to the desired orbit.

Within the hour, the Air Force K-12 satellite had achieved its optimal orbit and was completely checked out and pronounced in perfect operating condition for its mission.

## **December 5**

### **Along the Kuwait/GIR Border**

#### **The Greater Islamic Republic**

The entire region surrounding the Persian Gulf was arrayed like a massive chessboard where the playing pieces were the various Army, Navy, and Air Force groups deployed in the region by the opposing forces. As would occur in any difficult chess match, at times the two opponents observed their adversary's disposition of forces and the intent behind that disposition and then prepared to make countering moves accordingly with their own 'pieces.' In the Persian Gulf, on December 5, the movement of forces as a result of the initial clash was underway.

The GIR was maintaining a relatively large force in the vicinity of Irbil, and had established the headquarters for its 2<sup>nd</sup> Army group in Basra. This army group would be responsible for maintaining order in all of the former Iraq and providing for the defense along the Turkish/Saudi and Kuwaiti frontiers. To that end, this army group was being organized into a force of three hundred thousand troops along with several thousand artillery pieces, over fifteen hundred tanks, three hundred helicopters and seven hundred fighter and attack aircraft. The northern areas were to receive about one third of this force while the southern sector, which faced Kuwait and Saudi Arabia, fielded two thirds of the strength.

The GIR 1<sup>st</sup> Army group had been reconstituted and pulled out of the former Iraq back deeper into the Greater Islamic Republic, but only as far as Ahvaz, a distance of one hundred miles. This force would consist of close to one hundred and fifty thousand troops, two thousand artillery pieces, five hundred tanks, one hundred and fifty helicopters and six hundred military aircraft. These forces would be tasked with the security and defense of the GIR Persian Gulf coast from Abadan to the Mand River and the security of the internal regions, primarily the Karkeh, Dez and Marun river drainages.

With the reduction in forces in the former Iraq on the GIR's part, and with significant political pressure from opposition political leaders at home who claimed that the reason for the force buildup had vanished, the United States and its allies were also downsizing in the Gulf region. This downsizing would result in the United States and Great Britain maintaining a total reaction force of

twenty-five thousand troops (20K U.S. and 5K British) in the Kuwait area who were backed up by the Kuwaiti Army of twenty thousand active duty personnel and a Saudi contingent of ten thousand. It was anticipated that these force numbers would be reduced over the next several months as tensions continued to reduce, but Weisskopf was in no hurry—particularly given the proximity of the GIR 1<sup>st</sup> Army group.

The U.S. Navy kept a single carrier battle group in the Mediterranean and another in the Arabian Sea. The U.S. Air Force was downsizing its force to one hundred fighter and attack aircraft in Saudi and another one hundred in Turkey, augmented by the Kuwaiti, Saudi and Turkish Air Forces.

Incirlik Air Base in Turkey was in the process of being repaired and rebuilt. U.S. aircraft were already flying CAP missions and surveillance missions from the repaired runways and ground radar installations were operating out of temporary facilities. It would be another two weeks before longer airstrips accommodating E-3, KC-135 or B1-B aircraft were complete.

As these reductions and movements continued, an uneasy calm settled over the entire region. In the chess game, the players eyed each other's movements and tried to divine intentions. They both realized that the brief, violent exchange that had resulted in the termination of the Kurdish independence efforts in all likelihood only represented the opening moves in a longer, more difficult match.

That brief military exchange was being called simply the “Kurd War,” or the “Two Day War.” It was agreed that, in terms of military measurements, the confrontation had been a virtual draw, with the GIR losing far more equipment and personnel while achieving its goals, while the Americans lost less materiel and personnel, but failed to prevent the pacification of Kurdistan by the GIR.

However, diplomatically and strategically the outcome was viewed as a clear victory for the GIR. Most nations (outside of the United States and its immediate allies) believed that the unification of the Kurdish areas with the GIR was acceptable on the international scene. Still, there was an underlying feeling that business had been left unfinished. This meant that tensions remained high even though force levels continued to reduce.

Some history enthusiasts began to refer to this tense situation and standoff between the GIR and the United States as the “Persian Gulf phony war.” This was in reference to the time period during World War II after Germany had defeated Poland, but before hostilities between major powers ensued when France was attacked. Politicians and military analysts on both sides wondered how long this “phony war” might last before erupting into a more major conflict.

**December 7, 10:00 local time**

**Government Conference Center, Beijing**

**The People's Republic of China**

Jien Zenim considered the historic gathering that he had arranged. Here in the secure conference room with him, with no one else but their most trusted advisor in attendance, were:

Imam Hasan Sayeed—The Political, Military and Spiritual leader of the Greater Islamic Republic.

President KP Narayannan—The President of India.

President Jien Zenim—The leader of the most populous and (at least from his own perspective) the most powerful nation in the world.

The three of them made up the executive council of the CAS, or Coalition of Asian States. Through years of discipline and commitment, with unflinching focus and unflinching resolve, he had formed the most powerful economic coalition the world had ever known. Between the People's Republic of China, India, The Greater Islamic Republic and their exclusive rights to Siberia, the Coalition of Asian States was poised to dramatically shift the balance of world economic and political power. One would have to be a fool to think that the military balance would not also be correspondingly shifted.

It was to discuss this eventuality and their plans for it that the great leaders had come together here in Beijing at Jien's invitation. Throughout the weekend they had discussed their economic plans and their response to the current American sanctions. They had agreed that between themselves and their own markets, a divided European market and a hungry Russian market they had the demand and the resources to survive, intact, the American economic and international pressure.

Now the time had come to discuss the other matter. The potential for their political and economic activities to produce a corresponding military reaction had been recently displayed to them in a direct way over the Kurd issue. Although Jien had recommended against any premature military adventure by the GIR against the Kurds, correctly predicting the reaction of the Americans...the more information that had come out regarding it, the better he felt. Particularly now that force levels were reducing.

“Imam, you are correct. The benefits that have resulted from this exchange far outnumber the detriments. I still believe the risks were far greater than what materialized, but that is of no concern now. We have several issues we can make great use of as we build towards our ultimate goals.”

Through good planning, commitment and attrition, the American military machine can be held at bay and denied their desire to control the battlefield. In the process, if it is forced upon us, we can achieve our goals while so occupying their forces or those of their allies.

The Americans can be kept from amassing an overwhelming international or political coalition against any one of us. With our own influence and satellites, we can effectively block the creation of any such coalition by the west against any CAS member state.

The Americans have shown their hand in their assassination attempt of Hasan. The evidence provided to us by Hasan is incontrovertible.

“Imam Sayeed, congratulations on your victory. I believe the planning, the tactics and an explanation of the events surrounding your successful attack on the American air base at Incirlik, Turkey and your defense of you own ground forces the next day should be distributed to every military commander within each of our nations. It will be something they can learn from and take heart in. We should derive the basic strategies, how they played on American weakness and then school our own people in these strategies until they know them instinctively.

“I believe we can use these three issues to enhance our own plans.”

As he said this, Jien motioned and an aide brought in several copies of a leather-bound document and handed one to each person present.

“These plans represent a formal compilation and formulation of what I have discussed with each of you personally over the last several years. We have been successful beyond expectation to date and it is now time to turn these plans into reality. The plan, should it be required—and I believe from my study of history and my study of the Americans that it will be unavoidably necessary—is called “Breath of Fire.” Please open to the first section and follow along both within the document and on the screen.”

At this, Jien Zenim motioned for his advisor, Li Peng, who turned on the multi-media video equipment and prepared to display the various images that would follow along with Jien’s presentation. Jien continued.

“Breath of Fire” involves, foremost, our desire to establish the CAS as the dominant economic power in Asia, and an equal competitor in Europe and the Americas. If this goal is interfered with militarily, then it involves leading the Americans and their allies onto fatal terrain. This is a Chinese strategy put forth by the greatest war strategist in history, Sun Tsu. It simply means providing the Americans with the options that they expect where the range of their responses will all lead them into a position where they have no defense and no escape.”

President Narayannen carefully considered what Jien said. To date, the CAS had proved a huge economic boom for India. The Indian exploration teams in Siberia were finding and developing tremendous resources. The markets for Indian labor, manufacturing and technology in China, Russia and even in parts of the GIR were growing rapidly, and the European markets were continuing to grow as well.

Thus far, this economic windfall had all been accomplished with minimum risk. As an added benefit, this progress was steadily eating into areas where American firms and markets had long been entrenched. As a result, the Americans had attempted to establish sanctions and policies that would place pressure on India. Although Narayannen was favorably disposed to America’s ideological foundation...he just didn’t believe the current crop of American politicians and businessmen were disposed to being truly committed to it themselves. Zenim and Sayeed were also committed. Their fundamental ideology might be less appealing, but the results to India were clear, and the unwavering nature of the commitment to the principles that produced these results was something he felt he and his people could count on.

“Let us examine this plan together, Mr. President. We in India will move forward with a determination to avoid conflict if at all possible and establish the CAS as the influence in Asia that we all desire. At the same time, while it pains me, it is only prudent to prepare for the implementation of “Breath of Fire” should it become necessary.”

Hasan Sayeed knew that “Breath of Fire,” or something like it would be necessary. The Americans were realizing the true nature of the opposition. Hasan knew personally how serious they viewed that opposition and to what lengths they were prepared to go to forestall or eliminate it.

“President Zenim, we were truly blessed to have been successful in our short, but sharply fought efforts to retain the northern regions of the former Iraq. Do not be fooled. We were successful, but it was the type of success any of us could only stand so much of. I am confident that the Islamic people have the heart and the commitment to sustain such losses longer than the Americans, but do not think it will be an easy thing.

“Having said this, I will freely share with you that it is my conviction that “Breath of Fire,” as I see it explained here in the overview, will be absolutely necessary. It will be so, not because we desire it, but because it will be forced upon us. I do not believe the Americans, or their allies—several of which I am sorry to say are unfaithful Islamic states—will accept a second place status, economically or influence-wise, anywhere on the face of this globe we call earth. They will not accept such a status

particularly in areas where they have traditionally been recognized as supreme. So I believe we must study this plan, voice our input, revise it accordingly, and then stand prepared to implement it.

“Finally, I agree wholeheartedly that the tactics and the strategies that proved successful for us in holding off the American air superiority should be shared throughout our command structures. It amounts basically to this: throw more at them than they imagine. Make them use up all of their expensive weapons and then overwhelm them with what you have left.

“Your people must be absolutely disciplined in such an effort, because they must persevere in the face of horrendous losses. We threw approximately four hundred aircraft at the American base at Incirlik. Initially they had only twelve aircraft airborne. To this they added another eight, and then twelve more. These thirty-two aircraft shot down well over one hundred of ours. Their air defenses shot down another sixty. We lost over one hundred and sixty aircraft to accomplish our goals that day. Do not forget the basic math of this equation.”

Jien Zenim was impressed by both of these leaders. As they studied “Breath of Fire” they would find ample economic, political and military challenge and reward for their perspective nations and peoples. Much of it would come down to the discipline and will of which Sayeed spoke. But even more of it would come down to their ability to lead the Americans to the fatal terrain Jien had mentioned earlier.

Jien Zenim was very familiar with, and respectful of, the Americans’ capability, and, by extension, the capabilities of their allies. He had no intention, except where absolutely necessary, of directly challenging their strength. Hasan had used brute force and good planning and he had been successful. But as he himself admitted, you could only afford to “win” so many of those kind of battles. No, Jien was not afraid to pay the butcher’s bill when required, and though he had the will and the resources to accumulate such bills more so than any other sitting in this room, he preferred to manipulate circumstances so that the bill was paid by his adversaries instead. This was particularly true for the western allies because they had fewer resources with which to pay such bills, and, every time they did, it would substantially lessen their ability to force such payment terms on Jien and his people.

“Good, let us then review the introduction and overview. I believe you will find the summary to be succinct and to the point. It provides projected time frames, triggering events and goals for initial operations that will hold our adversaries in place, and then outlines how we will draw our adversaries onto the fatal terrain I have spoken of. After reviewing and commenting on the summary, and modifying it where necessary, we can launch into the details of each specific area of the plan.”

“It is my hope and goal that we can leave here tomorrow with both our economic plans that we have developed over the last two days, as well as the military options that we develop from these plans, in place.”

“Shall we proceed then?”

**December 9, 18:09 local time**

**800 KM Northwest of Krasnoyarsk**

**Siberia, The Russian Federation**

Dr. Gavanker was very proud of what his team had accomplished in the five months they had been in Siberia. By early August, the test bores had been sunk and they had brought back information beyond expectations. The field would in fact be bigger than the Baku field in the Crimea. He had been immediately informed by first the Indian government, and then the Russians, to expect to be provided with a significant increase in workers and materiel so that he could get initial production underway before winter.

By September the staff on his team had been tripled to almost two thousand workers. A regular “boom” town was developing, and a spur from the main rail lines two hundred kilometers to the east had been built and opened before November. By that time the weather had begun to worsen, but Dr. Gavanker and his team had already sunk six production wells and had also completed pipelines to the railhead so that the initial crude could be transported for refinement. This would have to do until a pipeline could be completed directly to their location. That was scheduled for the end of January, but progress was being slowed due to the weather.

As the increase in workers and materiel and business to support them all mushroomed, the Russians also increased the security forces. Military engineers came in and took the roughed-out airfield and turned it into a dual-use commercial and military air base with the latest military radar and with significant equipment for operations in winter. As a result of his success in helping develop the resource, building the initial airfield and having an unblemished record in securing this resource jewel for mother Russia, Colonel Nosik was promoted to General. In addition to a significantly increased security force, including more men and equipment, some heavy armor, and a number of interceptor and support aircraft, Nosik was given responsibility for the maintaining the security of two other resource projects. One was a new Chinese Cobaltite mine, and the other was a new Indian low-sulfur coking coalmine. The largest operation was here in Gavank, where he established his headquarters.

Over the preceding months, as their fortunes mutually improved, and they assumed more and more responsibility, Dr. Gavanker and General Nosik formed a friendship of sorts. General Nosik held weekly staff meetings and invited Dr. Gavanker to a number of them, to report on the status of the various civilian projects going on at Gavank. In turn, when Dr. Gavanker held his staff meetings, he would reserve a portion of each meeting for the General, or his Chief of Staff, to discuss security issues. Generally, on Fridays, the two men met informally over dinner and discussed the week's events and their thoughts in general. That is what they were doing today.

"Andrei, who could have guessed that things would go so well? Or who would have thought that a crusty old war dog like you would tolerate a theorist and soft foreigner like me to be a part of your operations for so many months?"

The General had to nod. He would not have imagined it himself—and if someone had told him it would be so a year ago, he would have laughed in their face. Yet it had worked out exactly as Buhpendra described it. Well, almost exactly.

"Buhpendra, you know I would never describe you as a "theorist," my friend. You have shown us all, on countless occasions, your ability to apply those theories to the real world and make this project a success. It could not have been a success without your strong grounding in reality. As to soft: humpf! No one who lives here in the wilds of Siberia as we have done these last months is deserving of the term "soft." I will admit to the crusty old war dog title, though."

Dr. Gavanker also nodded at the General's reply. He had come to enjoy these Friday evening get-togethers. There was so much they could discuss, and hearing and weighing their separate views of world events, politics, ideologies and beliefs had provided many hours of reflection and appreciation over the last several months.

"So, now that forces are reducing, and after some time to reflect, what do you think of the way the Muslims handled the Americans, my friend? I thought it was somewhat surprising."

General Nosik had not been too surprised. He had faced Muslims who were eager to fight, and committed to their faith. Such fighters were fierce, dedicated and willing to take significant losses to achieve their goals.

"I was not overly surprised. All Arabs are not like the Iraqis of Desert Storm and Iraqi Freedom. Those poor wretches were forced to be there and had no commitment to their cause...a surrender waiting to happen.

"This Hasan Sayeed, though: he has a commitment, and is gathering a committed people around him. Such a people, driven by their faith—and believe me, Buhpendra, such fighters are fierce—would be a very serious adversary. Many will gladly sacrifice their life simply to help attain their collective goals. The Americans, even with their technological advantage, will find it difficult to readily defeat such a people. I believe this is what they experienced in the brief exchange.

"But, I would not count the Americans out. It is true they are soft and have experienced many years where there was no appreciable challenge. It will probably take some fairly bloody noses to get their attention. But, like Yamamoto of Japan remarked in World War II after he pulled off perhaps the greatest defeat of the Americans at Pearl Harbor, I would be careful of waking that giant from its slumber. Better to just let it sleep, if you can, while you tiptoe around it and steal all of its belongings! Ha! Particularly with an old fighting bear like Weisskopf leading them. That's what I think."

Buhpendra was not a military man. He prided himself on being a strategic thinker and on being able to make clear, logical decisions. Those qualities had served him well throughout his career and they were serving him here in Siberia. Applying them to world affairs was not new to him. His work in the Energy Directorate for his country had required that he regularly factor in such strategy. But the military angle was new to him and he enjoyed discussing it and exploring it with the General.

"I agree about Weisskopf. His political enemies are using the current circumstances against him, but I would not count him out if things flare up again. He is a fighter and a fine leader and has the respect of his armed forces. Thank goodness things appear to have quieted down, even though the Americans' goal for an independent Kurdistan was not realized. Let's hope it remains that way."

**December 11, 22:00**

**Marine Recruit Training Depot**

**San Diego, California**

"*Come on! Come on! Come on!* Get off that bus, you maggots! What do you think this is? Where do you think you're going anyhow? To the matinee? Let's go! *What are you waiting for?*"

"I am Drill Instructor Sergeant Matthews. At *all* times, you *will* address me as "Sir." If you have a request or a statement to make to me, you *will* formulate it with the words *Drill Instructor Sergeant Matthews, Sir!*"

As Drill Instructor Sergeant Matthews continued, Billy and Leon stepped off the bus at the Marine Recruit Training base in San Diego. They had arrived on schedule at ten p.m., to be processed in.

"*Article 86 of the Uniform Code of Military Justice prohibits absence without leave. Article 91 of the Uniform Code of Military Justice prohibits disobedience to a lawful order. Article 93 of the*

Uniform Code of Military Justice *prohibits disrespect to a senior officer*. These are *absolute, non-breakable* laws you *will live by* for the next 13 weeks...and throughout your military career.”

Other armed services give their recruits a slight break during the in-processing phase of basic training. But not the Marine Corps. Discipline starts the instant the recruits step off the bus. Leon and Billy had been informed by Sergeant Bennett how things were going to be. They were finding out that he had been absolutely correct. Marine Corps drill instructors must be addressed loudly as “Sir.” They hadn’t even gotten off the bus before being taught that first lesson.

As they entered the building, Drill Instructor Sergeant Matthews continued to instruct them in clear, loud tones about what it was they needed to do, and about many of the other regulations they would have to live by for the next 13 weeks of their basic training.

The other services do a quick in-processing and allow recruits to get some sleep for the remainder of the first night. But in the Marine Corps new recruits are up the entire first night and all of the next day. During this time, they complete paperwork, get their hair cut off...all of it...turn in every bit of civilian clothing and articles they own, are issued their initial uniforms and field gear, and receive personal hygiene items from the PX, the cost of which is deducted from their pay.

Leon and Billy would spend the next three to five days in Receiving. During that time, they might be tempted to believe they were already in boot camp with Drill Instructors yelling at them, drilling them, marching them, showing them how to wear their uniforms, showing them how to make their “rack” presentable for inspection, feeding them, and more.—all “by the numbers.”

While in Receiving, Leon and Billy would also be given their Initial Strength Test (IST). To pass (and avoid being assigned to a Physical Conditioning Platoon), they would be required to do two pull-ups, thirty-five sit-ups in two minutes, and a one and one half mile run in thirteen and a half minutes or less. Leon and Billy would have no problem with the IST.

As Leon and Billy would learn, after Receiving the fun really begins when they are transported to their squad bay and introduced to their Senior Drill Instructor and his two assistants. These three would be the constant instructors, prodders, transformers, mentors, examples, trainers, indoctrinators and daddies of the sixty to eighty recruits who made up Leon and Billy’s platoon in Company B of the 1<sup>st</sup> Battalion at the San Diego Recruit Training Depot.

The hard core definition of the Marine Drill Instructor (DI) indicates that he is a short-tempered, impatient, deep-voiced, screaming, seemingly-psychotic, un-patronizing, but deeply-devoted and fully-dedicated Marine NCO who works his magic on new Marine recruits. That magic teaches them to “surrender body and spirit to harsh instruction so as to receive a soul.” It instills into them the makings of disciplined Marines who will stand and fight for duty, honor, country and their comrades when every other inborn instinct tells them to run.

The DI is an individual whom the new recruits hate—but whom the new Marines revere. The DI magic would work especially well on Leon and Billy, as future events would indisputably reveal.

**December 16, 16:30**

**Oval Office, The White House**

**Washington, D.C.**

The President had once again gathered his principal foreign relations team in the Oval Office. This team included the National Security Advisor, the Secretary of Defense, the Chairman of the Joint Chiefs, the Secretary of State, the Director of the Central Intelligence Agency and the Vice President. They had been discussing the continued issues associated with the growing Coalition of Asian States and the influence it was having in Asia through the People’s Republic of China and India, and its influence in the Middle East in the form of the Greater Islamic Republic.

“Summarizing, then, from diplomatic and relations standpoint: with the addition of Vietnam, North Korea, Cambodia, Mongolia, Laos, Nepal and Bangladesh, the CAS continues to grow as a world economic and ideological power. The Siberian resources are beginning to flow into China and India from the new oil fields, natural gas fields, gold mines and other mineral mines that are being rapidly brought into production. We estimate that there are one hundred and seventy-five to two hundred thousand Indian workers in Siberia now, and that there are in excess of two hundred thousand Chinese workers there. Russia is benefiting from their own percentage of each find, as well as from their royalties on the portions delivered to India and Red China.”

“Russia is also reaping rich profits and boosts to their economy by the arms sales going on to China, India and the GIR. Their arms and munitions plants, their armor factories, their naval yards and their aircraft factories are operating at levels in excess of the highest production rates during the cold war.”

“Mr. President, all of this adds up to significant economic and political pressure on many of our allies. Japan, South Korea and much of Europe are much more dependent on Mid East oil than we are. For our allies in the Far East, all of that oil flows through waters in which the CAS is showing a greater and greater presence. With their naval build up, the military installations they have established on so many critical islands and their tremendous influence on OPEC pricing and production, our friends are getting very nervous.”

As the Vice President paused, Norm Weisskopf assessed the strategic situation in his own mind. Someone on the other side was one heck of a chess player. As far as he was concerned, that someone had to be Jien Zemin. But where was he going with it? What was his end game? Better yet, how long before the confrontation?

Norm Weisskopf was absolutely sure the confrontation was coming. He couldn't see any way to avoid it if the United States wanted to maintain any high degree of influence in the Western Pacific, or in the Mid East.

"John, let's put this in perspective. Please summarize what we're seeing in terms of intelligence and surveillance on the military side."

John Bowers had been playing point on this for the President for some time now. Although he had gotten over his discomfort in speaking to matters that he was sure Defense and the CIA felt were their own areas of influence, he was still somewhat ill at ease speaking for them. Nonetheless, he had learned to work well with the various teams those two organizations could provide and spent countless hours in briefings and planning sessions with them.

"Mr. President. The greatest immediate threat remains in the Middle East. The GIR has pulled back an entire Army group, but they are still largely intact in the vicinity of the former Iraq/Iran border. They have not dispersed nearly as much as would be expected if they were going to garrison all of the bases and facilities located throughout that area of the GIR for peacetime deployment. We feel they are still poised to threaten Kuwait and Saudi Arabia.

"The forces in the former Iraq are deployed in strength along or near the Kuwait and Saudi border in the south, and the Turkish border in the north. They outnumber our forces considerably in both areas, particularly as a result of our force reductions since Desert Sentinel ended.

"Of significant note is the announcement of joint training exercises by Syria along the GIR border in Late January and early February. That is a situation we will have to watch."

At this point, General Stone, Chairman of the Joint Chiefs added,

"Sir, if I might add a thing or two here. First, Incirlik Air Base is fully functional again. We have increased our normal contingent of F-15s by a factor of two there. In Saudi, our first operational wing of F-22 Raptors has been deployed and is adding significantly to our defensive capabilities for the Kingdom.

"One other thing, if I may. Our Israeli friends are very nervous about the GIR, as you can imagine. They have increased their force readiness across the board. They are also significantly increasing their forces along their borders, particularly on the Golan Heights."

As the General finished, John continued.

"One more item of concern in the Middle East: Our old friend, Qaddafi, in Libya is mobilizing his forces and putting them in a state of readiness that we haven't seen since Reagan thumped him real hard in the 1980's. He is also assisting Chad with men and materiel in the final phases of their suppression of rebel forces there. There is a significant concern that he will soon announce his allegiance to Hasan Sayeed and his desire to become an official part of the GIR.

"As you are all aware, there are also approximately two hundred thousand Chinese in Chad. To begin with, they were involved in relief work, but lately we have word that many of them are working in arms factories, and are participating in the training of new Chad recruits. This is another area that bears watching. Mike, do your people on the ground have anything newer than my meeting at Langley last week?"

The Director of the CIA had gotten a report the evening before. As a result of John Bowers' meeting and the discussion of this very issue, Mike had instructed the Deputy Director of Operations to contact the embassy there in Chad and their operatives. The results of that inquiry had come in late last night.

"As a matter of fact, John, I do. Late last night we received a situation report (SitRep) from our people in Chad. It is clear that the Chinese there are assuming a more and more active role in armament manufacture, and in training and instruction of military forces. Many more Libyan advisors have also arrived in just the last week to ten days.

"Mr. President, given the numbers involved, and given the apparent militarization of the Chinese relief workers, I believe we should view these developments gravely. Particularly when you consider the close ties Sudan has with Libya and its recent positive behavior towards the GIR. Our friends in Egypt are concerned about an encirclement of fundamentalism that could threaten their interests."

The Secretary of State chimed in on this particular topic.

"Mr. President, we should immediately lodge a protest with the United Nations. Red China was operating under very specific guidelines in its appeal to provide assistance to Chad. That assistance is limited to humanitarian relief alone. If they are in any way involved with military assistance, we must lodge a protest and seek a vote condemning their actions and revoking the UN resolution that sent them there in the first place."

The President understood Secretary Reissinger's concern and the reason for his protest.

"Fred, I understand your frustration and your diplomatic ire. I agree we should make the protest. But I do not believe we will succeed in getting things turned around there. The UN was shown for the

paper tiger that it is at best just preceding Operation Iraqi Freedom in 2003. I haven't seen anything to indicate that it is anything more than that since. We'll use it where we can, but we will never allow it to determine our own course of action. Red China will simply veto any Security Council initiative, and we have seen that there is little prospect for a vote in the general assembly.

"Just the same, I believe it is politically and diplomatically necessary to make the effort. Please have our ambassador to the UN make the necessary arrangements and see who we can get to support it. Alan, please work with our allies and coordinate with Fred and the ambassador. Now, John, please continue."

John Bowers wasted no time in doing so.

"OK. Finally, we have several issues in the Far East that are equally distressing, if not as immediate. This involves the Red Chinese and the CAS.

"Of immediate concern is the buildup of North Korean forces along the demilitarized zone for their winter exercises. This is always a tense time of the year, and we are paying particular attention to their movements this year as our commitments in the Middle East have us spread fairly thin.

"We believe that conditions in the North are still extremely desperate in terms of food, but Red China, as a result of its continued economic growth and as a result of North Korea joining the CAS, has announced a food relief program of large proportions. They are getting millions of metric tons of wheat from Russia, Brazil, Venezuela and Canada and shipping it to North Korea. Along with the wheat, thousands of Chinese relief workers and newer farming equipment are being "loaned" to the North to improve their farming techniques. The first of the materiel has already arrived there.

"Finally, turning to the continued buildup of the PLAN: They continue with the very rapid manufacture and deployment of their newest generation of destroyers and frigates. Also, as you all know, in addition to their two large aircraft carriers being built in the Shanghai area, we have discovered that the Chinese have also embarked on a very rapid development and build of these smaller sea control aircraft carriers. The first of these, the Beijing, was launched in September and almost immediately took part in joint naval exercises with India. Since that time, they have launched two more and are building five others. We have utilized our best surveillance equipment coupled with Mike's HUMINT assets to discover the four shipyards where these conversions are taking place.

"Apparently, the Red Chinese purposely allowed us to find one of these facilities operating in the open some months ago in the hopes that our attention would be diverted. They were successful. In the meantime, they developed three other yards with completely enclosed dry dock spaces for the clandestine manufacture of more vessels. The result is that they will have eight of these very capable aircraft carriers in the Western Pacific in the next four to six months, followed by two larger deck carriers by next summer. This will represent a significant shift in power and one we cannot ignore or take lightly."

The picture that was developing was not pretty economically, diplomatically or militarily. While there was always the chance that the diplomatic and economic conditions in the world could shift, rise, fall and equivocate either to the nation's good or ill, there was no excuse for being in the military position they were now in. That is, no good excuse. Apathy, comfort, technological prowess and sheer arrogance all had grown to the point of extreme overconfidence. All of that had resulted in spending plans, building plans, force dispositions and strategies that reflected the same—and had done so for several years. The situation couldn't be turned around overnight.

That arrogant overconfidence had gotten the wind knocked out of it a few weeks ago in Kurdistan, the President thought. It reminded him of Desert Storm and his first weeks there, when he knew that if Saddam Hussein had chosen to come at Saudi, there was nothing that he could have done to stop it. Back then the enemy, for reasons of his own, had chosen not to come. A few weeks ago, the enemy had come and had come in overwhelming numbers: twelve F-15s against four hundred enemy aircraft. What do you do when your missiles are expended and your guns are empty? Answer: you either run or die.

"Ok, let's talk about what we can do about this. I want diplomatic, economic and military options on the table by the end of this meeting. Let's go in the order I just outlined. Alan, first you, and then Fred, outline your thoughts on diplomatic efforts that might be employed to stabilize this situation."

**December 17, 16:30**

**Sea Worthy Marina, along the Fox River**

**On Highway 31, north of Batavia, Illinois**

Ahmed Haddad immigrated to America from Lebanon in the early 1990s. He came to attend school at Northwestern University in Chicago, majoring in medicine. His visa had indicated that he was a student of Dentistry. Indeed, he went on to earn a degree from Northwestern and opened a dental practice that served the burgeoning immigrant population in that city. Allah was kind, and his business flourished, making Ahmed a wealthy man and leading to his becoming a naturalized American citizen.

And, to all outside appearances, Ahmed Haddad became the model American citizen. He worked hard, owned a business, and was a leader in his local community. What none of his American

friends knew about him was that his parents had been killed in an Israeli bombing raid just before he left his home country.

The Israeli government had called it an attack on a terrorist base, but there had been civilian casualties and Ahmed's parents were unfortunate enough to be in the wrong place at the wrong time. Shortly after their deaths, Ahmed joined the Hezbollah.

Soon thereafter, through the Hezbollah leaders, Allah had decided in his infinite wisdom that Ahmed would come to America. There, he was to bide his time until he was in a position to strike at those who had paid for the bombs which had taken the lives of his parents and so many others. Until then, his instructions were to simply work hard, stay out of trouble, fit into the society and wait patiently for instructions. Last month, those instructions had finally come.

Ahmed Haddad smiled as he signed the paperwork that completed the purchase of his forty-two foot Sea King houseboat. As he was doing so, the salesman commented.

"Mr. Haddad, you and your family are really going to enjoy yourselves on this boat. It will make a wonderful Christmas present for the family."

"I am sure we will have many unforgettable experiences on her. She is indeed a beautiful boat." Ahmed said.

As he said this, he also thought, "Are all American so ignorant? A Christmas gift indeed. Can't this fool see that I am Arabic?" No matter, after the last few years and the general underlying distrust of anyone who had Arabic features, it would be best to not let any irritation whatsoever show.

The salesman continued.

"She is absolutely top of the line, Sir. We've outfitted her exactly as you requested. The GPS gear and the radios you ordered have been installed and checked out. The radar equipment has also been installed and tested, just as you asked, and her name has been painted on the rear of the boat."

Ahmed smiled to himself as he signed the check to complete the transaction. What the salesman didn't know was that Ahmed was just getting started customizing his new boat. Once the houseboat left the dealer, it would be transported to a large warehouse that Ahmed and several of his close friends owned on the outskirts of Chicago near Schaumburg. There, further and more extensive modifications would be made to the boat, none of which had ever been anticipated by its designers. Just like the modifications that would be made to the other more than half a dozen cruisers and houseboats that Ahmed was involved with having purchased.

"Thank you so much for your service to me." Ahmed said as he shook the salesman's hand and rose to leave. "A truck will arrive later this afternoon to transport the boat to my slip."

As he shook Haddad's hand, the salesman had one last question.

"You're very welcome, Mr. Haddad. You know, that's quite the name you have for her. We've never had a boat named the "Dhul Fiqar" before. Excuse me if I pronounce it wrong. What does it mean anyway?"

Ahmed had arrived at the name for this particular boat long ago.

"No matter. It is not uncommon to mispronounce it in English. It's pronounced D'-hul Fi'car and it's an old Arabic expression of faith. Again, it has been a pleasure doing business with you."

Seeing the salesman nod, Ahmed turned and left. What he hadn't told the salesman was the complete meaning of the name. In Arabic, "Dhul Fiqar" translates into "The Prophet's Sword."

## Chapter 8

*“See first with your mind, then with your eyes, and finally with your body”—Yagyū Munenori*

### Christmas

Throughout Christendom, the festive, joyful atmosphere was in full swing. All across Europe and North America, record purchase volumes had been set as shoppers visited the malls and their favorite stores and shops to purchase gifts for their relatives and friends. Christmas day dawned bright and cool across the better portion of North America and Europe, although in the northern sections a lingering snow cover from snowfall several days earlier made for a white Christmas nonetheless.

The President of the United States and the Prime Minister of Britain made a joint, Christmas Day appearance to troops in the Mid East who were still stationed there as a result of the hostilities that had occurred in early November. Both men made a morning appearance on the ground in Kuwait to their Army and forward deployed Air Force personnel. Then, later in the afternoon they made appearances on board two ships in the Persian Gulf. President Weisskopf visited the USS Shiloh (CG 68), an Aegis class guided missile cruiser (CG) of the US 7<sup>th</sup> Fleet. The British Prime Minister visited the HMS Argyll (F 231), a Duke class, Type 23 FFG and flagship of the United Kingdom’s 6<sup>th</sup> Frigate Squadron.

Both ships were deployed, along with several others, in the Persian Gulf to supply radar warning, additional anti-air defenses and fire support to allied ground and air forces should it be required. No major capital ships such as American or British aircraft carriers or large amphibious assault ships were being allowed into the Gulf. With the GIR’s proven willingness to launch massive air assaults and take tremendous casualties, the confines of the Persian Gulf made the prospect of these large ships and their embarked air wings and expeditionary ground forces too risky.

Security for these visits was extremely pronounced. No fewer than fifty interceptor aircraft were in the air at all times in conjunction with the Presidential and Prime Minister’s visit. Although there had been some threats from specific terrorists groups which created a corresponding higher alert status at each of the bases. No untoward incidents occurred.

Meanwhile, a potential inter-Arab crisis and condition was developing along the border of Syria and the GIR, at the former Iraqi border. The Syrian Army and Air Force were conducting exercises south of Turkey along that border. Syria indicated through diplomatic channels that these exercises were needed for its armed forces and were also meant to send a strong message to the GIR to respect Syria’s borders. Although Syria had not taken part in Operation Iraqi Freedom and had been warned by the United States not to attempt to help Saddam Hussein or his Ba’ath party at that time, Syria had participated earlier in Desert Storm on the side of the allies. Many western analysts viewed the current military posturing by Syria as a much needed and strong signal to the GIR and Hasan Sayeed. They presumed it indicated that Sayeed’s influence did not extend to all of Islam, including some of those states viewed as very fundamental and faithful to the Islamic faith.

The exercises themselves involved upwards of one hundred thousand personnel as three full divisions practiced armored assault, mechanized advance and air assault operations. Syria’s logistical supply operations were also exercised in support of these operations. In addition, close air support and combat air patrol operations were held in support of the armored and mechanized exercises.

The GIR communicated many warnings to the Syrians regarding these exercises throughout the week between Christmas and the New Year. Hasan Sayeed personally warned the Syrian King to ensure that no encroachment occurred by the one thousand tanks, twelve hundred armored personnel carriers and four hundred military aircraft involved in the exercises. Most of this equipment was newer and perceived as a significant threat. T-72 and T-80 tanks, BTR-80 and BMP-2 armored personnel carriers, Mig-29, Mig-27 and SU-22 aircraft and HIND-E attack helicopters were all employed.

Mediation by various members of the Arab League was attempted as the GIR beefed up its own forces in the areas along their northern border with Syria. This involved transferring some of the forces that had been deployed around Irbil and Karkuk after the defeat of the Kurds. As part of the GIR 1<sup>st</sup> Army group that had been pulled back deeper into the GIR began mobilizing for movement, negotiations and calls for caution were issued by the European Union, the Security Council of the United Nations and by the United States.

On December 30<sup>th</sup>, Jien Zenim announced that the People’s Republic of China would lead a delegation of several of the Coalition of Asian States to the region during the first week of January in an attempt to negotiate and defuse the crisis. Jien’s close confidant and ally, Li Peng, would head the delegation on behalf of the PRC and the CAS.

### New Year

As the people all around the globe rang in the New Year with celebration and festivities, the world also anxiously awaited the resolution of the crisis brewing between the GIR and Syria. While

the delegations were preparing for the Chinese brokered summit, and while Syrian and GIR troops by the hundreds of thousands faced each other over what appeared to be a very tense frontier, other disturbing developments were coming to light on the international scene.

North Korea's annual military exercises were the largest in its history. Over three hundred thousand North Korean combat troops and their equipment were gathered right along the DMZ conducting exercises meant to simulate the North's capability to invade the South. These exercises and the numbers of troops participating meant that the US forces and South Korean forces were placed on their highest state of alert. Recognizing that an outbreak of hostilities on the Korean peninsula would almost certainly end up involving them, Japan and Taiwan also placed their forces on their highest state of readiness.

All of this added substantially to the overall unease felt around the world, particularly in the west and in those nations of Asia that had not become a part of the CAS. Markets were down sharply, particularly the high tech and petroleum markets that depended on these regions for their production.

While this was occurring, the CAS continued experiencing growth and prosperity. This prosperity was enjoyed by all of its member states, but particularly China, India and the GIR. Russia was also benefiting immensely from her relationship to the CAS through the exclusive exploitation of Siberia, and through its blossoming arms sales to members of the CAS and the GIR. By January 1<sup>st</sup>, the number of nations that had officially joined with the CAS included China, Cambodia, India, Mongolia, The Greater Islamic Republic, Laos, Vietnam, Nepal, North Korea, and Bangladesh.

The GIR was itself growing and reaching ever further towards the Imam Hasan Sayeed's goal for a unified Islam. By January 1<sup>st</sup>, the GIR included all of the former states of Iran, Tajikistan, Afghanistan, Kyrgyzstan, Turkmenistan, Pakistan, Uzbekistan, and Iraq.

This amounted to an Islamic population of over two hundred and seventy million citizens who looked to the Imam Hasan Sayeed as their political, military and spiritual leader. The developing Islamic Republic, like its predecessor Iran, was a fundamental Islamic state where freedom of religion was not recognized and freedom of speech and the press was severely suppressed. The fact that most of these people were choosing to live in such conditions was mystifying to the west, but alluring to other Islamic nations that leaned towards fundamentalism.

**January 5, 16:00 local time**

**Foreign Ministry press room**

**Damascus, Syria**

"All I can tell you is that we have reached a very delicate stage of the negotiations. The Syrian and GIR military and diplomatic representatives have requested to continue meeting and negotiating behind closed doors. Thus far we have made tremendous progress which the various news services have witnessed in open meetings of the last three days. Now, the time has come for more delicate issues to be discussed which will be pivotal in having the two armed forces back away from their high levels of alert and move away from their borders. I have every confidence that within the next few days we will be successful in those aims.

"I will take a question or two. Yes, the young lady on the 2<sup>nd</sup> row."

As Li Ping motioned to the ABS reporter who had raised her hand, he briefly thought about the status of the meetings to date. Things were going just a Jien Zemin and Hasan Sayeed had planned. This very news conference had been a part of that elaborate planning, and here were all of the major news services of the world, particularly of the western world, hungry for the story. That hunger was represented in all of their eyes and their clamoring to ask their questions. The ABS reporter he had chosen first, Linda McPherson, was a well known journalist whose dislike and disdain for the current US President was well documented.

"Mr. Li, you indicated that great progress had been made thus far at this summit. Can you outline for us what that progress consists of?"

Excellent question, thought Li.

"I would be happy to, though you will understand if I do not delve deeply into specifics at the moment. Syria is clearly reacting to the presence of so many troops near its borders as a result of the unfortunate hostilities in the area last November. Although the GIR stated in plain language that it had no intent to violate any other nation's sovereignty or borders, nonetheless, one can understand Syria's prudence when there is someone with a big stick standing outside your unlocked and largely undefended back door. This is particularly true when the individual carrying the stick is confused for a bully who has been known to wield the stick at weaker neighbors in the past.

"This prudence has invoked a similar reaction from the GIR, whose new borders also need to be secure. When they see large forces on their doorstep, they naturally move a countering force nearby, just in case.

"The most important progress to date has been our ability, as respected mediators and friends of both nations, to point out that the old bully on the street is no longer there. That both neighbors need to cautiously realize that miscommunication, presumptions and historical fears have led to the current situation. In essence, that the two nations and forces really need not fear each other. To realize that the

most likely situation that would lead to hostilities in this particular situation is the proximity of the forces and their high degree of alert—not a pre-determined desire or plan to violate the border of one or the other. I believe we have arrived at that understanding, which places us in a position to move forward.”

“Next question. There, in the third row on the left, the young man with the brown blazer.”

The leading Middle East correspondent for WNN stood up.

“Yes. Without going into any specifics of the “delicate” portions of the current negotiations, can you tell us what your preferred time table would be, and what general steps could lead towards a stand down by both forces?”

Li decided that this would be an opportune time to release some leading information. Information the “free press” would surely take up and spread abroad. Information that would be used to pressure politicians in a manner congruent with the long term plans of the CAS.

“Well, the short answer on the time table portion is: as soon as possible, or as you Americans say ASAP.”

Li paused for the laughter that rippled through the press room. When it had died down, he continued.

“But, more seriously, I expect we can arrive at a detailed plan for bringing the border regions into a normal mode within three to four days. Once we achieve that understanding, and develop non threatening logistical plans towards that end, we can then proceed to lower threat and alert levels, reduce combat air patrols and move forces back away from the border itself. I hope this gives you a general feel for where we hope to take these negotiations. One last question. Yes, you here on the back row.”

JT Samson could not believe his good fortune. His Internet news site, SierraLines, had been in operation almost eight years. Up until last year, it had operated on a shoe-string budget, barely earning enough to keep his few employees paid, and have enough left over for living expenses. In fact, had it not been for his wife’s medical practice, which was really what was putting bread on the table, SierraLines would have gone under long ago.

But all of that had changed during the last presidential elections. At a fund raising dinner in Denver, it had been JT’s microphone which had caught now President Norm Weisskopf’s unguarded and now famous remark about “wrestling” with the husband of his opponent, a former President himself, who had commented on Weisskopf’s age.

That brief recording and its subsequent publication on his site, had brought him all of the notoriety and advertising and news contracts he needed to turn SierraLines into what was now considered the pre-eminent conservative news site on the internet. It had given him the time and the money to travel and chase after major news events all over the world—and JT had proven quite good at it. The fact was, he had *always* been good at it, he just needed the opportunity.

So here he was, chasing his instincts. He remembered seeing the video of the event he had in mind, the muffled crack of a single gunshot and then the security forces riding Hasan Sayeed to the ground. He had seen it only once on the networks...and then no more. Yes, he had a question for Li Peng, an individual JT recognized as an “insider” in the PRC leadership; and that question wasn’t related to the current Syrian “crisis” at all.

“Mr. Li, is it true that you and the PRC leadership are privy to information that during Hasan Sayeed’s recent pilgrimage to Irbil, before he successfully negotiated the inclusion of the Kurds into the GIR, that he was the victim of an assassination attempt? Do you, or do you not have clear evidence that the assassination attempt was conducted by the United States CIA and was foiled by none other than Jabal Talabari, the former leader of the Kurd military and the current leader of the GIR military in this crisis?”

As the question had been formulated, the pleasant smile on Li Peng’s face had slowly given way to a guarded incredulous look. The room had gone deathly silent, a silence that lingered for a few pregnant heartbeats as Li prepared to answer.

Then, bedlam as the room erupted into a deafening chorus of shouts, questions and attempts to get Li’s attention. All hands were raised, most reporters were on their feet. Li looked around, wondering how the mood and the focus of the meeting could have turned so drastically. Finally, he raised his voice loud enough to be heard over the din.

“I cannot comment on any such report. The security forces of the GIR and their investigative agencies are in the best position to answer such allegations. Thank you all. This concludes the press conference.”

**January 10, 14:00 local time**

**General People’s Congress**

**Tripoli, Libya**

Premier Mubarak al-Shamik stood and walked to the podium and the microphones. The People’s Congress had voted and the voting had been unanimous, just as their leader, Muamar Abu al-Qahdafa

had predicted it would be. Now, it was left to him, Premier Mubarik Shamik to make the historic announcement.

“My brothers, citizens of Libya, today we are becoming part of history; part of a divine destiny. It is with great pleasure and pride that I present you with the results of the historic vote. Let it be recorded that today, Monday, January 10, the General People’s Congress has voted unanimously to unite ourselves with the Greater Islamic Republic and to proclaim the Imam Hasan Sayeed as our Mahdi.”

“The recent revelations regarding the Great Satan’s, America’s, role in the attempted assassination of the Imam have hastened this decision. We, as the faithful in Islam, must unite to stave off these insidious influences and attacks by the west.”

“In addition, I am further pleased to say that as I speak, concurrently in Algiers, Algeria; N’Djamena, Chad; Khartoum, Sudan; Sanaa, Yemen; and Muscat, Oman similar announcements are being made.”

“It has become an irresistible force as sure as the pull of gravity and it is sweeping all of Islam. Our people and faith are being united into a greater whole and the Imam Sayeed is God’s instrument in making it happen. I urge all Islamic people to join with us. Our revolutionary leader, Muamar Qahdafa was the first to sign this document and he has authorized me, on his behalf, to endorse our unification in the holy name of Allah.”

As a roar of approval erupted from the congress, Premier Shamik returned to his seat. He sat down and contemplated the coming struggles. With today’s announcement, enough members of OPEC (four out of eleven) were now a part of the GIR to be able to hold up almost any measure they desired. The west would understand the meaning of this. In addition, almost one third of the Arab League (seven out of twenty-two) was now a part of the GIR. If things worked as the Imam had planned, soon a much higher percentage of both organizations would be a part of the GIR.

Shamik was relatively cynical. He had been involved as a politician and a leader under one of the most ruthless Muslim dictators in the world and had therefore seen his share of purges and elimination, faithful follower of Allah or not. Yet, despite this, he was himself a man of faith and it took his breath away to contemplate the coming together of so much of the Muslim world: Iran, Tajikistan, Yemen, Afghanistan, Kyrgyzstan, Chad, Turkmenistan, Pakistan, Algeria, Uzbekistan, Iraq, Oman, Libya.

All of these were now one nation! Could it be true? Would it hold and allow Allah’s will to be manifest through them? Shamik felt that much of that depended on the Arab states that were resisting. Saudi Arabia, Egypt, Morocco, Turkey, The United Arab Emirate, Syria, Jordan and Lebanon had still not made any definitive move. In fact, some of them were openly hostile. Those states and how they reacted to coming events would be the key for the realization of the long awaited dream, Shamik was sure of this.

**January 12, 15:25**

**Salt Lake City International Airport**

**Salt Lake City, UT**

“Ladies and Gentlemen, Delta Airlines welcomes you to Salt Lake City where the local time is 3:25 p.m. Mountain Standard Time.”

The landing was smooth and Hector Ortiz was awakened from his nap only by the roar of the engines operating in reverse thrust and the customary arrival announcement by the flight attendant. Ortiz looked out the window and saw the mountains to the east of the airport in the valley of the Great Salt Lake. His flight had begun in Monterey and having already cleared customs at Dallas-Forth Worth, he anticipated a quick stop at the Avis counter and a short drive to his hotel. Tomorrow, he had a number of appointments to keep in both the Salt Lake and the further south, Utah valleys.

While Hector Ortiz enjoyed his frequent trips to the United States, the home of his customers and the source of his income, he had no love for the American people or their system of government. He hoped, and worked for the day, that the map of the American continent would be very different. Secretly, he had rejoiced when the bin Laden organization had successfully attacked America some years ago. He had not let it show then, or at any time since. He was far too shrewd for that, but he had secretly hoped at the time that those events would have toppled the American eagle off of its perch. When it hadn’t, he had filed and stored the experience, understanding that without supporting actions such attacks, even as large as those that occurred in September of 2001, had little hope of doing more than momentarily stunning a nation as large and capable as the United States.

Ortiz was engaged in the business of international trade. In its visible activities, his trucking company was one of several which facilitated the burgeoning flow of goods from Mexico to the United States as a result of the North American Free Trade Agreement. The freight manifests of his company showed finished goods of all kinds, including home appliances, hardware, automotive parts and industrial electrical devices which were assembled in the maquiladora towns for export to “El Norte.” This enterprise provided him with knowledge of traps and hazards to be avoided in

conducting his shadowy and even more profitable operations—conveying contraband cargo across the long, porous border between the two nations.

Ortiz saw the United States as a land of contradictions. A nation whose economic vitality was born in its traditions of liberty and free enterprise, now America ironically provided profit opportunities to smugglers like himself through its prohibition policies, just as the ban of alcohol had given rise to the gangland entrepreneurs of the early 20<sup>th</sup> century. A land both powerful and yet so very vulnerable, dependent upon its webs of technology and energy. That vulnerability had been very aptly demonstrated back in 2001, and the Americans had attempted to respond, while maintaining their open society. The President at that time had created a new cabinet level position, the “Office of Homeland Security” and many procedures and plans had been established to protect the more obvious targets within America. Plans and procedures had been in place for the last five years, but they had never been tested. Soon perhaps they would be.

Despite his personal financial success resulting from his businesses, Ortiz, who was borne in Ciudad Juarez, was a student of history. He held that the lands of the US southwest were stolen by conquest in the wars of 1836 through 1846 or coerced purchases, and that they rightfully belonged to the Hispanic people. For more than thirty years, Hispanic nationalists within the US had been promoting the idea of Aztlan, a new nation which would be comprised of these lands. Certainly, demographic trends that might be conducive to such a development were already developing in the United States. In addition, the events of the past year involving the Greater Islamic Republic had proven, to an even greater degree than the breakup of the old Soviet Union, that such monumental changes were possible, and perhaps even inevitable.

To that end, Ortiz had been contacted recently by an old friend, an aging head of state, who asked for his assistance in bringing about similar changes to North America. Hector would use his own resources to study the current state of the infrastructure networks—the pipelines, irrigation systems, power lines and their nodes throughout the sparsely populated American West. Then, based on further instructions from his friend, he would put together a number of “projects” related to that infrastructure.

Hector recalled a conversation with Miguel Santos, one of his drivers from the early days when his business was small, but who had risen to be a trusted senior member of Hector’s inner circle. Miguel had told him of working in the United States in the mid to late 1990s as a range land fire fighter. Once, over two thousand fire fighters were brought in to fight a brushfire in an isolated area of the state of Utah where brushfires are usually left to burn out behind a fire line. Miguel mentioned that an electric power substation some fifteen miles from the town of Fontaine was the junction point for transmission of 10% of the electric power required for southern California. The men had been brought in to ensure that this juncture was not damaged and they had been ordered to keep the fire from it at all costs.

That had been a number of years ago, and the firefighters, who had camped in the Fontaine, Utah, City Park, had in fact saved the transmission station. Now, in conjunction with the assignment from his employer, Ortiz had already done substantial research on this facility, along with many others, and the Bonneville Power Administration Company that maintained and administered it. He had used on-line resources principally, but since his friend funded this effort so well, he had also purchased SPOT satellite images of the station. This had revealed much to him about the substation and how it had been designed and placed generally.

However, as he had learned from his underground business, there was no substitute for first hand, close up observations. Ortiz was committed to making those observations over the next two days between and after his legitimate business appointments. Those observations would also include an assessment of how America’s “Office of Homeland Defense” may have instituted policies that would prevent or inhibit his plans out in these rural areas, over the next two days.

**January 16, 19:38**

**White House Situation Room**

**Washington, D.C.**

The mood was tense. They had been meeting here for over four hours, and for the President of the United States, four hours was huge block of time. Conditions warranted it.

“OK, you’re telling me that all of our SIGINT data NRO images are indicating that the GIR and Syria are moving away from one another, but NOT standing down?”

Jeremy Stone paused before answering the President’s question.

“Mr. President, that is essentially correct, but I believe that the flavor John Bowers is putting on this is much closer to what the real picture could shape up to be.

“We have two very large forces, who we believed, up until a few days ago, were potentially belligerent towards one another. But, the positions they are moving towards along the Turkish border, and the disposition of their logistics trains are causing our War College and think tankers a lot of concern. I guess I can best sum it up by quoting what one of our junior analysts quipped the other day before the direction and disposition became clear. I believe his exact words were, “Boy, if those two

forces were on the same side, now that would be one hell of a pincer about to deploy into Turkey.” This quote opened a lot of eyes and led to our current concerns Mr. President.”

As the President digested the magnitude of what General Stone had just said, John Bowers, the National Security Advisor to the President contemplated the ramifications.

Simply put, they had been suckered and led around like an animal with a ring in its nose. The Syrians had over one hundred thousand combat troops moving west along their border with Turkey. The Greater Islamic Republic had over one hundred and twenty thousand troops moving east along their border with Turkey. Between them, they had over 2,300 main battle tanks and almost 3,500 armored personnel carriers in those two army groups, not to mention some 850 combat aircraft. If they somehow could coordinate their activities and move, pincer-like into Turkey—well, Turkey’s total military strength comprised about 390,000 of which 340,000 were draftees. Turkey had almost 4,000 tanks, but only 1,000 of them were modern. The entire Turkish Air Force consisted of only 350–400 modern aircraft. This could get very dangerous, very quickly.

“Jeremy, Tim and John: how quickly can we, or the Turks have forces in place to counter a move should the Syrians and/or the GIR invade Turkey?”

The Chairman of the Joint Chiefs fielded the question.

“Mr. President, we have staffed down significantly in terms of ground troops. Incirlik has a strong air wing and we could start ferrying troops in there fairly quickly. But we are many weeks away from having a large enough blocking force in place with the equipment to effectively block such an operations. The Turks are certainly watching this, but their total Army is barely larger than these two forces combined. They could block maybe one of these thrusts if they started today and the GIR and Syrians held off for at least a couple of weeks. Otherwise, there would be serious loss of ground before a defense could be set up.”

It didn’t take very long for the President to make up his mind.

“OK, let’s get the 82<sup>nd</sup> Airborne headed for Turkey. I want the orders cut and the initial people in the air by tomorrow. Tim, work with General Stone and follow that up with planning to place a force in depth there to assist Turkey as soon as possible.”

“Fred, we need to immediately set up a conference call between myself and the President of Turkey. We need to apprise him of our concerns and suspicions and coordinate a meeting ASAP between our military people and Turkey’s. Make sure we include NATO in this as we are looking at a potential NATO response should there be any hostilities. Tim, please ensure that all of our military people are hooked tight into this very quickly.”

“Fred, also get me a conference call with Hasan Sayeed, we need to make our intentions and commitment with respect to Turkey very plain.”

“Finally, Tim and Jeremy, please have the basic ingredients of your plan for the defense of Turkey prepared to discuss with the Turkish government and any NATO personnel during the meeting that Fred will be setting up.”

“Let’s meet back here tomorrow morning at seven o’clock a.m. to work out the details of the schedule for all of this. Ladies and gentlemen, with these developments in Turkey, the developments along the DMZ in Korea, the continued build up of Red China and the political and military encirclement of Egypt, we face a developing crisis as large as that preceding World War II. We must face it with the same level of gravity and commitment.”

**January 17, 07:30 local time**

**Pope Air Force Base Flight Line**

**Ft. Bragg, North Carolina**

On the flight line of Pope Air Force Base, the first group of C-17 Globe Master III Heavy Lift Transports were spooling up and preparing for departure. The C-17 military airlift aircraft could carry payloads up to 169,000 pounds anywhere in the world to land on small, unimproved airfields. In this case, they were going to be carrying their payload to the recently repaired airfield at Incirlik, Turkey. The payloads could include these troops and their equipment, up to and including HUMMV’s, Bradley Fighting Vehicles, Sheridan Tanks and M1A1 main battle tanks. In this case, the initial flights would be heavily laden with troops and some of their supporting equipment, principally HUMMV’s and some of their APC’s.

This early winter morning, long lines of soldiers carrying their personal equipment and effects were strung out next to each aircraft as elements of the 1<sup>st</sup> Brigade of the 82<sup>nd</sup> boarded. Their collective breath could be seen rising in small clouds as the temperature outside was hovering at twenty-five degrees Fahrenheit. These troops would be arriving in Turkey in eighteen to twenty hours as the initial phase of the United States response to the looming threat of the Syrian and GIR forces massing on the Turkish border.

Away from the flight line, crews were in the final stages of preparing attack helicopters from the 1<sup>st</sup> Battalion of the 82<sup>nd</sup> Aviation Regiment for transport to Turkey. The 82<sup>nd</sup> Aviation Regiment was the only Army attack and support helicopter unit prepared to deploy anywhere in the world within

eighteen hours notice. Right now, they were feverishly preparing their OH-58D and newly delivered RH-66 Comanche helicopters, and their UH-60 helicopters for transport and combat.

As the first C-17 Globemaster lifted into the air and crossed the outer barrier of the base, a small Fiat sedan parked just off the base in an area frequented by military enthusiasts, started its engine and drove away. Inside, Jabeel Suma, a twenty-three year old Arabic student at the local community college in Fayetteville, North Carolina, closed his notepad and set it on the seat next to him. He drove into Fayetteville, in an area fairly far removed from his apartment, near downtown where he stopped and got out of his car. He walked into the city park.

Five minutes later, from a bench in the middle of the city park, Jabeel used his cell phone to send a coded message. The message gave the details of the deployment of the 82<sup>nd</sup> Airborne Division to his primary contact, an attaché to the Greater Islamic Republic ambassador to the United Nations in New York City. From there, the information was transmitted to Tehran and Damascus and then routed to the Syrian and GIR headquarters along the Turkish border. That message, detailing the time and initial quantities of C-17s involved in the take off arrived at those headquarters within four hours, fully fifteen hours before the C-17s arrived in Incirlik.

Over the next two days, seven similar messages would be sent as more elements of the 82<sup>nd</sup> Airborne Division departed Ft. Bragg and flew to Turkey. But, it was that first message that had the most telling effect.

**January 18, 21:30 local time**

**Presidential Press Room**

**Tehran, Greater Islamic Republic**

“...therefore, as of 8:00 p.m. this evening, a state of war exists between the Greater Islamic Republic and those Islamic Nations which have broken the faith, which have embraced the infidel western societies and whored our collective resources to them, who are destroying our faith, the very foundation of our culture and society. These nations include Turkey, Kazikstan, Egypt, Saudi Arabia, The United Arab Emirate and Morocco. The sword of Allah hangs over them and they shall be brought into alignment with the faith.”

“Concurrent announcements are being made in the capitols of the following member nations as I speak: Iran, Tajikistan, Yemen, Afghanistan, Kyrgyzstan, Chad, Turkmenistan, Pakistan, Algeria, Uzbekistan, Iraq, Syria, Oman, Libya, Jordan, Sudan, and Ethiopia.”

“Today’s announcement includes four new names, who themselves are announcing a solidarity and unification with the Greater Islamic Republic, Syria, Sudan, Ethiopia and Jordan.”

“To the western nations, particularly the United States, NATO and Israel, we say: do not interfere and you will not be interfered with. We seek to live at peace with the rest of the world and will allow you your faith, your commerce and your culture, as faithless and as corrupt as much of it is.”

“But, make no mistake, we will answer the call of our brothers and sisters in Islamic states who are being disenfranchised and destroyed by governments that have a solemn duty to uphold and defend their faith. The nations I have spoken of all fall into this category and it is to their governments that we solemnly proclaim: cease your whoring, cease your desecration, cease your persecutions of the faithful for we will humble you if you do not do so at once. To the faithful in those countries we say, rise up and join with us. Our armies, your faithful brethren will soon be amongst you and will bring you all into the fold. This concludes my remarks.”

**January 18, same time**

**Approaching Turkish Air Space**

**Off the coast of Turkey over the Mediterranean**

Colonel Newhouse glanced at his Multi-Functional Display (MFD). He was in navigation mode while his co-pilot monitored various other aspects of the aircraft and their surroundings. The aircraft, carrying the command element of the 1<sup>st</sup> Brigade of the 82<sup>nd</sup> Airborne Division and its security detachment, was about fifty miles off the coast of Turkey and still some three hundred miles from Incirlik Air Base.

Colonel Newhouse’s C-17 Globemaster was the lead element of a flight of fifteen Globemasters strung out over one hundred and fifty miles. There was approximately ten miles distance between each aircraft in this first flight of fifteen. Additional flights of C17’s and C-141’s, carrying the entire 101<sup>st</sup> Airborne were strung out all the way back to North Carolina. All of the flights represented a veritable river of men and materiel flowing towards Turkey. They had refueled over the middle of the Mediterranean and had plenty of fuel for their approach and landing at Incirlik.

The Colonel was contemplating the rapid turn around he was scheduled to make at Incirlik when he was contacted by the AWACS aircraft, code named Skyman, controlling this final leg of the trip. Skyman also controlled the four F-22 Raptor fighter aircraft that were escorting the Colonel’s flight of C-17s into this potentially hostile air space.

“Greyhound one, come to bearing 135 degrees angels 10. Many unidentified aircraft approaching from the southeast, range 225 miles. Bogies are going supersonic. Incirlik had declared an air emergency and is under heavy ballistic missile attack at the current moment”

Immediately Colonel Newhouse and his co-pilot snapped to. Warning lights were flashed to the loadmaster and the passengers in the cargo and carrying area. The “passengers” immediately took their seats and strapped themselves in. The co-pilot switched to the defensive system option on his MFD while Colonel Newhouse maneuvered the aircraft.

“Roger that Skyman, 135 degrees, angels 10.”

Switching to the command frequency, Col. Newhouse continued.

“Dave, contact the entire flight and have all aircraft immediately wave off from Incirlik and divert to Izmir, then get me on the command frequency to Izmir. We may only have a few minutes.”

As Colonel Newhouse’s co-pilot complied, all four F-22 Raptor aircraft vectored off to the east-southeast to intercept. They went to “super cruise” mode to reach supersonic speed without engaging their afterburners, thus saving significant fuel.

The F-22 was the crown jewel of America’s (and everyone else’s) fighter aircraft industry. It was capable of carrying as much ordinance as the F-15, but further, faster, with vectored thrust, and it employed the latest stealth technology. There were simply no other aircraft in that could engage it head to head. But the GIR had no intention of engaging America’s superior technology one on one.

Each of these carried six AMRAAM missiles and two Sidewinder missiles and would be in missile range in four and a half minutes.

**January 18, 20:05 local time**

**Over the Turkish coast, outside Turkish airspace**

**West of Adana, Turkey**

Once again, GIR Air Force General Mahdavi Ardakani, surveyed the aircraft that were accompanying him to attack American interests.

On this day, an even larger attack into Turkey was occurring than what had occurred in November, a little over two-and-a-half months earlier. Many of the same elements of the GIR Air Force in this theater, which had been reinforced to make up for earlier losses, were being joined today by a large portion of the Syrian Air Force in this assault on Turkey. Incirlik airbase was again targeted and was even now being attacked by well over 200 ballistic missiles carrying conventional munitions preparatory to an attack by well over two hundred aircraft.

Every major airfield and military base in southern and eastern Turkey was going to be hit this evening and throughout tomorrow as the Syrian and GIR armies crossed the border in a two pronged drive into central Turkey along the Tigris River, and along the coast towards Adana. All in all, between the GIR and Syria (which itself had just announced its own unification with the GIR), over eight hundred military aircraft were involved here in what they were calling simply “Operation Turkey.”

The General’s flight of 48 fighter aircraft was specifically targeted on the incoming C-17 aircraft carrying the advance elements of the 101<sup>st</sup> Airborne Division. Thwarting a strengthened American presence in front of the invading armies was critical. Thirty-two of the aircraft were SU-27’s, but the General’s aircraft and another eleven were the more modern SU-35s which were flying in three flights of four in the middle rear of the overall formation. The General also had along four of the tandem seat SU-34s which were being used as electronics warfare aircraft. All of the General’s 48 aircraft were now within a few minutes of catching the large aircraft, which his radar was showing scattering. Like a small herd of sheep before a pack of wolves, thought the General.

He was surprised there were no escorting American fighters.

No matter, given the range and their fuel status, he calculated that his aircraft should be able to down four or five of the advanced and very expensive cargo planes before he had to turn back.

Just as he was preparing to order the various flight leaders to vector towards their corresponding targets, missile launch warning tones began erupting in the cockpits of all of the aircraft in the lead flights.

Cries of “Missile launch” and orders for evasive maneuvering were heard over the command frequency as the various flights being targeted sought to evade the oncoming missiles which appeared to have materialized out of nowhere. Very quickly, two of the General’s SU-34 EW aircraft had backtracked the oncoming missiles and re-calibrated their instrumentation.

“Hawk Leader, we have marginal identification on four enemy aircraft, bearing fifteen degrees, altitude approximately ten thousand meters, range forty-five kilometers. We are identifying these as US F-22 Raptor aircraft. Very little electronic, radar or thermal signature.”

Raptors! Finally a head to head combat confrontation with the latest American fighters. From the looks of it, they are everything they have been advertised as being, the General thought.

There had been no warning, just the missiles themselves in the air—AMRAAMS, from the looks of it. Well, he hoped that his SU-35 and SU-34 combination he had included in this attack would allow him to not only complete his mission, but to defeat several of the F-22s as well.

**January 18, the next five minutes**  
**Over the Turkish coast, outside Turkish airspace**  
**West of Adana, Turkey**

Over the next few minutes, four more launches of AMRAAMS by the US aircraft were accomplished before the range closed and the GIR aircraft got close enough to make IR contact and lock with the Americans. In that time, of the twenty missiles launched, fourteen of them found their mark and brought down SU-27's.

In the ensuing fight, General Ardakani committed four of his SU-35s and twelve of his remaining SU-27's against the four F-22s. With his remaining eight SU-35s, eight SU-27's and all four SU-34s, the General accelerated through the melee and continued on towards the C-17 aircraft which were now low to the deck, making an evasive egress towards Izmir.

Three F-22s were destroyed, two by R-27T1 infrared homing missiles and one by gunfire as the combat closed to "knife fight" range. The fourth F-22 was able to escape. This had cost the GIR another four SU-27's and two of the four SU-35s that had engaged the Americans. The total GIR cost to break through to the C-17 cargo aircraft had been twelve SU-27's and two SU-35s versus three F-22s. Although the numbers were again very lopsided, the data recorded of the battle with the F-22s would later prove very advantageous to the GIR and her allies. It was also heralded as a great "victory" as the GIR not only accomplished its mission, but also overcame the vaunted, supposedly undefeatable American technology in doing so, despite horrendous losses that would not be so heralded.

General Ardakani's flight of aircraft caught up to and shot down three of the C-17s. Colonel Newhouse's aircraft was not one of these. In the action, pursued by no less than four SU-35s, including General Ardakani's aircraft, Colonel Newhouse's C-17 evaded six R-27 GIR missiles before being severely damaged by a R-27T1 infrared homing missile, which took out one of the C-17s engines, and another impact from a R-27R1 radar homing missile above and behind the cockpit. The explosion killed the co-pilot and severely injured the Colonel. Despite severe damage to aircraft hydraulics and attitude control, the Colonel was able to make an emergency landing along a dirt roadway fifteen miles inland in Turkey. His heroic actions in landing the aircraft under these circumstances saved the lives of the command staff for the 1<sup>st</sup> Brigade of the 82<sup>nd</sup> Airborne and would earn the Colonel a Medal of Honor.

**January 18, 16:35**  
**Situation Room, The White House**  
**Washington, D.C.**

As the reports came in, everyone in the room was silent.

Not two hours ago the world had been shocked at the announcements from the GIR. War had been declared by the GIR against America's staunchest Arab allies, including Turkey, Saudi Arabia and Egypt. Several new nations had announced their unification with the GIR, including Syria, which only confirmed the worst fears of those in the United States. The President had immediately called his closest advisors into session in the situation room to monitor events. This included the Secretary of Defense, the Secretary of State, the National Security Advisor, the Chairman of the Joint Chiefs of Staff and the Vice President. Immediately following the announcement by Hasan Sayeed of the declaration of war, the GIR launched another attack on Incirlik, equally devastating to the one two months earlier, and executed an ambush of the lead elements of the 82<sup>nd</sup> Airborne division off the Turkish coast. In that ambush, three F-22s and four C-17s were destroyed (this included the emergency landing of the C-17 by Colonel Newhouse where the decision had been made to destroy the aircraft on the ground after landing and evacuating it). This resulted in several hundred members of the 1<sup>st</sup> Brigade being killed along with the destruction of their equipment.

Now, from around the region, more bad news was pouring in. After the end of the latest report coming in from secure satellite link in Saudi Arabia, Jeremy Stone, the Chairman of the Joint Chiefs addressed those assembled.

"So, let's summarize what we know so far. We have a two-pronged invasion of Turkey, one consisting of a large GIR army group moving along the Tigris River with an apparent initial goal of Diyarbakir. The other is led by the Syrian Army Group, now also a GIR group, and is pointed along the coast with an apparent initial goal of Adana. Logistical support is already in place for both of these Army groups and men, equipment, materiel and supplies are flowing behind them. Our resources in the area are severely hampered by the destruction of Incirlik and the apparent airborne landing occurring in the vicinity now. Izmir is receiving the 82<sup>nd</sup>, but we are clearly on a defensive posture there and are working with the Turkish armed forces to establish a cohesive line of defense extending from Mersin on the Mediterranean coast to Samsun on the Black Sea.

"Latest reports from Saudi indicate that the large GIR army group in the vicinity of Kuwait is also on the move. We expect a crossing of the Kuwait border sometime early tomorrow. We are experiencing heavy ballistic missile attack throughout the region as we speak and expect heavy air

attacks to follow. Our air forces in the Saudi Kingdom are strong, but we frankly do not have enough men and materiel to fight anything short of a holding action in the Kuwait area. Given their announced intention to punish Saudi Arabia and their declaration of war, we believe that the GIR will proceed directly through Kuwait into the oil rich areas along the Persian Gulf Coast of Saudi Arabia and The United Arab Emirate. Mr. President, our initial recommendation will be to fall back and inflict as much attrition on the advancing GIR forces as possible. Again, their logistic lines are in place and set up to feed this invasion force as well. This map of the region should make clear what the GIR's intentions with respect to Saudi Arabia are."

"Finally, Egypt is in no better condition. With Chad, Libya, the Sudan and Ethiopia all joining with the Greater Islamic Republic, Egypt's position is as bad as Saudi Arabia's and just as grave. With the declaration of war on Egypt, the disposition of forces to the East and South of Egypt bring the strategic picture into clear focus. We expect that those Libyan and Sudanese forces that have been mobilizing are in a position to attack Egypt within the week. If for any reason the Chinese in Chad join in this, the prospects for Egypt are very grave."

President Weisskopf soberly took this in. There was little doubt that Hasan Sayeed was eliminating western influence, and particularly U.S influence in the Mid East. But in attacking Turkey, the stakes had been increased significantly. Would the NATO nations honor their commitments?

"Fred and Tim, can we expect full support and involvement by all of NATO in protecting Turkey?"

Tim Hattering considered this. Militarily it would require a full NATO mobilization to repel the GIR forces that were currently assaulting her, and those mobilizing to support that assault. But, whether or not all the NATO nations would do so was the question. Those nations were much more dependent on the oil from the Middle East than the United States.

"Mr. President, if all of NATO honors their treaty obligations, we can repel this invasion. My concern is the oil issue and the influence it is sure to have on many of these nations. Fred, what is your read? I believe we can really only count on Canada, Great Britain and Germany."

Fred Reissinger had been talking to his counterparts in Europe over the last week since it had become clear that a potential for an attack on Turkey existed. The results had not been good.

"Mr. President, I believe we can count 100% on Great Britain and Canada. I believe Germany is 90% there, but we are going to have to help them find alternate sources for petroleum. Outside of this, I believe the Danes, the Poles, the Czechoslovakians and most of eastern Europe may also join, but the French and others are very iffy."

The President again soberly considered this.

"Well, I guess there is no great surprise there, particularly from the French. Let's get the House and Senate leadership of both parties over here. In the mean time, Fred, get the Prime Ministers Great Britain and Canada and the Chancellor of Germany on the line in that order. It is my intention to request declaration of war between the United States and the GIR as of this evening. I want the vote in Congress done quickly so I can announce the same in a nation wide broadcast."

**January 18, 22:30**

**The Oval Office, The White House  
Washington, D.C.**

"My fellow Americans. It with heavy heart but with crystal clear intent that I must speak with you tonight."

"Most of you have heard of the declaration of war announced by the leader of the Greater Islamic Republic earlier today on the nations of Egypt, Saudi Arabia, Turkey, Kuwait and the United Arab Emirate. These are some of America's most trusted and loyal allies in the Middle East."

"The GIR has followed up that announcement with immediate attacks on Turkish and Saudi Arabian installations and cities. With great regret I must announce that these attacks included attacks on American installations in Turkey, Saudi Arabia and Kuwait. There has been significant loss of life. Incirlik airbase has once again been devastated by an unprovoked and overwhelming attack. GIR airborne forces have landed there and there is fierce fighting going on there as I speak to you tonight."

"My fellow citizens, we have strict obligations to our allies in this region. Turkey is a member of the North Atlantic Treaty Organization (NATO) to which we also belong. In the fifth article of that treaty, we are bound to treat any attack on any member as an attack on ourselves. We intend to comply with and fulfill our treaty obligations."

"In addition, our own forces have been attacked in an unprovoked and malicious way. It is clear that Hasan Sayeed and his leadership intend to coerce all Islamic nations to join with them. Those that will not are to be forced into their totalitarian and dogmatic society, a society where the most basic and fundamental of rights to religion and free speech are not only denied, but brutally suppressed. The United States of America *will not stand by* and watch our friends and allies be coerced into such an environment in any way, and particularly not at force of arms."

"This is not like the attack we suffered a few years ago that we all remember. In that attack, a rogue network of terrorist organizations supported by one or two governments assaulted our

homeland. In this instance, we have dedicated and large armies invading our allies. Where the “War on Terrorism” was against fiercely dedicated but small cells of terrorists and the relatively minor governments that supported them, this conflict will be waged against large nations and their armies. These nations have demonstrated their intent on conquering other nations and will, if not stopped, ultimately threaten our shores with similar attempts at conquest.

Therefore, I have consulted with the congressional leadership and a vote by your representatives has already taken place. As of 10:00 p.m. this evening, January 18, a state of war officially exists between the Greater Islamic Republic and the United States of America.”

“I must urge calm upon all of our citizens. This war will not be easy or quick. The GIR and its allies represent a population greater than our own, and production capacity almost equal to our own. The GIR sit astride some of the largest oil deposits in the world. They are in the process of attempting to take, at force of arms, oil deposits for which we and our allies have contracted with friendly nations to make use of. The hardships that this situation has the potential of inflicting on our citizens are enormous.”

“I am calling up 300,000 reservists today, to bolster our Army, Air and Naval forces so that we can contain and then kill this naked aggression.”

“As tyrants, warmongers and despots have discovered: when aroused, the American people are capable of not only suffering through great hardship, but are capable of rising to levels of production and commitment unseen throughout the rest of the world. This is because we are free and because our freedom is founded upon absolutely firm moral principles.”

“I urge all Americans to make tomorrow, January 19<sup>th</sup> a national day of prayer and reflection. Let us consider the roots of our liberty and what it is all based on. Then let us ask the hand of Providence to support us as we go forth once again as a people to defeat tyranny that would crush ourselves and our friends under its unrelenting heel.”

“In conjunction with this announcement, I am informed that the Canadian and British parliaments are in session considering similar articles of war which will place them in this war at our side. We expect to hear of the positive results of these votes within the hour.”

“Announcements regarding mobilization of all reserve units, of emergency actions regarding production and usage of strategic materiel and of war time policies will be forth coming beginning tomorrow.”

“My fellow citizens, let us rise to the occasion and as a people answer these atrocities and these incursions with fierce resolution and with the American ingenuity and attitude that has been the hallmark of American history. God bless you all. Good night.”

**News stands**

**New York City, New York**

“Extra, Extra! Read all about it... War Declared in Mid East. US declares WAR on the Greater Islamic Republic! President calls for national day of prayer and reflection... read all about it!”

The newsboys were shouting it all over the city, waving the latest, hot off the press editions of the New York Herald Post. Similar scenes were being played out across America’s major cities and throughout the world.

**Herald Post**

**Special Edition**

## **WAR DECLARED!**

*Washington, D.C., January 19—An angry, indignant Hasan Sayeed announced to the world yesterday that his nation, or group of nations making up the Greater Islamic Republic, had declared war on the nations of Turkey, Saudi Arabia, Kuwait, the United Arab Emirate and Egypt. Coincident with this announcement was the announcement that Syria, Jordan, Sudan and Ethiopia would be joining the GIR.*

*Within eight hours, and after attacks on U.S. military installations and personnel in the area, the President of the United States, Norm Weisskopf, announced that the U.S. Congress had met and declared war on the Greater Islamic Republic. This announcement was followed shortly thereafter by similar announcements from Great Britain and Canada, which are now added to the earlier announcements by Egypt, Saudi Arabia, Turkey, Kuwait and the United Arab Emirate.*

*As of 5 a.m., EST, GIR armies had already penetrated into Turkey on two fronts and were closing on the Kuwait border. Heavy fighting is reported in both areas, as well as at the U.S. Air Force base at Incirlik, Turkey, where GIR air borne forces landed in strength after a massive ballistic missile and air attack rendered the air base inoperable.*

*In addition, two GIR Army groups are massing near Egypt, one to the west of Egypt near the Libyan border and another to the south along the border with Sudan. Both of these groups are expected to invade Egypt within the next few days.*

The news rocketed around the globe.

January 19 became known as another “Dark Thursday” as both the DOW and NASDAQ plummeted. By the end of the day, both indexes were down record amounts on the day, despite safe

guards that halted trading and then restarted it several times. Total losses for the day were in excess of ten percent. Trillions of dollars of wealth evaporated against the fear of negative impact on energy and against an anticipated expanding war.

German politicians continued a very hot debate regarding their treaty obligations under NATO. By the end of the day, Germany voted in favor of honoring article five of their NATO treaty commitment, but it was a very narrow victory.

In Italy and Spain, the vote never occurred. Those against those nations entry into the war held enough power for the moment to thwart the vote coming to the floor of their respective legislative bodies.

In the far east, Japan, Korea, The Republic of China and other far eastern nations took “wait and see” attitude about the conflict, although Australia immediately voted to logistically support the United States and her allies in any way possible short of declaring war themselves.

The CAS released a harshly worded communiqué on behalf of Red China and India, denouncing what it called “the hasty decision” by NATO countries to declare war on a member state of the CAS. That same communiqué praised other NATO countries for showing restraint in what it viewed as a regional issue centered around religious persecution and intolerance by those states upon whom the GIR had declared war. Both the Russian Federation and Red China offered to mediate and called for an immediate meeting of the UN Security Council to work out a meeting of the parties at the negotiating table.

**January 22, 21:30 local time**

**CP, 39th Security Forces Squadron**

**Incirlik Air Force Base, Turkey**

Captain Hanson surveyed what he had left as a fighting force. He was down to about one-third strength for his security forces, but had augmented that with various grades of enlisted and officer rank personnel left over from the 39th Support, Transportation, Logistics and Medical groups and a few from the Air Wing Group. A few members of the 628th Air Mobility Support Squadron and US Army Corps of Engineers were also with him.

He had been fighting a rear guard action since the major evacuation from the base after the devastating ballistic missile and air attacks of the 18<sup>th</sup>. His original job had been to ensure that all critical equipment and materiel left behind in the evacuation was destroyed and that any stragglers were gathered up for the final evacuation which was supposed to have occurred late yesterday afternoon. But that was before the GIR had landed in battalion strength in airdrops to the south and east of the base the afternoon of the 20<sup>th</sup>, soon after the major evacuation was completed. They had been lucky that the transport, support and escort aircraft had made it out, and that the ground convoy had escaped.

The GIR had been reinforced and now controlled roughly two-thirds of the base. He had destroyed a lot of classified materiel and equipment, but useful equipment had still fallen into the hands of their attackers.

Captain Hanson did not expect any further re-supply. The first evening, the U.S. Air Force had returned in strength and supported him, accomplishing close air support and dropping ammunition, medical supplies and other materiel to the beleaguered defenders. But last night the sky belonged to the GIR, and it was looking like they had established air superiority in the region. His radio communications were being effectively jammed, and the last message had given him the initiative to continue the fight for as long as practicable, or retreat at his discretion. Reports indicated that an entire GIR Army group, numbering in excess of one hundred and twenty thousand men, had broken through Turkish defenses near Osmaniye, fifty miles to the east. This meant that advance elements would be arriving very soon, possibly this evening, and certainly by tomorrow morning.

Hanson had decided to withdraw this evening. He had six deuce-and-a-half trucks for transportation, his last three Avenger-2 Missile systems (mounted on HUMMV chassis) for anti-air coverage, his last three V-150 APC's, six Peacekeeper APC's and six HUMMV's (two of which were outfitted with TOW missiles). Altogether, he had two hundred personnel to transport, with twenty-seven of these being severely wounded and unable to assist in any defense.

In order to accomplish the withdrawal, the Captain had requested a volunteer force of twenty security personnel, which he would lead as a diversion. He planned to use one Avenger, one V-150 and one of the Peacekeepers with this force to punch through the GIR lines and attack a logistics depot on the opposite side of the base near the northern perimeter. Two of his scouts had discovered this logistics point last evening as they were reconnoitering behind enemy lines. The depot appeared to be fairly well defended.

This “diversion” would be Captain Hanson's answer to the GIR brokered cease-fire for him to consider terms for surrender. A part of the diversion included an escape route north into the hills for any who could manage it.

An hour ago there was still an open corridor back through Adana to a small security detachment, also under his command, with the 39<sup>th</sup> Wing A 39 Supply Squadron in Yumurtalik, thirty kilometers

away. Once his XO joined up with them, they would retreat to the east and join U.S. or Turkish forces north of Mersin along the defenses being created there.

**January 22, 22:23 local time**

**GIR logistics point**

**Incirlik Air Force Base, Turkey**

The firefight was over. It had been short and incredibly intense. Colonel Ahmass could hardly believe the audacity of it. Twenty minutes ago when he had been informed that the Americans had made a breakthrough and were proceeding towards his position with several APCs and an unknown number of personnel, the Colonel had prepared accordingly.

Colonel Ahmass' unit was a lead element of the large GIR/Syrian Army that was invading Turkey along the Mediterranean coast. The Colonel had arrived yesterday and was the one who set up the logistics depot and its defenses.

Those defenses consisted of a detachment of one hundred and fifty soldiers with two ZSU-23-4 AAW vehicles, four BMP-2 tracked APC's, four BTR-152 wheeled APC's and several 7.62 MM PK machine guns.

As the Americans approached, the Colonel called in air support in the form of two Mi-28N Havoc attack helicopters from locations just behind the advancing GIR army group. When they arrived, the lead unit immediately attacked one of the American APC's, the Peacekeeper, with an Ataka anti-tank missile, and completely destroyed it. To the Colonel's shock, the small U.S. attacking force included a very capable AAW platform, the U.S. Avenger, which immediately engaged both Havoc helicopters and shot both out of the air with Stinger missiles.

The American V-150 laid down a deadly fire with its 20 mm cannon, immediately engaging one BMP-2 and destroying it. As the other GIR BMP-2's came into play, American soldiers on foot employed their man-portable M47 Dragon anti-tank missiles and destroyed two of them. Finally, the last BMP-2 scored a direct hit on the rear of the V-150 with an AT-4 Spigot missile, and then finished the vehicle off with its 30 mm cannon using twenty to thirty AP-T (armor piercing-tracer) rounds. That BMP-2 then quickly dispatched the American Avenger unit as it tried to escape to the north. This was accomplished with a second AT-4 Spigot missile which quickly traveled the 1,500 meters that separated the two vehicles, completely destroying the lightly armed Avenger in a spectacular explosion as its remaining Stinger missiles cooked off in the conflagration. After this, a brief firefight ensued which ended up driving off the last four or five American soldiers who retreated to the north.

The GIR logistics depot had been defended, but it had cost Colonel Ahmass the two Mi-28N attack helicopters, three of his BMP-2's, one of his BTR-152's and about forty personnel. For this carnage, he could count two American APC's, the Avenger and what appeared to be the bodies of about fifteen American soldiers.

Captain Hanson was among the five survivors who escaped into the hills to the north where he ultimately joined up with Turkish partisans in what would prove to be a very long and bitter fight against the GIR forces which were sweeping across Turkey.

**January 22, 22:35 local time**

**Outside Adana International Airport**

**Adana, Turkey**

As the firefight at the logistics depot ended, the retreating American column sped along the four-lane highway on the outskirts of Adana near the International Airport. The Americans were unaware that just two hours earlier a number of transports had landed GIR Special Forces at the airport. These forces, supported by attack helicopters, took control of the airport in a brief firefight with elements of the local Turkish defense forces. Thereafter, twenty-five transport aircraft landed a full armored reconnaissance company at the airport as an advance contingent of the armored division that was currently en route along the coast.

As the retreating Americans passed the airport entrance, four Type-63 light tanks had just taken up position there along with four BMP-2's and four BTR-80 APC's. Both sides were completely surprised to encounter one another. The ensuing fight was brief and deadly as the Americans attempted to force their way past.

In the fight, the Americans lost four of their six deuce-and-a-half trucks and most of the personnel riding in them. In addition, they lost both V-150 APC's, four of their six Peacekeeper APC's and three HUMMV's. Most of these vehicles were destroyed by cannon fire from the Type-63 tanks and anti-tank munitions from the BMP-2 and BTR-80 APC's. Both Avenger AAW units were able to speed past the airport entrance in the fighting and confusion.

Of the nearly 200 personnel retreating in the American convoy, only sixty-five personnel made it past the airport and ultimately joined up with the smaller security detachment for the A 39 Supply Squadron that was anxiously waiting for them in Yumurtalik. One hundred and three Americans were killed, most in the loaded and unprotected deuce-and-a-half trucks, and another forty-three were wounded and captured along with twenty other personnel who had not been injured in the fighting. Of

these sixty-three captured personnel, the GIR spared fifteen officers and senior enlisted men for questioning while mercilessly executing the rest where they stood or lay to the horror of the fifteen survivors.

In the fight, the American V-150's and the TOW equipped HUMMV's exacted a heavy toll from the GIR forces. Two of the Type-63 tanks, three of the BMP-2's and three of the BTR-80's were destroyed. Most of the soldiers in the GIR APC's were killed as the units had just arrived and the troops had not unloaded from them when the fighting began. In all, eighty-three GIR personnel were killed and fifteen wounded. An armed scout helicopter that was sent to attack the fleeing Americans was shot down by one of the escorting Avenger AAW vehicles, and thereafter the American retreat was not interfered with.

With this battle, the fall of the U.S. airbase at Incirlik, Turkey was complete and the GIR had established a strong foothold along the coast of Turkey.

**January 24, 16:35**

**Lazy H Ranch**

**Outside Montague, Texas**

Jess took off his over boots as he stepped onto the back porch.

Boy, that north wind is howling, he thought as he took off his insulated coveralls and placed them on a peg.

At least those are still easily found, Made in America, he thought as he went through the back door. Jess took great satisfaction in only buying "Made in America" goods for his own personal clothing and implements. The rest of the family had never been quite as serious about it, though they did make the effort, for which Jess was grateful. But, Jess had been to many of those "foreign" places and saw how the people lived, how their governments treated them. He did not want that for America and figured, in his own small way, he could help avoid it by "buying American."

"Hey sweetheart," he called, "what's to eat?"

Cindy not only heard Jess come in, what with that north wind blowing, she also felt him come in by the blast of cold air that accompanied his entry.

"We've got some Chili Beans and cornbread honey, made just the way you like it and piping hot."

"How cold is it out there, anyway. Wind's been blowing all day and I know I've seen some flakes of snow blowing past the windows here."

Actually, the snow was coming down harder now and Jess thought they were in for at least several inches by morning. Temperature had been dropping since yesterday when that norther came through and it had fallen through the twenties today and was sitting at eighteen degrees right now. Despite impressions to the contrary, here in north central Texas, especially up here near the Red River, snow, ice and cold were a typical part of winter, even if the winter was relatively short.

But Jess knew that this small talk about weather was just that. He knew Cindy was concerned about the declaration of war and the notice he had already received. This was not going to be any short duration TDY type of thing. He was being called to active duty for the duration. And his intuition told him that it could be a long time.

He couldn't tell Cindy where he was going. The verbal orders, delivered over secure lines, posting him to Israel to deliver a secretly purchased squadron of Comanches and to train the Israeli military in their use was all very much top secret—and it was indicative of the view of leadership just where this fighting was going to ultimately lead. But, he knew he could be completely open with her about the gravity of the situation and its likely duration, and he knew he would have to do that tonight.

"Boy that smells good honey! Can't wait to get a bowl full into me. Even with the welder going in the barn, it was awful cold out there this afternoon."

After the prayer, and after Jess got started, Cindy broached the topic.

"...so, I got your things together and they are packed and ready. Saturday morning is going to come quick. Do you think this will blow over as quick as that last set-to did?"

Jess could only be as honest as his oaths and sworn duty would allow...but he owed it to this, his best friend and closest confidant in the world.

"Honey, I am afraid this is "the big one." The GIR has a lot of resources and is buying up a lot of modern equipment. From everything I have read, they have developed a phenomenal training program and they are committed. Who would have thought they could pull off those attacks on Incirlik, and now the invasions of Turkey, Kuwait and Saudi."

"It's going to be a tough, long fight in pushing them back, and that's if some of these other tinhorns that have an axe to grind with us don't jump in somewhere else around the world. No, I believe you'll see me now and again on leave when that can be arranged, but I'm afraid we're in this for the long haul. Probably end up being a lot of austere war-time provisions, maybe a lot like our parents experienced in World War II."

Cindy had feared as much, but she was grateful that Jess always served it up to her straight. They discussed preparations and they discussed Billy and his likely role, particularly his timing as he

finished his training and went on to the various schools. Then as they finished cleaning up the dishes, Cindy took Jess's hand and said.

"Babe, given what we are facing, we're just going to have to work real hard to get as prepared as we can. We'll also have to work extra hard at giving you the kind of send off my man deserves and one you can keep close to your heart through whatever you may be called to face."

**January 26, 22:00**

**Marine Recruit Training Depot  
San Diego, California**

Company B of the 1<sup>st</sup> Battalion at the San Diego Recruit Training Depot was ready to enter its live fire training. For the next two weeks, they would become versed in the operation and firing of the standard issue M-16A2 assault rifle.

"OK girls, listen up! Over the next two weeks you are going to be dedicated to extensive weapons training and all-out live-fire training with your M-16 rifles. You'll fire on a variety of targets, still, moving and pop-up and you will fire on both normal straight ranges and combat ranges."

"All of you *will* qualify as a "marksman" before this two week period is complete."

"Each of you has already spent many hours taking this rifle apart, cleaning it thoroughly, and putting it back together, familiarizing yourselves with every piece of it. But now, before we actually let you children fire one of these fine weapons, you will practice aiming and dry-firing your rifle until you can't stand it anymore. By the time you fire that first actual shot, you'll have dry-fired your rifle in every conceivable position many hundreds of times."

"In addition to rifle training, during these two weeks, you'll receive basic training on grenades and other types of weapons."

"I expect each of you to pay close attention. As has already been drilled into you, this is your most basic implement as a Marine. We are teaching you to kill and destroy our nation's enemies, and as recent events are proving, we have plenty of them that would like nothing better than to bring the eagle down. So, of necessity, we are training you to be very good at it. While all of your training is paramount to your survival, coming to know and respect your weapon in intimate detail will make the difference in your life or death. The weapon must become an extension of you, and we'll make it just that."

"Remember this, every Marine, from the lowliest private to a fighter jock, to medics and doctors is an infantryman first and foremost. You take and hold ground with people, plain and simple. It's the way it has always been, and it is no different now, regardless of how much high tech they create and introduce. Don't ever forget it Marines. At some point, that knowledge will be your friend and save your tail."

Both Billy Simmons and Leon Campbell listened intently. They were both natural leaders and other recruits were already following their lead. Jess had a lot of experience with rifles, having shot many thousands of rounds through his Mini-14 on the ranch back home. He had also been well versed in its operation, maintenance and assembly by his Dad. Leo had learned quickly and had benefited from his friendship with Billy. To anyone noticing, it was clear that Leon had every intention of taking his DI's words to heart. The rifle was becoming a part of him, and he a part of it. It was the path he had chosen, recon—sniper.

They had both come into boot camp in relatively good shape, but the last six weeks had honed each of them down to the epitome of lean, mean fighting machines. Drill evaluations, 3- 4- and 5-mile hikes with fully loaded packs, the Confidence Course, Combat Water Survival and Martial Arts training had all contributed.

Both were also excelling in their academic classes. Core values, first aide, Marine customs, survival and many other topics were adding to the well-rounded nature of the training all of the recruits were receiving, where excellence was demanded. Already, in their own private discussions, the DI's from various platoons and even the other companies were talking about the "magnificent duo" that existed in Billy and Leon.

In private, more than a few bets were being placed on how these two, in the same platoon, would impact the overall platoon competition that was a part of the tradition. Of course, none of this was ever alluded to in front of any of the recruits. There, the equality of the discipline and "strong encouragement" to excellence, to achievement and to learning and maintaining the high standard of the Marine Corps reigned supreme. It could be no other way.

**February 2, 06:00**

**Situation Room, The White House**

**Daily War Briefing**

**Washington, D.C.**

Jeremy Stone had taken on the daily task of briefing the President and his key cabinet members. His briefings were attended by the other Joint Chiefs of Staff and key Congressional leaders whenever possible.

“Let’s begin. Mr. President, we will start with the current, on-the-ground situation in Turkey, followed by the same in Saudi Arabia. We will then briefly touch on developments in and around Egypt.

“In Turkey, we have established a defensive line from Samsun to the north, down to Kayseri in the center and it is holding. The GIR Army Group out of the former Iran has only probed our defenses there, and it’s a good thing since the defense is not yet established in depth. But that is improving as those lines are augmented by elements of the 82<sup>nd</sup> Airborne, just arriving British forces and of course, in the main by the Turkish army.

“We expect the first heavy armor out of Germany and infantry out of Canada to arrive in the next seven to ten days, but this will then take several days to get moved to the front lines. In the mean time, the GIR is consolidating its holdings and is being helped by the more hard line Islamic citizens who are welcoming them as heroes, especially in the cities of Erzurum and Malatya. Nonetheless there is significant partisan and guerilla activity behind their lines, particularly in the mountains. We are in contact with the remnants of part of the Incirlik security forces. In fact, the commanding officer of those security forces has linked up with some Turkish partisans there.

“To the south in Turkey, the news is not as good. Our original plan to try and establish an anchor on the coast at Mersin has failed. We were unable to get enough forces in place after the rapid fall of Incirlik and Adana. A full battalion of the 82<sup>nd</sup> Airborne was flown in and worked well with the local Turkish forces, but it was a case of too little too late. Heavy losses were inflicted on the advancing Syrian Army Group, but that close to the GIR, with their massive numbers of aircraft, air superiority was not achieved and we were left with no choice but to withdraw. It was orderly, but we suffered moderate losses amongst elements of the 1<sup>st</sup> Brigade of the 82<sup>nd</sup> Airborne that were engaged there. We also suffered significant attrition in the air wing of the U.S.S. Eisenhower as it flew support operations along with our aircraft out of Izmir.

“We are now working at establishing an interim defense point at Ulukisia in the canyons there exiting the Taurus Mountains, but it is likely that our firm defense will have to be set up where the central plain there narrows between Lake Golu and Konya.

“Speaking of the GIR air forces, satellite imagery indicates that they are close to having the airbase at Incirlik repaired and operational. We expect a fairly massive influx of aircraft there as they establish forward air bases to support their ongoing offensive in Turkey. We are waiting for those aircraft and intend to spring a surprise of our own. Admiral Crowler and General Livingston will hold a briefing on this operation at 4 p.m. today.

“Finally, in Saudi Arabia. Our Marine Expeditionary Unit has made an orderly retreat with elements of the Kuwait army in front of the advancing GIR 1<sup>st</sup> Army Group. We estimate that nearly 200,000 effective combat troops with 1,200 tanks and the same number of APC’s are moving across the Kuwait border as we speak. We intend to fight a holding action from the Saudi border at Al Khafji on the Persian Gulf to KK Military City. If the GIR forces are serious about advancing, we will conduct a fighting withdrawal from those points back to firmer defenses we are now establishing stretching from Abu Hadriyah to Az Zilfi to Medina.

“Mr. President, knowing the Kingdom as you do, I believe now is the time for the Summit you proposed so that the King can prepare the people for this invasion. As in Turkey, there are factions within Saudi Arabia that will welcome Hasan Sayeed and proclaim him their Imam.”

The President asked a few pertinent questions regarding the disposition of forces and how long it would take to gather enough forces to blunt the enemies’ offenses and then mount a credible offense of their own. Having had experience in Desert Storm, he knew it would be a long wait. The “nightmare scenario” from Desert Storm, an invasion of Saudi Arabia before their defenses were prepared, was playing out in front of him. Not only that, another serious invasion was already in process in Turkey and a third appeared to be imminent in Egypt.

“Fred, are we ready for the summit? We are talking about Egypt, Turkey, Saudi, Great Britain, Canada and Germany. I expect to talk frankly about these events and regarding what I view as the very real possibility of conflict in Asia while this is occurring.”

Fred Reissinger was on top of this. He had made all of the contacts and he had done it discreetly. The plans were already in place for a discreet, really a secretive, meeting early next week.

“Mr. President, the meetings are set up for next week, February 6<sup>th</sup> and 7<sup>th</sup> in Iceland. You will be flying out on Air Force One Sunday morning the 5<sup>th</sup>, and returning to Andrews on the morning of the 8<sup>th</sup>.”

Norm Weisskopf nodded his approval.

“Good, it can’t be soon enough. I have a feeling we are looking at a long hard road in front of us gentlemen—of major world war proportions. We must discreetly prepare and plan accordingly. After lunch, we will be meeting with Curt to put FEMA preparations into motion for our Federal War Time footing, which we then hope to roll out to each of the states. General Stone, please continue, what is the situation in Egypt?”

**February 2, 11:10**  
**Lot 8, Building 14, Woodfield Industrial Park**  
**Schaumburg, Illinois**

The industrial park consisted of over one hundred buildings, each with either a private or semi-private entry drive that could accommodate semi tractor-trailers off of Woodfield Road, near its intersection with National Parkway in Schaumburg. Each industrial building had elevated docks with entry bays, which could accommodate equipment or vehicles up to thirty feet wide and twenty-five feet tall.

Ahmed Haddad entered the small entry door. His presence had been noted and accepted by the security staff that manned the security console twenty-four hours a day. That staff was small, but well trained. Like Ahmed, most had been in America for many years, some had been born here. They had all worked in the security profession for most of their careers, some having included local law enforcement work.

Ahmed's presence had been noted when his vehicle turned into the lot, his license had been matched via digital video recording and character recognition. Once Ahmed exited his vehicle and began approaching the building, he was watched closely by the duty officer. Finally, before entering the building, a personal identification card, which was digitally encoded with Ahmed's entry code, was read at the door. The bay door, and the inset door within it, were both made of solid steel, three inches thick.

But, to outward appearances, other than the reader on the inset door, the entire facility looked like the other bland warehouse and industrial buildings in the complex. The only identification was a small sign on the front door that said, "Haddad and Jones Enterprises." Anyone checking into the name would show that the firm specialized in the repair and rework of dental equipment. Nonetheless, with the enhanced security in America since September of 2001, one could never be too careful.

The bay that Ahmed entered was a self-contained portion of the building. It had the single outside entry and a single, similarly secure inside entry to the rest of the facility. Within the thirty-foot wide, by sixty-foot long, by twenty-five foot high bay, there were numerous work, equipment, machinery and storage facilities—and sitting in the middle of the bay was the "Dhul Fiqar": "The Prophet's Sword."

As he looked over the lines of this forty-two foot houseboat, he noted the visible progress on the modifications. The strengthened and protected attachment points along the railings, the mountings along the aft quarter deck and the numerous antennae and electronic fairings along the top of the wheel house, which was really looking more and more like the control room it would be. As he noticed this, he called out.

"My brothers, how is our work progressing today?"

Almost immediately, a dark headed and bearded man of approximately thirty years of age stuck his head out of the wheel house and responded.

"Ahmed, *great* to see you my friend. Progress is proceeding ahead of schedule. All of the electronics are in; all of the attachment points are completed. We have only to test the circuitry and then apply a thorough quality test for reliability and functioning under shock conditions. I anticipate we will be ready to load the boat for transportation to our berth within a four to five days if you so desire."

Ahmed considered this response. It was really quite good news, but they weren't scheduled to be complete until the 10<sup>th</sup> of March, with actual travel occurring almost anytime thereafter. But, having a few extra weeks would be good as long as security held. The other boats were not ahead of schedule and Ahmed wanted to make sure that the timing of all of the missions was as perfectly synchronized as possible.

"Outstanding, Jahmil. I was just at the other Schaumburg location off of Golf Road and Esau is on schedule. Two of our other locations, Aurora and Joliet are actually two days behind, so early completion here will allow us to shift the proven expertise of your group to assist in those locations. Loading and transportation will stay on the current schedule. We'll just use the extra time to ensure everyone is ready. Now, show me how the special equipment is going to attach to the hardened and protected points you've created."

**February 3, 13:23 local time**  
**Gavank, 800 KM northwest of Krasnoyarsk**  
**Siberia, The Russian Federation**

The insulation sleeve had been fitted around the last joint and the welders had finished their task. This was the last section of the pipeline that would now carry the fruits of their labors to India and to the Russian Federation. From his control vehicle, Dr. Buhendra Gavanker observed the final construction sequences with satisfaction.

These last few miles had been accomplished in conditions that Dr. Gavanker would have thought impossible. Winds howling at over 80 km/hour, actual temperature at minus forty centigrade, snow

coming down horizontally and drifting well over two meters. No, Dr. Gavanker had been briefed, he had seen films, he had heard the stories, but to experience it was something else all together. Thank goodness the Russians had sent in their team of specialists: men who were versed in applying Gavanker's instructions in these harsh conditions. The results? Well, very soon now, perhaps as early as tomorrow, full time, year round crude oil production would commence.

The railhead would still be used for transportation of materiel, supplies and personnel. The year-round airfield was also capable of bringing in personnel and supplies. But the crude, in the quantities that these fields would produce, that required the large pipelines like the one that had just been completed. By spring, another one just like it would be in place. Given the escalating war in the Middle East, it was going to be very timely. His nation would be able to significantly reduce its dependence on Middle East oil, even if the GIR was officially part of the CAS.

Always best to be self sufficient thought the Doctor.

As he contemplated this, his assistant, who was monitoring outside communications from the front portion of the cabin, turned in his seat and addressed him.

"Dr., I have a relayed call to you from General Nosik. Would you like to take it back there at your seat Sir?"

The Doctor nodded his assent, and when the red light on his handset blinked, he picked up the phone and spoke.

"Andrei, how are you? Very good to hear from you. I imagine you are interested in the progress on the pipeline?"

Listening for a brief moment to the General's reply, the Doctor continued.

"Yes, we have just finished with the final assembly and fabrication. We are finalizing the test of the welds and the integrity of this last section and expect oil to be flowing as soon as tomorrow morning, perhaps by tomorrow evening...How are the mining operations progressing? The Chinese Cobaltite and our low-sulfur coking coal mine."

The Doctor's eyes lit up at the short response.

"Now, now, Andrei. You know I am not intending to breach your security. For mercy's sake, those mines and their locations have been written up in several trade publications with readership on three continents. And your own nation announced to the world your promotion to General and your responsibilities over the security for those very mines. Or do you fear your own internal security my friend?"

Buhpendra laughed at the reply.

"Fine, I will be more careful on these "un-secure" lines. Are we still on for that schedule review day after tomorrow? I have been requested to make a personal report back in New Delhi at the end of the month and we will need to work that into our mutual operational plans."

After another short pause, Gavanker finished the conversation.

"Great, we will see you then. Goodbye."

**February 4, 17:28 local time**

**COSTIND Headquarters**

**Beijing, PRC**

General Hunbaio was excited about this meeting. It was a preliminary culmination of many years of work. COSTIND's weapons and systems development efforts (over which the General presided) were proving successful beyond their most aggressive projections. To see many years of work come together in success was always rewarding and gratifying, particularly when it had such a strong impact on his nation's strategic goals.

As anticipated, several of these new systems were coming on line now, ahead of schedule, and were already well into their trial periods. New aircraft, new missile systems, new Ship classes of all types, new weapons systems—all coming together at the appointed time.

The new conversion ships were astounding in their ease of manufacture and their capabilities. Four of the Sea Control carriers, eight of the tactical assault ships and six of the Amphibious Assault ships were already at sea. The latter two classes of vessel were still unknown to the west, because until used for their appointed purposes, they could pass for the container ships from which they had been converted. This was exactly the intent, as several more of each would be ready before commencement of "Breath of Fire."

The Project 071, Yunana II class landing craft that would be so critical for the full implementation of "Breath of Fire" were now being produced by the score. The new LRASD Super Cavitating weapons and the ship borne strategic missile derivatives had been fully tested and excelled in all of their operating parameters. Production efforts for these two weapons systems had ramped up to where dozens of each were being produced each week.

In attendance at this meeting were Admiral Lu Pham, Sr. Vice President, Sung Hsu, Assistant Vice Minister Qiao Wenzhong and the commanding Admiral of the PLAN, Li Huang and their aides. All of these individuals would be briefing not only General Hunbaio, but more importantly, they would be briefing their special guests, President Jien Zenim and Chairman Chin Zhongbaio and their

top aides regarding the operational status of each of these systems and their availability for the upcoming operations.

After an introduction to this effect, Chin Zhongbaio, the Chairman of COSCO and a high ranking Politburo member, addressed the gathering.

“Comrades, I need not go into great detail regarding the importance of these meetings and the briefings they will encompass. The work your various organizations have accomplished are of the utmost importance to the future and viability of our People’s Republic and our continuing People’s Revolution as couched in the work of the Three Wisdoms that our leader has introduced to the world. The change and improvement to social equity and justice that this revolution will now bring to the world as a whole, and to the developing nations and their people will be as momentous and as long lasting as any change witnessed throughout recorded history. Your efforts represent the very foundational insurance for that change.

“I want to reiterate to each of you, our foremost desire is for these changes to occur as the peaceful, natural consequence of social evolution that they represent. However, in order to overcome the less equitable capitalistic and class-dividing western systems that currently pollute our regions, it is likely that we will have to make use of the insurance your developments represent. As you know, we anticipate this to be the case and have prudently made plans accordingly. We look forward to now hearing of your preparations and status with respect to those plans.”

Lu Pham sat through these opening remarks reflecting on the amazing developments in the last few years. Not only for him personally, but for the nation and social system that he was involved with. Oh, he knew as well as the Chairman here, as well as Jien Zenim himself in fact, that the system they were talking about would still have its inequities. Such a system would always need those with the strength and vision to implement the necessary changes. He was marveling that somehow he had become one of those directly involved with the vision.

It has always been thus, thought Lu. Marx, Lenin, Stalin, Mao, Ho Chi Minh—and now Jien Zenim. The Americans had developed their own: Washington, Jefferson, Adams, Lincoln, Roosevelt, Reagan and now Weiskopf. But Lu was convinced that this developing system would truly eclipse all others in terms of its ability to provide for fuller social justice and equity for the teeming masses of Asia and any other developing nations. The American model pitted people against one another as individuals, always striving to improve themselves over others around them. Lu felt this had provided for marvelous innovation and the ability for a relative few to fulfill their potential. But he felt it was limited by its nature in its ability to bring such achievement and fulfillment to the entire society. The model Jien Zenim espoused called for the group, the collective to willingly work together and improve all; and it was molded for once in a fashion that Lu truly felt would allow for it to be accomplished, far superior to the corruption plagued Stalinist systems of prior times.

Of course, what Lu failed to take into account in this optimistic analysis was that his enthusiasm for the new system was directly related to his own personal involvement in the upper levels of the decision-making. His relative new status as one of the inner circle allowed him to enjoy the types of latitude and personal decision making freedom that he eschewed the rival “western” system for. It would only be after significant trial, hardship and eye opening experience acquired over years of actually attempting to implement the “Three Wisdoms” dream that this would dawn on Lu.

## Chapter 9

*“The beginning of strife is as when one letteth out water”—Solomon*

**February 6, 03:23 local time**

**USS Michigan SSGN-727**

**300 nautical miles south of Adana, Turkey**

**Mediterranean Sea**

All along the length of the boat, behind the sail, the coverings for fifteen of the Multiple All-around Canisters (MAC's) were hinging back to reveal the lethal cargo they protected. Underneath each covering, fitted into each of the former tubes for Trident missiles, the MAC's housed seven Tomahawk SLCM's (Sub Launched Cruise Missiles).

The Michigan was one of four conversions that had been made to former Trident SSBM submarines between the years of 2001 and 2004, enabling them to carry up to 154 SLCM's each, along with a significant contingent of Navy SEAL personnel for special operations. Two served in the Pacific and two in the Atlantic. Since the outbreak of hostilities last November, one of the two Atlantic boats had been on patrol in the Mediterranean for just such a contingency as this current mission.

“We have the mark. Conn, steady as she goes, bearing one two zero degrees. Missile Control, you may commence firing sequence when ready.”

In the missile control center, the fire control officer responded.

“Aye, aye Sir, all systems are *go* and ready for launch. Ripple firing sequence commencing on my mark. Three, two, one...Mark!”

The MK 98 digital computer fire control system, which had been modified for the SSGN conversion to integrate the tactical Tomahawk weapon control systems, took over from that point. Target coordinates and flight profiles had already been downloaded into the missiles.

Within four minutes, over one hundred SLCM's had been launched and were out of the water and on their way. Flying at a very low level for most of the trip, each missile would arrive at their destination precisely thirty-three minutes after launch, where they would perform a pop-up maneuver over their targets and announce their deadly presence.

**February 6, same time**

**Thruster Flight, B1-B Lancer Bombers**

**357 miles west of Adana, Turkey**

The four stealthy wraiths were flying nape of the earth, just under Mach One over south-central Turkey. Over Egridir Lake, Thruster flight reached its launch point.

“Weapons release in on my mark in three...two...one...Mark!”

At the eight attachment points along the under side of each B1-B Lancer bomber (commonly called “Bones”), a total of fourteen ALCM's (Air Launched Cruise Missiles) began their pre-programmed release from each aircraft. These were followed by six ALCM's from each aircraft's rotary launcher in the internal bomb bay, making a total of twenty ALCM's that were launched from each aircraft.

High above Thruster flight, two flights of F-22 fighters patrolled, but they were not interfered with. The large diversion attack along the front lines to the north and east near the hotly contested city of Keyseri was attracting the attention of most of the GIR's air assets. One large contingent of aircraft that the GIR did not have involved in the fighting along the front lines was the large number of attack aircraft, fighter aircraft and even two flights of TU-22M Bombers that had landed within the last two hours at Incirlik airbase near Adana. These aircraft, almost two hundred of them, were now being refueled and rearmed for use by the GIR commanders in this theater.

Those very GIR assets were the focus of Thruster flight and USS Michigan. Having been notified of the landing of those GIR aircraft at Incirlik by satellite observation, the orders had gone out to the USS Michigan and B1-B's at Izmir. Within the next few minutes, the results would be apparent.

**February 6, 04:02 local time**

**GIR Incirlik Air Base**

**Near Adana, Turkey**

The aircraft were crowding every portion of open space on the service apron, along the taxiways, the newly constructed revetments and the few hangars that had been reconstructed since GIR forces had taken the airfield. They were a mixture of SU-25 “Frogfoot” attack aircraft, MIG-27 “Flogger” attack aircraft, SU-24 “Fencer” attack aircraft, SU-22 “Fitter” fighter aircraft, SU-27 “Flanker” fighter aircraft and the two flights of TU-22M “Backfire” bombers. These one 180 aircraft had arrived over the last few hours. Their presence here, when added to the two dozen fighter and attack aircraft already present at the base, represented the GIR's “front line” aircraft commitment to the southern sector of their Turkey operation.

A flight of four SU-27 fighters was up providing combat air patrol (CAP) for the base at all times, controlled by a GIR Ilyushin Il-76 "Mainstay" AEW aircraft that was loitering above the base.

Numerous ZSU-23 vehicles had been stationed around the airfield in revetments especially built for them. These rapid-fire 23 mm anti-aircraft weapons were very effective against low-flying aircraft. It was hoped that the SA-11 and SA-13 missile batteries stationed around the base would be effective against many of the American and Turkish aircraft and those of their allies, and force them to fly low and in range of the ZSU-23-4's.

The incoming U.S. cruise missiles were targeted for every revetment, radar emplacement, command and control facility and anti-aircraft emplacement that had been located by satellite. Each had been assigned multiple missiles. The first missiles were targeted at the anti-air defenses themselves.

The missiles were flying very low, and were designed to be difficult to acquire on radar. But with the GIR Mainstay AEW aircraft aloft, its doppler radar spotted the first missiles in the stream from the USS Michigan when they were fifteen miles away. Traveling at 500 knots, this meant that the defenses had a little over one-and-a-half minutes to prepare.

"We have many inbound missile tracks to the east southeast, counting twenty tracks and growing; altitude 100-200 meters. Have all missile batteries hold their fire, while we vector Wolf Flight to intercept. Have close in anti-air defenses prepared for cruise missile attack."

The controller on the Mainstay vectored the four SU-27 aircraft to an intercept course. Wolf flight, with four SU-27's that had their own effective doppler radar, picked up the American SLCM's and engaged them.

"Engaging with radar guided missiles, and then cannons!"

Radar lock was difficult to obtain and the SU-27's found themselves having to engage, circle and re-engage. In the process, many missiles "leaked" through before Wolf Flight had expended its ordnance. In so doing though, twenty-two of the first 105 cruise missiles were destroyed.

The GIR had a system of revetments for its ZSU-23's all around the base where they rotated from one revetment to another. As the first missiles leaked past Wolf Flight's intercept, they were engaged by the ZSU-23's. Many of these first missiles were targeted on the ZSU-23 revetments themselves. With its excellent low-level radar, its wide engagement angles (elevation of -4 to +85 degrees; 360 degrees azimuth) and its high rate of fire—800 to 1000 rounds per minute for each of its four barrels—the ZSU-23 was a very effective close-in AAW platform. The eight units on that eastern side of the base were able to knock down eighteen more SLCM's before succumbing to the multiple missiles targeted on each revetment.

At this point, forty missiles had been downed and another thirty-two expended on the ZSU-23 and missile defenses. This left thirty-three missiles from the initial stream launched by the USS Michigan still targeted on the airfield and its structures. Of these, another fourteen were downed by portable, shoulder fired SA-14 "Gremlin" missiles. With an all-aspect targeting capability similar to the US Stinger missile, the "Gremlin" was a potent tool in defending against low-level aircraft attacks of all types.

The twenty missiles that impacted the service aprons, revetments and hangars caused heavy damage to the aircraft being refueled and rearmed there. Many secondary explosions occurred as ordnance and fuel exploded with the aircraft. Many highly trained pilots and other personnel were killed.

Even as the last missiles from the USS Michigan were detected by the GIR AEW aircraft, controllers on that same aircraft picked up the second stream of eighty ALCM's coming from the BI-B flight. These eighty missiles were engaged by the SA-11 and SA-13 batteries as the SU-27 CAP had expended its munitions. Those batteries were far less effective against low-level cruise missile attacks and had themselves been subjected to losses from the first group of SLCM's from the USS Michigan. Although scores AAW missiles were fired at the incoming stream of ALCM's, only thirteen missiles were downed by the missile batteries.

Once over the base, the remaining sixty-six missiles were again engaged by SA-14 "Gremlins" fired by personnel on the base itself. Another nine ALCM's were destroyed as a result of this last defensive flurry. The net result was that another fifty-eight cruise missiles impacted all over the airfield among already burning aircraft, aircraft that personnel were desperately trying to move out of the way and the support facilities that the GIR had hastily repaired and built on the base. More aircraft were destroyed or damaged, more personnel were killed and injured and more facilities were wrecked or damaged.

When the all clear signal at Incirlik was given at 05:00 hours, over 120 aircraft on the ground were either destroyed or heavily damaged. In addition, several hundred personnel had been killed or injured and the airfield itself was closed. Because of its proximity to the sea and the exposure to quick SLCM attack, Incirlik would not open again as a major airfield, the GIR preferring smaller fields further inland where they would have more warning and where they could develop more layered defenses.

**February 7, 14:00 local time**  
**Secure Conference Center, U.S. Embassy**  
**Reykjavik, Iceland**

The meetings were wrapping up. For the last two days, the principal western allies in the two-week old war in the Middle East had been in summit. The United States, Canada, Great Britain, Germany, Turkey, Saudi Arabia and Egypt were all represented. They had met the entire time in a secure conference center in the U.S. embassy under tight security. Top aides had accompanied each of the leaders. The best “war college” scenarios that each respective nation could produce had been analyzed.

Military operations were ongoing during the summit. Airlifts into Turkey, Saudi Arabia, Egypt and the UAE were proceeding. Pre-positioned materiel and equipment all around the region was activated and transported to logistic areas well in advance of the on coming GIR forces. These efforts were focused on building up adequate defenses, in an attempt to stem the tide of the GIR onslaught.

In the field, the allies were back on their heels and some difficult strategic decisions were necessary. Kuwait had fallen, Saudi Arabia had been invaded and the GIR forces were advancing along the Persian Gulf Coast toward the UAE and inland towards the Saudi capital. Defensive lines kept shifting further south and west in hopes of slowing the GIR advance.

Despite a highly successful tactical attack on Incirlik, Turkey was in desperate circumstances as the GIR armies had literally divided the country and were pressing their advantage. A significant GIR buildup in the center of the line gave every indication of producing a break through soon, which would mean the defensive lines in Turkey would also shift to the west.

Additionally, two large GIR armies were moving towards the Egyptian border from Libya and the Sudan. Deploying sufficient allied strength in front of them was going to be difficult at best, particularly given the pressures and requirements for allied deployments to protect the Arabian oil fields and Turkey.

In light of all of this, the leaders had discussed overall strategy and come to some initial, path setting decisions. President Weisskopf was summarizing as the meetings wound up.

“We have agreed that the United States and its forces would provide over-all strategic control and that the theater commanders will be American, supported by allied commanders in their various roles and in specific operational areas. I understand that this will produce some political difficulties, but in light of the desperate and monumental task before us, and in light of the vast majority of equipment and materiel coming out of America in each operational area, we will proceed as we have agreed.

“We have discussed a number of likely reactions to and consequences of the current conflict and we have agreed that escalation is likely, particularly in the Far East. As a result of this, we have agreed that the Middle East and the Mediterranean Theater will be our first order of focus. As with World War II, should war break out in the Far East, we will focus on securing and winning the war in the west first.

“While pursuing this primary objective, in so much as it is practicable, we will fight a holding action in the Far East Theater until we can turn the full weight of our production and capability to that part of the world. Each of us must take these decisions back to our military and civil command structures and implement them accordingly, coordinating through the command structures we have discussed here. I expect that summits like this will be held regularly, perhaps every four to six months.”

As the President paused, the Prime Minister of Great Britain spoke.

“Mr. President, should the Far East Theater escalate into war with the CAS, we can expect Japan, Korea, Australia and other European nations to become a part of this summit. In that event, there will be great pressure exerted on our priorities and strategic decisions. I want to ensure that we all understand our commitment here and the decisions we are making today.”

President Weisskopf had already contemplated this exact issue.

“Mr. Prime Minister, I understand your point. I share concerns about the Far East, and particularly any participation by the CAS as an ally of the GIR, but I cannot see that we have any choice in the matter right now.

“I will close my remarks with this: we are facing a challenge and a danger of unprecedented proportions. Should the CAS and the GIR unite in conflict against the west, as we consider likely, in my estimation we will be facing a threat far greater than that of the combined Nazi and Imperial Japanese capability of sixty-five years ago.

This should sober us, it should galvanize us and it should spur us on to the necessary decisions and actions as allies and on each of our home fronts. I believe this summit is a good start at that, but I believe we must not for an instant let our guard down or forget the nature of the threat we face. Thank you, and may God bless our united efforts.”

As he returned to his seat, Norm Weisskopf again contemplated his remarks and the decisions they had made. The Far East escalation was a projection, the war in the Middle East was real and a desperate fight. World-wide oil production was at stake. Whole economies were going to be ruined.

Nonetheless, President Weisskopf still wondered about that over-riding strategic decision they had made regarding the Far East conflict, should it come. Really, at the current time, just as he had indicated to the Prime Minister, they had no choice. But putting that decision into motion in the deployments, in the production schedules that would result, in the build-up—it would be difficult if not impossible to change later.

Still, he just couldn't shake the feeling that the primary menace was that big red dragon that had yet to project its real intent onto these events. Norm felt an overpowering conviction in his soul regarding that dragon's fury. Should it be unleashed and not quickly contained, it would be more difficult to suppress and overpower than they could possibly imagine.

As the meeting ended, President Weisskopf began working with his staff on his national address slated for the next evening. He intended to review the basics of this meeting with the allied leaders and then "lay it out" for the American people, many of whom had not yet had the reality of the true nature of this conflict hit home for them. What the President did not yet appreciate himself was how remarkably accurate his convictions regarding the threat in the Far East would prove, or how much he would regret not pushing harder to establish a strategy accordingly when he had the chance.

**February 9, 10:02**

**U.S. Army Recruiting Station**

**NW 53<sup>rd</sup> Terrace**

**Miami, Florida**

Hernando Rodriguez waited patiently in line. It really wasn't too terribly long a line at all, in fact not nearly as long as he'd expected. After last night's speech to the nation by President Weisskopf, which Hernando would always remember as the most patriotic and inspiring speech of his life, he'd expected the recruiting center to be literally packed with people signing up. The speech had surely affected him that way and he naturally expected it to have affected others in the same way.

And to some degree it had. The recruiting station here at The Augusta Building on NW 53<sup>rd</sup> Terrace had been doing a fairly brisk business all morning. Never more than eight or ten people waiting, but there had also not been an open counter all morning as young men and women came in and joined the Army.

The recruiting officers had been noticing a gradual pick up in recruitment ever since the declaration of war in the Middle East three weeks ago. This was occurring here in Miami and at other major recruiting stations around the country. There had been a few very brisk days right after the declaration, but it had leveled off somewhat as people watched events unfold and as the buildup proceeded. But the continued rapid decline in the stock market and the anxiety over fuel costs and rumored fuel allocations were driving home to people that this was a "real" war, and one that would not be soon in ending.

Today's surge in activity was associated directly with the President's speech last night. In that speech he directly and succinctly outlined the gravity of the situation facing America and its allies. Even with the reserve units he was calling up, there would not be enough men at arms to stop and then roll back the Greater Islamic Republic and its naked aggression in the Middle East. The President had made it clear that now was one of those times in history when America's cream must rise to the top. The President had shown by way of graphs, multi-media displays and heart-felt explanation that the situation was dire. America could "expect worse news before better"—that in all probability our friendly oil supplies would be taken or destroyed in the conflict and that America was facing energy shortages in the near future. Then the President had outlined the emergency provisions he was directing all federal agencies to adopt. Many of these agencies interfaced with the public and many of them regulated activities that the public was involved with, like the transportation department's involvement with gas pricing and distribution, and the defense department's interface with the defense industry. It was clear that millions of Americans would be impacted. The President then asked for the governors and legislators from each of the fifty states to adopt similar measure to conserve strategic resources and to more fully organize the public sector for what lay ahead. The President had ended by announcing a call up of 500,000 more reservists, an appeal for more enlistment and finally an inspired statement of confidence in the nation, its strength, depth and basic goodness. Hernando had "felt" those words and with that feeling came the clear knowledge of what he must do.

Early this morning he had called into the maintenance department at Florida State University where he worked. He had told his boss Stan that he would not be in today—that in fact he would not be coming back at all. When questioned, he had simply told Stan that he was joining the Army.

Stan had thought him crazy.

"What? Come on Hernando, you have to be kidding me, right?"

When Hernando made it clear he was not joking, Stan continued.

“Look man, there’s no draft. They have an ‘all volunteer Army’ for this, you don’t have to do it. We’ll end up kicking this Sayeed guy the same way we did bin Laden.”

The reply had been immediate, “I don’t think so Stan. Didn’t you hear what the President was saying last night?”

But Stan would not listen, or consider. He just knew he was losing a very good worker, and someone he considered his friend.

“What about your future, Hernando? You are in a position here to get your education paid for and you have a very good job that will provide for the future you keep talking about with Maria.”

All Hernando could think to say was, “I am doing it for our future Stan, Maria’s, our kids... that’s what this is all about. Look, I’m sorry you don’t agree, and I am sorry this is so abrupt. God bless you man, you’ve been a good boss. Pray for me. I gotta go.”

How could Hernando explain it to someone like Stan. Stan had never experienced, or heard first hand about what life was like without the basic liberties and freedoms he and so many other Americas took for granted. Despite the unbelievable death toll America had sustained as a result of the terror attack in 2001, once the terrorists and the governments supporting them had been defeated, many Americans felt that chapter in history had been put behind them. Once again now, only a few years later, the apathy and the attitude of entitlement was setting in.

After talking to Stan, the call to his mom and dad had been a little harder to initiate, but much more gratifying in its reaction. They were concerned, but they were *proud* of him.

“God bless you son, you are a true American,” his father had simply said. But with those simple words, his heart had soared.

“God *will* bless you Hernando. We have raised you well and will pray for you every night. Have you told Maria? Don’t worry, we will help take care of her while you are gone. My heart fears for your safety, even as it bursts with pride over your goodness and commitment”

Hernando had told Maria. They had been at his place watching TV when the speech had been given last night. He had immediately shared with her what his convictions were. They had done the only thing two devout Catholics, who were intended for one another in their hearts could do. They had sought out their Priest after the speech, explained their circumstance and then been wed late last night in a simple ceremony with just themselves and the Priest present. They had then spent last evening together, their first ever, and last for a long time.

“Mom, Dad, Maria is now your daughter in-law. Please forgive me, but we were married last night by Father Chapman. Maria has let her folks know and she will be living in my apartment.”

“Mother of God! Why...this is...this is...oh Hernando, this is *wonderful* news. We will treat her as our own. She will need to save her money! We will work with her parents and ensure that she is watched over and taken good care of; you need not worry over it.”

Hernando loved his parents. They were good, solid people. They worked hard. They had an abiding faith and they practiced it devoutly and freely. He had every confidence that between Maria’s parents (who were similar in all ways to his own) and his own parents, that Maria would be well watched over until he returned. Besides, Hernando knew that Maria was his equal in faith, commitment, drive and energy and would be watching out for herself.

Beyond this, as first generation Cuban Americans, people who had escaped relatively recently from the continuing hell hole that Cuba was, Hernando’s parents only wished that the fight would be carried to what they called the “old scoundrel” in Havana.

Well, Hernando didn’t know about that, he had been too young when his parents had escaped by boat, really just a small child of six years; he just *knew* that he had to do this. At twenty-two years of age, Hernando knew he had to stand up now and fight for liberty so that he and his Maria could enjoy it and pass it on to their children after them.

**February 12, 14:30**

**FTA Trucking, U.S. Headquarters**

**Dallas, TX**

Miguel Santos leaned back in his leather chair. As he waited for his boss and close friend, he gazed out of the window of his office. It was a corner suite on the fourteenth floor of a fifteen-story office building at the intersection of Central Expressway and the LBJ on the north side of Dallas.

“What a view,” he thought to himself as he looked to the south and saw the majestic skyline of downtown Dallas. The Americans certainly did love their material wealth, their glamour. It was written not only all over many of their faces, it was etched into their very skylines. Yes, Miguel admitted it was entrancing, and it was almost intoxicating. Look at how many other entire nations sought to emulate them. It was at such times that Miguel had only to think back on his childhood, the poverty and want he had experienced in Cuba, to break the spell in which it often held him. All that misery at the hands of these Americans who were living in such opulence, who had cut his nation from the trade and aid that could have benefited so many!

He had seen it as a youth and a young adult in Mexico, the place he called home now. The same poverty, the same hunger, while just across an imaginary line so many enjoyed so much.

Well, Miguel had risen above it himself, and he was thankful to be a part of something that he felt certain was going to help uncounted others too. In fact, it never ceased to amaze him that he, a former poultry truck driver, once living in Chihuahua, could have risen to such a position. Here he was, senior VP of U.S. Operations. He had Hector to thank for it all. Hector who had taken a liking to him early on, who appreciated not only Miguel's willingness to work very hard, but who also recognized the organizational and management potential in Miguel. Hector had nurtured those talents and both men had prospered greatly, now both owning substantial Haciendas back in central Mexico where their wives and children were safe from the darker and more dangerous aspects of their businesses, and away from the alluring material influence of America.

They had profited enormously through the opportunities afforded by America's openness, particularly through the expansion of their international trucking business resulting from provisions of the NAFTA agreement. They profited even more by dealing very carefully in the illicit trades that were so desired by many Americans, mixing in a healthy dose of trafficking in the items they required for their future political aspirations; weapons and the people who knew how to use them.

As he mused on this, his secretary rang to let him know his guest had arrived and was on his way in.

"Hector, my dear friend, how good to see you!"

The two men met half way across the floor and hugged one another while slapping one another's backs.

"Miguel, my friend, as always, it is my pleasure to visit with you as well. I can't tell you how pleased I am with your success, and my certainty that the performance of your operations will end up exceeding our goals and projections. Let's get right to the review and the plans for the future."

All of this was genuine, but it was also couched in key words. Miguel's operations were indeed out pacing the expectations set for them, but the review they would be conducting today had nothing to do with trucking. The two men were so adept at discussing one thing while meaning another, that they had even built entire presentations around the art. Pictures, charts and verbiage appearing to mean one thing, while conveying something entirely different.

Miguel moved to his desk and activated the automatic curtains for his office windows. The multi-media presentation required that the sunlight be blocked, but the curtains coming down blocked much more than sunlight. Even though the room was "scrubbed" daily for listening devices, by pressing another button, Miguel activated some soft background music, which was especially digitally encoded and projected more than simply audible melodies. The final element of their security was then activated, a projector that created an ionic shield which helped foil any electronic eavesdropping not effected by the other security measures.

After implementing all of this, Miguel joined Hector at the small conference table and keyed the remote audio-video equipment. Hector's digitally encoded RWDVD was placed in the machinery and the presentation began.

The presentation centered on the various trucking "corridors" on which FTA Trucking concentrated to transport goods back and forth from Mexico as well as other central and south American countries into the United States. Originally they had focused on the "I-35" north-south corridor, which ran from southern Texas up into Minnesota. They had been so successful along that line, with their ability to haul freight at reduced rates using their equipment and personnel from Mexico that they had soon expanded. By using US Highway 287 and the I-40 corridor, and by using the I-20 and I-10 corridors, they had tapped next into the I-25 corridor running from El Paso all the way up into Montana. Finally, they had expanded further west along the I-10 corridor and were now mounting very profitable operations from southern California up the I-15 corridor into Utah and Idaho and up the I-5 corridor into northern California, Oregon and Washington.

As they discussed each of these corridors, operations and their profitability, what would not be apparent to anyone overhearing the presentation, was that the two were reviewing in detail the status of six other "projects" associated with each corridor. Projects related to the planning and execution of the mission given to Hector Ortiz by his friend, the aging head of state.

"So, Hector, it appears we are in fact ahead of schedule in all six corridors. What is the company's current target date for reaching the final profitability figures in each?"

Without the slightest pause or hesitation, Hector answered both questions that had been posed by the single interrogatory.

"We must reach these figures by early March. The exact timing is something we can float a couple of weeks, but no sooner than March 5th and probably no later than the 20th. As we get closer to our year end financial reviews back at the corporate offices in Mexico City, I will communicate a more exact date to you.

"As you know, I intend to personally come and meet with the employees in the three western corridors to congratulate them on a job well done, while you personally handle the appreciation here in Texas and in Colorado."

Miguel was pleased that Hector was following through with his commitment to get in the field and personally coordinate three of these "projects."

“Yes, my friend, I know. I am confident that our employees there will give you every reason to congratulate them. They are looking forward to your time with them. It means a lot to them Hector, and it is one of the things about FTA that our employees like the most, the willingness of upper management to be involved right there in the trenches with them.”

**February 17, 19:30 local time**

**Presidential Office Suite**

**Tehran, GIR**

“Continue with the briefing General.”

Hasan Sayeed waited anxiously for the details of what he already knew generally. GIR forces were advancing on all fronts. It was true that the advance was not as quick as he would like, and it was true that their losses were extensive. Despite this he respected and followed both General Jabal Talabari’s and his foreign minister’s, and trusted ally, Ayatollah Sadiq Shiraziha’s, advice to pace their advance so as to ensure that occupied areas were properly consolidated and capable of supporting logistics activities for his advancing forces.

Nonetheless, in the space of just a few weeks, half of Turkey had fallen and Kuwait had been conquered. Additionally, the rich oil fields along the Saudi Arabian coast had been taken as far south as Al Jubayl and significant progress had been made into interior portions of the Arabian Peninsula toward Medina. Now, another offensive was about to begin in the western deserts of Egypt and from the south moving north along the Nile.

Against this, the Turkish, Saudi, UAR and of course the American forces were making a determined defense with their as yet inferior numbers. More NATO troops, including British and German were coming into both Turkey and Egypt. But the numbers were not with them yet, and Hasan had no intention of allowing them to build up forces while he sat behind berms and in trenches as the fool Hussein had done over ten years earlier.

“Please begin with your estimates of the American buildup in eastern Turkey, Egypt and Saudi Arabia. What can we expect to be up against as our forces continue to advance?”

General Jabal Talabari was prepared to answer his Imam’s questions. He had risen rapidly in the ranks and had become the Theater Commander by Hasan’s personal order. The overall Defense Minister and Generals who were in Tehran were his nominal direct line commanders, but he enjoyed and respected that Hasan himself sat in on these briefings.

“My Imam, we are progressing nicely in both Saudi Arabia and in Turkey. We have broken through the initial defensive lines, but have also suffered significant attrition in moving up to their second lines of defense.

“We fought our first pitched armored battle in the coastal deserts just north of Abu Hadriyah two days ago. In that battle over fifty-five American Abrams tanks were destroyed while we lost over one hundred and sixty of our own. The Americans had set up a defensive position along the coast, extending out into the desert towards the Ad Dah Na. Their defense was in-depth with significant air cover. By making a feint in force towards Riyadh, we were able to draw enough of their strength away to commit our reserve right along the coast and punch through all the way to Al Jubayl and the oilfields there. The Americans were quick to recover and we suffered significant losses, but we achieved our objectives.

“It will be of interest to you, and should be passed on to our allies that we have developed a tactic with our T-80s and T-90s where we can defeat the M1A1 Abrams. It requires a two-to-one superiority and it requires enough air cover to keep the A-10’s and Apaches off of our columns. by working two of our T-80s as a team focusing on a single M1A1, we are finding that in 70% of the engagements at least one of our T-80s moves on, leaving a smoking M1A1 hulk in the desert.

“In addition, we have devised another tactic regarding the very capable U.S. MLRS system. These tracked Multiple Launch Rocket Systems are deadly against massed armor of any type, or massed infantry. Our armor and infantry face so many lethal threats, the Apache helicopters, the A-10 aircraft and the MLRS, before we are even able to engage the American armor directly. MLRS systems have punished us terribly during the entire campaign in Saudi to date.

“Over fifty of the tanks we lost in the battle I just described were due to an MLRS battery the Americans employed. I am happy to inform you that we were able to completely destroy this battery. We kept a full squadron of SU-25s in reserve for just this purpose, escorted by a squadron of SU-33s. Since our counter battery fire has been ineffective against the highly mobile MLRS, once we had determined the location of the MLRS attack by radar, we immediately dispatched the SU-25s. Our aircraft caught the MLRS battery in transit away from the positions they had fired from and destroyed them. Our SU-33s engaged several American and Saudi aircraft, but only three of the SU-25s were lost. This is another tactic that should be passed along and used against the American technology.

“Still, once we are able to engage the American armor directly, we require the numeric advantage. This brings me to my major point before speaking to the American buildup. I would plead with my respected superiors: our logistics lines *must* remain open and the 4<sup>th</sup> and 7<sup>th</sup> Army groups must quickly move up to reinforce and strengthen the 1<sup>st</sup> and 2<sup>nd</sup> groups respectively. The Americans

are employing their B1-B's and their cruise missiles to great effect in hampering our supply lines. I plead with you to either find a way to prevent this, or send enough support to ensure that the requisite amount of men, equipment and munitions reach our staging areas."

And so the meeting went. Hasan Sayeed was very satisfied with Jabal's performance. He had chosen correctly when he named Jabal theater commander over the objections of his Defense Minister and leading military commanders. To their credit, they were now exploiting Jabal's understanding of how the Americans would employ their forces and react.

Nonetheless, the American and NATO buildup was progressing at a faster than expected rate. At the current rate, it would allow them to field enough of their technology to blunt the GIR advance in the next eight to ten weeks. Hasan could not go into the details in this meeting, but he was expecting that rate to dramatically diminish in the next three to four weeks. He would take Jabal aside after the meeting, sometime later this evening while they were at dinner, and quietly let him know what to expect from "Breath of Fire" so he could have contingency plans prepared accordingly.

## **February 20, 18:55 local time**

### **GIR forward position**

#### **East of Cicekdag, Turkey**

Sergeant Abduhl Selim watched the highway below, running through the valley. His position on the hill overlooking the main highway to Ankara was the furthest position forward in the GIR line, and from his point of view, clearly the most exposed. But that was nothing new to the Sergeant.

GIR forces had broken through the Turkish and British lines at Kayseri on the 17<sup>th</sup>, just as reports of advancing German armor and Canadian reinforcements were being received. As a result of the breakthrough, they had caught the German and Canadian forces in transit and forced them to retreat. The last three days had brought them to this position. Reconnaissance flights and patrols indicated that the German armor and Canadian infantry had withdrawn and heavily reinforced the U.S. 82<sup>nd</sup> Airborne Division which was already dug in at the next line of defense just three kilometers up the road, around the hills off to the west.

Abduhl had been promoted to the senior NCO for his platoon three weeks ago after the former NCO had been killed. In fact, Abduhl and two other men were the only surviving members of the original squad that had entered Iraq in September. So here he was, an eighteen-year-old, who was a crack shot and who had become battle hardened in the space of six months.

"Okay, okay! I want each of you men dug in along this line on each side of the ridge towards the east here, five-meter separation. We may be up here all night. In fact, we probably will be up here all night and nothing is coming up that valley or over that ridge without us knowing about it and reporting back to the company. Let's go, be quick about it!"

Turning to several sets of two man teams that had just arrived at his position, Abduhl began issuing them orders too.

"Set up those anti-tank positions on each side of the ridge, near the military crest in positions fifteen meters back from the forward end of the line, and those anti-aircraft teams in the middle on each side of the ridge.

"Any aircraft or armor they send scouting are going to pay a heavy price. Dig in deep, once they find we're here they will barrage us quickly."

In fact, the men didn't know it yet, but the young sergeant was going to have them dig a secondary position two hundred meters to their rear as soon as they had completed this one. He figured he had just enough time to get those second positions prepared, and then get his men into their forward position with their night vision headsets on before it got too dark.

His two AT-4 Spigot anti-tank missile teams would be fine for engaging scout or recon APC's or IFV's, but they would be of questionable use against frontal armor of the American and German main battle tanks (MBT's). To date, he had fought against the older variety if Turkish MBT's, the M-60's. Since the Spigot had a tough time penetrating frontal armor, he knew that against the newer tanks his missiles would even be more questionable. In that event, he would alert his command of their presence and attempt to wait and let them begin to get past him, allowing their side and rear armor to be targeted, before engaging them.

The SA-14 Gremlin missiles his two, two-man teams carried were effective against helicopters or low flying attack aircraft. They were the Russian built equivalent of the American "Stinger" missile. Perhaps not as capable, but capable enough. Abduhl knew that when his teams launched them, the targeted aircraft immediately attempted to evade and egress...but he also knew that his entire position would then be targeted in return.

As Abduhl sent out the first of his reconnaissance patrols that would cover the surrounding area to their front and flanks through the night, he thought about the coming ground confrontation with the Americans.

The American 82<sup>nd</sup> Airborne, he thought. He had heard his former NCO's, talk a lot about the American 101<sup>st</sup> and 82<sup>nd</sup> Airborne Divisions, hoping they would have a chance to fight them. Even though they wanted a chance to confront them, Abduhl knew they had a very healthy respect for them.

Abduhl had seen what American air power could do. Most of those NCO's he was remembering were now dead because of it, the rest died at the hands of the Turks. He knew that the American ground forces were going to be just as effective as their air forces had been and he was going to just have to do his best to prepare for that.

"Perhaps we will find out tonight. It'll be getting dark within the hour; and everyone has told me that the Americans like the night."

**February 20, same time**

**82<sup>nd</sup> Airborne Scout**

**East of Cicekdag, Turkey**

Sixteen hundred and seventy-five yards to the north and east of Sergeant Selim, along the next ridgeline over and running tangential to the front, Master Sergeant Michael O'Malley was watching the GIR forward position through his 10X dual purpose monocular-range finder. The Sergeant and his three-man security/communications team were forward observers for the very 82<sup>nd</sup> Airborne Division that Selim was worrying about.

"Okay, these guys are real smart. It looks like they are preparing a secondary fall back position. They have anti-tank, anti-air and some forward observation in an oversized platoon. They're sending out a patrol right now, you got them Johannsen?"

Private Johannsen was one of two soldiers providing security for O'Malley. He was quick to respond to his sergeant.

"I got 'em, six guys, heading north along this side of the ridge. I'll keep an eye on them and let you know if they start our way."

O'Malley responded.

"Great Private, you make sure you do. Corporal, pass these two coordinates that I'm about to give you back to battalion. Go ahead and get them on the horn. This'll take just a couple of seconds."

The Master Sergeant checked his optics and then compared it to the representation that he called up on the ruggedized tablet computer he carried. He used a stylus to scroll to the correct position on the 3-D digital map of the surrounding area that was loaded into the computer. As he did, the coordinates he desired appeared on the display.

He had an option to upload the information via wireless communication directly to a JOINT STAR aircraft if one was available and had been programmed into the system, or he could store the coordinates locally and then use standard radio communication to call them into his battalion headquarters. Since total air superiority had not been achieved, and the loss of one of the very expensive JOINT STAR aircraft late last year over eastern Turkey was still fresh in everyone's mind, no JOINT STAR aircraft would be risked this close to the front. That left the radio.

"OK, here's the first coordinate. Let's see if we can't arrange a little surprise for these folks around 0430 when the counterattack kicks off. That is, if they stay put that long"

**February 24, 16:50**

**Simplot Corporate Offices**

**Boise, ID**

Geneva glanced at the clock. Ten minutes until five on a Friday afternoon. She was probably going to have to work a few minutes late in order to finish up the word processing that was needed for Monday morning. She might even come in on Saturday if necessary.

Geneva had gotten the job several months ago. She had taken a local class on computers and then on word processing and surprised herself and Alan too when she had literally excelled at it. The school had a placement program and Simplot had taken her on as a temp in their word processing pool. After three months as a temp, they had brought her on full time and she really enjoyed the work.

The one caveat had been she needed a week's vacation in March to drive down to San Diego. Simplot had very strict rules about vacation and sick leave and when one could qualify for it. However, in Geneva's case, when they had heard what the vacation was for...her supervisor had talked with management and they had arranged for her to take the time as a paid leave, not impacting future vacation she might accrue.

Simplot had a reputation as a very strict, no-nonsense company that was somewhat of a corporate piranha. It showed in their earnings, even in the hard times. Simplot was also a *very* patriotic company. Few people knew that the company had tragically lost a number of civilian employees in World War II when the Japanese invaded and took over Wake Island. Several Simplot employees had been captured along with the Marines defending the Island and they had been, almost to the man, executed by the Japanese. So when it came to a Marine Boot Camp graduation, Simplot was not only understanding, they were extremely accommodating.

"Let's see," Geneva thought for a moment, "February 20<sup>th</sup>, this will mark the end of his eleventh week, only two more weeks to go! I'll bet that boy is cutting quite the figure after all that training!"

As she thought about him and continued her work, she saw the other employees leaving as the five o'clock hour came and passed.

“RINNNNGGG!”

“Oh! I wonder who that could be this late on a Friday afternoon?” Geneva thought as she picked up her extension and answered it.

“Simplot, this is Geneva Campbell in Word Processing.”

On the other end of the phone the familiar voice of Alan spoke up.

“Hi mom, what’s happenin’ girl?”

Geneva had to smile, Alan was always checking up on his mom. Sometimes it made her wonder just who the parent was.

“Alan, what’s going on? You better have a good reason for calling, ‘cause you know you’re not supposed to call work. This is a company line.”

Alan loved his mom. He knew she took her work and her work ethic seriously, and he was sure it was rubbing off on him just as it had on Leon.

“Mom, that’s why I waited until after five. I knew you’d be slavin’ away doin’ the “perfect” job and all, and I just wanted to see when you thought you’d be home. I’m fixin’ *you* dinner tonight.”

Geneva smiled. That Alan, he sure was a sweet talker; and it was genuine. It was hard for anyone to remain out of sorts with Alan.

“Okay, okay. I figure I’ll be leaving in the next fifteen minutes or so. That should get me home between five-thirty and six.”

Alan paused for a moment on the phone, then he set the hook.

“Well, okay. I just wanted you to know that Leon called. He said he’d call back at five-thirty. He wants to finalize the schedule and plans for our trip down to his graduation.”

Geneva took back everything she’d just thought. That rascal Alan!

“Alan, I swear boy you are going to drive me crazy. Why didn’t you just tell me that to begin with? No, I know, I know, you just wanted to lead me long. I’ll be home at five-thirty; you make sure Leon waits for me—and you stop playin’ with my emotions so!”

Alan laughed out loud, not in a bad way, but in the good natured, loving way that always disarmed his mom, even if she was put out with him.

“Okay Mom, but I’ll have that dinner ready when you get here.”

**February 28<sup>th</sup>, 22:30 local time**

**2<sup>nd</sup> Infantry Division Headquarters**

**Camp Red Cloud, Uijongbu, South Korea**

The 2<sup>nd</sup> Infantry Division was the United States principal ground combat unit within the US Forces Korea (USFK). Over 20,000 soldiers were continuously standing in the breach between the free world and totalitarianism. Along with their South Korean allies and comrades in arms, who numbered a half million in the active armed forces, they faced off against a standing army of over twice their size, with ready reserves that could turn the ratio to eight to one in a matter of days.

Particularly on the occasions, like now, when North Korea conducted massive military exercises along the DMZ, the alert levels were high and the tension was palpable.

In the intelligence section, Colonel Martinez, who was in charge, was pacing the floor. He was a constant, almost twenty-four hour per day presence around the intelligence offices while the North Korean exercises were going on. He literally slept and ate here. He felt he had good cause. He wanted to be available personally to make the decisions necessary if the North ever decided to “come.” He didn’t want any confusion or indecision in those critical first few moments that an attack was either discovered, or launched.

Just as he was walking past the analyst section, a young Lt. noticed him and waved him over.

“Holy cow, Colonel, take a look at this.”

The protocol may not have been the best, but the Colonel focused on results. This young man may look the “nerd” to a lot of the “gung-ho” soldiers—and in fact he was a nerd—but he was committed to his job. He was also as good at analyzing photographic and SIGINT data and tying the two together as anyone the Colonel had ever known.

“Okay, Lt. Finley, what’s got you so excited you forgot to say ‘Sir’?”

The Lt. blushed in embarrassment as he answered.

“Oh! Sorry, Sir! I have correlated our latest reconnaissance photos from an over flight along the DMZ two hours ago with the latest NRO data. In fact, the folks back in NRO in northern Virginia were so anxious that they ftp’d me their data just a few minutes ago. I’ve got both sets of data and the graphics up on the screen right now. Please Sir, take a look while I brief you on it, though I believe the graphics tell the story pretty straight forwardly.”

As Martinez studied the screen, the hair on the back of his neck literally stood up. There it was, laid out for them. The reconnaissance photos showed several suspected forward deployment positions for North Korean artillery occupied with stacks of munitions being piled up next to them. You could actually see the workers stacking the shells. In several images, the positions revealed North Korean 127mm mobile rocket launchers, again with stacks of reloads piled near the launchers.

In addition, the National Reconnaissance Office satellite photos showed a steady stream of supplies moving towards the front from depots in the rear. Those satellite photos confirmed that a lot more ammo, troops, equipment and heavy armor were moving towards the DMZ. If more ordinance was moving up in those numbers, then...

“Okay, great job Lt. Captain, get CINCCFC on the line immediately, *I mean right now!*”

He didn't know how long he had. Let's see...two hours. Looking at those photos it could go anytime now. Which would mean—my God, their Special Forces: the sappers!

“Lt. Finley, you get the Base Commander on the line *now!* I want to speak with the commander of the Security Forces here on the base as well. Then line up the same at Camp Humphreys, Camp Henry, Husan Air Base and Osan Air Base.”

**February 28<sup>th</sup>, same time**

**Forward Observation Post (FOP)**

**West of Chorwon, Along the DMZ, Korea**

There was a lot of activity out there tonight. You could hear the Korean voices drifting across the DMZ along with a lot of equipment moving. But, no one had ventured out into the forbidden area between the two nations, so the small contingent of American soldiers who were on duty here tonight kept their eyes and ears open, but did not display overt concern.

Except for Private Teasedale. He was out at the observation post right now along with the Corporal while the other six men of their squad rested back in the FOP bunker or monitored the listening, infrared or electronic devices that were also watching their section of the DMZ. Three, who were not on watch duty at the time, played games, read books or slept, waiting for their watch.

But, Private Teasedale was new to Korea, having been “in country” for only six weeks now. As a part of his “in processing” he had heard several lectures, read some operations manuals and listened to the required audio tapes. One tape he could not get out of his mind was the excellent report that the Commanding General of all USFK had given to the United States Congress a few years earlier. It had been so succinct, so well delivered, that the 2<sup>nd</sup> Division had made it a standard part of their “in processing” for new arrivals. The one phrase from that tape that had been riveted into Private Teasedale's mind that day had been this:

“The North Korean Army would be able to sustain a rate of artillery fire of five hundred thousand shells per hour for prolonged periods.”

As he sat there this evening, watching the DMZ with his night vision scope, hearing all of the Korean talk, movement and equipment across the zone, that statement kept coming back to his mind again and again.

“...a rate of artillery fire of 500,000 shells per hour.”

Now, from across the way, the private heard several whistles being blown. Sounded like dozens of them, no, scores, maybe hundreds. He turned to the corporal, who had also perked up and was listening.

“Corporal, do you hear that? What does it mean? Why are they blowing those...”

As he asked this question, from down the tunnel in the bunker he heard the land-line begin to ring.

“Rinnnggg, Rinnnggg, Rinnnggg”

And then the entire sky, from horizon to horizon along, the DMZ in front of him lit up brightly. But it was a flash that did not die. It kept being repeated time and again, giving the appearance of a huge, bright strobe light, just below the horizon and stretching for miles in either direction. In addition, thousands of streaks of light reached rapidly across the sky in what must have appeared to be the grandest and mightiest fireworks display of all time; except that these streaks and that whistling sound, were all coming towards the young private.

Then the 127mm rockets and the 122mm, 152mm and 180mm high explosive (HE) rounds began to land and nothing else mattered.

**March 1, 05:30 local time**

**Politburo**

**Beijing, China**

“Kim Jong-Il's forces are moving forward faster than expected Mr. President. Since the initiation of hostilities last evening, the entire DMZ has been over-run. The attack is ahead of schedule.

“Democratic People's Republic forces are advancing along a broad front and are entering Pyokche and Uijongbu on the outskirts of Seoul. The civilian population is in complete pandemonium and the chaos is hampering ROK and US forces. This morning's missile strikes in Seoul have included strikes on their financial and governmental centers that have hit several of the high rise buildings. Subsequently, many of these buildings have collapsed into rubble adding to the chaos.

“This missile and artillery barrage is being coupled with massive air strikes in advance of the three pronged assault on Seoul. One leg of that assault is a thrust at Incheon along the coast, which is hitting the outskirts of Seoul to the west. This is the army group now entering Pyokche. A second

thrust is coming from the north through Uijongbu. The third thrust is several divisions from the attack down the middle of the country through Ch'unch'on, approaching Seoul from the north and east.

"Along the coast DPRK forces have advanced as far as YangYang. Right now, the penetration, except for small pockets of resistance, is along a line running from YangYang, eastward to Ch'ung'on, over to Uijongbu and then to the eastern coast at Pyokche. We expect DPRK forces to enter Seoul this afternoon, either tonight or tomorrow morning at the latest. Given the current rate of advance, I would be surprised if it wasn't today.

"We can attribute much of this success to the DPRK Special Forces who were extremely successful in sabotaging many ROK and US aircraft before they could take off, which were followed up by massive ballistic missile strikes on all airports and airfields. Those strikes are continuing to this moment. Unfortunately, those same forces were not successful in eliminating the U.S. 2<sup>nd</sup> Infantry Division leadership at Camp Red Cloud, although they did penetrate the perimeter briefly where they attacked a number of housing units. This added significantly to the confusion."

Jien Zenim sat back in his custom-made Natuzzi chair and considered the developing world situation. The GIR was continuing to advance in the Middle East, albeit their rate of advance was slowing. The Americans and NATO had been pouring men and equipment into that region for many weeks now and would be in a position to start seriously challenging GIR forces within a few short weeks. Now, they would have this to deal with.

He tried to picture the "situation room" in the White House. Surely they were concerned, perhaps even panicking, worrying about China's response.

"Li, make sure that we open up a direct line call to President Weisskopf. I want to offer to mediate. And make sure word of that is passed on to David Krenshaw at WNN."

Jien doubted that the conversation with Weisskopf would even take place, although the American State Department (and probably their Defense Department too) would be urging the President to avoid any confrontation with China at this point, given the overall world situation.

Jien was well aware of that situation. He and his comrades had been manipulating it towards this for years. After all, the cold war was over, America was the world's only superpower and that had warranted those deep cuts. It just made such perfect sense, particularly when China was catching the capitalism fever and wanted to "open" its markets, particularly when so many American politicians were so easily bought off with money or vice.

No, Jien knew exactly what situation America's military was in, and what situation his own was in. The irony of it was, that America had funded both for their own cut backs and China's build-up with their own money!

Now, the Americans were in a situation where any major theater engagement on the ground taxed them; and now they were facing three major theater engagements in Turkey, Saudi/Egypt and now Korea. Soon, the beleaguered Americans would be facing a fourth theater scale confrontation, and Jien had ensured that the fourth one, his own, would be the largest and costliest from the outset. China's role in "Breath of Fire" would be, "the straw that broke the camel's back," as the Americans would say. Or as Sun Tsu taught: the application of overwhelming force when your enemy was distracted in another direction.

In the mean time, Jien would cause as much political and moral damage as he could by continuing to manipulate the American public through their press up until the final hour. The more dissension, the more confusion and loss of confidence he could instill in them, the better.

**February 28, 13:17**

**Situation Room, White House**

**Washington, D.C.**

"This is an unmitigated disaster! Akin to what happened in the Philippines after Pearl Harbor.

"You are telling me we are down to 50% operational strength for the 7<sup>th</sup> Air Force over there—in just one day? How in the hell did that happen, Jeremy? And we're down to 65% in terms of combat effectiveness for the 2<sup>nd</sup> Infantry Division.

"Gentlemen, we were supposed to be on heightened security alert and measures at all bases! The North was conducting exercises that emulated this very attack!"

Jeremy Stone understood his President's frustration. Jeremy was frustrated too, and knowing that the President himself had been one the most successful military general's in the last half century, he could just imagine the old general wanting to come out in him. But, while being frustrated, he could also understand why the disaster in Korea was occurring.

"Mr. President, I have to be honest with you. It may not help at the moment, in fact the only thing that will help those boys over there at the moment is their grit and determination and that of our allies, the South Koreans—and us getting them some relief as quickly as possible. They are going to have to conduct a fighting withdrawal while forces to the south establish a strong defense line. It'll mean abandoning Seoul and Inchon. If we wait though, our forces there are going to be surrounded and we'll be looking at a surrender of those forces in a matter of weeks, if not days.

“But, in terms of the current disaster, Mr. President, we were just too thin. When our enemy can lob ballistic missiles and rockets at us at a rate of hundreds of thousands per hour, Sir, there just are not enough Patriot, Improved Hawk or any other defensive missiles to get them all; and we’ve been watching them build up like this for years, while we staffed down and tried to “talk.” No disrespect meant, Secretary Reissinger, but we should have backed up all of that talk with a credible force.

“The results were predictable. Our defenses were overwhelmed, despite our hi-tech advantage. In addition, despite the increased security measures of the last few years, it turns out the North Koreans had dozens of sleepers working at each of our bases. People we had known and reviewed for years, in some cases decades. That contributed to the sabotage of our aircraft, equipment and storage as they let the DPRK Special Forces units onto the bases, and conducted sabotage themselves.

“Had it not been for one quick thinking Intelligence Officer in the 2<sup>nd</sup> Infantry Division, a Colonel Martinez I believe, we very well could have been decapitated as well. As it was, his quick analysis of recon photos and NRO satellite photos from guess who? That’s right, from Tom Lawton’s people. And Martinez’ quick witted decisions, probably saved the command echelon of many of our prime units there. The 2<sup>nd</sup> Infantry Division, the 19<sup>th</sup> Theater Army Area Command, the 8<sup>th</sup> and 51<sup>st</sup> Fighter wings of the 7<sup>th</sup> Air Force, the 6<sup>th</sup> Cavalry Brigade and the CINC of all USFK were each warned in time. Those warnings allowed those commanders and most of their staffs to be surrounded by security troops very quickly and escorted to secure areas while the attacks were being made. Unfortunately we still lost some of their staff, and the commanders of the 1<sup>st</sup> Signal Brigade and the 8<sup>th</sup> Military Police Brigade were lost due to enemy action last night.

“Since then, as you know, the situation has been chaotic, and there’s been a lot of ground loss—and we’re going to lose more. But our forces are beginning to come together along with the ROK forces who were equally targeted. I believe they are capable of a fighting withdrawal while we establish a firm line further to the south.”

The President knew Jeremy was right. America had been downsizing the military for years after the end of the cold war with the Soviet Union. Even the horrific terrorist attacks of 2001 had not altogether halted that trend, but it had slowed or abated it in some critical areas.

Well, thank God for small miracles, thought the President. He would hate to have to respond to these crises had the headlong trends continued completely unabated. Nonetheless, America had continued to bank on and count on the “silver bullets” of high tech. That was good as long as you had plenty of it to shoot, and keep shooting at the enemy. It generally worked *great* for small or single theater confrontations. But now, the whole world was erupting around them and there just weren’t enough. Not enough forces overall, and certainly not enough hi-tech inventory. They were going to have to implement a full-scale war time production effort. He’d have to address that in his speech to the nation tonight.

“Mr. President, how do you want to respond to this request by Jien Zenim for a conference? He wants to try and mediate.”

The President knew exactly how he wanted to respond.

“Fred, I firmly believe that Jien Zenim is up to his eyeballs in all of this. I think it is only a matter of time before his hammer falls, and I believe we *must* respond decisively in Korea to have any hope of forestalling that. Tell President Zenim that I appreciate his offer, but regrettably, given the circumstances, we will have to talk later. Perhaps in a few weeks, after we get some help to South Korea and start pushing these tyrants back, then we can hold a summit. Tell him three to four weeks and arrange it...and just for the sake of everyone sitting here, my message at such a summit is going to be *very* direct to the Chinese. *Do not* interfere. I will also make sure that they understand that North Korea is not going to exist as a nation state after the fighting is over and President Jien Zenim can take that to the bank!

“Now, Tim and Jeremy, we are going to have to call up significant numbers of reserves, I’m talking a million men to add to our current forces. We are going to also have to push very hard for much more enlistment. I want a package from the Congress, committed to today after their formal declaration of war on North Korea that gives great incentive for folks to join. Something like the old GI bill used to be, with just as many perks. We will have to make those perks retroactive for everyone who is already serving. It’s going to cost a lot, but not nearly as much as the other measures we are going to have to take if we expect the light of liberty to continue burning brightly in the world. As much as those costs may add up to, they will be *nothing* compared to what it will cost should we fail, because I believe *that* cost will end up being our national survival.

“Okay, Tim and Jeremy, here’s what I would like to do in broad strokes. I want to establish two Marine Air Ground Task Forces (MAGTF’s) for Korea, each made up of two augmented MEU’s. Can we do that?”

The Secretary of Defense, Tim Hattering, deferred to General Stone.

“I believe we can Mr. President. We have two of our east coast MEU’s already on the ground in the Mid-East, but the Army has built up enough force there now that they can bring one of them home. If we take the other East Coast MEU, the 24<sup>th</sup>, and have it do a rapid transit to the west coast for temporary basing there, we could move all three west coast MEU’s towards Korea to form up with the

31<sup>st</sup> in Okinawa. I would want to have them escorted by two Carrier Battle groups that would join up with the Kitty Hawk out of Japan.”

The President considered this, and then looked at Tim.

“Well, Tim, what do you think?”

Tim was thinking about the strain on the numbers of amphibious assault ships and Carriers. Four carriers already in the Mid East, and now three in the Far East. That’s seven of twelve, and three were in service life upgrades. Similar numbers existed for their twelve large amphibious assault ships.

“Mr. President, we are going to have to either halt or expedite some of the Service Life Programs that are going on if we want to have any Carriers and Amphibious Assault ships in reserve. Also, we are going to have to have the Marines begin to form up more MEU’s. If we do that to backfill, I would feel very comfortable expediting this.”

The President was in high gear. He was beginning to see what types of things he had to get done to stabilize an extremely dire and unstable condition. He felt he had the team here with him who could make it happen.

“Great, I will sign off on the requisite orders. I want each MAGTF to comprise ten thousand fighting men and I want them in Korea yesterday. You guys make it happen, the carriers will stay on in support.

“In addition, since we already have the 82<sup>nd</sup> Air Borne in Turkey and the 101<sup>st</sup> in Egypt, Jeremy, we’re going to have to look at flying more men into Korea. I want another ten thousand men already there when these MAGTF’s arrive. The materiel is already pre-positioned for this.”

At this, Tim Hattering spoke.

“Pardon the interruption Mr. President, but our military transport and our civilian air carriers are maximized right now trying to build up our forces in the Middle East and still maintain their commercial operations. We’re going to have to get significant additional buy-in from the commercial sector to make what you just stated possible, and we will have to subsidize them if they are to remain financially viable.”

Norm’s mind was already out in front of his Secretary of Defense. When he thought full-scale war mobilization, he meant it. America already had a model for such efforts and he had lived through it as a young boy.

“I understand Tim. You have done a *great* job working with the airlines to date, and now we are going to have to depend on you to even do more. I will make this a part of the speech tonight, we’re going to have to get more lift out of the commercial carriers. Please have the FAA Administrator and the appropriate Congressional representatives meet with us this afternoon.”

**February 28, 19:12**

**WNN Broadcasting Studios**

**New York City, New York**

As the commercial was running, David thought how much he continued to enjoy his job, a job he felt he did extraordinarily well. Here he was, continuing in his plum anchor roll, while being on the Board of Directors and the President of World Wide News for WNN, involved in the principal management decisions for the entire network. When you add to that his bird’s eye view of emerging events through his membership in the prestigious Council on International Relations, well life just didn’t get much better. Perhaps in a few years, he’ll allow these roles to propel him into politics. But now, the thirty-second light had come on and he needed to get back to today’s dramatic events.

“This is David Krenshaw, back with WNN. Continuing the status of fighting in Korea. WNN has learned that the Combined Command structure of both the Republic of Korea and the United States have decided to withdraw from Seoul and Inchon rather than fight what they consider to be a losing battle and risk having what forces remain being cut off. Those commands indicate to WNN reporters on the scene, that fighting is heavy, that there have been significant losses inflicted upon the North’s forces, but that significant losses have been experienced amongst allied forces as well.

“The dramatic pictures you saw on WNN earlier were of actual fighting in the outskirts of Seoul. As missiles were launched into the heart of Seoul, apparently targeting governmental offices there, you saw the collapse of many high rise buildings within the city itself due to missile impacts that weakened the buildings and the fires which caused those weakened structures to ultimately collapse. The death toll amongst the civilian population in Seoul is thought to number in the many thousands.

“The result has been a further Declaration of War by the U.S. Congress and by the Republic of Korea on North Korea. Almost immediately, the GIR also declared war on South Korea and announced solidarity with North Korea in the name of their CAS economic agreement. By invoking the CAS economic agreements as a reason to enter this conflict, when they are already embroiled in a conflict thousands of miles away with America, the GIR has raised a question that interests the entire world. Where is China in this conflict? What will China’s response be?

“WNN can announce that through an exclusive phone interview, we are in a position to provide some answers and insight into that question.

“Earlier today, I spoke with Li Peng, the head of the Chinese Parliament and a close friend and confidant of President Jien Zenim. Li asked me to convey his respect to the American people and indicated that his government was not involving itself in the fight between North and South Korea. He indicated that China viewed it as an internal matter and would not become involved unless it spilled over and began threatening either China or other surrounding nations. He went on to speak of his efforts to communicate with and provide immediate mediation in the conflict. Here are the words he spoke during that interview, as recorded earlier this afternoon:”

*“The People’s Republic of China stands ready to immediately step in and provide mediation of this conflict. We have a vested interest in peace in this part of the world since we are the largest trading partner of the Democratic People’s Republic of Korea, and one of America’s largest trading partners as well.”*

*“Unfortunately, the current administration in America has indicated that they cannot meet with us on this critical matter for several weeks. This is most unfortunate. We urge the United States to utilize every tool at their disposal to stop the killing in Korea, where brother is fighting against brother. We urge them, as we have now for many years, to extract themselves from that conflict so these brothers can most effectively solve their differences without any undue, outside influence or military forces. We urge the American people to prevail upon your elected officials to allow this mediation summit to occur. We have already talked to the Kin Sung-II’s foreign minister and there is a willingness to call a halt in place to allow for it.”*

“That was an exclusive WNN taping of Li Peng, the leader of the Chinese parliament. He has made an extraordinary appeal to mediate and we will keep you informed of those efforts as well as the Weisskopf administration’s response to them. Now, onto other news while we wait for the President’s national address at 8 p.m.”

**February 28, 20:00**  
**The Oval Office**  
**Washington, D.C.**

“My fellow Americans, I come before you tonight with news that is distressing. As you are all aware, massive forces of the Democratic People’s Republic of Korea, whom we call North Korea, ruthlessly attacked their neighbor to the south and our ally, the Republic of Korea. This attack was unprovoked and was carried out while North Korean forces were conducting training exercises.

“I wish I could tell you that the attack has been foiled and thrown back. I cannot. The harsh reality is that we are rapidly being pushed back on the Korean peninsula. Seoul has been attacked and there is heavy fighting going on there as we speak. Many of you saw the horrific photos of high-rise buildings in Seoul collapsing after being shelled and struck by North Korean missiles. The civilian death count is unimaginable.

“Our forces have fought well, but have suffered many casualties.

“As a result, at 5:56 this afternoon, our Congress voted to declare war on the Democratic People’s Republic of Korea.

“My fellow citizens, I must be blunt and direct. What we have witnessed in the last few months, the tremendous struggle taking place in the Mid East, and now this dastardly and major attack in the Far East, is rapidly turning into World War. We are ill-prepared for it. As a people, we love peace, and I am afraid that our love for peace, which in and of itself is a very good and desirable thing, and our fixation on our material pursuits, has resulted in tremendous complacency and apathy about the dangers that surround us. About the true nature of the world we live in.

“Any individual who has spent any appreciable time outside of the borders of this great Republic has a notion of what that nature is. While conditions vary, particularly in Western Europe, the harsh reality is that most areas of the world are terribly poor, they are very ignorant and they are easily taken advantage of. This gives rise to despots and tyrants who seek to control those people and others in their quest for power, riches and vice.

“In short, it is a dangerous world, dangerous for truth, dangerous for the open study of knowledge. In short, dangerous for liberty.

“But, we are “the land of the free” and we must face these dangers directly and with squared shoulders, or we will forever sacrifice and surrender those liberties to those who would destroy them.

“We have come awfully close to doing just that my fellow Americans. We convinced ourselves that the world was a safer place to live in with the demise of the former Soviet Union, and then we began to act like it actually was. We cut our armed forces, we reduced our numbers and our research into future programs and procurement. We cut training and we glossed it over with a relatively few high technology weapons we convinced ourselves would keep us safe. We were wrong.

“I led the military campaign during Operation Desert Storm a number of years ago where we utilized many of those high technology weapons to win a war and to make it look much easier than it was. We were lucky, my fellow Americans. We were lucky that the tyrant of the day wavered and did not push on into Saudi Arabia at the time. We were lucky that his conscripts were more afraid of him than they were of us and were thus willing to surrender in droves when the actual fighting started.

Finally, we were lucky we were still basking in the appropriate build-up of arms and materiel that had occurred under President Ronald Reagan, one of our greatest all-time Presidents in my opinion.

“Just a few short years ago, in 2003, we went up against that same tyrant in Iraq and finished the job, with much the same results. We fought a large army and prevailed, but it was an army more afraid of its master than of us and they surrendered or just went home and did not fight.

“As a result, we squandered away the forces needed to confront any truly dangerous tyrant, one who uses charisma and the strength of their personality to convince an entire people to follow a misguided cause. We have slashed our defenses, and we have placed ourselves in positions of dependency when we ought not to have done so.

“All the while, conditions in the world as a whole have not changed. Evil still exists in great abundance. Ignorance still exists in large measure; poverty still exists in most places. All of these provide fertile soil for evil and conspiring forces. Unfortunately, as we have found by spending trillions, it is a condition that we cannot fix. The peoples of these nations have to fix it, they have to want to fix it. We can only assist those who really do, otherwise, we are planting the seeds and funding the very forces that would destroy us, who hate our liberty and way of life. This is the harsh, cruel reality of the world in which we live. It has always been so.

“We saw a natural evolution of this in 2001 when one such tyrant attacked our nation and killed many innocent people. It was a misguided, evil effort to lash out at and destroy our morale, our financial capabilities and thereby our influence. We responded and brought that individual and his organization to justice, along with the few governments who were willing to support him.

“Now, the evolution of despair, ignorance and hate has stepped up. Now we find, once again on the world scene, ruthless dictators and despots who have convinced entire people’s to follow them and support them in their tyranny. We can no more allow this to stand than we could allow the acts of September 11, 2001 to stand. In fact, even more so, we must come together as a people and, like “the greatest generation,” we must astound the world with our ability to produce, to unite and to successfully confront tyranny.

“Let there be no mistake, it is going to take just such an effort. We face a situation every bit as dangerous as our fathers and grandfathers faced in the early 1940’s. Perhaps even more so.

“So, to the questions of how do we respond? And how do we avoid this in the future? I intend to give some answers tonight. I intend, with the support of the congress and the support of the people, to place us on a path to win this war. We *will* win it decisively and will win it in a manner that will cause us to never forget, to never allow ourselves to become so complacent again. Here is the formula. It is not a new formula, my fellow Americans. It is the same formula our founders used to win our independence and vouchsafe those unalienable rights that have been endowed to each of us by, as our founders labeled Him, our Creator.

“First, we must immediately embark on a full-scale war-time mobilization. A mobilization of our forces and a mobilization of industry to give those forces what they need to wage and win this war.

“In that regard, I am calling up one million reserves. Details of this call up will be announced by the Secretary of Defense starting tomorrow. In addition, I have spoken with the leaders in Congress and gotten their support in calling for a significant increase in what used to be called the GI Bill. We will elevate it to what it used to be in terms of providing for education, health care, homesteading and job opportunity for those who serve.

“I expect this to be a long and costly war. We may yet suffer attacks on this land. We are going to need every able-bodied man between the ages of 18 and 45 to be prepared to serve their country, at home and abroad. We do not want and have no plans to institute a “draft.” We want volunteers and we are going to make it worth the while of those who do so. It will take the agreement and the willingness to do so of those who are not in a position to serve to make this possible. I ask you tonight, my fellow Americans, for that commitment, for that willingness.

“But that is not all I ask of you.

“For those not able or willing to sign up directly with the military, our Director of Homeland Security will be announcing in the next few weeks a program for “Home Guard” units who will work with their local Sheriffs to help maintain security here on our shores. These units will be volunteer units, they will be armed, they will be trained and they will have communications devices to get them immediately in touch with their local sheriff’s and through them with their state’s National Guard. The training, the weapons and the communications will be provided by the government and will become the property of those who volunteer.

“With respect to mobilization of fighting forces, we are going to have to come to the aide of our allies and friends, and our own forces in Korea. I have ordered up immediate relief in terms of several Marine units and the ships and aircraft to support them. I am ordering significant ground forces to be ferried over by aircraft, both military and commercial.

“Now this is going to place a significant burden on our airline travel, our commercial travel. But the need is urgent and the situation is critical. We need to move ten thousand men to Korea, and escort them safely there, in the next two weeks. These men will then be supported by several times their number arriving with the Marine Task Forces. In order to do this, restrictions on commercial flying

will be announced tomorrow by all of the major airlines. These restrictions are voluntary, but once volunteered, I have made it plain that they will be in existence through the duration of the emergency. I have requested and received the agreement from the CEO's of all of the major airlines. I am proud of these patriotic leaders in our business community.

"In that vein, let me turn to the second requirement for our mobilization. That is our tremendous industrial capacity. Sadly, we have squandered much of it away over the last few years in the name of building a so-called "service economy." Well, in my mind a "service economy" is an economy of servants, and it has placed us in this very dangerous situation. In the name of so-called "free trade," we have shipped much of our capacity off shore, in some cases to the very nations that now either threaten us, or are being destroyed by those who do. In order for trade to really be "free," it must also be fair, and we have neglected that side of the equation, particularly for our own industries. We cannot afford to allow this to continue. Not for energy, not for manufacturing, not for food, and not for any other strategic and critical industry.

"Therefore, today, I am announcing all of the following:

"There will be an immediate cessation of all restrictions on the search for, and production of, oil reserves that are local to the United States and its territories. This includes the Alaskan north-slope fields and the fields just off of our west coast. We were already moving in this regard, but were being severely hampered by provisions of several Acts of Congress, some of which had expired but were still funded. All acts that have expired will, as of this date, no longer be funded or recognized by this administration or any of its agencies. Other acts hindering our ability to remain energy free in either the petroleum, nuclear, coal or alternate fuel areas will, by executive order, be administratively set aside by all agencies under my executive direction until they are rescinded by Congress. I have requested this of the leadership in Congress and both sides of the aisle have assured me, in the interest of national security and survival, that it will be done. I have instructed all of the Directors and Secretaries of Executive Branch agencies accordingly.

"I have requested and expect to get agreement from Congress and from all state governors, agreement regarding the establishment of priorities for the use of strategic materiel required for the war effort, or the re-institution of industries critical to that effort. This will result in some rationing by the state governments for private citizens and non-essential industries. I want to thank the governors who have already responded and those I expect will respond, along with the congressional leadership for their approval of these measures. Again, once implemented, they will be in effect for the duration of the emergency. I expect that over the next few weeks, executive branch agency heads and state officials will announce the specific allocation plans.

"I have instructed the Secretary of Commerce to draw up import and export guidelines, similar to those we recently implemented with the CAS that will now apply generally. We intend to allow free trade, my fellow Americans, but never again will our free trade be unfair to our own. Any nation seeking to do business with America will have to do it on our terms, or not at all. They will have to comply with our standards, or not at all. If their governments subsidizes their efforts and they comply with our standards, then our producers will either get an amount equal to what that government is providing, and it will come from *that* government, or they can take their business elsewhere.

"The playing field will either be level, or they will not be allowed on it in America. In this way, we will keep our industries competitive right here in America if they are willing to apply that Yankee ingenuity we have always been famous for. It will also allow us to slowly remove the artificial supports that have been put in place in some industries that never should have been there in the first place. They were efforts that tried to address playing fields that were so lopsided that they could not hope to be addressed. We will remove the burden from the American taxpayer and put it where it belongs, on those nations and those companies wanting to do business here."

"Other measures may become necessary as time goes on and depending on circumstances with the war effort. As they do, I will speak with your representatives, your state leaders and with you as I have done here tonight.

"In closing, my fellow Americans, this is a time for three things:

"First, it is once again a time for national prayer. We must unite our collective faith so we are equal to the challenges that lie before us. We have a long road, it is a road that may get worse before it gets better. It will require our collective faith to walk that road. Therefore, I am calling for March 1<sup>st</sup> to be established as an annual National Day of Prayer and Reflection. All federal government offices will release their workers tomorrow at 11:30 a.m. and allow them to gather in their churches, their synagogues, their assembly halls, their mosques and their own quiet places for the remainder of the day. In future years, this will be a full day holiday.

"Second, it is a time for unity. Let us put aside all of the hyphenated Americans. Let us put aside our differences, so that we might remain free to have them. Let us work together as compatriots, as brother and sister Americans to walk this path, to climb this hill, to put down this dark tyranny. It is a tyranny that would force on our friends, and ultimately on us, the denial of individual rights in the name of some collective, a collective invariably controlled and ruled by a select few. We have seen this ideology in our world my fellow Americans, history is littered with the skeletons and debris of the

peoples who mistakenly embraced it, and with those peoples who were not resolute or strong enough to stand up against it. We shall not be such debris—we shall stand!

“Finally, it is a time for sacrifice. The collective effort to produce the materiel, the arms, the personnel and the equipment to allow our eventual triumph is going to require that we step outside our comfort zone. It is going to require that we willingly give up some of our creature comforts through the duration of this crisis, so that we can retain them in perpetuity for our children and grandchildren.

“I urge each of you, to voluntarily find the ways you can give, to find the ways you can help, to work with your relatives, friends and neighbors, to follow your elected representatives.

“And I commit to you, that I, and each member of my staff, and every member of any agency working for me will sacrifice similarly and accordingly. I commit that under our constitution, whatever measures we take will be in strict accordance with that constitution. It is the banner we look to, after we look to our faith. It is the instrument all of your public representatives and officials swear an oath to bear true faith and allegiance to. I commit to each of you, that throughout this crisis, I will ensure that I am always true to that oath, and that everyone working for me is true to it, or be removed from office, so help me God!

“God bless you each. May He be with us all as we go forward. May God bless America this night and in the future to be strong, to be brave, to be committed and to be true, whatever the cost. Good night.

## Chapter 10

*“When China awakens, the world will tremble.”—Napoleon Bonaparte*

**March 7, 06:30 local time**

**Flag Observation Deck, PLAN 1001 Beijing**

**15 Kilometers east of Shanghai, China Sea**

As Admiral Yao Hsu stood on the flag officer’s observation post outside of Air Operations, he turned and looked back over the wake of his flagship as she glided through the mild seas and away from land. Even after all of these years, this was a time he cherished greatly, a time of anticipation and expectation. Every time he made out to sea, he experienced these feelings, and the years and circumstances never seemed to dim them.

Trials for the PLAN’s new Sea Control Carrier had gone better than expected and now circumstance dictated that he take her out for a different type of trial, a trial by fire. The apprehension associated with that, with wondering if the tactics, the weapons systems and the experiences so new to the PLAN would be sufficient to the task at hand, understandably dampened the Admiral’s normal feelings as they made to sea. But the anticipation and excitement associated with making out to sea, and with testing himself and his nation against their most formidable adversary, overshadowed any apprehension or other concern.

To starboard and perhaps two or three kilometers off his bow, the lead ship of the Lanzhou class of area air-defense guided missile destroyers had accelerated to thirty knots to take up its position as the principle inner-ring escort for his carrier. As he watched her, his thoughts focused on the undeniable beauty of what he was seeing.

What a beautiful ship she is! Sleek, low to the water and a match for any surface combatant on earth, even the so called “war God” Aegis cruisers that the U.S. Navy employed, and whose function she executed so effectively.

Thinking of the Americans caused him some reflection. Funny, for many years he felt awed by their navy, their ship handling, the balance of the various ship classes, their carriers, their battle groups—and particularly the technology they employed. In fact, a lot of that technology had gone into the development of the ship he was standing on. Through so-called “exchange” programs, Admiral Hsu himself had been aboard U.S. Carriers and U.S. Aegis warships in the late 1990’s and seen how they functioned. The information and knowledge had been invaluable. In addition, through acquisition of “dual use” technologies, some by bribery, some by clandestine methods and others as simple gifts from the Americans, many of the electronics, sensors and automated controls had been refined far beyond what the PLAN would have been capable of just a few years ago.

But now, all of that had all been improved upon and refined to produce newer classes of ships, newer tactics and newer weapons systems that were, in the Admiral’s view, a match for any thing the Americans had, and in fact, in his eye’s, even better.

The Beijing task force was centered around the carrier, and included two Lanzhou class DDG’s, one of the latest Hangzhou class guided missile destroyers, one of the newer Guangzhou class DDG’s, and four Ma’anshan class FFG’s. All of the DDGs, in addition to their other formidable armaments, had been upgraded and armed with four of the new LRASD weapons and the targeting and fire control systems to control them.

The Beijing itself had a full combat load of twelve SU-35 fighter aircraft, six of the EW variants of the SU-35 aircraft and twelve navalized J-10 attack aircraft. In addition, she carried four of the new Biao STOL AEW aircraft and four Ka-28 ASW helicopters. All of these were now being built in China, and at a rapid production rate to outfit the new carriers being produced.

In addition, the Beijing carried vertical launch missiles (VLS) which included forty tubes for anti-aircraft and ten tubes of anti-surface. Unlike the American system, these could all be automatically reloaded within minutes and the Beijing class of carrier carried five reloads for each. The anti-air missiles were the new ship borne KS-2 missile which had a range of 45 kilometers and an effective altitude ceiling of 25,000 meters; very effective indeed. The anti-surface missile were the SS-26 Yakhont missile (also now license produced within China), which had a range of 300 kilometers and were mach 2.5 sea-skimming missiles.

Still, one had to have great respect for the experience, knowledge, tactics, weapons and technology that the Americans employed. They had the operational experience, and they still had the numbers in terms of ships, ship classes and aircraft. One could not fail to recognize this. One could never underestimate them.

As he thought this, the rising sound of jet turbines pulled his attention to the port launching position. A quick glance to port confirmed that an SU-35 was spooling up, preparing to launch. He glanced at his watch. It read 0635 local. He nodded his head almost imperceptibly. This aircraft was due on station at 0640 for the morning Combat Air Patrol (CAP). Another SU-35, behind and to the

side of the first one, also began to spool up. Within forty-five seconds, both aircraft had launched right after one another. As they circled to gain altitude, the Admiral turned and went back inside and made his way through Air Operations towards his cabin.

“Admiral, a moment if you please.”

Captain Tuan Hongwen had waited for the commanding officer of Task Force Beijing to come in before addressing him. Having served for several years with the Admiral in other capacities, he knew of the Admiral’s love for taking a moment alone while making out to sea and he had not disturbed him while he took those few moments. The matter was not urgent, but the Admiral did need to hear of it. As Admiral Yao stopped and turned towards him, Captain Tuan continued.

“Admiral, all units report under way towards point SUN. Recent intelligence indicates that a massive American fleet has put to sea and will be rendezvousing with the USS Kitty Hawk near Okinawa within seven days. They are not taking any great pains to hide their intentions.”

The Admiral considered this information for a moment and then replied as he continued towards his cabin.

“Thank you Captain. I would not expect the Americans to do anything other than charge forward with a bit in their mouth at this point, particularly given their deteriorating position in South Korea. Keep me apprised...by the way Tuan, the ship and crew are very fit, my compliments to you and your staff. Until my staff briefing at 0800, I will be in my cabin.”

As the Admiral entered his cabin moments later, his eyes were drawn to his locked security safe. He opened it and withdrew his orders. As he took them in hand, he sat down and reviewed them once again.

XXXXXXXXXXXX// 170003MAR06 \\\XXXXXXXXXXXX

FR: COMEAST

TO: COMBEIJING

SJ: EXECUTE OP SENTINEL

SITREP: US, UK and CAN naval forces forming for approach Korean peninsula. US CBG’s Stennis, Constellation & Kitty Hawk with many Amphib groups. UK two (2) CHV, one (1) LPH. CAN SAG. Sub threat high

ORDERS: Utilize rendezvous point SUN. Coordinate movement and operations of TFs Gansu, Yunman, Fujian, Hunan, Jilin and Hennan according to op Sentinel. Warning: Prepare execute op BREATHOFFIRE between 14MAR & 16MAR.

ROE: weapons status white until execution order.

XOXOXOXOXOXOXOXOXOXO

The Admiral reflected on the import of these orders. The moment he, Admiral Li Huang Chin Zhongbaio, General Hunbaio and so many others had worked and planned for so many years was soon to be upon them. The Tactical Attack Ships (TAS) that would be under his command were already under way, with their escorts to their respective operational areas. Others, the first several out of production, were long since under way to their positions off the east and west coasts of America. Those were the most vulnerable; they had no escort and would have to fend for themselves.

If Operation *Breath of Fire* was executed, and with these orders it appeared almost a certainty, his life, and the life of all his countrymen would change dramatically. If successful, it would place China and the Coalition of Asian States in the forefront of economic and political development for the entire western Pacific and Asian areas for the foreseeable future. If it failed, they would have a much more difficult time attaining that goal.

But, he did not expect it would fail. The Americans were so predictable, and they felt themselves unassailable. Despite their bruises and losses in the Mid East, they felt that these had occurred principally in the air and against overwhelming number where they had inflicted severe losses on their enemies. They simply could not conceive that they could also be assailed on the open seas—or that a true military strike was possible on their own shores. Well, *Breath of Fire* would either prove the planning, commitment and strategy of the leaders in the People’s Republic to be accurate and successful, or it would prove that the American arrogance was well founded. It was now time to find out which it would be.

He looked again at his watch, 0655. Time to plan his staff meeting for 0800. In that meeting, after his intelligence people spoke, after the commanders of the various ships in his Task Force had the opportunity to speak, he would brief them all on the true nature and import of their orders.

**March 7, 04:25 local time**

**Rendezvous Point Designated Point Conception**

**250 nautical miles west of San Diego, Eastern Pacific**

The orders that the President had issued had been reviewed and the details developed for the support of South Korea. Those detailed orders for troops embarking on air carriers, and for Marines embarking on naval vessels had been passed down the line and were now being carried out. As

airliners flew over the Pacific from various points in the country, ships of the U.S. Navy set sail from all along the western coast of the United States.

Now, the many ships that would be transiting the Pacific to Korea were gathering at their initial rendezvous point, point Conception. The gathering force would be the largest task force of U.S. Navy warships in the Pacific since the World War II.

The Task Force would use the designated number for the Combined Task Force (CTF) in the Western Pacific, CBT 77, which would be under the overall command of Admiral Reginald Patterson.

To prepare for that transit across the Pacific, large portions of CBT 77 were gathering off the California coast. That transit group would consist of two CTF's, CTF 77.2 and CTF 77.3.

CTF 77.2 would be centered on Carrier Group 7 comprised of the USS John Stennis (CVN 74) and its escort and support vessels. CTF 77.2 would also include two augmented Amphibious Squadrons (PHIBRONs). The first would be PHIBRON 3, centered on the USS Bonhomme Richard (LHD 6) Amphibious Ready Group (ARG) embarking the 11<sup>th</sup> MEU. The second would be PHIBRON 1, centered on the USS Peleliu (LHA 5) ARG, embarking the 15<sup>th</sup> MEU.

CTF 77.3 would be centered on Carrier Group 2 comprised of the USS Constellation (CV 64) and its escort and support vessels. CTF 77.3 would also include the augmented PHIBRON 7, centered on the USS Wasp (LHD 1) ARG, embarking the 13<sup>th</sup> MEU.

Once the transit groups reached the Okinawa area, they would be joined by CBT 77.1, which would include Carrier Group 5, centered on the USS Kitty Hawk (CV 63) and its escort and support vessels. CBT 77.1 would also include PHIBRON 11, centered on the USS Essex (LHD 2) ARG, embarking the 31<sup>st</sup> MEU. Carrier Group 5 and PHIBRON 11 were permanently deployed in Japan and at Okinawa respectively.

Altogether, three Carrier Groups and four Amphibious Squadrons would be included in the task force. Each of the Carrier Groups would be comprised of the following:

- One (1) Aircraft Carrier (CV or CVN)
- Two (2) Aegis Cruisers (CG)
- Three (3) Burke Class Guided Missile Destroyers (DDG)
- Two (2) Improved Los Angeles Attack Submarines (SSN)
- One (1) Fast Combat Support Ship (AOR)

Each of the augmented Amphibious Squadrons that the Carrier Groups were protecting would consist of the following:

- One (1) Amphibious Assault Ship (LHD or LHA)
- Two (2) Amphibious Transport Docks (LPD)
- Two (2) Dock Landing Ships (LSD)
- Two (2) Burke Class Guided Missile Destroyers (DDG)
- Two (2) Oliver Hazard Perry Guided Missile Frigates (FFG)
- One (1) Replenishment Oiler (T-AO)

In addition, attached to each of the CTFs in transit, sailing with one of the augmented PHIBRONs, the following ships were included:

- One (1) Amphibious Cargo Ship (LTKA)
- One (1) Ammunition Ship (T-AE)
- One (1) Combat Stores Ship (T-AFS)
- One (1) Oliver Hazard Perry Guided Missile Frigate (FFG)

This amounted to seventy-five U.S. Navy warships, fully one fifth of the entire U.S. Navy war fleet. Onboard these ships would be over twenty-five thousand sailors. In addition, there were over twenty thousand U.S. Marines embarked on the ships of the various PHIBRONs.

Off the southern coast of Japan the plan called for CTF 77 to be joined by two allied Task Forces. One was a British task force centered on two of their Invincible Class jump jet carriers (CVH) and two of their newest amphibious ships, the HMS Ocean (LPH) and the HMS Albion (LPD), along with several escorts and support vessels. The second was a Canadian Task Force consisting of two Iroquois guided missile destroyers (DDG's), two Halifax guided missile frigates (FFG's) and two new Canadian sealift ships. These two task forces were transporting another three thousand troops to assist the United States and the Republic of Korea in their fight on the peninsula.

### **March 7, same time**

#### **Task Force Commander's Cabin, USS Lake Chaplain (CG 57)**

#### **250 nautical miles west of San Diego, Eastern Pacific**

JT Samson was enjoying himself immensely, despite the gravity of the situation. The very fact that he was a part of a very limited press pool on this mission to South Korea had to be one of the high points of his career as a journalist—an admittedly "conservative" journalist.

As the owner and Chief Editor of SierraLines, JT's reputation for ferreting out stories and then reporting on them from a *very* pro-American standpoint ("pro" in the sense that JT *always* insisted on

coming at his reporting and editorials from a Constitutional perspective) preceded him. That reputation had first caught the administration's eye when JT had reported so positively on the then candidate Weisskopf's challenge to the husband of his challenger during the presidential campaign. It had done so again when he had so thoroughly derailed a press conference by Li Peng, the head of the Chinese Parliament, in Damascus back in January. The pointed question he had asked, had gotten him an invite to the White House. There, the President's chief of staff, at the direction of the President, had personally briefed him on the situation and indicated how the President "hoped" at least some in the media would handle that particular story once they had all of the "facts." The President had even given his permission to use the Chief of Staff specifically as the source.

The ensuing story had vaulted JT's SierraLines into the spotlight and finally established once and for all that an Internet News outlet could compete head-to-head with the major networks. It had also earned JT a "point" position as an embedded reporter for any story associated with the war just by requesting it. He had selected to be "point" on this operation to Korea. Tens of millions of Americans were anxiously awaiting his daily reports, subject to military screening, regarding the progress of the largest U.S. naval combat operation since World War II.

JT was now waiting to board a Sea Hawk helicopter to return to the USS Bonhomme Richard, the ship on which he was embarked. The USS Lake Chaplain, an Aegis guided missile cruiser, was Admiral Patterson's flagship for the entire combined task force.

JT had just completed his initial interview with the Admiral. Calling it an interview was really a stretch. Actually the Admiral had invited JT over to introduce himself and to make sure that he was being treated according to the guidelines that had been established for all embedded reporters. It was clear that the Admiral was very interested in getting a clear, concise, accurate and positive report back to the American people regarding this operation. JT was committed to all of those things, but would allow the "positive" portion of it to be decided by the people, and he made sure that the Admiral understood it.

The Admiral had understood, and indicated he was convinced that if the report were simply clear, concise and accurate, that the positive portion would take care of itself. He had ended their time together with a hearty handshake, sincere thanks, and a statement to his Chief of Staff, Commander Lewis, to see to JT's needs and schedule a more thorough interview within the next few days.

JT would include the results of this meeting, in his next "update."

**March 11, 16:42**

**Marine Recruit Training Depot  
San Diego, California**

Alan could not believe how strong his brother had gotten. He had just given him a hug, and had squeezed as hard as he could to try and impress Leon. But the squeeze back had nearly cracked Alan's ribs! Leon must have known it, because he lightened up at about the moment Alan thought he couldn't take any more. Neither brother had said anything, they had just looked at one another with that "knowing" look.

Alan was so proud of Leon. He looked so good in his Marine uniform. It was clear that Leon could not be any prouder than he had been when he showed Alan and their mother the Eagle, Globe and Anchor emblem of the U.S. Marine Corps that he had earned. The emblem had been given to him by his DI after he had completed the Crucible, two weeks ago. The Crucible was the supreme test for Marine Corps recruits. It was where they either made it or broke it. A 54 hour physical, mental and moral test which included food and sleep deprivation while marching over forty miles to obstacles ranging from the long march, to combat assault courses, to problem solving and reaction course, to the team building stations spread out along the way. Once a recruit successfully completes that test, from thereafter they are one of the few and the proud. Leon had completed it, and he was proud. He was proud of himself, proud of Billy, proud of his new friends, and proud of his country for giving him the opportunity.

Alan moved out of the way for his Mom to get a hug. As Leon hugged his Mom, and held on tight for several seconds, Geneva Campbell said, "Boy, I am so proud of you! Just look at yourself. I wish your daddy could see you now."

Leon considered this for a moment, and then, bowing his head so no one would notice the tears, he said,

"Mom, I believe he does see it. I really believe he knows."

Right then, Billy Simmons walked up, with his Mom, Cindy.

"Leon, bro! How does it feel? We actually did it man, can you believe it, we are now officially U.S. Marines!" After Billy and Leon exchanged congratulatory bear hugs, Geneva embraced Billy, giving him a big kiss and asked "What's next for you boys?" Billy replied: "Now, Mrs. Campbell we're off to Camp Lejeune over in North Carolina to get into our Infantry training and then some specific Military Occupational Specialties (MOS) that we're both going after."

As Leon and Billy were talking, Geneva noticed Cindy holding on to her son's arm so tightly. She didn't see Billy's Dad, Jess.

“Cindy, where’s Jess?”

Cindy turned to Geneva, and smiling, responded, “Oh, Geneva, he’s off doing what these boys are learning. He got his orders several weeks ago, and off he went. He’s over in the Mid East somewhere. I got a letter from him just last week. He’s involved with something all hush, hush because he can’t say a thing about where he is. But, I’ve gotten use to it. The good Lord will take care of Jess and me too, until we are reunited.”

“Well, why don’t we all go and get us some dinner? I’ll tell you what, I’ll treat the whole bunch of you!”

**March 12, 19:55**

**Situation Room, White House**

**Washington, D.C.**

“Ladies and gentlemen, I have to warn you, what you are about to see is *extremely* disturbing and *extremely* graphic. We have all heard rumors and talk about the atrocities being committed by North Korean forces in the South, and particularly in Seoul. What you are about to witness is documented proof of that. Anyone who either does not want to witness the following, or who feels their stomach may rebel, please step out into the waiting area and we will invite you back in after the film.”

Despite the warning from the President’s Chief of Staff, no one left. They were all leaders of their nation. None of them got any pleasure or approved of graphic violence or sex, but they would not step back from the reality of the situation in Korea either. They knew that if such a culture and society were allowed free reign in America the same thing would happen. They knew that if they did not stand up to it while it was afflicting their friends and allies, they opened the door to the possibility that it could come to these shores. So, despite the Chief of Staff’s warning they all watched with misgivings as the film was started.

As the film was played, on a number of occasion exclamations of “My God,” “Dear God, no,” “Sweet Jesus,” “Those sorry bastards,” and other such comments were made by those in attendance.

What the film showed was the literal rape of Seoul. A U.S. Army cameraman, who had gotten separated from his unit, had been trapped behind lines in Seoul and had been able to record scenes of abject horror. In one particularly graphic incident, lines of North Korean soldiers could be seen coming down either side of a main thoroughfare, with armored vehicles, tanks and IFV’s advancing down the center of the street. Smoke was rising from several modern buildings in the background, and rubble from the collapse of buildings could be seen everywhere. There were bodies strewn in the street with the smoking hulks of cars and South Korean APCs.

As this group advanced, they came to the entrance to a building. Apparently, one of the soldiers heard something. He lifted his hand and the line stopped on that side of the street. Crouching down, the lead soldier and seven others rushed into the building. Seconds later, they exited the building, leading a group of four American GI’s and a family of six Koreans. The GI’s were not armed, had their hands raised, and were forced to lay down spread eagled on the street with two North Korean soldiers holding each down, one with his boot on the neck of each GI. The Korean family consisted of a man in his forties, his wife, what looked to be two teenage daughters and a son about ten years old. They were all being handled roughly by the soldiers.

An officer was called to the front. When he got there he separated the three women. As he was doing so, the father rushed after his wife and daughters and the officer ruthlessly and coldly shot him in the face with his service pistol. He then walked to the ten year old boy, who was standing there sobbing over his father, wetting his pants and the officer shot him in the head. All of the American soldiers began struggling to rise. The officer barked out an order and all four of the Americans were also executed.

All three women were separated. The entire column was now halted, and other soldiers, drivers and vehicle commanders were milling around. The officer barked out several orders in Korean and many of the men began lining up around each of the three women. Then, to the horror of those watching, those poor women were literally raped to death. The cameraman could be heard reciting Mother Mary’s and quietly sobbing as he filmed. Long after the women had either lost consciousness or died, the horror continued. Finally, their limp bodies were dragged out into the street and the same officer delivered a final shot to the head of each. Then, the soldiers got back into their vehicles, reformed their lines and continued down the street.

After it was over, the President himself spoke to those gathered.

“Let’s spend a moment in silent prayer for those poor souls who were so brutally killed.”

After another moment’s pause, the President continued on soberly.

“I showed this to you today so there would be no doubt in your minds what types of horror we are up against in Korea. Our suspicions of similar things going on in the Mid East, were recently confirmed by a young Lieutenant who escaped after being held prisoner after the taking of Incirlik air base. He provided detailed accounts of summary execution of our soldiers by GIR forces. Please listen to his statement”

Turning to his Chief of Staff, he indicated that the audiotape of the Lieutenant's statement should be played. What it recounted, in grim, brutal detail, was the execution of the wounded, and those not deemed having any useful information after the battle at the Adana International Airport. Sixty-three Americans had been captured, forty-eight had been executed by their captors. The young Lieutenant broke down as he recounted the sudden violent death of his friends and comrades. He then told of the brutal death and torture of others as a means of extracting information from those whom the GIR retained. He had escaped several days later and had ultimately made it to friendly lines.

"Ladies and gentlemen, this is the nature of those whom we fight. According to this Lieutenant, and we have no reason to doubt him, even senior officers participated in the atrocities he experienced. Regarding the film out of Korea, our analysts have enhanced parts of that film and found that the North Korean officer during the one scene is a full Colonel.

"Let the reality of these atrocities burn into your memories. One day we will have justice and there will be a reckoning and a lasting retribution. As you can see, these incidents are not isolated, or committed by a single unit. They are widespread. Wherever the cameraman went he filmed similar atrocities. We must never forget this.

"This film and the audio tape will be made available to our commanders and to our allies so they can understand the abject brutality and inhumanity of these attackers. We expect in South Korea, it will spur the people as a whole to resist with every thing they have, and they need to. I will spend some time deciding how we can best present the knowledge of this to our own people.

"Now, General Stone, please proceed with the briefing."

General Stone gave a thorough briefing. The military situation was not good. After brief success with a counter attack by the 82<sup>nd</sup> Airborne Division in the center of the defensive line in Turkey, the GIR funneled more troops and aircraft into the area. Within three days all of the ground made up had been lost. Now, the GIR was closing in on the Turkish capital.

In Saudi Arabia, the situation was similar. GIR forces there had reached the United Arab Emirate (UAE) and had expanded their coastal operations towards the Saudi capital of Riyadh. American armor in all areas was still terribly outnumbered and was falling back. Though they were being forced back, they were exacting a heavy toll on the GIR forces arrayed against them. It was generally taken for granted that once sufficient forces were built up in staging areas along the Red Sea and on the Mediterranean, U.S., NATO and other allied forces would push the GIR back from all of their gains.

In Egypt, the General reported that the Libyans and the Sudanese had begun their offensive. Egyptian and U.K. defensive lines were set up well to the east and north of these attacks. Allied forces were doing little more than harassing the advance, hoping that the advancing GIR columns would break themselves on allied defenses and allied air power, which in that area were well established.

As the film had indicated, the situation in Korea continued to be very grim. Seoul had been lost along with Inchon. The remainder of the 2<sup>nd</sup> Infantry Division and the 6<sup>th</sup> Cavalry brigade had narrowly avoided encirclement. They were barely able to maintain an orderly fighting withdrawal back along the western side of the peninsula to defenses that were being set up along a line running from Ulchin on the east coast, through Ch'ongju, to P'yongt'aek on the west coast.

U.S. soldiers were arriving by airlift in Pusan and being moved towards the front as rapidly as possible. Even though there were plenty of small arms and ammunition, the heavy armor and artillery available was not sufficient to guarantee that the defensive line could hold. The Marines and their equipment were needed desperately. They were expected to arrive at Pusan within three to four days.

### **March 14, 16:20 local time**

#### **Israeli Defense Force (IDF) positions**

##### **Golan Heights**

Colonel Abraham Eshkol warmly shook the hand of the American Major who would be working with them for the next few months.

"Major Simmons, it is a real pleasure to meet you, and I don't mind saying, it is even a greater pleasure to meet your aircraft!"

Jess Simmons returned the vigorous handshake.

"Colonel, the feeling is mutual. You sure have a wonderful view up here, and I might add an extremely defensible one."

The Colonel turned and gazed in the direction the Major was looking, the direction from which any attack out of Syria would come.

"Any military person who comes here immediately grasps the import of this position. It is why we refuse to give it up. We would be foolish to do so.

"The ground was taken from an aggressor nation, the same one that sits out there below us now. I believe should another war come, and it is looking more and more likely, that we will simply annex the area and officially call it a part of Israel and be done with it. That is of course presuming that we are victorious—and that is the only presumption I will allow on these heights."

Jess could tell that he was going to like this Colonel.

“Colonel, I’ll you what, in as much as I am sitting up here with you, that’s the only presumption I will make as well. We are absolutely united on that point. Back home in Texas we would say “we’re closer than two peas in a pod on that.” I hope you understand my meaning.

“Now, let me show you and your people you a thing or two about these twelve birds your country has purchased. After that, either late today, or early tomorrow, we’ll take them up and show you a thing or two about what they can do in the air and you can see for yourself on your own detection equipment how difficult they are to acquire and track”

The Colonel enjoyed this Texas Major’s manner of speech, and the way he thought. Beyond that, he was looking forward to having the Comanche helicopters here. Their specifications and reputation preceded them. In addition, despite it being relatively quiet here now, and despite that no Arab country had yet attacked Israel in Hasan Sayeed’s war, there was no doubt in the Colonel’s mind that they would desperately need these helicopters in the future. In Colonel Eshkol’s estimation, that eventuality would be all too soon in coming. He planned, with the U.S. Major’s help, to be as prepared as humanly possible when it did.

**March 14, 22:45**

**North Side of Little Havana**

**Miami, FL**

Isabelle Rodriguez read through the letter from her son, for the sixth time. Her husband Oscar had read it earlier in the afternoon, and had already written a reply and gotten it to the post office that afternoon.

But Isabelle needed more time to gather her feelings, to formulate her thoughts and then to respond to her son as only a mother could.

*Dear Mom and Dad,*

*Basic training is very hard. I mean, I have never worked so hard in all my life! I have never been so sore in my life. I have never been so tired in my life. And I thought I was in pretty good shape.*

*Dad, the drill instructors are tough, mean and on us all the time. But you know what? I’m grateful for it. After a while you get used to it, and if you respond and don’t fight it, you can almost hear in their next insults and demands...well, a respect, like they can see you’re getting it. Anyway, I know we’re going to have to react quickly and be mentally alert and tough to handle what we are being trained for and that’s what their job is: to get us there.*

*Everyone here talks about it all the time at night when we are in the barracks before bed. We read the letters from our loved ones. We hear the news. It’s pretty plain that our country needs more of us, a lot more. Most here are anxious to get out there and help stop what’s going on, particularly before it can ever get to our shores.*

*Anyway, I emailed Maria today. You guys should really get a computer and getting set up so you can get email. It makes the communication quicker, cheaper and, well just more effective. She seems to be doing very well, and guess what? We’re going to be parents! You and Dad are going to be grandparents! Maybe Maria already told you, but if she hasn’t, let her.*

*Well, I have to go now, pretty soon it’s lights out, and I am dead anyway. I’ll write more when I can. Only eight weeks to go!*

*Your son, Hernando*

Isabelle had to wipe the tears away, again.

She was so proud of her son. So happy for him and Maria and the coming baby—and so scared for him. It was becoming obvious, with the President’s remarks, the restrictions on air travel and gasoline; this was a serious, serious situation and would probably last a long time to come.

As she began to write a reply to her son, she voiced a silent prayer.

“Dear God, please bless Hernando. Help him to be brave, help him to do well. Help him to learn and please, please, keep him safe.”

**March 15, 01:12 local time**

**Bridge of PLAN 2004 Guizhou TAS**

**220 Kilometers east of Norfolk, VA, Atlantic Ocean**

Captain Bin Lin had his crew navigate their container vessel turned Tactical Attack Ship into the assigned position amongst other cargo and container vessels awaiting transit into U.S. territorial waters. Based on past experience, he calculated that he had about a twenty-four hour wait. That was fine. He expected his execute order to come in the next twelve to eighteen hours, and if it was longer, he was prepared to execute his orders from wherever he stood at the time.

To anyone looking, the ship appeared to be a standard COSCO container vessel. Only by boarding and actually opening the crates that surrounded the LRASD box launchers, or moving the pallets covering the tactical missile hatches, could anyone determine that his vessel was anything more than what it appeared.

Captain Bin had at first wished that he had been assigned to the forces that would be confronting the U.S. Navy directly in the western Pacific. He wanted to pit his skills against his American

counterparts. Besides, each of those vessels had an escorting Luhu or Luda class destroyer with them, each of which carried four more LRASD weapons along with their other anti-air, anti-submarine and anti-surface weapons. But, as he thought about it more, he felt honored to be one of those who had been selected to be involved with the American mainland directly, even if he was working alone and therefore more vulnerable to counter attack.

If attacked, he had no intention of being boarded. He had a contingent of one hundred well-armed Chinese Marines aboard to prevent that. He had his LRASD weapons to defend against surface or submarine attack, and he had the very capable KS-2 VLS battery, each tube with five reloads, to defend against air attack.

Of course, if the Americans identified him and tasted of any of these measures, they would quickly come at him with standoff weapons and overwhelm his defenses. He hoped all of that could be avoided. He would prefer of course, to just fire his missiles, and then turn to the south as planned and make for the COSCO facility in Bermuda.

There were fourteen other such vessels taking up positions along the entire coast of the United States. From Maine to Georgia, from Pensacola to Corpus Christi, and from San Diego to Seattle, PLAN Tactical Attack Ships loaded with over 500 conventional ballistic missiles were preparing for a surprise attack on the continental United States.

Most would get the execute order while well out to sea like himself. Others would be closer in, and a few might even be in port when the order came. This last condition was, of course to be avoided if at all possible. The new "Homeland Security" rules for vessels desiring to dock at U.S. ports called for a thorough examination of selected ship's cargo before they were allowed to enter U.S. waters. This had been implemented after the attacks of 2001 when American defense analysts began worrying what a terrorist with a large cargo ship could do if it were full of any potent explosive—or just full of the right type of fertilizer for that matter.

All of the Chinese ships had explicit orders to not allow any boarding if at all possible. They were to time their approach to be buffered by other vessels desiring entry. Failing this, they were to stay well out to sea, feigning mechanical problems.

Of course, if they were boarded and something was found, the U.S. Coast Guard and U.S. Customs personnel would be eliminated along with their vessel. In such an event, that Chinese vessel would then run for the open sea like a rogue ship—which is exactly what it would be labeled—and they would be expected to scuttle their ship in the deepest water available. This was the circumstance to be avoided at all costs.

"Officer of the deck. All stop, all stop. Drop anchor, and maintain position. I'll be in the Combat Information Center (CIC). Maintain an EMCONN status of passive except for our normal, commercial surface and air radar."

**March 15, 02:57**

**National Reconnaissance Office Headquarters**

**IMINT Directorate, Chantilly, VA**

"Okay, Diane, let's review this. It's late, but we need to understand and decide its priority."

Tom hung up the phone and waited for his new, junior analyst, Diane Smiley to come in. Diane had joined the group recently as a result of more funding, and was four years out of college. When Diane arrived, Tom had swung his dual screen monitor around so she could see it.

"Earlier today, while reviewing some pictures of newer PLAN class destroyers, you noticed some railing missing behind one of the life boat davits of the ship. Thinking it odd, you zoomed in on that portion if the ship and noticed, in the shadows of an overhang from the next higher deck, what appeared to be something out of place. Enhancing the photo, you were able to produce this."

Tom called up the image of a rectangular object on the right screen of the dual screen display.

"Then, as a result of heightened interest, you began looking at all new, or recently refitted Chinese destroyers, to see if there were more, and came up with this really clear picture."

Tom called up a clear picture of one of the structure in full light on a Luhu class destroyer. "At this point you brought it to my attention, right?"

Diane meekly looked down and nodded her head while saying,

"Yes Sir."

Tom continued.

"Okay. At that point I asked you to look at other large PLAN vessels to see if you could find more. As a result of your efforts, around 10 p.m. you came back and told me you had in fact found more of these structures on several classes of vessels. Is that correct?"

Again, feeling even more uncertain of herself, Diane nodded and repeated, "Yes Sir."

Tom was getting perplexed with the effect he was having on Diane.

"Look Diane, you're not in trouble here or anything, okay? I am asking all of these questions because as analysts, that's what we have to do to make absolutely sure we understand what we are talking about. So, don't be so worried or concerned. I happen to think that what you've found here is of critical importance. I'm just trying to get my arms around it.

“Anyhow, after discovering more of these structures, I asked you to broaden your search while I continued to follow up on my ideas. Were you able to find more?”

Having heard Tom indicate that the data could be critical and that he wasn't giving her the third degree because of problems, Diane perked up.

“Well, no, I didn't find any more of these “boxes”, but I did find something else. Why don't you call up this file?”

Diane gave Tom the network location of a file that he quickly called up on the screen. It was a picture of some kind of swivel joint.

“Tom, this is the attach point of one of those “boxes” on the deck of the Luhai DDG. This joint appears to allow for both traverse and elevation movement. When I take that knowledge and factor it in to the locations on the decks of the ships, it is clear that these “boxes” will swing out from the side of the ship through a fairly broad angle.”

Tom took this information and factored it into the things that he had discovered. It was beginning to paint a picture that he didn't like one bit.

“Okay Diane, I believe that is important information regarding the function of these things. Let me tell you what I have discovered.

“As you know, we have been concerned about the PLAN's capability to convert some its container ships into very effective sea control Aircraft Carriers in a relatively short space of time. We have been scouring Chinese port and repair facilities to locate all of the places they are doing this. In looking at all of those facilities, we have found three potential sites, two of which we are sure of.

“There are many other sites where COSCO refits and repairs its container ships, or other places in the PRC where this could occur. We have been checking them all. One of the things I noticed coming out of other locations, not involved with the carrier conversions, were container ships that left their dry dock or repair dock looking like this.”

Tom called up a container ship just leaving a dry dock facility. Zooming in on the deck, there were six of the large rectangular containers along each side. Tom zoomed in on one and highlighted the container and brought it up on his left-hand screen.

“Now look what happens when we compare your “boxes” to these containers.”

Tom called up one of Diane's “boxes” on the right screen, highlighted it and dragged it over to the left hand screen and superimposed it over the container. The “box” fit right inside.

“Those “boxes” from the destroyers fit right inside these containers from the container ships with about six inches to spare all around.”

Diane thought about this for no more than a second and then jumped right on the implication.

“Okay, perhaps the Chinese are using the pretext of the refit or repair of their container ships to transport these “boxes” to where the destroyers can get at them. Now I want to know what they use them for on those destroyers.”

Tom appreciated Diane's focus, but she was still young and not used to looking for a bigger picture in case it was there.

“Good idea, that was my first thought too. So, I went and looked for container ships that have been refitted at these same places over the last three months or more. I figured I would find some photos of ships that had the containers at one point, and then later “lost” them.

“But that's not what I found. What I found was that in all cases the container ships still had the containers on them that the boxes fit into. In all cases, once these ships put to sea doing their container hauling, the other cargo and containers were stacked around them. Then, when the other containers are off loaded, these remain.

“You want to know what I think now that you've shown me how they are attached?”

Actually, Diane was anxious to hear. Her boss Tom was sharp and she wanted to learn a lot from him. His reputation as an analyst himself was legend around here and she was excited that her first major “find” had caught his attention.

“Absolutely, shoot.”

Tom did.

“I think these are weapons of some sort, and that we now have armed container ships plowing the seas. Ask yourself why the Red Chinese would do this. Who are they afraid of? Who do they feel these ships, particularly the container ships, are going to have to fight?”

“Now, this is a preliminary assessment and we're going to have to do even more research to verify or disprove this; but I believe it is critical that we do so.

“Look, it's late. Why don't you head home and get a few hours sleep. After I work out some assignments for this, I will do the same. Meet me back here at 9 a.m. and we'll get right back on this.”

Diane was glad for the opportunity to get some sleep. She'd been here since 7:30 a.m. and now it was after 3 a.m.—almost twenty hours!

“Okay boss, thanks for the help and thanks for the encouragement. I'll see you here at 9 a.m.”

As she left his office, Tom did draw up plans and assignments for Diane to address the next morning. When he was done with that, he stayed on and continued to do the research, analysis and contemplation necessary to either firm up, or dispel his theory. By 9 a.m. when Diane arrived, he had

arrived at the conclusion that the PLAN was deploying an unknown new weapon system on all of its guided missile destroyers and on many of its container ships. After meeting again with Diane at 11:30 a.m. and confirming his apprehensions, he sent a report at 12:30 p.m. to his NRO command chain, CINCPAC and the NSA.

It would take this report eight hours to be read, analyzed and forwarded to bases and units around the world, including CBT 77. By then, it would be too late to make any difference in the events of that early evening of March 15<sup>th</sup> in America, or at the same time in the early morning hours of March 16<sup>th</sup> in the Western Pacific.

### **March 16, 05:35 local time**

#### **Flag Briefing Room, USS Lake Chaplain (CG 57)**

#### **420 nautical miles ENE of Okinawa, Western Pacific Ocean**

The briefing had just ended. Admiral Reginald Patterson was pleased. He had served in many positions in his twenty-eight year tenure with the United States Navy. He had served on many staffs, and had quite a few staffs serve under him. He honestly believed that the staff serving with him now in CBT 77 was the best, and in the Admiral's way of thinking, that's exactly how it should be.

The decision had been made several days ago to send the CBT 77.1 with the USS Kitty Hawk CSG and the USS Essex ARG further north, to transit into the Sea of Japan north of the southern most main island of Japan. This was occurring this morning. In the mean time, CBT 77.2 and CBT 77.3, transited into the China Sea north of Okinawa.

The rendezvous of all elements would occur off of Pusan day after tomorrow, which would allow the Kitty Hawk to provide needed air support to the US and Korean forces for two full days before the landings off Pusan would begin.

"Commander Lewis, you gave a very good overview of the exclusion zones and the current status of allied and neutral shipping with respect to them. It seems pretty crowded out there."

Lewis, in addition to being the Admiral's chief of staff, was also an excellent tactician and intelligence analyst.

"Admiral, as you know, this is one of the highest traffic sea lanes in the world. There are always a lot of ships in here. I suppose short of all-out maritime warfare directed against Japan and its shipping, there's not much that will slow it down.

"The bit about the Chinese "escorting" their container ships bothers me though. As a supposedly neutral power, I suppose it may be understandable, but we both know how much military, tactical, logistic and supply support they have given the North Koreans before the outbreak of hostilities. There's not a one of us who believes that the North Koreans would ever have undertaken this invasion without the tacit approval of Beijing. Their neutrality is dubious and therefore their warships are potential belligerents."

Admiral Patterson understood. The fact was, most of the chain of command believed the same thing, including, as he understood it, the NCA himself.

"Well, they are not violating any of the zones we've established, but we'd best keep an eye on them. I am not overly concerned about any two, or any ten of their Luhai and Luhu class destroyers. It would be suicide for them to consider trying to get close enough to inflict damage on this task force. Just the same, draw up instructions for each task force commander to develop operational plans to keep each of those particular Chinese groups under close observation.

"I'm more concerned about their two Chinese carrier task forces, the one centered on the Beijing south and west of Okinawa in the China Sea, and the one centered on the Shanghai in the South China Sea. We need to keep those groups under constant surveillance, whether by satellite or by aircraft out of Okinawa or from this task force. I know those are already standing orders, let's just make sure they are emphasized."

Unknown to Admiral Patterson and Commander Lewis, those "not to be overly concerned about" Chinese groups centered on the "container ships" had already launched long range weapons. The results would make history and they would establish the parameters that would govern maritime warfare throughout the remainder of World War III.

### **March 16, 06:00 local time**

#### **Combat Information Center, PLAN 1001 Beijing**

#### **250 km WSW of Okinawa, China Sea**

Admiral Yao Hsu would remain in the CIC throughout the engagement. Captain Tuan Hongwen was working with his people to ensure that the Beijing was prepared to execute her portion of the attack at the appointed hour. That would amount to a launch of four full salvos of his SS-26 missiles at Okinawa's airbase and command and control facilities. Forty-eight missiles arriving in four waves of twelve, each wave would be less than five minutes apart. Arriving with the fourth wave would be an air attack of six SU-35s and ten J-10s, supported by one AEW aircraft.

It would be critical that air cover from the mainland arrive over the carrier to augment the six remaining SU-35s at the proper time. Everyone expected some sort of air attack from Okinawa or

American airfields in Korea and Japan. At the appointed time, ships would conduct ballistic missile attacks on American airfields in Japan, while Chinese missiles from across the Yellow Sea would hit bases in Korea.

Finally, the Shanghai, PLAN 1002, in conjunction with PLAN 83, the Shi Lang, would lead a strike on the HMS Ark Royal Task Force that was approaching from the South China Sea. With the carrier air groups, with the carrier launched surface-to-surface missiles (SSM) and with assistance from PLAN aircraft from the mainland, it was expected that the HMS task force would be quickly and totally destroyed.

As it stood now, 125 LRASD devices were rapidly approaching the American Task Forces. When they commenced their destructive work, the moment of truth would be upon them all.

PLAN attack submarines were passively listening well off of the American task forces. As soon as any one of them reported that the engagement had begun, an order would go out to all of the waiting Chinese forces. At that moment Tactical Attack Ships both here and off America, the Chinese missile bases and the various other task forces, including this one, would launch their attacks.

"Perhaps America is a sleeping giant," thought the Admiral. "Well, we will not make the mistakes of the Japanese sixty-five years ago. We will not deal in half measures. Our "surprise" will knock the American's unconscious. By the time they awaken and try and respond, the new order of things here in the Pacific and Asia will be too far advanced for them to counter."

At least, that was the plan.

**March 16, 06:22 local time**

**Control Room, USS Jefferson City (SSN 759)**

**370 nautical miles ENE of Okinawa, Western Pacific Ocean**

"Captain, we have multiple contacts well off our port bow."

Captain Wellington looked up from the plotting board as his executive officer made this statement. He had just been reviewing their patrol course out in front of Carrier Group Seven.

"What do we have?"

The executive officer responded.

"Sir, they say they'd like you to come and listen. They're not sure."

The Captain considered this, almost made a sarcastic remark, but then said, "Okay, Steve, you have the Conn."

The Captain quickly made his way over to sonar.

"Okay guys, what do you over here that requires me to listen?"

Looking up from his station, the duty officer, a Lieutenant, responded as he handed the Captain a pair of earphones.

"Sir, I've got the sound of many propellers, faint, but closing. Range 20,000 yards. They are definitely mechanical, no known acoustic match."

The Captain put on the earphones and was silent for a moment. Sure enough, he could faintly hear the sound of propellers.

"How many, at what approximate depth, and what closure rate?"

Looking at the readout on the screen at his duty station, the Lieutenant quickly pressed a few keys and then answered.

"Captain, the count keeps increasing, now twenty-one targets. Range to closest is now 19,100 yards and closing on a tangent of 223 degrees. Depth estimated at 600 feet. Speed is 48 knots."

Digesting this, the Captain quickly calculated and then said "That course is taking them in towards the Task Force."

Picking up a communications phone, the Captain called his XO.

"Steve, sound general quarters. This is no drill. Set course to interdict incoming targets, go to 20 knots and arm tubes one through four."

**March 16, same time**

**PLAN 2012 Gansu LRASD Strike**

**386 nautical miles ENE of Okinawa, Western Pacific Ocean**

The twenty-five LRASD strike that had been launched by the Gansu group were one of three strikes that were now inbound toward CBT 77.2 and CBT 77.3. The LRASD devices were programmable by both acoustic signature and sonar image. They were also programmable by depth, course, distance, loiter time and loiter pattern. The devices had been set up to have several different primary and secondary targets. The lead units of each strike were programmed to look for U.S. attack submarines—predominantly LA Class submarines that were typically escorting carrier battle groups.

At 18,000 yards, both lead LRASDs acquired the faint acoustic signature of the Jefferson City which was now approaching them. The two lead units plotted an intercept course at their current 48 knot speed and continued until the range had closed to 10,000 yards. At this point, both units broadcast a tight sonar pulse down the bearing of the acoustic match. The resulting sonar signature confirmed their acoustic data.

What followed was the culmination of Lu Pham's engineering efforts. In the space of three seconds, the two devices lined themselves up on an interception course for the Jefferson City, set their proximity destruction to preprogrammed parameters and ignited their rocket engines. Within two seconds, the devices began supercavitating as they were designed to do and reached their maximum speed of 600 knots within five seconds. By this time the range had closed to 8,000 yards, less than twenty-five seconds from impact.

**March 16, 06:34 local time**

**Sonar, USS Jefferson City (SSN 759)**

**369 nautical miles ENE of Okinawa, Western Pacific Ocean**

Captain Wellington had remained in sonar with the Lieutenant, relaying his commands to the Executive Officer in the control room.

"Okay, Lieutenant, what have we got?"

The Lieutenant now believed that the Captain's nerves were made of steel. Since the two closest targets had briefly gone active, they had continued their approach. At the captain's order, the Jefferson City had also gone briefly active and now had much more data on the approaching threat.

They knew that these entities were approximately fifty feet long and a good six to eight feet in diameter. Traveling underwater at forty-eight knots, the Captain had concluded they were some type of small miniature submarine.

"Captain, they are continuing on their current course towards us at forty-eight knots. Range now... just under 10,000 yards. *Wait!* There's a change in aspect ratio. *Wow!* Something new here, new propulsion, very loud! Speed increasing. ... Captain! These two targets are now approaching at 600 knots!"

The Captain was stunned for an instant. 600 knots! Unbelievable. No, it couldn't be! There was no time. He didn't ask the Lieutenant if he was sure; he knew full well the import of that speed and what had happened.

Grabbing the phone set, he called to his executive officer.

"Steve, Emergency stop! Blow all ballasts!"

Since the Lieutenant had voiced the warning that the incoming targets were approaching at 600 knots, the Captain had reacted quickly. He had issued his orders to his executive officer in just under ten seconds. The executive officer had issued those same orders within another five seconds, now fifteen seconds after the Lieutenant's warning. The ship actually began to slow and rise at the nineteen second mark, six seconds before impact.

Given the nature of the information they were presented with, it was remarkable that the captain and crew reacted so quickly. It was a testament to their training. But nothing they had been trained for as a crew prepared them for this, and it wasn't fast enough.

At 06:35 a.m. on March 16, in the Western Pacific, as the Jefferson City rose through a 400 foot depth, the pair of LRASD weapons arrived almost simultaneously. One hit just under the sail; the other struck amidships. Each LRASD carried a 2,000 kilogram (4,400 pound) high explosive warhead. The resulting, almost simultaneous explosions, tore the Jefferson City into three pieces. The center section was pushed another 100 feet higher in the water before joining the fore and aft sections in sinking.

Captain Wellington, his executive officer, the lieutenant in the sonar spaces and the entire crew only had enough time to briefly stare one another in the eye in the closing seconds as they heard the onrushing sound of their doom. They had to accept their deaths in whatever means that were left available to them in those brief seconds. Then they, and their boat, were committed to the deep. A few moments later a small emergency buoy rose to the surface to announce the news to listening satellites, while the explosion itself announced the deed to closer ears.

The 142 officers and crew of the USS Jefferson City (SSN 759) thus became the first casualties of a war with Red China that would prove to be the longest and most costly in American history.

**March 16, 06:38 local time**

**Bridge, USS Jarrett (FFG 33)**

**385 Miles ENE of Okinawa, Western Pacific Ocean**

"Whoa! Sir, sonar reports a very large underwater explosion, could have been two almost simultaneous explosions of some type, bearing 31 degrees. Must be twenty to twenty-five miles out."

Commander Carlson considered the report from the duty officer.

"That would be in the Jefferson City's patrol zone. Are we getting anything else?"

The duty officer paused momentarily and then responded.

"No Sir, just that large explosion. Had to be very large to come across the way it did."

Carlson considered the information. He was a sonar and missile picket, about twenty miles in advance of the main body of Carrier Group Seven of CBT 77.2. The Jefferson City was the vanguard, doing ASW work along the primary threat axis.

“Okay, have our Sea Hawk immediately investigate and pass the report back to the battle group commander. As soon as the Sea Hawk is within ten miles of the area, get them on the line for me. I want to personally talk to them as they approach.”

**March 16, 06:44 local time**

**Admiral’s Cabin, USS Lake Chaplain (CG 57)**

**402 miles ENE of Okinawa, Western Pacific Ocean**

After his morning walk up on the bridge, and breakfast, Admiral Patterson had just finished a quick shower and was almost done dressing when the knock at his door came. As he took a couple of quick steps to the door and opened it, he answered.

“Yes, what is it?”

The young ensign quickly saluted and reported.

“Begging the Admiral’s pardon Sir, Commander Lewis requests your urgent presence in the CIC Sir regarding reports from the Jarrett concerning explosions in the Jefferson City patrol area, Sir!”

The Admiral listened attentively.

“Okay Ensign, I’m coming right now. Let’s get down to CIC.”

As they quickly made their way, the Admiral finished buttoning his shirt. He also thought about the import of the information he’d just received. It must be serious or Lewis would have waited. Lewis was an “on the ball” officer and had the knack of knowing precisely when something needed to be passed up the line, and when more information was warranted before doing so. That is precisely what made him such an excellent Chief of Staff. As they walked into the CIC, things were extremely hectic. It was clear something serious was developing. On entering the CIC, he acknowledged Lewis, and then approached the Captain of the Lake Chaplain, Captain Merrill, who was in an animated conversation with the CO of Carrier Group Seven, Admiral Flynn.

“Admiral! The Jarrett has reported multiple inbound submerged targets approaching this task force from his position! He is now reporting explosions from both the Jefferson City and the Salt Lake City patrol areas!”

After a pause, the Captain continued.

“I know that Sir, but I believe we are...”

The Captain turned and consulted briefly with another of his officers who handed him a note.

“Excuse me, Sir, we have just received word from the Jarrett. He is reporting he is under attack, I repeat, he is under attack. Submerged contact has turned towards him on a collision course and is approaching at—my God, approaching at 600 knots!”

Admiral Patterson digested the information. As the CINC of the entire CBT 77, he could wait no longer.

“Captain, please give me the phone.”

The Captain informed Admiral Flynn that CINC CBT 77 was going to speak to him and handed the phone to Admiral Patterson.

“Jim, yea, this is Reg. Look, we are clearly under attack. Get on the horn with your PHIBRON and then patch me through to Ben over at CBT 77.3 and then to the Kitty Hawk.

“I want you all to immediately execute a turn back to the southeast on an axis directly away from the reports of these contacts. That should be a heading of about 220 degrees. Make sure your Ospreys lay out patterns between this task force and the oncoming threat. Yes, I know that it will take some time, but we have to put more space between us and what’s coming. Also, launch your ready alert birds and augment both your anti-air and anti-surface birds.

“I’m not sure who it is yet, but there can only be a couple of possibilities. Clearly someone has developed and fielded a supercavitating weapon and is using it against this task force. Please patch Troy and the Kitty Hawk through to me right here.”

After giving the commanders of Task Force 77.3 and 77.1 the same orders, the Admiral got the attention of Captain Merrill.

“Captain, how many contacts were there reported by the Jarrett and what speed were they approaching at?”

The Captain cupped his hand over the phone for a moment.

“Admiral I am on the line with the Commander of the Jarrett right now. He’s in trouble, Sir. He indicated in excess of twenty in-bounds moving at 50 knots initially, but they have now increased their speed to 75 knots. Just one moment, Sir.”

The Captain uncovered the phone and then spoke briefly. In the middle of a sentence he stopped, called urgently and loudly for Commander Carlson several times, and then, turning to the Admiral, he spoke in a now surprisingly quiet CIC.

“Sir, Commander Carlson was cut off in mid sentence. This...threat was approaching and then, right in the middle of describing the unbelievable speed of the approaching track, nothing. We lost radio contact with the Jarrett.”

Turning to one of his officers in CIC, the Captain asked “Radar, what do you have on Jarrett?”

The radar officer, gazing closely at the display answered.

“Sir, rapidly weakening signal at Jarrett’s last reported position.”

Admiral Patterson reacted quickly in the stunned silence.

“Okay, Commander Lewis, get the following SITREP off to CINCPAC and to Washington: CBT 77 under attack. Multiple inbound threats detected, probable supercavitating devices of some type. USS Jarrett lost, USS Jefferson City and USS Salt Lake City presumed lost. Taking evasive action. Send it *now!*”

The Admiral had already done the math, it would be ten minutes before all of the ships in the task force could turn in an orderly fashion. At 75 knots these weapons would be amongst them in those same ten minutes. That would be too late.

“Captain, on my authority, you are to turn this vessel around to the southeast *immediately* while continuing to cover for the John Stennis. Patch me through to the Task Force commanders, and the Captains of the John Stennis, the Constellation and the Kitty Hawk. I intend to order all vessels in all task forces, meaning all ships in the Carrier Groups and PHIBRONS to immediately turn and egress at maximum speed away from these threats.”

**March 16, 12:45**

**Naval Headquarters, CINCPAC**

**Honolulu, Hawaii**

“Sir, we are now picking up emergency distress signals from four of our attacks submarines in the western Pacific. The USS Jefferson City and the USS Salt Lake City with Carrier Group Seven attached to CBT 77.2, the USS Santa Fe with Carrier Group Two attached to CBT 77.3 and the USS Pasadena with Carrier Group Five attached to CBT 77.1. All in the last ten minutes.”

Commander Banks digested this sobering information. Distress signals from attack submarines on station meant one thing: that the boat had gone down and the buoy had been released after the hull passed crush depth. But to have four at once—and from a task force standing into combat.

“Okay, Lieutenant, work on exact fixes for each and continue trying to contact CBT 77 for a situation report. I have to contact the CINC.”

Before Commander Banks could finish dialing the emergency number for the CINC of Pacific Naval Operations, the SITREP from CBT 77 came in.

“...CBT 77 under attack. Multiple inbound threats detected, probable supercavitating devices of some type. USS Jarrett lost, USS Jefferson City and USS Salt Lake City presumed lost. Taking evasive action.”

Banks finished dialing the number. Admiral Sullivan, CINCPAC, immediately answered.

“Sullivan.”

Banks wasted no time, “Admiral Sir, sorry to disturb you, but this is Commander Banks in operations. Between 23:37 and 23:45 we picked up four, emergency distress beacons from attack submarines attached to CBT 77. At 23:49, we received a SITREP from Admiral Patterson NE of Okinawa indicating that the Task Force was under attack, that several vessels were lost, and that he was taking evasive action.”

The Admiral listened in stunned silence...but just for an instant.

“Okay commander. I will be in operations within ten minutes right about midnight. I would like to speak directly with Admiral Patterson at 00:10 if at all possible.

“Immediately contact Admiral Crowley and arrange to conference him into to that call. Out.”

**March 16, 06:55 local time**

**Approximately 400 nautical miles ENE of Okinawa**

**Western Pacific Ocean**

Admiral Patterson’s orders were prudent given the information he had at the time. They would also have been more effective except that two other LSRAD strikes were approaching his task force as well. A total of seventy-five LRASDs had been launched at the sixty-two ships in CBT’s 77.2 and 77.3. One group of these was approaching from the southwest, which diminished the effectiveness of Patterson’s retreat to the southeast.

As the ships of the two Carrier Groups and three augmented PHIBRONS completed their turns, the LRASD devices, moving at 75 knots, entered the target area. As they did so, they slowed and surveyed their surroundings.

The lead LRASD units, upon detecting and identifying targets that fit their programmed profiles, aligned themselves on those targets and activated their rocket engines. From distances ranging from 6,000 yards to 12,000 yards, 2,000 kilogram high explosive underwater missiles began attacking their targets at 600 knots, a closure rate equal to approximately one mile (1,700 yards) every five seconds.

**March 16, 06:56 local time**

**Bridge, USS Lake Chaplain (CG 57)**

**404 nautical miles ENE of Okinawa, Western Pacific Ocean**

Admiral Patterson had decided to join Captain Merrill who had gone to the bridge to observe the action. Commander Lewis had accompanied the Admiral there.

Seconds after their arrival on the bridge, there was a tremendous flash off to the north, just over the horizon, but producing flames that must have reached hundreds of feet into the air to be seen at this distance. The Admiral, still looking to the distant explosion, asked "What was that?"

Captain Merrill, who had been monitoring the attack while the Admiral made his way to the bridge from CIC, took the phone from his ear and answered.

"That was the Howard. One of those submerged devices had just lit up and was bearing down on her as you came in Admiral."

After listening to his phone for just a few seconds, a look of disillusionment passed over his face and he said,

"Dear God, the Decatur is reporting that the Howard has broken in half and is sinking rapidly. Few, if any survivors."

A sober moment passed, then closer in, Commander Lewis got their attention and pointed to the south. "Sir, there in the PHIBRON group!"

As the Admiral and the Captain turned to the south, they could see that Carrier Group Seven and PHIBRON One, one of the two PHIBRONs that they were escorting, were beginning to mix. Off to the south, perhaps four miles out, the LHA Peleliu, a Tarawa class amphibious assault ship, had completed its turn to the southeast.

As they watched, the large, carrier-like ship began to lean into a hard turn to starboard. While this was occurring, two faint streaks in the water approached at unbelievable speed and struck the Peleliu. Two tremendous geysers of water accompanied by two tremendous explosions obscured and then hid the entire ship. When the water fell and the smoke began to clear a few seconds later, the great ship had completely capsized, revealing two horrendous gashes in her side, the lower ends of which were already below the water line. Clearly, the ship was sinking rapidly and would be gone in just a few more moments.

Admiral Patterson could only exclaim "Dear God in Heaven, there were over 3,000 sailors and marines on that ship!"

The horrors were far from over. As they were absorbing the shock of the loss of the Peleliu, two S3B's flew over them at very low altitude and continued not far above the waves for approximately a mile before turning to and lining up on two more streaks approaching from that quarter. Admiral Patterson immediately assessed the threat.

"Those two are headed for the John Stennis."

As they watched, each S3B released a Mk-50 torpedo in front of the rapidly approaching streaks. One was clearly too late and hit the water hundreds of feet behind and to the left of its intended target/streak. But the second S3B managed to lay its Mk-50 a good quarter mile in front of its streaking target. Almost immediately, the streak converged with the place where the torpedo had entered the water and there was an explosion. That streak did not continue past the point of impact.

Captain Merrill was exuberant.

"Yes! Did you see that? That S3 driver *nailed* that SOB!"

But the remaining streak covered the mile-and-a-half to the John Stennis in just under eight seconds, far too quickly for the big carrier to avoid it. As the three men on the Lake Chaplain watched in shock, another huge geyser erupted; followed by a tremendous explosion and what appeared to be a literal "lurch" in the ship's aft section. The big ship immediately lost headway as tremendous amounts of smoke and fire poured out of her aft, port elevator where a jagged gash, extending down below the water line had appeared above the point of impact.

For several seconds, the three men sat in disbelief, stunned into silence, as they watched one of the very symbols, the essence of American military projection, slow in the water and then begin to stop. Fires and large secondary explosions attested to the damage inflicted upon the John Stennis.

Commander Lewis spoke first.

"She's hit bad Admiral, real bad."

As they watched the drama play out, a crack extended above the gash, right though the elevator and onto the flight deck. Presently, the entire aft end of the great ship tore away from the fore section. That aft end began to sink quickly. The forward three-fifths of the ship began to settle in the water by the new aft end. Although it would be longer in suffering, it was clear that the fore section of the USS John Stennis, nuclear powered super carrier, would share the fate of the smaller aft section.

The silence was broken by more reports coming in to Captain Merrill. As he reported on the status of CBT 77.2 and CBT 77.3, Admiral Patterson ordered Commander Lewis to send a FLASH SITREP to CINCPAC and Washington.

"FLASH: From CINC CBT 77. Continuing to evade large numbers of supercavitating weapons. USS Howard sunk, feared lost with all hands, USS Peleliu capsized and sinking rapidly with heavy loss, USS John Stennis broken in two and sinking. No contact with Constellation."

As Commander Lewis returned to the bridge after sending the flash message, the Lake Chaplain, began to turn extremely hard to port. All three men had to hold to railing to remain upright. Captain Merrill continued to issue orders while the Admiral and Commander looked on. They then noticed and followed the horrified gaze of the Captain well off to the starboard side of the ship.

There, coming directly at them with astonishing speed, was a streak like the others they had seen over the last few minutes. It appeared that Captain Merrill's violent maneuver was going to cause the weapon to miss. Then, at its closest approach, a mere twenty feet from their hull, the 4,400 pounds of high explosive detonated according to its proximity programming.

The force of the explosion caused the Lake Chaplain to lean over drastically. Right at the moment when the men on the bridge who were still capable of sensing it, most having been thrown violently to the floor and injured, felt that the ship must capsize, she righted herself.

Captain Merrill was the first up and he immediately helped Admiral Patterson up. The Admiral had broken a shoulder in the fall and was in great pain. Nonetheless, they went over to the fallen form of Commander Lewis to help him up; but he was beyond help. The fall had violently thrown him into a bulkhead and broken his neck.

Captain Merrill attempted to get damage control on his phone, but communications were out. He and the Admiral walked over to the starboard side and looked over the side of the ship. Smoke was pouring out of a rent to their aft. Clearly, the hull had been compromised by the explosion.

"We'd best get you to sick bay, that shoulder looks broke to hell."

Turning to an uninjured officer, the Captain gave some orders.

"Ensign, get the Admiral here below to sick bay. I will be here on the bridge coordinating damage control as we establish communications."

The admiral, in great pain and holding his arm close to his body to keep it immobile, could only nod in assent.

As the Ensign led the way into the ship, the Lake Chaplain began to list to the starboard. It began relatively slowly, but the further they went, the worse it became. By the time they had arrived at sick bay, it had gotten so bad, that again, they began to feel they would surely capsize.

They were right. At 07:08, the Lake Chaplain, an Aegis guided missile cruiser, rolled over and sank. Along with 90% of her crew, Admiral Patterson and Captain Merrill went down with the ship.

### **March 16, 07:00 local time**

#### **Western Pacific Ocean**

The LRASD attacks were not just centered on CBT 77.2 and CBT 77.3, nor were the LRASD attacks the only portion of the attack on American forces and her allies conducted by the Chinese in the Western Pacific that day. But, they were an important part, because neutralizing American carrier power in the western Pacific was critical to the overall success of the operation.

With the initial attack on the Jefferson City, two Han class Chinese attack submarines, that had been sitting quietly and passively, and would not actively participate in the fighting, monitored the explosions well out in front of CBT 77.2 and CBT 77.3. They had been told to expect it, and they had very specific orders regarding it. As soon as the explosion was detected, a single communications buoy was released by both subs. The buoy rose to the surface and transmitted a single code word in Mandarin: "Breath."

Units throughout eastern China, on the high seas in the South China Sea, in the China Sea, in the Yellow Sea and in the Sea of Japan had been awaiting this transmission. When received, they all began countdown to attack sequences. It had been planned that within twenty-five minutes of any LRASD attack on any escorting American attack submarine, the other LRASD units would arrive and begin decimating the American fleets. Therefore, twenty-five minutes after that attack on the USS Jefferson City, at 07:00 hours, other Chinese forces began unleashing their attacks as well.

From Taiwan to Okinawa to the islands of Japan to the Korean peninsula, massive ballistic missile barrages rained down on US installations and the installations of its allies. These continued throughout the day and were interspersed by attacks from Chinese land-based, or carrier-based aircraft. The attacks included strikes against the British Task Force approaching from the south and against Japanese Maritime Defense Force (JMDF) ships in the Sea of Japan.

Surprise was total.

Within days, the surprise Chinese air attacks on Korea and Taiwan would be followed by large numbers of Chinese ground troops. These would be carried to their destinations by the new Yunana II landing craft, by the new Amphibious Assault ships and by many other craft. The invasion forces would be escorted by Beijing class carrier groups whose aircraft, and more land based aircraft, would protect them from attack by Korean, Japanese and ROC (Taiwan) forces.

And this was not all. The order to begin China's "Breath of Fire" operation was also transmitted to the Tactical Attack Ships waiting off the coasts of the United States and to operatives whose teams within the United States were staged and ready. These unleashed their attacks on American soil with a savagery and effectiveness that surprised even the Chinese planners.

**March 15, 19:04**

**Presidential Quarters entry way**

**White House, Washington, D.C.**

As the first couple exited their armored, specially outfitted limousine, Linda Weisskopf thought fondly on their dinner.

“Now wasn’t that the wonderful dinner?” she thought. Norm had been such a gentlemen, and had take such pains to have everything appear normal, though she knew that events and their potential impact were weighing heavily on his mind. In fact, a National Security meeting was waiting for him in the situation room right now.

As they stepped up to the entry, flanked by their Secret Service detail, she thought she would mention her gratitude and appreciation to him.

“Norm?” she said, as she tugged on the sleeve of his coat. He turned to look at her.

“Yes sweetheart.”

As they briefly paused, she continued.

“I just wanted you to know how much I appreci...”

That was as far as she got. Before she could finish, the agent in charge of their detail came bursting back through the entry and yelled.

“Turn around. Get the President and First Lady back on Marine One and away *now!*”

He had his hand to his ear, listening, as he came forward. Norm turned and took Linda by the arm and they literally ran to the landing area where Marine One, was already spooling up its engines.

The pilot was waiting for the President, First Lady and their immediate Secret Service detail to board. A Marine was standing just outside, waving them emphatically on.

As the aircraft lifted off, the President, gaining his wits, quickly asked “Alright Burt, what on earth is going on?”

He turned to the President with a desperate look on his face.

“Mr. President, NORAD and local tracking just picked up multiple ballistic missile launches within the last three minutes. All are between one and three hundred miles off the coast. Multiple tracks targeting Washington, D.C., Sir.”

The President grimly took this in. Ballistic launches only a few hundred miles away. My God, he thought. If they are nuclear... Looking directly at Burt while holding Linda’s hand, The President could see in Burt’s and the other agents’ eyes the grim conclusions that they had drawn.

“My God, Burt, if they launched from that close in, then their flight time would be...”

The answers to the both timing and the composition of the warhead came at that moment.

**BLAM!**

Marine One was scarcely two hundred feet in the air and only a few hundred yards away from the White House when the first of four conventional missiles targeted on the White House impacted. Luckily, though the turbulence was severe, the pilot was experienced and had seen worse in combat he had previously flown in. He brought them out of a roll to the left, steadied the aircraft and kept gaining altitude and distance.

As the President and First Lady watched out their windows in horror, three more missiles impacted on and around the White House, then more missiles began impacting on and around the Capitol building and the Pentagon. Very quickly large pillars of smoke and tremendous flames began to rise from all three places.

As they flew on the President asked, “Has Andrews been attacked?”

The agent in charge went forward to the pilot’s compartment and returned in a few seconds.

“No Sir, Andrews appears to be intact at the moment. We are receiving reports of significant attacks at Newport News and Hampton Roads, others coming in from elsewhere in the country.”

The President didn’t hesitate. Calling to the pilot “Captain!”

The response from the flight deck was immediate.

“Yes Sir!”

“Get me over to Andrews. Contact them and tell them it is my direct order to have Air Force One standing by when I arrive, ready for immediate take off.”

Though the agent in charge tried to protest and suggest that they fly to a site that was not so high-profile a target, the President would have none of it.

“Burt, I appreciate your concerns, but this is a direct order from your commander in chief. Now get me to Andrews and get me on Air Force One. I *must* establish communications with military and political leaders, I can do that best from Air Force One!”

As Marine One banked towards Andrews and communicated with flight control and the command chain there, Norm Weisskopf sat back and consoled his wife, while watching the landscape pass underneath him.

## **March 15, same time**

### **Construction Yard, CVN-77**

#### **Newport News Shipbuilding, Newport News, VA**

In many ways, except for the “odd” look to her island, and the fact that it was set further back on her flight deck than America’s other super-carriers, she looked just like the super carrier that was in dry dock next to her undergoing its Service Life Extension Program (SLEP).

But looks can be deceiving.

CVN-78 was the first of the “new” generation of U.S. aircraft carriers. Billions of dollars had been invested in the construction, the new technology, the practices and the configurations that would make her more operationally effective, over 20% less costly and would require a much smaller crew. This would make way for more improvements in her follow on sister ships, one of which was already under construction further down the “line.”

Several of the improvements and innovations that the “CV-21” class would incorporate over the current “Nimitz” class would include:

- A open system architecture for all computers and combat systems,
- A fully integrated information system,
- A composite construction island,
- Multifunctional embedded antennas,
- Redundant fiber optic cabling for all communications,
- Zonal electrical distribution systems,
- New, much more efficient nuclear power plants,
- The SPY-1F AEGIS radar system,
- Improved close-in defenses adding the Mk-31 (RAM) missile system.
- Provisions for upgrading to linear electromagnetic-motor catapults.

In addition, these would be the first carriers to be built with the new air wing composition in mind. That air wing would consist of twenty-four F/A-18E single-seat air-superiority fighters, twelve F/A-18F two-seat attack/fighters, twelve JSF V/STOL attack/fighters, and 14–16 Common Support Aircraft (CSA). The CSA would likely be comprised of four E-2C AEW aircraft, four EF-18G Electronic Warfare aircraft and ten of the new S-22B Osprey ASW aircraft.

But, plans for the launch of this formidable new carrier, the CVN-78, as well as for the re-launch of the SLEP carrier were now being put on long term hold.

Over ninety ballistic missiles were now falling on the carriers and the construction yards that were building or refitting them. Each missile carried a 1,000-pound warhead guided unflinchingly by GPS coordinates that had been programmed into them resulting from the many Chinese military “exchange” guests who had visited the facilities. In fact, in attacks on fixed American installations in the United States and the Far East that were occurring this day—and would occur in future attacks—the unerring accuracy resulted from this same “guest exchange program.” As with the White House, the Pentagon and the Capitol, there was very little warning time, only three to five minutes.

Machinery and equipment critical to the construction were exploding all around. Huge, gaping holes were appearing in the carrier decks, followed immediately by bone-rattling detonations that further ripped the carrier decks apart and gutted the interior spaces. The islands were hammered into smoking piles of twisted metal and equipment. Skilled laborers were killed and injured by the hundreds at each location.

When it was over just a few minutes later, the construction yards and docks were a burning, smoking and twisted ruin. The ships themselves were wrecked hulks burning out of control. On this day, America lost four of its super carriers: Two operational carriers in the Western Pacific, and two more here at Newport News.

## **March 15, 18:12**

### **Construction Yard, DDX**

#### **Ingalls Shipbuilding, Pascagoula, MS**

The sleek, new ship was scheduled to be launched in July. Built low to the water and gliding through the waves on new electric drive propulsion, planners had been hoping for a July 4<sup>th</sup> christening and launch to punctuate the patriotic nature of this next Naval “defender” of America.

The lead ship in the DDX program was being built to revolutionize sea warfare. A fully modular design, this class would initially be delivered as a Maritime Fire Support Ship with two new, one hundred mile range 155mm guns, two sixty-four cell VLS blocks holding many Land Attack and anti-surface Tomahawk missiles, as well as evolved Sea Sparrow missiles for anti-air self defense.

Later versions of the design would incorporate full anti-submarine capabilities and then, still later, theater-wide anti-ballistic, anti-air capabilities.

The technology being used to construct the ship was state of the art and specially designed for the many innovations in propulsion, fire support, radar and automation being incorporated. Ingalls

Shipbuilding was one of two primary shipyards building destroyers for the United States Navy. The other was Bath Iron Works in Maine.

At 6:12 p.m., sixty tactical missiles fired from less than two hundred miles away began raining down on these shipyards as well. The primary targets were the construction yards for the DDX and the construction yards for continuing construction of the Block II A version of the Arleigh Burke class of guided missile destroyers, another of which was under construction.

As large explosions racked the yards from secondary explosions of fuels and other combustibles stored there, workers ran in a frenzied panic to seek shelter. Within a few short minutes, both ships and the equipment and facilities for their construction were either very badly damaged or destroyed in the attack. In addition, hundreds of more skilled ship builders were killed, some with skills honed over thirty years of building modern destroyers for the U.S. Navy.

The same scene was played out at Bath Iron Works in Maine, where the second DDX ship was under construction and where another Arleigh Burke class destroyer was being built.

**March 15, 18:09**

### **Propane Storage Facility**

#### **Missouri Shore of the Mississippi River, Just North of St. Louis, MO**

The propane storage facilities here were massive: close to two million gallons of propane stored at this single site. Fully 12% of U.S. available resource was stored here for transmission across the country. In addition to trucks and pipelines that carried the gas away from the facility, large propane storage barges were used to transport the fuel up and down the Mississippi River to alternate distribution sites.

Ahmed Haddad, Jahmil and his six subordinates had selected this target well. They had studied the schedules and documented the security, both ashore and on the water. Traveling in their refitted Sea King houseboat, the Dhul Fiqar, they had just made the turn toward the facility, traveling at their maximum speed of twelve knots.

Below, surrounded by a special protective shielding of Kevlar armor and hardened stainless steel, was two thousand pounds of C4 explosive. The shielding would protect it during transit, and then project its force in the desired manner upon detonation. Ahead now, about two miles directly in front of them, was the target, a huge propane barge moored next to a large storage tank taking on propane.

“Keep her steady Jahmil. Aim directly for the middle of that barge. We will soon be in paradise together my brother.”

Jahmil knew that what his friend of many years said was true, and he looked forward to it.

“Allah Mak, Ahmed, God is truly great, and hopefully we will send many of these infidels to hell when we step into paradise this day, my friend.”

As they continued their approach towards the facility, finally, as they knew it ultimately must, came the sound of a large horn off to their left. From behind a group of several other craft that had shielded the Dhul Fiqar’s turn towards the facility, a forty-one foot U.S. Coast Guard Ports and Waterways patrol boat turned directly towards them and picked up speed.

This craft, and two others like it, worked three shifts and were the principal waterway security for the propane facility. Powered by two diesel engines, the patrol boat was capable of sustaining twenty-eight knots, far faster than the Dhul Fiqar. It was armed with a bow-mounted M2 HB fifty-caliber machine gun and two M-60 thirty-caliber machine guns. It was carried a very powerful loud speaker.

“Sea King houseboat, heave to. You are approaching a restricted area and are ordered by the U.S. Coast Guard to heave to.”

Ahmed looked at Jahmil briefly then ordered him to continue. They only had a little over a mile to go now, and they could be there in about four minutes.

The pilothouse of the Dhul Fiqar, where Jahmil was stationed, had been reinforced and was also coated in Kevlar armor for just this contingency. In addition, the Dhul Fiqar was well armed for any encounter with the U.S. Coast Guard. They had installed mounts for one twenty-millimeter cannon and one M-60, thirty-caliber machinegun. Ahmed now had five of the other team members taking out this weaponry and preparing to mount it. Two of his men would man the twenty-millimeter cannon, while another manned the M-60 machine gun. Two other team members would be armed with M16A1 assault rifles mounting 40mm M202 grenade launchers. The last member of Ahmed’s team would maintain the engine, and serve as a reserve for the firing positions, wherever needed.

When the U.S. Coast Guard officer saw that the Dhul Fiqar had no intention of stopping, he tried one last broadcast.

“Dhul Fiqar, you are ordered to heave to. If you do not comply immediately, we will be forced to fire upon you.”

Several Coast Guard crewmembers were now out on the forward deck uncovering the fifty-caliber machinegun mounted there. Two other members were already manning smaller M-60 thirty-caliber machineguns on mounts towards the aft portion of the boat.

To indicate they meant business, the Coast Guard officer commanding the craft ordered his crew to fire several rounds across the bow of the Dhul Fiqar.

Bap Bap Bap...Bap Bap Bap

The rounds kicked up impressive geysers in front of the Dhul Fiqar.

When the Dhul Fiqar began taking evasive maneuvers by turning slightly in a weaving pattern towards the propane facility, the Coast Guard boat increased speed to their maximum 28 knots. From several hundred yards to the side and behind, the patrol craft began overtaking the Dhul Fiqar rapidly, firing as they came.

1,200 yards to go.

Ahmed and his men took cover behind specially prepared Kevlar coated positions at their firing stations as many rounds hit the boat, tearing off materiel and punching holes in the hull. When the Coast Guard patrol boat had closed to within 200 yards, Ahmed ordered his men to man their firing stations and open fire. As they rose up and began firing back at the Coast Guard vessel, the Coast Guard crew began targeting them. Almost immediately, two of Ahmed's six men were cut down, but the other four began returning a murderous fire on the unarmored Coast Guard boat.

The twenty-millimeter cannon began scoring direct hits on the Coast Guard pilothouse and the boat veered off as those piloting the U.S. craft were killed or injured. The twenty millimeter-cannon then began concentrating on the Coast Guard patrol boat's hull, punching many large holes in it and damaging other vital equipment. Upon seeing this heavy weapon and its impact on their vessel, the Coast Guard crew manning the fifty-caliber machinegun raked the twenty-millimeter position and killed both men there.

800 yards to go.

As this was occurring, one of the crew with a grenade launcher found his range and dropped one forty millimeter grenade in the aft section of the Coast Guard boat, killing both of the Coast Guard M-60 machine gunners and destroying the two Cummins diesel engines used to power the craft. As the Coast Guard patrol boat went dead in the water and began to burn, the fifty-caliber machinegun crew again raked the Dhul Fiqar, seriously wounding Ahmed's man who held the grenade launcher, knocking him overboard.

300 yards to go.

Ahmed made his way towards the pilothouse. Now only he and Jahmil were left on the Dhul Fiqar. Just as he was opening the door to the pilothouse, a fifty-caliber round hit him in the shoulder and threw him violently into the pilothouse and onto the floor. Jahmil quickly closed the door. The Kevlar protection, three inches thick around the pilothouse, was not a guarantee of safety, but it had worked thus far. Looking down at his friend, Jahmil saw that he was terribly wounded and bleeding profusely. The fifty-caliber round had taken off Ahmed's entire right arm and part of the shoulder. Although he was still conscious, and trying to stand, there was no doubt that Ahmed would soon die from shock and loss of blood.

100 yards to go.

Now, with only about fifteen seconds before impact, Ahmed's condition did not matter. Jahmil locked the rudder into position and then helped his friend, Ahmed, stand up so he could see their fate.

Workers were running for their lives. Many were diving into the river trying to swim away and others were running down planks onto shore. Some of the brave security personnel were firing on the Dhul Fiqar, but their small arms fire was ineffectual. Jahmil knew that any escape and any resistance was truly futile at this point. He and Ahmed had wrapped the fate of all of these, and many more, together with their own.

Impact.

The Dhul Fiqar plowed into the middle of the propane barge and the last thing Jahmil and Ahmed perceived was a brilliantly bright flash of light, as the pressure sensors on the bow of the craft worked as they had been designed and set off the C4 explosives. The 2,000 pounds of very high explosive created a brilliant, elongated fireball that expanded to over 75 yards in diameter and 150 yards long in milliseconds, directing its energy forward into the barge, although as it turned out, with the Dhul Fiqar so close to the barge, it was wholly unnecessary.

Within additional milliseconds, the propane stored on the barge, almost a full load of 100,000 gallons, ignited in a much larger explosion. The fireball from that detonation was a full three hundred yards in diameter and immediately incinerated anything within its reach. That reach included the nearest storage tank, which was being used to load the barge and where over one quarter of a million gallons of propane were stored. The fireball from that conflagration was fully one-third of a mile in diameter and set off a domino effect of similarly massive explosions as every storage tank in the facility, six of them, detonated one after another.

The blast and shock waves resulting from the massive explosions of the propane storage tanks leveled every building within a one half-mile radius of the facility, and set fire to most structures within a mile. Over 20,000 people worked or lived within a mile radius of the facility, and the mortality rate to those individuals was just under thirty percent, just over 6,000 people killed, with double that number injured, many of them seriously.

**March 15, 18:27**

**Bonneville Power Administration Substation**

**15 Miles Northwest of Fontaine, UT**

Hector Ortiz and his five comrades looked down on the substation.

There was no one around.

Hector turned to his men and simply said, "Let's go."

They drove their four wheelers down the slope of the gravel road that ran next to the substation.

Three of the men went down the road a quarter of a mile to provide security, but as it turned out none was needed. Apart from some small motion detectors that Hector recognized inside the fence, and what appeared to be a video camera, there appeared to be no security. The camera and the motion detectors were quickly dispensed of with a silenced pistol Hector carried.

Hector and his men had camped out in a popular four wheeling area for the last two days several miles west of the substation. At night they rested and planned, and during the day they did the minimum amount of four wheeling necessary to keep up appearances that they were learning to use these new vehicles they had purchased from friends. Outside of friendly advice from passers by, no one asked anything of them.

Then, last evening, the warning for the execution of their operation came in code over Hector's radio. Immediately after receiving the message, they all retired and slept well for the night. This afternoon, the actual execute order had come and they had gathered their "equipment" and drove over the intervening hills to the substation.

Now, explosives had been set to completely destroy the substation and several of the high voltage lines leading into and away from it. They were all wired together to a single timer, and the timer had been set. All of them had then moved back into the hills where Hector brought out his remote detonation device in case it was needed.

It was not.

From a distance of two miles, they watched the explosions as the substation was destroyed and as the towers came down. As they crashed to the earth, 10% of the power supply to Southern California was also cut off.

This had a rippling and cascading effect throughout the western electric grid, particularly considering the success of some of Hector's other teams that day. It all amounted to complete power outage that lasted three days to over ten million Americans in the western United States, at a time when fear and chaos gripped the entire country.

But not all of Hector's teams enjoyed such success that day.

**March 15, 18:42**

**Above Lucky Peak Dam**

**12 miles northeast of Boise, ID**

Brent was watching the hills and ravines across the canyon from their hilltop. David was watching the near side, down and to the right and to the left of their position on the hill. Both men had normal and thermal night vision scopes for their M-14 rifles, and both men had been well trained in their use.

Brent and David carried Motorola, frequency-hopping, hand-held military radios with which they communicated with the Ada County response team located below them, near the dam. Brent and David were volunteers in a State of Idaho program providing local security to local infrastructure.

The program was called, "Homeland Defenders," and it had been started eighteen months earlier in nearby Gem County. Basically, it called for volunteers from the local population to stand watch over major infrastructure, and augment local law enforcement in protecting them from terrorists. It had been the brainchild of a local citizen in Gem County in the wake of the terrorist attacks on New York City and Washington, D.C. in September of 2001. The program simply called for the local Sheriff's office to recruit and train volunteers who would stand watch twenty-four hours a day. Eight, three hour shifts of two-man teams at each critical infrastructure were called for. The positions were completely voluntary, meaning there was no pay; but the team members did get the training and they were issued fine thirty-caliber rifles with day and night scopes, which they got to keep.

There had been more volunteers than there were places to guard.

The idea had caught on in Idaho: from several county Sheriffs who adopted it, to the Governor who later officially endorsed it and implemented it statewide. The next year, the governors of Montana, Wyoming, and Nevada did the same thing. This was the program the Director of National Homeland Security wanted to implement nation-wide.

Now, this early evening in Ada County, Brent and David were taking their watch, which would end at 9 p.m.

"Holy crap, Ada County Three-Seven, this is Sentinel, I've got something!"

David listened for a moment. He had been coming up here three times a week for the last year with Brent, and though they'd seen a few teenagers hiking around and perhaps an occasional local misdemeanor, he'd never heard Brent use this tone.

"Go ahead Sentinel, this is Ada County Three-Seven. State your condition."

Brent continued speaking into the microphone clipped to his lapel.

"Six, no, eight guys. Coming down the slope three hundred yards to the northwest of the turn onto the dam. They're using the military crest on the opposite side away from the dam to descend. Four appear to be carrying large duffel bags over their backs, the other four are armed with what appears to be assault rifles. I'll call them AR-15's."

David scanned his area again, and seeing nothing, he looked over to where Brent was indicating. Sure enough, with the aid of the scope, he could clearly see several men stealthily descending in a manner that would allow them to approach the road onto the top of the dam unobserved. Right now they were stopped and two of them were using thermal scopes of their own.

"We copy that Sentinel. Be advised. Ada Air One-One is en route. Ada County Three-Seven will interdict as they cross the road. Please advise when they are crossing and provide covering fire if necessary. You are authorized to fire upon any Tango who raises a weapon once the order to stop and surrender is given."

Brent looked at David, knowing that he had heard.

"Okay David, we'll target the shooters. You take any shooter on the left, and I'll take the right. I'll pass the word to Ada County just before they reach the road, and we'll go from there."

Over the next few minutes, as dusk set in, the eight man team slowly made their way to a position a few yards from the road. When they had held that position for a couple of minutes, assuring themselves that they were ready and that no vehicles were approaching, they began to approach the road.

As they reached the road, a spotlight was turned on from Ada County Three-Seven, an armored, four-wheel-drive SWAT Team carrier.

"You next to the road, this is the Ada County Sheriff's office, you are surrounded and covered. Throw down your weapons and put your hand in the air *now*."

The response was immediate—three of the shooters raised their rifles. Brent and David fired simultaneously and one of the shooters went down. The others opened fire and took out the spotlight.

What followed was a classic firefight. The SWAT team and the terrorists had tracer ammo, so a deadly light show showed positions and aim. Both sides had thermal and starlight equipment to assist them, so the shots were not entirely wild, though a few wild rounds were directed at the hilltop upon where Brent and David sat. But with Brent and David on the opposite hill commanding the high ground with their rifles, and with the arrival of Ada Air One-One, the terrorists never had a chance.

In the end, after two Sheriff's deputies were killed, and another two wounded, all eight terrorists were either killed or seriously wounded before it ended. Once this occurred, the Sheriff's deputies began to warily approach the area, while Ada Air One-One spotlighted the location. Before the deputies could get to them, and as Brent and David looked on, the least wounded of the three surviving terrorists quickly used a small hand gun to kill the other two, and then himself.

Later, as Brent and David were debriefed, it became clear what the purpose of the assault on the dam was intended to do. The duffel bags were filled with 100 pounds of C4 each, and with shaped contact charges, and the wiring to attempt to blow a hole in the dam.

Below the dam, in the Boise River valley, over fifty thousand people, the Capitol and the Governor's mansion would have all been at mortal risk from any breach of that dam. Brent and David were justifiably hailed as heroes in Idaho and across the nation. The "Homeland Defenders" program would now easily be established nation-wide after news of its successful implementation in Idaho spread around the country.

**March 16, 07:27 local time**

**Flight Leader, "Spider" Flight, SU-35**

**320 Kilometers south east of Taiwan, South China Sea**

Commander Ni Hsu reflected on the past fifteen minutes of combat as his flight returned to his carrier, PLAN 1002 Shanghai. So much had happened so quickly.

With twelve SU-30's, ten SU-25s and six SU-35s from the two carriers supported by twelve B6-D bombers and twelve A-5 Fantan strike aircraft, Commander Ni had expected the British task force to be a push over. He had been wrong.

First of all, the Shanghai and Shi Lang carrier group had not been able to get in position to launch a strike with their surface to surface missiles. Had those missiles arrived just prior to his attack, he was certain that the entire British Task Force would have been destroyed. As it was, they were forced to rely on air-launched missiles alone, which required them to get much closer and forced them to contend with the Harrier and Joint Strike Fighter (JSF) air cover over the two British carriers.

His eight air superiority SU-30's would have been more than a match for the Harriers lone, except he had not counted on the numbers of JSF aircraft that were present and the effectiveness of

their AMRAAM missiles. Reflecting back, the ability of the new AEW.7 Sea King helicopter to detect them at two hundred and eighty kilometers as opposed to the one hundred and eighty they had anticipated made a significant difference.

What should have been a British CAP of four aircraft had instead been eight. Other Harriers and JSF aircraft quickly added to the defense over the two Carriers.

The ensuing dogfight required Ni to employ his other four SU-30's which were supposed to have been dedicated to surface strike missions. The AMRAAM's from the eight British aircraft had destroyed six of his SU-30's before they had a chance to engage. Once the remaining SU-30's became involved at closer range, they had been able to down six aircraft and sent the other two into a headlong retreat while losing two more SU-30's.

While this had been taking place, the second group of eight British aircraft had been vectored towards the twenty-four HY-4 anti-ship missiles launched by the B6-D bombers. These twenty-four missiles heavily damaged one British Type 42C escort, the York, and sank a Type 23 escort, the Duke. In addition, they necessitated the expenditure of many anti-aircraft missiles and drew off the remaining enemy aircraft. This left the path open for his strike force to launch its missiles.

Each of the SU-35s carried four AS-11 Kilter anti-radar missiles. All twenty-four of these were launched. At a speed in excess of Mach 2, they attacked the British radar systems, particularly on the two undamaged Type 42 AAW destroyers. Simultaneously, the SU-25s came into range and launched their AS-17 anti-ship missiles. These had been specially configured by the Chinese to operate from their naval SU-25s. Each Su-25 carried four AS-17 missiles. Very quickly, forty mach-two AS-17's were inbound on the British task force. The effect was devastating.

Eighteen of the AS-17's targeted the Invincible. Anti-air missile shot down four of the missiles, and then the CIWS on the Invincible downed three more. But eleven AS-17's scored on the carrier. As she slowed and then stopped in the water, fires burned out of control all along the flight deck and secondary explosions racked the ship. Another ten AS-17's targeted the HMS Ocean, the newest British helicopter carrier. Only one of these was destroyed before the Ocean's CIWS accounted for another two. Seven missiles impacted the Ocean motionless, listing, and burning.

The last twelve AS-17's were split evenly between the carrier *Illustrious* and the assault ship *Albion*. Having to choose between protecting the carrier or the LPD, most of the defenses were directed at knocking down the missiles targeted on *Illustrious*. Between the escorts and the *Illustrious'* CIWS, this effort was successful and no impacts were scored on the second carrier. But four of the six missiles targeted on the *Albion* scored direct hits, setting her ablaze from stem to stern. Thirty seconds after these impacts a tremendous secondary explosion broke her back and sent her beneath the waves.

During this attack, another six Harriers from the *Illustrious* ravaged Ni's attack group destroying two more SU-30's, one of his SU-35s and four SU-25s.

The A-5 Fantom attack followed all of this action. Its missiles sank the burning *Invincible* and the damaged Type 42 escort, damaged another Type 42, and sank a second Type 23 escort. In the process this group lost nine of their aircraft to British aircraft returning from their attack on the HY-4 missiles.

Now, as Ni was returning to the Shanghai, he counted the costs. From a total of twenty-eight attacking aircraft with his group, he was returning with thirteen. The land-based air group lost nine aircraft. That was a total of twenty-four high performance attack aircraft for three destroyers, a carrier, a large helicopter assault ship, and an amphibious assault ship. It certainly had not been a push over, but a great victory nonetheless.

The decimated British task force turned away, trailing dark smoke from the *HMS Illustrious*. Ultimately, it would make good its escape. The *Illustrious*, a Type 42 escort, and two Type 22 escorts were all that returned to England. No British ships or men would arrive to help South Korea.

### **March 16, 07:45 local time**

#### **415 Nautical miles ENE of Okinawa**

#### **Fantail of USS *Bonhomme Richard*, Western Pacific Ocean**

JT was not a deeply religious man. Oh, he believed in God, and he knew that God was the source of rights and true morality; he just wasn't one to very often articulate such things. Today was an exception. No, today, He thanked God openly and vocally that he was alive.

All around him, similar sentiments were being expressed. Feelings of humility, shock, bewilderment, anger and all of the emotions one would expect in such circumstances were running wild amongst those who were not on duty. Many of them, like JT, were on the fantail of the vessel taking a smoke to relieve the tension as the ship put more distance between itself and the horrendous ambush that had been staged against the U.S. Navy.

Some of the toughest, deadliest Marines in America's compliment were unashamedly crying. Some of the crustiest, most foul-mouthed sailors on the face of the earth were weeping uncontrollably and uttering whispered prayers. All of them were still shaken from their near death.

Seeing almost six thousand men and women die right before your very eyes has a way of doing that to a person, thought JT.

The USS Constellation's destruction had been just like that. No more than three miles off their starboard side, JT had watched the ungodly speed of those streaks in the water, leaving their surreal wakes, as they sped towards the Constellation. And there was not a solitary thing anyone could do to stop them. Two of them had hit the Constellation within about one hundred feet of one another directly amidships.

To see a structure that massive, that housed that many people just split apart and fold in two like that, and do it so quickly was beyond words to describe. Even now he could hear the God forsaken sound of that rending, he could still see all the aircraft—the F/A-18Fs, the JSFs, the EF-18Gs, and the Hawkeyes—sliding together like so many toys into that maelstrom in the middle. He could see all those specks sliding down the deck, flying through the air...men and women.

It was an image that would stay with him the rest of his life, and with every living soul who had witnessed it. It was an image he had to share with America so that they could understand what had happened here. It was also an image of a sudden death that JT had almost experienced himself.

Had it not been for the USS Thach, that marvelously quick and nimble frigate, whose commander had unflinchingly run in between the Bonhomme Richard and a similar approaching death, JT knew he would be dead right now. What an act of selflessness and what an act of heroism that saving action had been. JT hoped that the Captain of the Thach would be awarded the Medal of Honor for it. JT knew he deserved it.

"God bless them and rest them...God bless them all!"

JT voiced out loud with great emotion and tears streaming down his face as he thought on it. Surrounding sailors and Marines could only nod, or voice an "amen" in response...they knew exactly what he was talking about.

No, America *must* hear this tale and see the images of it occurring as he had digitally recorded it. So that they could understand what the awful ambush had produced in the way of death and anguish, and in the way of heroism. So that they would never forget—and so that America would produce the righteous indignation and absolute commitment to a just retribution that this act *must* produce for an ultimately victorious America.

But right now, that victory looked to be a long, long ways away.

**March 16, 08:04 local time**

**Flag Conference Room, USS Kitty Hawk**

**Exiting Bungo Strait, Between Kyushu and Shikoku, Japan**

Admiral Ben Ryan reflected on the grim reality of this day; a day that had barely started on the clock, but that had already lasted for an eternity. He was the soul surviving task force commander of CBT 77. So many good men, so many close friends, so many future plans; all gone.

He looked at the shocked faces of those with him in this briefing.

"Folks, I know you are shocked, I know we have all lost a lot of good friends today. But, I need you to pull together now. We have been trained to defend our nation in just these circumstances, and our nation has been savaged today—and not just here in the Western Pacific."

At the mention of this, several faces looked up, an alertness returning to their eyes. This is exactly what the Admiral had hoped for.

"That's right, there have been other attacks. The principal of which, ladies and gentlemen, occurred on the continental United States!"

Audible intakes of breath could be heard as the Admiral paused for just a moment and then continued.

"Apparently, hundreds of ballistic missiles were used. All of them conventional thank God. Just like those an hour or so ago that descended on airfields and shipyards in Japan. The White House has been destroyed, but I can say that the President is safe, having narrowly escaped. The Vice President and several members of the cabinet were killed. The Pentagon, the Capitol, Newport News Shipyards, Ingalls Shipyards, Bath Iron Works, San Diego, Bremerton and many other sites have been hit. There are reports of terrorist attacks on all types of infrastructure in inland areas. There are many, many civilian casualties."

After allowing this to sink in for a few seconds, he continued.

"We have been trained to do something about this, and we are going to do so. Just after the attacks began, we received a communiqué from the National Reconnaissance Office (NRO). It indicated that the Chinese had fielded a new sub-surface weapon of some sort on many of their container ships and on all of their destroyer classes. We now know what these weapons are and what they are capable of.

"We also know the location of five to seven "groups" of Red Chinese ships that launched these weapons on us. They are made up of a single container ship escorted by two destroyers from those classes I just mentioned.

"Due to the nature of the risk and due to the need for force protection for the gators that have survived, we have been ordered to retire to Hawaii with all due haste. We are to gather the remainder of CBT 77, from the other Joint Task Forces as we go.

“As we depart, I have ordered the aircraft from the John Stennis and the Constellation, which were airborne when the attack came, to form up and make a strike on one of these groups. They will attack in conjunction with a Tomahawk strike that has already been launched from our task force. Based on the outcome of that attack, we may plan additional air strikes on the other groups while we are still in range to do so. We will launch as many Tomahawk missiles as we can. The Japanese Air Force and Navy have assured me that they will continue to do likewise after our departure.

“Regarding the Japanese Navy, they will be augmenting our escort as we depart by providing additional ASW and AAW support. You will see two of their new Takanami class guided missile destroyers and one of their Kongo class Aegis destroyers, the Myoko, form up with us in the next hour or so. They will travel with us for fifteen hundred miles, until we are clear of imminent danger. They are doing this at great risk to themselves, at a time when they are sorely needed. We should remember this. They are going to need our help over here as soon as we can possibly return.”

**March 16, 08:21 local time**

### **Raptor Strike**

#### **280 nautical miles SE of Okinawa, Western Pacific Ocean**

They had named themselves “Raptor Strike.” Although they were a mixed group from two carriers that no longer existed, they still carried a lot of sting.

Each carrier had already sent an E-2C Hawkeye AEW aircraft aloft that morning before the attack. In addition they each had four F/A-18Fs aloft for CAP and two more aloft for anti-surface duties. When Admiral Patterson had ordered the ready birds to be launched around 06:45, both carriers had launched two more F/A-18Fs, a F/A-18 with buddy stores for refueling, and an EF-18G EW aircraft. Now, from this, a strike package was assembled to go after one of the Red Chinese container ship groups, the one off to their southwest that had attacked them this morning.

Four F/A-18Fs carrying four AGM-94 Joint Air to Surface Standoff Missiles (JASSM) each, two EF-18Gs carrying four AGM-88 High Speed Anti-radiation Missiles (HARM) each, four F/A-18Fs flying escort and one E-2C Hawkeye providing radar and early warning coverage were approaching their launch coordinates.

“Raptor flight leader, this is Frisbee two-three, be advised that Tomahawk strike is now seventy miles from target. You have reached the launch window and you may launch at any time.”

The flight leader knew that timing was everything, he felt that they were behind schedule and therefore, rather than launch at the maximum distance, he decided to close another twenty miles.

“Frisbee two-three, this is Raptor lead. Roger your last. We will ingress further to maximize strike effectiveness. Will advise, out.”

This would have the dual advantage of getting his JASSM’s, which were slower than the Tomahawks, in much closer before launch. This would give them a better chance of a hit and would have them arriving soon after the Tomahawks. It would also allow his anti-radar missiles, which were very fast and which would surge ahead of the Tomahawks to optimize the spread between themselves and the trailing Tomahawks. Launch too soon, and the HARM’s get there too far in advance of the slower Tomahawks. In that event, the enemy simply turns off their radar until the HARM’s expend themselves, and then turn it back on to engage the Tomahawks. Launch too late, and the enemy has engaged all of your slow Tomahawks before your HARM’s can do anything about it.

When Raptor flight closed to within fifty miles of their target, but still twelve to fifteen miles outside of the range of the KS-2 missiles that the targeted ships carried, the flight leader had all aircraft launch their missiles. Eight HARM’s and sixteen JASSM’s were launched. As this took place, twenty-four Tomahawks from the Kitty Hawk battle group were just entering the effective range of the KS-2.

Except for two F/A-18Fs left to observe, Raptor flight then turned towards the Kitty Hawk. En route, they would refuel and then proceed to land on the carrier’s overloaded deck.

As the inbound Tomahawk strike closed on the Chinese group of three ships, the first layer of defenses encountered was the KS-2 anti-air missile. The KS-2 was a very effective missile, but the Tomahawks were coming in low, just above the waves, and using their own electronic counter measures. The result was that the stream of twenty-four Tomahawks was reduced to twelve by the long-range KS-2 defenses of the three Chinese ships. The most effective of these was the Tactical Strike ship itself, the PLAN 2019 Hunan. With its forty VLS cells filled with KS-2 missiles, and its reload capability, it simply kept pumping out the missiles until the incoming threat was too close. Then, the close-in defenses of each ship came into play.

The escorting Luda class destroyer was the weakest anti-air platform of the three, so therefore to it fell the dire task of illuminating all of its radar so as to draw missiles away from the other two ships. As a result, it took the brunt of the HARM missiles attack, soaking up six of the eight missiles. These hits severely disabled the ship and may have sunk it, but that was rendered moot a few moments later as three of the surviving Tomahawk missiles also struck the vessel. With the penetrating design of the Tomahawk warhead, and its 1,000 pound payload of high explosive, the Luda class destroyer was completely obliterated and she sank with all hands in just under two minutes.

The Luhai class destroyer escorting the Hunan was a much more modern and capable design. Her close-in defenses were layered and effective, consisting of both short range Crotale missiles and eight thirty-seven millimeter close in weapon systems (CIWS). As a result, three of the five Tomahawks targeted on her were downed by her defenses, but the last two HARM missiles and two of the Tomahawks impacted. She broke in half and sank with heavy loss.

The Hunan also had effective close-in defenses. This consisted of eight, thirty millimeter, fifty-four caliber, AK-630M gatling guns that operated much like the twenty millimeter Phalanx systems on U.S. ships, but shooting a larger projectile. This system knocked down all of the Tomahawk missiles targeting her, the last being destroyed a mere four hundred yards from the port side of the ship. This near miss damaged the ship as exploding fuel and debris, continuing to move forward with their failing inertia, impacted the ship, killing a number of crewmen, setting a moderate fire on deck and disabling two of the LRASD mounts on that side.

While the Hunan and her Luhai escort were engaged in defending themselves against the HARM and Tomahawk threat, the JASSM strike launched by the F/A-18Fs was bearing down on the vessels.

Of the sixteen JASSM's launched, only four were destroyed by the distracted and therefore much less effective KS-2 defenses. Of the remaining twelve missiles, eight targeted the Hunan and four the sinking Luhai class destroyer. A total of four of the eight JASSM's impacted on the Hunan, resulting in many serious secondary explosions, causing her to go dead in the water with a significant list to her port side. Two of the four JASSM's targeted on the Luhai impacted with catastrophic results hastening her sinking.

All of this was observed by the pair of F/A-18Fs that remained in the area to observe results of the attack. They were able to do this with impunity. Based on their reports, a follow-on strike of eight Tomahawks found the Hunan ninety minutes later as she tried to limp away, and sent her to the bottom of the Pacific.

It was a very hollow victory on this day of abject defeat.

**15 March, 20:29**

**Bridge, USCGS Gallatin (WHEC 721)**

**150 Miles NE of Cape Hatteras, North Carolina, Atlantic, Ocean**

Captain Thames listened as the reports continued to come in. Death, destruction, terror and chaos were gripping areas all over the country.

Apparently the President was alive, but he was still not in a position to address the nation. A nation that was not sure how many of its other political and military leaders *were* alive.

The Pentagon had been hit hard, much worse than the September 2001 attacks. Three of the five sides took hits and many portions collapsed. The Capitol building was attacked; apparently the dome had completely collapsed with much of the structure under the weight of several direct hits. Many representatives and senators had not escaped.

"Well," the Captain thought, "we're out here in the water trying to track down one of the perpetrators."

The message had been broadcast to all units now: Chinese container ships may have weapons aboard, including long range ballistic missiles.

He felt his High Endurance Cutter (WHEC) was up to and capable of tracking down and prosecuting such a target if he got the chance. With his seventy-six millimeter dual-purpose deck gun, his twenty millimeter Phalanx (CIWS) and particularly his eight Harpoon missiles, he was ready to catch up with any vessel that had attacked his nation and either take it down, or put it down.

Right now, he was prosecuting one such lead. A single Chinese container ship had been waiting for clearance into the Chesapeake when the attacks occurred and several other ships that were also waiting had named this ship, the Guizhou, as the shooter. He had a track on it now, about seventy miles in front of him.

"Jake, get Lieutenant Ross on the horn for me."

Less than thirty seconds later, the Captain was handed the hand set. Lieutenant Ross was the pilot of the HH-35 Dauphin helicopter that was embarked on the Gallatin. The Dauphin was a good design, perfect qualities for the multiple roles required of the Coast Guard of search and rescue, interdiction, and potential combat. The Captain keyed his hand set.

"Mallet, this is Cut-base, how do you copy? State your situation"

A clear signal came immediately back.

"Cut-base, I read you loud and clear. I'm thirty miles from tango-01 and have him on radar. You should be getting the feed. A single ship, looks like a container ship from here, but I am going in for a closer look."

The Captain talked briefly with his Combat Information Center. They did indeed have the radar track and already had four Harpoons targeted on the vessel.

"Ross, we have the digital feed and all targeting is already programmed. Try and get a positive ID, then get back to me. Be careful, Cut-base out."

The line was silent for a several seconds, then “I roger that Cut-base. We are closing to twenty-five miles now and reducing altitude... *wait one*, we are being illuminated, I say again, vessel has lit us up. *Missile launch*, I have a missile launch...two, three launches. Evading.”

The abrupt nature of the change stunned the Captain and everyone on the bridge momentarily.

“Ross, get down on the deck and get the hell out of their range!”

“CIC, fire! I say again, *Fire!* Engage the target!”

“Ross? Mallet? Radar, what do you have on Mallet?”

The radar officer looked at his scope and then at his screen.

“Captain, he’s off radar and we have lost the data feed.”

Just then, from forward of the bridge, massive gouts of flame kicked out of launch canisters as one after another, four RGM-84A Harpoon missiles were launched. They accelerated to 600 knots and after an initial climb, arched over and descended to fifty feet above the water, continuing on their track towards the target.

Eight minutes later, when it was clear that three of the missiles had been shot down before they could reach the target, the Captain ordered another four launched.

This time, only two of his missiles were definitely shot down, but the radar image of the Guizhou was still on the screen and moving, although now the speed had slowed from twenty to eight knots. Smoke could be seen over the horizon as the Gallatin continued to close.

At a range of twenty miles, the masts and upper super structure of the Guizhou could just be seen over the horizon, with smoke billowing up from its forward section. The Captain ordered the Gallatin to close to within firing range of their seventy-six millimeter dual-purpose gun, another twelve miles.

But they never made it.

At a range of eighteen miles from the Chinese vessel, the sonar operator shouted a warning of an object in the water coming at them at unbelievable speed from off the starboard bow, and four miles out. The Captain ran to the starboard side of the bridge and saw an unbelievably fast streak, trailing a fearsome wake close on his ship and explode almost directly beneath where he was standing. It was the last thing he saw on this earth.

The USCGS Gallatin (WHEC 721) stopped dead in the water as the sea flowed into the gaping rent. Very quickly, she settled and sank four minutes later at 22:07. Only thirty-three members of the crew, out of total of one hundred and seventy-seven, escaped alive.

The Guizhou, damaged by two Harpoon missile hits from the Gallatin, continued to limp further south, where she was located at 23:25 hours by a flight of two P3-C Orion’s out of Oceana Naval Air Station. Each Orion employed very powerful surface search radar and carried four Harpoon missiles. Eight missiles were launched at the Guizhou from well outside of anti-aircraft missile range. Of the eight, five got through her defenses and scored hits on her. One produced a massive secondary explosion in the forward section of the ship as reloads for the VLS missile system detonated. This explosion literally blew off the Guizhou’s bow and at 23:52, she too sank beneath the waves.

The position of the Guizhou’s sinking was painstakingly noted by circling US aircraft as rescue ships were dispatched. American intelligence agencies, shocked and stinging from the day’s events, were already anxious to gather as much information regarding the new Chinese technologies and weapons systems as possible. They intended to accomplish this in whatever manner they could, from surviving crew, from wreckage floating on the ocean surface or from a deep-sea salvage operation if necessary. As far as they were concerned, and given the gravity of the situation, the sooner that information was recovered, the better.

## Aftermath of the Attack

**March 16, 10:00 local time**  
**Government Conference Center**  
**Beijing, The People's Republic of China**

Jien Zenim stood resolute before the cameras. In a few seconds he would deliver a historically momentous statement to the people of China and to the world. That statement would be direct. It would announce in fact what the original CAS announcement had said in principle over a year ago.

Mao had been right about where all political power derives from ... the point of a gun.

As he waited, he thought of the events of this morning. Initial reports were beyond belief in terms of their success. The Chinese portion of "Breath of Fire" was exceeding expectations, both here in Asia and in America. He was certain that the hold that America had on eastern Asia had been broken, and he was convinced that China's leadership in the CAS would keep it that way.

As the light flashed to green, he began his prepared statement.

"People of China, it is with sorrow that I announce to you that a state of war exists between The People's Republic of China and the United States of America. This is not what the peace loving people of China have desired, but it is now thrust upon us.

"As a result of unequivocal information we have received we now know beyond a doubt that the United States government has embarked on a systematic program to thwart the will of free peoples around the world. They have done this by plundering the resources of other nations, by undermining the social order of other nations, by ignoring the confirmed vote of other nations, and by seeking to murder the heads of state of other nations whenever it suits their presumed needs.

"We have seen this recently in the former state of Iraq, where the people voted to align themselves with the Greater Islamic Republic after the death of their head of state. Evidence indicated then that the United States might have been complicit in the death of that head of state. America then tried to thwart the will of the people by raising up and supporting a puppet, break away government in northern Iraq. They resorted to military force to force the issue. When GIR forces liberated those areas, and when the leader of the GIR unilaterally offered an end to the fighting, America resorted to an attempted assassination to thwart that leader's attempt to bring peace.

"Now, here in Asia, we see an internal dispute among the Korean peoples. Again, the United States is seeking to exert its will. They were sending a vast armada with tens of thousands of soldiers to accomplish this.

"The People of China are a patient people. We are a peace loving people. But we are also a just people who can only stand back so long while such a bully ravages others—particularly others who have entered into peaceful and profitable economic and friendship agreements with the People's Republic of China. Today, the Chinese people reached their limit.

"This morning at 06:00, I ordered elements of the People's Liberation Army to engage and interdict American forces approaching Korea and elsewhere. I must tell you that our forces have succeeded beyond our projections. You can be proud of your heroes, they have made all of China proud, and they will continue to make us proud as we push this alien mentality back across the ocean from where it came.

"In that regard, as I am sure most of you have heard, I also ordered our forces to strike America in its homeland, the same way they have done to so many other nations. The targets were all military in nature, from their command and control, up to and including their commander in chief, to their shipbuilding, air force and other bases. We have heard reports of terror attacks on American citizens and we unequivocally disavow such attacks. We have no knowledge of, and will provide no support to, such attacks.

"To the people of America I say. We are your friends. We seek peace. Use the tools and institutions you have to remove those in your own government who use your resources in such terrible ways. Elect new leaders, who are truly interested in peace, and there will be peace.

"To America's allies I say, cease your support for such a monstrous government. We invite you to adopt the Three Wisdoms of which you have heard us speak. Adapt it to your particular culture and economic principles. If you do not desire this, that is fine. But, if you persist in your support of the monstrous policies of the current American administration, then we will wage war on you until you can no longer export such a base value system.

"To the people of China, and all the peoples of the Coalition of Asian States I say, let us unite and keep interlopers and intruders and those who would destroy our cultures and our peace away. Let us push them and their corporations of greed and death and vice far from our shores, and let us not stop until they are not capable of exporting them here again.

"Good night."

**March 16, 01:20**  
**Aspen Lodge , Presidential Bedroom**  
**Camp David, Maryland**

Norm Weisskopf could not sleep. He was thankful for his wife's deep, even breathing, for her life. He was also thankful that he finally got aboard Air Force One to communicate with the military commands that protected the nation. For about half an hour they had been very close to a full nuclear exchange with China. But when it was clear that none of the missiles were nuclear, biological or chemical, that crisis had passed.

"Well, we utterly failed our nation today," thought the President. The list of estimate losses in the western Pacific kept appearing again and again in his mind.

EYES ONLY--TOP SECRET ESTIMATED LOSSES-03/16/06

TOTALS	Sunk-25 Damaged-8		24,510	6,001

Those were just the losses at sea in the western Pacific and did not take into account the losses on Okinawa, the losses on Japan, the losses in Korea—and then the horrific losses here in the continental United States itself. Bath Iron Works, Norfolk Shipyards, Newport News Shipbuilding, Ingalls Shipbuilding, San Diego, Los Angeles, Bremerton, the Pentagon, the Capitol, the White House, the unspeakable toll in St. Louis...the numbers were just too much to take in; too much to contemplate. The United States appeared to have lost more people in this one horrific day than in the entire ten year span of the Vietnam War!

And it was just the beginning. Later reports indicated that large Chinese invasion forces, with hundreds and hundreds of small landing craft, were gathering along the coasts of China. They looked

to be preparing for incursions into Korea across the Yellow Sea, across the Taiwan Straits at the Republic of China (Taiwan) and another force that could well be targeting the Philippines.

“My God, where art Thou?” thought the troubled President. It should bring tears to his eyes just to think on all of this and what it would mean; but he had no more tears to shed.

Tomorrow morning, here at Camp David at 06:00 in the Laurel Lodge, he would hold his cabinet meeting. Dear God, some good people and close friends were gone! Alan, Timothy and Mike were all dead. Great Americans killed in the fulfilling of their duties. Apparently the three of them had been attending to other business upstairs in the White House while they waited on him to return from lunch to start the National Security meeting. The rest were already seated down in the situation room and had been spared, albeit Jeremy and Fred had both been injured. The Vice President, the Secretary of Defense and the Director of the CIA were all dead and it was all he could do to contain his emotions.

Then at 8 a.m. he would have a joint session of Congress; at least those who were alive and healthy enough to come. They would hold it in the Chapel here at Camp David and tend to the business of declaring war on the Chinese. Congress was also decimated by this attack. Over one hundred Congressmen and thirty-seven Senators were dead in the collapsed Capitol and adjoining buildings. More good, cream of the crop Americans: gone.

At 10 a.m. he would address the nation, and he prayed that God in Heaven would give him the strength and the wisdom to know what to say, to know how to lead his nation out of these horrific circumstances and return peace and stability to the world. It would take strength, it would take steel.

His mind wandered to the Pentagon. Over two thousand five hundred missing. Lots of good, loyal and hard working Americans who had made a lifetime out of serving their country. What about Admiral Patterson? There was an honest to God, modern John Wayne American if there ever was one—now gone—died fighting for his country.

All of those hundreds and hundreds of loyal craftsmen at the shipbuilding companies. So many of them gone this day too.

The DD-21 and the CVX: destroyed before they could even be completed.

My God! The John Stennis and the Constellation! Both gone? It was just too much to take in.

And then that lying, smug bastard Zenim. The very idea of his audacity! How dare he make such statements over the blood he shed this day! Well, he certainly left no doubt as to who the enemy is.

“Dear God in Heaven, let it be his undoing. Fashion us as an instrument to bring just retribution to the Jien Zenim’s and Hasan Sayeed’s of this world, a retribution they so richly deserve.”

As he thought this, he finally, mercifully, drifted off to sleep.

**March 16, 09:57**

**Presidential Office, Laurel House**

**Camp David, Maryland**

Just a few minutes from now and a nation in total and abject shock and a world on the precipice of world war, would receive a verbal answer from the United States of America, an answer that would be voiced by Norm Weisskopf.

He had slept exhaustedly for the few hours that had been available to him. Then, this morning he had held his staff and cabinet meetings. There would be many, many more.

The cabinet meeting had gone well, considering the familiar faces and good friends who were not there, who would never be there again. The agency heads were receiving a lot of information and the picture of what had been done to America was becoming horrifically clear.

It was becoming more and more obvious to the President that China was the principal enemy, the probable mastermind behind most of what had been going on for many months...and probably a lot longer than that. China had waited until America was fully engaged in the Middle East, and then lured significant American reserves into the Far East through its proxy, North Korea, before attacking. It was a deadly serious undertaking, as China had made clear with the very nature of its attack. The fact that the terror attacks across the nation had occurred at virtually the same time made it clear that they were part and parcel of the same operation, doing things that even China didn’t want to “officially” muddy its hands with.

Thousands and thousands of American civilians were dead. Millions were without electricity. Propane heating fuel was going to be short for the rest of the spring.

The nation was going to have to take some significant time and effort to fully secure its borders, to secure its coastlines. All efforts would be poured into mobilizing America for war: her military, her industry, her financial dealings ... her people.

The congressional session had also been heartening, considering the circumstances and the many who would never be there again. But other Americans would step in. Special elections would be held soon. The Declaration of War had been unanimous. The President had then shared with the representatives, and the cabinet who were present in the room, what his intentions were. He was heartened by their support. The nature of the threat was clear; and exactly who the enemy was, was also clear. Other political or partisan issues would be placed aside, defeating the common enemy would take precedence over all else.

On the allied front, the British, who were also savaged with the loss of the majority of their task force, were squarely in the war beside the United States. Canada and Australia had made their own declarations of war against China. The major European nations were taking up the matter. The United States was demanding that all NATO countries honor article five of that agreement.

As the cameras turned on, the President could be seen sitting in the Presidential office of the Laurel house at Camp David, with the Presidential Seal behind him and an American flag to his side.

"My fellow Americans. I spoke to you on February twenty-eighth about the true nature of the conflict we find ourselves embroiled in. I spoke of sacrifice, of faith, of self-sufficiency, and of unity. The absolute need for all of these was brought home to us yesterday in a dastardly, sneak attack without provocation or precedent on this nation.

"We have suffered a terrible ambush and a tremendous loss. Our White House is destroyed, along with many loyal Americans who worked there including several of the cabinet, and including, regrettably, the Vice President of the United States.

"Our Capitol building has been destroyed along with close to 150 of our representatives and senators, all of whom were going about their sworn duty to this nation.

"Our Pentagon was again attacked, and damaged terribly, much more so than the attack in September of 2001. We have lost many, many good and loyal Americans who have devoted much of their careers to the protection of our nation, of our liberties. Now they have offered their lives.

"Our military forces in the Far East were decimated and savaged in surprise attacks by ships posing as commercial vessels and by a nation professing its neutrality. This is the same nation that carried out the attacks against our homeland here that I have just described to you. It is certain that the total death toll from these attacks will be close to 50,000 Americans. A number that may exceed our total combat losses in all of the Vietnam War.

"Yesterday, we heard the brazen words of a tyrant, a tyrant who tried to couch reprehensible acts of terror and treachery in flowery phrases. We the people of the United States of America reject those blatant lies. We in America have seen and fought and defeated this kind before, and we shall do so now. The time for flowery words is past. We will bury our dead, we will approach our God in our grief, and then we will fight.

"As of 9:30 a.m. EST today, March 16, a state of war exists between the United States of America and the People's Republic of China. It will be a long war, it will be a costly war, but it will be a war fought for liberty and freedom and against the most blatant and abject tyranny the world has seen since Hitler, Stalin and Mao.

"I will not propose to speak for or to the citizens of other nations, but I will speak directly to Jien Zenim. I want you to listen to me Zenim, from this date forward I will never attach any title to your name, you are not deserving of any.

"So, listen well. You have made the same fatal mistake that the Japanese made when they attacked America at Pearl Harbor in 1941. On that occasion, sixty-five years ago, their military leader, Admiral Yamamoto, indicated that he "feared they had awakened a sleeping giant and filled him with a terrible resolve." You have done just that, Zenim. Read your history and find out what we Americans did to Admiral Yamamoto. We discovered where he was flying and then sent our aircraft in overwhelming numbers and hunted him down and killed him. Then we defeated the Japanese armies and their navies, and when they would not surrender unconditionally, we firebombed and then nuclear bombed their cities until they did. We did essentially the same to cities of Nazi Germany and the world has been better for it. You have filled us with a terrible resolve that is many times greater than the resolve we developed from Pearl Harbor in 1941, and you and any peoples who stand with you, shall suffer the horrible consequences.

"This is not a threat, it is a promise. It is a personal promise from me, and from any one who may follow me in this office, to you, and to those who support you. We need no "coalition" to fulfill this promise and to prosecute this purpose. You have filled us with our own coalition. It is the people of the United States, and if you thought your veiled threats would alter us from this purpose, you are again sadly and fatally mistaken.

"Zenim, you have admitted your cold-blooded, calculated butchery to the world, and tried to call it good. History will judge you the same way it did Hitler, and the same way it did Mao, at least in the free, civilized world where the truth of tens of millions of dead is discussed for the genocide it is.

"I make a commitment before the citizens of America and before God. We will not rest, we will not stop, we will never, *ever give up!* If it takes us three years, or if it takes us ten years, our nation will overcome your dastardly and cowardly attack. We will produce aircraft carriers like the ones you sank by the dozens, we will produce technology to defeat whatever you may throw at us. We will produce weapons and methodologies that you will never conceive of in your closed, collective society.

"To our allies I say, *stand with us.*

"We may have been knocked to the ground, we may have been ravished by our enemies, but you can count on us getting back up on our feet stronger than before, filled with a righteous indignation and a resolve that we will pour out on our enemies to their utter astonishment and their eventual complete destruction.

“*Stand with us.*

“We will not forsake you. The United States of America makes a solemn commitment and promise to return to liberate any who fall under the blight that is now spreading. . . .and we shall return!

There will be no iron curtains at the end of this fight. The governments currently prosecuting these invasions and this tyranny will cease to exist every bit as much as Nazi Germany and Imperial Japan ceased to exist. In their place will be constitutional Republics that cherish peace and liberty and have the will to defend it.

“*Stand with us.*

“And we will stand with you to the end. If you choose not to, then all we ask is for you to stay out of the way, we will do this with, or without help.

“To our forces who are fighting on in Asia in the face of monumental odds. Who fight with the knowledge that our relief efforts have failed and that relief is far off, I say: “*Fight on.*

“Fight this enemy wherever you may find him and out of whatever circumstances you may find yourself. Take to the hills if you must, take to the streets, take to the night. They are the enemies of all we believe in and all we as a people stand for.

“*Fight on.*

“With your weapons, with your fists, with stones and clubs if you must. Fight with your words, fight with non-compliance, fight with your silence. Like an American hero from the Vietnam War, Rocky Versace. When they captured him and beat him and ultimately marched him off to execute him, he was singing “God bless America.”

“*Fight on.*

“And never give up. We will make every effort to come for you soon, but if we cannot, do not despair. As surely as the sun rises in the east, we are coming. The time will arrive when like at Normandy on June 6<sup>th</sup>, 1944, you will look out and see the sea and the sky filled with the innumerable host of your comrades come to liberate the captive and put down the tyrant.

“To the American people I say, take heart! Yes, armies of tyranny and coercion are on the march in the Middle East and now ominously in Asia. Yes, many of our own have died at the hands of these tyrants. Yes, some of our friends will undoubtedly fall under the control of these tyrants, but our fathers and grandfathers faced the same threats. The fight for liberty has always been so tested. Like them, America will rise to the challenge and again be the vanguard for liberty for the world. We will liberate the captive and destroy the despot.

“In the mean time, *We hold the course.*

“We will hold new elections to replace those who have fallen.

“*We hold the course.*

“We will submit new names for the heads of those agencies to congress for approval where the former leaders have been taken from us.

“*We hold the course.*

“We will establish, in keeping with the brave example from Idaho that yesterday saved tens of thousands of lives, a national Homeland Defenders, a Home Guard program. This program will be established at the local level, allowing any American to sign up and defend infrastructure in this nation in the best traditions of local militia and deputized civilians defending their own.

“*We hold the course.*

“I announce today, two national goals associated with the war effort, from which we will not step back even after we win this war.

1. We will be *totally* energy independent within eighteen months.

2. We will build and deploy an effective anti-ballistic missile shield for the entire United States within three years.

“We hold the course and that course is liberty!

“It is individual liberty, morality, accountability and responsibility. These are the key ingredients of our success as a people and our way of life.

“To punctuate this, let me close with the following two quotes.

“From the Declaration of Independence:

“*We hold these truths to be self evident. That all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness.*”

“The other is from Patrick Henry. “

“*We shall not fight our battles alone. There is a just God who presides over the destinies of Nations, and who will raise up friends to fight our battles for us. The battle, Sir, is not to the strong alone. It is to the vigilant, the active, the brave. Besides, Sir, we have no choice. If we were base enough to desire it, it is now too late to retire from the contest. There is no retreat but in submission and slavery!*”

“So my fellow Americans, *we hold the course.* Though we have been injured, though we have been grievously hurt, we do not bow, and *we do not cower.*”

“Millions who have gone before have purchased our right to stand now.

“Millions who are yet to come are depending on us.

“We shall overcome this darkest day in American history, and when we do, with the help of God, we will find the bright lining that rims every dark cloud. “

“Thank you all, keep the faith, and may God bless America in this hour of our greatest need!”

### **March 17-19**

#### **Aftermath of “Breath of Fire”**

The western world was numb and in shock. No one had believed it possible, not even after the setbacks America had suffered in the Middle East late the year before and early that year. Everyone simply presumed that it was only a matter of time until the United States and her allies would build up sufficient force and materiel in-theater and utterly destroy their enemies. But no one, not even those planning the surprise attacks against the United States in the Pacific, had believed that America could suffer a defeat as overwhelming as what had occurred on March 15-16. The fact that no one had deemed it possible had only enhanced the effect when it actually occurred. No individual, no organization, no Allied nation and no group was prepared for it. But the nations and individuals who had planned it, even if they had not anticipated the magnitude of their victory, were prepared to take abject advantage of it.

Never had the United States of America suffered such a catastrophic military defeat in all its long and distinguished history. New York City in the Revolutionary War could not compare. Manassas in the Civil War could not compare. The Little Bighorn in the western Indian wars could not compare. Pearl Harbor in World War II could not compare (although there were similarities in military and a strategic positioning). Vietnam could not compare (which had not actually been a military defeat as much as it was a political one). Even the horrific events of September 11, 2001 could not compare. March 15<sup>th</sup> and 16<sup>th</sup> of that year would be forever remembered as the darkest single day in American history...a defining date for America and the world. What that definition would ultimately produce was yet to be determined, but the immediate results were clear...America and her allies were in retreat in the Pacific and falling back before powerful and emboldened forces in the Mid-East.

What the Red Chinese and their Coalition of Asian State (CAS) and Greater Islamic Republic (GIR) allies had accomplish was to effectively defeat all major U.S. military assets in the Western Pacific. That defeat had sent the surviving relief forces reeling and scurrying back eastward towards the protection of the vast Pacific and ultimately their home waters, while leaving those in-place units to fend for themselves, without hope of reinforcement. The surprise attack, a Chinese operation plan entitled “Breath of Fire” had succeeded beyond the grandest expectation of its design.

Jien Zenim, the President of the People’s Republic of China, had been the mastermind of the entire set of events, having secretly met and planned with the heads of states, or those he planned installing as the heads of state, for several years. His formation of the CAS as a new Asian superpower, both economically and militarily had set the stage. He had established that Coalition on an ideology of his own making, one that combined the foundational Maoist and Marxist principles with what he considered to be the reality of a market driven economy. He called this ideology the “Three Wisdoms” and had used it as the basis to drive the economic and social order he foresaw. Simply put, the Three Wisdoms stated:

1. All men and women are equal.
2. All share equally in the bounty of an industrious society.
3. One goal, one thought, one people for world peace.

Hasan Sayeed, who with the help of Zenim had come to power in the former state of Iran, embraced these tenets and preached a fundamental brand of Islam that incorporated the basis for them into his efforts. Once in power he proceeded, to the astonishment of the world and the consternation of America and her allies, to unify much of the Islamic world into what was now known as the GIR. His successes had been the catalyst to Jien Zenim’s overall plan. His actions in the Middle East and the resulting conflict had locked in place the bulk of the United States force projection, which had left the door open for a massive invasion of South Korea by the North. The events in the Middle East and the invasion of South Korea had been part of Jien Zenim’s lead up to “Breath of Fire,” a plan to deliver a devastating surprise attack on the relief forces sent to help the beleaguered U.S. Forces in Korea (USFK). That attack had taken place, and had been a resounding success.

As a result, the U.S. Navy, which had not suffered even a minor military setback in over sixty years, had been dealt a blow that would have totally eliminated most modern navies, and which decimated America’s carrier air-wing and amphibious capabilities in the Pacific. Two super carriers and two carrier-like, large amphibious assault ships were sunk along with many of their escorts. In addition, numerous other auxiliary ships and some of their escorts had also been sunk. This had included two Aegis cruisers, an Arleigh Burke class Aegis destroyer and eight other amphibious ships of various classes. In all twenty-four U.S. Naval vessels had been sunk in the Pacific and over twenty-five thousand personnel killed. Literally hundreds and hundreds of American tanks, armored

personnel carriers, trucks, artillery and HMMWVs (High Mobility Multipurpose Wheeled Vehicles) or “Hummers” had been lost with the amphibious ships.

The Chinese had committed the surprise attack against the U.S. 7<sup>th</sup> Fleet with modern container ship vessels and their escorts, upon which they had deployed their LRASD and other modern weapons. The LRASD, a large, underwater, supercavitating weapon with a highly advanced sonar and acoustical search and targeting capability that had a range in excess of 500 kilometers, moved to its attack area under conventional propulsion at upwards of 50 knots, and then performed a terminal attack from 15-20 kilometers using advanced rocket engines that propelled the weapon through the water at over 600 knots. With a 2000-Kg warhead, the effects on any ship struck by such a device were cataclysmic.

Outside of South Korea, where South Korean and U.S. forces were engaged in all-out war against the massive invading forces of North, U.S. Army and Air Force assets had been caught by surprise all across the Japanese Islands and in Okinawa. Hundreds of personnel had been killed and many air superiority and strike aircraft destroyed by surprise ballistic missile attacks from other converted Chinese container ships and their escorts. Many of these aircraft had been extremely vital to the continued defense of the Korean peninsula.

The Korean forces and their support units in Japan were now effectively cut off and facing a very ominous situation as local populations and governments began considering their own reaction in the face of the Chinese and CAS threat. And the local governments had reason to be concerned. Several large invasion forces consisting of the newly developed and deployed PLAN amphibious assault groups escorted by newly deployed Chinese STOL aircraft carrier groups had formed up. These were moving towards the western shores of South Korea, towards the Republic of China (ROC) on Taiwan and towards the Philippines.

In the continental United States (CONUS), surprise ballistic missile attacks by many converted Chinese container ships had been devastating. Every major U.S. Navy shipyard and construction yard up and down the East and West Coasts, and even on the Gulf Coast, had been hit and severally damaged. Thousands of workers were dead and many thousands more injured. New ships, in particular the new destroyer and carrier designs that were about to be launched, had been destroyed in place. The White House, the Capitol building, and the Pentagon had all been virtually destroyed by conventional ballistic missiles launched from converted Chinese container ships lying off of the U.S. coast in international waters. Many elected and appointed government officials had been killed, including the Vice President, some senior members of the cabinet and many congressmen and senators in this “decapitation” strike by PLAN forces. The President himself, Norm Weisskopf, had narrowly escaped the same fate as he and his wife were whisked away from the White House in Marine One in the very nick of time.

Terror attacks by individuals and groups of individuals had disrupted many areas within the United States, killing thousands of U.S. citizens. These attacks were continuing. Power was off to large portions of the American West. In St Louis, a large commercial business area was destroyed in a huge propane explosion, killing several thousand citizens. Several dams had been breached near major metropolitan areas and one large office complex in the Chicago area had been attacked. A number of major bridges had been destroyed along the Mississippi River, and attacks aimed at locks and storage areas were continuing up and down the river by heavily armed small craft.

In the Middle East, U.S. forces that had been conducting strategic withdrawals in Saudi Arabia and Turkey to buy time for reinforcement and re-supply were stunned by the news. Critical forces that had been allocated for America’s emergency relief effort in Korea were now lost. Critical re-supply efforts and materiel that were in route to the Middle East were now going to have to be shared while America built up to defend itself at home and to fight large major wars on two fronts. The morale and logistics impact of the defeat in the Pacific had ominous implications for the war in the Middle East.

America’s allies were extremely concerned. Their own defense capabilities had always been tied to the might of America, and now as the western world’s financial system tumbled towards massive depression and failure, some questioned their own future course of action. England, Canada, Germany, and Australia remained strong, but France, Italy, Greece and Spain were wavering.

Enemy nations were ecstatic at the success of the surprise attacks and there were celebrations in the streets of Beijing, Shanghai, Tehran, Baghdad, Damascus, Islamabad, Tripoli, and to a lesser extent in New Delhi, Bombay, and Calcutta. Those nations were rapidly moving forward with their plans to consolidate and make use of the advantages they had won.

All of this represented the conditions that America and her citizens found themselves in. Many thousands of her finest were dead, with many more wounded and injured. Tens of thousands of her troops and citizens in Asia were cut off without prospect of relief while others were retreating in the hopes of regrouping and fighting another day. The shock was still fresh to both the military and civilian populations. That shock would soon give way, but to what? The answer to this question would be one of the critical determining factors in the direction that events would soon take

## Chapter 11

*“Use all of your strength to keep a wounded enemy from rising.”—Ancient Chinese Warlord*

**March 18, 01:30 local time**

**Bridge of USS Kitty Hawk, CTF 77**

**Western Pacific Ocean, North of Bonin Island**

Ben Ryan watched the wake of his flagship as she continued to make her way north and eastward.

“What a difference a day or two makes,” he thought.

Two days ago at this time, three strong carrier task forces (TF) of Combined Task Force (CTF) 77 of the United States Navy had been making their way towards Korea bent on reinforcing the besieged and reeling American forces there and turning the tide of war on that peninsula. Today, the remnants of those three task forces were retreating across the Pacific, leaving Korea and the entire Pacific Rim to their own devices in the face of a now much more dangerous enemy.

That remnant was itself a strong task force by any nation’s standard. In and of itself, it was stronger than many other entire navies. But it had not been a “floating” navy that had made the difference in the early morning hours of the 16<sup>th</sup> of March. Nor had it been a floating or airborne threat that was now sending the remainder of his forces scurrying to the east as quickly as their props would take them. No, a new submerged threat had been manifest, an extremely lethal and as yet undefined submerged threat that had cut through the United States Navy like a scythe through wheat. Two other task force commanders and most of their staffs were dead as a result, including the overall commander Admiral Reginald Patterson, as brilliant, brave and loyal a U.S. naval officer as had ever proudly donned the uniform. Two mighty United States Navy super carriers, numerous escort ships and many amphibious and supply ships they were shepherding were also gone, twenty-four ships in all...and upwards of twenty-five thousand American service personnel.

“My God, how could this have happened?” thought Admiral Ryan. “Where was the monumental breakdown that permitted the development and deployment of these weapons without a shred of notice, and that allowed for the political will to carry off such an attack against our forces?”

It was a question political and military leaders all over the world were asking. . .it was a question in the minds of tens of millions of civilians as well. The Admiral realized that the answer was not to be found in a short-term analysis of the situation. Ryan recognized that the motivations empowering these events had been building for decades. It was apparent now, after such horrendous losses, that a complacent and almost criminally negligent rush to develop “new” markets and “broader” political acceptance had fueled forces bent on delivering a paralyzing, if not fatal, blow to America.

It was clear now that the government of the People’s Republic of China had taken advantage of every American overture and every American effort with a clear and patient plan in mind to evict America from the Western Pacific region. It was also clear that many American business leaders and politicians had been enticed, had looked the other way, or worse, had abetted the very plans that had led to the current situation, as they sought to enhance their own positions.

“Yes, what a difference a day or two makes,” thought the Admiral. All of this was now so much clearer. The Admiral himself had followed orders on many occasions, and issued them on others, to allow for joint activities and “sharing” with the very enemies who had attacked them yesterday. The same enemies who had just yesterday so callously announced to the world what their real intentions were regarding world peace. Now there would be hell to pay in putting this particular genie back in the bottle, if it indeed could be placed back in the bottle at all.

As the Admiral turned and reentered the bridge in route to one more briefing before catching a few hours of sleep, he reviewed the hastily thrown together operation plan (OPLAN) for CTF 77. After driving almost due east and rendezvousing with the remnant of TF 77.2 and TF 77.3, the CTF had turned north by northeast 150 miles west of Bonin Island yesterday. It was at this point that the Japanese escorting vessels that had been sailing with them as added protection turned back towards Japan. Those three destroyers, two Takanami and one Kongo class, had been very welcome in the long hours of the 16<sup>th</sup>, when additional attacks had been considered imminent. Now they were turning back to their home islands, which desperately needed their strong sonar and air defense capabilities to stand against the imminent threat of the same forces which had mauled the U.S. 7<sup>th</sup> Fleet. Their willingness to help their U.S. allies in an hour of abject need would not soon be forgotten.

After several hours of rapid transit (as rapid as the accompanying amphibious and replenishment ships would allow), the CTF had rendezvoused with the retreating Canadian Task Force that would have joined them today off Korea’s shores. That Canadian Task Force (CANTFOR), although it had not been itself attacked, recognized the futility of proceeding into those dangerous waters after the losses inflicted on the much stronger U.S and British Task Forces.

As a result, two Iroquois guided missile destroyers, two Halifax guided missile frigates and two new Canadian rapid sea lift transports would now accompany CTF 77 eastward to fulfill their new mission. That new mission called for a strengthening of Guam and Wake Islands' defenses as CTF 77 made its way back to Hawaii. Marines, materiel, and aircraft would be offloaded at both islands to help prepare them for what was considered the likely prospect that China and her CAS allies would seek rapid expansion in all of Asia and into the Pacific.

The Admiral desired above all else to relieve U.S. forces in Korea, at Okinawa and Japan, and the Special Forces units in the Philippines. But, it was painfully obvious that the nature and capabilities of the new weapons systems employed against him made any mission further west suicidal for U.S. surface forces at this point. Having personally seen them in action, the Admiral knew full well that the enemy to the west was formidable and deadly, but their full capabilities and how widely they had deployed these systems were still unknown. Therefore, a highly unpredictable course had been plotted that would lead CTF 77 away from immediate danger and make it difficult to pinpoint their location, while allowing them to deliver the desired reinforcements to both Guam and Wake Island on their way back to Pearl Harbor.

Any offensive action from the sea would now have to come from the same type of forces that the enemy had employed, that of submerged forces. In this area the United States was not lacking, and at this very hour back at CINCPAC, considerable thought was going into how to best apply those forces. With all of this firmly in mind, Admiral Ryan entered the briefing conference room to inform his staff and the rest of the task force where their duty lay for the next two weeks and how they would fulfill it. He would then dispatch a few messages to CINCPAC before retiring for the night.

**March 18, 04:30 local time**

**Stateroom aboard USS Bonhomme Richard  
Western Pacific Ocean, NE of Bonin Island**

JT Samson contemplated the hours since midnight. He had worked feverishly for a day and a half to take the images he had captured during the horrific attack, and put together a narrative to go with them. That narrative had come from the heart like no other in JT's career. He had witnessed death and destruction unparalleled in American history, and he had transformed it into a powerful, heart-wrenching, soul-searching presentation that depicted the brutality and suddenness of the attack.

The destruction of the aircraft carrier USS Constellation after being hit by two of those incredibly fast torpedo-like weapons, and the unbelievable folding together of its two halves as its back broke and it rapidly slipped beneath the waves, was the most appalling and gut-wrenching thing JT had ever witnessed. The resulting maelstrom of aircraft, equipment and people falling together in the middle of that wreckage had been clearly visible two miles away from where JT had photographed it.

In addition, he had captured the unbelievable heroic action of the captain of the USS Thach when he timed perfectly his frigate's insertion between the Bonhomme Richard and another of those destructive devices. That action had cost the life of almost every sailor on the Thach, but had saved many times that number on the Bonhomme Richard.

"Everyone one of us on this ship owe that man our lives...we owe *that whole crew* our lives. My God! They faithfully carried out their orders in the face of certain death, never flinching and never wavering. They knew their duty, and they carried it out regardless of the consequences," thought JT, realizing as he thought it that such integrity, such virtue, and such commitment was what would be required in the face of the storm they all now faced.

"We owe them a debt of honor...I owe them a debt of honor," he continued in his mind. "And I'm going to pay that debt in full by making sure that the folks back home and the entire world know of their sacrifice...and never forget it!"

JT had also filmed the reaction of those hardened, totally in-shape Marines on the Bonhomme Richard as they witnessed each of these events, and took in the death and destruction before their very eyes. That reaction was an emotional and almost spiritually patriotic occurrence of shock, surprise, sadness, and then evolving resolve that JT was convinced the entire nation needed to see.

When he finally had the material in a form that he felt captured and conveyed the essences of all of these thoughts, JT delivered all of it to Admiral Ryan's staff in accordance with his pre-arranged press agreement. JT had not expected that his request for an immediate transfer of the unedited story back to the United States would be allowed, particularly since he also requested that his own online news service receive the material with as little editing as possible for publication. To his surprise, after a staff meeting in the early hours of this morning, word had come back that the Admiral himself had approved of the transfer of his report with his request to Washington, D.C. directly. The assessment of its content would occur at Camp David, Maryland, where the President's staff would review the material and make the final decision as to how to proceed.

"So, the Admiral felt it, too," mused JT, "and he passed it all, unedited, directly to Weisskopf's staff, bypassing CINCPAC entirely. I'll bet he had to jump through hoops to get that approved."

This was one of those occasions where every instinct told JT that the material he had captured would have significant and long-lasting impact in the world of news. It was not unlike that event

during the presidential election when JT's open microphone had captured then-Presidential candidate Norman Weisskopf's reaction to some comments by his challenger's husband, himself a former president, regarding Weisskopf's age. The honesty and uniquely American nature of that reaction had propelled Norman Weisskopf to the presidency. It had also made a name for JT Samson and his online news service, SierraLines, propelling them to a leading position amongst all online news services...and winning Samson a place in the new President's heart.

"That place very nearly cost me my life," thought JT as he once again reflected on how close he had come to sharing the fate of those brave sailors on the USS Constellation and USS Thach. The invitation to join the Task Force had come from the highest levels in the administration. There was no doubt that the administration trusted him to report events honestly and accurately. "They certainly never had in mind that those events would take this course," he thought.

"Well, the report and the data is on their way," concluded JT in his mind. "We'll see if Weisskopf's people are true to their word about reporting the events as openly and accurately to the American people as possible."

And with that, JT lay down on his berth and immediately fell into a deep and exhausted sleep, it having been almost forty eight hours since he had last had any.

**March 18, 06:30 EST**

**Executive Conference Room, Laurel House  
Camp David, Maryland**

The presentation was over and the President's chief of staff turned off the AV equipment. Everyone in the room sat in stunned shock, despite what they themselves had experienced in the last forty-eight hours. Even though they all had access to and had read the casualty reports which listed the estimated loss of life, and identified destroyed and damaged ships, nothing short of being there could have prepared them for the brutal reality of the images they had just seen.

After almost a half minute of silence, the President spoke.

"Well folks, I can hardly begin to describe the feelings...this is the second time I have seen this, the first being early this morning not long after the report was brought to my attention. I am of the opinion and inclination to show most of this report to the nation, exactly as JT Samson narrated it and then to approve his request that it be made available on his news service web site."

Curt Johnson, the Head of FEMA, disagreed. "Are you sure we want to do that, Mr. President? I mean, we have continuing attacks occurring within the borders of this nation, and they are not trivial. We have panic in some areas where citizens are suffering from a complete loss of critical services. Not everyone will see it, and it could contribute to further deterioration of morale here at home."

President Weisskopf answered immediately.

"Curt, the people of this nation represent our employers. Whenever possible, I intend to give them as full a disclosure as possible of the gravity of the situation facing us all. We will make it the policy of this administration to trust them more than your typical politician has done in the past. So, in answer to your question, yes, I am sure I want to do this. Particularly because I feel that by having the people know the full gravity of the situation we are facing, they will support us as their representatives in the full mobilization measures that will be required for our victory in this war."

Jeremy Stone, the Chairman of the Joint Chiefs of Staff, used the President's pause as an opportunity to interject his own thoughts.

"Mr. President, I understand your convictions in this matter and, quite frankly, I share them and applaud them. At the same time, I must urge caution. These films are not only graphic from a human standpoint as to what our enemies did, they are graphic from a military and an intelligence standpoint. They will provide direct battle damage assessment (BDA) to our enemies. For this reason, I believe I must urge caution and restraint in making such a film available to the general public."

During the entire time that General Stone was speaking, the President had been nodding his head. At the conclusion of General Stone's remarks, the President spoke.

"Jeremy, I said I wanted the American people to be fully aware of the gravity of the situation; I did not say that all details need to be revealed. In fact, I believe we can take this opportunity to expose our citizens to the full gravity of the situation, and sow some confusion amongst the enemy at the same time. To date, they know that they have succeeded in winning a huge victory and that we are retreating, but I do not believe they know the full extent of that victory. What if, for example, they thought that the Constellation was the only carrier sunk? According to our NRO people, there were no Chinese satellites positioned to get a view of that attack. What if we were able to sow seeds of doubt in their minds regarding what we have available to us in the way of carriers in the Pacific?"

"I believe we can edit out the sensitive portions of this film to help accomplish both aims. Jeremy, John, Fred and Admiral Crowler, I want you to put your best people on this and come up with a plan that uses the Kitty Hawk in the same way the USS Enterprise was used in the early days of World War II. In short, make the enemy believe that we only lost one carrier in the engagement on the 16<sup>th</sup>. At the same time, I want the relevant portions of the death of the Constellation and the Thach

aired, along with the sobering and tremendously emotional shots of those Marines aboard the Bonhomme Richard. We'll give up some BDA in that, but if we can make the ruse more believable by doing so, then we will come out ahead in the end.

"As far as the Kitty Hawk's operational plans, I will leave that to you, Jeremy, and Admiral Crowler. But my guess is you will have to utilize quite a few LA Class and at least one of our Sea Wolf class subs to insure that the Kitty Hawk is properly protected from the submerged threat. Under no circumstances could we afford to lose her...but we cannot afford not to use her, either."

John Bowers, the President's National Security Advisor (NSA) spoke as the President paused to look at his cabinet members.

"Mr. President, despite the fact that there were apparently no Chinese reconnaissance satellites in a position to view the John Stennis at the time of the attack, it will be difficult to carry off this ruse for very long. We lost almost five thousand personnel on the John Stennis. Those personnel have families, friends and other ties. They have friends throughout the service. Hundreds of others saw the John Stennis get hit and go down. How will we be able to keep the loss away from family and friends, the press, and from those agents sure to be here amongst us?"

The President reflected for only a second or two before responding.

"John, we are in all-out war. All operational security procedures in wartime apply. I want the American people to be aware of the gravity of the situation and will share whatever knowledge possible to insure that...but we will not compromise ongoing operations to do so. It is a fine line – perhaps razor edge—but Admiral Crowley, perhaps assisted by your staff, will have to mete out the announcement of the deaths of those service people appropriately in order to insure the security of the operational plan as it is developed. I believe that by announcing factually what occurred to the Constellation group, and what occurred in the Stennis group excluding the carrier, we will fulfill my desire regarding making the people aware. We will just have to insure that Admiral Ryan conveys to his staff – and that they impart to their staffs as well – the overriding necessity to preserve operational security. I believe JT Samson will abide by this as well. He's probably the most patriotic, yet straightforward and honest journalist I know.

"Now, gentlemen, let's turn to the remaining items on the agenda. They include: one, the domestic front; two, the situation in Korea; three, the status of our thousands of citizens who are now trapped inside the People's Republic of China; four, the status of Chinese satellite and reconnaissance capabilities and our ability to destroy them; five, the formation of these Chinese invasion forces in the Yellow Sea; six, an update on India's involvement; and seven, the overall situation in the Mid East.

"Okay, let's start with the continuing attacks occurring here domestically. We must get a handle on this so we can put down the terror attacks occurring within our borders. At that point, our full mobilization and wartime production plans can move forward.

"Curt, please update us on the FEMA efforts here in the CONUS, and then Russell, give us your report on how Homeland Security is containing the terrorists and enemy agents amongst us?"

**March 18, 18:28 EST**

**WNN Broadcast Studios**

**New York, New York**

David Krenshaw had viewed the video earlier, before the President had broadcast it to the nation in the last hour. WNN, along with all the major networks, had received an advance copy so that they could put together their report and commentary to be aired after the President's address. The clarity was amazing...the graphic nature of the death and destruction appalling.

"Too bad it was already copyrighted and all fees for its use and viewing would go to that upstart Internet operation," thought David. "Perhaps I can convince the CEO and CFO here at WNN to offer enough to purchase the rights from that amateur."

As an executive at WNN, and as a member of the Council on International Relations (CIR), David was a rising star in the worldwide broadcast and news industry. He was one of the most recognized newscasters on earth. Recently, he was finally given the opportunity to show that his organizational and overall production management skills matched his camera presence and delivery. David had never doubted for an instant that such an opportunity was not only deserved, it was his destined avenue to worldwide influence to match his recognition.

Now, he was going to present potentially one of the most important commentaries he had ever broadcast, a commentary on the beginning of global war, a war that pitted his own nation against some of the most influential people in David's career. Jien Zemin, the President of the People's Republic of China, and David Krenshaw were friends, and had been for many years...no, more than friends. David liked to believe that they were mutual confidants, and David was anxious for that relationship to continue, despite the conflict and the resulting complications.

"Yes, that's important...extremely critical for some point of contact, some point of trust to be maintained in these horrible circumstances," thought David as the final touches were applied to his makeup prior to the broadcast.

It was just such reasoning that had led David to transmit a copy of the video in its entirety over the secure satellite phone to his “friend and confidant” just two hours ago. It was such reasoning that influenced the entire production David was about to broadcast. Despite the location of his headquarters, despite David’s citizenship and the declaration of war, David felt he had “global responsibilities” to fulfill. He felt his unique position and relationship with the Chinese leadership placed him in a position to individually influence both sides and to make a difference in this conflict.

“Surely this is so,” reflected David. Jien Zenim had told him so himself not three hours ago.

As he completed that sobering, yet satisfying, thought, his production assistant and attending technicians informed him of the timing and the countdown began. At zero, the production assistant motioned to David, the red light blinked on, and David Krenshaw turned to the camera and spoke.

“Ladies and gentlemen, welcome to this special commentary on world events by WNN. I am David Krenshaw, a member of the Board of Directors at WNN and President and General Manager for Worldwide News. I will be your host this evening.

“We have just witnessed a broadcast from the President of the United States that is so horrifying as to shock us all into fully realizing the peril into which our nation and the world were thrust as a result of the attacks just two days ago. The loss of life is monumental. The destruction of some of the most advanced technology in America’s arsenal is highly troubling. Despite the shock and the horror, or maybe even as a result, perhaps this is a time to pause and let that shock sink in so we can find a way to escape from this abyss that has opened wide its jaws before us.

“Please do not misunderstand. What occurred on March 15<sup>th</sup> was a brutal and unexpected attack on the United States and, as the President so aptly pointed out, justice for those actions must be satisfied. We here at WNN hope that the U.S. government will seek the most judicious path to attain that justice. However, we hope that in seeking justice, we will not be subject to a repetition of the horrors depicted in this broadcast.

“Such costs, according to the Pentagon and the Weisskopf administration, as the sinking of a U.S. Navy super carrier, the USS Constellation, and the sinking of two of our large assault ships, and many of their escorts, cannot be borne again. We urge the administration to find a way to open dialog with both the GIR and the CAS that will halt the hostilities and allow justice to be served.

“We’ll now turn to our chief military analyst for an explanation of what these losses represent in terms of naval capabilities for the United States in the Pacific...”

**March 19, 19:10 CST**

**FTA Trucking, U.S. Headquarters**

**Dallas, TX**

Both men sat quietly, reflecting on the corporate conference that they had concluded ten minutes earlier. The officers and managers who had attended had been apprised of the impact on trucking operations that the current restrictions on all interstate travel would have on their operations. That impact was expected to be severe in the short term, and therefore the absolute necessity to maintain all required documentation and paper work for all operations, and each individual trip, was emphasized.

These two men, Miguel Santos and Hector Ortiz, were already personally familiar with many of these restrictions. Both men had been officially “on vacation” when the attacks, which had initiated the restrictions, had occurred on March 15<sup>th</sup>. Both men had then traveled by personal car back to Dallas from their “vacations” in the western states. While arranging for this conference by cell phone during their return trip, they had both experienced first-hand the restrictions—the border and random checkpoints manned by hastily organized National Guard and local State Patrol and Sheriff’s units.

Although they may have been put together hastily, there was nothing hasty about the review of each person traveling through the checkpoints. Some of the waits had been over an hour in length. Of course, both Miguel and Hector carried papers establishing beyond doubt their credibility as executive officers of one of the premier NAFTA success stories.

Despite that success, and despite the high level positions each man held, there is nothing quite so sobering, as the feeling one gets when looking at the business end of an automatic military assault rifle, or squad serviced machine guns and infantry fighting vehicles. As they reflected on that, the two began to get down to the real purpose of their follow-up meeting. Hector broke the silence and began.

“Miguel, your operations along I-15, I-5 and I-25 have gone very well. Congratulations on a job well done. As you know, Mexico City has approved your shift of some resources to press this advantage. I suppose it is most correct to say that I and my superiors have approved it. I’m more than interested in hearing your assessment of operations involving the temporary shift of resource from the I-35 corridor to the I-25, from the U.S. 287 corridor to I-25 and from I-40 to I-5 in California.”

Miguel understood every bit of Hector’s coded conversation. That conversation was spoken in code as a final insurance against eavesdropping. The other aspects of the security included the special electromagnetically shielded curtains, the daily scrubbing for bugs (in five years, not one had ever been found), and the barely audibly but digitally synthesized and encoded background music they employed to thwart any other outside, directional, or sophisticated listening devices.

All of that aside, in fact, the three most successful operations out of the ten that Hector and Miguel's teams had undertaken on March 15<sup>th</sup> had occurred along I-5 in southern California, I-15 in Utah, and I-25 in Colorado. Hector and Miguel had both been personally involved in leading two of those teams before returning to Dallas for these meetings. As a result, large areas of southern California, Arizona, Utah, New Mexico and Colorado remained without power today.

Now, the more serious follow-on operations were about to begin. Whereas before, the teams in those areas had been involved principally in the destruction of critical substations in the power grid, they were now about to embark on more direct and violent action. By combining teams from other areas, Miguel and Hector were about to unleash three fifty-man teams, armed with RPGs, fully automatic weapons and shoulder launched anti-armor and anti-aircraft weapons, against three high value targets in the principle metropolitan areas of Salt Lake City, Denver, and Los Angeles.

"Thank you Hector, Your faith and trust in our U.S. operations have sustained us and inspired the very success we are now experiencing. Without your personal involvement, these successes would not have been possible. We estimate that we can consolidate and coordinate the activities of the additional personnel within a short period in order to produce the desired results for our operations in all three areas by the 18<sup>th</sup> of next month."

Hector understood that the 18<sup>th</sup> of the next month meant 1800 hours of the next day.

All is going according to plan, then. By late tomorrow evening, the news networks should be covering yet another large and horrific attack on the United States and her people," thought Hector. "Whatever it takes."

Hector believed that the time had come to bring the conflict home to these people to pay a price, a stiff price. In his mind, they were a people who had for so long, been living in the lap of luxury, and off the largesse of gains and wealth acquired at the expense of other peoples throughout the world. In particular he believed the Americans had been doing this off of land and wealth usurped from the "rightful" owners of the lands of "El Norte". He had been receiving funding for years from his friends in the Caribbean and in South America, and large amounts of interest that had been generated from those funds. With that money he had equipped and brought hundreds of individuals into America across her poorly protected southern border, individuals whom his people had trained well over the years. Now Hector believed that preparations for the long-planned-for attack were complete.

In Hector's mind, the time had finally arrived for the oppressed Latino peoples of the Americas to work hand-in-hand with other forces around the world. He felt it was time to work in concert with the leader of the Greater Islamic Republic acting on behalf of the oppressed Middle Eastern peoples, and with the leader of the Coalition of Asian States acting on behalf of the exploited Asian peoples. The time was right for them all to throw off the yoke of economic oppression and the ever-present and coercive military presence of the United States.

And if he, Hector Ortiz, and his loyal adherents like Miguel personally profited from the undertaking and the resultant new order they would impose in the aftermath...well then, what of it?

"Wonderful news, Miguel! I will anxiously await the reports on your activities and watch closely the growing profit margin and increased market share. Let's toast a successful fulfillment of our goals in this regard, both from a corporate perspective and from your own U.S. Operations perspective. I assure you, the success of these operations will be spread liberally throughout the organization"

**March 19, 22:35 MST**

**Henry's Ranch Subdivision**

**Boise, ID**

Geneva watched intently as her son Alan worked at the computer and prepared to read the email they had just received from Leon, her oldest son. He was writing from Camp Lejeune in North Carolina, where he was going through Marine Infantry Training after having completed basic training just over a week ago. With the attack on the 15<sup>th</sup>, all leaves had been canceled and every Marine had been called back to his or her duty station. For Leon, and for his friend, Billy Simmons, this had meant immediate travel to Camp Lejeune and an accelerated training so they could get to their individual Military Occupational Specialties (MOS) training as rapidly as possible. It was clear that every one of them was going to be needed, and quickly.

"Could it really have only been one week ago?" thought Geneva as Alan began to read. Their entire world had turned completely upside down in that week with the attacks on American forces in the Pacific and the direct attacks on America. The destruction of the White House, the Capitol building in Washington, D.C., and most of the Pentagon—as well as the attacks on so many port facilities and shipbuilding yards had everyone. Not to mention the attempted destruction of the dam above Boise, just a few miles upstream from the very subdivision that she now lived in.

"Lord Almighty!" thought Geneva. "They done gone and brought this fighting right here to my new home." In fact, had that attack been successful—had not those brave young men who were working with the sheriff's department as a part of Idaho's Home Guard program been successful in preventing it—then Geneva and Alan both probably would have died in the resulting flood. They would have died along with thousands of other Idahoans along the Boise River.

Leon had been able to catch a military transport the very next day and had arrived in North Carolina the next day. Now he had sent them an email to let them know he was safely there. Geneva reviewed all of this in her mind, and as Alan read the words of the email from Leon, her motherly instincts and love for her boys welled up and the tears ran down her cheeks.

*“Dear Mom and Alan,*

*“I just arrived at Camp Lejeune this morning. It was a long flight. The seating was not what some folks would call first class, but it was a lot better than no seating at all, so it was a ‘good’ flight.*

*“They were all ready for us. As orderly as basic training had been, it was nothing compared to the all-business attitude and regiment we are seeing now. We are Marines and we are ready! Mom, I have never felt so alive in my whole life...more committed...more proud to be a part of something!*

*“Alan, you get yourself ready, little brother. It was freedom that allowed us the opportunity of a fresh start, and that’s what this country stands for. And it’s under attack, so it’s time for us to stand up for it. If you’re grateful for the blessings we’ve enjoyed, I hope and pray that you will consider joining me as your blood brother and as your brother in arms in fighting for it!*

*“We are now going through an accelerated Infantry Training Course, shaving off a full ten days calendar time, but working longer hours each day. Then it will be on to our individual MOS training. As a sniper, I will go through scout and specialized sniper training course work. Billy is going into flying helicopter gunships, like his father does in the Army...except the Army does not have the new AH-IZ Viper Cobra that we have in the Marines—the ones that Billy will be flying. There is going to come a time when we will see those birds come flying to our assistance, like angels flying on heavenly wings. I’ll see him for the next few weeks, but then he will be off to Florida to learn to fly, and then who knows when we will next cross paths?*

*“Well, I don’t have much time. I want all of you to stay safe and not worry in the least about me! Alan, you might consider joining up with one of those Home Guard units as you finish high school. They were sure effective there at that dam near Boise! I tell you, saving lives and defending freedom against our enemies is great training for preparing to be a Marine! So, please think about it.*

*“I love you both. And Momma, don’t you worry. I am not only in the good Lord’s hands, I am in the hands of some crusty old NCOs and fine officers here who will do everything in their power, in their own way, to take care of me just as He would. Especially the NCOs...even if most folks would be hard pressed to understand it that way. But I understand it that way, and I want you to, too.*

*“Love, your son and brother, Leon”*

**March 20, 07:04 local time**

**800 miles Northwest of Krasnoyarsk**

**Gavank, Siberia, the Russian Federation**

General Andrei Nosik listened to the briefing from his intelligence officer. Things here in Gavank were tolerable. The Russian military men in charge of security had found that the Indians were generally a hard working and peaceable people. Oh, there was the occasional flare-up and brawl—and on occasion there had even been a knifing or two. But, all in all, there had been no major difficulties for the security forces under General Nosik’s command. This good fortune applied equally to the major petroleum production going on here at Gavank, as well as the low sulfur coking operation 300 kilometers to the east, also an Indian operation.

The Cobaltite mine to the south was a different matter. Perhaps it was the long-standing distrust between the people, or perhaps it was from what General Nosik considered the too-cramped and crowded living conditions there, but the Chinese operations had provided his forces and the Colonel commanding them there no end of trouble. Brawls were more frequent, and there had been numerous deaths there amongst the workers due to knifings and the occasional shooting.

Colonel Propov had required several meetings with the Chinese Project Management team to impress upon them the absolute need for discipline and order. Of course Li Fan, the manager for the Chinese workers there, had promised compliance, and had worked hard to achieve it, exerting firm discipline on his people that sometimes had included summary executions of the worst offenders.

Li also knew that the operation would go on, regardless of the difficulties with the workers and the protestations of the Russian security forces. Simply put, Li, Colonel Propov, and General Nosik all knew that the Russian Federation simply required the hard currency produced by these operations too badly to allow a few Chinese brawls or deaths to interfere. The Chinese, particularly now that they had grabbed the Tiger’s tail, needed the raw materials too badly, and Russia needed the money.

Nonetheless, General Nosik was concerned and would remain so. His concerns went beyond the local lawlessness and disorder, extending to the Indian operations as well. There were simply too many foreigners within the borders of his country for his liking—and most of them were young, healthy, military-aged men. Although it not so for Dr. Gavanker here at Gavank, most of the other “Project Managers” with whom Nosik was familiar had too much of the military bearing about them.

General Nosik had been a military man for his entire adult life, beginning with the old Soviet Union and extending into the new Russian Federation. He had served in the West on the old Iron

Curtain, and had seen significant and meritorious service in the Soviet operation in Afghanistan. He had also served with distinction in various operations and areas within the Russian Federation.

General Nosik's latest service was here in Siberia, where he had been promoted to General in charge of security for an entire region and for three of the largest projects in the Siberian Economic Development Treaty signed well over a year ago. That treaty, negotiated by the administration of President Vladimir Putin between the Russian Federation, the People's Republic of China, and India, had opened up vast tracts of Siberia and its resources to tremendous exploitation.

There were over thirty projects in operation, and the influx of hard currency into Russia and raw materials into India and China, were making for a literal economic boom for all three countries. General Nosik could not deny that the entire treaty was advantageous to his nation, and was helping bolster the readiness of her military forces. Nonetheless, General Nosik was and always would be extremely leery of any treaty, understanding or project that allowed literally hundreds of thousands of young men to be on the sovereign soil of Russia.

He could not help but compare the eight thousand military personnel he had at his disposal to the thirty-five thousand foreign workers employed on these three projects. It did not help the General's concerns to know that his force was the best equipped and largest of all the security forces for the thirty-some-odd projects scattered about Siberia. In all, over three hundred and fifty thousand foreign workers were being "secured" by less than thirty thousand Russian personnel...not to mention the Siberian bandits, gangs and "independence" minded insurgent-rabble he had to deal with. No, by far and away those three hundred and fifty thousand foreigners, most of them relatively young men, were his greatest security concern, even if Moscow discounted the threat. As these thoughts ran through his mind, he heard the intelligence officer continuing his briefing.

"Summing up, then, outside of a few minor disturbances over the weekend here in Gavank and at the low-sulfur operations, the Indian projects are going very smoothly from an internal security standpoint. As usual, this is not the case with the Chinese Cobaltite operations to the south. Over the weekend a more serious class-three incident occurred. It was a riot really, in Block 3-D of their worker dorms, where our security personnel under Colonel Propov, assisted by Chinese management, were forced to use rubber bullets, shields, riot batons, and tear gas to disperse the combatants. Nine injuries and one death resulted. Despite last weekend's incident, the overall count of class-three incidents at the Chinese project is down over forty percent in the last two months, and Colonel Propov and his staff should be commended for their work in this regard.

"Turning to external security, for the single specific incident outside of the regional and global considerations that I briefed you all on earlier, I will turn the time over to Colonel Butoma. Colonel, please brief us on your regiment's response to the incident that caused the destruction of a section of the rail spur to the main line to Krasnoyarsk. Tell us what measures have been taken to insure the security of that line, as well as to punish the bandits responsible for the short break in operations. After Colonel Butoma's report, Dr. Gavanker will share with us his weekly update on production operations. Colonel Butoma."

### **March 20, 14:45 local time**

#### **Secure Governmental Command Facility**

#### **45 KM Southwest of the Republic of China**

The National Security Council of the Republic of China on Taiwan had sat in conference in this secure facility since early this morning. The meeting had been a closely held secret as the principal members of the council, including the President, were reported to be away in the mountains on holiday. The rest of the attendees had come to the location by circuitous routes after being seen to attend meetings in other locations that were otherwise on their agendas.

The topic was both stark and very urgent, and although hundreds of meters of solid rock covered and protected them, it did not provide much comfort for the harsh reality of the situation they faced. That situation was the task of maintaining the defense of the Island of Taiwan, the ROC, against an expected mainland Chinese onslaught in the very near future, a defense without the kingpin they had always counted on: the assistance of the United States of America. Oh, they had war gamed it out, trying to see how long they could hold on without such assistance, but even in those scenarios they had counted on the power and presence of the United States. Those scenarios had included U.S. materiel and logistics support, and they had always presumed the certainty of direct and massive U.S. intervention if the situation became desperate...and those had been the worst-case scenarios.

Now, a new worst-case scenario had been created—the prospect of little if any U.S. materiel, logistics, or moral support at all, much less direct military intervention. With Okinawa in ruins and under constant follow-up attack, with U.S. Forces on the Korean peninsula in dire circumstances with no prospect for relief, it was clear American forces remaining in the region could offer no help.

Further, with Japan hunkered down to protect itself, and considering negotiations with China and with large Chinese task forces forming for apparent assaults on Korea, Taiwan and potentially staging for the Philippines, the successful defense of the free Republic of China was now in grave doubt.

President Chen Shu-bien considered the meeting. The National Security Council consisted of several members of his cabinet. These included the Minister of Foreign Affairs, the Minister of Defense, and Heads of the General Staff of each of the major Armed Services, the head of the Coast Guard Administration, the Minister of Transportation and Communications and the Vice President. In addition, for this particular meeting, they had in attendance the Dean of the Chungshan Institute of Technology and two of his leading Professors of Research.

Debate had raged all morning on how the defenses should be postured. The new weaponry that the People's Republic of China had employed to defeat the United States Navy was one of the principle points of concern. The Republic of China's policy had been to interdict any mainland Chinese attempt at invasion in the Formosa Straits, and they had built up a modern technological Navy (one they still considered to be superior to the PLAN) in order to help their Air Force do this.

It was felt that the Air Force could hold out much longer, perhaps indefinitely with the Navy's help. That help would come in the form of the newer area air defense ships, particularly the four former U.S. Kidd class destroyers and the two newer Arleigh Burke class Aegis destroyers, which would augment their air-to-air fighting capabilities with the long range Standard missiles supplied by the U.S. In effect, with the newer IDF, F-16 and Mirage 2000 aircraft utilizing AMRAAM and indigenous Sky Sword II missiles, and with the Navy's Standard missiles, a wall of steel would be erected down the length of the Formosa Straits that the PLA Air Force and Navy could not break. But that had presumed that these ships could navigate freely in the straits and position themselves where required in support of the Air Force.

There was no doubt that these new ships, augmented by the modern Kuang Hua I (ex-U.S. Halsey class FFGs) and Kuang Hua II (new French La Fayette class FFGs) would be a match for any surface combatant or submarine the communists could throw at them. But that entire premise, depending on their surface fleet to augment their Air Force, had been entirely swept away with the deployment of the new super-cavitating devices that the People's Republic had employed so successfully against the Americans. As he was thinking this, President Chen picked up on Professor of Research Bin Hau's summary of these very weapons.

"Therefore, based on this satellite, sonar and eyewitness intelligence data shared with us by the United States that I have explained to you, it appears that these devices have an extremely long range, perhaps 400 to 500 kilometers, which they traverse on traditional propulsion. Then, when within twenty to twenty-five kilometers of their target, they ignite a rocket engine that propels them through the water at almost supersonic speeds, so that they literally reach the target before it can maneuver out of the way. The warhead appears to be extremely large, probably in the 2,000-kilogram range. Any craft struck by any single such weapon, at least any in our inventory, would be sunk by it.

"The implications regarding miniaturization, computerization, targeting via sonar and acoustic signature are very distressing. We must presume that the People's Republic has captured the signatures of our own vessels as they clearly demonstrated that they have captured the Americans, including their Los Angeles class attack submarines, four of which were destroyed. We must presume that all of our major combatants are in their database, including our new diesel submarines, and that they are all therefore vulnerable."

The Chief of the ROC Air Force, General Li Hsieh, took this opportunity to speak up, and once again press for what he considered to be their best response.

"Gentlemen, I must insist that we face reality here. Professor Bin has given us a good dose of it with respect to the capabilities of these new weapons systems, and what they mean to our long-standing plans. As long as these weapons are employed without a clear counter or defense, our fine Navy, like the Americans, has been rendered moot on the high seas in defense of our Republic. I believe we must station the principal area defense ships in the major ports to provide air defense, particularly to augment the Patriot batteries around the Capitol. I then strongly urge that we utilize our technological strength in our Air Force, and perform a unilateral, surprise strike against the two large PLAN task forces that are forming across the straits in the vicinity of Quanzhou and Xiamen.

"These task forces are comprised of one of their new amphibious assault ships each, one of their new carrier groups, numerous escort vessels including Hangzhou and Lanzhou DDGs and many, many of these new LCU type landing craft. They are clearly forming for one reason, and one reason alone. If we can mass our assets and strike quickly and resolutely, we can destroy a large part of their amphibious capabilities and perhaps their capitol ships as well."

And so, the debate that had been taking place all morning picked up again as Admiral Chang, the Chief of the Naval Forces, spoke against such a plan.

"General, I agree that our area defense ships cannot be risked in the Straits at this time. It is unfortunate and is causing us to reassess our defense strategy, which I believe will lead exactly to what you propose with respect to those assets. However, with all due respect, I cannot condone an attempted mass attack into the teeth of the People's Republic strength—the disparity in numbers is just too unfavorable. Not to mention the fact that their new SU-33s and SU-35s are the technological equivalent of our own forces. They are deploying them in increasing numbers across the straits to

blunt our advantage, particularly if they are willing to suffer attrition in their older aircraft—and I bet they are willing to do that. Who would bet against it?

“What good would we do if we sank a lot of those landing craft, or even some of their larger combatants and suffered severe attrition of our own? It would leave us wide open to any force these ships and landing craft in large numbers. No, I say, let them come to us. We just draw back, soak up their ballistic missile barrage, and wait until they try and force a crossing. They will still have to come within range of our area defense destroyers before they can launch, and that, in my opinion, is when our Air Force can be used to the best effect just like we planned, in concert with our naval assets.”

The General interrupted. “Just soak up their ballistic missile barrage? Listen to yourself, Admiral. We are here to protect our people, and I believe we can perhaps forestall such barrages by immediately going on the offensive. Those hundreds and even thousands of missiles will exact an unacceptable toll on our population and production efforts. If we do not act, they will do so before we ever inflicted any casualties on the enemy—and they would probably be successful in taking out at least a part of our own defenses, particularly your ships if they are restricted to their harbors.”

The Admiral’s composure began to weaken as he responded.

“Would it be better to lose a part of our people and production facilities, or all of it, General? I say we must modify our plans to fit these terrible circumstances, but still keep intact the basic premise, and that is of a defense in depth. Force the communists to come to us!”

Finally, President Chen raised his hand, and indicated that he was ready to speak, and render a decision and seek consensus.

“Gentlemen... General, Admiral, please compose yourselves. This is a critical time in which all of us are working towards the same end—that of preserving our nation and our people. It is a harsh time as well, where difficult decisions will have to be made that will inevitably result in the destruction of property and the loss of life either way. Thank you for your input. This has been a long day, and we have all heard much. I will order the immediate implementation of our Emergency Plan for full war time mobilization. Our people have long prepared for this, though we had all hoped to avoid it.

“I will request that the Legislative Yuan immediately approve the State of Emergency, and that we institute martial law. All reserves will be called up according to our National Emergency Defense Plan for defending the island against infiltration, and against amphibious or air assault. Minister Hsu, please ensure that transportation and communications are immediately regulated and curtailed according to plan, as soon as the Legislative Yuan approves, which I expect this evening.

“General, I believe there is some merit in attempting a scaled-down surprise attack against the People’s Republic forces massing to our east. I want specifically to conduct a raid on the two large amphibious assault ships, and use as minimal force as possible to achieve this. Use that attack as an effort to lure as many PLA Air Force fighters back across the Strait into SAM traps that you set up with the area defense ships. I will, of course, leave all the details to you. Outside of that, I want a defense plan along the lines that the Admiral has proposed.

“We are going to face a war of attrition, and we cannot afford to lose that war! If we do, we will be invaded and their numbers will ultimately defeat us. So, we must avoid any chance for anything approaching parity, or even good kill ratios that benefit our side. No, we must develop strategies and plans that force tremendous odds and tremendous kill ratios if we are to survive. Is this understood?”

The President, the youngest ever elected by the Republic of China, eyed each of his military and cabinet members individually. As he went around the room, each met his gaze steadily and with grim determination. Each also nodded their assent.

**March 20, 17:45 local time**

**People’s Republic of China Politburo**

**Beijing, China**

Lu Pham knew why he was here today. He was deeply honored that this recognition would be accorded him. Here in his adopted homeland, those who had so much influence and power over the lives of everyone were honoring him. Despite the recognition, despite the surroundings, despite the acclaim he would be receiving, there was nothing that could compare with the knowledge that his inventions, his instruments, had fulfilled their purpose and worked so well against the Americans.

The feeling he had felt in his breast—in his heart—when he had heard over the secure transmission facilities that at least one American carrier and two of their large assault ships had been hit was a dream come true...his dream. The fact that so many of the American escorting vessels, including Aegis cruisers and many destroyers, had been hit just added to the feeling. Now, seeing the actual video images of that destruction from the Americans themselves here in the company of the leaders of the Chinese Politburo allowed him to relive the feeling of that fulfillment all over again! He finally felt that his long dead parents, killed by American Special Forces in South Vietnam as they trained the Vietcong so long ago, could rest in peace. He had kept his word to avenge them.

It was a promise he had felt he would never fulfill for so many years as he worked in the University in Hanoi, particularly as relations thawed between America and Vietnam. He knew he had

the Chinese to thank for the opportunity to realize that dream. They had resurrected the plans of Lu's youth. Those plans that he had been developed while working for the meager North Vietnamese Naval forces. Those grandiose plans for North Vietnamese forces to take on the most powerful navy in the world through the use of revolutionary super-cavitating weapons that flew through the water as a missile flies through the air. But to his surprise and disappointment, his North Vietnamese leaders had squashed the idea out of hand.

It was the Chinese, whose intelligence apparatus had retrieved the plans, who believed in such weapons and that their use against the Americans was possible. General Hunbaio and his intelligence operatives had tracked Lu down, and made the contact and the offer. Chin Zhongbaio, the President of COSCO had the vision for those specific plans and had directed General Hunbaio to find Lu. Jien Zenim himself, the leader of the People's Republic possessed the will and the drive to confront and defeat the Americans and build a new order in Asia based on the Three Wisdoms.

And there were many more, like Sung Hsu, with whom Lu had worked to bring the theories and paper designs to reality. Lu knew that all of this came together so he could fulfill his promise to his parents, to make good on his dream. Now, at the conclusion of the video presentation, they awaited his acceptance of the honor they were bestowing.

"Comrades, I am honored to stand here among you. I am almost speechless at the conclusion of this video that so aptly demonstrates the effectiveness of our plans, and of the instruments that helped us achieve them. I can do no more than thank you for the honor you bestow upon me, a foreigner whom you took to your side and provided the means to accomplish what we have just witnessed. It is you leaders who deserve the honor and recognition, for having the foresight to confront our enemy, to plan and then put in place the pieces to carry off that plan. I am truly no more than one of the pieces of that plan, one of the parts of the puzzle that you have seen so clearly and assembled so adeptly. Thank you for the opportunity to work within that framework.

"Quite frankly, I am surprised that the Americans released such a video, because even now, in my mind, I am analyzing it, seeing the strengths of our design and evaluating some weaknesses. But that is for another time, and I am sure you do not wish to have me belabor the success of that attack with such technical analysis and jargon.

"Let me just close by saying that the team I manage is even now working on improvements to the system, working to stay ahead of the Americans in their attempts to counter our achievements. There is no doubt that they will seek to do so. In fact, this video displays some of those avenues that were attempted in an *ad hoc* fashion by their on-scene commanders in the heat of battle. We will maintain the upper hand. We will provide our fighting forces with the technology and the systems to continue to defeat the Americans and their allies, and drive them from this part of the world.

"Once again, I thank you for the honor you bestow. I accept it in all humility, knowing full well that it is you, the leaders here who are deserving of the greater honor, who made possible whatever small contribution I may have made. Thank you."

Jien Zenim rose and applauded Lu Pham as he returned to his seat. He was aware of Lu's humility and desire to avoid the limelight. He was also aware, through his trusted ally and compatriot Chin Zhongbaio, of exactly how significant Lu's contribution had been. Quite frankly, they would have preferred to have developed and deployed these weapons without the need to find and recruit Lu Pham at all. But that had turned out to be impossible.

None of their other scientists and researchers had been able to bring those old designs to fruition. It wasn't until Lu had been recruited and brought onto the project that progress was made towards truly modernizing and completing the design and then deploying it. Now, the heretofore indestructible, indomitable U.S. Navy had been defeated, and every major PLAN combatant was either already equipped, or soon would be outfitted, with these fabulous weapons.

And what a defeat it had been!

Jien spoke. "My friends and compatriots, the realization of every plan and global aspiration that we have been putting together for the last ten years lies before us and our allies as a result of those few hours of success a few days ago. Surely the very foundations of the western world's power, strength, economic system, and the hold they had on the rest of the world had been shaken by those events, particularly that of the our principal adversary, the Americans. And they needed to be shaken—they deserved to be shaken. We will yet shake them to their very core so that their grip is completely undone. With the emergence of the CAS, we are creating a new order that will replace them.

"It is ironic, is it not, that many in the West have helped us establish this? Some have helped unwittingly through greed and vice; others helped knowingly in their lust for power. And then there are a few who truly share our collective ideology. Over the last twenty years, we have developed resources amongst all three varieties in abundance within the West, and in America in particular. We will continue to use them all, and, except for our true ideological allies, we will destroy them all as we sweep them from their places of influence.

"And we have committed individuals here at home, like you, Lu Pham, who are helping to make this all possible. Lu, your enthusiasm, your untiring efforts and your humility are recognized, appreciated and respected by everyone here. You are completely deserving of the honor that we are

bestowing to you. Such an honor, to be named as a hero of the People's Republic, has never before been granted to any foreigner. I can think of no one more deserving, Chinese or not. All we ask is that you continue forward with the same spirit and brilliance, and do exactly what you have committed to do here today. We know you will not disappoint us—you have proven it by your actions to date. You are excused to return to your family and your duties.”

Lu Pham rose to the applause of the assembled leaders, and accepted their congratulatory handshakes as he took his leave with the family, friends, and compatriots who had been invited to share in his honor. When he was out of the room, Jien Zenim continued.

“Now, my friends, with the departure of our colleague, let us move on to a summary of the planning that has been done for the three major near-term tasks before us. Those tasks include first, assisting our Korean brothers in reuniting their peninsula once and for all; second, the reunification of our own wayward province on Formosa; and third, the bringing of the four principle Asian Island powers into the fold of the CAS—namely Japan, the Philippines, Indonesia and Malaysia. In that regard, as soon as the Americans begin their attacks on our satellites, my orders are to immediately implement operation Falling Star against *all* of their space-based assets.”

**March 20, 17:45 local time**

### **GIR Forward Positions**

#### **To the East and Above Kirikkale, Turkey**

Lieutenant Abduhl Selim finished his evening prayers. He had often missed his prayers while herding his father's sheep and goats back in Turkmenistan. In those days, he had taken religion in general, and his personal attachment to it, lightly. After many months of combat, after many friends had gone on to meet Allah, Abduhl never missed an opportunity to pray now.

He was eighteen years old, soon to be nineteen. He had fought with GIR forces across what had once been northern Iraq and now deep into Turkey, facing first Turkish forces and then various NATO forces, and finally the vaunted Americans themselves. All of the western forces had fought hard. All of them employed technology that was years ahead of their own. With numbers and with a willingness on the part of their leaders, and the soldiers themselves, to spend those numbers against the western technology, the GIR forces, of which Abduhl was a part, had pushed them all back.

In the course of that fighting, Abduhl, who had started out as the lowest grade non-commissioned soldier in the GIR ground forces, had learned to fight and to survive. Much of his education was due to his upbringing, and the insistence that his father had made on his learning how to shoot and how to survive as he tended his family's herds.

It was also due to Abduhl's developing code of honor and conduct. He was dedicated to his people's cause, and particularly to the cause of the great Imam Hasan Sayeed, who led the Greater Islamic Republic. Abduhl honestly believed that all of Islam should be united—that as one they would stand eye to eye with any other people in the world in terms of their culture, their economic output, and their ability to defend themselves.

Now as a result of attrition in the ranks, as a result of his own actions in combat, and as a result of his developing and unerring leadership capabilities, Abduhl had been given a battlefield commission to Lieutenant. He had been the ranking NCO in his platoon for only eight weeks when he was commissioned an officer, but what an eight weeks it had been.

They had finally faced the famed American 82<sup>nd</sup> Airborne Division, who had counterattacked just outside of Cicekdag. They had come at night, as Abduhl had been told they would by his former (and by then dead) NCOs. Abduhl had prepared the forward position for this company that very afternoon, and had even prepared a strong fallback position should their location be targeted. When the Americans had come, he found both his primary and his secondary positions had already been precisely targeted by American missile and artillery fire. Falling back to that second position had only led to a death trap for much of his platoon. It had only been the will of Allah that had allowed him and a few of his men to survive.

Nonetheless, Abduhl had rallied them, and they had surprised themselves and the Americans by attacking down the slope into the flank of the advancing American forces. That attack had the effect of slowing the American advance temporarily as they were forced to deal with his small force. But that momentary hesitation had made the difference between a total annihilation of the GIR's front-line forces, of which Abduhl's platoon had been a part, and their ability to conduct a hasty retreat.

For the next several days, Abduhl and his few remaining companions had tried to harass American platoons and recon units whenever they could feasibly get away with it as they searched for their own lines. Ultimately they had found them, dug in with their comrades, and held against the weight of American technology as more GIR forces were funneled into the battle, and as more GIR aircraft thwarted the Americans' attempt at total air superiority. Finally, after several days and many kilometers of lost ground, the sheer numbers of the GIR's corps sized force blunted the Americans' attack, and then pushed it back.

The encounter had been costly, more costly than Abduhl could fathom, but it had ultimately led to regaining all of the lost ground and more. In the process, Abduhl had been given his battlefield

commission, and was now the officer in charge of an entire platoon and the new Executive Officer for his company. The men, the NCOs, and even his commanding officer had great respect for this young man who had survived so much, and who was willing to face such extreme peril, to charge into the teeth of the tiger and emerge alive and willing to fight another day.

Then, four days ago had come news of the tremendous victory that the Coalition of Asian States and the Red Chinese had scored over the Americans in the Pacific Ocean. For several hours, he and his men had basked in the glow of that occurrence and had celebrated as best they could in the battlefield conditions they faced. Following this news, for three days, in fact up until today, the American and the Turkish morale had seemingly been dashed as the GIR advance moved at an increased rate. At least that was what the higher-level officers were saying to the troops.

“More likely,” thought Abduhl, “the Americans are simply falling back to better prepared positions around the Turkish capital of Ankara.”

And that is exactly what Abduhl told his men. He had no intention of underestimating the professionalism of the American troops, or their NATO allies. They had proven to him their effectiveness and their ability to mete out severe punishment at almost every turn. Abduhl just hoped that the supply of GIR soldiers committed to the cause did not run out before their goals were realized—before they conquered Turkey and brought this worldly and western-sympathetic nation back into the fold of the true Islam represented by the Greater Islamic Republic.

**March 20, 17:55 MST**

**Outside of Foothill Mall**

**Denver, CO**

As Sandy walked out to her car with her three children she couldn't help but notice the chill in the air. The weatherman had forecast dropping temperatures and perhaps a late winter/early spring snowstorm for later tonight and tomorrow, and it looked as if he might be right. But, none of that mattered. She had finished shopping for her husband's birthday, which they would celebrate tomorrow, and he had decided to take the day off. What a wonderful day it would be, enjoying Troy's celebration there at home with their three children. The kids would be so happy that Daddy was home.

She was glad that he would be home, too. With the grave conditions that the nation faced, it would be so reassuring to have him there. Though the attacks and horror seemed far removed from them here on the outskirts of Denver, still, Sandy knew people on the East Coast who had witnessed the fire and destruction a few days ago. Some of those friends personally knew people who had been killed. She and Troy had watched the news reports many times in sober contemplation. They had even witnessed some of the impact and consequences of those attacks here in Denver over the last couple of days with the increased security around the Capitol building and the airport.

“Apparently they're even extending it a bit out here in the suburbs,” she thought as she exited the mall parking lot on the east side, away from the mountains, and passed two military camouflaged HMMWVs that were pulling into the parking lot as she left.

“I've never seen the National Guard here before,” she thought as she turned onto Pearle Avenue, en route to the freeway that would convey them to their subdivision a couple of miles to the north.

“I'm glad they aren't taking any chances,” she said out loud as she looked into her rearview mirror and saw one of the vehicles pull across the entrance, blocking it as the first few flakes of snow blew in a brief flurry between her and the mall.

As she turned onto the entrance ramp to the freeway and lost sight of the mall, she didn't know that she, along with a few other vehicles, were the last ones to leave the mall safely that afternoon.

**March 20, 17:59 MST**

**Outside of Foothill Mall**

**Denver, CO**

Manuel wished he could have interdicted that last vehicle that had just left the parking lot. The more of these soft Americans he could catch, the better. But he was disciplined, and knew that the mission parameters did not allow for it at this point. He would do nothing to risk the mission with any premature antics. No, the mission would kick off at precisely 1800 hours, just as he had planned it with his team leaders, and would then proceed from there. They had twenty-one minutes before the helicopters would arrive and extract them, and they had to make the absolute most of every one of those minutes in executing the operation as planned.

Manuel figured he had the resources and the people to do so. Ten HMMWVs, all purchased separately over the last several months here in the intermountain west. All were driven to Denver after their purchase and housed in various large storage units, where they were painted camouflage to match the local National Guard units. Each of these vehicles now contained five camouflaged and heavily armed men, each of whom knew his part perfectly.

One of those units, an ambush and blocking unit, was taking up position on the freeway median by the underpass where Pearle passed over I-225. It would interdict the inevitable support that would

be sent by local authorities. Another blocking unit was taking up position one-quarter mile down Pearle in the opposite direction, at the other major intersection that fed the mall on that side.

Each of these units had one individual dedicated to a Rocket Propelled Grenade (RPG) launcher, and who would make use of the twenty warheads each vehicle carried. The man serving as backup to the RPG launcher would operate the Stinger missile launcher each of these units also carried if it became necessary. The other three men provided security by way of two M-16 assault rifles and a 7.62-mm sniper rifle. The local authorities would have their hands full trying to get past these units to the mall, and that was the entire idea.

In the parking lot, Manuel watched as his accompanying unit pulled across the parking lot entrance that they had just used. The same thing was happening at all four parking lot entrances to the mall. These blocking forces would be used initially to contain the civilian vehicles inside the parking lot, and then to destroy them. Later, if required, they would engage any enemy units that got past the initial ambush and blocking forces. Each of those four units contained a similar weapons composition as the units out on the freeway and down by the major intersection, except no sniper rifle was employed. The security personnel for these units all had M-16 assault rifles.

Manuel now proceeded towards the front of the mall and the primary entrance, converging with another unit proceeding towards the other entrance to the mall on this side. Two more units were converging on the backside of the mall, towards the two major entrances there. Manuel's unit, and all of the units converging on the mall itself, contained a light, 5.56 mm machine gun, which one of his men was now mounting on the top of the HMMWV through a hatch that had been cut into the top for that purpose. Each of these weapons would make use of the over 5,000 rounds in belt-fed boxes on the floor of the HMMWV. They would be used for direct fire support at the front of the mall and then later in the parking lot. The assault vehicles also contained another RPG launcher and three M-16 assault rifles, with numerous grenades and a large satchel of C-4 plastic explosives.

As their vehicle pulled right up onto the sidewalk leading to the mall entrance and skidded to a stop twenty feet from the doors, departing shoppers scrambled to get out of the way. Two of them, an elderly man and his grandson, were too slow, or perhaps just in the wrong place at the wrong time, and were crushed as the vehicle skid over them. The backlit digits on Manuel's digital watch turned over to 1800 as the vehicle came to a stop. As it did, Manuel quickly clicked his hand-held microphone twice to indicate that all units should commence operation as planned.

**March 20, 18:00 MST**

**Main Entrance to Foothill Mall  
Denver, CO**

Officer Frank Acosta was on patrol duty in the front entryway to the mall this evening. He typically enjoyed duty at the mall because it rarely required more than the apprehension of an occasional shoplifter or trying to settle squabbles between local youth. As Manuel's vehicle slid to a stop outside the entrance, Frank noticed the movement out of the corner of his eye through the glass doors and turned to see what was happening.

For an instant, he was frozen as he saw what appeared to be a National Guard HMMWV outside, and two National Guardsmen jumping out of the vehicle with assault rifles. His right hand automatically went to his holstered pistol and unsnapped the retainer. With his other hand he keyed his lapel-mounted mic and said, "Control, dispatch."

Almost immediately there was a response, "Go ahead, this is dispatch."

Frank began to respond, "Dispatch, Officer Acosta here. I've got a National Guard HMMWV loaded for bear at the main mall entrance. Two soldiers are..."

...and then it all hit the fan.

Manuel's man at the machine gun on top of the HMMWV began laying down fire directly through the glass doors, sweeping the weapon and its stream of lethal bullets across the entire mall entry hall. Immediately, there were the agonized screams of the wounded mixing with the screams of the terrified, breaking glass, and ricocheting bullets.

Frank's training kicked in, and he immediately threw himself to the ground while pulling out his service pistol. He rolled towards an information kiosk for cover. He was trying to bring his weapon to bear on one of the men coming through the door. At the same time he again keyed his mic and, as he watched a fleeing young teenage girl fall to the floor in a limp and bloody heap as she was stitched across the back.

He yelled into his mic. "Officer needs assistance! Automatic weapons fire at the front..."

But that was as far as he got.

Manuel had noticed the officer dive to the floor and roll towards the kiosk as he came through a door off to Frank's left. While Frank was frantically trying to bring his pistol to bear on the man in front of him, Manuel calmly fired a three-round burst into Frank's side from fifty feet away. He then walked directly over to Frank's thrashing body, kicked the pistol away, and fired another two rounds into Frank's head.

The initial attack was having the desired effect of driving the shoppers back into the mall. Manuel was sure that the same was occurring at the other three mall entrances as he heard the firing from those assaults echoing up and down the main mall corridor to his position. Manuel and his comrade quickly cleared the few small stores here in the entryway, killing all the civilians left in the entryway, and tossing hand grenades into each of the stores before entering them and eliminating anyone they found alive.

Within ninety seconds, their entrance was cleared. A third man entered the mall and came through the entry hall with the C-4, while the machine gunner on the HMMWV turned his attention to the parking lot and sidewalks behind them. Moving carefully, with Manuel and the others providing cover up and down the main corridor of the mall, he moved toward the supporting columns at the end of the entryway, and set explosives next to them.

Once there, Manuel came over, knelt down and quickly keyed his handheld mic three times. Within fifteen seconds he had three single keys back, informing him that all three other teams had successfully cleared their entry halls and placed their charges. Manuel keyed his mic twice more, counted to three, and then set the charge for sixty seconds. He and his two men then quickly exited the mall, all the while watching the C-4 charge they had left next to the support column. At twenty-five seconds, they climbed back into their idling HMMWV. The driver immediately backed out of the mall entrance, and screeched to a halt in the parking lot almost two hundred feet away.

As Manuel's vehicle skidded to a stop, a tremendous explosion rocked the front of the mall, and a cloud of dust and smoke shot out of the entrance towards the parking lot. Debris rained down and a portion of the front of the two-story structure collapsed. Almost simultaneously, three similar explosions erupted from the other three entrances to the mall, with similar effects.

Manuel looked at his watch—18:03.35.

"Three and a half minutes...excellent," thought Manuel, as his team now took up positions around their HMMWV and amongst the vehicles surrounding it. They began to concentrate on anyone coming out of the emergency exits of the now-burning mall and any vehicles or persons they observed nearby, indiscriminately shooting them down, and using the RPGs to create burning infernos of any occupied vehicles trying to escape. As they did so, Manuel heard the first sirens approaching.

**March 20, 18:04 MST**

### **I-225 Underpass Outside Foothill Mall**

**Denver, CO**

A rising volume of gunfire was occurring at the parking lot exits of the mall, and coming from the vicinity of the mall itself. Through the increasing flurries of snow, Hernando could hear the intensity of the various teams' firing as they concentrated on the increasing number of vehicles and persons frantically trying to get to the parking lot exits, and as the assault teams cleared the entry halls in the mall. A few RPG explosions were heard as well, and then, just a moment ago, the tremendous explosions of the C-4 as all four charges went off within a second or two of each other.

Smoke was now pouring out of the mall, and the rate of fire was picking up as the four assault teams set up in the parking lot and began targeting vehicles and people there. Approaching sirens could be heard in the distance.

"Okay, compadres, any moment now, and it will be our turn. Be ready," Hernando told his team next to the underpass as the sounds came closer.

"Sounds like two or three on the other side of the mall, and several coming up the freeway."

As he said this, he saw several vehicles, lights flashing, come around the curve in the freeway one-half mile to the south and east of them. His orders were clear: engage the responding units as they pass on the exit ramp. Do not announce your presence prematurely—ambush as many as possible before they stop to engage you."

Sure enough, here came four local police cars around that turn. Their dispatcher had routed them together as they responded to calls from security personnel and officers at the mall. In their rush to get to the mall, they did not notice Hernando's team there under the bridge.

All four turned off their lights and sirens as they took the exit. Hernando's RPG launcher was kneeling next to him, tracking the lead vehicle, with the launcher extending over the hood of the HMMWV. As that vehicle got halfway up the exit ramp, Hernando patted his man on the shoulder and an RPG rocketed towards the lead car, just as the officer driving that vehicle, who was clearly visible, turned and stared wide-eyed towards his impending doom. As he raised his radio microphone to his mouth in a vain attempt to broadcast a warning, the RPG punched through his door and exploded, creating a blazing crematorium for him and his partner.

Immediately, Hernando and one of the security men began raking the other three cars with their M-16s. One of these, the second in line, veered to avoid the raging wreck in front of him, caught the rear bumper of that vehicle as it careened off the roadway and flipped onto its top, sliding down the embankment of the exit ramp. It came to rest no more than fifty yards from Hernando's team, who poured fire into it for a second or two until it was clear that the two officers inside were dead.

While this was happening, the RPG launcher had lined up on the last vehicle and fired another round. That vehicle had fishtailed off the road, and was just coming to rest with its back facing the ambush team when the RPG entered the trunk and exploded, sending the trunk lid spiraling wildly seventy-five feet into the air and creating another inferno inside that vehicle.

Within a few more seconds it was over. One officer in the last vehicle had gotten out of the wreck and returned a few rounds of ineffective pistol fire before being cut down by Hernando's sniper. All seven of the other officers were killed in their vehicles. While that was occurring, Hernando's RPG launcher and his security man successfully engaged an ambulance and a fire truck that were responding to the mall. They were following several hundred yards behind the police cars. Those two vehicles were now burning hulks, their occupants either dead or dying, and the smoke from their wreckage now adding to that of the police cars.

With that, Hernando's team began engaging, indiscriminately, every vehicle on the freeway. Very quickly, for hundreds of yards in either direction of the underpass, the freeway became littered with destroyed and burning vehicles and the bodies of their occupants.

**March 20, 18:08 MST**

**On I-225 Southeast of Foothill Mall**

**Denver, CO**

Lieutenant Gary Douglas was becoming more alarmed by the moment. The radio traffic was filled with short-lived, frantic cries for assistance and calls of "officer down." As they came around the sweeping curve that led to the exit near the mall, he could clearly see the huge cloud of smoke billowing over the top of the berm from the vicinity of the mall. There was also smoke rising from the vicinity of the freeway itself where he knew those four local cars had last been heard from. The hairs stood up on the back of his neck as that thought sank in.

"Pull it over, Charlie! Pull it over in the ditch *now!*"

Deputy Charles Duncan pulled their Tahoe over and quickly came to a halt as the other two Sheriff's Deputy vehicles followed their lead. Lieutenant Douglas grabbed the binoculars he kept in the glove compartment, as well as the Ruger Mini-14 rifle from the rack in the back as he got out.

"Lieutenant, why are we stopping here?" one of the other deputies asked as he got out of his vehicle and hurried over to the Lieutenant's side.

"Doyle, take a look at that smoke coming off the freeway there around the bend. A few moments ago four squad cars went barreling around that corner towards the mall...and no one has heard from them since. Tell the others to set up a perimeter right here clear across the freeway. Stop all traffic here. Then, you come along and catch up with me, and we'll do a little recon," answered Douglas. "Just make sure you stay low, for God's sake."

Lieutenant Douglas kept low to the earth on the side of the berm as he made his way forward about a hundred yards. Finally, he reached a point where he could just see around the bend to the exit ramp. What greeted him was a scene of destruction and carnage. Another hundred yards in front of him was the burning wreckage of the fire truck. Beyond that were several wrecked and burning cars, and over on the exit ramp were the burning remains of the police cars.

There were a number of bodies strewn over the median and up the sides of the freeway where people had tried to escape. A few people were still moving behind vehicles. One noticed him, and waved frantically to him for help. Shots rang out, and that individual slumped over and fell to the ground. This caused the lieutenant to notice the camouflaged HMMWV down by the underpass, less than a half mile away, from which the fire originated. He also noticed he was in their line of sight.

Immediately, he realized he needed to move back about a hundred feet so he had the side of the berm between him and the snipers by the underpass. Slowly and quietly he did so. When he was within thirty feet of his objective, his friend and fellow county deputy, Doyle, came into the line of fire from around the curve. The lieutenant quickly made hand motions for Doyle to get down and to go back, but it was too late.

Back beneath the underpass, Hernando was attracted to movement beyond the burning fire truck. He saw what looked like a state patrolman just coming around the bend.

"Rodrigo, there, beyond the fire truck!" he yelled to his sniper as he also noticed the other officer, a little closer to them and very low to the ground, moving away.

Rodrigo turned, sighted in on the first officer, who was beginning to crouch down, and fired.

Gary Douglas heard the small "snap" as a bullet passed by him at supersonic speed. He heard the audible "THUD" as that bullet impacted, and he watched as his friend fell backward to the ground.

"Crap!" exclaimed Gary as he dodged and wove the thirty feet to his friend.

Another bullet passed near him, and then another, the audible "crack" of the rifle following hard on the heels of the bullet's passage. He picked Doyle up by the collar and dragged him around the bend far enough to be out of the line of fire. He noticed the trail of blood from his friend as he sat him down, quickly ripped open his shirt, and removed the Kevlar vest that had been perforated by the high-velocity bullet. As he applied pressure to the wound on Doyle's left breast, he keyed his mic.

“Dispatch, officer down on I-225, approximately one-half mile east of the exit ramp! Need medical assistance immediately. Setting up perimeter here. We cannot get to the mall. We have several tangos at the underpass of I-225 and Pearle. See if Air-1 can get a look at these people.”

“Acknowledged. Will advise all units. Air-1 will be over you in thirty seconds. I will divert him to check out that underpass. Dispatch out.”

Gary could hear the helicopter now as two more deputies came up, and one of them took over for him in seeing to Doyle’s wound. Looking up and around, he located the sheriff’s helicopter as it approached at about 1,000 feet.

“Air-1, this is Douglas. What can you tell me about those tangos under the bridge?”

“This is Air-1. We’ve got them. There appear to be four or five...wait! One of them just fired some sort of RPG at a civilian vehicle approaching from the north. Ah! They’ve destroyed that vehicle. Okay, we’re back on the tangos...clearly four of them...no, there’s a fifth coming out from behind that HMMWV. Wait! He’s got a...hold! We’re going to be busy here.”

Douglas had scurried on his stomach to where he could get a line of sight on the underpass. As he did, there was a loud “WHOOOSH” and a cloud of smoke billowed out from the underpass. A small missile rapidly rose from that position to Air-1, and impacted the engine of the helicopter. The helicopter immediately lost power, and began to gyrate and oscillate wildly as it fell, burning.

“Mayday! Mayday!! This is Air-1. We’re going down!”

The transmission cut off as Air-1 plunged into a subdivision across the freeway, producing a brilliant fireball and a small black mushroom cloud that rose into the sky.

“Dispatch, the tangos just shot down Air-1! Advise all air units to stay well clear. They used some kind of shoulder-fired missile. We’re going to need heavy support here, I repeat, heavy support.”

With that, the lieutenant and two of his deputies began using their Ruger Mini-14 rifles to trade fire with Hernando’s men.

**March 20, 18:13 MST**

**Orchard Subdivision, Near Foothill Mall**

**Denver, CO**

Eldon Hightower ran to the berm. There were five of his friends with him, and his next door neighbors were right behind them. He and the first five were armed with their hunting rifles. A sheriff’s helicopter had just crashed into some houses in their subdivision with a resounding explosion after passing over their heads in a fiery, wildly twisting, and fatal descent. It had been shot down by some form of surface-to-air missile (SAM); Eldon took just a second to look back and be sure that it had crashed well clear of his own home and family in the Orchard subdivision, the place he and these others called home.

Eldon had been in his backyard, staking out the location of a new sprinkler system he planned to put in this summer when all of the shooting and explosions had started over by the mall. Upon hearing all of the firing, he ran to the berm overlooking the freeway just in time to see the attack on the initial responding squad cars from the HMMWV beneath the underpass. Eldon had not hesitated. He had served as a Ranger in the Army for eight years. He ran home and grabbed his hunting rifle, a Savage .308 with a 4X12 scope, and started back for the berm. As he did this, he had called out to friends and neighbors who were also coming out of their homes to see what was going on.

“Terrorists are attacking the mall!” he cried. “Get your rifles! They’re taking out the police on the freeway as they arrive. Those officers need our help!”

Many who heard Eldon quickly ran back into their houses and began calling the police themselves, adding pressure and traffic to an already overloaded circuit. But several others had done just what Eldon suggested, and had in turn, as they dashed towards their homes, called to others to do the same. Wives and children were fearfully asking what was going on as husbands and older brothers ran into their homes, grabbed their hunting and assault rifles, and handfuls or boxes of cartridges before running out their doors.

Now, Eldon and five others were the first to arrive back at the berm, take up positions along it. They began firing on Hernando’s men under the bridge just as Lieutenant Douglas and his deputies opened fire from up the highway.

Eldon’s next-door neighbors, Sean and Sarah, were running just behind Eldon and the other five men. They had heard Eldon’s call when they came out of their house after all of the explosions and firing started. Sean worked as a local volunteer fireman, and his wife was a nurse at the area clinic. Upon hearing the unmistakable sounds of gunfire and seeing Eldon running towards that sound with his rifle, and gathering as many neighbors as he could, Sean and Sarah had turned towards each other for just an instant and stared. An unspoken understanding passed between them, and they rushed into the house to get their first aid packs, and followed Eldon at a dead run. They arrived at the berm just as Eldon was instructing his five friends.

“Stay low to this berm. Fire your rifle, and then roll over a few feet before firing again. Shoot at the muzzle flashes from their weapons and at that HMMWV. If we provide enough cover fire, the officers down there—and hopefully the Guard—will be able to take these suckers out.”

Eldon had lived in the Orchard subdivision for ten years. He had moved here and taken a job after getting out of the service; he figured it was the right mix of good work and proximity to the hunting and fishing that he enjoyed. The environs of Denver had never disappointed him in either regard. Even though Denver was a growing high-tech and cosmopolitan community, it was still a big city on the edge of the Rocky Mountains, and a lot of hunters just like Eldon lived here. Each of them had a high-powered rifle similar to the one Rodrigo was using at the underpass—and they all knew how to use them. Others simply enjoyed exercising their 2<sup>nd</sup> amendment rights on weekends at shooting ranges. Either for fun, or for matches, these individuals were proficient shots.

Now, here at Orchard Subdivision across I-225 from Foothill Mall, the real purpose of the 2<sup>nd</sup> Amendment to the U.S. Constitution regarding the right of the people to keep and bear arms was made clearly manifest. As Sean and Sarah set up to administer first aid, which quickly evolved into treating trauma cases fifteen yards behind the crest of the berm, a hot and vicious firefight developed between the residents of Orchard subdivision and the terrorist team by the underpass.

**March 20, 18:16 MST**

**I-225 Underpass Outside Foothill Mall**

**Denver, CO**

It was time to go. Hernando knew that in a few short minutes, the helicopters would be coming to extract them all. The trouble was, Hernando and his two remaining men were completely pinned down and were not going anywhere. For the last several minutes, the amount of fire being directed at them had increased tremendously; some was coming from the officers down the freeway, where he was sure the local authorities were gathering their forces to try and push past him. But that was the plan, and he was prepared to handle that until he had to leave.

No, what was pinning him down, and had killed Rodrigo and his RPG launcher, was the increasing fire coming from that subdivision. A heavy volume of well placed, directed fire.

It had started right after they had shot the small helicopter down. Sporadic at first, it had grown to a fevered pitch very quickly, and had now killed two of his men, wounded another, and incapacitated their HMMWV, their ride out of here. They had fired many RPGs in the last few minutes towards that berm in an effort to break up the volume of fire. Hernando was sure they had killed a number of those people over there—but the rate of fire and the numbers of people didn’t diminish. They both just kept increasing. He was sure there were no less than a hundred people over there firing on him now.

“Where in Diablo’s Hades did they all come from?” he muttered to himself as he clicked his hand-held radio three times in quick succession, and then repeated that signal four times to inform Manuel that his team was in deep trouble. “How could they mobilize such a large force so quickly?”

He heard another unmistakable “thud” of a hit to the body behind him, and turned in time to see his backup RPG launcher, the man who had shot the helicopter down, fall back with a bloody, puckered hole in the center of his forehead. Crouching low, he moved to the support pillar for the underpass behind their HMMWV, from where his last man was still firing. This man was wounded in the thigh, and had applied a tourniquet to stanch the bleeding.

As he tried to take cover, Hernando felt a stiff tug at his own shoulder and fell down. When he tried to get up, he noticed the blood pouring down his shirt from a ragged wound high on his shoulder. A high velocity bullet had passed through there, and his collarbone was shattered. He knew that the pain would hit any second. The bullets were coming more rapidly now, impacting all around them.

Hernando painfully reached into the opposite pocket of his camouflage jacket with his good hand, and pulled out his electronic transmitter. It was intended for use during their departure in the helicopters, to activate a demolition charge of C-4 in their HMMWV and destroy it in an attempt to ensure their security. Each team had one. Now Hernando knew he was going to have to use his before the helicopters ever got there.

Talking to his last remaining team member, Hernando said, “My friend, we have done all we could. These gringos didn’t get past us, eh? We took out a lot of them, too. That helicopter of theirs going down was a sight to see! But, I am afraid we are not going to make it. What do you think?”

Hernando noticed that no more weapons fire was coming from his friend. Turning his head to look toward his position, Hernando was greeted only by the flat, vacant stare of the dead.

“Such a shame,” thought Hernando. That was his last conscious thought as he pressed the button on his transmitter, and his mortal world ended in a hot, fiery flash, not unlike those his team had been dealing out to others over the last ten to twelve minutes.

**March 20, 18:20 MST**  
**Parking Lot of Foothill Mall**  
**Denver, CO**

Over in the parking lot of the mall, in front of the now-ruined main entrance, Manuel heard the four Bell Ranger helicopters approaching. That sound diverted his attention from the rising cloud of smoke he had just seen mushroom up from the direction of the underpass of the freeway. He had heard the signal from Hernando, indicating he was in trouble and unable to comply with the egress. That had been followed less than thirty seconds later by the explosion Manuel recognized as the self-destruction of Hernando's blocking team HMMWV.

"That was an incredible volume of fire over there," thought Manuel. "Too bad, Hernando, my friend. You will be missed. You were one of the best," was all Manuel could allow in passing for his friend and compatriot. If he survived, there would be time enough later to properly mourn the loss.

Manuel had received similar signals from the blocking team at the intersection of Pearle, and from the parking lot entrance team closest to them on the other side of the mall. Those had occurred one after another a few moments before Hernando's signal, and there had been no other signal from them—just a lot of firing, some RPG and other explosions, and now nothing. Manuel assumed the worst. Through those signals and sounds, Manuel had tracked his enemy's movements towards him.

Manuel ran over the figures in his head. "Three teams unaccounted for and probably down. Two teams on the other side of the mall still fully engaged and unable to break off and withdraw. Four teams now converging on this position."

He had cleared an area for the helicopters to land, and established a final perimeter for defense while loading. Manuel had already keyed a code to the helicopters, waving one off. There would be no one to board it anyway, and it was senseless to bring it down under such circumstances. Manuel would try and use that last helicopter as his eyes above the fray.

Then the other three helicopters landed, and the men boarded their designated aircraft. Each of the helicopters had been painstakingly painted to match local TV station helicopters in color, and even in designation numbers. Each of them had been legally purchased over the last five years by legitimate front firms, financed through blind accounts created by financial personnel in the employ of Hector Ortiz's aging statesman friend. Tracking those accounts to their source would prove impossible.

Each of the helicopters had been reported "stolen" by their "legitimate" owners on March 15<sup>th</sup>. The confusion and massive amount of investigative work required for the attacks themselves had hindered sufficient attention being directed at these individual thefts to tie them together in time.

Now, as they loaded, Manuel and five others provided the final security. They directed several bursts of fire at approaching Sheriff's vehicles, squad cars, and a couple of National Guard HMMWVs that were now entering the parking lot on this side of the mall, and trying to converge on his position. When he felt he had gotten their attention and they stopped and took cover, he motioned to his men. They all boarded the last helicopter, which immediately rose at a very high rate of ascent into the increasing snowfall.

Hernando carefully waited as several vehicles converged on the HMMWVs that they had left behind. When the first three vehicles pulled up to them and Hernando could see the figures of men with assault rifles getting out through the snow, he pressed all of the self-destruct transmitters simultaneously. The resulting explosions caught these three vehicles and their occupants inside the blast radius, and caused the others to stop and take cover at a safe distance.

"That should hold them for another few minutes," he thought. "At least until they get their EOD people in to check out the wreckage. By then, we will be far away from here."

Manuel keyed in the last order on his mic and all four helicopters, flying at just over one thousand feet towards the west, immediately split apart and dropped below five hundred feet. They then embarked on their own weaving and diverging paths to the northwest, west and southwest towards the mountains and their separately planned escape routes.

**March 20, 18:21 MST**  
**25,000 ft and Ten Miles West of Foothill Mall**  
**Denver, CO**

"Sky-watch, this is Bolt-cutter, I have four tangos diverging and heading for the mountains on the deck, dropping below angels one."

The flight of two F-15C aircraft had just taken up position to the west of the mall, and well up into the overcast. They had been vectored there from their duty station covering the Denver International airport by their AWACS controller, Sky-watch. Each F-15C was armed with four Sidewinder air-to-air heat-seeking missiles and four Sparrow air-to-air radar-guided missiles. Their rules of engagement (ROE) had been clearly communicated while en route: Track the targets by radar, let the tangos clear the subdivisions, and then take them down at the first opportunity where their destruction would not harm innocent civilians on the ground. Bolt-cutter transmitted to Sky-watch.

“Sky-watch, Bolt-cutter will track and engage the two northern targets designated tango-1 and 2. Sword-man will track and engage the two southern targets, designated tango-3 and 4, copy?”

“Sky-watch copies five by five.”

As the helicopters made their way towards the mountains and employed desperate effort to use the steep, narrow canyons to help cover their escape, they approached landscape that was becoming less and less inhabited. As they flew over steep foothills, or barren washes, where no dwellings were located, one by one they were each turned into twisted, burning and exploding masses of wrecked metal, wire, fiberglass and flesh by the missiles from Bolt-cutter and Sword-man.

Bolt-cutter had no problem destroying both tango-1 and tango-2, but was drawn off to the north while targeting and destroying tango-1, placing him out of range to support Sword-man. Sword-man had to make a wide swing to the south to target tango-4 when it came over terrain compatible with his ROE. After firing and destroying tango-4, he planned to circle back and take out tango-3. But tango-3's flight path kept it over inhabited terrain, right into one of the many canyons leading up into the mountains from the foothills. In fact, that canyon itself was heavily built up with some of the most expensive dwellings in the Denver metro area, well up into the mountains. By keeping below the ridgelines on either side of the canyon, tango-3 disappeared from Sword-man's, Bolt-cutter's and Sky-watch's radar. The overcast they were flying in made any visual tracking impossible for the fighters.

This was no accident. Tango-3 was Manuel's helicopter, and he had personally laid out the flight plan to maintain its flight over inhabited territory right up into the mountains. Other teams had opted away from this, feeling that to do so would make it too easy for citizens to track their progress by sight and sound for too long. Manuel had been less afraid of the civilians than he was of the AWACS and any American fighters that might interdict them in time, and he had urged the other team leaders to do likewise. But the need to separate during their egress, and the feeling of the other team leaders that a direct and quick flight to relatively rugged and uninhabited terrain was best, had dictated otherwise.

“To their destruction,” thought Manuel as he noted the loss of each of the other helicopters. These local Americans, despite the surprise and destruction, had reacted quickly.

As Manuel's pilot gained a little altitude and dashed through a low divide, they passed out of the lavishly built-up canyon filled with expensive dwellings into a larger, but more rugged and less inhabited one. Staying just below the cloud bases, they zigzagged and wove between canyons along their escape route. With every passing minute, Manuel's planning was vindicated by the very lives of the seven men with him. They would be the only attackers on Foothill Mall to escape alive.

**March 20, 18:45 MST**

**Parking Lot of Foothill Mall**

**Denver, CO**

As the snowfall steadily increased, Lieutenant Gary Douglas surveyed the scene in front of the main entrance to Foothill Mall. Between here and the battle out on the freeway, three deputies were killed and another was injured. Two of those deaths had occurred right there, where the remaining terrorists had left their Hummers after boarding their helicopters and leaving. One of his vehicles had rushed to the scene with two local police cars, as the helicopters took off to try to prevent their escape and see if there were any wounded that they could take into custody.

In the rush and intensity of the moment, they had not even considered booby-traps. It had cost his deputies their lives, along with four other officers from the local police department. It was not something any of them would soon forget when dealing with such attacks.

But, as bad and as heart-wrenchingly painful as the deaths of his deputies were for him personally, they were nothing compared to the carnage in the mall or its parking lot, or out on the freeway. or over at the major intersection on Pearle. Carnage that was almost impossible to comprehend here in suburban America...unless you had experienced it yourself as the lieutenant and so many others had here today.

“These bastards came here to kill as many civilians as they could,” he thought. “And they succeeded, my God, they succeeded!”

There were twenty-three dead terrorists here around the mall, including the five that had been killed out on the freeway. Police officers and their second SWAT team (the first SWAT team had been ambushed over at the intersection on Pearle) had wounded and captured three more on the other side of the mall. Lieutenant Douglas was certain that they would not have killed many terrorists at all, and that they likely would not have captured a single one, if those citizens in the subdivision, and a number over at the intersection, had not gotten involved and helped. The amount of fire that subdivision had rained down on the terrorists over on the freeway had prevented their escape and had saved deputies' lives. Douglas was certain of it...even if it had cost a number of those civilians their own lives in the process.

Over at the major intersection on Pearle, the owner of Pearle Sports and Guns had reacted quickly upon hearing and seeing the terrorist blocking team open fire just up the street from his store. He had opened his store to citizens, and later to police officers, to make liberal use of his stock of rifles and ammo. The resulting volume of fire had created similar problems for the terrorists on the other

side of the mall as the terrorists had experienced by the underpass. There, too, a good number of those civilians, including the owner of Pearle Sports and Guns, had been killed.

“God bless them and rest them,” thought Douglas. “It makes me proud to be an American.”

He did not really want to know how many civilians had been butchered here in the parking lot, or in the mall. But it was his job to find out just the same. It looked to be several hundred dead, and an equal number injured. Quite a few people were coming out of the mall now, as the fire department now fought the fires there as it was clear that the danger of being shot down while doing so was past.

At least they had been able to prevent all of the terrorists from escaping here, and apparently the U.S. Air Force had gotten a lot more. As he reflected on this, Douglas could not help but again think of the help rendered by those brave citizens. Those terrorists at the freeway and at the major intersection would have surely kept his men, the local police, and the few National Guard who responded in time from disrupting their plans if those armed citizens had not become involved. Armed citizen involvement in these circumstance was something Lieutenant Douglas would never forget.

From dispatch and from other officers and civilians, it was now apparent that the attack here on Foothill Mall was not isolated. It was now all over the news networks that another mall south of Salt Lake City, as well as the Los Angeles International Airport, had also been attacked in similar fashion. The Lieutenant knew he did not have the time to worry about or consider that now. There were still too many people needing help here and too much work to be done before he could even consider finding out more about those attacks. And before he did, when he was finally done here, he was going to go home and hold his wife and children for a long, long time.

## Chapter 12

*“The principle of the sovereignty of the people governs the whole political system of the Anglo-Americans.” – Alexis de Tocqueville*

**March 20, 22:05 EST**

**Executive Conference Room, Laurel House**

**Camp David, Maryland**

“Alright, I’m going on air in fifty-five minutes to address the nation. I’ll need the latest update on casualties and the current situation with specifics on the following: Have all three locations been secured? What about the situation on the Mississippi River? Are we any closer to containing those attacks? We have to move quickly in addressing these particular attacks, and I want input from each of you regarding your thoughts on how we should respond to them. In that regard, I had already been preparing a set of Presidential Directives and Executive Orders to address the overall situation that we will also discuss. Now that these attacks have occurred, I have decided to announce them all tonight ... I intend to do the physical signing on air while explaining them to the people.”

Turning to his Attorney General, Dean Byron Hull, the outspoken, extremely conservative former Governor of Wyoming, the President continued.

“Dean, I want you and Ross in the Presidential Office with me on my right during my address. Curt, you and Stewart will be on my left, and Russell, I would like you standing behind me and to the left. The people know that each of you is either a member of the cabinet, or a high-ranking advisor reporting to the cabinet. Just the same, I want the people to see each of you as I announce these measures and as I discuss the individual parts each of your agencies will play in implementing them.”

Nodding to his Chief of Staff, the President said,

“Talbot, make sure the press people understand that the cameramen is to focus on each of these gentlemen as I announce their roles in these emergency measures.

“Okay, Stewart, brief us on the current situation in Denver, L.A. and Salt Lake City. We’ll follow that up with a review of the situation on the Mississippi River.”

Stewart Langstrom, the Director of Homeland Security, wore an earpiece providing him with continuous updates of the latest details of the attacks. Curt Johnson, the Director of FEMA, Dean Hull, the Attorney General, Ross Sessions, the Director of the FBI, and Admiral Tom Gwinn, the Commandant of the Coast Guard were all receiving similar up-to-date information. As updated information came in to each of them, Langstrom began his report.

“Mr. President, in Denver, twenty-three terrorists were killed on the ground and three were captured. F-15s flying CAP over the Denver airport responded and downed three of the helicopters making their escape with the surviving terrorists. The count is still uncertain, but from films of those helicopters as they were loading, it appears that another fourteen to twenty terrorists were aboard the three kills. Six to eight terrorists escaped in one helicopter and we’re searching for it with every available asset at our disposal in the mountains west of Denver at the current time.

The civilian causality count is not yet precisely known, but it will be several hundred dead and a similar number injured in Denver.”

At this point, Curt Johnson interjected.

“And what of the unilateral actions of those “citizens” Stewart. Sounds like a bunch of cowboys to me. The BATF people are saying, these civilians shot up half the freeway and they’ve identified some illegal weaponry in their possession. They are continuing their investigation.”

Stewart, annoyed at the interruption, and even more annoyed at the tone and content of Curt’s interruption, quickly replied:

“Curt, those “cowboys” as you call them are what allowed the local Sheriff’s department to break through a blocking force that the terrorists had placed on the highway. Similar actions at a major intersection on the other side of the mall had the same effect. Without those “cowboys” who put their necks right on the line, law enforcement and the available military would never have pressed the terrorists and killed so many, or captured the others ... and we would have had one hell of a lot more casualties. I will not sit here and listen to you take jabs at citizens who both risked and lost their lives while fighting our enemies. So I suggest that you put a lid on those comments ... now !”

The President could see the heat rising in both men. They were both extremely talented, and they both had strong wills. On this particular issue, the President sided with his Homeland Security Director, as did most of the Cabinet.

“Curt, what those people did in Denver helped prevent an even worse disaster. I believe that particular local Sheriff’s department will welcome Stewart’s Home Guard initiatives, and I intend to use the power of this office to help in any way I can. Some of the Directives and Executive Orders that I am announcing tonight are directly related to this effort. They may seem extreme to some, but we’re facing an extreme situation and we need the help of our citizens. I will say this ... there will be

NO investigation of those local citizens and certainly no prosecution for their part in engaging the terrorists. The very notion of it is repugnant.

“Right now, let’s finish the briefing. Go ahead Stewart, continue.”

The Director of Homeland security recognized that he, like Curt and pretty much everyone in the room, was operating on too little sleep, was under a lot of pressure, and was experiencing a great deal of frustration. Composing himself, he continued.

“In the Provo area, just south of Salt Lake City, the situation ended up being somewhat more fluid, though the scene itself is now secure. The small mall there collapsed completely and an unknown number of citizens remain trapped, injured or buried under the wreckage. Again, the count will be several hundred fatalities and a similar number injured. F-16 aircraft operating out of Hill Air Force Base downed all of the helicopters transporting the terrorists away from the scene. The last helicopter was shot down just one half hour ago as it was identified and downed in central Utah south of a small town called Green River. Forty terrorists are dead and ten wounded and captured.”

“Los Angeles International Airport is completely shut down. The terrorists there got onto the tarmac with the apparent help of insiders at the airport itself... apparently a group of undocumented, illegal alien workers. One group conducted a surprise RPG and machine gun assault on the airport response team command center at the outset. Another group of terrorists concentrated on the aircraft awaiting departure on the taxi-ways while a final group attacked the main terminal itself.”

“RPG’s fired into airliners as they sat waiting for take-off destroyed six on the ground. One pilot who saw what was happening to the planes behind him attempted an emergency take-off, but collided with another airliner in the middle of the runway and both of these aircraft exploded. That’s a total of eight loaded aircraft destroyed. A portion of the main terminal collapsed during the attack.

The death toll is likely to exceed fifteen hundred, perhaps as high as two thousand. Lesser numbers injured, certainly many hundreds, but very few people escaped from those airliners on the taxiway ... they were all full of fuel awaiting take off ... the carnage is unbelievable.

“The terrorists who attacked LAX used waiting Lear Jets to attempt their escape. Only ten or twelve of the terrorists were interdicted on the ground before those five Lear Jets took off. Our F15s were able to down three of the five. We got two out over the ocean at low level and one was shot down in Riverside County. Unfortunately, that one crashed into a residential neighborhood and there are a number of fatalities there on the ground. Two other aircraft are being searched for, but were able to avoid our patrols as they flew nap of the earth over the LA basin and made their way into the mountains ... one directly east and the other to the north.

“That’s the current update Mr. President, and I must add something in closing. All of the bodies of these terrorists and all of those captured are of Spanish or Latino origin. The prisoners are not speaking English, only Spanish. None of them have any identification, but the FBI is working hard on running all of their fingerprints and checking them both here at home and with Interpol and our allies.”

Everyone sat in silence for a few seconds as the reality of these latest attacks continued to sink in. The Secretary of Commerce, Russell Gage, spoke up first.

“While it’s been quite a few years since my military service, I have to say that these acts appear very well coordinated and very well funded. The ramifications are extremely distressing.”

The President, slowly shaking his head at the tremendous toll, turned and replied.

“Russ, there is no doubt about it ... these acts are planned to strike fear into our citizens and to incapacitate our mobilization. But by God, they are going to fail ! For the sake of morale as well as logistics, we must demonstrate that they will not be successful in those aims. Certainly we have been hurt by their attacks but we will show our nation’s resolve by minimizing any impact and by mobilizing our citizens and Stewart’s “Home Guards” effectively. We must rapidly defeat these infiltrators who are engaging us here at home now, and quickly identify and defeat any who pop up in the future. The measures we announce tonight will go a long way towards making that happen.

“Admiral Gwinn, what is the latest update on the Mississippi River?”

Tom Gwinn was a full admiral (four stars) in the U.S. Navy and had been selected for the four-year stint as the Commandant for the Coast Guard by President Weiskopf. Gwinn had earned the President’s respect and trust through their mutual service in the liberation of Kuwait from Iraq in 1990. With the latest Declaration of War, the President had placed the Coast Guard under the auspices of the Navy for the duration of the war effort. Admiral Gwinn was in this internal security and Homeland Defense meeting, along with General Nicholson Prebal, the Commanding General over the Continental United States (CONUS) Defense Forces now called Northern Command, or NORCOM. Normally, both of them reported in these capacities to Stewart Langstrom, the Director of Homeland Security. Overall, they both also reported up through their Joint Chiefs and participated as required in the National Security meetings that were held separately for the overseas war efforts. Now, Admiral Gwinn made his report on the ongoing attacks along the Mississippi.

“Mr. President, we are facing continuing action along the Mississippi. We have an enemy who has obviously prepared very well for years ... a sort of fifth column effort on their part. Militarily, that effort is inconsequential. But, from a logistics standpoint and from its impact on the civilian perceptions it could be highly detrimental to our efforts.

“In addition to the devastating attack on the propane storage facilities in St. Louis on the 15<sup>th</sup>, we have had no less than twenty separate attacks carried out on bridges, locks, dikes, other storage facilities, natural gas pipelines and electrical transmission towers along the river. These have occurred from northern Louisiana in the south to up near Minneapolis in the north. In addition, some of these “craft” have also made forays along the Ohio River as far up as Louisville, KY. The craft range in size from 28-foot cruisers to 48-foot houseboats. All of them appear to possess engines substantially more powerful than the usual for their size as well as military armament, including a mix of hand-held anti-air missiles, RPG’s, larger caliber machine guns and assault rifles. In many instances they are packed with high explosives for suicide attacks. We estimate that there are between fifteen and twenty of these craft remaining in the Mississippi and its tributaries.

“We have lost two helicopters and one F-16 to them in the last two days along with six of our smaller Ports and Water Ways 41-foot armed utility boats. In the process, nine of the enemy craft have been destroyed either by our forces or when they were destroyed in suicide attacks as with the craft involved with the propane storage farm in St. Louis. To date, we have captured five terrorist survivors. Mr. President, all of the prisoners and the recovered bodies are of Mid-Eastern descent.”

“We are now sending two flotillas of craft up the river from New Orleans. Each consists of two 110-foot Island Class Patrol Craft, two 87-foot Protector Class Patrol Boats and four each of the 41-foot armed utility craft. They will make their way north, one branching off up the Ohio River, over the next several days, destroying or capturing the terrorists and driving them northward to heavily fortified blocking positions we have set up at various places along each river. Their 25mm bushmaster and 50 caliber guns will be more than a match for craft either flotilla encounters.

“Mr. President, we expect to have the Mississippi situation fully contained in the next 7 days, with declining attacks throughout that time, as long as no other enemy craft are launched.”

The President considered that the Mississippi River and its tributaries accounted for a healthy percentage of America’s commerce, more than most American realized. Any lengthy paralysis of the Mississippi and Ohio Rivers would severely hamper mobilization efforts, and the knew it.

“General Prebal, work with Stewart to ensure that we have the Air National Guard, Air Force, and Coast Guard helicopters necessary to patrol the Mississippi and Ohio Rivers. We must locate and eliminate these enemies as quickly as possible per Admiral Gwinn’s plans. I certainly do not want this to drag out longer than the seven days Admiral Gwinn forecasts. I would rather see it contained even sooner if possible. If additional air units can help achieve this, give it priority.

“Ok, time is short. You all understand the serious nature of the situation we face. We are clearly experiencing internal attacks for which the perpetrators have spent a long time preparing. Cells of terrorists are being activated in an effort to weaken our resolve, terrorize our people, destroy our infrastructure and limit our mobilization. All of these motives are clearly a part of the overall war effort against us. We have to act forcefully to bring this situation under control as quickly as possible.

“Each of you is being given a copy of the Presidential Directives and Executive Orders I will be signing this evening. Many of them will involve your organizations and people. I am invoking emergency powers that the executive branch of government will exercise for the duration of the emergency. It is my intent that some changes associated with these orders will become permanent. In all likelihood, there will be some political fallout from these measures. Some of you may find your personal philosophy irreconcilable with these orders. Should conscience compel your resignation, I shall respect and honor your decision. To be sure, there can be no vacillation. The potential for disagreement and resignation aside, I insist on this team’s absolute unity in the face of these attacks. I can countenance no less. We must present a solid, united front to the people, to our enemies and to those politically motivated individuals and those they influence who may oppose this. Please take the next ten minutes to review these documents, and we will pick up the meeting at that point.”

As the Chief of Staff distributed the paperwork, the President responded to a signal from Jeremy Stone, the Chairman of the Joint Chiefs of Staff and Fred Reisinger, the Secretary of State, who motioned for him to approach them. Both men had been injured in the March 15<sup>th</sup> attack on the White House, and despite their wounds, they were up and attending to duties. After a few seconds of hushed conversation, the President quickly followed them, exited the conference room and proceeded to the communication center, manned by U.S. Marines, to receive a critical transmission from Turkey.

**March 20, 22:23 EST**

**Communication Center, Laurel House**

**Camp David, Maryland**

“Mr. President, I am sure you have heard, or soon will hear of the situation here. I wanted to personally apprise you of our current circumstance.”

President Weisskopf listened attentively as President Ahmin Sezir of Turkey continued.

“The GIR has achieved a breakthrough at Kirikkale, some fifty kilometers to our east. We are being forced to move the seat of government and have determined that Istanbul is to be the new location. I, and the members of the National Security Counsel and the Cabinet, will be leaving here within two hours. We expect to mount a vigorous defense of Ankara. But, given the extent of the

breakthrough, the numbers of the GIR forces and the likelihood that these facilities will be targeted by air attack at any time and by rocket and artillery in the next several hours, we are forced to evacuate.

“The National Assembly will do the same, although a number of them are missing and assumed either captured or in hiding behind enemy lines. Those who are captured are being summarily tried under Islamic Law and executed by the GIR for supposedly betraying the faith.”

Norman Weisskopf visibly winced upon hearing this. The GIR was apparently every bit as harsh, barbaric and cruel in their operations as the vivid videos were showing the North Koreans to be. The President solemnly swore to himself that there would be an accounting for these atrocities ... it may take a long time...but he swore before God, that there would be a day of reckoning.

“Ahmed, I am very sorry to hear this. I know you leave the capital there with great reservation, but you are doing the right thing. Your nation needs you...the entire civilized world needs you and we need Turkey to continue holding the line as long as possible to enable us to turn the tide.

“General Stone will coordinate with your Military leaders, NATO and our own commanders to insure that the time is not far distant when we do just that.”

President Weisskopf, General Stone and Secretary Reisinger could not see it, but a security detachment entered the Presidential Offices there in Ankara and urgently conferred with President Sezir while the American President was speaking.

“I am told Mr. President that a large GIR air raid is inbound to the capital. I must leave now. We plan to dispatch Prime Minister Bulint Eseven to you there in America as soon as we land in Istanbul. He will catch a connecting flight. He will be carrying proposals regarding the defense of the remainder of our country and the disposition of your troops that will require your approval.”

Norm Weisskopf turned questioningly to Fred Reisinger who simply shrugged his shoulders to indicate that these the existence of these proposals was news to him.

“That is fine. We will receive the Prime Minister with open arms and will immediately confer with him. Good luck. We will not take more of your time. God’s speed to you Ahmed.”

### **That same time**

### **Presidential Offices**

### **Tehran, Greater Islamic Republic**

As President Weisskopf ended his conversation with the Turkish President, a similar conversation, but from a much different perspective, was just beginning on the other side of the globe. President Hassan Sayeed of the GIR, or simple the Imam to much of the Islamic world, was listening intently to the speaker phone on his desk. On the other end of the encrypted conversation was General Jabal Talabari, the commander in Chief of the GIR forces that were on the offensive in Turkey.

“My Imam, we have achieved a major breakthrough near the Turkish capital of Ankara. The Turkish, NATO and American forces are retreating in a major withdrawal. I believe we will take the capital in the next twenty-four hours, two days at the outside.”

Hasan Sayeed was pleased with this. Turkey was a major kingpin for the western influence of all of the Middle East and had been for decades. The leaders there had become secular and had adopted many western ways...and accepted western finance and equipment as payment to turn against their brothers. Oh, the west attempted to exert influence on the more fundamental states it was true. But, it was through their real Islamic surrogates, the Turks and the ruling class in Saudi Arabia and Egypt that the major influence was brought to bear against their Muslim brothers and sisters.

Hasan and others had tried for many years to influence the leaders in those nations away from such a course. Individuals like Sahdam Hussein had filled their coffers and strengthened their own hold on power by appearing to cozy up to the west. He had taken their wares and allowed himself to be played off against his brothers while trying to build an Islamic coalition himself that would, in the end, turn on the west. Others, like Usama bin Laden, had taken a very fundamental path, perpetrating terror attacks against the west thereby hoping to instigate a spontaneous Holy war against the west.

But the west had proved too resilient and too wise to allow such actions to thwart their purposes. Sahdam had been corrupt and swayed by his personal ambitions, and ultimately he had been killed for them. Usama had been too much the maverick with no high ranking clerical backing and little major governmental support, aside from the upstart and isolated Taliban. The Americans had crushed his networks and hunted him down and killed him for his attacks of September 11<sup>th</sup>, 2001. No, in the end, Hasan saw that all such efforts had ultimately proven to be abject failures.

Well, Hasan was neither corrupt nor a maverick. He was fulfilling the prophecies under Allah’s direction. He alone had won support of the leading clerics in both the Shia and Sunni sects of Islam. He had been named the Imam of all of Iran, the original Islamic Republic and had moved forward with the stated purpose of forming a Greater Islamic Republic, the GIR as the westerners called it. And he had been successful. Turkmenistan, Afghanistan, Uzbekistan, Pakistan and then Iran had all come into his fold. Libya, Syria, and many others had followed suit. As anticipated and as planned with his Asian allies, the creation of a powerful, unified Islamic state had led to war with the west in general, and America in particular.

Now, with the help of his CAS allies, who had overwhelmingly surprised and were now also driving back western forces in Asia and the Pacific, he was moving steadily forward with the first of his major goals. He intended to bring the wayward Islamic nations into the fold. This meant that the secular Turkish, Saudi Arabian and Egyptian governments all had to capitulate or fall. As expected, they were attempting to stand with their western backers and their western equipment.

“But who could stand against Allah’s will?” Hasan thought as he now responded to Jabal.

“What of the Turkish government, the National Security Council, the Cabinet and General Assembly in Ankara? I want as many of them captured and tried under Islamic law as possible.”

On the other end of the line, in his command headquarters, which had been set up near Diyarbakir in eastern Turkey, Jabal wasted no time in responding.

“We have captured quite a few of the General Assembly who were not able to escape our advance across the country. Each is being tried in turn for supporting the infidel western influence that has been perverting Islam. Several have already been publicly executed as a result. The national government, particularly the executive branch, was last reported to be in session in Ankara. As we speak, there is a massive air strike being conducted against the capital. The legislative and executive complexes are targeted. We may eliminate some as a result of this strike, but my guess would be that they evacuated as soon as they got word of the breakthrough.

“One last comment if I may, Imam. During the attack on the American flank, where Turkish and NATO forces were massed, we used the first of the Turkish national brigades we have incorporated into our service. The element of surprise and the impact on morale, particularly as regards the Turkish forces, were very effective. We had large numbers surrender to their countrymen, some literally closely related by blood. This was the impetus that led to the collapse of the American lines. When the Americans or British are teamed closely with their allied Turkish units, they are much more difficult to defeat. But when we confront the Turkish forces head-on, away from the western influence, we have experienced much greater success. With this attack, we have proven that when we utilize those local forces loyal to our cause to confront the “puppet” troops of the west, the results are monumentally to our benefit. We then exploit that benefit to perform encirclements and flanking maneuvers on the purely western forces. The Americans and their western allies do not understand this yet my Imam, and though our losses are severe ... even horrendous, it is encouraging our troops. We must press this advantage for as long as possible before American and NATO intelligence recognize it and take measures to minimize their exposure. If you can continue to provide me with the materiel, I will push the western forces and their supporters out of Asia in six weeks!”

This is exactly what Hasan wanted to hear. He had chosen well in promoting Jabal into this leadership role. Many had warned against it. After all, Jabal had once been in the employ of the Americans against Saddam. But when Jabal had thwarted an attempt on Hasan’s own life last November outside of Irbil, and killed a senior CIA operative in the process, Hasan knew that he had found a truly faithful follower.

**March 20, 22:35 EST**

**Executive Conference Room, Laurel House**

**Camp David, Maryland**

The President re-entered the room. Everyone was sitting at the table and only a few were still reading. Most were caught up in what appeared to be sober contemplation. A couple of them were visibly upset. Norm Weisskopf knew he had to come directly to the point and quickly obtain consensus, while weeding out those within his cabinet who could not support him. Turning in the direction from which he expected the greatest resistance, he spoke to the man who headed the Federal Emergency Management Agency, FEMA.

“Curt, you look like you have a lot to say. Let’s get to it. Speak you mind openly and frankly.”

The President was not amiss in his expectations.

“Mr. President, quite frankly, I am shocked! Our duty here is clear. The Congress has passed laws that we are bound to uphold. Your issuing of these directives and orders will reverse the better part of thirty years of legislation when it comes to gun control and two of the primary federal agencies established to enforce those laws.

“I believe the changes to the BATF and the FBI that you are proposing will compromise our capacity to deal with the threats of saboteurs such as we’ve seen. The measures you propose establishing checkpoints along our waterways and throughout our highway system and at state borders are understandable. But, please help me understand your directives to ignore, or set aside enforcement of laws which congress has passed and your predecessors have signed, Mr. President. As I interpret them, I simply cannot support, or carry out these directives regarding firearms.”

The President had expected Curt’s disagreement. He knew that he needed to move quickly now and determine whether he or any others, would need to be removed from this administration and replaced by others who could support the measures. One thing was for certain: In the current circumstances, with war raging on two continents and America losing that war- and with abject

terrorism and military attacks occurring right here at home-America needed every available individual in the fight. Dissension at the top of the command chain was not an option.

“Curt, I am going to explain this to you in two ways. I hope that explanation will allow you to understand and be able to support me through these extraordinarily difficult times. If not, speak now ... and that goes for anyone else.”

“Number one. We face continuing attacks of unprecedented scale within our borders. Hundreds ... no, thousands of our citizens are being butchered by an unknown number of highly trained, ruthless and well-provisioned enemies who have taken up residence amongst us. Our “open border” policy and efforts to extend amnesty, or near amnesty to hundreds of thousands of illegal workers and aliens in this nation while we continue to only interdict small percentages of those crossing our borders has led to this. When you consider that this mass migration has been going on for decades you cannot discount the possibility that it has added significantly to the number of those willing to attack us within our borders. We clearly have enemies who have planned these attacks for years and we have given them the means to infiltrate the attackers right in amongst us. The sappers are therefore within the perimeter and I don’t need to tell you that this is a mortally perilous situation.

“It is a situation we must address expeditiously. We must thwart these attacks whenever they occur and minimize the loss of innocent life. We do not know where the next attacks will occur, and we delude ourselves if we think that any drastic curtailment of the lawful citizen’s rights to travel, association and free assembly will prevent it. Therefore, it is incumbent on us to have every area as prepared as possible for the next attack. The best way to do that is to arm the people themselves.

“In this regard, I intend to implement a policy that the Israelis enacted several years ago during the Palestinian intifadah of 2000-2003. The Israeli Prime Minister indicated that he wanted to ensure that armed citizen were in the right place at the right time when it came to terror attacks. In order to do that, they issued 60,000 additional concealed weapons permits to their citizens. The program was an astounding success. Terror attacks were interdicted as they developed, not after they butchered Israeli citizens. And this was in a country where the inherent right to bear arms is not recognized.”

“Well, in this nation, the people already have that right. Over the last several decades, in the name of “saving the children,” “security,” and in the name of any number of wrong headed initiatives, that right has been watered down by well intentioned but self serving politicians and organizations. But “shall not be infringed” is fairly easy to understand. And it is even easier to enact and respect.”

“The hard reality is this. We need armed citizens in place to confront these terrorists, these enemies, at the very moment they raise their heads. We saw this clearly in Idaho a few days ago during the attacks of the 15<sup>th</sup> where a state program had citizens armed and on patrol at infrastructure sites far too numerous to be covered by any “official” government agency. Those armed citizens helped prevent a catastrophe that could have cost tens of thousands of lives. Thank God they were there, thank God they were armed and thank God they were willing. Then, today, we had upwards of a hundred armed men in a neighborhood respond with their hunting and sporting rifles when their local mall was attacked. Another large group used weapons handed out by a gun-store owner, who himself was killed, to take on another group of these animals. Their intervention helped drastically lessen an atrocious and horrific attack on the innocent. Again, thank God they were there and willing ... and thank God they had the weapons to respond. What if those armed men had been inside the mall and in the parking lot when the terrorists started? I’ll tell you what. More of the terrorists would be dead, and a lot less of our citizens would be.

“Curt, we simply do not have enough law enforcement to go around. And many of those we do have are the right age and disposition to be used to fend off foreign armies bent on conquering the entire world...and sooner or later that will mean those would-be conquerors come to us here unless those individuals help stop them “over there”. In the hopes of stopping them “over there” I have already called up one million reservists. I am afraid we are going to have to call up a lot more before we are successful in halting and then defeating the enemy.

“All of this adds up to the fact that we have to have the people who remain here armed and in place to defend our homes, lives and liberty against these internal attacks. The answer is not 100,000 more police officers...or a million more. The answer is to be sure that honest, law-abiding citizens are armed and liberally distributed amongst us to stop these events as they happen. I believe it is the duty of law-abiding citizens to help in such situations where they are able. I know that is not a popular opinion amongst those who believe that agencies of government are the only ones capable in this area, but it is nonetheless my sentiment, particularly in these extreme, emergency conditions.

“So in this down to earth, practical sense, I intend to see to it that more of our people are armed, as many as possible. When was the last time you heard of a serious terror attack in Switzerland, where there is an automatic assault rifle in almost every home? The answer is you haven’t.”

“Now, number two. I have discussed this with our White House legal council, and have talked about it and considered it with friends of mine in the legislature and judiciary, Supreme Court judges and Senators and Representatives now retired. Actually, I have been doing this for some time as I have contemplated and anticipated such a need. The time has come to act. In so doing, we can never forget that the executive branch is a co-equal with the other two branches of government. It executes

the laws, the legislature passes the laws and the judiciary interprets the laws. It is a triad of power and influence, each member of which has taken the same oath...to protect, defend and bear true allegiance to the Constitution. To some extent, this means we are all watchdogs over the other branches, and that we are all in a position to counter any extra-constitutional moves that may arise. I have a moral and a legal duty and obligation to specifically challenge or ignore any law I deem unconstitutional. There is historical and legal precedence for this. Any such law, by long standing Supreme Court ruling is null and void anyway, and always has been.

"In addition, we are living in an abject emergency and significant power is vested in the executive branch...perhaps too much power from a constitutional perspective...to address such emergencies as directly as possible. Therefore, I have the wherewithal to approach this from two perspectives, the National Emergency perspective and the Constitutional perspective.

"And that's exactly what I intend to do. Today, as a part of our emergency plan, I intend to instruct the employees in the executive branch to simply not enforce many of the federal gun laws that are in existence. I will implement this policy on a dual foundation of constitutionality and emergency need. The leaders in the house and senate have already indicated to me that given the circumstances, we will not get the Executive Order thrown back at us. I intend tonight to begin undoing a lot of present gun legislation using the exact same tactics that got many of them passed. What this means is that the American people are going to be told, and they are going to see, how being unarmed leads to a significant increase in the violence, and ultimately in the death count of our citizens. I will then propose the solution that we arm the people according to the directives and orders you have just read.

"In addition, as these directives and orders indicate, I am requesting that the leaders in congress and the state governors and legislatures, enact legislation that will support and uphold these provisions not only for the duration of the emergency, but also once we are victorious and the emergency is past. I intend to do all in my power to get us out of the vulnerable position we find ourselves in and get back to a safer condition more in keeping with the original intent of our Constitution. I make no bones about using this horrible emergency and the patriotic fervor that it has naturally engendered to get this done. It begs to be done. It will save the lives of many more of our citizens right now, and even more importantly, it will get our nation back to a reliance on the principles that it was founded upon, and under which it prospered for the longest period of time."

"That's the explanation Curt...now it's time to decide. Are you with me? or on the sidelines?"

Curt Johnson was a product of a moderate philosophy when it came to gun laws specifically, and to all legislation in general. Although he was a moderate who favored basically smaller government over what the other side of the aisle promoted, he still believed that there were several areas where the government was far superior than the "private sector". In those functions he felt that the "common" citizen had absolutely no business. Law enforcement was one of these areas and to Curt's way of thinking, gun rights had to be restricted to sporting and some hunting in order to assure that there was no cross over, that no amateur citizens got in the professional's way.

"Mr. President, I simply cannot support what I consider a perversion of law enforcement and the creation of an abject constitutional crisis."

President Weisskopf was genuinely saddened, but not surprised. He shook his head for a moment and then looked Curt Johnson in the eye and said.

"I believe you are wrong Curt, but it is your decision to make. In view of your feelings, I will expect your resignation on my desk first thing in the morning."

Then, looking around at the faces of the others in the room, the President continued.

"Are there any others who feel as Curt does?"

The Director of the FBI, a hold over from the previous administration and another individual who was fairly outspoken regarding the absolute need for waiting periods, limits on personal firearms and other progressive gun restrictions, looked around the room for a moment, and then said.

"You'd best count me out Mr. President. I understand your position and what you are trying to do. And I respect the urgency of the situation, but I just cannot support the use of this crisis to undermine what I consider to be the progress we have made on this issue over the last many years. As Curt already said, it will create a Constitutional crisis at a time when we can least afford it."

Again, the President's countenance fell briefly and a saddened look passed momentarily across his face. Then he answered the Director of the FBI.

"Ross, I respect your desire to follow the dictates of your own conscience on this issue. But, I will tell you this: The Constitutional crisis in this regard has existed for a long time in my opinion. What we are doing with these measures is finally - even belatedly - addressing it. The Constitutional crisis in this regard began when a fundamental right laid out in the Constitution was first compromised. You cannot compromise a fundamental right. The moment you do the right has been forfeited...and that is what has been happening to one of the most fundamental rights upon which this nation was founded. The effort to return to a reverence and defense of that right simply represents the solution to an already existing crisis. That solution needs to be implemented now more than ever before. As we face this overwhelming external threat - and what I am sure is its offspring in the

horrific attacks we are experiencing on our own shore - we need to set this right. We are going to begin doing that this evening. In view of your feelings, I must ask for your resignation as well.

"Now, I would ask you to dismiss yourselves from this meeting, clean out your desks and have those resignations on my desk first thing tomorrow morning."

As Ross Sessions and Curt Johnson exited the conference room, President Weisskopf continued.

"Okay, they're both going to be missed for their management and administrative skills...but those can be replaced. We can't afford such deep philosophical splits. Unity of spirit and purpose in this administration will be vital if we are to prevail in this war. The crisis is too grave to risk our resolve or commitment at the leadership level with fundamental disagreements of this nature. The opposition, even during this crisis, is apt to be too intense for us to have the slightest waver in our commitment. Given those conditions, I must now ask again...are all of you with me on this?"

The President looked around the room, gazing intently into the eyes of each of those present for any sign of wavering. What he got back were the steady gazes and firm nods of a group of people who were as committed to these principles as he was...who were committed to enacting measures that would, in their eyes, drastically curtail the possibility of new attacks like those today.

"Now, for the presentation to the nation this evening, Dean, you stay on my right and until we have a replacement for Ross, I will refer to you for all matters concerning the FBI. Stewart, you continue on the left and with Curt gone, I will refer to you for FEMA activities. With the restructuring of the FBI, FEMA and the BATF outlined in these directives, Stewart, you and Dean will share overall responsibility for our internal security and response operations anyway. Let's get these final arrangements in place then, and I believe we need another fifteen or thirty minutes to do it."

Turning to his chief of staff, the President continued

"Talbot, please contact the networks and make sure that they know we are going to push back the address until 11:30 PM Eastern. In addition, make sure that the camera people know to focus on Stewart and Dean alone at the appropriate times. Do you have those nomination lists? Please give them to me and I will hand them out while you are talking to the network people"

The chief of Staff pulled several folders out of his brief case, handed them to the President, and then left the room to make the arrangements with the media. As he was leaving, the President handed one of these folders to each of the members of his cabinet who were present in the room.

"I need to immediately present the names for the heads of the FBI and FEMA along with the CIA and Secretary of Defense nominations, to Congress. In anticipation of this evening's resignations, and after a lot of soul searching regarding the other positions, here are the names I'd like to propose. I'd like each of you members of the cabinet who are receiving these names to review them and be prepared to offer your comments regarding them in tomorrow's 10 AM cabinet meeting. The other members already have their copies and will bring their input to that same meeting. I will present the names to Congress as early as tomorrow evening if possible.

"Please note that in light of current conditions. I hope to have that one available within the next week and will work further on it this evening after tonight's address to the nation."

**March 23, 19:30 local time**

**IDF Briefing Room**

**Tel Aviv, Israel**

"Therefore, coordinated operations of the RAH-66 in the Scout/Attack role with armored and mechanized battalions will maximize their effectiveness against the massed attacks you're likely to encounter. As we have demonstrated over the last several days, it is stealthy and visually hard to detect, it is extremely agile, it can defend itself against other attack helicopters and even against strike aircraft, and it carries the same weapons as the heavier AH-64. However, what it lacks in throw weight when compared to the Apache, it very nearly makes up for in overall effectiveness ... and it is more reliable and maintainable. All in all, for those amongst you who are history buffs, the Comanche is well named. For those of you who are not, I would suggest you read up on your 19<sup>th</sup> century American history, particularly regarding the southwest. The Comanche were amongst the most feared warriors of that time. Today's Comanche will represent the same to any enemy it faces.

"Let me close by saying this. We have been carefully analyzing the attack patterns against US and allied forces on the Arabian Peninsula, in Turkey and in western Egypt. The enemy is making good use of its principle asset...numbers. They are pairing up two and three units of relatively modern T-80 and T-90 tanks to take on individual M-60 and Abrams units and advancing in formations designed to allow for this. In addition, they are committing massive numbers of their strike aircraft to the air space over the battlefield and directly behind it. They are using these strike aircraft as a type of counter battery fire against our MLRS, and against our own attack helicopters. We are winning the air battle in terms of kill ratios in a big way, but we are not able to maintain air superiority, and certainly not air dominance. All this is critical when developing the operations plan for the Comanche in IDF service as an armor killer as the fighting progresses towards Israel.

“There is no doubt in my mind that the GIR intends to turn its attention to Israel if or when it is able to defeat the bordering Islamic states that have been allied with America. In that eventuality, the counter strategies to the GIR attacks being employed against American forces as we have discussed here today must be battle ready. I have been authorized to copy the U.S. battlefield command and planning staffs in both Turkey and Saudi Arabia on counter strategies as we develop and test them. We will be provided with their analysis and simulation results incorporating their own operational plans and, if available, actual battlefield reports and assessments.

“Are there any questions?”

Jess Simmons looked around the room. The briefing of the IDF leadership on plans to deliver a squadron of Comanche helicopters had gone well. Many of those in the room were people Major Simmons had worked closely with in the reinforcement of the Golan Heights defenses in the face of the rapid expansion of the GIR. His part in the “beef-up” had been to demonstrate the RAH-66 and development of plans for effectively integrating the first twelve Comanches into Israeli operations.

A hand was raised to his left.

“Yes Captain?”

“Major Simmons, I know this is not an overall intelligence briefing, and I know that this question may seem off topic...but what can you tell us of your country’s logistic support plans for the Arabian Peninsula? The reality is that GIR forces are moving effectively along the western coast of the Persian Gulf cutting off Qatar and entering the United Arab Emirates, and thrusting into the interior from Dhahran towards Riyadh. Without massive re-supply and reinforcement, Saudi Arabia will fall. If it does, this will trap US forces between two Corps sized GIR army groups. Such an eventuality will create a situation where integrating these few attack helicopters would be dwarfed by the urgent need to provide support for the withdrawal and regrouping of a much larger US force here in Israel.”

The question was informal and the fact that it had been asked at all indicated clearly that either the briefing had gone extremely well, or that the over riding concerns of those present was focused on a much larger picture. Jess was betting that this particular question was a result of the latter.

“Captain, let me answer your question this way. I am of course not in a position to speak to the much larger issues that your question raises. I will let our President, our Secretary of State and our Secretary of Defense articulate our official position. I will also leave it to our Theater Commander and his staff to address the specifics of the logistical situation. Please do not misunderstand. Your question is a good one, and one that is on everyone’s mind. I can assure you that the United States and my compatriots in the War College and in the various planning staffs are planning for every contingency...including the dire one you raise. In such a scenario, the experience that we gain now by integrating this particular system, the RAH-66 into your operations will be invaluable.

“With respect to the Comanche itself I can say this. For all the reasons I have already enumerated, the RAH-66 Comanche can be a significant force multiplier for the commanders who employ it. That is the reason your nation requested it, and in light of the current global circumstance, it is the reason my nation agreed to provide this first contingent to you. Should the need arise, either on the Golan Heights, or elsewhere here in Israel, I have no doubt that both of our forces in the area will be extremely grateful that the Comanche is present.

“Next question?”

From there, the question answer portion of Major Simmons briefing evolved into specific technical issues regarding the RAH-66 operating envelope and its capabilities. Comparisons of the Comanche with the Apache and Cobra helicopter gun ships already deployed by the IDF as well as the various platforms that the Comanche could expect to face, both on land and in the air, were put forward. Major Simmons’ combat experience and his expertise with the Comanche provided invaluable insights for the IDF, both in overview for the attending senior commanders, as well as for the more specific needs of those tasked with employing the Comanche for the IDF.

Colonel Abraham Eshkol was one of the latter. He had put in many hours along side Major Simmons over the last several days to avail himself of the Major’s experience in fully preparing his units on the Golan Heights. While it had been one of his captains who had posed the initial question regarding strategic considerations, the Colonel would not chastise him for raising the issue. He himself expected that the GIR would turn its attention towards Israel sooner rather than later.

“Apparently only after they succeed in pacifying the more moderate Arab states surrounding us,” thought the Colonel as Major Simmons completed his briefing and began to gather his material.

And the most troubling thing about the current situation was the calculated discipline displayed in the GIR strategy. With their lightning strikes on the more moderate Arab states, the GIR was putting Israel in a box. Should they succeed in pushing the Americans back and defeating Egypt, Saudi Arabia and Turkey, they would isolate Israel like she had never been isolated before. Should that occur, Colonel Eshkol knew that the Golan Heights and his forces occupying them would then sit squarely in the sights of the GIR juggernaut, flush with victory and emboldened.

“Great briefing Jess, you handled the questions well. I hope we can fully tap your wealth of expertise before you are reassigned. My nation is grateful that America would provide you to us at a time when you could so clearly be used to great advantage by your own forces elsewhere.”

The sixteen-hour duty shifts the two men had worked over the last week had given rise to the development of a close professional and personal bond between them. On the half-day they had been able to take off en route to this briefing, Jess had been a dinner guest of the Eshkol family and their relationship had developed to the point of a first name basis.

“Abe, I couldn’t have done it without your input and advice...and the excellent help of your staff. You already know the high esteem I hold for the professionalism and discipline of the IDF. The more I am here and the more I interact with your people at all levels, the more that is confirmed. Also the more convinced I am that your people will put these Comanches to good use. This is going to be one hellacious fight, however long it lasts, and I pray that we will all be reunited in peace with our loved ones when it’s over. I know I’m looking forward to that reunion more than I can say.”

**March 26, 09:23 EST**

**ABS Broadcast Studios, “Meet the Nation”**

**New York City, New York**

After the junior Senator from California completed her comments, the well-known host turned to the Attorney General of the United States, Dean Byron Hull, and said.

“Mr. Hull, you must admit that the measures contained in these Executive Orders and Presidential Directives are unprecedented in the history of our nation. At a time when so many Americans are concerned about violence, the President has taken steps to make instruments of violence more prevalent than ever. The Senator from California has just raised some pointed concerns with respect to the constitutionality of the President’s unilaterally suspending laws enacted by Congress. Two high ranking members of the President’s administration have resigned over this.

“So, one more time...isn’t the President bound to uphold the laws of the land as passed by the Congress? Isn’t anything short of that a violation of his oath of office? Isn’t it true, that as the Attorney General in this administration, your job is to execute faithfully the laws of the United States as passed by Congress, and prosecute any who would break them?”

The Attorney General had expected a grilling. Many of those who had made names for themselves, and even careers, by seeking and enacting legislation to limit the use of firearms, were not taking the President’s Executive Orders and Presidential Directives well at all. Since he had so straightforwardly announced them earlier in the week, many of the leaders in the firearms control movement, in and out of political office, were trumpeting their opposition to the measures in an effort to draw attention to themselves. However, despite such politically motivated opposition, in the midst of the crisis, public opinion and sentiment in the congress strongly backed the President.

“Fred, we have been over this several times already. The President himself has addressed these issues very directly, including a straightforward statement about the resignations. With all due respect to you and the Senator, these “unprecedented” actions are necessary precisely because we live in such unprecedented times and are confront such unprecedented attacks within our nation. We are at war, part of that war is now being waged within our own borders and hundreds, even thousands of our own citizens are being killed and terribly wounded. The Executive Branch is given broad ranging powers when it comes to repelling invasion and overcoming insurrection in such circumstances.

“What is happening here is that the President is simply exercising those powers. In this sense, the actions of the President are not nearly as precedent setting as those of Abraham Lincoln during the civil war when states legislative assemblies were cancelled and legislators were imprisoned for how they might vote on the question of secession. So, from the executive powers standpoint, what the President is doing is responding as the Commander in Chief in directing the nation’s response to its enemies in a time of war. In so doing, he has the strong support of the vast majority of the people.

“With respect to the oath of office, both for myself and the President ... and for that matter for every governmental official and uniformed member of the armed forces, that oath is to bear true faith and allegiance to the Constitution. It is not an oath to any single person. It is not an oath to any group of persons, and it is not an oath to a set of laws outside of the Constitution. It is an oath to the Constitution and all of us are bound by that oath to oppose any laws or actions that are not consistent with the Constitution. It is through taking this oath to heart that each branch of government remains a watchdog over the actions of the others.”

“Some of our colleagues disagree with the President from a constitutional perspective and they are free to pursue the constitutional avenues to address that disagreement. I do not think they will be successful. Clearly, gun ownership and possession is protected by the 2<sup>nd</sup> amendment. “Shall not be infringed” is clear and unambiguous language. The history of the nation indicates that for a much longer period of time than some of the current legislation has been in existence, that fairly unrestricted ownership and possession of firearms was protected under the 2<sup>nd</sup> amendment. Nothing short of a constitutional amendment can change that, and there are questions regarding the validity of that approach when the issue is contemplated in terms of the “unalienable rights” position.”

“Fred, again, as I stated to you in my opening remarks, this administration is committed to bearing true faith and allegiance to the Constitution...particularly under the current set of

circumstances. America's security will be at increased peril if we continue to perpetuate the faulty reasoning inherent to unconstitutional prohibitions."

The junior Senator could not contain herself and interrupted:

"Dean, I must say that I am ashamed of you. What you and the President and this administration are doing is using a horrific situation to push a radical, right-wing gun agenda on the rest of the nation. What you are doing is not only shameful, it's obscene. I tell you now, I along with a number of other Senators and representatives are going to do all we can to stop this either in the congress, or in court.

"I noticed you did not dwell too much on the resignations of the Director of the FBI or the head of FEMA. I think it is because they would agree that this is a malignant abuse of executive powers."

The Attorney General had expected unrelenting opposition from Senator Susan Crater. Her stand on gun rights and their stringent control was well documented. It was why the producers of the "Meet the Nation" show had invited her to discuss the issue with the Attorney General. Not even in these dire circumstances could she be moved from her ideological position, never mind the fact that her position was in direct opposition to the simple wording of the second amendment itself.

Dean Hull felt that the Senator's tenacious resistance to these initiatives, and her relative soft pedaling of the whole conflict with the People's Republic of China, was partly due to the close business and financial relationships with entities within the PRC. There were longstanding relations that she and her husband had maintained and that had started soon after her election to the Senate. Those same relationships were now a matter of discrete inquiry by the Justice Department for the possibilities of coercion or blackmail given the Senator's sensitive position.

But the fact that the network had invited her alone as the junior Senator from California onto the show was very telling. Originally, both Senators from California had been slated to be on the show with the Attorney General. In fact, the administration itself had expected similar abject opposition from California's senior Senator as well. The circumstances surrounding the conspicuous absence of the senior Senator and her silence in this matter would now be the Attorney General's "Ace in the Hole" in culminating his response to the comments by Senator Crater.

"Well Senator, once again with all due respect, I must say that our "radical" stance is much more in keeping with the views and actions of the individuals who founded this nation than what you propose. And in answer to the allegation that you and others raise that those individuals lived in a "different time", let me answer that in this way. While the nation was smaller and much more agrarian, while the means of communication and travel were slower and while their firearms were primitive by today's standards, one thing that has remained the same is the human heart. Those men understood human nature and provided for it in an inspired way in putting together the government that has endured for so long. In the midst of establishing it, they themselves stated how critical an armed populace was in preserving the government that they created. All other considerations aside, I will put my faith in what they crafted and in their own words concerning it.

"With respect to your attempts to use the Congress or the Judiciary to reverse what the President started on the evening of the 20th...it is your right to pursue such an avenue with your colleagues if you wish. But you'd best hurry because the numbers of those colleagues are diminishing rapidly. Very few people misunderstand the import of what occurred on the 20th at Foothill Mall in Colorado, or on the 15th near Boise, Idaho. Armed citizens repelled enemy attacks. Armed citizens saved lives. If more had been armed, far fewer of our people would now be dead or injured.

"Like I say, people on both sides of the aisle are seeing this for the obvious truth that it is. Let me quote your own distinguished colleague, the senior Senator from California, Senator Stonefeld in her press release yesterday,"

*"While I have typically been associated with what some call the gun control lobby, I will support the President in this initiative. These are perilous and terrible times. They are times that call for new ways of thinking. Perhaps after the crisis has past we can consider some common sense legislation once again. But in this crisis, and perhaps extending beyond it, I must support the President in arming more of our decent, law-abiding citizens so they might be in place to counteract such attacks and the loss of lives. Of course this has been made tragically and painfully obvious to me personally as a result of the loss of our dear nephew and niece at LAX earlier this week. That experience has caused me to rethink my stance on this issue like no other could."*

Senator Crater's demeanor was visibly impacted by the quote. She had always considered herself and Senator Stonefeld to be two of the leaders in the efforts to place strict controls on the so called and uniquely American "right" to own guns. That such verbiage would originate from the senior Senator was bad enough, that this lackey of what she considered to be an "out of control" administration would parade that verbiage in front of millions of Americans was just too much.

"Dean, that's way out of line. How dare you use what was clearly an emotional statement by Deborah, that was made at a time of numbing grief, to help push this agenda!"

For one instant, the Attorney General allowed his control slip as he, in turn, interrupted, the Senator. With eyes flashing briefly, he said,

"No Senator, how dare YOU doubt the seriousness of the situation, and how dare you ascribe your own agenda and ideology to a situation that clearly calls for us as a people to rise to the occasion

and fight for our very survival. The tragic loss that Senator Stonefeld experienced is being shared by tens of thousands of families all across this nation, the vast majority of whom recognize the gravity of the situation. They agree, and now she agrees, with the President on how we as a people must face it.”

Turning to the host of the show while noticing the clock, the Attorney General continued.

“Fred, even though time is short, let me just briefly review once again the essence of the President’s initiatives by citing the following five points:

“First, the only considerations that the federal government will recognize and pursue with respect to denying gun ownership and possession to any citizen of this nation are prior felony convictions involving the use of a firearm in the commission of that crime. Any existing background checks will be restricted to those areas alone and must occur immediately with the burden being placed on the federal system. In other words, there will be no waiting period, and if there are any troubles with the system, the check will occur manually and the sale will proceed. The only transactions that will be disallowed will be those in which the system identifies such individuals.

“Second, with the exception of fully automatic or crew serviced weaponry or explosive devices, all limitations on the import and sale of firearms in the United States will be lifted. This includes all semi-automatic rifles, various types of ammunition and certain handgun bans and restrictions.

“Third, all records associated with points one and two being held or archived by any federal agency will be destroyed.”

“Fourth, the law enforcement operations of the BATF have been dissolved. Investigative operations will now operate as a branch of the Federal Bureau of Investigation and be known as the ATFID, the Alcohol, Tobacco and Firearms Investigative Directorate. All future enforcement requirements will be the responsibility of the criminal division of the Federal Bureau of Investigation, and with respect to firearms, these will be restricted to the two areas I have just mentioned.

“And, fifth, the President is urging and expecting Congress to submit to him bills for his signature to establish these initiatives in law. Suggestions for a Federal Firearm’s Act reflecting these measures will be forwarded to the Congress within the week.

“So, Senator, I would humbly suggest that you put aside your commitment to an ideology that is so clearly out of touch with reality and join with us, just as Senator Crater has done. Either way, the President has made it clear that this administration is going forward with the measures he announced three nights ago, and we are confident that we have the votes in Congress and the support of the judiciary to insure that that they are carried out.”

### **March 26, 21:23 local**

#### **Inside the PRC Consulate**

#### **Panama City, Republic of Panama**

“Our security forces are already set up and in place around each installation and around the canal. The anti-air missile batteries have been erected and are protecting all critical air space according to plan. Our TAS vessels are positioned and ready to launch at zero hour. They are also positioned to utilize their LRASD weaponry against any threat from vessels out in the Gulf. We have a large flight of three hundred aircraft, supported by in-flight refueling en route as we speak. They will arrive tomorrow morning in conjunction with the operation against the growing US presence. Are the Panamanian Defense Forces prepared for the planned ground and air support?”

“Well that was the real question wasn’t it?” thought the foreign minister as the Chinese General posed his question.

“Of course, General, the President and his military council inform me that the US training bases and logistics centers in our country will be hit just before dawn as your aircraft arrive. Our aircraft will provide the necessary coverage as your aircraft carry out their attacks.”

“We are looking very forward to this...many of us have waited many years to regain our honor after what the Americans did to us in 1989. It was quite some time ago, but we have not forgotten. The ceding of the canal and removal of most of their military was a necessary first step...we are ready now to complete their eviction once and for all and keep them from re-establishing themselves here.”

### **March 27, 04:50 local**

#### **Just off the city of Colon**

#### **Republic of Panama**

The three Tactical Attack Ships (TAS) camouflaged as container ships had taken up position off the terminus of the canal near Colon. They were positioned to both launch their tactical missiles and to guard against the approach of any enemy vessels approaching from the Gulf. They had been in Panamanian waters for over two weeks, arriving just a few days before the initial Chinese attacks on America that had taken place on March 17<sup>th</sup>. This morning there were three more TAS vessels taking up similar positions on the western side of the canal.

The Chinese had been in Panama in significant numbers for years. Soon after the United States ceded the canal back to Panama in the year 2000, the Panamanians had awarded the maintenance and operation contracts for the canal to commercial firms from the People’s Republic of China. But these

“commercial” firms had also been fronts for the People’s Liberation Army (PLA). For years now they had been secretly bringing in more and more military personnel disguised as canal workers. During the same time they had been bringing in more and more military equipment and caching it for just this eventuality. The latest container ships, including the six TAS ships now in Panamanian waters, had brought in significant amounts of heavier weaponry, including twelve KS-2 missile batteries, almost one hundred and fifty tanks and enough ammunition to supply the Chinese security forces for twelve weeks of operations.

At zero hour, a total of seventy two ballistic missiles were launched from the TAS vessels at targets along the Gulf Coast of the United States, from Corpus Christi, Texas, to Houston, to New Orleans, to the Naval facilities in Pascagoula, MS. These were the same naval facilities that had been hit so hard on March 17<sup>th</sup>. While these launches were occurring, joint PLA and Panamanian Defense Force armor assaults were carried against all US facilities. These ground assaults were accompanied by air attacks against those same facilities by arriving Chinese attack aircraft.

Though the various detachments of Americans fought fiercely and well, they were taken completely by surprise and overwhelmed by the large numbers of Chinese and Panamanian infantry and armor forces accompanied by the surprising and very strong air support. By noon, most of the heavy fighting around the canal zone was over. A number of attempted air attacks by the United States that were staged out of Texas were ineffective. Quite a few American aircraft were lost to the KS-2 missiles on the TAS vessels and the KS-2 missile batteries that had been erected around the canal, in Panama City and near Colon. There were also a number lost to the SU-30 combat air patrols flying over the canal zone when the American aircraft arrived. These high performance and modern air defenses came as a complete shock to American forces who were in the process of building up forces in Panama themselves to retake the canal and defend it against just this sort of attack.

By the next day, US hyper-velocity reconnaissance flights showed the entire canal-zone under tight PRC military control...the canal works themselves rigged for demolition. The President ordered a cessation of any more hasty attempts to prevent the coup that the Chinese had already pulled off. Instead, he ordered the military to perform whatever harassing operations were possible while he ordered the State Department to immediately contact the Mexican government and the Columbia government for permission to stage troops and materiel in their countries. He then ordered the Joint Chiefs of Staff to have a plan ready to present to him within the week to reverse the situation entirely, but due to other intervening events, that reversal would be much longer in coming.

**March 29, 03:23 local**

**USS Jimmy Carter (SSN-23), Control Room**

**South China Sea**

“Ok, Tony, quietly take us down and make your depth six-zero-zero. Then maintain a steady bearing of two-oh-three degrees at five knots.”

Captain Simon Thompson was back in the South China Sea on a mission in the deep water off the coast. Unlike prior visits to this area, the United States of America was now at war and the Chinese. Any “contacts” would be enemies who would immediately do all in their power to destroy his vessel and his crew if they discovered them there ... and, with the new supercavitating weapons that the Chinese now had in their arsenal, they were very capable of doing just that.

“Well, they must be having a really difficult time finding us, otherwise we would already be dead,” Captain Thompson thought as he reflected on this harsh reality.

The USS Jimmy Carter was the third and last of the Sea Wolf attack submarine class. The most advanced, quietest and most deadly class of submarine in existence. Built to a standard that envisioned insuring dominance over what had been the continued expansion of the Soviet Union Navy submarine capability at the time, the Sea Wolf class had found itself literally “too good” ... and too expensive ... for the anticipated operations when the Soviet Union collapsed. Instead, a newer, less expensive and somewhat less capable-in terms of overall weapons capacity-submarine class, the Virginia Class, had been designed. It was this class that would be built in the numbers originally envisioned for the Sea Wolf class. The first three of that class were already complete, and the namesake, the SSN 774, USS Virginia, had recently been ordered to the Arabian Sea when hostilities with the Greater Islamic Republic had broken out.

“I wish we had a half dozen more Sea Wolf’s,” thought the Captain. He realized that the net effect on operations resulting from designing and building the new class of submarine had meant that for several years no new US submarines had been commissioned and sent forth into the world’s oceans. Of course, that thought had been that since nothing afloat was capable of contending even with the older class US submarines anyway, that there was time to allow for the break.

“Well, hindsight is 20-20,” reflected Thompson. The Jimmy Carter had been the last new submarine in the US inventory until the Virginia class had started coming on line.

Her construction had itself exceeded original schedule by several years due to the requirement to accommodate several enhancements to her original design. Most notable of these were lengthening of the hull to accommodate the Advanced SEAL Delivery System (ASDS) submersible and all of the

provisions and weapons for two full teams of Navy SEALs. The ASDS was really a mini-submarine itself that could carry up to ten Seals and their equipment in a safer dry environment than the earlier “wet” submersibles that the SEALs had employed.

On this mission, the Jimmy Carter carried her contingent of SEALs, but no ASDS. This was a mission for which stealth was the highest priority. While the ASDS itself was as quiet as the SSN, the piggy-back configuration with the ASDS mounted behind the sail, inevitably perturbed the perfect stream line flow around the Jimmy Carter’s hull and on this mission there could be no risk of even the slightest additional sound. The mission was to observe the activities, operations and characteristics of the new Chinese naval craft and particularly the new super-cavitating weapons they carried that they had launched so effectively against American warships.

“Their success had cost the lives of thousands of American service men and women, including some of my personal friends,” thought the Captain.

In the last week it had also been made painfully obvious that the Chinese had effectively acquired the acoustical signature of US submarines in particular. As a result the backbone of the US fast attack fleet, the Los Angeles (LA) class boats, were at serious risk. Well off the Taiwan coast, the Jimmy Carter had listened helplessly as an LA class boat had attempted an approach and attack on a Chinese Surface Action Group (SAG). The SAG was centered on one of the new Chinese Tactical Attack Ships (TAS) and escorted by two Jiangwei-II frigates and a Hangzhou class guided missile destroyer. All of these escort ships were capable anti-submarine platforms and the TAS and the Hangzhou were outfitted with the same LRASD weapons systems that had mauled the 7th Fleet.

As the Jimmy Carter observed, the LA class boat got into position and fired a spread of torpedoes targeting the TAS, the Hangzhou and the closest Jiangwei-II frigate. What had happened next was something everyone on board the Jimmy Carter would remember forever.

The Hangzhou and the TAS had each immediately fired a single LRASD. These two devices had entered the water and tracked off to the northwest towards the firing position of the LA class boat, now some fifteen kilometers distant and maintaining wire guidance on it’s own Mark-50 torpedoes. The LRASD weapons had been in the water and running at close to fifty knots for no more than three minutes when they each lit off their rocket engines and accelerated rapidly to over 500 knots and made directly for the LA class boat. In seconds the weapons had arrived on station and caught the US submarine as it had attempted to turn away and accelerate.

“There just hadn’t been enough time,” thought Captain Thompson.

The entire crew had heard the thunderous explosions of the mammoth warheads that the LRASD weapons carried. They both went off within a few seconds of one another. The first device had exploded within fifty feet of the LA class boat, breaching and crushing the pressure hull like an egg shell. The second device had plowed into the mass of turbulence created by the detonation of the first weapon and exploded as well. What fell out of the two explosions and sank to the ocean floor was no longer recognizable as a US attack submarine by the sensing devices on the Jimmy Carter.

The spread of “fish” fired by the American boat had only struck one victim, and that had been the nearest Jiangwei-II frigate, which had burned ferociously for over an hour and a half before settling in the water and sinking bow first. The lines to the other American torpedoes had been cut too soon to allow them to acquire the TAS or the Hangzhou, either of which was by far the greater prize. In a one for one battle with the Chinese, the loss of US LA Class SSN while claiming only the single Jiangwei-II frigate was a disastrous exchange.

The death of that American vessel, along with one hundred and fifty of their fellow countrymen, had been sobering for the captain and crew of the USS Jimmy Carter. This crew knew the gory details of the attacks on the fifteenth. They had also seen the extraordinary video of the death of the USS Constellation. Despite this clinical knowledge, they had not been personally present when Task Force 77 had been so terribly savaged and therefore had not developed the true gut-wrenching, mind-shocking personal experience that such a presence would evoke.

That was not the case here. They had witnessed the death of that LA class boat up close and personal, and there was nothing comparable in their experience. The crews of the US Navy’s SSNs had grown comfortable over several decades as the top predators in the world’s oceans. In this mind set, for the crews of US attack submarines, there were only two types of vessels, their submarine and “targets”. The last several minutes had all too vividly shown them the new reality...they were no longer invulnerable...now they could just as easily be the “target”. Their challenger was deadly and would attack with a fury that, for now at least, they could not counter. They themselves could have just as easily been the victims as those lost on the LA class boat.

The LA class boats, particular the Advanced Capability (ADCAP) boats, were superior to any other navy’s submarines. The US had over fifty such submarines at the onset of hostilities and it was felt that they would make quick work of the new Chinese surface combatants, despite the fact that on the first day of the war, four of those submarines had been sunk. Immediately thereafter, CINCPAC had dispatched twenty towards the South China Sea, the Yellow Sea and to conduct operations off of Japan and the Philippines. Since that time, the first four scheduled to arrive on station had failed to

report in and were now well overdue. The Jimmy Carter had, in all probability, just witnessed what had befallen those missing boats.

Despite the desire to avenge their countrymen, the Captain had maintained the absolute discipline that was required for the completion of his mission. Although he and every man on the Jimmy Carter felt certain that they could sink the entire Chinese SAG, they also knew that every man aboard the hapless LA class boat had thought the same thing. It was a risk they simply could not take, and it was not in keeping with their operation plan and specific orders.

No, the time for avenging would come later. He and the crew would have to be satisfied with the Situation Report (SITREP) that they would communicate back to CINCPAC later in the day regarding the demise of that LA class boat. Right now, the Jimmy Carter's acoustical emanations were either below the detection threshold of the Chinese sonar systems or they had not been entered into the database of the new weapons. Captain Thompson intended to keep it that way for as long as possible in order to gather sufficient information about these deadly threats. CINCPAC would then come up with effective counter measures and the means to defeat them.

**March 28, 04:35 local time**

**Lightning Flight**

**75,000 ft over Alaska**

"Backstop, Lightning lead ... Alpha window in 50 seconds.."

Captain Becky Bosworth was speaking to her controller on the E-3 Sentry AWACS aircraft which had taken up station to the north of Fairbanks. Captain Bosworth and her flight of four modified F-15C fighter aircraft were each carrying one of the latest upgraded Anti-Satellite (ASAT) missiles built almost twenty years earlier by Vought Missiles and Space Corporation and regularly upgraded to incorporate successive generations of avionics and sensors. The ASAT carried both active radar homing and infrared homing seekers for terminal guidance of their warhead. However, this would be the first time that they had ever been used in combat and everyone from the president down to Bosworth were anxious about this first engagement. A lot was riding on the ability of these missiles to take out the Chinese surveillance satellite capability.

"Lightning lead, Backstop ... Initiate profile ... slave to Backstop for Alpha launch at T-minus 10. Maintain profile through launch."

Backstop was instructing the Lightning flight leader and her wingman to slave the final acquisition and launch of the ASAT missiles to the E-3 Sentry, who would provide a digital data link to US Space Command facilities that were providing the actual data for the engagement. That data would be downloaded to the missiles via the digital link right up until launch. Upon final approach, the missiles themselves would activate their seekers and destroy the targets. During the entire time, US Space Command, through a multitude of sensors, would monitor the engagement. They would then analyze the outcome and assess the engagement, recommending any follow-up necessary.

"Backstop ... Lightning slaves at T-minus 10 ... profile through launch."

Within a few seconds, Captain Bosworth and her wingman received a green light on their panels verifying the status of communication data links with Backstop, and their ASAT missiles began receiving targeting information from the controlling aircraft.

"Backstop, systems nominal. Slaving in 3, 2, 1, Mark! Weapons slaved. You have the ball."

Ten seconds later, from an altitude now in excess of 60,000 feet, the ASAT missiles from the two F-15Cs lit and climbed rapidly away, accelerating through the thinning atmosphere until main engine burnout. Within 2 minutes they were at an altitude of 100 miles, and now seeking their target - a Chinese satellite that would be passing over the north Pacific.

Fifteen minutes later, a second pair of F-15C's in Lightning flight had launched their ASAT's at a second Chinese satellite passing over the central Pacific Ocean.

**March 28, 04:42 local time**

**In Orbit**

**Over the northern Pacific Ocean**

The latest reconnaissance satellites employed by the People's Republic of China were only marginally inferior to the United States KH-12 in terms of sensor capability, resolution and range. Their rapid advance was due largely to the efforts of intelligence operatives in the 1990s, entering America as exchange students who later obtained jobs in US technology firms and gathered information for several years while they worked their. Their rapid advances were also due to commercial "exchange" operations that netted significant information and materiel, to "joint" military operations and liaisons and through outright bribery of US officials. But the PLA had not stopped there. Under General Hunbaio, commander of the People's Republic's weapons research operations, a team had been specifically tasked with developing defenses for Chinese satellite assets against the very type of attack the United States had just launched.

That effort had produced powerful orbital adjustment jets for each satellite with enough fuel for several orbital adjustments. In addition, each satellite was fitted with an array of wide-angle infrared

sensors to detect the exhaust plume of attackers, and its defenses included chaff dispensers for releasing small clouds of metallic foil particles which mimicked the satellite's radar image to decoy any attack. Finally, each satellite was equipped with a relatively powerful Electronic Warfare (EW) suite which including jamming and the capability to produce small, but tightly focused electromagnetic pulses (EMP) directed at attacking systems. All of this was masked by the large size of the satellite vehicles themselves, which effectively masked the jets and their fuel cells, and also masked the degree of miniaturization that the Chinese had been able to achieve in including these other packages onboard. That larger size also fit conveniently to the western intelligence assessment of Chinese capabilities. The net effect was that each Chinese satellite could produce two or three decoys of itself while adjusting its own position by several thousand meters if alerted in time of a attack by ground controllers or by the satellite's own on-board sensors. If these efforts failed, the satellites could then attempt to jam or destroy the electronics of any approaching warhead.

And that is exactly what the Chinese satellite over the northern Pacific Ocean attempted to do.

As the two US ASAT missiles approached, they were detected first by ground controllers and then by the satellite's sensors. A preprogrammed evasive sequence was executed and two foil patterns were ejected before the missiles arrived. One of the missiles was drawn off by a false radar image and exploded harmlessly amidst that foil pattern. The other locked onto the actual satellite but was unable to adjust its trajectory sufficiently to make a direct hit. The US upgrades included both a home on jam and a shielding against EMP capability, so the electronic countermeasures were not effective when employed by the Chinese satellite.

As the warhead passed within two hundred meters of the satellite, a proximity sensor ignited the warhead. Of the thousands of pieces of shrapnel radiating out from the resulting explosion, only a few actually struck the satellite. One of these cut through the outer skin of the satellite, destroying one of the attitude jets and several electronic components that controlled the satellite's primary gyro. This damage produced an uncontrollable spin and a velocity change that sent the satellite into a lower, unstable orbit. Despite the efforts of the Chinese ground control crew, the orbit and the satellite's attitude continued to deteriorate and it burned up in the earth's atmosphere less than an hour later.

The Chinese satellite over the central Pacific was not damaged at all. Both US missiles missed as a result of the PLA ground control team having several more minutes to move the satellite further out of its normal orbit and produce more numerous and more effective radar decoys.

Within three hours, Lightning flight was back in the air over Alaska. This time they launched all four of their ASAT missiles at the remaining Chinese satellite as it passed over the central Pacific. With four missiles targeting it, one of the warheads made a direct hit and completely destroyed the satellite. The result was the creation of a huge gap in Chinese satellite reconnaissance over the Pacific Ocean that the United States planned to take advantage of through operational plans for the USS Kitty Hawk. Another result was that the attack triggered the Chinese into implementing their "Falling Star" operation targeting US space based assets as ordered by Jien Zenim.

### **March 29, 20:45 local time**

### **PLA Satellite Launch Facilities, 100 kilometers outside Kuqa**

### **The People's Republic of China**

General Xien Lei-Hsu watched silently as the last of three boosters lifted its payload rapidly into the clear night air. He had stepped outside of the control facility onto the VIP observation deck just a few seconds after the last of the three launches to watch the rocket rise into the atmosphere. The launch facility was located at an altitude of almost three thousand meters where the air was clear, thin and dry...and it made for an ideal location to insert satellites or other space-bound payloads into earth orbit. It was a location that the People's Liberation Army was making good use of this evening with the three "ripple" launches within just a few minutes of one another.

"Ideal for space launches, but not so ideal for civilized man," thought the General as the chill in the early spring air seeped through his parka. Spring was a very relative term in this location compared to other duty assignments where the General had served.

Regardless, the General thought that having the privilege of initiating the most visible and politically damaging portion of "Falling Star" was well worth the discomfort of tonight's weather. He knew that the several other launches occurring at other satellite launch facilities throughout the PRC would be assumed by the Americans to be launches of replacement satellites for those that they had downed earlier in the evening. He also knew that they would be wrong in their assumptions.

"No, for this location, at this time of the year, the discomfort is not bad ... not bad at all. It could be worse," he thought as the rocket faded from view and he made his way back into the facility.

"Soon it will be the Americans who are feeling the discomfort."

**March 28, 18:42 MST**  
**Global Watch Section, NORAD**  
**Cheyenne Mountain, Colorado**

“OK, there they go. I have multiple launches from all three locations inside the PRC. I’ve got a total of ten, no, twelve tracks now. We’ll have trajectory information momentarily.”

Noticing the anxiety in the watch section’s report, despite the discipline, the duty officer immediately communicated the report of the launches over secure lines to NORAD command. NORAD command would in turn broadcast it to a multitude of US Military commands around the world, including the National Reconnaissance Office (NRO) and the National Command Authority (NCA), the President himself. After several seconds, the watch section continued.

“OK...launch vehicles are NOT ICBMs ...all tracks show orbital insertion. No imminent threat to CONUS (Continental United States) or any other land target. Update on the orbits momentarily.”

Again the information was communicated to the US military and to the civilian leadership. As they heard the report that the tracks were not directed at the CONUS, many heart rates slowed and many sighs of relief were uttered...even though this was the expected news. Once the threat of any ballistic missile attack was allayed, most of the leadership presumed that the twelve tracks simply represented a PRC effort to replace the eight satellites that the US had downed early that morning, and to place redundant systems in orbit in case of more attacks. As such, they viewed each of these as more targets for ASAT missiles and went on about their business. Those involved directly with the operation to eliminate PRC satellites began to prepare for more attacks as soon as they had the data.

These presumption and the plans based upon them, along with the relief and the slower heart rates were all very short lived as the watch section began to receive the analysis regarding the specific orbits for each Chinese track. As one after another the orbits were plotted and the deadly celestial ballet began to materialize to the watch section, the duty officer raised the warning.

“Hold! I am declaring a NORAD defense emergency! All inclinations and apsides deviate from established patterns...the orbital tracks do not match normal insertions for recon. I repeat, the orbital tracks do not match normal insertions for recon. Projected tracks will intercept major national assets.”

This information raced around the world at the speed of light as the duty officer sent the report to NORAD command and as NORAD in turn passed it on as flash traffic. Duty officers and their commanders around the world set up in rapt attention as the information continued to come in. The NORAD duty officer was hard pressed to keep up with the reporting as more data regarding the specific orbital tracks kept pouring in through the watch section ... and it only got worse.

“Analysis data now indicates a 100% probability of orbital intercept insertions targeting NRO, US Space Command, civilian and NASA assets!

“We are now seeing a second wave of Chinese launches ... another 12 tracks.

“Primary target analysis indicates that our KH-12 satellites, our military communication satellites and major civilian communications satellites are all targeted. Wait, there’s more...analysis indicates that...dear God, they’re targeting the International Space Station!”

## Chapter 13

*“When the star falls from the sky, you will know that the end is near.”—Ancient Biblical Era Prophecy*

**March 26, 18:50 local time**

**Command Module**

**International Space Station**

“Captain Wynn! This is Lieutenant Clyde in the Command Module. You’d better get over here and take a look at this. We have Flash traffic coming in from Mission Control in Houston. It says ‘Eyes Only’ and is addressed to you.”

The fact that Larry was addressing him in a military fashion alerted Captain Bart Wynn, United States Navy, that something extraordinary was going on. Since the space station and NASA itself were civilian operations, informality was the rule in day-to-day operations, even if various members of the crew came from military branches of service of their respective governments.

Three of the four Americans were U.S. military officers assigned to NASA, had been in the program for years, and were experienced astronauts. The fourth member was a scientist who had worked for the government her whole life, and was also a very experienced NASA astronaut. The other six members of the crew hailed from three countries: the United Kingdom, Japan and Germany. Of these, only two were military personnel, Colonel Erickson of the United Kingdom, and Lieutenant Stuedler of Germany. The Germans and the Japanese had only last week replaced two Russian and two Canadian crew members who had returned to Earth on the U.S. Shuttle Atlantis. The U.S. Shuttle Discovery was currently docked at the space station, and two of its crew would be replacing two of the Americans the day after tomorrow and returning earth side.

“I wonder if there is a problem with the Discovery schedule,” thought the Captain as he typed in his access code and viewed the message.

It didn’t take Captain Bart Wynn but a few seconds to realize the import, the immediacy, and the danger of the situation facing the space station. The training and experience he had acquired as an astronaut, coupled with his fifteen years of prior active duty experience on board ships of the U.S. Navy, had prepared him well for such command conditions. His first action was to immediately reach over on the control console and manually activate the collision alert alarm.

As his friend Lieutenant Clyde Norris looked at him in surprise, the Captain said, “Lieutenant, this station is under attack by the People’s Republic of China. Three warheads of undetermined characteristics have been inserted into an intercept orbit for this station and they will arrive here within the next fifteen minutes.

“Inform Commander Granger on Discovery to immediately prepare for an emergency departure carrying all members of this crew. Also, activate the maneuvering thrusters and begin moving this station outbound, normal to our orbit. I doubt it will make much difference, but we have to try to move it as far out of harm’s way as possible before those weapons arrive.”

The incessant buzzing of the collision alert brought every member of the crew to the command module to find out what the situation was. Upon their arrival, Captain Wynn informed each of them of the grave danger they faced. There was little time. It would take another seven to eight minutes for the shuttle to prepare for an emergency departure; then the crew would have the remaining minutes to maneuver Discovery as far as possible away from the space station. Each crew member was given specific orders by Captain Wynn, instructing them to completely suit up, to power systems down, to seal modules, and do everything humanly possible to limit the damage in the time they had remaining.

All too soon, the time passed and the captain, who had been in contact with both the commander of the shuttle Discovery and with NASA Mission Control, ordered them all to board the Discovery and prepare for immediate departure.

**March 26, 19:02 local time**

**Command Deck**

**U.S. Shuttle Discovery**

“Our relative velocity to the station is now three meters per second outbound. The station is up to one point five meters per second. Commander. We are two hundred meters distant.”

Commander Granger soberly considered the data that his Executive Officer, Lieutenant John Burnett, the pilot of the Discovery, had just given him. Discovery was completely overloaded with fourteen people on board, and not enough couches to accommodate them. He had all eight of the couches filled, and everyone else was strapped into bunks on the lower deck. He hoped it wouldn’t get too rough, but he could tell that they were not going to get as far away from the station as he would like before those Chinese warheads arrived. Mission Control and the U.S. military had no idea what kind of warheads they were, and it was clear that he and those with him would be the to first find out.

Per instructions from Mission Control—and the Commander understood that the command came all the way from the NCA (National Command Authority or the President himself)—the Discovery was filming the station as he departed, along the expected approach vector of the Chinese warheads.

He asked his Executive Officer, “John, what’s the ETA for those weapons?”

Several minutes ago, the XO had set up a real-time readout of the estimated time to impact on his own console. Giving it a quick glance, he responded, “Commander, we’re estimating ninety seconds.”

Granger noticed Captain Wynn looking his way. He returned the look with a barely perceptible nod. They both were doing the math. They both understood what was occurring here. The “intercept” was not a matter of the Chinese missiles that overtaking the Space Station in the traditional sense of an intercept. What was really occurring was that the Chinese were simply placing these three warheads of some type in their orbital path and allowing them to run into them. Even if they were not explosive warheads, at the orbital velocity of many thousands of miles per hour, simple contact would be absolutely catastrophic. They’d be lucky to be four hundred meters from the shuttle when the intercept occurred, and that was simply not far enough for the commander.

“John, bring all the thrusters online now. Vector them for maximum velocity...peg it!”

The XO turned to his commander with a shocked look and replied, “Commander, that will stress the system and expend our maneuvering fuel. We won’t have any margin of error for re-entry!”

Like Captain Wynn, Commander Granger had served for many years in the Navy on combat ships. Part of that time had been spent off the coast of Yemen assisting the USS Cole after it had been attacked and almost destroyed by terrorists on October 12, 2000. Later, he had been the XO of a guided missile destroyer (DDG) off the coast of Afghanistan during Operation Enduring Freedom against the Al Qaeda and Taliban forces after the 9-11 attacks of 2001. As a result, Commander Granger had a firm grasp on the reality of the combat situation they faced.

“John, we have *no* time for debate. If we do not survive the next one hundred seconds, the additional fuel and the integrity of our hull will be meaningless. So kick it into high gear and do it now! That’s a direct order.”

The Lieutenant immediately complied with what had suddenly become a military imperative from his commanding officer. By activating all of the thrusters and vectoring them for appropriate movement, the stress on the Shuttle was perceptible to all on board. With the passing seconds, the XO continued to read out their velocity, their distance from the station, and the time to impact.

“We’re now at four point five meters per second relative velocity, two hundred seventy-five meters distant and forty five seconds to impact...now at five meters per second, three hundred ninety meters and twenty-eight seconds to impact...six meters per second, five hundred twenty meters and ten seconds to impact. Nine, eight, seven, six...I have some kind of separation on the warheads!”

When the XO made this statement, everyone’s eyes turned and quickly locked on the display monitor, magnifying the area of space where the warheads that they were rapidly approaching were located. There, in the distance, at the very limit of the shuttle’s on-board optical capability, barely perceptible flashes of light represented the location of the warheads for the intercept.

### **March 26, 19:04 local time**

#### **PLA Intercept warheads**

#### **Orbital path of U.S. Shuttle Discovery**

Those barely perceptible flashes marked the detonation of small separation charges on each warhead. Their purpose was not sophisticated at all in terms of tracking or targeting beyond what had already occurred in getting those “kill-vehicles” (KV) into their present position. Each had simply blown a group of buckshot-sized pellets out in front of itself in a circular pattern. For each warhead, this separation produced close to twenty-five hundred miniature “meteorites” that were thrown out in an expanding pattern that would reach almost four hundred meters in diameter before the interception trajectory of the Space Station would pass through them.

This meant that seventy-five hundred small, solid projectiles filled a twelve hundred meter front as the Space Station approached at orbital velocity. That was the extent of the Chinese ASAT technology, and it was about to be proven very effective.

### **March 28, 10:05 local time**

#### **Command Deck**

#### **U.S. Shuttle Discovery**

The shuttle rocked violently as the time for the interception came and went.

Amid the resulting warning lights, alarm buzzers and general confusion, Commander Granger and his XO quickly evaluated the condition of the shuttle.

“I have positive pressure on both decks.

“I’m showing a loss of both primary and secondary hydraulics for the port wing control surfaces...checking further now.

“The system is reporting a loss in integrity of the thermal shield on the leading edge and underneath the port wing surfaces. Looks like we have serious damage to that port wing.”

As members of the Space Station crew shouted questions, Commander Granger raised his voice. "All right, people, we are alive but damaged. Hold all conversations for the time being to the minimum. Let the crew do its job."

Captain Wynn added his own directive. "That's right. Folks, we are visitors on this craft. Commander Granger is in charge. He will let us know what is going on in good time, and he will inform us of any way that we can help. For the time being, let's stay calm and let them do their jobs...and thank God that we are alive."

"Take a look at the Space Station if you doubt for an instant the need to be thankful."

With that, all eyes, except Commander Granger and the XO, who were still exerting military discipline and assessing the condition of their craft, turned to the display monitor for their on-board cameras that were focused on the Space Station...or better said, the remains of the Space Station. The video, which was also down linked to Mission Control, the command of NORAD, and the President and his situation team at Camp David, showed the shredded remains of what had been, up until just a few seconds ago, the most sophisticated and greatest undertaking of mankind in space to date.

"Gone...just like that, in only a split second," thought Captain Wynn as he viewed the drifting and expanding field of wreckage a few hundred meters away.

The basic command, living and scientific modules remained intact as units, but even from this distance, it was clear that they had all been perforated hundreds of times by the interception. The bulk of those modules appeared to be separating from the vicinity of the space shuttle at a noticeable rate...towards the clouds below. In addition, all of the communications, power, observation and other antennae and sensors had been stripped away and destroyed in the literal hailstorm of projectiles through which the station had passed. Except for a few larger components of the solar array, very few of the pieces were even recognizable. That entire wreckage field was drifting away with the modules.

"It's no wonder all of that was stripped away," thought the Captain. "At those velocities, even the smallest objects laid in our path carried enough energy to make mincemeat out of all of those antennae, sensors, and receivers."

As the occupants of the shuttle and the personnel who were earth-side contemplated the devastation, Commander Granger relayed his initial assessment of the attack on the Space Station, and the consequences it held for Discovery to Mission Control in Houston.

"Mission Control, this is Granger. The Space Station is a complete loss. Initial calculations from this location indicate that the station's orbit has been completely compromised, and it is falling rapidly into an unstable track that will cause it to re-enter the Earth's atmosphere. You guys are going to be better able to verify that and to determine the exact track from your position...and we are going to have our own hands full, anyway."

"Apparently we passed through the extreme edge of the target pattern of those weapons. It was a very close call. A few tens of meters less departure on our part, and we would have all been gone. As it was, we took severe damage to our port side wing. I have a camera looking at it now, and you can see for yourself that the integrity of that wing has been compromised beyond our ability to repair it with the expertise and materiel we have on board."

"John, bring up the video of that wing on the so that everyone on board can see."

As the XO brought up the disturbing image, everyone turned to that display and saw what the Commander was talking about...saw exactly what Mission Control, NORAD, and the situation room in Maryland were also seeing. The port side wing of the shuttle had been perforated in scores of places. The control surfaces on the trailing edge were still hanging onto the structure closer in to the hull of the Discovery, but were dangling loosely out in space beyond that. A large number of black tiles, both whole and in fragments, could be seen drifting out into space around the shuttle where they had been fractured and knocked free by the projectiles that had passed through the wing. Towards the tip end of the wing, the outer covering had been stripped away, exposing the bare structure beneath it.

"Houston, we will not be landing this craft as is. While the crew cabin sustained no apparent damage, and life support, fuel and other consumables are all intact, damage to the flight and control surfaces on the port wing, and to its heat shield eliminate that as an option without extensive repairs. I believe we will be able to maneuver here in orbit, but I would suggest that ground control put their heads together and come up with a good evasive plan while we're up here. We'll want to be able to avoid future intercepts should the enemy track our orbit, which I am sure they will try to do."

"What are your thoughts on having our science officer make an EVA within the next hour or two to obtain a full assessment of the damage. We can probably accomplish that assessment in a two to three hour EVA. The close-up video of the damage that we obtain during the EVA will help the engineering team down there to come up with the plan for how to proceed."

"John and I need your input in stretching our consumables to maximize our endurance given the number of personnel on-board. I will also ask Captain Wynn and his XOs assistance in developing and implementing these plans and a rotation schedule."

Mission Control concurred with Commander Granger's assessment. Over the next forty-five minutes, definitive plans were derived from that assessment, and were discussed and analyzed by all those on board and by those on the ground with a calm and discipline that had been honed in rigorous

pre-flight simulations. Their calm belied the desperate nature of the crisis facing the crew and occupants of the Discovery. At the same time, those on the ground, from the President and his staff down to the individual controllers of the various American military satellites, came to terms with the full impact of this latest attack by the Chinese.

**March 26, 20:10 EST**

**Situation Room, Laurel House**

**Camp David, Maryland**

"Okay, that sums up the situation in Panama. I need not remind you all of how critical that canal is to us for logistical purposes. We simply must find a way to get it back, or at the very least eject that Chinese expeditionary force out of Central America as soon as possible. Although we need the plans to do this yesterday, I am afraid that our ability to put together and execute such plans are going to take some time given the situation in the Mid East and in Asia. Nonetheless, General Stone, I want the process started and the operational plans developed. In spite of the conditions in other theaters, we will have to consider Central America a new theater of operations and put together the forces to execute those plans as soon as possible.

"Now, let's turn to the exchange in Space. I have asked John to brief us on that. John?"

As the President sat down, John Bowers thought for a moment as he made his way to the front and the small podium in front of the President's National Security team in the situation room at the Laurel House at Camp David. As the National Security Advisor to the President, he had significant direct access to most of the other members on the President's cabinet. If circumstances warranted it, he also had direct access to the President on most occasions, able to interrupt what would otherwise be closed meetings. In fact, when the President had asked him to serve in this capacity, he had made it clear to John that such unfettered access was a part of the job description.

John Bowers' association with the President went far beyond political. They had served as comrades in arms during Desert Storm, when then-Captain Bowers in the 1<sup>st</sup> Brigade of the U.S. Army's 3<sup>rd</sup> Armored Division had led a platoon of Abrams tanks that had been the pivotal unit in the destruction of an Iraqi Republican Guard Armored Division. The resulting recognition and awards ceremonies had introduced Captain Bowers directly to the "General" and they had remained close ever since, as was now evidenced by Bowers serving as the President's National Security Advisor.

Now, with all that had happened since that appointment, he reflected on the current circumstance. America was in a deadly mortal struggle. Against most odds and against the thinking of most analysts of the day, the People's Republic of China had opened up a broad war on the United States and her allies. It was a war in which the United States was not faring well to date. Of course, the President and others like John Bowers had themselves not been in step with the thinking of the analysts. It was one of the reasons the President had been elected.

In the short time available to them since the election, they had done all in their power to revamp and prepare America's military and her people, so as to avoid the type of situation they now found themselves in. There had simply not been enough time, and clearly their enemies had recognized the effort and had acted to pre-empt it. Those enemies were determined that there would be no "Reagan-style" revamping of America's military that had proven so successful in the 1980s.

At this point, outside of the President himself, John knew that no one else in this room was privy to the next assignment that the President had for him. He was floored by the mention of it during his confidential meeting with the President three days ago, after the Presidential address to the nation—thunderstruck was probably a better word. The one exception regarding knowledge of John's new assignment was the President's wife, Linda, if John was any judge. But that would soon end.

By the upcoming weekend, it would become clear to the nation, and to the world, that the President intended to nominate John Bowers as the next Vice-President of the United States. It was beyond John's comprehension as to all of the reasons why, but John was a loyal and dedicated American and would not turn down any call to serve, particularly at this time. He had required little time in coming to that decision, and the deal had been cemented after speaking to his wife, who was as committed and loyal an American as her husband.

This nomination would, of course, create another vacancy in the National Security Advisor position. The President had asked John for his recommendation. John had not hesitated, and had named Bill Hendrickson, the man running all of the nation's imagery intelligence over at the National Reconnaissance Office. John knew Bill had a very good sense of worldwide geopolitical conditions. Bill also possessed a strong knowledge of history, was a dedicated and absolutely loyal American who agreed with the President's initiatives, was very capable at briefing the NCA, and was a brilliant analyst in his own right who was unafraid to think outside the box.

In addition, Tom Lawton, whom Bill would recommend for promotion to fill his current position in Imagery Analysis, would completely fill his predecessor's shoes. The President had concurred with the appointment of Hendrickson, and had asked John to make the necessary initial contact, after which the President himself would meet with his new National Security Advisor. That meeting had occurred

just yesterday. As a result, Hendrickson's appointment would be announced this weekend also, immediately following the announcement of John Bowers' nomination as Vice President.

For now, John had to continue with his present assignment. There was a briefing to give.

"Okay, here is the latest status regarding the exchange with the PRC in space. For our part, Operation Lightning Bolt completely negated the PRC's satellite surveillance capabilities over the Pacific and most of Eastern Asia. In short, we completely accomplished the goals we had established. The operation did require more ASAT missiles than we planned because those Chinese satellites proved tougher to kill than we had anticipated. Our analysts are looking at the data now, and we are confident that we will achieve better kill ratios in the future. Just the same, we should restart ASAT production to maintain our capability, pending wider deployment of the Ballistic Missile Defense, particularly the phase implementing our capability against exo-atmospheric threats, which will then provide similar capability for satellite intercepts.

"In that regard, our Theater High Altitude operational tests involving the Block IVA Standard missile have come to a successful completion, and we have two Aegis platforms already carrying their normal complement of those missiles. I suggest that our wartime mobilization plans call for a 150-200% ramp up in production such that we can deploy six of these platforms off the East Coast, and up to ten off the West Coast by November.

"Now, for the results of the Chinese attack. Quite frankly, we were caught completely off guard. We realized the Chinese had been testing ASAT capabilities, but our assessments underestimated their ability to deploy anything effective in this time frame. Our best estimate is that they deployed in mass production without full testing. Clearly, whatever level of testing they had implemented was effective, because they achieved a 90% success ratio for the weapons they launched.

"They used all three of their space launch facilities and ripple-launched multiple payloads within a few hours of our downing of their satellites. This was obviously a pre-planned response to our attack. As a result they launched twenty-four KV's (kill vehicles), of which twenty-two successfully achieved intercept insertions into orbit. Those twenty-two KV's engaged our Space Command, NRO, military, NASA and civilian satellite assets, including the International Space Station."

The Secretary of State interjected at this point. "And what of the crew on the Space Station? That was an international crew, including Germans, Japanese and Canadians. What is their status?"

John knew that his initial response would be well received, but it was not as rosy as it seemed.

"Mr. Secretary, everyone on the Space Station was evacuated safely. Luckily, and coincidentally, we had the Discovery at the Space Station at the time of the attack. Despite very little notice, Captain Wynn and Commander Granger successfully evacuated all personnel to the shuttle, and were able to avoid destruction by quickly maneuvering away from the Space Station.

"Unfortunately, the Space Station was hit and is a complete loss. Its wreckage will fall to earth sometime on the evening of the 29<sup>th</sup> in what we hope is a remote area of the southwest Atlantic Ocean, although the exact location is as of yet undetermined.

"Also, unfortunately, Discovery did not avoid damage, and the damage is severe. As most of you have already seen on the video, one of the shuttle's wings was damaged by the weapon's kinetic payload. The damage has rendered the shuttle incapable of re-entering the Earth's atmosphere and landing. Without relief, the fourteen personnel on the shuttle have enough air for a maximum of twelve more days. Without relief before that time, they will all die."

The relative silence of the room was broken at this point by the murmured conversation of several of those present, and a number of people trying to question John at once. To bring order to the room, and to allow the briefing to continue, the President spoke up.

"I know this is distressing news for all of us. It represents a tremendous setback to the international community...the free international community. The investment in time and in hardware is lost, but certainly not in the knowledge we have developed and not, as of yet in, those fourteen brave souls marooned on the Discovery. We will find a way to bring them down, so help me God.

"In the meantime, as difficult as it is to say this, the hard fact is that the rest of John's briefing is even more important and more distressing from an overall perspective. John, please continue."

John Bowers was grateful for the President's intervention. He did not want to cut people off in mid-conversation—people who were still his senior cabinet members, and who were coming to grips with so many difficulties at once. He preferred to let the President handle that.

As the room quieted down, he continued, "As the President has said, from an overall strategic and military perspective, the rest of the briefing is even more significant. With the exceptions of our geosynchronous assets, two satellites that the Chinese KV's missed, two KH-12s that we were able to maneuver out of the way, and one KH-12 that was severely damaged, all of the other satellites targeted by the Chinese have been destroyed. The following table summarizes these losses."

**TOP SECRET ----- TABLE 1-1 ----- EYES ONLY**

SUMMARY OF SATELLITE LOSSES 03-26-06

ASSET	AGENCY/BRANCH	STATUS	PRC KV's
Space Station	NASA	1 destroyed	3

Shuttle Discovery	NASA	1 damaged	N/A
KH-12 Satellites	NRO	2 destroyed	10
		1 damaged	
		2 undamaged	
		3 not targeted	
Commsats	SPACOM	3 destroyed	3
		6 not targeted	
GPS SATs	Army/Navy	3 destroyed	3
		8 not targeted	
Civilian SATs	News/GPS	3 destroyed	3
		12 not targeted	
Totals		12 destroyed	18 functioned
		2 damaged	2 malfunctioned
		29 not targeted	2 missed

After everyone had scanned the table for a few seconds, the National Security Advisor continued, "Okay, just what does this mean?"

"Quite frankly, it means that we have lost a significant portion of our surveillance, GPS targeting, satellite communication, and satellite-based news communication capabilities in the Western Pacific and the Middle East. In essence, the People's Republic has very nearly done to us what we have done to them. With the two surviving and operational KH-12s, we have retained only limited surveillance capability. That remaining capability is predominantly focused in a band over the more southern portions of the two theaters of operation.

"It also means that we must presume that the Chinese, once they have assessed the results of their operation, will attempt to finish the job, both in the Pacific and Middle East and perhaps elsewhere, just as we will be doing. We do not know how much inventory they have, or what their capability is to restock it, but we must now presume that they have stockpiled significant quantities and that they came to this fight prepared. Anything less makes no sense.

"Finally, in closing, what are we capable of doing about it?"

"Mr. President, ladies and gentlemen, we have several options, some of them based on operational plans worked up in the war college for very similar situations. The problem is that a number of them were postulated to occur a few years later, if at all, when our own technological advantage and capabilities would have been even more pronounced.

"We have atmospheric capabilities of which we have already made good use, and which we can continue to utilize. The SR-77 Pervador and HR-7 Thunder Dart aircraft are the most advanced systems of their type and are still very capable in this regard. And they are even more versatile in that they are not limited by the orbital mechanics that constrain our space-based systems. In essence, we can make more use of these and 'Continue the Mission'."

At this point in the briefing, the Chairman of the Joint Chiefs of Staff, General Jeremy Stone, wanted to clarify things with respect to the SR-77 and HR-7 for the rest of the attendees.

"John, what you say is true, and those reconnaissance platforms of ours are very capable. But I do want to remind everyone that the Chinese have developed systems that can threaten both platforms. The improved version of their KS-2 anti-aircraft missile, what we have designated as the KS-2+, is the primary threat. Without going into detail, in May of last year, they proved this capability against the HR-7 itself and showed a surprising capability to track, lock-on and engage the HR-7.

"Admittedly, the engagement to which I refer took place under a certain set of parameters at the lower end of the HR-7 operating envelope. But I just want everyone to know that this is not a sure thing, or a risk-free proposition...and I am sure the Chinese have not been resting in the meantime."

John appreciated General Stone's input. The fact was, they were facing a much more capable and committed enemy than they would have imagined. America was going to lose a lot of people in defeating this enemy. Indeed, from the very outset of this conflict, America received a taste of how expensive the butcher's bill was going to be. In addition, ultimate triumph was by no means assured at this point, although John's faith in America, his faith in her people, and his faith in God would allow him to consider no other alternative.

"Thank you, General. It is imperative that we all understand the reality of the threat and the risks. You have punctuated both, and your reminder is both timely and well stated. I apologize if I was not clear enough on that point, or if I presumed too much. Despite the advanced technology of the HR-77 and its companion HR-7, they are not immune to interdiction or destruction by our enemy.

"If I may then, I will now continue with the other options we have for addressing the current situation. We can continue to launch satellites, although we have no idea how many anti-satellite vehicles the Chinese have. But, as I said, we must presume that they have stockpiled them in anticipation of these very conditions. They may be more than willing to level the playing field in this

regard if they can keep on downing our satellites. If they are successful, they will have negated a tremendous advantage. We cannot allow them to be successful in such an aim.

"In this regard, clearly one of our options is to mount operations against the launch facilities inside the PRC, and against the associated technology and infrastructure. We have several options in this regard, ranging from ballistic missile attacks, to cruise missile attacks, to stealth bomber attacks, to conventional attacks with B1-B bombers.

"I believe it is imperative that, in addition to whatever other measures we may take, we hit those installations and hit them hard. . .and keep on hitting them so we can regain our eyes in the sky while denying the same to our enemies.

"Now, briefly, with respect to the shuttle Discovery, we also have a number of options. The first is the immediate launching of another shuttle on a relief mission. The risk is great for such a mission because, as they have just proven, the Chinese are capable of shooting it out of the sky. Another option is to launch much smaller packages into orbit and have the Discovery rendezvous with them. Such packages could contain provisions, fuel, materiel, and equipment to help in their repair efforts. Such missions are also more difficult for the Chinese to interdict and, from their perspective, a much more costly tradeoff.

"A highly irregular and evasive orbital pattern has been developed for the shuttle, but the maintenance of that pattern will require that the Shuttle's fuel be supplemented regularly until we can bring them down. In order to do this, I believe that the second option is the best for the time being. It may keep the operations at Vandenberg and the Cape hopping, but a manned relief mission is just too risky at the present time. Earth orbit just became a very dangerous place.

"That concludes the overview portion of the briefing."

As John completed his part of the briefing, a number of hands went up. The President indicated that John should continue to lead the discussion. For the next ninety minutes, the group considered actions and possible responses to China's attack on American space-based assets. Those discussions led to leadership decisions regarding America's initial policy for near space over the course of the conflict. Those decisions would be turned into operational plans that would be reviewed, then analyzed, and then reviewed again. Once finalized, those operational plans would be put into motion and executed in the midst of the myriad of other ongoing operations in the Pacific and in the Mid East.

It would in fact be four weeks before the Shuttle Discovery, after being re-provisioned several times and after effecting emergency repairs, could land in the California desert after a hair-raising re-entry that "snuck" through a break in PRC efforts to down her. But well before that happened, a preliminary portion of America's response to the attack would be implemented.

### **200,000 ft and West of the Kuril Islands**

### **Far Western Pacific Ocean**

"Mac" Mendenhall checked his flight profile one last time before going feet dry. On this mission he would be pushing the envelope of the HR-7's capabilities in almost every operational parameter. Altitude would be max'ed out at his current 200,000 feet. Speed would be max'ed out at Mach 7-over 5,000 miles per hour-for most of the duration of the flight. Most importantly, and probably most worrisome, the endurance of his aircraft would be max'ed out too. Once he went feet dry over Asia, there would be no friendly presence for a long, long time.

He would pass into China just to the north of the border with North Korea. He would then fly the entire length of the former Chinese-Mongolian border, flying over the highland wastes of the Gobi Desert, and into western China's Takla Makan. As he did this, he would be gathering information on all three of the PRC's known space launch facilities. He would then vector south and west just to the east of the Hindu Kush, passing over India and into the Arabian Sea. There, courtesy of the U.S. Navy, he would refuel his very thirsty bird.

While his Pulse Detonation Wave Engines (PDWE) were economical, it was stretching them to their max and beyond to fly almost 5,000 miles between fueling. As a matter of fact, for a manned military mission, he was about to set a new record. Also as a matter of fact, the mission parameters called for him to run out of fuel for his PWDE and descend for two hundred miles in an unpowered glide. He would restart his turbo-jet engines at an altitude and speed that would sustain them, but was still sufficiently high to avoid all known Indian air defense systems.

"Well, when you're the best, they can't call on the rest," thought the Colonel as the steadily pulsating vibrations of the engines permeated every inch of his cockpit space.

"That only holds if the ChiComs haven't shared any of those hotrod missiles with the Indians that I ran up against last year over the Gulf of Chijhli," he concluded.

He remembered that mission very well. It had been one of the most stressful of his career. The Chinese had almost got him with their improved version of the KS-2. He had been vectored in to take pictures of the Chinese shipyards at Tianjin in a profile designed to have a significant safety margin from the KS-2+ missile, which he was assured was the best the Chinese had. It wasn't. As he had

slowed and dropped altitude to maximize the effectiveness of his surveillance equipment, but was still well above the KS-2's effective range, the Chinese had acquired him, locked on, and engaged. It had been one of the great shocks of his life—and it had very nearly been the *last* shock of his life. At Mach 4 and at 150,000 feet, those missiles had still come within a few thousand feet of reaching him.

Well, he didn't plan on coming anywhere near those parameters on this mission. He was going to be almost twice as fast and 50,000 feet higher—except right at the end as he exited India. If the Indians had acquired those KS-2+ missiles and had established them along their coast north of Bombay, he could be in deep trouble.

"Very risky indeed," thought the Colonel. "But if it were easy, they wouldn't ask for me!"

For the next hour anyway, he knew that he could probably sit back and enjoy the ride, monitoring his automated profile and ready to intervene if necessary.

**March 28, 04:22 local time**

**Eastern Sector Air Defense Center**

**Changchun, PRC**

"General, we have several stations reporting a faint, intermittent contact passing just to our north. No acquisition or lock-on possible, but the readings, if they are to be believed, indicate an altitude in excess of 60,000 meters, and a speed in excess of 9,000 kilometers per hour."

The General in charge of all air defense in the northeastern portion of China considered what he had just been told. He did not like being awakened, but understood the gravity of the potential contact.

"Well Colonel, given our wartime posture and who our principle enemy is, what would you say regarding the believability of the readings?"

The Colonel, who was the lead duty officer for the sector at this hour of the morning, knew exactly where the General was going.

"General, I would presume that the Americans were performing a hyper-velocity over-flight of our territory for surveillance purposes. I would further presume, given the flight profile, that their principle target lies far to our west, where our recent space interdiction operation originated."

The General was pleased. He had chosen well in assigning this man to be the lead duty officer for the sector. It was in anticipation of just such violations of their airspace, of just such attacks on his country, that he had made his choice.

"Colonel, I concur. We do not have much time at their current velocity, but immediately declare a Level Three alert and pass the word along to Beijing, our Central Sector, and to the commanders at each of the launch facilities. In addition, post this information to that new CAS unified communication link. This American is going to have to come out of CAS airspace somewhere, and that exit will have to be towards either the Bay of Bengal, or the Arabian Sea."

The word of the potential over-flight flashed ahead of the American HR-7 at the speed of light, still arriving at the launch facilities only minutes before Colonel Mendenhall. Despite a flurry of activity, and raised voices and anxiety, there simply wasn't sufficient time to take any concrete action to physically "button up" those facilities, and prevent the surveillance from getting a good look at ongoing operations at each launch pad.

There was enough time, however, to take some electronic action. Electronic communication channels between the control facilities, and more kill vehicles sitting atop their boosters were shut down to prevent the recording or measuring of those frequencies and parameters. In addition, each facility's own air search sensors were fine tuned to data passed on from the eastern provinces, and more information regarding the capabilities of the HR-7 was gathered for later analysis.

**March 28, forty minutes later**

**60,000 feet and 400 miles east of Bombay, India**

**Over the Arabian Gulf**

"Spinner-3, this is Hyper. Monday Cruising, do you copy, I say Monday Cruising?"

Colonel Mac Mendenhall was resting easy as he contacted the Navy controller for his fill-up. Everything had gone perfectly, "No glitches and no hitches," he thought. The flight across China had been high, it had been fast, and, except for the telltale signs of various enemy radar trying to acquire him—which he was happy and relieved to say none had done—it had been uneventful.

"Mission Accomplished... just like you knew it would," summed up the Colonel.

"Hyper-flight, this is Spinner-3, reading you 5x5. Rolling through, I say again, Rolling through, please activate your FOF (Friend or Foe)."

With that authentication, Mac used his mission planning Multi-Function Display (MFD) to activate his FOF transceiver, and was immediately designated as a confirmed friendly on the E-2C Hawkeye airborne early warning and air control aircraft that was holding station another two hundred and fifty miles to his west. That Hawkeye was from the USS Enterprise (CVN 65), whose battle group was stationed another one hundred and fifty miles to the southwest, in the Arabian Sea.

As he made his way to their location, he picked up a pair of F-18E Super Hornet escorts en route, who were each loaded to the gills with war-shot air-to-air missiles consisting of four of the latest

Sidewinders and four AMRAAMs. Mac was glad for their protection after the tense moments of decreasing altitude and decreasing speed when he had passed over the coast of India. That had been when he was at his most vulnerable, but apparently the Indians either didn't have the improved KS-2s from the Chinese in that area, or they were not vigilant in their use. Either way, Mac was glad for it.

As he made his way further from hostile shores and towards his refueling, he went through the procedures and communications necessary with Spinner-3 to send his surveillance data through a secure digital link to the Hawkeye, who would in turn relay it back to the carrier. When he had completed that task, he prepared for his refueling from the buddy stores on an F-18F. From there, he would fly on westward and ultimately, after several more refuelings, would land again at his home base, Nellis Air Force Base in Nevada, having literally circumnavigated the globe on this mission.

**March 28, 10:10 EST**

**Firing Range, Combat Training Battalion  
Ft. Benning, Georgia**

Hernando breathed out slowly as he sighted in on the target at two hundred yards and then squeezed the trigger of his M16A1 rifle. The nudge of the recoil and the "crack" of the discharge to which he had become so accustomed over the last two weeks followed. He was sure he was doing better, but would know for sure in a few minutes when the targets were examined.

"That's right, Rodriguez. That's better. We'll make an infantry rifleman out of you yet! ...even if my own grandma can still shoot better than you ever will!"

Was Hernando hearing things? Was there the slightest bit of encouragement in that latest comment? Even though the endless comparisons to the Drill Sergeant's grandma seemed to never cease, perhaps he was making progress...or maybe the DS had just slipped for an instant. Whatever the case, Hernando felt that the DS wasn't quite as rough on them as he had been those first few weeks. At any rate, he had learned well what the only acceptable response was.

"Yes, Drill Sergeant!"

Hernando was almost finished with his second phase of basic training in the U.S. Army here at Fort Benning, Georgia. He was at Fort Benning because he had indicated that he wanted straight infantry training, and that he wanted his specialized training to also be infantry. That's what they do at Fort Benning. When he had completed his nine-weeks of basic training, he would have a short leave and then be back at Fort Benning for twelve weeks for his Infantry Training before being shipped out.

Normally, in peacetime, that advanced infantry training that he would take was a fourteen-week course. But in the wartime situation the nation faced, the course had been accelerated to twelve weeks. The same was true for part of the Army's basic training with which he was now involved. Normally those nine weeks followed what was a two-week "Reception Battalion" where the operative phrase, at least from what Hernando had been told, had always been "hurry up and wait." But, since the declaration of war against the GIR in January, that two weeks had been cut down to the 18 hours of processing it really represented, and the new recruits were in and out of "Purgatory", as the Reception Battalion was referred to, in two to three days.

That had been almost six weeks ago, and Hernando had experienced a lot since then. The first phase of training, the Red Phase, had been physically and mentally challenging, as it was meant to be. He completed those three weeks and endured the verbal assaults of the Drill Sergeant (DS) as the Army had exerted "Total Control" on the new recruits, and put them through their intensive Physical Training (PT). He had also learned to never "eyeball" a DS. When he had first started Phase One he had thought it good to look the DS in the eye and respond directly. But had learned the hard way that any eyeballing of a DS by a recruit would result in a ten minute tongue lashing and an ultimate "drop and give me twenty"...or more pushups. The first lesson had been enough for Hernando.

He had been introduced to his rifle (not his "gun," not his "weapon," but his rifle), and learned to clean it, care for it, and keep it in perfect working order. He could take it apart and put it back together in his sleep. He had come to dream of the rifle, taking it apart and putting it back together while he slept towards the end of the Red phase of training.

Hernando had never owned or fired a gun before joining the Army. But, now that his White Phase, or Gunfighter Phase, of training was nearing its end, it was almost as though he had never been without it. Although he would not consider himself nearly the marksman that some of these recruits who had grown up around firearms were, he certainly was proud of the proficiency he was developing with it. In this phase, that first week they had spent so much time firing the rifle that the sound of the firing range was actually almost a comfort to him now. Then, along with the in-class sessions about the Army and its traditions, had come bayonet training and the skills associated with being able to use it to defend yourself—to stick it into another person and kill him before he could do the same to you.

Hernando was not a violent person in any sense, but he recognized that there were those who were violent, and that sometimes, either individually or as a nation, you had no choice but to defend yourself against them. He understood that in so doing it defended one's own liberty and well being, along with the liberty and well being of friends and loved ones. Hernando, even though a gentle soul, was committed to doing just that.

That was why he had joined the Army. From his parent who had escaped from Cuba with him as a young child, he knew what a loss of freedom would mean. What it would mean to lifestyle, what it would mean to the ability to achieve, what it would mean to the soul. As the GIR had first attacked Turkey, and then devoured Kuwait, and entered Saudi Arabia early this year, there in south Florida Hernando had clearly seen that the threat, if not stopped, would ultimately impact him and his family—and now his new bride, Maria. In his heart and soul he could not sit back and let others do the fighting for him. Out of that conviction, he had stepped forward on his own, as hard as it had been to leave his home, his family...and his new bride.

After the events of March 15<sup>th</sup> and 16<sup>th</sup>, which had occurred in the middle of his Red phase of training, he felt even more vindicated in his heart for that decision. America, his home and still the bastion of freedom and self-government in the world, was in trouble and he was glad he was in a position to do his part to defend her and the ideals that she represented. Now confronted on one side by the Greater Islamic Republic, and on the other by the Chinese and Koreans, Hernando was not only glad to be in uniform, he was anxious to put what he had learned into practice in his country's defense. This was particularly true after the direct attacks on his homeland that had killed so many Americans.

Although the training was difficult, although the DS was loud, obnoxious and verbally abusive...Hernando had seen through all of that to where it was leading. It was leading to a group of disciplined individuals who would hang together and fight for what was right. Knowing that engendered respect within Hernando. Respect for the DS and respect for the system. He could see that it was leading him and these other recruits to the place Hernando wanted to go anyway. In the middle of all of the sweat, work, endurance and hardship, the seven Core Values that the Army espoused to the recruits kept coming to him again and again: Loyalty, Duty, Respect, Honor, Integrity, Selfless Service, and Personal Courage.

These were the same principles that Hernando had been taught at home, along with one other...Faith. Hernando believed in them all; he believed they would see him through, and he believed in the ultimate triumph of good over evil, of liberty over coercion, and of virtue over vice. It was what he had been taught all of his life in southern Florida by good, faithful parents—and he was determined that the ability to teach such enduring truths would carry on into the future.

"Okay, here are the results. Rodriguez! Surprise, surprise! You scored at the top on this particular shoot. I suppose miracles will never cease. Thompson..."

Hernando was doing better! Funny how something so simple could mean so much. Yet, he knew that something so simple would also later save his life and the lives of those around him. Soon they would assemble and move over to their next assignment for the day, and the one in which Hernando was taking more and more interest: anti-tank, anti-mechanized weapon training. But not for the reason most would think. Hernando enjoyed learning how to operate the weapons, and in learning to defeat what would be a mortal threat to any infantry unit caught out in the open without such weapons. Even more than the weapons to defeat the enemy mechanized units, Hernando had developed a keen interest in his nation's mechanized equipment itself.

He had always been something of a mechanic, working on cars in high school and fixing them up with glass packs, four-barrel carburetors for the muscle cars, and as fine a set of tires as he could afford. He loved the way those big engines sounded and the way they could carry infantrymen like himself over terrain. More and more he was considering working toward a Military Occupational Specialty (MOS) of 11B in his career with the Army, that of Fighting Vehicle Infantryman.

But that would not come until later. He still had to finish Phase Three of his basic training, the Blue Phase or Warrior Phase, and graduate. That would start next week and would involve a lot of time in the field. He had never camped in his life either, but he was looking forward to it now, wondering if maybe this was how some of those kids who had gone into the Boy Scouts back in grade and middle school had felt. In retrospect, he wished he had pursued scouting with some of those kids back then. Lord knew that the guys here with Scout training were excelling and assuming leadership positions. But, hindsight is 20/20, and even though he didn't get the woodcraft, the camping, the knot-tying, and some of the other skills those boys had learned in Boy Scouts, he had gotten the most important lessons and principles they were taught: those of integrity, faith, ethics and honor, and he had gotten those at home, from his parents, which was the still the best place to learn them, as far as Hernando was concerned. As long as he had those, he felt he could catch up on the others.

"As soon as I can, I'm going tell Maria that very thing," he thought as he took another shot.

**March 29, 09:10 CST**

**Lazy H Ranch**

**Outside Montague, Texas**

Cindy Simmons looked out of her window at the beautiful spring morning in north central Texas. The wildflowers were in full bloom, the trees were all budding, the sun was shining down through partly cloudy skies, and there was a gentle southerly breeze, so typical of this time of the year, coming off the Gulf of Mexico three hundred miles to the south. It was pleasant out there, humid, but not too

warm. With the breeze it would be delightful, a far cry from the heat they would experience later on about the middle to the end of May. But by then, she wouldn't be here to experience it.

As she signed and then folded the letter she has been writing, she couldn't help but reflect upon her husband Jess, the love of her life, to whom she was writing, and who was stationed so far away. Stationed somewhere—she knew not where—serving his country, and working with those attack helicopters that he loved so much.

There were times when he was away on duty like this that she was tempted to begrudge him the time; they had spent so much of their married life apart. But she knew she couldn't do that. Jess was a good man who loved his God, his family, and his country, and she knew he loved them in that order...even when duty called him away from them. Actually, it was only calling him *away* from her this time. Now that their son, Billy had joined the Marines to be something as close to “just like his Dad” as he could become, he was already away himself.

“Well, he could sure do a whole heck of a lot worse,” thought Cindy as she reflected on Billy going through his MOS training down in Florida.

“At least I know where he is and will see him during leave late next month,” she thought.

By that time, the plans she had made and was informing Jess of in her letter would already be in motion, and would be a “done deal,” as they say in Texas.

As she looked out the window, she saw the old Case tractor through the doorway in the barn where it was parked. Jess sure loved that tractor, even if he was always threatening to get a newer air-conditioned variety. She knew it was all talk...that he never would. He was a man who believed that “real work” involved sweat—and that the sweat of such labor helped purify the soul. Cindy believed he was right. When that old tractor finally wore out, Jess was likely to just find and buy another one just like it, and use it until it wore out. But the way he kept this one in tip-top running shape, it was sure to be a long time before they had to worry about the old thing wearing out.

“If he were here, he'd be on that old tractor right now,” thought Cindy. “Preparing some of the fields for later planting, nurturing the spring growth in other fields of hay that would be harvested in the first cut in just a few weeks.”

But Jess wasn't here. The war had come in between all of that and the Simmons family, and Cindy could tell it was not going to be a short war. She prayed nightly that Jess and Billy would both be brought home safely to her. But she knew in her heart that this war was shaping up to be a long, knock-down, drag-out affair. It was apparent in everything that was going on. It was apparent in her heart. She saw it in the terrible attacks America had suffered on their own soil—both military and civilian targets being attacked by ruthless enemies.

She saw it in the cut-off of Mid-East oil and the President's forthright explanations about the rationing, and the hardships that were coming—and the commitment it would take to get through them. She saw it in the defeats and setbacks America's military were suffering in the Mid-East, in the Pacific, and in Korea. And she felt it in those quiet hours at night, or first thing in the early morning, when she thought and prayed about her men who were off fighting.

“Now I believe I know what my parents must have felt in those dark early months of World War II,” thought Cindy.

Well, Cindy had made up her mind. Perhaps she wouldn't be called upon to fight, though she owned a gun and knew how to use it. With the President's announcement, and the subsequent announcement by the Governor of Texas, she was determined to have it with her wherever she went. No, she might not be called upon to fight, but she could be prepared to do so if necessary, and she sure enough could help in other ways. She'd seen the films of women working in World War II, and it had given her an idea. Jess wasn't here to consult, but he was off fighting and sacrificing. Sacrifice and hard work was something she could do, too.

With all the young men, and even older men in their thirties and forties clamoring to sign up for military service in the Dallas/Fort Worth (DFW) area, there were plenty of important war-related jobs a girl could do. In particular, down at the old aircraft plant in Fort Worth, just down U.S. Highway 287 from Bowie which was ten miles to her west, important work was going on regarding the war effort. The aircraft company that now owned that plant was designing and building the Joint Strike Fighter (JSF) there. They had won the contract back in 2001 to deploy the fighters in numbers to America's military and those of her allies. Now that full mobilization efforts were being put in place, everyone who could be taught to do so was being asked to hire on and help push those fighters out immediately.

She already knew from the old films of World War II that women would fill those roles, and she had driven to Fort Worth two weeks ago, interviewed, and been selected to start at the assembly plant next week. The foreman, an older gentleman in his sixties, had moist eyes when Cindy explained who she was, who her husband and son were, and why she felt compelled to come down to the “big” city and apply for this work. After that, there had been no question about her getting a job. That man had lost a son in Vietnam years ago and wanted to do everything he could to minimize the number of sons who would be lost in this conflict. Producing the JSF was now a joint and personal effort to do so.

Since that time, she had taken care of her affairs in Montague and leased out the entire place, except for the land right around the house, to a neighbor whom she and Jess had known for almost

fifteen years. He was older and still operated his place as a full production farm and ranch. He indicated that he could put the Simmons's property into production and would pay a good lease for it. This opened the door for Cindy to work in the factory in Fort Worth, feeling secure that her place in Montague was being well taken care of, and that it was also helping in the effort by feeding the cows that fed the people.

Her new employer had even set up an apartment for her close to the plant, paying for it themselves rather than trying to obtain a special allocation of precious fuel for the fifty-mile commute from Montague. The doors had been opened, and Cindy had walked through them. Now she was prepared to do her part.

She reflected on the letter she had written Jess, and because of the close relationship they had developed over the last nineteen years of marriage, she knew he would be concerned when he read it. She knew he would have reservations about it and worry about her being "square in the crosshairs of the target" (as if he himself weren't). But she also knew that, after a few moments of sober contemplation, that his heart would swell with pride, and he would accept her decision one hundred percent. He would support her judgment completely, since she was the "commander on the scene."

"... and his ability to do that very thing is part of what makes him a great Colonel in the service of his country, in addition to being the best husband a girl could hope for, and a father that most kids in today's world can only dream of," thought Cindy.

As she thought this, she again reviewed in her mind the closing paragraphs of the letter she had written Jess, and hoped he would receive it as soon as possible

*So, Hon, I have gone ahead and done it. I start on Monday down in Fort Worth on the assembly line. I'll be helping to fabricate the wing assemblies of aircraft that one day may have to pull your fat out of the fire...and you know what? If that time ever comes, I hope and pray they are right there to do it, too! One of the ones I worked on.*

*Mr. Harbisen has leased the entire place and promises he will take care of the lawn around the house while I'm down in Fort Worth. He told me to be sure to tell you to hurry back so he could dicker with you in the future...that I drive too hard of a bargain. I don't believe that all of that was in jest, either! I have to say I got a good, fair price for the use of our place. You'd be proud of me!*

*With the fuel allocation I'll be receiving, it looks like I'll have enough gas to get up to the place once every two weeks and tidy things up. The apartment that Lockheed got for me is nice...it's not very big, but there are two bedrooms. So if you and Billy are home at the same time, there will be enough room for all of us. I try not to think about that too much...you being home. I feel in my heart that it is going to be a longer time than I want to contemplate. But I know it is necessary, and I know that this is what the good Lord wants me to do while you are away and while this conflict goes on... and it is what I want to do. Any way I can help you, and help our nation defeat these horrible enemies is what I want to do, and after praying about it, I feel real good about this.*

*I'll see Billy in a few weeks, and hope to have your latest letter to let him read when he is here. You'd be proud of him, Jess. He wants to be like his Dad, and it's because he knows his Dad is a good man, a patriotic man and a God-fearing man who knows his duty and goes about fulfilling it. What a blessing in this day and age to have such a son. I hope our nation has millions just like him...Lord knows we are going to need them.*

*One last thing. You know those daisies I am so fond of that you planted for me in front of the porch, around the Live Oak tree and over around the mailbox? Well you should see them this year! They are so beautiful and bright! The ones around the Live Oak tree look for all the world like a big ol' yellow ribbon around the base of that tree! You picture them in your mind, sweetheart, and know that they are your "yellow ribbon around the old oak tree." I will keep them bright for you, even if I can only get up there every two weeks. All spring, all summer...into the late fall until the first freeze...they'll be waiting here for you...and so will I.*

*Well, I'd best go now. The day is getting on and I still have a lot to do before closing up shop here and going down to Fort Worth. Just know I am thinking about you always. Remember your yellow ribbon, because I will be here.*

*Yours forever,*

*Love,*

*Cindy*

**March 29, 23:34 local time**

**Rau Cosme Velho**

**Rio de Janeiro, Brazil**

The winding twisting course of Rau Cosme Velho was lined for as far as the eye could see with vehicles and people. The same held true for every other road and avenue leading up into the hills and mountains surrounding Rio de Janeiro that held any chance for a view out to sea, out over the Atlantic Ocean beyond Guanabara Bay. Where the road twisted behind the hills in its ascent, the people had simply gotten out of their vehicles and either walked along the road until they could see, or climbed

the particular hill that was blocking their view. The result was that the roadways and hills were covered with people. People had come out this night literally by the millions to watch the sky.

All of the radio and TV stations were carrying the story, as they had been for the last thirty-six hours since the Americans' space agency, NASA, had announced that the station would fall to earth in the Atlantic Ocean somewhere well off the Brazilian coast. The TV stations and the international press, including large satellite trucks from ABS, CBC, and WNN had occupied the most prominent hilltops and mountaintops in order to carry the story live. A favorite spot for them was the Christ the Redeemer Monument, to which Rau Cosme Velho led. All of today's newspapers had also carried the story on their front pages. The people who had either not seen the TV or newspapers, or not heard it on the radio, had heard it from their relatives and friends. The result was that a substantial portion of Rio de Janeiro's almost ten million metropolitan area inhabitants was out watching the sky off to their west tonight, waiting for the remains of the Space Station to pass overhead from west to east.

Felix had brought his wife Henrietta and their two children along to watch. They felt it was a once in a lifetime opportunity, and would be something they and their children would share and remember together for their entire lives. Juan was their oldest and he was seven years old; their daughter Bertice was four years old. Felix provided a modest living for them, living and working in the northern area of the crowded city... the area that was home to many of the working class people of Rio de Janeiro. Felix was proud of his position as a lower level accountant in one of the departments of a shipping company down at the docks, and he was looking forward to the time when he could save enough money to move his family to a little nicer area of the city.

Now, just to the east of and well above the major thoroughfare of Avenue Paulo de Frontin, Felix and his family sat on Rau Cosme Velho looking to the west over the mountains. Like the hundreds of thousands around them, and the millions around the city, they sat there waiting... watching.

**March 29, 23:36 local time**

**Fifty Miles over Araraquara, Brazil**

**Two hundred and fifty miles west of Rio de Janeiro**

The command, living, scientific and five service modules of the International Space Station were all falling together in one piece through re-entry, though one would not be able to recognize them as such at this exact moment. Despite the reports, despite the calculations, despite the hopes and assurances to the contrary... the modules had hung together as a single entity to this point and none of the smaller portions had broken off to enter earth's atmosphere separately.

No, as of two seconds ago, a molten mass of material several hundred thousand pounds heavier than expected had entered the upper reaches of the denser portion of the earth's atmosphere and had begun to burn up. It immediately left a blue-green trail behind it as outside material became molten and dropped away, and as the gasses from the extreme frictional heating ignited and burned behind the wreckage when they came into contact with the oxygen in the denser, lower atmosphere.

The miscalculations on the resulting orbit and its re-entry point meant that the remains of the station were coming down and entering the atmosphere several hundred miles further east than expected, and at a steeper angle. This meant that instead of falling through the atmosphere and either completely or nearly incinerating before it impacted somewhere in the Atlantic Ocean, it was going to come down somewhere very near the Brazilian coast. It also meant that a significant portion of it would remain intact through re-entry and impact that coast at high velocity. For the people watching in Rio de Janeiro, it made for a spectacular light show right before their very eyes—while putting each and every one of them in mortal danger.

**March 29, 23:36 local time**

**Rau Cosme Velho**

**Rio de Janeiro, Brazil**

Off to the west, well out over the mountains and high in the heavens, what started as an almost indistinguishable pinpoint of light that could barely be seen over the brightness of the city lights... quickly flared brightly. It trailed a bright blue-green trail as it moved eastward towards Rio de Janeiro and fell lower into the atmosphere. Small sparks could be seen flying off of the object as molten pieces fell away and flared brightly as they burned up.

As it flared, and the pretty blue-green trail blossomed with what looked to be small sparks flying off, the young boy, Juan, turned to his mother and pointed to the sky off to the west over the mountains as he excitedly exclaimed.

“Olhe Mom! Uma estrela de queda! (Look Mom! A falling star!)”

Henrietta had already seen the approaching light in the heavens, but knew it was not a falling star in the sense that her son meant. But, in a moment of reflection and perception about the world conditions that were bringing this event about, she responded to her son almost without thinking about the dual meaning of the words she uttered.

“Sim filho, você é direito. É uma estrela de queda na verdade “ (You are right, son. It is a falling star in truth).

“Deixe-nos pray que se levanta outra vez logo.” (Let us pray that it rises again soon.)

As she said this, and as she continued to watch the approaching object, she realized that the display was going on far too long, and that something was dreadfully wrong. Her heartbeat quickened, and felt as if it was catching in her throat just as her husband’s arm stiffened around her waist in alarm.

Still well off to the west, but approaching rapidly now, it became apparent to everyone watching that the man-made meteorite was not going to burn up completely in the atmosphere, that it was going to fall all the way to earth. In the short time since its appearance, it had fallen entirely through the atmosphere and was now approaching at a rate that still measured many times faster than the speed of sound, trailing molten material and burning gasses as it came. As the people watched in horror, a large portion of it broke away from the rest and fell off at a slightly different and steeper angle.

Just as he had planned and envisioned it, Felix and his family would indeed never forget this sight as long as they lived. But it now turned into a much different sight than he had expected, and for a few awful moments he felt as if they were all surely going to perish as a result.

The large portion of the remains of the space station angled towards the earth a little further north of the original track and at a steeper rate of descent. That piece, being larger and containing more mass, flared much brighter and trailed flame and burning gasses much farther behind it than the smaller piece. The sight of this larger piece transfixed most of those watching, and that fixation produced an audible intake of breath from millions of throats—a kind of communal gasp—that was literally heard all over the city as the wreckage passed from view behind the mountain range to their west. There it produced a brilliant glow upon impact well off to the west-northwest in the vicinity of the city, Juiz de For. And the glow did not diminish, but could be clearly seen even over the tops of those same mountains off to the west-northwest.

Although most of those watching fixed their eyes on the largest falling object, a small percentage of the people were fixated on the smaller piece of the station, which was in actuality the remains of a portion of one of the service modules, still attached to the main scientific module. While it appeared to fall less steeply and somewhat more slowly, this was an optical illusion, and it arrived on the scene in the instant just after the larger piece passed behind the mountains. Though not as bright, it too trailed molten material and burning gasses as it approached. One of the local TV stations and the ABS camera crew focused on this piece of wreckage, and tracked it all the way to impact. All of the other camera crews had tracked the larger piece of wreckage as it fell on the west side of the mountains, producing the tremendous glow there.

When the group of the people who were following the descent of the smaller piece of the wreckage realized what was about to happen, they began to scream and started to run. The pandemonium caught the attention of the majority of the crowd, which had been watching the larger piece fall off to the west. When they turned to see what was happening, the speed of its approach allowed only an instant of paralyzing horror. In an instant, what was later estimated as a twenty-five ton piece of the International Space Station traveling at six times the speed of sound passed over a ridge and produced a deafening and destructive multiple-detonation sonic boom. With a roar that many of the peasants described as the voice of God, it then impacted immediately to the east of Santos Dumont airport in the vicinity of Avenida Rio Branco.

The impact produced a blinding explosion whose immediate blast diameter covered several city blocks. It sent out a shock wave that spread to the east and out onto the Bay at unbelievable speed, destroying every structure and killing every exposed human between it and the Bay, then literally wiping the bay clean of smaller craft, while wrecking or capsizing larger ships.

Henrietta and the children were screaming hysterically as Felix pushed them to the ground behind their car and then covered them with his own body as best he could just as the wreckage impacted some five miles from their location. A hot, stiff wind passed over them a few seconds later as the deafening sonic boom, roar, and explosion reached their ears. Luckily for them, and for everyone who occupied the road with them, the shock wave was focused to the east, and the smaller portion that did move to the west quickly dissipated its energy against the hills below Felix and his family. Aside from some minor flash burns resulting from the brief, hot, furnace blast of air that passed by, they and their vehicle were practically unscathed.

Rising from that position high up on Rau Cosme Velho, and while his wife and children continued to huddle and cry there at his feet, Felix saw the rising mushroom cloud from the impact to his east, and the raging inferno it had produced. It was an inferno that was obliterating and annihilating the very area of the city to which he had one day hoped to move his wife and children. As it did, it also incinerated all of the inhabitants of that portion of the city who were anywhere near the impact.

When he realized this, when the massive scene of death and destruction before his eyes registered on his brain, Felix began to unshamedly shed tears as he bowed his head, and thanked God for something for which he had never envisioned himself being thankful. He thanked Him for the grace of being poor, a condition that today had meant their mortal salvation—a genuine miracle that had spared his life, and the lives of his family. It was this miracle, even more than the memory of the horror of the event itself, that he and his family would remember the most, and retell to one another and to others, for the rest of their lives.

Along with the feelings associated with that miracle, there was something else germinating in the depths of Felix's very soul—and it was germinating in the souls of the millions of people who had witnessed this unbelievably terrible tragedy. It was the stirrings of a deep resentment and rock-solid resolve regarding the cause of this horror that had befallen their nation and suddenly killed so many of their citizens. It would grow most quickly in those who had personally witnessed it, but it would spread almost as swiftly amongst those who had witnessed it on TV this night, or who would witness it on TV in the coming days. This number would ultimately include the vast majority of the population of Brazil as word spread and as relatives, friends and neighbors encouraged everyone to see for themselves the direct results to Brazil of the conflict that was going on between east and west.

The results of that sentiment would shock the world and establish a pattern for other countries who felt or hoped that this particular conflict would have nothing to do with them or their people. It was a pattern that would radiate from Rio de Janeiro, and the global impact would reach far beyond Brazil. It would radiate throughout South America, and across oceans and continents like the ripples spreading out on a lake when a stone strikes its surface. But, unlike the united sentiment that began to build that very hour in Rio de Janeiro, the worldwide sentiment would not be unified—it would be split between both sides of the conflict and serve to intensify it dramatically.

Now, as Felix leaned down to help his wife stand up, and as he attempted to comfort both her and his children, he saw little Juan's tear-streaked, upturned face and heard his scared and trembling voice ask his mother, "Mom, Uma estrela de queda?" (Mom, a falling star?)

## Chapter 14

*“When the heart believes the lie, the eyes shall not betray it.” – Unknown Hindu Philosopher*

**April 4, 10:00 local time**

**Presidential Offices**

**Tehran, Greater Islamic Republic**

“This is my official response to the horrible events in Brazil of April 2<sup>nd</sup>.”

“As a religious people here in the Greater Islamic Republic, we project our faith and join in prayer with those who have been afflicted by these terrible events. We pledge to do all in our power to send relief to those so afflicted as Allah would bid us. We extend our hand to the people of Brazil in your hour of need and ask the blessings of Allah to be upon the innocent.

“In doing this, we are compelled to make known our concerns regarding the conditions that led up to this tragedy. An act of aggression led to this tragedy. In violation of every international treaty regarding the use of space, the United States broadened the current conflict and unilaterally attacked the People’s Republic of China’s civilian communications satellites without warning.”

“Our intelligence indicates that telemetry, communications and surveillance for these attacks came from America’s ground observation posts and its space-based assets, including their military personnel on the International Space Station. The peace loving people of the People’s Republic of China responded in self defense and attacked the very assets that had been used to attack them.

“We understand the nature of these things in our faith. Islam is a peaceful religion, except when aroused by the attacks of our enemies or by the unfaithful. It is only then that Allah wields his sword through the instrumentality of our hands...and we respect the right of other nations, and other faiths to do the same, as our friends in the People’s Republic of China have done in this instance.

“Now, in closing, I will sound a note of caution. It appears that there are elements amongst our enemies, and their agents and puppets amongst other nations in the world who would twist and pervert this terrible tragedy to their own ends. They would try to place the blame for this on our allies, on those who were simply defending themselves from aggression as any civilized nation would. Do not pay head to their lies. Doing so can only lead to more strife, to more conflict and to a condition in which those very nations who would twist the truth will take abject advantage of you and your people as they have done in so many other areas of the world. We speak from experience in this regard. The past evil that our enemies have perpetrated, and a desire not to allow them to continue with their belligerence and lies, with is why we are engaged in this monumental struggle. We will throw off their yoke and throw off their influence, as God is our witness. Do not be fooled into listening to these manipulators, and do not allow yourself to be caught in their web of deceit. Do not let them talk you into setting your foot on the path that they tread. It portends nothing but disaster.”

**April 5, 20:30 local time**

**Politburo Press Briefing Room**

**Beijing, PRC**

The press conference in Beijing was attended by a limited number of the world’s press. The number of media representatives from any western nations was particularly limited. Nonetheless, the state-run news networks from China, the Greater Islamic Republic and the relatively free press from India were there, along with a respectable number of reporters from Russia and the Ukraine and a handful from France, Italy and Spain. These latter three were there by virtue of the fact that their governments had not taken an official stance on the fighting yet, despite their own investment in the International Space Station and the fact that some of their citizens had been aboard from time to time.

As the room buzzed with conversation in anticipation of the announcement by Jien Zenim regarding the horror that had befallen Brazil, the mahogany door to the left opened and he entered, wasting no time in stepping to the podium and speaking directly into the microphone.

“I have a brief statement for the world press and then I will take a question or two.

“On March 28<sup>th</sup> in the cities of Rio de Janeiro and Juiz de For in Brazil, the entire world witnessed the deadly consequence of a belligerent nation that militarizes space. We witnessed the deadly consequence of a nation breaking every known international treaty and attacking a nation in space without warning or provocation. The attack forced a measured response by the PRC to protect itself from future attacks, and to punish those who would venture to do so.

“We regret the unfortunate and horrible loss of innocent life on the ground in Brazil. The People’s Republic of China places the blame for this unprecedented tragedy squarely on the shoulders of the United States of America, where it rightfully belongs. It is they who chose to broaden the scope of the current struggle and unilaterally extend it into space. It is they who used an international platform to help in the same, I suppose in the hopes of hiding behind it. There were consequences to them for those actions, and unfortunately those consequences involved the loss of innocent lives on the ground. That innocent blood is on America’s hands.

“That concludes my statement. Are there any questions?”

Hands shot up all over the room, but the script that was to be played out had been carefully choreographed. Turning to a young woman reporter from India, President Jien recognized her.

“Yes, the young lady in the third row.”

“Mr. President, how do you respond to the President of Brazil’s allegation that it is the PRC who is to blame for this terrible tragedy?”

Jien Zenim appeared to frown for just a moment, and then paused reflectively.

“It is natural for them to lash out when something this terrible befalls an individual and its people.

We interpret the President’s words as just that. We will not condemn him and trust that he, his government and his people will do the right thing after having more time to reflect.

“I can say this ... the PRC is not to blame. I have already addressed blame in this meeting and have no further comment regarding that obvious issue.

“Next?”

Turning to a French correspondent from the WNN, a correspondent who worked for David Krenshaw, and who was here specifically as a result of that reporting relationship, the President said.

“Yes, Francois, please.”

“Mr. President, I have a general question and, if you please, a follow-up. The non-combatant nations along the Pacific Rim and on my side of the world in Europe are tremendously concerned about the ongoing conflict. It seems to be escalating and spiraling out of control. What can you tell such nations who are not involved in the fighting that will comfort them and help calm the situation?”

This question, and its follow-up, was what this news conference was really all about. Jien Zenim and the leaders of the People’s Republic, above all else, wanted to control the spin to the non-aligned nations of the world. They wanted to prevent any coalition against the CAS and their allies, the GIR. They were prepared to offer open arms to all who would accept them in order to achieve that.

“Francois, we do not seek conflict and turmoil. I have addressed how and why this conflict began. The People of China are patient, they are equitable and they are just. They also do not seek strife. We extend the hand of mutual approbation and peace and prosperity to anyone who will grasp it, and we offer it to all as equals.

“To the people’s of Korea we say...stop fighting amongst yourselves. Unify as the single people you are and become a part of our Asian Coalition. You will be accepted as full partners.

“To the people of Formosa we say...re-unite with your homeland. Let go of the western influence that has stifled your cultural heritage and turned you against your own. We offer complete and unequivocal reconciliation without malice.

“To the people of Japan, the Philippines, Malaysia, Indonesia and even Australia we say...come, join with us. Many of your people and your factories are already here. There need be no further disruption. We will gladly welcome each of you into our Coalition of Asian States also as full partners. Come, share in the prosperity.

“To the people of Europe, Africa, the Mid East and South and Central America we say...trade with us, work with us. We offer competitive products and materials and we offer them at substantially lower price and on better delivery and support terms than you are apt to find almost anywhere else. We do not desire conflict or contention. Urge your other trading partners, and in some cases your allies to end their hostilities against us. We have tried, but have only been rebuffed.

“Finally, to the people of America and her allies we entreat you to settle with us. Our differences may seem severe, and the unfortunate loss of life two weeks ago as we interceded on behalf of our people and friends in this part of the world will be difficult to set aside. But please reflect and realize that countless numbers of other people have suffered and died as a result of the policies of your government over the years. Of all peoples in the world, you have it in your power to change those policies. We ask that you do so now...that you force your leaders to negotiate a just and lasting peace with us, or replace them with those who will. Only then can we stand beside you as equals and open the world market to true free trade, to develop a truly unfettered and competitive global trade system that can’t help but improve each and every nation that is a part of it.

“Francois, your follow-up?”

The French reporter consulted his palm-pilot where the notes he had received from WNN were recorded. Carefully, he worded the second question exactly as it had been communicated to him.

“Mr. President, with all due respect, although the concessions and the proposals you make sound reasonable, what concrete steps can be taken that will lead the People’s Republic of China and the United States of America to the peace and resumption in world trade that you suggest? Most people believe that if America and the People’s Republic could negotiate a peace, then, with your influence, that peace could spread to the Mid East.”

Jien Zenim intended to take the “slow pitch” that this question represented and, as the Americans themselves would say, “knock it out of the park”.

“Francois, the insight contained in the question you just asked is astounding in its simplicity and far reaching in its implications.

“We in the People’s Republic are serious about the offers we have made. We are willing to call a halt to all offensive operations - a halt in place if you will - and to exert our influence on our allies to do the same, if the Americans will agree to meet with us and negotiate a cease-fire. We would tie the cease-fire agreement to a cessation in American military involvement in Korea and to any continued arms sales to our break-away province on Formosa.

“In turn, we would be willing to work with the United States for fair and balanced referenda regarding the reunification of both North and South Korea, and the reunification of our own peoples. Such referenda would be held in the best traditions of America’s own electoral process and we would open both the entirety of the People’s Republic of China and the Koreans to monitoring of the process. While we are confident that the balloting would favor reunification in both cases and we would assist with the implementation, we would respect the decision of the electorate whatever it may be.

“In addition, we would extend the opportunity for membership in the CAS to all involved nations in the Pacific Rim region.

“This is what we say; this is what we offer...and to these offers we add this note of caution, particularly for the government of the United States. Do not think that we will go back to the old order. In Asia and on the Pacific Rim, a new order has been established. It is a historical occurrence very similar to almost two hundred years ago when the tides of history changed on the western margins of the Atlantic, resulting in the doctrine proclaimed by your own President Monroe. The new order in the western Pacific has been established for the people of this area, by the people of this area. As long as your aim is to undermine this new order - as long as your aim is to damage or destroy this new order - then we are your enemy. As such, you will then find that our offers of peace will blow away in the hot wind of our indignation and we will be unrelenting in our defense of this new order until you no longer have the capability or the will to pursue such aims.

“Our forces are already gathered and prepared to do this...they will continue to gather and continue to prepare as long as necessary. Without a clear response to these offers, proposals and initiatives within the next forty-eight hours, we will proceed to use those forces to ensure the aims I have outlined for you all here today.”

As the President of the People’s Republic of China finished this statement, many hands shot up for more questions. Rather than point to one or the other of the reporters, Jien Zenim simply folded his papers, leaned close in to the microphone and said,

“Ladies and gentlemen, I thank you for your time. This concludes the news conference.”

With that the President turned to leave the podium as his aides signaled the conclusion of the news conference.

**April 6, 17:50 local time**

**Joint Session, Brazilian Parliament**

**Brasilia, Brazil**

The President of Brazil, Alfonso Hermosa, a man in his mid-fifties of medium build, an individual with prominent facial features and natural, wavy, jet-black hair, approached the podium in Brazil’s parliament and began delivering the most important speech of his long political career.

“Distinguished lawmakers, ladies and gentlemen of the world’s press, our honored guests and most importantly, citizens of Brazil. Last night, the Parliament of Brazil met at my direction to consider articles of war. This was an unprecedented request and an unprecedented vote. It was a vote necessitated by the unspeakable horror and tragedy that was visited on our nation last Saturday evening, April 2<sup>nd</sup> and continuing through Sunday morning, April 3<sup>rd</sup> when all the fires were brought under control and rescue and recovery operations could begin in earnest.

“Now, some of the detractors to our unequivocal response have indicated that this tragedy was the result of a monumental accident...a tragic error...an “Act of God” that befell our nation, and that therefore such drastic action as a Declaration of War is unwarranted. To this I can only reply that those individuals have a right to their opinion, but that I consider such an opinion as the height of ignorance and the height of denial. We can afford neither in such circumstances. It is likely that in Rio de Janeiro alone that the death toll will exceed 25,000 souls. In the vicinity of Juiz de For the estimates are not nearly as precise because of the location of the impact on the outskirts of the city and because the city itself is more remote...but the toll there is likely to exceed 10,000.

“We can not afford to ignore an evil that would produce such death and rain down such destruction on the innocent. By attacking the international space station and causing its destruction, the People’s Republic of China has committed an affront to the civilized world otherwise uninvolved in their conflict with the United States of America. Let there be no mistake...this was no accident. The Chinese intended to destroy the Space Station, an undertaking to which we ourselves have contributed over the years through our scientific, research and manufacturing community. The benefits from the international research being performed there in space have been helpful to many nations, indeed to the whole world. The Space Station enabled us to envision unprecedented advances in health and disease control. Now that vision no longer exists.

“Not only have tens of thousands of innocent people been killed as a result of this belligerent and irresponsible act on the part of the People’s Republic of China, but the potential for positive advances in the health and longevity of the people of the world has been shattered.

“The people of Brazil are a peaceful people, particularly in our international relations. Our history testifies to this. We readily embrace such peaceful initiatives as the International Space Station represented...and we condemn aggression and abuse of the innocent and defenseless wherever we see it...east and west, north and south. That is why we must not only condemn this horrific act of aggression, but we must also actively respond to it in a manner that will stop it and prevent its repeat in the future. Passivity is not an option.

“The Chinese used conventional weapons that were incapable of destroying the space station entirely. They did not dare use unconventional weapons out of fear of retaliation in kind by the United States that would be much more severe. But the weapons they did use were certain to cause the station to re-enter the atmosphere and impact here on earth. It is apparent that they gave no consideration to where that impact would take place, and that they were aware that it could occur anywhere along the length of the orbital track of the station. Therefore, their act is an act of naked aggression against any nation along that path, and particularly against us. The results to Brazil are as if a weapon of mass destruction had been unleashed upon us. This is how we in Brazil, of our own free will, out of our own painfully firsthand experience with the situation, choose to view it.

“As I have stated since the day before yesterday, and despite the patently insincere, misleading and untruthful statements to the contrary by the leader of the GIR and by the President of the People’s Republic of China, an abject act of war has been committed against Brazil. It is an act that demands our unequivocal response.

“Today that response has been delivered. As of this afternoon at 4:30 PM, an official state of war exists between the Republic of Brazil and the People’s Republic of China. We willingly, and with absolute focus and determination, join the growing coalition of nations who are committed to defeating this evil that has already caused so much death and destruction throughout the free world.

“I have a warning for this enemy: Do not underestimate the capability, the determination or the resolve of the people of the free world. You have seriously miscalculated. Cease your aggression while you still have a formal government that can do so. We will avenge our citizens and bring a lasting and a just retribution to those who perpetrated this crime, and any who abet it...however long that may take...whatever hardship it may create for us.

“To the people of Brazil I say...take heart. We are a strong people, we are a bright people and we are a people committed to the principles of justice and equity. I have absolute faith that these qualities will allow us to endure the conditions that will be necessary to ensure our victory in this struggle. I am sure of this because I know that our people recognize that the hardships of defeating such an enemy will always be lighter than the hardships that would follow a surrender to such an enemy...and we shall never lay down, we shall never surrender to such evil. The Minister of the Interior will hold a press conference tomorrow morning to announce the first measures that will be required to establish our nation’s prosecution of this effort, as well as specific details relating to public and commercial interests.

“To the other nations of the free world I say this: Do not wait until such evil befalls you to take sides in this conflict. I predict that ultimately it will touch you all. Do not wait until it touches you as it has us. Do not wait until the evil stands at your own door. A few years ago, in September of 2001, another dastardly attack that we all remember occurred upon innocents. The leader of that nation, and its people, rose up in great moral clarity and, with one voice, expressed a sentiment that I wish to share with the world again now. I do so because I believe the clarity must be just as riveting...in fact, it must be even more so. The vile cancer of 9-11, has spread from evil terrorist organizations and a network of relatively small supporting countries to an evil of monstrous proportions. We now see some of the most powerful nations in the world willingly banding together to coerce, threaten and destroy any nation or people that stands in their way. As was the case on 9-11 in America, the evildoers who wreaked havoc on our nation acted with great callousness and disregard for innocent life.

“So, I repeat the imperative that was so clearly stated by the American President after the 9-11 attacks. I repeat it to the free world today, to anyone listening to the sound of my voice...

*“You are either with us, are you are with these monsters.”*

“I join with the American President, a man I respect greatly, President Weisskopf, in saying, ‘Either join us, get out of our way, or prepare to fight us.’ This struggle allows for no other choices.

“Now, in conclusion, I also join with President Weisskopf in his statement earlier this morning to the leaders of the GIR and the PRC in response to their news conferences of the last two days. The President of the United States addressed both Hasan Sayeed and Jien Zenim in those remarks. To date, since we are embroiled only with the People’s Republic of China, my words are addressed only to its President and to the people of the nation that he leads.

“President Jien Zenim of the People’s Republic of China, I address you directly and join with the President of the United States in saying on behalf of my nation, Brazil, that nothing short of your unconditional surrender will be acceptable to bring this conflict to a close.

“Your words regarding elections, your words regarding invitations for nations to join your coalition, your words regarding trade and competition...all of them are meaningless in light of your actions. Without the unconditional surrender of which I speak, there is no point in further discussions outside of the contest of arms.”

“This concludes my remarks. May God bless our nation and our people...and may He bless the entire free world in this struggle so that the light of freedom, the spark of individual initiative and free will continue to bless our planet.”

**April 7, 04:50 local time**

**400 feet below the surface**

**70 km North of Wakasa Bay, The Sea of Japan**

They were floating there over one hundred and twenty meters below the surface...buoyant, waiting, listening...well below the thermal layer that was hiding them, eight LRASD devices of the People's Republic of China patiently waited according to the parameters of their programming. Like their cousins, they were sleek and long...huge by the standards of any known torpedo...but they were also a new variety, an innovation produced and tested by the scientists working for Lu Pham. A variant that had not been ready for the momentous attack in mid-March when other similar, but less advanced devices had been used against the United States 7<sup>th</sup> Fleet. This was to be their combat debut.

The initial and more widely-produced variant that had attacked the Americans moved swiftly to the respective area of operation before acquiring targets and then performing their deadly supercavitating attack. This variant moved more slowly and stealthily to its area of operation, or was placed there, and then waited...silently, quietly, unobserved...for days or even weeks if necessary...before acquiring its target and then performing the same deadly attack maneuver.

These particular units, and the other three groups of eight that were similarly waiting in their designated locations, did not have much longer to wait.

This particular group also had some unanticipated, and undetected, company.

**April 7, that same time**

**400 feet below the surface**

**Approaching the LRASD devices, The Sea of Japan**

“There! Just a little closer and I can make it out,” thought Chief Ben Kowalski as he and his swim buddy got closer to the object and made out its dim shape in front of them in the limited illumination provided by their underwater lamps.

“Holy cow! That’s one big mother. Must be over fifty feet long and a good eight feet in diameter,” he calculated as he swam right up to what appeared to be a huge torpedo of some type.

“Shelf, Crazy Horse here. We have a visual on the target.”

Approximately one mile back, in the SEAL command spaces of the USS Jimmy Carter, Lieutenant Commander Terry Sheffield had monitored the progress of his team as they approached the nearest of the eight objects that Captain Thompson had sent them out to investigate.

“How fitting that we should be the ones getting up close and personal with these things,” thought the Lieutenant Commander. After all, it had been his very team that had laid the surveillance devices on the sea bottom of the Chinese harbors that had initially verified that the Chinese were making much more rapid naval advances than had been previously thought. That had been almost a year ago in a clandestine operation long before the countries were at war. In that operation, he and Chief Kowalski had personally set several of the miniaturized underwater, all aspect surveillance (MUAS) devices that had discovered the types of ships from which these weapons had been launched. On that mission both he and Kowalski had been in the water, having been delivered near the mouth of the harbors by their ASDS 3 that normally rode piggyback on the Jimmy Carter.

Now Kowalski was in the water, there was no ASDS with them, and Sheffield was here coordinating this mission from the Jimmy Carter itself. With him, he had Ensign Murdock, who normally “drove” their ASDS but was today acting as a communications officer for the mission. Their mission was to gather as much data on these devices that Captain Thompson felt relatively sure were eight of the supercavitating weapons that the Chinese were employing with such deadly efficiency against the United States Navy and her allies. Sheffield responded to Kowalski.

“Ten-Four, Crazy Horse. What are the essentials?”

Kowalski’s reply was almost instantaneous.

“Shelf, we’re looking at fifty by eight, or something very close to that. This is one big, scary SOB. The nose end of this thing has a really weird shape...tapers off to a long, needle-nosed point. Just a second Shelf. There’s a line coming off the device we need to check out.”

As the Chief had reconnoitered around to the front of the device, he had noticed a line of some type that ascended in the water directly above the front of the device, about six feet back from the nose and then disappeared above them. He now took his partner and swam upwards following the line.

About seventy-five feet above them, they came to the end of the line, to which was attached some sort of electronic device housed in an object that was round, about eighteen inches in diameter

and concave shaped on the bottom. Clearly, when pulled back to the device below, it would fit perfectly into the hole from which the line had originated such that the top of this circular device would fit flush to the outer skin of the large object below.

"Shelf, we have some sort of small electronic package about seventy-five feet above the main device. It is just floating here in the current at the end of its tether."

Lt. Commander Sheffield deduced quickly what he felt certain the small package represented.

"Okay Crazy Horse. This sounds like some sort of sensor or detection device floating in the water there above the thermal. Get back to the main device and check out the aft end. Report back."

A few minutes after he had finished this transmission, Ensign Murdock informed him that they had just received a message from the bridge of the Jimmy Carter.

"What do we have Ensign?"

Ensign Murdock read directly off the printout he had just received.

"Captain Thompson is passing on an update on those earlier faint surface contacts sir. Now that the ASW screen of helicopters and other contacts have passed over us, what we now have is a large number of confirmed surface contacts moving towards us from the general direction of Wasaka Bay. Preliminary identification indicates many Japanese Maritime Self Defense Force (JMSDF) vessels, including several Kongo Class destroyers at a range of about fifteen miles."

Lieutenant Commander Sheffield considered this information.

"Several of their Kongo class?" he asked himself. That would mean something huge was up if the Japanese were committing the bulk of their most important vessels. When combined with the other data he already had, a disturbing picture was taking shape in his mind.

The USS Jimmy Carter had tracked the large Chinese surface contact that had sunk a US attack submarine off of Taiwan north through the treacherous Korean Straits and into the Sea of Japan. It was in the company of several very capable escorts and the Jimmy Carter had to maintain its "tail" very carefully. Captain Thompson had performed this surveillance exceptionally well, gathering more and more information about the ship and its propulsion, electronic and weapons capabilities. Thompson and his men had even gathered critical data on what could only have been an attempted airborne engagement of their target ship either by South Korean, Japanese, or surviving US aircraft. The target ship had come through it apparently unscathed and had continued on into the Sea of Japan. In the process, it had picked up several more escort vessels.

Then, yesterday morning, the entire procession had slowed considerably and the target vessel had discharged eight devices, seemingly in the middle of nowhere. The eight devices were of the same physical characteristics as the weapons that had been used to kill the Los Angeles class attack boat a few days earlier. They had set off by themselves towards this location at a rate of ten knots per hour and a depth of several hundred feet, just below the thermal layer.

Faced with the dilemma of whether to follow the target ship, or to follow these weapons, Captain Thompson had convened a quick staff meeting to get input from his officers. Lieutenant Commander Sheffield had been asked to join and provide his input as well. Although there had been some opinion on both sides of the issue, the vast majority, including Sheffield, and (as it turned out) the Captain himself, had been for following the weapons. That is exactly what they had done and the weapons had arrived at this location late yesterday where they had stopped and began simply holding the position where Chief Kowalski was now examining them.

Now here came several Kongo class destroyers, Japan's most valuable naval asset, behind a strong ASW sweep in front of them...a sweep that probably would have detected almost any submarine, and certainly any moving "super-torpedo" device. But these devices weren't moving...they were just sitting here waiting. It didn't take a rocket scientist to figure out what was up. The Japanese were walking into a carefully laid trap.

Picking up his internal comm-set, the SEAL commander addressed the Captain.

"Captain. Thompson, Sheffield here ... this is urgent.

"Based on the reports I am getting from my team, and from your most recent update, it's clear that these devices are sitting out here like Limpet mines, waiting for targets. The most valuable targets in theater, perhaps outside of the Jimmy Carter, are those Kongo destroyers. They're walking into a trap, sir...is there anything we can do to warn them off?"

There was a brief pause, followed by the Captain's answer.

"Terry, I know. We've come to the same conclusion up here. We're trying to figure out how to contact the Japanese forces directly without compromising our location, signature and mission. I can't reiterate strongly enough the importance this mission has taken on for the long term war effort...as much as I want to, I simply cannot risk that mission, or the information we are gathering, with any kind of direct communication.

"We did send off a VLF message two minutes ago informing CINCPAC of the details and stressing the urgency of the situation, particularly for the Japanese vessels.

"Right now, that's the best we can do. We'll have to just hope and pray it is enough. In the meantime, we Charlie Mike and gather as much information as we can. With respect to your men in the water, these vessels are closing our position rapidly. You'd better call them back."

Sheffield concurred with the Captain and told Ensign Murdock to immediately contact Chief Kowalski. As he prepared to do so, the Chief contacted him first.

**April 7, 05:03 local time**

**400 feet below the surface**

**The Sea of Japan**

“Shelf, I am at the aft end of the device, off to the port side. There is a conventional torpedo screw on the tail of this thing, but forward of that, perhaps six to eight feet, recessed into the body of the device are four ports. I’m going to go forward there and take a look.”

Lieutenant Commander Sheffield urged the Chief on, hurrying him.

“Okay, Crazy Horse. But the situation is getting urgent...hurry this up and RTB (return to base). You have maybe two to three minutes before you have to RTB.”

Those tense minutes passed as the Lieutenant waited for Kowalski to report back in.

“Okay, I have taken a good look at those ports. Shelf, I read them as exhaust ports...equally spaced, one every ninety degrees.”

“Wait a minute!...something is going on. That line to the device above the thermal layer was just cut and released...okay, now the device is clearly activating and swinging through a pretty good arc. Maneuvering thrusters forward and aft around the circumference...noise is picking up ...”

Sheffield knew what was coming. Raising his voice, he broke protocol.

“Kowalski, get the hell out of there NOW! Move away from the aft end of that thing...”

But it was too late.

**April 7, 05:15 local time**

**400 feet below the surface**

**LRASD Device, The Sea of Japan**

Just moments after the Jimmy Carter had positively identified the approaching JMSDF destroyers, the remote sensor connected to the LRASD had done the same thing from its position above the thermal layer. Once identified, the device had patiently waited as the Kongo class contacts, which were approaching at flank speed, closed the range. As the digital processor within the electronic “brain” of the device went through the range calculations, an “if, then, else” statement in the device programming that controlled engagement sequencing was satisfied and a solution indicating the optimum bearing and timing for an intercept of the selected target was calculated.

Once this occurred, the remote sensor was immediately released. Chief Kowalski saw the line to the sensing device go slack and had reported it to Lieutenant Commander Sheffield. Just as he completed that report, maneuvering thrusters built into the sides of the LRASD activated and swung the weapon through the proper arc until it was “aimed” along the right bearing to intercept its primary target. As this was occurring, the pumps for the rocket engine began to activate and at precisely the right moment, the processing unit activated the rocket engine. Immediately, a tongue superheated exhaust gasses shot out of each of the four exhaust ports, creating an area of superheated steam behind the LRASD as it began to rapidly accelerate towards the oncoming JMSDF task force.

All of this occurred in an instant, just as Lieutenant Sheffield’s frantic communication to get out of the area reached the Chief. But the ignition of the rocket engine coincided with the Lieutenant’s transmission and there was simply no time to react. In the first second of ignition, the superheated steam created by the exhaust incinerated both Chief Kowalski and the man with him before they fully realized what was happening, and certainly before the Chief could respond to the Lieutenant. There was just a brief instant of recognition in Kowalski’s mind as he saw the rocket engine ignite and then the expanding gases and steam shot out of the exhaust ports and engulfed the two of them.

Chief Warrant Officer Ben Kowalski, eighteen-year veteran of the US Navy, and eleven-year veteran in the “teams”, died doing what he enjoyed best...serving his nation with his closest friends.

**April 7, that same time**

**JMSDF Task Force**

**Northwest of Wakasa Bay, The Sea of Japan**

The JMSDF task force was already at battle stations and was approaching its area of operation when the LRASD weapons “lit” off. The flagship for the task force was the Shirane class destroyer, the DDH 144 Kurama, flagship of the entire 2nd Escort Flotilla for the Japanese Maritime Self Defense Force based out of Sasebo, Japan. Today, she was leading the largest and most powerful combat naval task force that Japan had put to sea in over sixty years...a task force of twelve ships and over 3000 sailors that represented roughly one fourth of the JMSDF overall combat capability.

Over the last two to three decades, the Japanese had built up what was considered to be the best all around destroyer navy in the world. Numbering over fifty ships and comprising several very modern and very capable classes, the Japanese Maritime Self Defense Force boasted, next to the US Navy itself, the most modern, the most numerous and the most comprehensive destroyer fleet in the world. Many analysts felt that except for the numbers (the US Navy included over sixty destroyers) and the overall anti-air technology (the US force included over forty Aegis class destroyers against

five for the JMSDF), that the JMSDF was the equal to the U.S Navy. The JMSDF had worked hard, had trained hard, and many felt that they had achieved parity in terms of pure capability in either the anti-submarine or the anti-surface warfare role, and in terms of overall seamanship and training.

Today, these claims were going to be put to the test. The Kurama was leading a task force of three of the five JMSDF Kongo class Aegis destroyers along with eight other modern escorts at flank speed to the coordinates necessary for an optimum intercept of a large Chinese air raid that was forming to attack the main Japanese islands.

The Kurama led the task force because she and her sister ship, the Shirane, were unique in their roles as large, helicopter-carrying destroyers. Each was capable of carrying three SH-60J anti-submarine helicopters (something no other destroyer in the world could do) and each was additionally outfitted with all the necessary sensors and weapons systems for hunting down and killing submarines, or any other submerged threat. They had also been built specifically to serve as the flagship for JMSDF flotillas and major task forces. They included worldwide communication, war-fighting coordination capabilities and the facilities to house the flotilla commander and his staff.

But the ability to coordinate the engagement of sub-surface threats was the real reason the Kurama was specifically with the task force today. Along with her significant capabilities, the task force included four other very capable Anti-Submarine Warfare (ASW) vessels of the JMSDF. These included two Murasame class destroyers and two Asagiri class destroyers. The powerful sonars, the ASW SH-60J helicopters with their sonar-buoys, the many anti-submarine torpedoes and the joint communication and targeting capabilities of these five ASW vessels were all on maximum alert. They were being employed to insure that no submerged threat, and in particular that no supercavitating threat, could approach the task force to hinder it from its primary mission.

That primary mission was the interdiction of the huge air raid on Japan that intelligence had confirmed was being launched from North Korea and the People's Republic of China. The raid was now forming in the vicinity of Harbin in the People's Republic of China and would consist of several hundred aircraft of multiple varieties including SU-24 Fencer bombers, TU-22M bombers, SU-30 fighters and Mig-29 fighters. Intelligence indicated that the raid would approach Japan over Wasaka Bay and then split into two groups, one attacking Osaka and the larger group attacking Tokyo.

To counter this, the planning staffs for the Japanese Defense Forces had devised a defense strategy using the formidable Air Defense forces and their AWACS aircraft teamed with F-15s coupled with the significant area coverage capabilities of the Aegis class destroyers of the maritime self defense forces. In order to ensure the safety of the capital assets that the Aegis destroyers represented, the significant ASW capability had been integrated into the task force and was additionally augmented by twelve, P-3C Orion ASW aircraft operating from land bases in the area. These formidable ASW capabilities were sweeping the ocean out to 100 kilometers in advance of the task force while SH-60J ASW helicopters off of other vessels in the task force sanitized the inner zone closer to the task force.

It was felt that a one hundred kilometer clear zone was necessary to protect the task force from any of the long-range devices that the Chinese had employed against the Americans. The now well-documented ability for those devices to approach at upwards of fifty kilometers per hour and then to engage in a terminal attack in the supercavitating mode at 600 kilometers per hour necessitated such a buffer for the Japanese. They dared not risk their Kongo class destroyers without it.

The three Kongo class destroyers included the DDG 173 Kongo, the DDG 175 Myoko and the DDG 176 Chokai. Each was licensed-built version of the United States Arleigh Burke class of Aegis destroyers, which had included some alterations and improvements specifically designed into the Japanese vessels. Those alterations included a back-up surface/air radar system, a faster firing 127-mm main gun with its own dedicated fire control system and a more elaborate Electronic Warfare Suite. The additions had been expensive and had added extra weight, but had been considered critical to the Japanese given their more limited operating environment so close to very large and potentially belligerent adversaries. But the principle advantage that they provided was their Aegis anti-air warfare capability that controlled the ninety long-range standard missiles that each vessel carried. The system was capable of tracking literally hundreds of targets simultaneously and quickly engaging them from the vertical launch (VLS) missile system that each vessel carried.

In addition to the three Kongo Class destroyers, the task force also included another four very capable AAW destroyers. This included two of the newer Improved Murasame class destroyers, each of which carried thirty-two standard missiles in vertical launch cells, and two Tachikaze class destroyers, which held forty standard missiles each. Each of these class destroyers was capable of slaving the targeting and firing of their anti-aircraft missiles to any one of the Kongo class vessels in the task force, thereby significantly improving the overall effectiveness of the task force as a whole. With the missiles of the Kongo class destroyers complimented by these vessels, the task force was moving into a position to "ambush" the approaching Chinese air raid with well over 400 of the most modern and most capable anti-aircraft missiles available on earth.

And the ambush was about to be "sprung" as planned...only the Japanese had not planned it.

**April 7, 05:16 local time**  
**Combat Information Center**

**DDH 144 Kurama, The Sea of Japan**

Admiral Arai Shigeru, commander of the JMSDF task force, was conferring with Captain Minamoto Ohira of the Kurama. They were discussing the best position for the Kurama relative to the rest of the task force now that they had reached their area of operations. As they were doing so, the communications officer abruptly interrupted them.

“Admiral, I have flash traffic from the Defense Ministry. They are routing a direct message from US CINCPAC to your attention, marked urgent.

Looking at the Captain with some surprise, the Admiral said, “A direct message from CINCPAC? ... I wonder what it could be?... must be important. Go ahead Lieutenant.”

But the Lieutenant did not get the chance to begin delivering the message before there was a simultaneous, excited pronouncement by the Ensign monitoring the sonar readings there in the Combat Information Center (CIC).

“What!... I have multiple very loud transients bearing oh-two-five degrees... now others bearing three-four-six degrees. Range one-six kilometers... speed... speed increasing now through 200 kilometers per hour... continuing to increase. Now another group!”

Every sonar operator on every ship in the task force was hearing the same awful sounds that the sonar operator on the Kurama was reporting. Every one of them was also in the process of frantically reporting it to his commanding officer.

Admiral Shigeru immediately realized the significance of the report. Despite the ASW screen, despite what the Admiral felt were the best possible efforts to the contrary, somehow the Chinese had been able to get their weapons inside their defenses where they were now attacking them. Turning to Captain Ohira, the Admiral immediately began issuing orders in accordance with contingency plans he had hoped to never implement.

“Captain, execute formation plan Gama immediately and transmit that order to the rest of the Task Force now! Inform the Defense Ministry that we are under attack by supercavitating weapons.”

Immediately the Kurama and every other capable ship in the task force lay down an ASROC (Anti-submarine Rocket Assisted Torpedo) barrage in front of the approaching contacts using the predetermined Zebra pattern. The inner-zone ASW aircraft converged on approaching contacts to get their fish in the water in front of them as a secondary line of defense...utilizing the attack patterns and disposition suggested and communicated by the Americans the previous week.

**April 7, 05:17 local time**  
**JMSDF Task Force**

**Northwest of Wakasa Bay, The Sea of Japan**

Formation plan Gama was a dispersal formation that would place the most expendable vessels in front of the more highly valued Kongo class destroyers and the Kurama. The problem was, they were currently in a tight, air-defense formation used for the most effective use of their anti-air weaponry. Getting to the dispersal formation would take several minutes...minutes they no longer had.

The ASROC intercept calculations were quickly performed by the advanced computer systems on the Kongo class vessels and relayed through digital links to those vessels that had them in their vertical launch cell magazines. The DDG 173 Kongo was tasked with defensive ASW weapons control and so the other ships slaved their launches to the Kongo in order to achieve the most effective intercept pattern possible. Within a few seconds, sixteen of the weapons were airborne, vectoring towards the three different groups of approaching LRASD weapons. They had been programmed to land in front of the contacts, penetrate into the water and immediately explode in the hopes of collapsing the cavities through which the Chinese weapons were “flying”. Their hopes were based on the single instance of success that the Americans had experienced over two weeks earlier when attacked by the Chinese with these same weapons. In that instance, a single Mk-50 Barracuda torpedo, dropped by a CV-22, Osprey, ASW aircraft, had been manually exploded in front of one of the weapons and had successfully destroyed its cavity, whereupon the weapon had literally destroyed itself as it impacted the water at 600 knots.

The results were mixed. Of the twenty-four weapons now targeting the twelve JMSDF vessels, six were destroyed, a fact that would be analyzed in great depth later. But eighteen weapons bore right through the Japanese barrage and continued towards their targets. This left the two inner zone SH-60J ASW helicopters to try to interdict the incoming weapons. But, given the location of their ASW patrols prior to the attack, neither of them was capable of the speed necessary to intercept the LRASD weapons. They could only watch the incredibly fast streaks move towards the vessels of their task force and explode, one after another, as they tried in vain to intercept them. Less than sixty seconds after the initial ASROC intercept, the naval engagement was over.

Six of the twelve JMSDF ships were sunk outright, being completely torn apart by impacting LRASD weapons and sinking immediately with almost all hands. This included each of the Kongo

class destroyers that had been targeted by four weapons each, and the Kumara, which had also been targeted by four weapons. Admiral Shigeru and Captain Ohira, two of the most seasoned officers in the JMSDF, were lost with their entire crew. Three ships, one of the Improved Murasame destroyers and two of the Takikaze destroyers, sank more slowly due to the weapons targeting them exploding close in to the vessels as their proximity fuses activated, but not impacting those vessels directly. The resulting explosions were close enough to the vessels that they broke the back of two of them and the other was holed severely below the water line. All three would sink within two hours of the attack.

In what would later be called the pivotal, "Battle of the Sea of Japan", only three of the vessels in the JMSDF Task Force survived. Two of these were the two Asagiri ASW destroyers that had been conducting ASW duties on the extreme edge of the formation, one on either side. Both had been able to turn away violently enough without danger of collision and were therefore able to maneuver out of the way of the approaching weapons. Those weapons did come close enough for their proximity fuses to activate and detonate their warheads, but those explosions were far enough away to inflict only minor damage and casualties to both ships. The other survivor, one of the improved Murasame destroyers located closer to the center of the formation, was severely damaged but would survive. That vessel had actually been struck by one of the weapons and every man on board who saw it thought that they were witnessing their own deaths. Miraculously, the warhead had failed to detonate and the severe damage was due to the shear impact of the weapon itself at 600 knots. The resulting collision had holed the side of the vessel below the waterline and caused a terrible fire that would take twelve hours to extinguish. It also caused significant structural damage that would require several weeks in dry dock to repair.

The entire disastrous confrontation was recorded in detail and at close quarters by the sensors on the USS Jimmy Carter...and the more audible sounds, the sounds of the destruction of each of the Japanese ships, were heard by every member of the crew.

**April 7, 05:25 local time**

### **Approaching PRC Air Raid**

#### **Over Wakasa Bay, The Sea of Japan**

Stripped of the Aegis AAW defenses that they had expected to exact a tremendous toll on the approaching raid, the Japanese aircraft were neither numerous enough, nor sufficiently more technologically advanced to hold back the Chinese. Their F-15s exacted a heavy toll on the bomber and attack aircraft where they could break through the Chinese fighter cover, but such breakthroughs were very rare. The Chinese were employing over two hundred of their advanced SU-30 air superiority fighters to cover the attack aircraft and these SU-30's were very close to a technological match for the F-15s employed by the Japanese. In addition, the Chinese had been training extensively over the last two years to produce pilots with the experience to go up against the western pilots who historically logged many more hours training them for future combat.

The Chinese training, and their overwhelming numbers, paid off. It was a strategy that the GIR had already proven was effective in Turkey against western technology. The result of the initial air battle, while providing a higher kill ratio to the Japanese, was disastrous for Japan because it failed to stop the raid. Ultimately, the Japanese fighters either ran out of ordinance, or were swept from the sky as close to three hundred and fifty Chinese and North Korean attack aircraft continued towards their targets, still escorted by over one hundred fighter aircraft.

Over Wakasa Bay, the attack aircraft reached their point of departure and split into two large groups. One hundred and fifty aircraft proceeded towards the city of Osaka; the other two hundred proceeded towards Tokyo. Japanese reinforcement aircraft were being alerted and rushed to the scene from all over the islands. Some of these arrived in time to do battle with the Chinese who had quickly swept the small combat air patrols from the sky that had been left in reserve over each city. This allowed the attack aircraft to prosecute their targets. These included air defense sites, ship-yards, manufacturing plants, petroleum processing and storage facilities, military bases, police headquarters, power plants, bridges, governmental offices and communication facilities...all of which were hit hard by the raid. Once air defenses had been suppressed, the Chinese aircraft had free reign over both cities for almost an hour. The remaining Chinese fighter aircraft engaged the increasing numbers of Japanese fighter aircraft arriving from other bases until the attack aircraft began to egress.

During the flight back to China, Japanese aircraft, pursuing the fleeing attackers like angry hornets, were able to break through to attack aircraft and punish them. These Japanese fighter aircraft were, in turn, set upon by more and more Chinese aircraft the closer they came to Chinese and North Korean airspace and a large dog fight ensued on the western side of the Sea of Japan.

In the end, the Chinese lost over one hundred fighter aircraft and close to the same number of attack aircraft...over two hundred aircraft altogether. The Japanese lost less than one hundred of their F-15 and other indigenous fighter aircraft in the overall melee. Although this was an appreciable loss to the Chinese, they had many hundreds more aircraft to throw into the battle...and they appeared more than willing to do so. For the Japanese, the loss of so many aircraft had a much greater impact. They could not afford such attrition. Coupled with the naval losses, the overall losses to Japan on

April 7<sup>th</sup> were disastrous, both in terms of strategic military consequences, as well as morale. Added to this, the Japanese also suffered thousands and thousands of casualties in Osaka and Tokyo and terrible logistical and infrastructure loss. Fires in those two cities raged out of control throughout the day on the 7<sup>th</sup> and into the night.

And that night, another even larger raid returned and punished the cities again. In that second battle, the Japanese suffered losses in the air similar to those that the battle that morning had exacted. And, while the Japanese aircraft were able to inflict heavy losses on the Chinese fighter cover, they were not able to muster enough aircraft to break through the Chinese fighter cover to the attack aircraft as they returned to the mainland.

April 8<sup>th</sup> dawned clear and bright...except over the cities of Osaka and Tokyo where the pallor of smoke hung high in the atmosphere over both cities and was visible from locations all over the islands. But April 8<sup>th</sup> dawned a new day. It was a day that began with the Japanese air force having been reduced in numbers by almost 40% over the previous day. It was a day that began with the Japanese Maritime Defense Forces depleted by almost 20% of their destroyer strength over the previous day. It was a day when the Japanese people and many individuals in Japanese leadership were questioning their ability to defend themselves. It was a day when more and more Japanese contemplated a futility unknown since the days of August 1945.

### **April 8, 17:30 local time**

### **Emergency Command Shelter**

### **Outside of Tokyo, Japan**

Prime Minister Hatoyama Kakuei listened as the various ministers continued their discussion with the heads of the various branches of the military regarding the traumatic events of the last thirty-six hours. Virtually everyone in this room had lost someone dear to them. Thankfully, outside of a number of more minor air skirmishes, and continuing ballistic missile barrages directed at military installations, there had been a lull in the fighting for most of the day. Nonetheless, the political debate regarding what to do next had raged all day.

The Prime Minister and his cabinet were a representation of the Liberal Democratic political party that had held together a majority coalition in the Japanese government for so many years...actually for decades. On social issues they had always been liberal, even socialistic by some standards...but on military issues they had always been fairly conservative. Despite this, due to the events of the last six weeks, there were cracks appearing in that coalition. Things had been viewed as difficult - even catastrophic - after the defeat of the large American-led Korean relief force last month. Now that the Japanese themselves had suffered such a defeat, for many in attendance at this meeting the situation was beginning to look absolutely hopeless. The military did not believe so. The heads of all three major service branches of the Japanese Defense Forces were convinced that they had the capability and the will to continue the defense of their homeland, and to carry the fight to their enemies. They were pressuring their civilian leadership for three things:

1. Planning and conducting a massive retaliatory attack against major Chinese military installations, governmental facilities and infrastructure using Air Force and Maritime forces.
2. Authorization to utilize in the proposed attack the dozen nuclear weapons that the Japanese had very carefully and secretly produced and stored over the last five years.
3. Immediate authorization to implement emergency production of dozens more such devices, according to plans that had been secretly developed for several years.

Hatoyama Kakuei harbored mixed emotions. Clearly at current attrition rates, if the Chinese and North Koreans were willing to continue - and every indication showed that they were - the ability for the Japanese Defense forces to even mount such an attack would evaporate within a few days. Their very ability to defend Japan at all against air attack would disappear not long thereafter. The opportunity to strike back existed now, and it had to be either used, or discarded.

On the other hand, what were the chances of such an attack being successfully carried off? The Chinese numbers were overwhelming and would be tough to break through with the resources left to Japan. And what if Japan were successful? What would be the consequences?

That latter question was somewhat easier to answer. The Chinese also possessed nuclear weapons and they were more numerous and potentially more devastating than the weapons that the Japanese possessed. They would surely use them against Japan. Japan was a much smaller and more densely populated nation...and of all nations, Japan knew what the consequences of nuclear detonation on populated cities would be. It was a consequence that the Prime Minister would do almost anything to avoid.

"So," Kakuei mused, "either we fight to the death...a death that would probably not be too long in coming...or we face defeat...either abject military defeat, or a negotiated one."

Of all the options, perhaps there was still some room for an honorable, negotiated end to this...before it was too late for all the citizens in his nation. With that thought in mind, he interrupted the ongoing conversation and addressed his cabinet and the military leadership.

“Gentlemen, I believe we have but three options, and they are the options we have discussed in detail over the last several hours. The first option, one that we all desire emotionally, is that we decide to wage all out war and punish the Chinese for their aggression. In such a scenario, we would use the weapons at our disposal, invoking the inevitable response from the Chinese whether we succeeded or not. Our only hope in such a scenario is that the United States replies with overwhelming devastation and puts an end to The People’s Republic of China. I ask you to carefully and soberly consider this option, putting pure emotion aside. If we pursue such a course, the Chinese would certainly punish our nation when they retaliate, with a result far worse than any we could inflict upon them. We would be decades recovering from such destruction in the best of circumstances. Then, what of the potential consequences of a massive attack on China by the Americans? What would be the fallout experienced by our nation, lying in such close geographical proximity? Prevailing winds would normally help, but there are times when the winds do blow towards us...what then when that heavy fallout blows across our already ruined nation?”

“Another choice is to continue fighting conventionally to the end. The last two days have shown us where this path leads. There are simply too many aircraft at the enemy’s disposal. We would ultimately lose and terms would be dictated to us, probably after our nation is invaded, our cities destroyed and our people violated.

“Our third option, and the one that I am leaning towards, is that we threaten China with our nuclear weapons and then put up the best defense we can over a period of time, while dispersing our remaining naval forces to bases we occupy away from the main islands. Then we must try to negotiate the best terms for peace possible with the People’s Republic of China.”

When the Prime Minister made this statement, there was an immediate, loud chorus of “NO!” and “NEVER!” shouted from many in the room, particularly the military commanders. Arguments broke out all around and a state of general chaos and pandemonium ensued. As the Prime Minister tried to retain control of the meeting, his chief of staff entered the room and handed him a note.

The Prime Minister opened the note and read the single line written there.

“President Jien Zenim of the People’s Republic of China is on a secure connection and is asking to speak directly to you.”

Hatoyama Kakuei looked sharply at his chief of staff and received a very sober and quick nod in reply. It was apparent that Zenim was waiting. The Prime Minister had to literally shout to get the attention of those in the room. Once he had their attention, he informed them of the call, summoned his Foreign Minister and Defense Minister to him, and the three of them departed.

### **April 8, that same time**

#### **Presidential Offices**

#### **Beijing, PRC**

As Jien Zenim prepared to speak to the Japanese Prime Minister, he felt very pleased. To date, operation “Tempered Shaft” had gone extremely well, despite larger-than-expected losses to the air forces. Those losses, however, had led to the accomplishment of all mission goals more quickly than anticipated. With the stepped-up production that China had already implemented in license building of aircraft, and with the additional funds set aside for the purchase of ongoing manufacturing capacity in the Russian Federation...all of the aircraft losses would be replaced within three months.

The strategy of leaking the planning and timing of the initial dual air raid on Osaka and Tokyo to a known Japanese agent had worked flawlessly. The Japanese had jumped at the chance to utilize their Aegis warships to decimate China’s aircraft and had taken every precaution against their knowledge of the operational parameters of the supercavitating weapons that the PLA had at their disposal. In all probability, if that knowledge had represented the full extent of those capabilities, the Japanese defenses would have worked very well. But, that had not been the extent of those capabilities. The Japanese had been completely unaware of the “sleep-mode” variant, which allowed the weapons to hold their position silently while waiting for a known enemy to come to them. And that is exactly what the Japanese had done. And that is exactly what had allowed that variant to be so devastatingly effective against the Japanese fleet. The Japanese had paid a terrible price for their assumptions and ignorance, and once those Aegis assets had been neutralized, the raid had proceeded as planned, and as the Japanese anticipated ... and their air force alone had been powerless to stop it.

“But such is the nature of warfare,” thought the Chinese President. “As Sun Tsu had said ... *all warfare is deception.*”

And now it was time to extend the olive branch with one hand...while still very visibly holding the club that delivered such effective blows in the other. If his offers were phrased properly...if he could reach through and touch the Prime Minister’s inner force and quell it, along with those of his ministers, then the prize of the Japanese Islands would fall to China without need for further hostilities. And the fall would happen far quicker than anyone, including the President himself, had envisioned.

As the connection was opened and the Japanese Prime Minister completed his curt greeting on behalf of himself and his ministers, Jien Zenim spoke.

“Hatoyama-san, thank you for taking my call. Under the circumstances I know it must be difficult. I have called to reiterate the same offer that was extended by the People’s Republic of China to the Western Rim nations several days ago.

“Clearly, these intensified hostilities have resulted in tragic losses to both of our peoples. We in the People’s Republic wish to end the bloodshed and are willing to call a halt to the fighting if you are in a position to do likewise.

“Mr. Prime Minister, let me be frank. Although we have no quarrel directly with your people, your support of, and your continued prosecution in proxy of, American foreign policy has brought us into conflict with one another. It is a conflict that can be put behind us, and quickly, if you simply disavow yourself from those policies and engage with us in the economic prosperity that an alignment of our interests is sure to bring.”

“Let me cite one example: Siberia. There is no doubt that Japan has historically been interested in exploiting the resources of that region. Today there is the opportunity to do just that. The Coalition of Asian States, as you are aware, has been working with the Russian Federation for the past year to further explore and develop the vast resources there on an exclusive basis. As a member of the CAS, Japan would be in a position to do that with us.

“Now, wouldn’t such opportunities be far better for Japan and her people than the current conflict? I know that they would for the People’s Republic, and that is exactly why I have made this call. I urge you to consider this proposition. Any positive consideration would generate an immediate long-term cease-fire and would see our Foreign Minister make the trip to Tokyo to negotiate a meaningful treaty between us. Such a treaty would inevitably involve a brief occupation of some of your military bases and other infrastructure to ensure that no lingering American influence was able to undermine our agreement, and to ensure that your defense forces are thoroughly trained and integrated into the overall CAS defense structure. In the end, such arrangements would prove advantageous for your nation as it would assure the continued prosperity that our alignment would produce.

“On the other hand, Mr. Prime Minister, I must be equally direct regarding the other path. If you continue to pursue your current course of defending American interests and exploitation, we will step up our operations and rain down the punishment you have experienced in the last two days at Osaka and Tokyo on all of your cities. After your ability to defend against it is thoroughly neutralized, we will invade your nation and occupy all of your cities in a much more harsh alternative to the very peaceful proposal I just made. Make no mistake. We know your force strength and readiness...we know how long you can continue to mount your defenses and we have far more than enough resources at our disposal to drain you completely. Let me add this: We also know of the few weapons of mass destruction that you have developed and warn you against the deployment of any of them at the cost of the most grave consequences to your entire nation.

“So, I urge you to consider my offer. I will call for a unilateral cessation of hostilities for thirty-six hours. At the end of that time, I must have your response. Do you have any questions of me?”

Hatoyama Kakuei, the Prime Minister of Japan, and his Foreign Minister had more than a few questions for Jien Zenim, and the conversation went on for several hours.

**April 9, 11:39 local time**  
**CINCPAC Headquarters**  
**Honolulu, Hawaii**

The messages came pouring in from surviving personnel at US bases and from many elements of various Japanese Defense Force commands. The messages spoke of betrayal, they asked for help, they told of plans...most of all, they spoke of internal fighting. It appeared that, despite the lull of the last two days, the recent attacks on Japan were so severe, and the losses so drastic, that order was breaking down. Exactly why, the analysts weren’t completely sure yet...but the rumors indicated that negotiations and dialog had been opened between the Japanese leadership and the PRC.

A number of Japanese Maritime Force commanders were proposing that vessels would form into two large task forces and head east. These commanders were not inconsequential and included two Flotilla Admirals and the captains of two of Japan’s newest Osumi class amphibious assault ships escorted by a number of their modern, high value destroyers... including one of the two remaining Aegis destroyers, the DDG 174 Kirishima.

The same thing was occurring with Japanese air force fighter and attack units, who were proposing forming up with AWACS and refueling aircraft to make their way eastward to US bases, or south and east to Australia. Army units were vying for open places on the amphibious and transport ships that were speaking now in open terms of “seeking asylum”.

As the Admiral walked into the command center, Commander Banks gave him a short briefing.

“Admiral, the reports first started coming in about an hour ago. It was just a trickle at that point and we routed them to intelligence. But, in the last twenty minutes, the volume has increased to a real flood and it is obvious that something major is going on.

“When we got the call from Captain Deleon by short wave from our base in Sendai, we made the call to you, sir. Per your instructions, he is now holding.”

The Commander in Chief of US Forces in the Pacific (CINCPAC), Admiral Richard Sullivan, listened closely. Commander Banks was a “good hand” in a crisis, as he had already proven during the attacks on the 7th Fleet almost a month ago. He had continued to prove his mettle and effectiveness ever since, in one crisis after another. Outside of the current events, the Admiral considered briefly the continuing stream of requests from the Commander for a combat command as quickly as possible. The Admiral was inclined to grant that request...but not just yet. First they had another major, unanticipated crisis to address.

“Jim, can you hear me?”

The connection wasn’t that good. There was quite a bit of static on the encrypted line, but the response was clearly understood.

“Yes, Admiral. Sorry to pull you in, sir. I’ll get right to it. The situation here is critical.

“Fifteen minutes ago I spoke to the Deputy Minister of Defense. He told me directly that a deal has been cut. Japan will announce tomorrow evening Tokyo time, less than a day from now, a complete cease fire and a negotiated settlement that will lead to Japan’s full membership in the CAS within twelve months. During those twelve months, the PLA will occupy selected areas of the country, including all US bases and most Defense Force bases. The cease fire will become effective immediately upon announcement and they will sign the documents during the announcement.

“As rumor of this, and now actual word of it, has spread, there’s been fighting, and the fighting is intensifying. Many in the military are not going along with it and there are rumors that PLA troops are already landing at secured airfields to help quell the growing violence. The civilian population is in pandemonium as the rumors spread. Already there are significant numbers of small craft loading up and making for sea...craft of all types and sizes. It has the making of a real human tragedy of monumental proportions, sir, that will make the South Vietnamese “boat lift” look like child’s play.”

The Admiral soberly took this in. He did not hesitate in his response.

“Jim, I want you to listen to me and listen well. You may not have much time. I know you are already probably executing contingency plans to destroy all classified material. But, I need you to continue your dialog with the Deputy Defense Minister if you can. There are a number of prime Japanese assets that cannot, under any circumstances, be allowed to fall into PRC hands. I am thinking specifically of those two remaining Aegis destroyers.”

After a pause in transmission, the Captain responded.

“We’re already way out in front of you there, Admiral. One of those Aegis destroyers will be the principle escort to the two Osumi assault ships and a number of other vessels that will be forming up early tonight. In fact, it is the same vessel and the same skipper that helped escort the Kitty Hawk out of those same waters after the March 15<sup>th</sup> attacks. They will make for Guam, and then further west, maybe Hawaii, and will be looking for escort and air cover as quickly as we can provide it.

“The other Aegis destroyer is under the command of an individual who will remain absolutely loyal to the dictates of Japan’s Prime Minister. He has already taken security measures onboard to prepare for a hand-over to the PLAN. However, his executive officer has already discretely contacted the Deputy Prime Minister’s faction and indicated that he will allow a contingent of Japanese Marines on the vessel to scuttle it. That operation will be occurring off the east coast of Japan before dawn.

“In addition - and this is of utmost importance and should be held at the highest levels of classification...the Deputy Prime Minister has passed on to me information regarding the attack on their naval forces. It contains all of the electronic and acoustical data, as well as their after-action reports. In addition, the Deputy Prime Minister has indicated that they have recovered the wreckage of one of the supercavitating devices that impacted one of their improved Murasame destroyers. Its warhead failed to detonate. That wreckage has already been loaded onto one of the large assault vessels in the hanger bay. It will be transferred into our custody when they arrive in Guam.”

The Admiral knew he needed to contact his boss, Admiral Crowley, the Chief of Naval Operations (CNO), in order to get this information to the President. He imagined that there would be intelligence and diplomatic confirmation, but he couldn’t take the chance that there wasn’t, and they were sure not to have the detail that he had regarding military issues. In addition, he needed direction specifically regarding the harboring of these Japanese assets, and attempts to evacuate remaining Americans. It sounded as if it were too late for most of the latter, outside of the relative few that could get on board these vessels, but he was certain he could help with the former. In fact, because of time constraints, he would issue orders on his own volition to insure he could help with the escorting and protection of those vessels until they made safe harbor. If the President were advised otherwise and heeded such recommendations, he would have to countermand such orders. Under the circumstances, and knowing the “General”, Sullivan felt very certain in anticipating Norm Weisskopf’s decision.

“Okay, Jim, let the Japanese know that there will be adequate air cover off of Guam, as far as our tankers there can extend it. In addition, let them know that we will direct submarine and surface escorts to rendezvous with them as quickly as possible. Let them know we will welcome their help, and will stand with them. I will issue the necessary orders following this conversation.

“Now, Captain, as for you...this is a direct order. Get yourself and your people on one of those ships or aircraft and get back here to Honolulu. Bring those tapes with you. Make sure that the

Deputy Defense Minister knows that this order that I just gave, and your ability to comply with it, will be my own personal condition for the substantial help I am ordering out to meet his people.

“If there is nothing else, carry on Captain. Sullivan out.”

**April 10, 07:52, EDT**

**Situation Room, Laurel House**

**Camp David, Maryland**

The entire cabinet sat in stunned silence and disbelief. They had known it was coming...they had all followed the progress of the battles and seen the pictures of the fires and destruction in Tokyo and Osaka, they had all read the reports from CINCPAC that had been transmitted earlier in the day. Just the same, the news conference that had just been carried live on WNN, and transmitted around the world, drove home the awful, final reality of the situation. It had shown in stark clarity the Prime Minister of Japan and the President of the People’s Republic of China making their joint announcement and then signing the documents that everyone in that room realized rendered United States foreign policy and prestige in the Pacific all but impotent. It also rendered decades of careful planning which had resulted in the conversion of a former enemy into a strong ally, and literally trillions of dollars of economic and military investment, worthless to America...while filling the coffers of the People’s Republic of China.

Everyone there knew that all hope for any hold out by American and South Korean forces, as unlikely as it had been in any case, was now completely gone. That scenario, when it was finally played out, would deliver a double dose of the same medicine to American foreign policy and its economy. It would mean that more decades of planning and careful cultivation of a foreign ally were gone along with more trillions of dollars of investment. Not only gone, but delivered lock, stock and barrel over to an enemy growing more powerful by the day.

“What had taken decades and trillions upon trillions to build and develop is now gone in a matter of a few days,” thought Fred Reisinger as he prepared to speak to those gathered regarding the continuing diplomatic fallout of China’s lightning offensive and stunning victories.

“Ladies and Gentlemen, let me be frank. We are witnessing a diplomatic nightmare of unprecedented proportions. I will focus on a summary of the diplomatic fallout. We have already heard the military summary from General Stone and we will here of the equally tremendous economic impact from Secretary Gage. This nightmare is of course most highly focused in the Far East and the Mid East where these belligerent nations are making the most headway. As you can imagine, with the setbacks in Turkey and Saudi Arabia, with the continued retreat in South Korea, and now with the shocking capitulation of Japan, other nations facing the joint GIR and CAS juggernauts are reluctant to join our alliance. At this point, they are reluctant to even voice support for our position for fear of literally being crushed. This is particularly true of nations smaller and weaker than those our enemies have already succeeded in taking down. Korea and Japan were keys to our strategic position in the Far East. Their rapid fall is casting a pall of fear and doubt over the whole region.

“Even more alarming is the effect of these events and their economic consequences on the positions of nations outside of the combat theaters, particularly in Europe. More directly put, we have a number of long standing allies, some of whom are members of NATO, who are simply vacillating and calling for restraint and caution as we move forward. They are understandably concerned about the loss of oil but to such extent of as to render them completely timorous.

“Clearly, this is going to be a long and hard-fought war. We are going to have to demonstrate successes before some of these nations will be willing to risk joining us in defeating tyranny. The battle for the morale of our allies is as essential as any physical battle we face with the PRC and GIR.

“Despite these dire conditions, there are a number of bright spots. Of course, Canada, the UK and Australia are with us completely. Brazil has led the way in South America...all of these proposing a formal alliance, a tremendous coalition of free nations under the leadership of the United States. Within that alliance, we will forge the closest of economic and trade ties. Within that alliance, all parties will provide men, equipment and materiel to the war effort until its successful completion, a completion that will only occur with the unconditional surrender of the CAS and the GIR. Those nations are:

Great Britain	Canada	Australia	Brazil	Turkey
Germany	Poland	Iceland	Belarus	Norway
Austria	Ecuador	Egypt	Costa Rica	Columbia
Israel	Nigeria	The ROC	Czech Republic	

“We expect to have all paperwork and instruments for the formation of this alliance prepared for signature within a few days. At that time, the formal treaty will be signed by all parties and this great Coalition for Liberty forged. Important to note in this regard is that the ROC, due to its isolated nature, will be signing the document that will be delivered to them via clandestine methods, and returned in the same fashion. Their position is clearly very desperate.

“In the meantime, our other diplomatic efforts will continue to focus on those nations which are currently sitting on the fence out of either fear of military assault or fear of economic impact. Our

message to them remains that they must choose...that the consequence of not choosing will only strengthen tyranny and insure their own ultimate succumbing to it. Our goal in this regard will be to have them join us. If that commitment is not forthcoming, then it would be best to have them sit on the sidelines with no official stance...or, lastly, and at the very least, to have them declare themselves neutral. Above all else, we will make every effort to keep them from aligning with either the CAS or the GIR. As the President has said, and as was so eloquently verbalized by the Brazilian President as well, I do not believe other nations will be able to remain unaligned or neutral the longer the conflict goes on. I am convinced that the goal of the CAS is global dominance and the GIR is in league inssofar as it advances the spread of Islam and their own self-interests."

**April 10, 11:52, EDT**

**Presidential Bedroom, Aspen House**

**Camp David, Maryland**

Linda Weisskopf was ready to go to sleep. She had been sitting in bed reading her novel for some time. Norm had completed his preparations for bed and had climbed in himself only a few minutes ago after completing his last meeting. That meeting had been a military briefing via satellite with Admiral Sullivan, who as CINCPAC was commanding all US Forces in the Pacific, and General Horton, who as CINCCEN was the commander of all US and Allied forces in Turkey and Saudi Arabia. Having spent so many years with him, Linda could tell from her husband's demeanor that the meeting was weighing on his mind.

"Honey, things'll be alright. Our nation has been down before, but we'll come back again."

Norm turned around and gave his wife a hug and kissed her forehead.

"I pray you are right sweetheart...and I believe it. In fact, within the next couple of days, we are going to try something rather risky, but if it's successful, it will help to bolster our forces and may strike some doubt and fear into the enemy. But it is perilous, and even if it works it will not begin to even the score compared to the losses we have sustained. No, I am not sure we have ever faced such odds as these...it is going to take the absolute commitment of our people to overcome and out produce the powerhouse these enemies have become. I pray we are up to it as a nation...as a people."

Linda knew that the nation would be up to it, however long it took, and however grim it got, just as long as Norm was there leading them.

"Norm, this nation has seen bleaker days and you know it. I've heard you speak of it...of General Washington and those desperate days after the fall of New York when he was being chased across New Jersey by a much larger army from the most powerful nation on earth at the time. They were just one battle away from total defeat...I believe that was a bleaker than what we face now.

"You've told me how Washington lost almost every battle but somehow preserved his army until the inspiration of a nighttime crossing of the Delaware in weather that no one would have believed possible turned the tables that year. That inspiration came from somewhere...I have no doubts, no matter how dark it gets...no matter what odds we face...that similar inspiration will be forthcoming. Enemies can't plan or prepare for that."

That thought struck the President powerfully as he rolled it over in his mind.

"No, they certainly can't plan for that, can they? Such preparation is not possible."

Norm never ceased to be amazed at this woman's optimism. Here they were, hidden away in the hills of Maryland because they had been driven from their home...no, because their home had been destroyed. So here they were, with the next in line to the President dead and his successor not in place...and she is the one with the positive mental attitude.

"Thank God for her," the President thought. "She doesn't realize how much I need her."

Then, on second thought, the President continued, "...oh yes she does."

For her part, Linda knew that Norm had been cooped up in these hills for too long.

Yes, she understood about security. Yes, she understood about succession of the Presidency. Yes, she understood that they still didn't have a confirmed Vice President. But she also understood something else. She understood Norm Weisskopf and she knew he needed to be out. He needed to be "visiting the troops" and building them up. In this case, the "troops" were not just the actual soldiers out in harm's way. As much as he would enjoy those trips, the President had plenty of very capable and good generals who could accomplish that task.

No, the troops that needed bolstering were the American people, and Norm was the one who needed to bolster them. Norm needed to be out doing that himself. Irrespective of the danger, irrespective of those who would oppose the idea...it was time, and Linda knew it. Reaching out and taking hold of each of his arms as Norm looked at her, she stared right back into his eyes. Then with that knowing look that can only pass between those who have spent decades learning one another's hearts and souls through the dedicated companionship of a married couple, she said,

"Norm, it's time you got out. I know all about security, succession, and all the reasons they are keeping you here. But you need to be out, and the people need you out there. I already mentioned it to Talbot earlier this evening. He probably thought it uncharacteristic that I would make it a "strong"

suggestion. Yet he did say that he would put a schedule together just in case. But you are going to need to push it if it is going to happen. I hope you will consider it.”

Norm had been thinking the same thing for days. When would he ever learn? He had held back for fear of leaving Linda too soon after the traumatic events of a few weeks ago. That reasoning had fit well into his advisors' and protectors' plans for him being at Camp David and “safe” until the full line of succession was back in place, and those reasons had all made very good, perfect sense. They had all assured him, and he believed it, that the people in the nation understood and that there was not the slightest indication of dissatisfaction or concern. But what people felt, and what they needed, were sometimes two different things. Despite his regular televised broadcast messages to the American people and the continuing appearance of his subordinates, Norm had sensed for several days that the people needed a leadership presence in their midst . . . and that would have to be him.

For a brief moment, Norm Weisskopf vaguely remembered a poignant scene from a Civil War movie he had seen as a child. It was a scene in which a Union general mounted his horse and rode among his troops amidst tremendous enemy fire, uplifting and inspiring them to hold fast to the ground they occupied. At such a young and impressionable age, he remembered admiring General Hancock, and he remembered thinking to himself that putting oneself in harm's way in order to inspire others must be one of the signs of a true leader. “Funny how seemingly insignificant childhood memories sometimes find a place, and a purpose, so many years later,” he mused to himself, while absentmindedly caressing Linda's arm.

Linda was right, and Norm knew it. This was an undertaking he could do something.

“Honey, you never cease to amaze me. I will talk to Talbot in the morning, and then the cabinet, and we will set the schedule up. It is time. And who knows? In getting out, maybe the doors will open a little wider for that inspiration you were just talking about.”

**April 13, 03:42**

### **350 NM East of the Kuril Islands**

#### **USS Kitty Hawk CIC, Western Pacific Ocean**

Admiral Ryan contemplated the strike force gathering around him, and over him, as he watched the multiple displays arrayed in the Combat Information Center of the USS Kitty Hawk. He was glad to be moving and, despite the grave risk, he was glad to be providing some small measure of “pay back” this morning. With the destruction of the Chinese satellite surveillance capabilities over this part of the Pacific, operation “Yellow Jacket” was hopefully going to come as a surprise and a shock to the Chinese and their allies. And, if the Chinese held their daily “briefing” for the world press as they had been doing every day for the last three weeks, it would also be a surprise that the whole world would witness. In witnessing it, the world would come to understand that America may have been hurt, she may have been thrown back, but she was far from “out”.

The USS Kitty Hawk had steamed for several days at flank speed to arrive here at this “way point” for the operation. Counter intelligence was indicating that she was actually the USS John Stennis for the benefit of their enemies, and any media that picked up on the story. As far as the “leaked” messages and orders were concerned, the USS Kitty Hawk was still in the vicinity of Guam and preparing to cruise over to Wake Island in a hurried effort to reinforce and re-supply those islands in preparation for any upcoming enemy action. As far as their enemies were concerned, it was the hastily repaired USS John Stennis that had left the vicinity of Guam for an unnamed combat operation. . . a ship whose shattered remains actually lay in the depths of the western Pacific.

Now, here was the Kitty Hawk in company with two Ticonderoga class Aegis cruisers and two Arleigh Burke class Aegis destroyers. In addition, riding shotgun were two Los Angeles class attack submarines and even more importantly, the USS Jimmy Carter, the Sea Wolf class submarine that had already proven so effective in monitoring the enemy and avoiding their new weapons. In anticipation of this operation, the Jimmy Carter had been ordered northward after witnessing and recording the destruction of the Japanese task force. The Admiral felt much more comfortable with her out there on point, particularly now that she had provided the acoustical characteristics and attack profiles of the weapons that were being so effectively employed by the enemy. That data had been provided to every ship and aircraft system being used by this task force and Admiral Ryan felt confident that his ASW efforts would be much more effective as result. But then, as he had already learned, “effective” was a very relative term when dealing with the supercavitating weapons the Chinese were employing.

One other vessel had also joined the task force just a few hours earlier. It was the USS Ohio, a submarine that previously would normally never come close to such a task force since its' primary mission involved months at a time in the deepest, most remote areas of the earth's oceans, training and holding silent vigil, waiting for orders it hoped would never come. The USS Ohio had been christened a nuclear powered ballistic missile submarine. In her original configuration, she had carried 24 Trident nuclear missiles, each carrying ten multiple, independent re-entry vehicles (MIRVs) capable of raining down nuclear fire on any enemy foolish enough to provoke America into responding. In fact, in that original configuration, she had carried more nuclear weapons than most other countries had in their entire arsenal, outside of Russian and perhaps the United Kingdom.

But the USS Ohio no longer carried an SSBN designation for nuclear powered Ballistic Missile submarine or any Trident missiles. During the last several years the USS Ohio, along with three of her seventeen sisters, had undergone significant conversion and refitting and now carried an SSGN designation for a nuclear powered guided missile submarine, in particular, sea launched cruise missiles. She was here with the task force specifically to add her one hundred and forty cruise missiles to the punch that Admiral Ryan was about to deliver.

With the Ohio, the four Aegis vessels and the two Los Angeles class submarines, Admiral Ryan was prepared, in the next few minutes, to launch over two hundred and seventy cruise missiles at the People's Republic of China. Those missiles would be targeting the shipyard facilities and other factory and logistic facilities surrounding Tianjin, factories and critical infrastructure in Beijing and, also in Beijing, critical governmental facilities, including the Politburo and the Presidential offices. These ship and submarine launched missiles would arrive hard on the heels of the main "punch" that Admiral Ryan's joint task force would be delivering to the Chinese this morning. That initial punch would be the result of the substantial number of US strike aircraft that were staging out of the CONUS and were now gathering overhead at this same "way point".

### **April 13, that same time**

#### **350 NM East of the Kuril Islands**

#### **"Stinger" Flight**

"All aircraft, this is stinger lead. Depart X-ray in oh-seven minutes on my mark, I repeat, on my mark, oh-seven minutes ... Mark!"

Colonel Theodore Saunders was prepared to lead the largest group of US heavy bombers gathered for a single combat mission since World War II into battle. Not even the "Linebacker" missions of the Vietnam War, had approached the size of this mission. Nor had any single strike package of Operations Desert Storm, Enduring Freedom, or Iraqi Freedom. No, it had literally been since the German and Japanese missions of World War II that as large a single force of American heavy bombers had been employed against any enemy.

"Fittingly," thought the Colonel, "since this fight is now a World War of equal proportions."

Staging out of Dyess air base in Texas and Ellsworth air base in South Dakota, the Colonel was now leading fifty of America's inventory of sixty-seven B-1B "Lancer" bombers. Each was carrying ten air-launched cruise missiles (ALCM) that were going to target air defense sites, military air-bases and other critical infrastructure within the People's Republic of China around Tianjin and Beijing.

"If everything goes as planned, this punch will not just open the door for the Navy's follow-on punch trailing our strike...it will knock that door off its hinges and lay it out flat on the ground," thought the Colonel.

"Stinger Lead, this is Dish Plate-two. Do you copy?"

Saunders replied immediately to the US Navy E-2C AWACS control aircraft from the Kitty Hawk that would be controlling their ingress and egress this morning.

"Stinger leads copies. Go ahead, Dish Plate."

"Stinger lead, be advised that Wildcat-One, Wildcat-Two and Raptor-One flights are formed up and will use your X-ray departure for their own, twenty-five miles to your front at angels 40."

"Alright!" thought the Colonel. "The Navy is ready to go."

Two flights of eight F/A-18E Super Hornet aircraft configured for long-range air-to-air warfare were going to be riding his front door. Each was armed with six medium range AMRAAM missiles that could reach out and "touch" the enemy at over 60+ miles. In addition, a flight of eight F/A-18F Hornet aircraft would provide more coverage with the eight AMRAAM missiles that each of them carried. Any enemy attempting to break through to do harm to Stinger flight was going to get stung hard themselves...and based on some of the mission parameters and goals, that was the whole idea.

The message from Dish Plate meant that the Hornets were topped off with fuel and ready to go. The Colonel knew that Dish Plate was out there almost one hundred miles to his front with an escort of four F/A-18F Super Hornets, providing defense for Dish Plate and for a flight of tankers that would refuel the naval aircraft upon their return. Dish Plate's passive sensors would allow them to approach the Chinese coast and pick up any active searches performed by the Chinese air defense forces, or any other for that matter...like the North Koreans or even the Russians. Until they either reached their launch point, or were discovered, they would be approaching in a passive mode themselves, hoping to achieve those launch points before discovery. Once discovered, or when they had reached the appropriate position for launch, Dish Plate's powerful radar, and the radar on selected units, would go active to insure their safe egress and to draw in as many Chinese aircraft as possible.

"Roger, Dish Plate. Wildcat and Raptor to use X-ray in oh-three minutes, to our front 25 miles and angels 40."

**April 13, 05:48 local time**  
**East of the North Korean and Chinese borders**  
**Russian Federation**

As the American strike force approached the Kuril Islands from the west, it dropped literally down to the deck and threaded its way through the remote portions of those islands and then made its approach on the Russian coast. Crossing into Russian airspace over the most remote portion of the Sikhotealin mountain range and then following a central, high valley in that range to the south and east, the fighters, bombers and the trailing stream of ship and submarine launched cruise missiles made their way towards China. By approaching on the deck, in one of the most remote areas of Eastern Russia, having used SEAL teams to neutralize the few radar stations the Russians had along that area of their coast, and by remaining far from the Russian Naval base at Vladivostok, the entire package was able to avoid Russian air defense detection. Once the strike package cleared the southern end of the mountain range, the fighter aircraft increased their altitude so they could better defend the bombers. This occurred just outside of Chinese and North Korean airspace as the bombers and trailing cruise missiles continued flying nap of the earth, less than one hundred feet above ground.

When the escorting US fighter aircraft became visible on the North Korean and Chinese air-defense radar systems, multiple flights of Chinese and North Korean fighters were immediately vectored towards them. These included license built Chinese SU-30's, the latest variant of their newest indigenous and highly maneuverable J-10 fighters and their long range JH-7 fighters. They also included North Korean Mig-29 Fulcrum and older Mig-25 Foxbat aircraft. When picking up signs of the Chinese and North Korean movement on their passive systems, the American E-2C AWACS aircraft, Dish Plate, which was trailing the strike package well off the coast with its accompanying escort and tanker aircraft, illuminated the entire area with its powerful radar system. At that same moment, the designated aircraft in the fighter cover activated their own radar and electronic warfare packages. Most of the fighter aircraft remained "passive" and would use their digital link to Dish Plate to target the enemy aircraft.

A moment of confusion ensued for the Chinese and North Korean air controllers when many new targets showed up on their systems and as they began to feel the effects of the electronics warfare. It was in this moment that the leading Super Hornets attacked with their first volley of sixteen AMRAAM missiles, followed within three seconds by a second volley targeting the approaching Chinese and North Korean interceptors.

The AMRAAM missiles rapidly approached the enemy fighters, using their fire-and-forget radar capabilities and began raining down on the approaching North Korean and Chinese aircraft. Those who had the time and who were able, immediately took evasive action...only to have the second volley fall amongst them. Within just a few moments, and before the controllers could change their attack profile, twenty-six North Korean and Chinese aircraft were destroyed and falling to earth in burning, smoking, charred ruins.

The second and even stronger approaching wave of enemy aircraft was now aware of the American aircraft, and they were preparing to attack accordingly. Before they could do so, the Stinger strike force launched its cruise missiles. Very quickly, five hundred cruise missiles were in the air flying towards their targets. Continuing to fly nap of the earth, they branched off towards their respective target areas in either Beijing or Tianjin. As they did so, the bombers turned back towards the sea while gaining altitude, allowing their fighter cover to engage the approaching wave of Chinese and North Korean fighters. Thanks to the long-range standoff capability of the cruise missiles and to the range of the AMRAAM missile, none of the Chinese and North Korean fighters were able to break through the US fighter cover to launch missiles at the departing B1-B bombers.

Of the five hundred missiles launched by the B-1B force, three hundred of the leading missiles were of a new variety known as Anti-Radiation Cruise Missiles (ARCM). These missiles operated on the same principle as the High-speed Anti-Radiation Missile (HARM) in terms of their targeting capabilities. As they flew forward, their detector heads scanned for any active radar targeting them. When a radar was located, the missile would home in on the radar signal itself and then, based on complex algorithms concerning "lock" state, distance from target, angle of attack and several other considerations, the missile could then target the source of that radar and attack it.

In the attack mode, the missiles were programmed to continually home on the latest source for the radar signal. In this way, if the enemy controllers attempted to foil the attack by iterating the signal between on and off, or by turning the signal completely off, the missile would still home in on the last known location. The ARCM missiles were also capable of communicating between one another regarding the nature and location of their targets. The onboard mission planner programming provided real time target evaluation and determined the optimum number of ARCMs to attack each particular emitter. Although significantly slower than the HARM, the ARCM carried a larger payload and its larger size accommodated the electronics to provide a higher level of ECM sophistication. As a result, the detection, targeting and homing functions were improved over HARM as was the survivability due to the enhanced electronic warfare capabilities.

All of this resulted in a rolling wave of attacks against anti-aircraft sites (including the very dangerous KS-2+ sites), air radar sites, radar controlled anti-aircraft artillery and gun platforms like the ZSU-23 employed by the Chinese. The initial three hundred ARCM missiles opened the door for the two hundred B-1B-launched land-attack cruise missiles that followed, which were then followed by the two hundred and seventy cruise missiles launched by the US Navy.

### **April 13, 08:02 local time**

#### **Press Room, Politburo**

#### **Beijing, China**

Li Peng, the head of the People's Republic Parliament and close associate of Jien Zenim, had just started the press briefing when a security officer entered the room and rushed over to his side.

"Excuse me, Minister Li. Please exit immediately through the door to your left and my staff will escort you to safety. The capital is under attack."

Turning to the crowd of astonished reporters, the officer then took the microphone that Li Peng had just vacated in his hand and said.

"Ladies and gentlemen of the press, please bear with us, we ..."

His voice was interrupted by the sudden start of wailing sirens, not only there near the Politburo, but also throughout the city.

"As you can all hear, there is an air raid warning and we ask each of you to exit the rear of the conference center and follow the two security personnel there. They will guide all of you to safety."

As the reporters rushed for the rear of the room, distant but very distinct "thuds" could be heard, along with anti-aircraft fire that was now mixing in with the sirens. Coming out of the building, the press people could see a number of missile-launches erupting to their east as the "thuds" grew closer.

While exiting the Politburo, Li Ping had received a priority call on his cell phone. When he noticed that it was Jien Zenim himself, he halted his impatient security procession so he could hear the words of the President of the People's Republic,

"Yes. Mr. President. I know, but I stopped the briefing since this attack is obviously aimed at the capital and we needed to get ourselves and the reporters to safety."

"Yes, Mr. President. Where are you? Have you been escorted to safety?"

After Jien Zenim acknowledged that he was safe in the bomb shelter below the Presidential offices, Li confirmed Jien's order that the press briefing resume following the all clear sign.

"Good, I will..."

He was not able to finish the sentence. He was interrupted by a huge explosion that occurred in the wing of the building adjoining the one they were in. The brightness of the explosion flashed through the windows, just before the pressure wave blew the glass into the assembled group, cutting several of the security personnel severely and nicking Li Ping on the left cheek, producing a small trickle of blood that ran down his face.

"Excuse me, sir. We must leave NOW!"

The security team leader was urgent now, not caring that he was interrupting a conversation with his own President as he took Li Ping's arm and forcefully led him down the hall. They were rapidly approaching a secure and heavily fortified elevator that would take them down to the staff bunker far below ground level. Just another twenty feet and they would be there. In fact, two of the security team were already at the door and were holding it open in anticipation of Li Ping's arrival.

"Just a few more seconds and I believe we are going to be alright," thought Li as the leading element of the security guards that had formed a protective shield around him reached the elevator.

He was wrong.

Just as the first of those men entered the elevator, and as Li himself was stepping across the threshold, there was tremendously bright flash behind him. Li only registered the surreal contrast between the bright light that was reflected on the inside wall of the elevator and his shadow which was cast on that same wall. It was his last conscious, mortal thought as his body, and the bodies of the five men around him, were tossed like so much tissue paper into that same elevator wall by the overpressure from the blast. The blast resulting from the impact of a United States ALCM that occurred only fifty feet behind them.

Li Ping, President of the People's Republic of China's Parliament, member of the Politburo for the communist party and close confidant and unofficial spokesman for Jien Zenim, was killed instantly. He would not resume the press briefing that morning.

When it finally did resume, the press conference would be anything but "normal".

### **April 14**

#### **The People's Republic of China**

The American attack on Beijing was a significant success, both from a political and a propaganda standpoint, and to a lesser extent, from a military standpoint. Many critical anti-aircraft defense installations were destroyed by the attack. A significant exception to this was one complex of very high value KS-2+ missile batteries right around Tianjin. Captain Hu Ziyang, who had been

instrumental in the near downing of an American HS-7 aircraft a year earlier, had been promoted to a position over all KS-2+ batteries in the Tianjin area. Upon recognizing the nature of the massive American raid, and its targeting of Chinese anti-air assets, he had ordered all KS-2+ operation in Tianjin shut down and saved many of the missile batteries.

But Captain Hu was one of the few who exhibited such good judgment. So, beyond the destruction of many other anti-aircraft defense installations, the American B1-B raid also inflicted significant damage to critical infrastructure in Tianjin and Beijing, and to many of the critical shipyard facilities in Tianjin dedicated to the military conversion of Chinese container ships. In addition, the Politburo facilities and Presidential offices in Beijing were completely destroyed. But, equally important was the death of Li Ping, who had been a significant political and diplomatic strategist for the Chinese and a strong ally of Jien Zenim.

Much of the attack in Beijing was captured on video by the cameras of the press. In one dramatic sequence, a photographer from Italy captured the hits on the Politburo facilities that resulted in Li Ping's death. US Tomahawk missiles were clearly seen impacting first one wing, and then a few seconds later the adjoining wing where the PLA security team had escorted Li Ping. The tremendous explosions of both weapons caused both wings to collapse into smoldering ruins. Although the Chinese government and military attempted to censor the videos, some of it inevitably made its way out of the country and was shown to the world, including the sequence of the collapse of the two wings of the Politburo facilities. But despite the tremendous amount of anti-aircraft fire that was directed into the air over Beijing, not one video showed any damage to any American aircraft. It was apparent that no American aircraft outside of the cruise missiles ever appeared over Beijing or Tianjin. All of the combat associated with the aircraft that participated in the raid occurred hundreds of miles away. In that combat, the Chinese lost seventy-five of their fighter aircraft while the Americans lost only five Super Hornets and not a single B-1B bomber.

As successful as the massive B1-B raid had been, Operation "Yellow Jacket" served as a major diversion to what was deemed the more important American military operation that day, Operation "Sudden Thunder". That operation dedicated fully one half of America's twenty B-2 stealth bomber force to a deep strike within China, coming over the North Pole and down across Siberia. That attack targeted the three satellite launch facilities across northern China, along the former Mongolian border. With Chinese national command and control capabilities focused on the attack on Beijing, Sudden Thunder was a complete success. The B-2's were not detected before or after the launch of their standoff missiles in the pre-dawn hours. A total of one hundred twenty missiles were launched at the three facilities, forty targeted at each. A total of only twenty-eight of these were shot down by the Chinese before they reached their targets, impacting at roughly the same time the cruise missiles were raining down on Beijing and Tianjin. The result was that all three facilities were severely damaged and launch operations would not be restored at any of them for three months.

The day after these attacks, amidst the euphoria that ensued in the United States when reports and videos began being broadcast, President Weisskopf spoke to the people in a national address and urged them against over confidence. He let them know that the operations, while successful, amounted to a nothing more than a pin prick in the tremendous onslaught in the Pacific, and continuing in the Middle East, which were pushing back US and allied forces at an alarming rate. His words were meant to inspire a long-term, united commitment to what he explained again would be a monumental and years-long effort to "roll the tyrants back". He left the people soberly considering his words - words that seemed to transform the jubilation into more of a quiet determination to see the struggle through to a successful conclusion at whatever cost necessary. That cost in terms of lives, sacrifice and hardship was only just beginning to be truly felt by the common citizens of the United States. It was being felt as they came to understand more and more their part in a struggle which was already engulfing more than half of the world, and was now threatening to engulf the remainder of it.

## Chapter 15

*“Damn the torpedoes, full speed ahead!” – Admiral David Farragut, USN*

### Mid-April through June in the Mid East

As spring turned into summer in the northern hemisphere, in Turkey allied forces were slowly being pushed back, despite an influx of German, American and Canadian troops into Izmir and into Uskudart, across the Bosphorus from Istanbul. The Turkish government re-established itself in Istanbul and fortified defensive positions were developed on the peninsula to the east of the Bosphorus, all along the Dardanelles and in a ring around Izmir. It was hoped that these fortified positions, and the significant reserves that were being built up and held behind them would be sufficient to hold against the GIR onslaught. The plan was to counter attack once the retreating allied forces, now well to the west and southwest of Ankara, fell back. The GIR, with principally Iranian, former Iraqi and Syrian forces, committed over 800,000 men to the effort in Turkey, and those numbers and the 1800 tanks and 1200 aircraft now supporting them were pushing the allies back towards the straits that separated Asia and Europe.

In Saudi Arabia, a similar, but more desperate situation was developing. One US Army group had been pushed out of Riyadh and the capital had fallen. These 50,000 US and 25,000 allied troops were retreating along the major oil pipeline that connected the oil fields on the Persian Gulf with the Red Sea, using the roadways that had been built to service that pipeline. They were destroying the pipeline and the roadway as they conducted a fighting withdrawal. The major problem with that was that all re-supply efforts had to be accomplished through the use of airdrops using a dangerous route out of Israel, risking GIR interception.

Another US group on the Arabian peninsula was also in a desperate situation, having been completely encircled and cut off on the Qatar peninsula on the Persian Gulf. Over 30,000 US personnel consisting of Marine Expeditionary Brigade One (MEB-1) and elements of XVIII Corps, along with 15,000 other allied troops were trapped there. They were desperately holding a defensive line along the Qatar and UAE border at the base of the peninsula and receiving air support from the USS Enterprise carrier group in the Arabian Sea, as well as re-supply from Diego Garcia. In this case, there was literally nowhere to retreat to. By mid-June the Persian Gulf was completely unsafe for any US Naval force of any type due to the strong air forces in Iran that were attacking allied positions in Qatar and waiting for an opportunity to attack any allied vessel that ventured into those narrow, confined waters. To their front, across the defensive lines on the narrow peninsula, was a large GIR Army group of over 250,000 that was besieging them and preparing for an all out assault, the goal of which would be to dislodge and destroy the Americans and their allies in Qatar.

The GIR had committed a total of over 750,000 troops to the Arabian-peninsula campaign. Along with those troops, and despite losses inflicted by superior American technology, there were still over 2,500 tanks and 3,000 combat aircraft. The numbers were simply overwhelming, as was grimly evidenced by the retreat of the Americans forces across the Arabian Peninsula where, west of Riyadh along the major oil pipeline, 75,000 allied troops were being pursued by over 450,000 GIR personnel. By the end of June, those allied forces were approaching Medina and a critical decision. Should they turn north towards Israel and try and fight their way through to US and Israeli forces there? Or should they continue towards the Red Sea and a Dunkirk style evacuation there? As it turned out, the decision was made for them. On June 11<sup>th</sup> and 12<sup>th</sup> an expeditionary force of 75,000 Chinese, armed and trained while working as a part of the 200,000 strong Chinese “relief workers” in the Sudan, crossed the Red Sea and landed near Yanbu to cut the Americans off.

In Egypt, the allied Egyptian and British forces had been pushed back to defenses along the Nile River along a line from Alexandria to just south of Cairo. This defensive line extended across to Suez at the head of the Red Sea and was composed of over 200,000 soldiers, mostly Egyptian and 800 modern tanks and 500 aircraft. Facing them were over 550,000 GIR troops made up of Libyan, Algerian and Chad forces supported by over 1500 tanks and 1200 aircraft. The enemy had achieved a major breakthrough in late May when the second in command of the Egyptian Armed forces, General Nahas Sidqi Naguib had defected to the GIR with five full divisions of Egyptian troops. The loss of these 100,000 troops created a breach in allied lines that was catastrophic to desert positions to the west of Cairo and caused a rapid allied fall back to the Nile River.

Now, as July approached, the pressure on allied forces in Egypt was extreme. Any major breakthrough could lead to the surrender of Egypt, and endanger the Suez Canal. As extreme as the pressure was, it was about to grow even more extreme as the 125,000 Chinese who had been masquerading as “relief workers” in Sudan, were now armed, formed up and moving north down the Nile River toward the allied defensive line.

### Mid-April through June in the United States

In America, the securing of the Mississippi and Ohio rivers took longer than Admiral Gwinn had anticipated. His two Coast Guard flotillas had sailed up those rivers and engaged any terrorist craft

they could locate. But a good number continued to allude him and cause havoc along remote areas of the rivers. Finally, on May 28<sup>th</sup> the final showdown came in a climatic battle on the Mississippi River near Paducah, Kentucky. There, eight terrorist vessels armed with 20 millimeter cannons, rocket propelled grenades and automatic small arms were trapped and engaged by a 110-foot Island Class Patrol Craft, two 87-foot Protector Class Patrol Boats and six 41-foot armed utility craft of the US Coast Guard. In addition, air support was provided by two flights of four Air National Guard F-16C attack aircraft. In the ensuing battle, which lasted for over three hours, all terrorist vessels were destroyed, killing over sixty terrorists, and wounding and capturing eight. Coast Guard losses amounted to two of the 41-foot craft sunk, severe damage to one of the 87-foot Protector vessels and light damage to several other vessels. Two F-16C's were shot down. Twelve Coast Guard and two Air National Guardsmen were killed and sixteen Coast Guard personnel were injured. It was a battle and a display that citizens all along the banks on either side of the river would never forget ... and in which some of them participated by providing small arms fire directed at the terrorist craft from shore.

But this did not end terror in America. Many sleeper cells were located throughout the continental United States and Canada and they were being activated according to long established plans. Border interdiction of new potential terrorists improved tremendously as the southern border with Mexico was militarized along its entire length. But sleeper cells of between four and twelve trained and committed terrorists kept "popping up" throughout the nation. The most severe attacks occurred in Hartford, CT, Atlanta, GA, Wichita, KS, and Phoenix, AZ throughout the month of May. In each case, the terrorists were able to inflict initial damage and casualties at government buildings and critical infrastructure sites, but they were quickly put down by the response of both law-enforcement and armed civilians. Through the application of the President's "Arm the Citizens" initiatives (as they were being called) and by virtue of the more formal Home Guard Program being implemented by the Director of Homeland Security, the attacks were rendered less and less effective.

In June, Hector Ortiz pulled off a cunning move in Dallas, TX where he had a combined team of thirty attack in North Dallas, actually targeting the complex where Ortiz's American headquarters were located. The terrorists took the complex and the critical interchange of LBJ Freeway and Central Expressway and held it for over two hours. After killing over one hundred citizens and twenty-two law enforcement and National Guard respondents, ten remaining terrorists were pushed away from the interchange and fell back to, and occupied, the office complex overlooking the expressways. They had earlier taken a group of Hector's and other businesses' employees hostage and they now used these as bargaining chips and leverage for over three days. Ultimately, the US government used Hector himself to help negotiate the surrender of the remaining terrorists and the safe release of the hostages. In exchange, and as planned, three of the higher-ranking surviving members of the "team" provided "evidence" implicating one of Hector's rival drug operations in the attack. Those members avoided death penalty convictions in exchange for their "testimony" and "evidence". Each of them had already been assured beforehand by their handlers of their freedom at a later date when the "capitalists" were brought down. All three would later die in captivity, reportedly as a result of action within the prison system by members of those rival drug cartels.

The lower level members of the team, who had no knowledge of the fabricated and misleading origination of the attack, were considered expendable and would face the full weight of the US anti-terror legal system. This system had become quite proficient by this point in trying, convicting and executing sentence on terrorists who were captured ... of course only after a thorough interrogation. Those interrogations had become much more focused on getting valuable information regarding the plans and intent of the terrorists than they were focused on the absolute maintenance of their civil liberties. In the terrible times the United States was facing, those who had been caught "red-handed" in the terrorizing and killing of American citizens, and who would soon face a hangman's noose, a firing squad, lethal injection or electrocution as payment for their crimes, were afforded few civil liberties. All of the other seven surviving members of the team who had committed the assault in Dallas were brought to trial within six weeks, convicted and sentenced to death. Less than six weeks later, each sentence was carried out.

America's NORCOM or, Northern Command, assisted the FBI in the investigation of the terror attacks while the Department of Homeland Security assimilated information and assessed threats. Any terrorists that were captured were interrogated. Those who would willingly talk were given the opportunity, making it clear that solid, helpful information might help avoid certain death after trial. Those who wouldn't talk were then interrogated in more a more intense fashion in an attempt to gather any information from them that was possible before their execution. As a result, the FBI was tracking down many very solid leads ... following both the materiel and money trails of what they believed were several clandestine operatives operating working within the United States and funneling funds, materiel and personnel to the terrorist cause. Many of these trails were blind allies and dead-ends established by the terrorist organizations themselves, but some of them were more promising.

While all of this was occurring, new recruits by the hundreds of thousands were answering the President's and their nation's call. Every branch of service was breaking all time historical records for volunteer induction, exceeding by several hundred percent the rates established in World War II after

the attack on Pearl Harbor. Training programs were abbreviated and fighting personnel began pouring out of American bases in increasing numbers. But, while the numbers of personnel were more than adequate, the amount of ordinance and equipment lagged. This was because so much of the manufacturing capability of the United States had been moved off-shore over the preceding two decades in the unbridled move towards globalization and towards “free” trade at almost any cost. It was a move that did not utilize the ample historical precedent or hindsight that was available to warn against such trends. It hampered full production mobilization because the military production was already limited and could not be augmented by a conversion of vast commercial production operations to military ends. The “vast commercial production operations” no longer existed, it had been moved “off-shore”. It would now have to be rebuilt on American soil.

The sad fact was that a lot of America’s “off-shore” manufacturing capability was now benefiting the very nations that had attacked America and her allies. The retooling and rebuilding of that capability would take time. Time that was going to have to be bought by soldiers, sailors, marines and airmen who were operating on increasingly diminishing stocks of “high tech” war shots, and who were coming to depend more and more on the same lower level technology that their enemies were employing against them. By late June, a large number of these troops were ready to deploy all over the world. They were being sent to relieve beleaguered forces under attack, or to beef-up defenses along lines yet to be tested, or in a few instances to prepare where counter attacks were being contemplated. Leon Campbell would be among the first of the new arrivals, fresh out of MOS training and well prepared, but still a green Marine. He would be followed shortly by his friend, Billy Simmons, albeit in an different theater of operation.

### **Mid-April through June in Central and South America**

The Chinese and the Panamanians continued to consolidate their position around the Panama Canal, and to strengthen their positions in the rest of the country. During May, the Chinese were successful in avoiding most of the United States attempts to interdict air traffic into Panama. The flights coming in from the west were hard for American aircraft to detect and engage at the ranges involved. The result was that another fifty thousand Chinese troops were ferried into the country. This brought the PLA force level in Panama up to over 125,000. Coupled with the growing Panamanian Defense Forces, a total of over 300,000 troops were available to consolidate and then expand their holdings. With over 800 modern aircraft and hundreds of armored vehicles in support, that expansion would prove to be a very dire threat to America, and to the free nations of Central and South America.

As a result, Guatemala and Nicaragua declared their neutrality. Cuba, providing discreet support to the enemies of the United States all along, but understanding that any blatant move would be foolish, also officially declared its neutrality. Costa Rica, Honduras and Columbia, in keeping with their strong ties to the United States, demanded a complete withdrawal of all Chinese troops and all military equipment from Central America before July 1<sup>st</sup>. Both countries began calling up reservists and mobilizing their armed forces.

These activities, coupled with the Brazilian declaration of war, led to a number of announcements in South Americas that would impact the course of events. Ecuador, Peru and Chile, joined with Columbia in demanding the removal of Chinese forces and announced solidarity with the July 1<sup>st</sup> deadline. Argentina and Venezuela announced new economic ties with the Coalition of Asian states and indicated solidarity with Panama. They immediately formed the Coalition of South American States (COSAS) and indicated that any attack on one would be viewed as an attack on all.

Brazil, the strongest and most populous nation on the South American continent, continued to mobilize itself for war. Their two aircraft carriers were formed into a strong South American task force with Brazilian and American vessels. Their newest carrier, the San Paulo, the former French Foch that had been sold to Brazil in 2001, served as the Brazilian flagship. Production at Brazilian shipyards was stepped up. The increased production would mean quicker launches for their new Improved Niteroi class Aegis destroyers, and their Batch II Barroso class frigates. Producing these vessels in numbers was essential for the adequate protection of the Brazilian carriers and troop transports. In the meantime, two of each class that had been launched and had completed sea trials were deployed with two American Aegis destroyers to protect the two carriers.

But the problem facing the Brazilian navy, indeed, the problem facing all of the allied navies, continued to be the Chinese LRASD devices. Despite the fact that no known instances of vessels carrying such weapons in the southern Atlantic had been reported, it was simply viewed as too risky to take to the high seas until an effective defense had been devised. With its anti-submarine aircraft and its many LA class submarines “riding shotgun” for American carriers, and with the strategy of exploding their torpedoes in front of attacking supercavitating weapons, the US was willing to risk its assets to some degree. No other allied nation was. The allies simply did not have enough capable escort vessels and aircraft to mount an effective defense, and they did not have the depth to afford or risk attrition so early in the war. Even with the loss of two super carriers, the United States had ten left. Most allied nations didn’t have a single carrier, and of those that did, only two had more than one

... the United Kingdom and Brazil. France had two, and also had the capability to defend them as the US was doing. But thus far, France was sitting this one out, sitting on the fence between an outright declaration of neutrality and a conscience decision to announce nothing. Brazil, true to its word to seriously engage the People's Republic of China and its allies, was doing all in its power to build up the resource necessary to protect and commit its carriers to the offensive.

In addition, sign-ups for the Brazilian armed forces were at an all time high and continuing to increase in the wake of the impact of the international space station catastrophe. Dozens of training camps were being built to accommodate the massive overflow from existing facilities, even though those facilities had themselves been expanded. Brazilian planners, in consultation with their American and allied counterparts, estimated that they would be producing a new division of Brazilian fighting forces each month by the end of the year. Months before that time, the first major operation using Brazilian forces would commence.

### **Mid-April through June in the Far East**

In the Far East, the Japanese capitulation and occupation reverberated throughout the region. The Chinese and North Koreans made good use of their accomplishments in propaganda and in negotiations with other nations in the area. During the first week of May, in quick order, to the shock of the western world in general, and to the United States in particular, the Philippines and then Malaysia signed treaties with China and India, preparing for their full induction into the CAS within six months. In early June, Indonesia, the nation with the largest Muslim population in the world, officially joined the GIR and by extension, the CAS. These nations immediately provided naval, air and army bases for Chinese troops and disavowed any military or economic ties to the United States. Indonesia immediately embarked on a massive invasion of Timor without any interference from the "international community" and ruthlessly conquered the island within six weeks. In addition, and the real reason for their capitulation without firing a shot, the Philippines and Malaysia were spared violent and massive invasion by large Chinese task forces that were forming up all along the Chinese coast for that specific purpose. Now, instead of invasions and battle, these two nations were occupied and experiencing the oppression of their conquerors. Indonesia, as a full member of the GIR and as a source for ample troops to fuel the GIR drive, was spared any such occupation or action.

The horror of occupation was particularly felt in Japan. Several "incidents" of nationalist Japanese resistance to Chinese occupation were very forcefully and brutally put down, and then used for abjectly violating the soothing promises that Jien Zenim had made to the Japanese Prime Minister. In several instances, entire cities where such resistance occurred experienced the same type of pillaging, rape and massacre that the Japanese had inflicted in 1937 on the Chinese city of Nanjing in the incident that became known as "The Rape of Nanjing" during World War II. It was something the Chinese had never forgotten, and something they took any excuse as an opportunity to repay in kind in a "rape" of Japan. In fact, most of the occupation forces coming into Japan were from that very region of China for that very reason. The results were unprecedented and atrocious given the slightest provocation. The overall extent was far greater, by an order of magnitude, than what had occurred in China in 1937 ... as it was intended to be. The "pacification" of Japan was meant to send a message to other nations in the region regarding what they might expect if they resisted. It was a message that was as clear as it was horrific ... and it was not lost on those observing it, or hearing of it.

The quick military victory by Chinese forces over Japan, and the resulting negotiated settlements with Malaysia, Indonesia and the Philippines completely cutoff the desperate final struggle by US and allied forces in South Korea. The Chinese had used their new amphibious assault ships and new landing craft to cross the Yellow Sea and land more than 100,000 troops south of Seoul in an attempt to create a pincer movement between themselves and their North Korean allies on the retreating American and South Korean forces. While the pincer attempt failed, it succeeded in placing significantly more pressure on the beleaguered allied forces as they retreated towards the south and caused them to do so much more rapidly as they avoided encirclement. Those units that were capable of doing so, bravely fought on. But as more and more units were over-run, and as more and more South Korean units melted into the population, the outcome against such overwhelming forces with no prospect for relief was inevitable.

Finally, on June 17<sup>th</sup> the ranking commander of United States Forces in Korea (USFK), General Frank Martinez who had been given a battlefield commission to that position when his commander was killed on June 2<sup>nd</sup>, surrendered his force of 8,257 personnel unconditionally to Chinese and North Korean forces. This occurred outside of the defensive perimeter at Pusan and included elements of the 1<sup>st</sup> Infantry Division and some surviving portions of other commands that had been flown into Korea as part of the relief effort. All of the officers who the Chinese and Koreans felt might have information or intelligence of any use to them were taken into custody for violent interrogation and a long and deadly captivity by both the Chinese and North Koreans. The other officers were marched off to a secluded and mountainous area some twenty miles away and summarily executed. All of the male enlisted men were immediately put into North Korean work camps, which turned into death

camps as the men were mercilessly worked. Within twelve months, of the 6,390 enlisted men put into such camps, less than 1,000 were still alive.

The fate suffered by the 835 women of USFK was worse. Most were brutally used up by North Korean and Chinese enlisted men while a few became the “white whores” of some of the Chinese officers. Less than two dozen of these women would survive a single year in such captivity. Later, as word of the atrocious fate of these women leaked out, rumblings reminiscent of those that had been debated decades earlier began to be heard stateside as to the wisdom of allowing women to serve in any position that would subject them to combat or potential capture was debated. Yet women, as was the case with their male counterparts, were still signing up to serve in the armed services in record numbers. The desperate need for American forces all over the globe dictated that none could or should be turned away, but the debate arising from the fate of the USFK women did quickly resolve any question regarding women serving in specific combat roles.

United States Army, Navy, Marine and Air Force combat units and positions would henceforth be staffed exclusively with men. Women would only serve in supporting roles well behind the front lines. This freed up more men, who would otherwise fill those positions, for combat. Even so, to an even greater extent than was the case in World War II, many of these positions would prove dangerous throughout the course of the war and many women would distinguish themselves in such circumstances. The net result was that all of those, male or female, who wanted to serve their country during the desperate circumstances were allowed to sign-up and serve. Very few were dissuaded by the tragic fate of the American women who fell into the hands of the Chinese and North Koreans. To the contrary, as word of their fate spread, a deep-seated righteous indignation spread throughout the nation that led to even greater enlistment numbers of both male and female recruits.

While U.S. forces were being defeated on the Korean peninsula, the Chinese were very busy transporting men and materiel to the west and south across the mainland. This effort was targeted at providing their Indian and GIR allies with technology and weapons to use against allied forces in those theaters of operation. This included both LRASD weaponry and KS-2+ missiles and the personnel to train the Indians and the GIR in how to maintain and operate them. For years the Chinese had been building a super-highway and a parallel railway across their frontier towards the Himalayan Mountains and secretly excavating great tunnels through that range of mountains for the very purpose of moving men and materiel quickly in the event of invasion. Now these corridors were being put to use to move men and materiel out of China towards their allies, and the movement of resources into the growing production capabilities within the People’s Republic of China.

Great pressure was being exerted by China and by the GIR on India to become actively involved in the conflict. Thus far, outside of quickly consolidating the neighboring small nation of Nepal where the Indians, as opposed to the Chinese, were welcomed, the only military action for the Indian military had been in Sri Lanka and Bangladesh, where operations proceeded smoothly and with little cost. By the 1<sup>st</sup> of June, those areas had been consolidated into the Republic of India and things were relatively quiet, outside of Indian forces striving to keep an eye on U.S. 5<sup>th</sup> Fleet assets in the Arabian Sea.

Now, as KS-2+ missile batteries were deployed around critical Indian infrastructure and military bases, and as LRASD weaponry was delivered and made operational on Indian warships, the Indian government was expected to become more actively involved. This pressure was centered on the desire to eliminate the U.S. Navy 5<sup>th</sup> Fleet carrier group that was perpetually stationed in the Arabian Sea and was helping prevent the elimination of allied forces in Qatar. Operational plans were studied, ratios were calculated and an implementation date was established for an Indian military operation against the US carrier group and to follow up the anticipated victory with an invasion of the U.S. base at Diego Garcia. This would extend Indian and CAS control over the entire Indian Ocean.

In addition, the Chinese and Indian governments eyed the nations of Burma and Thailand, who had declared their neutrality in the conflict, rather than agreeing to join the CAS as full members. It was obvious to the Chinese that both of these nations hoped that America and her allies would eventually return in numbers to the region and that they were “hedging their bets” in that likelihood. Operational plans were being prepared in both Beijing and New Delhi. The plans were focused on carving up these nations and incorporating them into the CAS through annexation, so that they might officially become provinces and “states” of the People’s Republic of China and the Indian Republic.

All of this left Taiwan completely isolated in Asia with no prospect of relief. The closest ally was Australia, and they were mobilizing as quickly as they could to try to establish a defense of their continent along a perimeter running from off the Timor Islands through New Guinea and onto the Solomon Islands, with a fall back on their own coasts if necessary. The People’s Republic of China had made repeated overtures for a “negotiated” settlement with their “rebellious province” on Taiwan ... as they lobbed thousands of missiles into Taipei and all of the other major cities. But the ROC steadfastly refused all PRC proposals. As a matter of fact, it seemed that the more provocation the People’s Republic initiated, the more resolute their “rebellious province” became.

Emergency wartime military powers kept most civilian anxiety in Taiwan under control, although there were a number of riots on some university campuses. These outbreaks, particularly those that urged unification with their “socialist” brothers, were ruthlessly put down. The videos that

were being smuggled into the country from Chinese-occupied Japan, the Philippines and Malaysia managed to keep in check any other trends towards giving in to unification with the mainland. The “a picture is worth a thousand words” maxim seemed to be ringing especially true for the Taiwanese. The videos graphically displayed the violent nature and superior attitude of the Chinese towards those people in the nations they were occupying. They also showed something else ... they showed that it was not just Chinese soldiers who were being shipped and flown into those countries. Chinese citizens, first by the tens of thousands, growing to the hundreds of thousands, were being “settled” in the occupied nations, displacing the inhabitants from their homes and businesses. Those who physically resisted were summarily executed. Knowledge of this part of The People’s Republic “unification” plans steered the people of Taiwan to resist at all costs.

As a result of Taiwan’s intransigence, the Chinese continued to rain down ballistic missiles on the island as they tried to draw the Taiwan Navy and Air Force away from the immediate vicinity of the island in order to overwhelm them and decisively defeat them. But the ROC had learned from the experiences of the Japanese and the Americans. Their air-defense ships remained solidly in port, behind heavy protective metal mesh and chain screens pulled across the mouths of each harbor. The ROC Air Force would not be drawn out over the Taiwan straits, but rather chose to engage the Red Chinese aircraft only when they came in close, or over the island itself. Through these tactics, major losses continued to be inflicted on the Chinese as they tried to force a decisive battle. Nonetheless, through the use of the ballistic missiles that the PLA was now producing as fast as they could fire them at Taiwan, and through an increasing use of more modern SU-30 aircraft, the People’s Republic was inflicting telling attrition on ROC forces that those forces could not afford.

By the end of June, it was apparent that the PLA was prepared to “force” a major confrontation in an attempt to attain air superiority over the island. They intended to do this through a buildup of even more ballistic missiles, a buildup of several of their new Beijing class carrier groups and land-based air, and a buildup of amphibious assets directly across the straits from Taiwan. The amphibious assets consisted of four of the new assault ship conversions and over one thousand of the Yunana II class landing craft, along with hundreds of other small craft that would be used to ferry troops across the straits once air superiority had been attained. The PLA planned to force that air superiority sometime in the first two weeks of July.

Outside of the attack on Beijing, Tianjin and the satellite facilities, there were only two major bright spots in the efforts against the Chinese in the western Pacific. One of these was the arrival of defecting Japanese naval and army forces on Guam. Two task forces consisting of over twenty Japanese naval ships each arrived at Guam carrying over forty thousand Japanese military personnel, political leaders and citizens ... including Captain Deleon and his staff. The destroyers and frigates and the amphibious assault ships represented an important addition to forces available in the Pacific for the defensive line America was establishing now, and for the ultimate offensive that would be mounted to push back the Chinese expansion.

The other bright spot, albeit bittersweet, was the use of US nuclear attack submarines in offensive action against the Chinese. Many Chinese ships, both naval and commercial, were being destroyed. Most of the tonnage was the result of the many Los Angeles class submarines operating in the area. They were quiet, they were well armed and deadly and they could get in close to convoys to attack, whether escorted or not. The only drawback for the LA class subs, and it was a horrendous one, was that any time they attacked a convoy that had any vessel that contained LRASD devices, they subjected themselves to the counter fire from those vessels. In this respect, the Chinese held an almost unassailable “trump” card and the counter fire invariably sent an LA class nuclear attack submarine to the bottom. By the end of June, of the initial twenty LA class boats sent into the western Pacific, and the ten others sent in relief behind them, only fourteen were still afloat. The loss of sixteen nuclear attack submarines was an attrition rate of over fifty percent, and was one the United States could not afford. By the end of June, CINCPAC ordered all remaining LA class boats back towards allied occupied areas to perform defensive and escort duties.

The only exception to these dismal statistics was the activities of the USS Jimmy Carter. After operation Yellow Jacket in which she so ably had taken part, she was ordered back to Guam to restock her provisions and reload her weapons. She was then sent into the Yellow Sea to perform a search and destroy mission where her orders simply stated that she should track and engage targets of opportunity, concentrating on any vessels carrying the supercavitating weapons system. She did this with great dispatch, sinking four Chinese merchantmen, three Chinese frigates, two destroyers and one each of one of the Chinese large amphibious and ballistic missile attack conversion ships. The latter was accomplished as that vessel made for its new homeport in Nagoya, Japan.

The efforts of the Jimmy Carter had not gone unnoticed by the PLAN. There was an all-out search for the “mystery” submarine that the Chinese had correctly determined to be an American Sea Wolf class nuclear attack submarine. Their efforts had produced several hair-raising experiences for the Captain and crew of the Jimmy Carter when Chinese vessels had counter fired LRASD weapons back along the attack tracks of the American sub’s approaching torpedoes. In these instances, the weapons had been unable to identify and “lock-on” to the Jimmy Carter and had missed entirely. But

twice, the unbelievably loud and rapid passage of those weapons came close enough to be heard by the entire crew as they passed within a few hundred yards of the Jimmy Carter's hull. During those instances, the crew, although highly trained to react to such an occurrence, was made painfully aware of the difference between theory and reality. Their own ears explained it to them very directly. They came away from those experiences with the realization that it might only be a matter of time before the acoustical characteristics of their own sub were no longer impermeable to Chinese weapons.

As a result of these experiences, the Chinese weapons specialists working under Lu Pham were tasked with developing new profiles in the LRASD targeting programs to seek out and destroy the newer American submarines. Complimenting this was an all-out espionage effort to acquire information from American or allied politicians, citizens or military personnel regarding the Sea Wolf and Virginia class submarine acoustical characteristics by theft, purchase or blackmail. While the Chinese implemented these plans, the Jimmy Carter was moving east across the Pacific. By the end of June, Captain Thompson and his crew were back in Guam to re-provision and to obtain new orders.

### **July 2, 21:10 local time**

### **Secure Housing Unit, COSTIND Conversion Operations**

### **Tianjin, The People's Republic of China**

Song Pham reflected on the condition of her family as she watched her husband, Lu, and his friend, Sung Hsu, converse after their meal. She and Sung's wife, Ming, cleared the table while keeping Ming's children occupied. As in most oriental households, the men did most of the serious, open talking ... but the women missed no part of the conversation and would later influence their men with their own thoughts, after the guests had left and when the two of them were alone.

"It will be no different tonight," thought Song as Lu and Sung spoke of work, politics and the world situation. Talk of their work was always in guarded and general terms. The highest levels of security were in effect throughout the nation, a condition under which Song had already lived for several years. But Song had come to sense certain things in that time. Based on that long experience, tonight there was no doubt that Lu and Sung were exuberant over some "breakthrough" at work that would allow China to further extend her influence in the world.

As they spoke of the "world", Song could not help but think back on those horrible moments ... moments she would remember for the rest of her life, when the American missiles had fallen like rain on Tianjin. Up until that moment, the reality of her life in China, of the entire reason her husband, along with the family, had been brought here had never really dawned on her. In less than a half an hour back in April, it had all become crystal clear.

Oh, she had heard Lu talk often of his desire to punish the Americans for the death of his parents so long ago in Vietnam. She had helped him develop some of his lectures to that effect when he had taught at the University in Hanoi after the Vietnam War and after unification with the south so many years ago. But such sentiments as those espoused by Lu had lost their appeal as time went on and as more powerful elements in Vietnam's governmental circles sought a reconciliation with America.

She could hear Lu's words from those times, echoing through the years,

"It is only for the American money that they do this. If they are not careful, they will become just like the corrupt, puppet government of the South that we fought against for so long."

Such thoughts had concerned Song. Not because they had not held the ring of truth for her, but because of the consequences to Lu, to her and to their children that such thoughts could bring. Through the practiced methods of oriental feminine persuasion, she convinced her husband that he needed to keep such thoughts to himself, or at the very least, between themselves. Those methods included the quality of being patient, of wisely interjecting comments at just the right moment, of calm discussion and of intimate persuasion ... and they had worked. To his credit, Lu had recognized the expediency of his wife's council (it was one of the reasons she loved him so much) and had indeed kept the thoughts and feelings to himself, rarely mentioning such things again, even to Song.

Song mused to herself, "Men seem to possess such rational, logical minds, and yet sometimes it is a woman's sense of diplomacy, or patience, that is needed in order to see to it that their plans do not go awry." A humble woman, who comprehended and accepted the role that she was played, she could not help but feel a kind of "calling" to occasionally instill a necessary element of moderation into her husband's impassioned thoughts and actions. Strangely, the need for her to do so in no way diminished her respect for him. His willingness to listen and moderate his own impassioned ideas based on her unassuming input was one of the things that endeared him most to her. Song knew that many men were totally unwilling to listen to such input, much less to alter their thinking and plans as a result of it. But Lu was, and in so doing he was able to retain his great passion and belief in what resulted. His ability to do this was one of the things she most admired about him.

So, the Chinese had come and resurrected Lu's old ideas and theories about the submerged weapon systems Lu had envisioned during the Vietnam War when he had worked as a mathematician and designer for the fledgling North Vietnamese Navy ... funded by the Russians. Not only had the Chinese resurrected those plans, they had used them like a lure to change Lu and Song's lives. Lu simply could not resist the opportunity to bring his plans to fruition, his plans to punish the Americans,

even after so many years. Song had seen it, had known he could not possibly refuse ... and they had been brought to China, to this foreign land. It had been twelve years ago and their two children, a young boy and a girl at the time, had completed their schooling and made their own lives. The daughter now worked in Beijing as a computer analyst. Song thought about her often, and wondered whether she had met any young men in whom she might have long-term interest.

Their son, with his father's influence, had joined the Navy of the People's Republic of China and was stationed on one of the newer ships. He had not seen any combat to date, although he was anxious to do so. Song was happy he had not, and hoped he would be spared it.

All in all, Song could not complain about their life here. They had been accepted. They had made many new friends and they lived in comfort, albeit a comfort that was under strict scrutiny due to Lu's work. They had been treated extremely well. She could never have hoped to have such a home ... so much space, so many pleasantries.

Lu had worked hard for these years ... driven to the accomplishment of his dream. He had impressed his superiors and his name and his plans had been the topic of discussion at the highest levels of the Chinese governmental hierarchy. A few weeks ago, with the onset of hostilities between the People's Republic of China and the United States, when Lu's inventions had worked so well, all of their reasons for coming to China had seemed vindicated. Lu had been awarded the highest award the Chinese could offer. He, a Vietnamese, had actually been named a Hero of the People's Republic. It was the first time in Chinese history that such a foreigner had been awarded that honor. It had all seemed like a never-ending fairy tale ... one that *could* never end ... that is, until April 13<sup>th</sup>.

On that day, the reality of her husband's job was brought home to Song. He designed instruments of war ... devices that killed other people. Now those "other" people who had seen their own people killed by those instruments were killing back, and one of their main targets would be where her husband worked ... would be her husband himself. During the attack, no missiles had landed in their housing unit, which was eight kilometers away from the shipyards themselves and which was protected by the highest of security. But they had come close. She and her friends had heard every one of the American missiles land ... they had *felt* every one of them land even at this distance and that experience had been terrifying. They had come out of their apartments at the bidding of the security personnel to hurry to the shelters. Those shelters had seemed so useless, such a waste of space and resource until that day. They certainly did not seem like a waste anymore.

As they had hurried along, they had seen the explosions in the distance, had seen the firing of guns at unseen attackers, had watched as their own missiles lifted off from that nearby missile base they had seen so often but never paid much attention to. Just before entering the shelter, two tremendous explosions occurred, just a kilometer from their housing units, and they had watched in terrified fascination as that same missile base was completely destroyed and large burning pieces of metal and other material fell to earth not far from them. Some of the building outside of their walled, secure compound had been set on fire by those burning pieces of material.

Then they had been hurried into the shelter where they spent over two hours before the all-clear signal was given and they were allowed to exit. Those two hours had been the longest two hours of Song's life as she feared for her husband, as she feared for her daughter in Beijing and as she feared for her son serving in the Navy.

After the all-clear signal, Lu had hurried home to check on Song. He arrived only a few minutes after she returned to their apartment. She would never forget the relief upon seeing him, the feeling of that reuniting. He assured her that, although destruction was significant in the dock and fabrication areas, his workspace was located in a safe area where no known conventional weapon could reach him. That evening their daughter, Chiang, had called and indicated that the Politburo and presidential offices had been destroyed in the attack, but that there had been no destruction near her.

"Don't worry, mother," she had said. "Beijing is a very large city. The destruction from the attacks occurred many kilometers away from where I live and work."

And finally, Lu had been able to find out that their son, Kao, was also safe. He was an anti-air missile technician on the new Amphibious Assault Ship, Chongqing, and was currently located somewhere in the China Sea with their task force escorted by the Beijing and its battle group. They had not been targeted.

Now, several weeks later, here she was with her husband and friends in their apartment carrying on as though nothing had happened. As she listened to Lu speak of the startling success of the Chinese military and diplomatic corps, as they talked of increased prosperity and influence, as they watched the Hsu's young children playing at their feet, it was easy to imagine that the attack had never happened. But Song could not forget. She knew that it had happened, and she carried the memory of the fear and sudden realizations it invoked deep in her heart.

**July 3, 18:28 local time**

**Field Headquarters, XVIII Corps**

**75 Kilometers West of Afif, Saudi Arabia**

General Olsen looked at the maps and data projected on the displays in his mobile field headquarters. The situation was grim, and not going to get any better any time soon. For the last eight weeks, the remainder of the United States XVIII Corps had been on the move, retreating in these God-forsaken deserts and wastes of the central Arabian Peninsula. And it was only a pitiful remainder, which consisted of elements of the 82<sup>nd</sup> Airborne Division, elements of the 24<sup>th</sup> Infantry Division and parts of the 3<sup>rd</sup> Armored Cavalry Regiment. It had been a running battle. No, an almost continuous set of running battles, feints and maneuvers in which his men and equipment always gave better than they got ... but they were being forced back just the same. In so doing, they had been keeping just ahead of two full corps-sized elements of the Greater Islamic Republic's armies representing the GIR's 1<sup>st</sup> Army group ... over 450,000 men and their equipment.

Now, as he surveyed the terrain, he knew that he had been pushed a little further south than he wanted and he was facing the most critical decision of his entire military career, in fact of his entire life. It was a decision upon which would hang the lives of many of these men, perhaps all of them. It was a decision upon which his own life would hang as well.

"Colonel Stratton, before I finalize this, please relay to everyone here just once more the intelligence you have from CENCOM (Central Command)."

The intelligence officer on the General's staff moved around to the front of the long trailer and addressed the divisional commanders and their subordinates who were able to make this briefing.

"Gentlemen, it's pretty straight forward. Up until six hours ago we had one satellite that was giving us a good feed of the Arabian Peninsula and the surrounding territory. Unfortunately, it has now gone offline and we presume that the Chinese have downed it. However, before it went down, it showed the following very clearly from this morning."

The Colonel leaned forward and typed a few commands on the keyboard in front of him. On the large display to his left, an aerial map of the Red Sea was displayed. Zooming in, the Colonel focused in on the portion relevant to his next comments.

"These traces are ships crossing the Red Sea. Their air cover and support was sufficient enough to preclude effective interdiction. Over here to the right, along the coast, you can see many small oblong objects in the water near the coast. Most of these are transport ships and some naval escorts. The traces are crossing over from Sudan, while the ones next to the coast have been offloading men and equipment for the twelve-hour period before this photograph was taken. Back in the states, the NRO has analyzed these and confirmed that they are offloading military equipment and men. Estimates put this force near the Saudi town of Yanbu and number it, when you include the transports still in transit, at anywhere from 75,000 to 100,000 men supported by light armor and strong artillery."

"Now, if you will take a look at this, I believe it will sum up our position."

Another picture was displayed. The colonel zoomed out to an overall view of the central Arabian peninsula, and then focused in on a segment that looked to be approximately 150 kilometers to the East of XVIII Corps. There, large clouds of dust could be seen in streaks across the desert ... many, many streaks all moving west. On the northern edge there were a number of streaks, perhaps twenty to thirty of them angling, to the north and west of the main body.

"What we see here is the main body of the GIR forces that are pursuing us. This main body is a good 70-80 kilometers behind their front lines. What is of interest is that these streaks angling off to the northwest point directly through the least rugged portions of the central desert on a course that leads to a relatively narrow area of flat terrain in the vicinity of Hadiyah. Analysis indicates that there are a full two regiments of GIR armor involved in this maneuver with supporting personnel carriers."

"Summing this information up, we have a Chinese force of approximately 100,000 forming up to our northwest along the coast ... a coast we had hoped to reach in the next day or two. We also have two regiments of armor now angling off to our north to form a blocking force to any advance on our part to the north ... towards Israel. Finally, that leaves another five regiments of armor and well over 300,000 men approaching from the east and continuing to press our rear guard units very hard."

"General, I believe that sums up the satellite intelligence. An over-flight of a strategic Air Force reconnaissance aircraft was planned, but that data has not arrived. We do have the tactical reconnaissance I spoke of earlier associated with the combat air support out of Israel and the supply drops of this afternoon. Comm-sat is still up, but only through the three channels available on the single bird."

The General reflected again on this information, as he knew his commanders were also doing. The GIR was trying to cut them off from escape by the Red Sea and from movement north towards Israel and the strong allied forces there. They wanted him to go south, further from support and into rougher terrain where they could literally wear him out. He had no intention of doing that. Even with the airborne reinforcements he had received over the last few days, and even with the supplies ... he was down in strength and always right on the line with respect to fuel and provisions. He had fewer

than 80,000 men left and with that new Chinese force, they were now surrounded by over one half million ... except to the south.

Well, he knew that the GIR and Chinese troops were suffering from the same lack of satellite information that he was ... in fact, he was sure they had less than he had. Allied forces certainly weren't maintaining air dominance over the entire battlefield. It took almost everything they could provide to keep the air lanes open for his supplies. So, since he had only bare air superiority in some areas, and parity or less in the others, the general knew that the enemy was getting some good reconnaissance and intelligence from his own air assets in a tactical sense. Of course, added to that, XVIII corps own tracks in the sand were a clear indication of the direction they had taken. So, what to do? As he pondered this, an idea germinated in his mind based on the intelligence he had just seen.

"Okay gentlemen, here's what I believe we must do. Listen up and then let's take it apart and put it back together again. If we can make the ideas I am about to share with you work, I want operational plans to this effect from each of you by no later than 2300 hours tonight ready for a kick-off early tomorrow morning. I know this is quick, but we are all fueled up, we are on the move and clearly time is of the essence. Given what we have heard here, our ability to react quickly will probably determine whether or not we make it out of this sand box."

### **July 4, 03:28 local time**

### **Company A, 2<sup>nd</sup> Battalion, 3<sup>rd</sup> Armored Cavalry Regiment**

### **Just west of Afif, Saudi Arabia**

Captain Singer had successfully wheeled the units in his company around and they were now rapidly approaching their jump-off point. The rear-guard and reconnaissance mission he had been performing for so long was about to turn into a flanking assault movement on the GIR armored battalion off to his left. Another company of mechanized Cavalry was performing a similar movement well off to his right. If things went as planned, these movements would attract the enemy's attention and pull support towards the two attacks. That movement towards the flanks would soften the center and allow an approaching reinforced battalion of heavy American M1A1 armor to punch right through it. The two battalions of GIR armor and supporting infantry in the center would be shredded as M1A1 battalion made its way into the enemy's rear and towards its approaching main body ... and hopefully its command units.

It felt good to be moving forward ... to be attacking. Outside of some fancy feinting movements, the last eight weeks had seen nothing but scouting, retreating and holding defensive position until overwhelming force caused them to repeat the entire process. Over and over again.

That is what they had been doing here west of Afif the last day and a half as the main body of XVIII Corp retreated further to the west. But here in the darkness of this early morning, they were going to do something entirely different, something he was sure the enemy forces would not expect. This morning, the hunted were going to turn into the hunter. Hopefully, all of this effort would buy enough time for the main body of XVIII Corps to successfully turn to the north and flank the blocking force the enemy had sent up there. Hopefully, in that process, this large diversion would also punish the enemy significantly. How fitting that it should all occur on July 4<sup>th</sup>, Independence Day.

"All units. Platoon leaders check in. Say your Able Ready status."

As the platoon leaders of his company checked in, Captain Singer reviewed the operation plan and layout of the ground he was approaching. He had twelve M2 Bradley fighting vehicles, each armed with a 25mm chain gun firing depleted uranium rounds capable of penetrating a main battle tank's side and rear armor ... everything but the heavy front armor. Each Bradley also carried four TOW missiles, whose range was further than the T-72 and T-80 tanks they faced. As the platoon leaders verified their ready status, Captain Singer contacted his air support.

"Tribal One, this is Able leader. How do you copy? State your status."

On the flight frequency, the response was almost instantaneous.

"Able leader, this is Tribal One leader. Read you 4X4 and are Able ready."

Captain Singer greeted this news with satisfaction and relief. He had expected nothing less, but it was good to confirm that the flight of four AH-64 Apache Longbow helicopters that would be supporting his action were right there with him, ready to go. Each of them carried sixteen Hellfire missiles as well as a 30mm chain gun that also fired depleted uranium shells capable of shooting right through the top of any armored vehicle they encountered.

It was time to move forward. They had to ascend 500 meters to a rise to their forward, and he expected to engage enemy units as soon as he crested it.

"Okay, this is what we get paid for. Able leader to all units, forward and engage! Good hunting."

Immediately, the M2 Bradley moved forward and covered the 500 meters to the summit of the rise in the desert. Once there, as he crested the rise looking through his infrared viewer, he immediately found several T-72 tanks, hull down in revetments facing his approach.

"Target left twenty-seven degrees, twenty-two hundred meters, TOW ... Fire!"

In his viewer, the scene automatically darkened as the bright light of the exhaust from the TOW caused the optics in his viewer to adjust accordingly. The missile rocketed forward and rapidly moved towards its target. Almost simultaneously, Singer saw similar flashes and streaks as other units in his company engaged the platoon of T-72 tanks guarding this sector. There were several shots from the T-72's that proved ineffective as the enemy was obviously caught completely by surprise. From above, what looked almost like a solid stream of light flashed down from one of the Apaches as it engaged a T-72 and destroyed it. At that same moment, Singer's missile impacted the turret of his target, punched a hole through it and caused tremendous secondary explosions.

"That's a kill," indicated the Captain as his company approached and made its way through the platoon of now wrecked and burning T-72 tanks. Now they had a battalion of GIR armor to bloody.

**July 4, 03:35 local time**

**3<sup>rd</sup> Battalion, 3<sup>rd</sup> Armored Cavalry Regiment**

**Just west of Afif, Saudi Arabia**

Four companies of M1A1 Abrams tanks were on the move. Each company was a reinforced company, meaning each had four platoons of six tanks. All in all, 3<sup>rd</sup> Battalion consisted of ninety-six of the most modern and efficient killing machines on the face of the earth this morning. And today they were out for "red meat".

Overhead and to their front were twelve supporting Apache helicopters. Like those supporting the flanking attacks, each was the "Longbow" variety with its own infrared and laser sensors mounted on the top of its rotor, allowing it to independently target and engage enemy units without the need of another helicopter or ground unit. Also like those helicopters in support of the companies attacking to the left and right of 3<sup>rd</sup> battalion, these Apaches each carried sixteen Hellfire missiles and their chain gun ... one hundred and ninety-two Hellfire missiles supporting ninety-six Abrams tanks.

"And we're going to need every bit of it," thought Colonel Gallagher. "We're charging hard into the teeth of eight hundred enemy tanks massed in that main body, not to mention this Division to our front that we have to defeat before we even get to play with the big boys."

But the Colonel had no doubts that they would break through the initial Division. Based on the radio traffic he was hearing and based on the JSTAR support they had this morning, the Company assaults to his right and left were having the desired effect on those portions of the GIR Division. Combined with the MLRS assault that should be occurring to his front in the next three to five minutes they should have a fairly easy time of it with the two Battalions immediately to his front. But he was sure that the approach in the main body would be an entirely different matter.

Over the command net, and from thirty kilometers to his rear, Colonel Gallagher heard the MLRS battery commander confirm his attack.

"Missiles away."

At the same moment, from the net monitoring their Apache air support, a communication was received from one of the Apache flight commanders patrolling seven kilometers to their front.

"Kingpin, this is Redman-2. Contact! I have eight tracked enemy units to my front, rolling out of the kill zone. Command unit, T-80, top hatch open, commander observing his front with viewing device ... maybe infrared. He is speaking into his mic now. Engaging."

There was a moment's pause as the Apache engaged the command vehicle and ordered his flight to engage the rest of the advancing enemy formation. The optics on the Apache flight commander's display automatically adjusted for the bright flash that resulted from the impact of his hellfire missile. Where the enemy commander had stood just seconds before in the hatch on his T-80, a bright gout of flame now jetted into the air from the remains of the now fiercely burning tank. The tank commander had simply disappeared in the instant of the hellfire's impact.

When the Apache commander observed the results of his own Hellfire attack, and as the units in his flight devastated the other seven enemy units, he commented over the net.

"Oh, baby, look at that hot plasma!"

And that action initiated a brief ten-minute fight with the portions of the initial GIR Division in front of the 3<sup>rd</sup> of the 3<sup>rd</sup>. As a result of the few minutes warning of action based on the flanking attacks and the GIR Division commander's reaction to it, it was obvious that the GIR forces had been caught off-guard and out of position when Colonel Gallagher's forces barreled into them. A number of units were attempting to move to the right and left in support of their comrades under attack in those sectors. These units were engaged by accurate MLRS barrages based on information passed to them by the JSTAR aircraft. Only a few of these came through those barrages and these were immediately set upon by Apache helicopters.

A number of other enemy armor units, like those initial eight tanks engaged by the Apache flight when the first MLRS barrage was fired, were moving forward to probe for oncoming American units in their own sectors. And like the initial enemy units, most of these were engaged by the two flights of Apaches patrolling in the front of the advancing 3<sup>rd</sup> Battalion for that very purpose. A few did get through and were quickly engaged and destroyed by the advancing M1A1 tanks. In addition, twenty

enemy tanks from the main body of the GIR battalions in the center came through the MLRS barrage and were engaged piece-meal as the American force passed.

When the ten-minute running fight was over, Colonel Gallagher's Battalion had suffered only two tanks destroyed and another six damaged. All in all, the GIR had lost over seventy-five of their own tanks. The two GIR Battalions holding the center were completely decimated and the GIR Battalions to the right and to the left were being mauled by the American mechanized Companies and their Apache support helicopters that had been tasked with holding them in place.

"And that is exactly what they are supposed to be doing," the Colonel thought, "While we while punch through the center."

As more information was received that he had an open road to his front, Gallagher continued thinking along those lines, "Maybe this will be like Desert Storm after all. We should have turned on these suckers and carried the fight to them a long time ago!"

Colonel Gallagher's enthusiasm and optimism was understandably based on the mauling of that first GIR Division to his front. But, in the heat of the moment he was forgetting his earlier caution that was based on the huge main body of the GIR forces pursuing XVIII Corps and the success the GIR had experienced to date in doing just that. It was a lapse that would ultimately prove costly.

#### **July 4, 05:17 local time**

#### **Field Headquarters, XVIII Corps**

#### **37 Kilometers West of Hadiyah, Saudi Arabia**

"What's the status on that JSTAR? Is there any chance of him getting back on station?"

The question was an important one that General Olsen was asking as he watched the details on the latest situation display becoming less and less detailed and up to date.

"Sir, the JSTAR has taken evasive action and is low on the deck. He has only two remaining F-15s escorts. We have lost contact with the other six F-15 escorts who were engaging the GIR aircraft. The JSTAR and those last two escorts are now egressing towards Israel out in front of the GIR aircraft pursuing them. We have reinforcement aircraft, including a number of IDF aircraft, advancing out of Israeli airspace to engage the pursuing GIR aircraft. But right now it's a race against time, and will probably require those last two F-15s to break off and engage the enemy in the hopes of delaying them until support out of Israel can arrive in time to save the JSTAR."

The General considered the update from his intelligence officer. The GIR had reacted more quickly than they had anticipated and had driven the JSTAR aircraft off before the armor engagement was complete. The JSTAR, or JOINTSTAR as it was known, was a battlefield command aircraft. It performed a function for ground forces very similar to what an AWACS aircraft performed for fighter aircraft. Using synthetic aperture radar, very sophisticated (and top secret) imaging and electronic processing capabilities and the latest digital link hardware and software, the JSTAR aircraft could "see" every enemy armor or mechanized formation over one hundred miles behind enemy lines. It could also target those formations and pass the targeting data to any digitally linked forces. In some cases, depending on the system, it could actually perform the targeting and engagement using the weapons systems of the "slaved" equipment. In this manner, MLRS, Apache helicopters, Abraham tanks, Bradley fighting vehicles and even individual infantry units that were supported by a JSTAR aircraft gained a great advantage in terms of battlefield knowledge, overall combat coordination, and combat effectiveness over their enemy. Its availability had led to the completely lopsided victories that the US XVIII Corps forces had experienced thus far that night. Not having it available would "level the playing field" for the more numerous GIR forces.

Both the GIR leadership and General Olsen realized this.

"What about the 3<sup>rd</sup> of the 3<sup>rd</sup>? What is their status against plan? Have they started back yet?"

After speaking briefly to one of his staff, the intelligence officer responded.

"General, Colonel Gallagher's forces were last observed by JSTAR engaging the GIR main body. Through targeting information provided by the JSTAR and as a result of information from the last Apache helicopter flight before it expended its ordinance and broke off, the 3<sup>rd</sup> of the 3<sup>rd</sup> was attempting to break through and reach the GIR command formation.

"Unfortunately, just as the engagement began, the flanking elements of the leading Division that the 3<sup>rd</sup> of the 3<sup>rd</sup> had broken through earlier were observed falling back towards Colonel Gallagher's flank, while significant GIR air support was approaching from the direction of Riyadh. A warning was sent and an order issued to immediately break off the attack and execute the egress plan. But Colonel Gallagher indicated his intent to press his advantage with the hope of decapitating the GIR command structure. All attempts to contact the 3<sup>rd</sup> of the 3<sup>rd</sup> since have been jammed and we have not received any more reports or communication from him.

"The units that provided the initial supporting attacks on the flanks for the 3<sup>rd</sup> have joined up and are reporting heavy fire in the direction of the GIR main body. They are too far away to help and they are holding their protective positions for Colonel Gallagher's force to break off and egress. They will be at a critical decision point regarding their own ability to egress the area in the next five minutes."

Again the General digested the latest information. Gallagher was in great danger, but his entire “attack” had been risky and devised to buy time for the main group of the XVIII to wheel around and break to the north behind the GIR blocking force. That part was proceeding very well, with only light contact off to their west. The plan to use the more rugged terrain to the east of the GIR blocking force to pass behind it in an effort to “break” for Israel and whatever measure of safety that might accord them had apparently succeeded ... at least for the time being.

But Gallagher, who served as the “diversion” for that move by the main body, was now many miles away, taking on the GIR main body in what they must think was a very major assault ... and the General was not in a position to provide any help. Gallagher was supposed to break off before such help was necessary and make his way with the other units to rendezvous with him, but Gallagher was late and apparently intent on doing as much damage to the enemy as he could.

“Is Gallagher a fool? ... or a hero?” thought the General, “Sometimes the dividing line between those two is very thin. How this turns out will determine which.”

In the General’s estimation, Colonel Gallagher and his command were going to be lucky to survive unless they broke off immediately. But, at the moment he had his own operation with the main body of XVIII Corps to successfully complete and he did not have the luxury to contemplate any further on how Colonel Gallagher’s action might or might not be remembered.

“Well, we can’t wait. Keep trying to contact the 3<sup>rd</sup> of the 3<sup>rd</sup> and order them to break off. Get with any air assets available or in reserve up north and have them support the 3<sup>rd</sup> of the 3<sup>rd</sup>. In the meantime, tell those two companies to wait as long as they can, but to absolutely *not* endanger their commands. Make that very clear. We are going to need every healthy unit and vehicle we can get before this is over. Have them proceed as planned.”

#### **July 4, 09:50 local time**

#### **Command Helicopter, GIR 1<sup>st</sup> Army Group 35 Kilometers West of Afif, Saudi Arabia**

General Talabari observed the destruction on the battlefield from an altitude of nearly one thousand feet. The special command version of the Russian made Mil-8 “Hip” helicopter he was in maneuvered at the bidding of his chief of staff and hovered when the general wanted to observe any specific location or piece of equipment. He had four escorting Ka-50 “Hokum” attack helicopters and a full squadron of SU-33 fighter aircraft flying combat air patrol above him for protection.

It had been just happenstance that the Theater Commander for all GIR forces in the Mid-East, General Talabari, had been here during the engagement. He had flown in the day before yesterday to Riyadh and had immediately flown out to this main group of the advancing 1<sup>st</sup> Army Group, which consisted of the entire GIR 1<sup>st</sup> Army and portions of the GIR 7<sup>th</sup> Army. The remainder of the advancing 1<sup>st</sup> Army Group on the Arabian peninsula, which consisted of the rest of the GIR 7<sup>th</sup> Army and three Divisions of Syrian troops, were positioned just south of Qatar, bottling up the US forces trapped there. General Talabari had intended to fly to those field headquarters this morning, but upon hearing of the American “assault” had elected to stay with the forces here to observe or help in this major engagement. Reluctantly the General had to admit that it had been a very near thing.

Now, surveying the battlefield in the light of day, it was obvious that what had been earlier reported this morning as two full divisions of American armor had actually been much less than that.

“More like a couple of battalions,” thought the General. “And what destruction they wrought!”

That morning the GIR 1<sup>st</sup> Army had lost almost four hundred tanks, over two hundred and fifty of them in the main group when those Americans had pressed their attack right in towards the center, driving towards the GIR command elements. The losses experienced in stopping that drive amounted to almost thirty percent of the GIR 1<sup>st</sup> Army’s total armor.

“It had almost amounted to the loss of the entire 1<sup>st</sup> Army command staff and the Theater commander as well,” thought the General as he observed a cluster of four destroyed M1A1 American tanks surrounded by perhaps twenty GIR hulks.

“Praise be to Allah that the American commander did not turn his entire force on us and attempt a full-scale counter attack,” continued the General in his mind. “They may well have carried the day and caused us to fall back all the way to Riyadh.”

But such were the fortunes of war. The General knew now that this attack had been a diversion for the American XVIII Corps’ turn to the north. Despite the fact that the GIR had suffered severe losses, the Americans had also suffered. In fact, this was the largest loss of US armor since World War II. General Talabari was sure of it ... perhaps the largest loss of US armor in one battle in history. Almost one hundred US M1A1 tanks lay scattered about between here, where the General was now observing, and the Saudi town of Afif where the Americans had initiated their attack.

It was a US “defeat” despite the significant GIR losses, and it would be reported that way. There were images here that could be used to great effect in the information war the GIR was also waging. Images of burning and smoldering US Abrams tanks would lift and embolden allies and demoralize and disenchant enemies.

Despite the satisfaction of those thoughts, the General knew that such “propaganda”, while useful, only belied the stark reality of his own experiences. That reality had been crystal clear in the moments before the lead US tanks were stopped only two kilometers short of the GIR command vehicles after their own security forces and armor had sped off to intercept the seemingly unstoppable American spearhead advancing towards them. When the sound of imminent warfare and destruction was upon them, only the timely arrival of GIR air support had saved the command. The clarity of those moments just before the dawn was instantly recalled in the General’s mind. No, his own thoughts and the thoughts of every man around him had been far removed from any “propaganda” campaign and how various “details” of the battle might later be reported to the their benefit. During those crucial, fateful moments, when their very lives hung in the balance, the General and every man with him had only focused on how best to fight and survive while facing their imminent destruction, a destruction from which they had been spared.

“Praise Allah for the timely arrival of that air support,” thought the General. “But what had driven that American commander?” he asked himself.

“He had to have known, with less than one hundred tanks, that this attack was bound to fail ... even if he had so nearly succeeded in “decapitating” the GIR forces in the area. He could have turned away a quarter of an hour earlier and saved much of his command and escaped to the north in the confusion as those initial flanking attackers had done.”

The General, despite his experience with and knowledge of the Americans had to ask himself what had driven this man to his death? The discipline of those under his command was astounding.

“Are the Americans then, in such conditions, capable of their own version of martyrdom?”

“Apparently so,” concluded the General as he looked upon the still smoking wreckage of one of the vaunted Apache helicopters.

In his many years of experience with the Americans, the vast majority of which had been as one of their allies in the Kurdish regions of the northern territories of the former Iraq, he had not considered the possibility of the Americans acting in such a fashion. While their “foot soldiers” were exceptionally well trained and very disciplined, they always seemed to place over-riding emphasis and value on their lives and their ability to survive.

“In fact, much of their planning centered around it,” thought the General. “It ‘s an important part of their culture.”

On top of this, their political leaders were usually so fickle and so conscience of “public” or “world” opinion, that they never seemed capable of making the hard choices. Now something was changing. Despite their defeats, the Americans were displaying a more steeled and determined face. The General knew what was driving this change. It was the quality, steel and determination of their new leadership. It was also the general realization amongst their ranks that without such steel and determination they could be defeated and driven out of the region entirely. In fact, they were being defeated and driven out of the region despite the American forces’ newfound resolve..

But the realization on the part of General Talabari regarding the American forces willingness to attack and die in such a fashion was something he would be forced to soberly take into account in his planning. He must take it into account in case the American leadership was ever willing to commit a significant portion of their high tech forces as this commander had done. If they were ever willing on a large scale to risk losing a large part or all of them in a bid to attain a specific operational goal, then the General seriously doubted that any force would be capable of stopping them while they maintained their technological advantage.

“At least not until they have expended most of their high tech ammunition and equipment,” contemplated Talabari.

The ability to survive in such an environment until the Americans expended those resources would have to be a critical part of the General’s instructions to his planning staff. In order to do that, he already knew he would need much more resource and a willingness to sacrifice time and ground “soaking up” any such American counterattack. In fact, if enough forces could be garnered, perhaps a plan to that effect could be developed. A plan to actually draw the Americans and their allies into making such a commitment, one where they were assured of defeating significant portions of GIR forces only to be overwhelmed by reserve forces once they ran out of their “force multipliers”. The prospect was both daunting and exciting. It was something he would have to bring before the Imam.

As the General ordered his helicopter to turn for Riyadh and his eventual visit to the command staff of the GIR 7<sup>th</sup> Army south of Qatar, he continued to ponder and plan for this new realization. He began to calculate the extents of a request to Tehran for even more overwhelming numbers to soak up and counter the largest attacks he could conceive of on the part of the Americans and their allies, and then to counter them with a devastating counterattack of his own.

**July 7, 23:59 local time**

**Combat Operations Center, PLAN 1001 Beijing**

**220 Kilometers Southeast of Shanghai, East China Sea**

The weapons officer continued the countdown. In a few seconds, the Beijing would again launch a salvo of the land attack variety of the SS-26 Yakhont missiles at the rebellious province.

“Five, Four, Three, Two, One, Zero ... Launch!”

Towards the bow of the distinctive x-shaped deck, a searing bright light lifted off in the darkness, illuminating its own smoke trail and casting a light over the entire ship as she drove forward through the sea. It rose quickly and tracked off towards the southeast. Within two seconds, another missile lifted off with the same effects. Within thirty seconds, all twelve missiles had been launched and were all in route towards Taiwan. In particular, all of these missiles were targeting one of Taiwan’s major air defense assets that had eluded the PLAN thus far in the conflict. This was one of the two Aegis anti-aircraft destroyers that the United States had sold to the rebellious island. Those two destroyers, along with the four Kidd class destroyers that had been sold earlier to the ROC, had played havoc with the Chinese air attacks on the island to date. As they held station in their assigned harbors, protected by their own American-made missiles and the Patriot missile batteries surrounding the harbors, those ships had downed many attacking Chinese aircraft and missiles.

By specifically targeting the ships with simultaneous launches of sea skimming Yakhont anti-shiping missiles from two other PLAN Beijing class aircraft carriers, and from several PLAN destroyers ... and by targeting the Patriot batteries with land and sea launched ballistic missiles, all four of the Kidd destroyers had ultimately been destroyed. Tonight’s operation would now focus on the destruction of the two Aegis class destroyers. They would be harder nuts to crack, and would require accordingly more resource. By committing the full missile loads of two carriers and three destroyers, a total of forty Mach-2, sea skimming, anti-shiping missiles were now in flight towards each of the ships. In addition, a total of seventy-two ballistic missiles were now targeting the Patriot missile defenses at each harbor. With so much of their high tech resource committed, the leadership of the People’s Republic of China had every expectation that the defenses for the ROC ships would be saturated and that they would be destroyed.

“All missiles have successfully tracked. We have a 100% launch and track ratio. Reports from the Shanghai indicate completion of their launching sequence. They are reporting a 92% launch and track ratio. We have a total of twenty-three missiles tracking. Estimated impact in five minutes, forty-eight seconds.”

Admiral Yao Hsu, the commander of the Beijing battle group and overall commander of PLAN operations around Taiwan, listened intently. Operation Mating Swan was being proceeding punctually and efficiently.

“Have our aircraft proceed as planned. Wish them success from me directly.”

Over the next twenty-four to thirty-six hours the immediate prospects for a forced reunification between the mainland and their rebellious province on Formosa, commonly called Taiwan in these days, would be decided. Two SU-35s escorted by eight SU-30’s from each carrier would make a battle damage assessment run on the Republic of China harbors from which the two remaining ROC destroyers were operating. If the ships were destroyed, the second phase of the operation would begin. If not, the launch of more Yakhont missiles and ballistic missiles would be repeated until they were. Once this was accomplished, the coordinated second phase would be implemented to draw out, engage and destroy the majority of the remaining ROC Air Force. Large numbers of land-based aircraft had massed close to the Taiwan straits over the last two weeks in anticipation of this operation. These were in addition to the ongoing operations against the island. Four PLAN carriers and their modern air wings were also massed around the island. The bait that would spring the trap was already out in the straits, awaiting the announcement regarding the disposition of the destroyers before proceeding directly towards the island.

**July 8, 00:25 local time**

**Tiger Squadron, Republic of China**

**Just west of the Taiwan Coast, Taiwan Straits**

Twenty-four IDF fighter/bombers of the Republic of China were accelerating to full combat throttle as they had crossed the coast and proceeded out into the straits. They were flying on the deck in attack formation and their targets were now less than sixty kilometers in front of them. To their north at an altitude of 30,000 feet was an escort consisting of twelve F-16 and sixteen F-5 aircraft, outfitted for air-to-air combat. To their south at an altitude of 35,000 feet was another escort of eight F-16 and twelve F-5 aircraft. Altogether this represented seventy-two of the most modern and capable aircraft the island had remaining in its inventory. It also represented a full forty percent of that inventory. Clearly, for imminent operations, the ROC was placing all of its eggs in one basket. It had come down to a matter of the republic’s survival.

“Squadron lead to all flight leaders. We are two minutes from point Lima. At Lima go to angels-10, acquire and engage.”

The Republic of China Air Force (ROCAF) utilized several different varieties of aircraft. For the air-superiority role they had F-16C aircraft armed with American AMRAAM missiles and Taiwan Sky Sword II missiles. The F-16C could also be used in the attack role, but for that type of mission the ROC preferred the Taiwan built IDF fighter/bombers. The two-seat variant, like those being used on this mission, was capable of carrying four ROC Hsiung Feng II surface attack missiles. The missile design was very advanced and could be launched from aircraft, ships, submarines or land. It included a mid-course correction capability through digital link, active radar homing and infrared homing. It was a true “fire and forget” missile once the general location of the target was known. With significant electronic warfare hardening and a 190 kilogram warhead, the Hsiung Feng II (which means “Mighty Wind”) was a very potent threat to any vessel of the People’s Republic of China.

And there was significant PRC shipping for these twenty-four aircraft to attack with their ninety-six missiles. The PLAN was committing two of its new Amphibious Assault ships along with over two hundred Yunana II landing craft to an operation that appeared to be the onset of their amphibious attack on the island. Escorting this force were several destroyers. The entire group was steaming directly towards Taiwan and was now well out into the straits with what the ROC leadership considered to be marginal air cover. The feeling that this armada represented the main amphibious assault at a time when the ROC had significantly thinned the numbers of aircraft that the PRC had to defend the assault had enticed the ROC air force into the current operation.

It was the remaining ROC AWACS aircraft that noticed the approaching Chinese surface vessels and the disposition of their air cover. These remaining AWACS aircraft were very valuable to the ROC. They were E-2C aircraft purchased from the US Navy. Only two remained in the ROC inventory as a result of the Chinese expending large numbers of their lower tech aircraft in downing the other four in the weeks since the beginning of hostilities. As a result, one aircraft was flying on the opposite side of the island at all times, escorted by over one dozen of the best aircraft the ROC possessed, manned by the most experienced pilots. This allowed for good radar and electronics coverage over the straits in the general area of where the PLAN task force was approaching. But the location of the ROC AWACS aircraft on the eastern side of the island also meant much-decreased coverage over the Chinese mainland and points well to the north and south over the East China Sea and the South China Sea. The PRC was counting on this “blind spot” in the ROC surveillance and was now taking advantage it as over three hundred high-performance aircraft approached from the mainland to the west, and from the carrier groups to the north and south. They were coming in on the deck from the “dead” zones of the E-2C coverage, and would rocket skyward when detected.

“Tiger lead! Tiger lead! This is Overseer-1. Many bandits approaching, climbing through angels-5 at a speed of Mach-1 and accelerating. Break off ... I say again, *break off your attack!*”

But the warning came too late, and the Battle of the Taiwan Straits was joined.

### **July 8, 00:29 local time**

### **PLAN Amphibious Assault Ship Chongqing**

#### **Taiwan Straits**

Kao Pham had been at battle stations for well over an hour when they came, dozens and dozens of sleek and deadly aircraft from the west, like wraiths in the moonlight. They had flown in between and to either side of the Chongqing and her sister ship, the Guangzhou, at incredible speed ... just twenty meters off the water. Then, one after another, with a visible tongue of fire and an audible “BOOM” followed by rumbling thunder, they had ignited their afterburners and gone into almost vertical ascents to the east of the leading escorts of the formation. It was an awe-inspiring sight that he would never forget, and it was a sight that steeled him to what he knew was coming ... combat.

The anti-aircraft missile launchers were on the forward portion of the ship, as they were with every one of the new Chinese conversion ships regardless of design. It was one of the many modular features that made them easy to build and maintain, and cut costs. These missiles were KS-2 missiles and were very capable in the anti-air defense role against either aircraft or anti-shipping missiles. All of the tasks associated with targeting, launching and engaging the missiles were the responsibility of several weapons officers in the armored combat information center located beneath the bridge of the ship. The loading of the vertical launch tubes that housed the missiles was handled below deck by automated machinery. That machinery was maintained by other sailors whose battle stations were located next to and below the missiles themselves. The maintenance of the hatches for the vertical launch missile tubes above deck was the responsibility of the section of personnel to which Koa belonged. Their posts were located on a special deck just below the open deck where the missile hatches opened to the air. They had special observation ports that allowed them to visually monitor the hatches while observing all of the various parameters of their status on computer displays located at each post. Koa monitored and maintained ten of the forty hatches on his ship.

When one of the KS-2 missiles was launched, the hatch was electronically actuated to flip open an instant before the missile launched. There was a hydraulic backup system that could also open the

hatch. Each hatch had to open at precisely the right instant, open to the proper orientation and then close again to allow the system to function properly. The heat of the burning exhaust gas as a missile launched was extreme. The metal fatigue that it caused tended to alter the physical makeup of those hatches over time. Any of the systems could fail after prolonged use, or because material was nominally out of specification. Of course, combat operations could also damage or destroy the hatch mechanisms. It was Koa's responsibility to monitor the state of the hatches and the systems that operated them and to proactively maintain or replace hatches and systems before failure. A failure of a hatch during launch could lead to missile detonation and catastrophic results - results which could severely damage or even sink the ship if they were severe enough to lead to secondary explosions involving the entire magazine of KS-2 missiles.

Koa took his responsibilities very seriously. He had been given every reason to. Not only by his training, by his commanding officers, by his dedication to his duty and responsibility, or by his commitment to his friends on board the Chongqing ... he had also been given every reason by the upbringing his parents had provided him. Koa knew his father was an important person to the overall war effort, but Koa's parents' example had been a powerful one even before his father assumed his current position of importance. They had always been hard workers and had always stressed the need to be committed to the task and responsibility at hand ... they still were. Their children had inherited that work ethic, and now Koa, although only eighteen years old, felt he had been given a serious responsibility to fulfill. And he was right.

Looking through the hardened windows of the observation port, Koa and his shipmate had seen the fighters stream by, each loaded with its own set of six to eight missiles. After they had "gone vertical", they had disappeared into the night sky, passing through a mid-level deck of stratus clouds off to the west. A few moments after he caught his breath and turned his attention back to his display screens, Koa turned to his section leader.

"Wu, did you see that? There must have been over one hundred of them!"

Wu, a senior missile technician responsible for another ten hatches and acting as the lead in this observation post, had indeed seen them. Despite his years in the PLAN, and his having taken part in many training operations, he had never seen anything like it. Those SU-24, SU-33 and MIG-29 aircraft had performed an extremely complicated and dangerous maneuver in the moonlight. Given the circumstances, there could only be one reason to take such risks.

"Yes, Koa, I saw them. I believe there were well over one hundred of them. Thank the stars that they were all ours. We'd best get ready. I have a feeling our services are going to be required very soon ... and this will not be a training exercise."

A few moments after he finished saying this, red warning lights flashed on both of their displays indicating targeting information being fed to their missiles. Very quickly, both men noticed that the majority of their missiles were receiving data. Both Wu and Koa pulled the darkened covers over their face plates in case missiles were soon launched, so they could observe the hatches physically in spite of the bright fires from the missiles. As they did this, the flashing lights flashed much quicker, indicating that the missiles were locked on and prepared to launch. Almost immediately thereafter, the red lights burned continuously and missiles began to launch.

The flames, exhaust smoke, noise and the rapidity of the launches were phenomenal. All systems performed nominally and all hatches opened and closed flawlessly. Missiles climbed into the night and disappeared, some of them rising simultaneously, others rising one after another depending on their targeting. Within forty-five seconds, all of their missiles were gone.

Wu shouted over the subsiding noise.

"Must be a large raid! All of the missiles were launched so fast!"

It took less than two minutes for the machinery below decks to reload the missile tubes, perform a check on the systems and indicate that the system was ready for a second salvo, if necessary. As soon as the system indicated that it was ready, red lights began flashing again and the whole sequence was repeated. This time the missiles were launched even faster, completing the launch of the entire array in just over thirty seconds. Many of the missiles visibly turned over in their trajectories and rocketed forward at fairly low angles after reaching an altitude of no more than a hundred feet.

Both Wu and Koa had an unhindered view of one of these as it made a sharp turn to starboard a short distance in front of the ship. There was the slightest impression of another flashing light moving towards their formation when the KS-2 missile that had caught their attention detonated violently. This produced another explosion that rained debris into the ocean in front of them. In the distance, there were numerous flashes just below and within a bank of stratus clouds.

As another salvo of missiles loaded, Koa saw a stream of light erupt from one of the escort vessels in front of them. That stream of light reached into the heavens for a brief instant and found its target, producing a bright explosion out in front and to port of the escort. The explosion itself seemed to stretch right out towards the escort and touch it as debris and burning fuel swept over the forecabin of that ship. As it did, another stream of light reached out ... and missed! A large explosion engulfed the side of the escort. It visibly rolled toward them - and then righted itself - as it slowed in the water.

Suddenly, there was a loud buzzing sound to their port and another stream of light reached out, this time from their own ship. It seemed to point to the front of their sister ship, the Guangzhou, as a stream of light reached out from that ship itself. The two seemed to cross and there was a large explosion that rained debris and fire into the ocean in front of the Guangzhou. As this occurred, several flashes of light passed over them and continued on deeper into the PLAN formation, out of sight of Koa's observation post. Then, in rapid succession, there were two explosions on the Guangzhou. One was centered vertically on the bridge, another was just above the waterline on the starboard side. Very quickly, fires raged out of control as smoke poured from the ship.

The air defense missile system on the Chongqing again indicated its readiness and again the targeting light began flashing. This time fewer of the missiles were involved and when lock-on was achieved, followed by launch, even fewer were launched. There was no repeat for a fourth salvo.

It had all happened so quickly. From the first flashing of warning lights to the last launches of the third salvo had taken no more than six minutes. In that amount of time, the Chongqing had launched almost one hundred missiles and Koa had witnessed enemy missiles hit two of the ships in the formation. The escort was now very low in the water and looked to be sinking. The Guangzhou was still burning and was dropping off behind them and looked as if she would soon go dead in the water. There was no telling how many of his countrymen had been killed, but Koa was certain that the death toll was high. His thoughts invariably led to questioning what he could have done better, how he could have been an instrument in saving more of his countrymen's lives. As he reviewed the figures and data in connection with that question, his section leader, Wu, noticed Koa's consternation.

"Koa, you did very well. The system performed as required. It did so because we have kept it in good shape with our maintenance and training. While it is true our enemies scored some hits on our ships, it is also true that our actions, along with those of our comrades, saved a great many more lives that would otherwise have been lost. Concentrate on that, and concentrate on the fact that those who did die did so in the furtherance of our goals and our mission as a task force, as a nation and as a people. There is no greater duty than that, and there is no more honorable a sacrifice. Now, let's make sure everything is prepared to perform as well during the next engagement."

**July 8, 00:48 local time**

**Tiger Squadron Lead**

**Just east of the Taiwan Coast, Republic of China**

Tears were streaming down the Squadron leader's face as he went "feet dry" over Taiwan. Nevertheless, he maintained discipline as he flew back under the CAP protection that was available.

"Overseer-1, Tiger lead is feet dry."

Seventy-two aircraft had participated in the attack. Only ten were returning. Oh, they had given better than they had taken ... they always did ... but they had been ambushed plain and simple. Three of the twenty-four IDF aircraft from Tiger Flight were all that remained. Five of the twenty-four valuable F-16C aircraft were all that were returning. Only two of the twenty-four F-5 aircraft that had participated in the attack had survived.

"So many good pilots - good friends - gone. So much critical equipment lost. At least we were able to acquire targets and launch most of our missiles," he thought. "Even if the abort command had come too late and had caused confusion just as we were being attacked ourselves."

In the dogfight that had ensued, the ROC aircraft had destroyed almost one hundred and twenty-five Chinese and Korean aircraft. But since the attacking force had numbered more than three hundred aircraft, the results were a foregone conclusion. Only those ten ROC aircraft were returning, and that meant that nearly forty percent of their air defense capability was now lost. Judging from the reports, both Aegis class air defense vessels were also destroyed tonight along with a large portion of the Patriot missile batteries protecting them. There was no doubt what would come next. Probing, followed by almost uncontested air superiority, ultimately air dominance, and then ...

... and the tears continued to flow because the commander knew he was right and he knew what it would mean, although he could scarcely form the thoughts in his mind, much less utter the words. It did not matter that he did not know that his attack had achieved a measure of success. In fact, it had inflicted more damage than the PRC had envisioned. Two destroyers sunk, two more damaged. One of the new, large PLAN Amphibious Assault ships sunk. Twenty-two Yunana II class landing craft sunk and ten more damaged. Those losses represented many personnel and a large amount of equipment that was now lost to the PRC efforts to force the ROC to unite with the mainland. However, when compared to what the PRC was amassing for the invasion of Taiwan, those losses also represented a small fraction of what they were going to commit. The Squadron leader for the ROC knew this ... and he knew his enemies knew it and had planned for it. And so his tears were for much more than his lost comrades and equipment. They were for his nation and its people.

The door was now open for the invasion of Taiwan. The PRC intended to accomplish it with over 1000 Yunana II class landing craft, four more large Amphibious Assault ships, three hundred other PLAN military transports and landing craft of all types, and with over one thousand commandeered commercial vessels. All of them filled to the brim with soldiers and equipment. There

would be a total of over 300,000 soldiers in the initial crossing of the invasion fleet, which would be escorted by over two hundred PLAN combat vessels of all types, including four Chinese carrier groups. It was the largest Chinese naval operation in history and it would be supported by over 1200 fighter and attack aircraft from the mainland and from the decks of the carriers. It would also be supported by almost continuous barrages of hundreds of short-range ballistic missiles from the mainland and from TAS vessels sailing with the fleet.

**July 8, 09:45 local time**

**Secure Governmental Command Facility**

**45 KM Southwest of Taipei, the Republic of China**

“We will be invaded then. We have held them off for almost three months, but we will be invaded. When can we expect it to begin?”

Admiral Cheng heard the resignation in President Chen Shu-bien’s voice. He knew it was resignation to the fact that they would be invaded, not resignation from their cause.

“Mr. President, they are already beginning. The advance portion of their fleet is less than thirty kilometers off our coasts hoping to lure more of our aircraft into the teeth of their numbers. Their missile barrages and attack aircraft are pummeling our northern and central coasts. We expect they will try to land on those coasts within the next thirty-six to forty-eight hours.

“Mr. President, on behalf of all of the Chiefs of Staff, I must request again that you and the other critical leaders in the executive and legislative branches immediately evacuate the island and set up a government in exile amongst the Americans.”

The Admiral saw the color rise on the President’s face and saw him fix his jaw.

“Admiral, and everyone present in this room. Let me say this only one more time and make sure you understand ... I will not leave this island or our people. I intend to remain here and I intend to fight from this island until either we are victorious, or I am dead. Do each of you understand that? There is no room for equivocation or debate on that point. I have instructed ... no, let me rephrase that ... I have ordered the Vice President and the Minister of Foreign Affairs to leave tonight with several ranking members of the Yuan to set up our government in exile. They will be leaving on the American submarine with a small marine security detachment and will make their way to American Samoa where they will make all of the necessary arrangements.

“I have one other matter to address before we adjourn. I believe everyone here has the need to know regarding this matter. General Li, are all the necessary assets in place for, and do we have the capability to communicate, an execute order to our people on the mainland for Operation Purify?”

General Li breathed a sigh of relief. He did not know whether the President was going to go through with it or not. He was glad he was. He had pushed for the implementation of this particular operation for over eight weeks now and wished it had been executed earlier. But for an operation like this ... it was better to do it now than not do it at all.

“Yes, Mr. President. Our people are in place and they understand their orders and they have the wherewithal and the will to carry them out.”

The President nodded his head reflectively and seriously. He had hoped that such an order would not be necessary.

“Very well. Send a warning order tonight indicating that the operation is expected to commence within thirty-six to forty-eight hours. Then, as soon as the PLAN landing craft begin reaching our shores, or as soon as any communist paratroopers land ... issue the execute order.”

“If there are no more questions, you all have your orders and understand the gravity of the situation. Dismissed.”

## Chapter 16

*“Teach him he must deny himself” – Robert E. Lee*

**July 10, 17:22 local time**

**President’s Conference Room, Executive Complex**

**New Delhi, India**

“Mr. President, with Taiwan being invaded, the surrender and occupation of Japan, and the treaties with the Philippines and Malaysia, the entire South China Sea and East China Sea have been secured for Coalition of Asian State commerce. That security extends out towards Indonesia, New Guinea, the Solomon Islands, the Marshall Islands and ultimately Australia and New Zealand. It is time for us to turn our attention to these matters. As a result of our recent treaty with Burma and our action in Bangladesh, Nepal and Bhutan, the Bay of Bengal is similarly secured. Only Thailand remains, and they are reconsidering their insistence on neutrality. With all of this in mind, I urge you to approve our operation directed at securing the Indian Ocean and thus completing the secure trade route for CAS goods from the Persian Gulf through the Indian Ocean and into the Seas of China.”

KP Narayannen, the President of India, knew that the time of decision had come. He could no longer delay; he could no longer waffle without bringing suspicion and doubt upon himself and his administration. That was something he was unwilling to do.

The trade and economic benefit that had accrued to India as a result of their involvement over the last fourteen months in the Coalition of Asian States had been tremendous. More Indians were working, the standard of living was rising, and the outlook for the future was better than ever before. The regional issues facing them in Sri Lanka, Bangladesh and Pakistan had all been resolved and the threat from Islam, China and Russia had all been dissolved in an enormous economic boom for all. The only potential dangers were resulting from the disenfranchisement of the West, and the warfare that had erupted and was raging as a result.

To this point, that warfare that had not touched India directly, but that was about to change. The US 5<sup>th</sup> Fleet was still strongly positioned in the Indian Ocean and sat squarely in the middle of the trade route so critical to the “New Order” the CAS had ushered into this part of the world. It was a presence that could not be tolerated and the Indian military and technology sectors were prepared to deal with it. But the coming confrontation was not something that could be entertained or embarked upon lightly. The West, and in particular the United States, had sharp teeth. They had been caught by surprise once, but such an ambush was going to be difficult to repeat. In addition, with fighting far from over on Taiwan, it was not an accurate representation to characterize the China Sea as “secure”. Before giving the approval for the go-ahead to carry out the military operation, the President felt it important to remind his cabinet of all of this.

“Minister Patel, I would not characterize the initial invasion of Taiwan and the current situation there as “securing” the China Sea. Every report indicates that the fighting is fierce and that incursion onto the island itself is at a virtual standstill not far from the beachheads. In addition, the civil unrest that has erupted along the Chinese mainland coast in the staging areas for the invasion and near the capital in Beijing is disconcerting.”

Over the last several months, the Foreign Minister, Rahmish Patel, had been rising in stature and influence throughout India. Whereas the President came across reserved and appeared almost reluctant in taking full advantage of the burgeoning relationship in the Coalition of Asian States, Patel was direct and outspoken. He took every opportunity to push for a more active part in diplomatic and military activities, and in condemnations of the west. The President considered Patel’s attitude and inclinations a dangerous and overly expansionist military philosophy. But with the growing economy, with the successful diplomatic and military action to date, the people were more and more willing to follow the lead of charismatic and influential leader like Patel ... and he knew it.

“Mr. President, despite the continued fighting, the Republic of China’s navy is either sunk or fleeing desperately to the east and their Air Force has ceased to exist as a viable threat. In this context, outside of only occasional American submarine activity, the China Sea is indeed secured. As to the fighting on the mainland, we have all known for a long time of the ROC’s attempted subversion of the citizens of the People’s Republic. It appears that they may have won a few more adherents than was expected. Nonetheless, I have no doubts that the legal and rightful government in China will quickly put the revolts down while continuing the campaign to pacify their rebellious province ... much as we have done now with Sri Lanka. That aside, how should I instruct our ambassadors and the members of our Foreign Service with respect to our operations in the Indian Ocean?”

The President had to hand it to his Foreign Minister. Despite his ambition, he was smooth and he had honed in on the critical point of this discussion. While the situation on Taiwan was critical for overall commerce, it was the responsibility of the People’s Republic. The interest of the cabinet in this

meeting was really focused on their own responsibilities and the matter of the US 5th Fleet in the Indian Ocean and securing that body of water for CAS trade.

“Let us hear a final assessment and review from the Minister of Technology regarding the enhancements and upgrades to the weapons we have acquired from the Chinese, whom I presume will provide a positive report regarding the same. Based on the outcome of that report you will be able to tell those members involved with the operation in the Foreign Service to proceed according to plan less than thirty-six hours from now.”

**July 11, 06:22 local time**

### **Main Runway, The Airfield**

### **Diego Garcia, Indian Ocean**

Diego Garcia is located just south of the Equator in the Indian Ocean. It is the southernmost and largest island in a chain of fifty-two hot and humid tropical islands known as the Chagos Archipelago. The entire group of islands falls under the administration of the United Kingdom in the British Indian Ocean Territory (BIOT). Located some eighty miles from the nearest island in the chain, Diego Garcia is a long and narrow island in a crescent shape that forms a harbor over six miles wide and thirteen miles long, which provides good anchorage for ocean going vessels. The island itself, which is comprised of some 6,700 acres, is wide enough for a major airfield but is densely vegetated where it has not been cleared. The maximum elevation is just twenty-two feet above sea level.

The island was first discovered in the 1500's by two separate Portuguese explorers, one named Diego and the other named Garcia. The resulting dispute regarding who discovered the island first resulted in the island simply being named Diego Garcia. The French won claim to the island from the Portuguese and ultimately the British won claim to the island from the French. The British claim is recognized as the legal administrator and ruler of the island.

In 1971 the United Kingdom and the United States signed an agreement that allowed the United States to lease the island and to build up a significant military presence there. This resulted in the basing of many United States military commands on the island. These commands included a Naval Computer & Telecommunications Station, a major Naval Support Facility, a major Military Sealift Command Office, Maritime Prepositioning Ship Squadron Two (MPSRON-2), Afloat Prepositioning Squadron Four (APSRON-4), a Naval Mobile Construction Battalion and a Naval Security Detachment. It also included U.S. Navy Patrol Reconnaissance Wing One, U.S. Air Force Pacific Wings One and Thirteen, the 18<sup>th</sup> Space Surveillance Squadron Detachment Two, 22<sup>nd</sup> Space Operation Squadron Detachment Two, and several other supporting commands, including a number of civilian contractors. The British representative on the island (BRITREP) serves as the overall magistrate while also commanding the British Royal Marine detachment on the island. In order to accommodate all of these various military commands, construction began immediately after the signing of the 1971 agreement and continued for more than ten years. By 1972, the three thousand inhabitants of the island, mostly workers on Coconut Oil plantations, were moved to Mauritius, the island from which most of the workers' ancestry originated, although many of their families had been on Diego Garcia for generations.

During the cold war, the United States military presence on Diego Garcia was meant to keep track of and balance Soviet military activity in the region. Since the end of the cold war, its focus had shifted to protecting the vital oil routes coming out of the Persian Gulf and to providing a staging area for military activity in the Middle East should war ever break out. During operation Desert Storm against Iraq in the early 1990's, operation Enduring Freedom against the Al Qaeda and the Taliban in Afghanistan in 2001-2000, and during Operation Iraqi Freedom starting in 2003, war actually broke out in the general Persian Gulf area. During those conflicts, though never threatened with attack, Diego Garcia had served as a critical staging area for U.S. operations and had paid significant dividends in terms of materiel and in terms of combat fight operations for long range bombers.

Now, this July there was a harsher reality as US Air Force C-17s were landing one after another and disgorging US Marines for imminent combat action on the island itself.

“Alright, Marines, form up! Come on, come on . . . this isn't some kind of lazy Sunday afternoon and it sure ain't your mama's picnic. On the double now!”

Lance Corporal Leon Campbell exited the rear of the aircraft on the double and was immediately assaulted by the heat and humidity. Such an oppressive climate was not unexpected here just below the Equator some 1500 miles southeast of the Arabian Peninsula and almost 1000 miles south of India. But one had to experience the intensity of it to appreciate just how hot and muggy it was.

“Man! Even North Carolina humidity can't compare to this!” thought Leon as he formed up with his platoon and began marching towards the facilities that would house them on the island.

“But it's not so bad. I know these boys are glad to have us here and it will be what I will always remember as my first real duty assignment, my first overseas assignment and my first wartime assignment all rolled up into one.”

And Leon was right. The soldiers who had been providing for the defense on Diego Garcia was very glad to see the arriving C-17s and their human “cargo”. The security detachment on the island

consisted of one company of Marines who had been diverted from Marine Expeditionary Brigade One (MEB-1) when it had been deployed in the Persian Gulf area at the outset of hostilities. Now, the rest of MEB-1 was completely cut off and trapped on the Qatar Peninsula. That had left the Marine company, the relatively small Air Force security detachment and a Royal Marine security detachment as the only combat ready forces on the island. That amounted to less than three companies of soldiers to defend one of the most strategic support and staging bases in the entire region.

The powers that be in Washington and London had decided that more was needed, particularly given the nature of the war at this point. So, Leon and the other Marines landing with him, and many others that would follow, had been sent here to bolster defenses and ensure that the strategic island remained in allied hands. The commitment represented an entire Marine Expeditionary Unit. An additional 2,500 men and their weapons and supplies to beef up the defenses at Diego Garcia. In addition to the small arms and mortars that the Marines brought, this augmented unit would also provide another eight tanks, ten fighter/bomber aircraft, thirty-six helicopters (twelve of which were the new AH-Z attack helicopters like Billy Simmons was learning to fly) and eight artillery batteries.

While he marched double time, Leon thought, "I wish Billy were here right now piloting one of those babies. I've got a feeling, with conditions over in the Persian Gulf being what they are, that it won't be long until they set their sights on us out here."

All of the heavy equipment for the MEU was already forward deployed at the base on the fast pre-positioning ships of MPSSRON-2 and APSSRON-4. The Marines and the aircraft were being flown in to mate up with that pre-positioned equipment. It wouldn't take them long to do so either. Naval personnel and the Marines already on the island had already off loaded all the equipment in preparation for the arrival of the MEU.

There was also a US Navy Surface Action Group (SAG) deployed around the island to provide additional security against air or sea attack. That SAG consisted of three Arleigh Burke Aegis guided-missile destroyers and two Oliver Hazard class frigates. This was in addition to the USS Enterprise Carrier Battle Group (CBG) on station in the Indian Ocean. The Enterprise CBG and the long-range aircraft at the airbase on Diego Garcia were all the air support the trapped units on Qatar had. But providing air cover to Qatar, helping protect Diego Garcia and interdicting CAS attempts at control of the Arabian Sea were wearing down air-wing operations on the carrier and causing the CBG to position itself such that an enemy's job of predicting its whereabouts was rendered much less difficult. This was a fact that was not lost on the Indian war planners, and something they were soon to use to their advantage.

**July 11, 11:41 local time**

### **Flight of Twenty-four Indian Tu-22M "Backfire" Bombers Over the Arabian Sea**

They were flying at over 1000 kilometers per hour, less than fifty meters off the water. Each of their shock waves was leaving a trail of raised and disturbed water behind them as they sped towards their release points. Another flight of twenty-four similarly configured TU-22M "Backfire" bombers was five minutes behind this one. All of them had entered the Arabian Sea just to the south of Bombay and proceeded on their current course towards their target acquisition area within twenty miles of the last reported position of the American carrier. That information had been purchased at the high price of several TU-142 Bear patrol aircraft and their long-range fighter escorts. But the price had been paid, the Americans had been found, and the operation to destroy them was now in progress.

To confuse the Americans and draw their attention away, a large raid of over two hundred aircraft was already in the air and proceeding to the attack them the direction of Karachi. Along that axis, the Indian Navy had amassed its largest combat task force in history. Both Indian aircraft carriers and over twelve escorting vessels were positioned there. They had launched missiles in support of the attack and were now proceeding at flank speed towards the American battle group. Aircraft from those carriers would be escorting the raid, along with ground based fighters. Every MiG-29 available to the Indian planners in that portion of India was in the air. Twenty TU-16 Badger bombers and another twelve TU-22M Backfire bombers were also assisting in that strike. It was a serious attack that the Americans could not ignore and it would be driven home in the hopes of damaging and destroying as many American vessels as possible.

But it was also a conventional attack of the sort that the designers of the American ships and weapons systems had anticipated for several decades. Their aircraft, their radar and electronic warfare systems, and their weapons systems had all been formulated to counter and defeat just such attacks. With two Ticonderoga Aegis cruisers and one Arleigh Burke Aegis destroyer, it was going to be very difficult to overwhelm the American missile defenses, particularly when those missile defenses were complimented F/A-18F Hornet air superiority aircraft that the American carrier Enterprise carried in abundance. But the Indian Air Force and Navy hoped to do just that and thereby eliminate a number of the escorting vessels, and perhaps the carrier itself, with their diversion attack from the north.

The greatest threat to the Americans would then approach from the east. It would come in, right on the deck, in the form of these twenty-four TU-22M Backfire bombers and the following squadron

of twenty-four more. Two of the bombers in each flight were outfitted with electronic warfare and additional target acquisition and communication hardware and software. Those two would “pop up” when they reached their target area and communicate information regarding the location of the American ships to the other aircraft. Upon learning of the location, those other aircraft would then proceed at low level and subsonic speed to the optimum location to launch their weapons.

As he contemplated this, the squadron leader and overall commander for this portion of the attack, General Raj Khanjar, thought to himself.

“It is then that we will deliver the weapons that have a proven track record of decimating American Carrier Battle Groups. Chinese LRASD weapons that our engineers have modified to be delivered by these very bombers. Just like the torpedo bombers of World War II, but with much more range and lethality. It is something the Americans will certainly not expect or be prepared for. I doubt that they believe that any of these weapons have even made their way into this theater of operations yet ... if that is so, they are about to be punished for their lack of intelligence.”

General Khanjar noticed the blinking yellow light on the console that provided automated course programming and monitoring. As the light continued to blink, he quickly broadcast on his local, narrow-band squadron frequency.

“Squadron leader to all units. Five minutes to acquisition point. Watch your threat displays. Hosdurg-1 and -2, prepare for pop-up maneuver, target acquisition and relay according to plan.”

They were quickly approaching the point where all of the planning, all of the designing and all of the preparations were about to be proven. The General knew that since they had not been discovered and attacked to this point, it suggested that the diversion off to the north was fulfilling its mission. Another few minutes followed by a successful acquisition and launch and there would be little the Americans could do to avoid devastation.

“I hope the modifications to the LRASD weaponry allow them to function after impact with the water,” thought the General. “All of the computer models and the few actual tests we had time to perform indicate they will. I just hope we have not missed anything.”

### **July 11, that same time**

#### **US Navy F/A-18F Barrier CAP**

#### **North of the USS Enterprise, Over the Arabian Sea**

“Yahoo! Talk about a Cake Walk! Look at those sorry SOB's disappearing off the screen. Don't mess with Uncle Sam, Gandhi!”

The flight leader, a full Navy Commander, had let the discipline break down for a moment or two, but it was time to rein it back in.

“Okay, that's enough. Cut the chatter. We're not done yet.”

In this sector, not one Indian aircraft had gotten through. Not one had gotten in range to launch missiles on the CSG (Carrier Strike Group). Off a little further to the east, those “Badgers” and “Backfires” had launched most of their longer range missiles and now those forty-seven missiles were inbound where the Aegis system would have to handle them. In addition, while they had engaged these attack aircraft and their escorts, a number of missiles launched by surface ships further off to the north had also gotten through and would enter the engagement zones of the standard missiles carried by the Aegis cruisers and destroyer. It looked like sixteen missiles from that axis. A total of sixty-three missiles inbound.

Thinking back on the engagement, the flight leader muttered to himself, “Those MIG-29s had come boring in like bats out of hell. Once the AWACS picked them up, they were toast. I suppose they were some kind of diversion for those “Badgers” and Backfires,” but it sure cost them.”

The Enterprise had been given ample warning of the approaching raid. It had numbered well over one hundred and fifty aircraft and had come in at altitudes ranging from ten thousand to thirty thousand feet. This meant that the attacking aircraft were high enough for the E-2C to see them hundreds of miles away, and in time for the aircraft carrier to launch adequate aircraft to engage them. Four aircraft had been left in CAP position over the carrier with another four on ready alert, while sixteen A/F-18F air superiority fighters had met the enemy here over two hundred miles north of the carrier. The result had been a completely lopsided dog-fight as the longer range and more effective US AMRAAM missiles ripped into the approaching flights of Indian aircraft.

“... and that enemy is ours,” continued the flight leader. “We downed over eighty and lost only three aircraft before they turned tail.” As he considered the words of the one exuberant pilot a few moments ago, he thought further, “Someday they will talk about the great Arabian Turkey Shoot of World War III just like they talk about the Marianas Turkey Shoot of World War II.”

And the Commander might have been right in his assessment had it not been for the approaching enemy forces from the east. Just as he was entertaining the thought about his engagement being compared to the World War II “Turkey Shoot” in the South Pacific, and as the Combat Information Centers of all the ships in the CSG were dealing with the imminent cruise missile threat, the new threat was discovered. A frantic warning went out from the E2-C close in to the carrier.

“Many bandits to the west, low level! Twenty-five miles out and approaching!”

## **July 11, the next ten minutes**

### **USS Enterprise Carrier Battle Group**

#### **The Arabian Sea**

As soon as General Khanjar's squadron of low-flying "Backfire" bombers was located, the AWACS aircraft vectored the local CAP towards them. In addition, targeting information was passed off to the "Goalkeeper" escort for the carrier, an Aegis cruiser. As this was happening, the two Indian aircraft tasked with final targeting rapidly gained altitude and immediately picked up the carrier and the three other surface ships in its immediate vicinity. This information was instantly passed to the other twenty-two attacking aircraft. The ships on the surface included the carrier, an escorting Aegis cruiser, an escorting Perry class frigate and an accompanying Supply class combat support/replenishment ship. Another Aegis cruiser and an Arleigh Burke Aegis destroyer in the CBG were located a good twenty-five miles to the north and northwest along that threat axis where they were engaging the incoming Indian cruise missiles.

As the American aircraft launched anti-air missiles at the Indian aircraft, the attackers engaged their full suite of electronic warfare packages that the license-built aircraft carried and that the Russians had designed specifically to counter American technology. Within one minute of detection, sixteen AMRAMM missiles were airborne and targeting the TU-22M aircraft from the F/A-18F Hornets. Ten standard missiles were also airborne from the Aegis cruiser. Of these twenty-six missiles, ten of them targeted the two Indian aircraft that had gained altitude for target acquisition. This was a result of their higher altitude and the incorrect presumption by the Americans that any aircraft that were gaining altitude represented the more severe and immediate threat. They incorrectly deduced that such a maneuver was a "pop up" preparatory to launching cruise missiles. The software and the operators therefore targeted these aircraft accordingly.

These ten missiles completely overwhelmed the two ascending Indian Backfires and both were destroyed, falling into the ocean as fiery debris. The other sixteen American missiles targeted the lower flying aircraft, but were much less effective due to their low altitude, a much smaller missile-to-aircraft ratio and due to jamming from the TU-22M's. Of the remaining twenty-two Indian aircraft, six were downed by the American missiles before the Indians could launch their LRASD weapons.

Before the full outcome of the first missile volley was known, the computers on the Aegis cruiser performed a rapid threat assessment and launched a second volley of missiles. By the time those missiles arrived, the Backfire bombers had come within ten miles of the carrier and had slowed to a launch speed of two hundred miles per hour. This volley consisted of thirty standard missiles, all launched within a span of two seconds from the vertical missile launch tubes on the cruiser. But they arrived too late to prevent launch of the LRASD weaponry that the Backfires carried.

As sixteen LRASD weapons fell away from the bombers, every defense officer in the Combat Information Centers (CIC) of the American ship formation noticed them on their radar and threat displays. They had been expecting them. They presumed they were large cruise missiles. The reaction was quick and very professional. On those ships so equipped, the defense systems were already in "full God mode" with the Aegis system on automatic. Standard missiles, shorter range Sea Sparrow missiles, Rolling Airframe Missiles (RAM), and Close in Weapons Systems (CIWS) were all primed to counter the threat. Other less-automated systems were activated on the other ships by defense officers as Dual Purpose (DP) guns and EW systems went active. It was all done very professionally, very efficiently ... but it all represented a reaction against the wrong type of threat.

As the objects were tracked on radar (and by some of the personnel on deck of the Perry escort closest to the aircraft), and as they slowed and impacted the water trailing their retarding parachutes, there was a brief moment of euphoria. For just a moment the Americans thought that every one of the attacking missiles had malfunctioned and crashed into the sea. But this thought and the associated euphoria was short lived as it became apparent that this was not the case.

All too quickly sonar operators in the CICs of every ship in the formation recognized the sound that had been recently drilled into them, and the sound that none of them wanted or expected to hear here in the Indian Ocean. It was the sound of approaching supercavitating weapons targeting their ships. Of the sixteen LRASD weapons, thirteen of them survived impact with the ocean and activated. Immediately acquiring the targets so close to them, they immediately went to rocket power. Five of them targeted the Enterprise, four of them targeted the escorting Aegis cruiser, two targeted the Perry frigate closest to them and two targeted an escorting LA class submarine that they detected in the near vicinity.

When activating their rocket engines, the LRASD weapons that targeted the Perry class frigate were only four miles away from that ship. Those targeting the Enterprise and its Aegis escort were eight miles away and the LA class submarine was eleven miles distant. Moving at a velocity approaching a mile every six seconds, the weapons had moved three miles before the officers on deck were able to respond to the sonar operators who had given the warning. They immediately took the helm and attempted to perform evasive maneuvers. But it was too late ... large ships do not turn on a dime ... they simply needed more time and more distance.

Within fifteen seconds, a tremendous spout of water, fire, smoke and debris rose from the port aft side of the frigate. The ship was literally lifted from the water and the ships back was broken. It immediately slowed in the water and began to sink. Twenty seconds later, two explosions racked the Aegis cruiser with even more devastating results as that ship was literally blown into three pieces, the largest of which capsized immediately while the fore and aft sections began to sink rapidly.

Just after the explosions on the Aegis cruiser, two blasts occurred toward the aft half of the starboard side of the Enterprise as it turned hard to avoid the weapons targeting it. Though it succeeded in avoiding three devices, the massive detonations of the two that struck home caused the large ship to list over thirty degrees to port. This rapid list dumped every aircraft and living soul on the deck that was not tied down into the ocean before the ship rolled back upright. The ship then rapidly went dead in the water. The tremendous rents in the side of the ship let in massive amounts of water and the carrier began to settle.

A few seconds later, a tremendous bulge and then geyser of water a mile and a half to the west of the aircraft carrier marked the death of the escorting Los Angeles class attack submarine.

Meanwhile, the missiles from the American ships had decimated the TU-22M squadron. The big bombers had turned radically after launch and gone to full afterburner power to escape, trying to use their top speed of mach-2. But before they attained anything close to that speed, the American standard missiles arrived. Of the sixteen aircraft that had launched LRASD weapons, only two managed to escape. Miraculously, one of these was the aircraft piloted by General Khanjar's who would survive the battle and give a gripping account of his squadron's successful attack on the American 5th Fleet.

As the surviving Perry class frigate rushed to the scene from its station five miles northwest of the carrier and as the undamaged Supply class replenishment ship began attempting to assist the carrier, six leaker missiles approached the ships from the north. The Aegis cruiser and Aegis destroyer had engaged and downed most of the Indian missiles that had been launched on the CBG by the aircraft to the north, but the cruiser itself had taken two missile strikes and was burning furiously amidships. The Aegis destroyer was unscathed and was now also making its best speed back towards the stricken carrier in an effort to help.

But the remaining six Indian "leaker" missiles would arrive long before the American destroyer would. Two each were targeting the undamaged Perry frigate, the damaged carrier and the replenishment ship. The Perry frigate used its own missile launcher and CIWS to destroy both of the missiles that were targeting it. In doing so, the frigate took significant damage to its helicopter hangar when the last missile was destroyed a mere two hundred yards away from the ship by the 20mm Phalanx CIWS. The momentum of that missile carried the exploding debris and its fiery fuel on into the destroyer near the helicopter hangar. Shrapnel impacting at several hundred miles per hour cut right through the hangar walls and exploded the SH-60 Seahawk helicopter that was parked there being prepared for an Anti-submarine warfare (ASW) mission. Its explosion added significantly to the fires that were already being set by the fuel from the missile itself that had also showered the area.

The Enterprise, though severely damaged, still had operational control over two of its four Sparrow missile launchers and one of its CIWS. These defensive weapon systems worked as designed and destroyed both missiles targeting the carrier. They also destroyed one of the missiles targeting the replenishment ship. However, due to budgetary constraints imposed in 1999 by the administration in Washington at the time, all US replenishment ships had all of their self-defense weapons systems removed and were defenseless against missile attacks themselves. Where before Sparrow missile launchers, RAM missile launchers and CIWS had once defended the ship very adequately against just this sort of attack, now nothing was in place to stop the last Indian missile. It came in low to the water at mach-2 and impacted the ship, penetrating deep into the interior before exploding in one of the aviation fuel storage areas. The resulting explosion immediately led to instantaneous secondary explosions that blew out one side and the bottom of the ship. As more fuel, ammunition, missiles and other flammable material were set off, within two minutes, the Supply class replenishment ship was sinking with most of its crew.

A few minutes after this attack, the second wave of Indian TU-22M Backfire bombers arrived and attacked the CSG with their LRASD weapons. The four F/A-18F CAP aircraft were alerted to their presence by the AWACS aircraft, which remained on station, and it directed the fighters to close and attack. The four aircraft only had eight short-range, infrared homing Sidewinder missiles left amongst them, but they used these and their cannons to good effect. Before the Indian aircraft could launch their weapons, eight of them were destroyed. Despite this, another twelve LRASD weapons were launched and ten of those weapons successfully activated after entering the ocean. Eight of them targeted the carrier and the last two targeted the Perry frigate that was rushing to the carrier's aid.

The USS Enterprise was going dead in the water and already listing heavily from the initial attack. It could not maneuver to avoid the approaching weapons at all. All eight of the LRASD devices impacted against the side of the carrier within seconds of one another causing a stupendous conflagration of explosions. When the smoke, water vapor and falling debris cleared ... the Enterprise was gone.

The approaching frigate fared better. Still some four miles beyond the carrier, and over fourteen miles distant from where the LRASD devices were launched, it had more time to take evasive action. Although both weapons missed, one of them passed close enough to the turning aft portion of the ship to activate its proximity fuse. The resulting explosion just behind the ship and to starboard was close enough to buckle the rudder and warp the prop on that side.

Later in the evening, burdened with several hundred survivors that were pulled out of the ocean, a severely damaged Ticonderoga class Aegis cruiser, an undamaged Arleigh Burke class Aegis destroyer, the damaged Perry class frigate and an undamaged Los Angeles class submarine left the area. They departed under the heaviest air cover available originating out of Diego Garcia. They were all that was left of the nine vessel, ever-present US Navy 5th Fleet CSG that had projected power and influence in the Indian Ocean and Persian Gulf for so many years. It would be quite a few years before an American CSG entered these waters again.

The four vessels set a course to the south for the only place of refuge left to them within thousands of miles, Diego Garcia where repair and re-provisioning facilities were available for the vessels, and hospital and recuperation facilities were available for the personnel requiring it. They would join two E2-C AWACS aircraft, two EA-6B Electronic warfare aircraft, four HV-22 anti-submarine aircraft and sixteen F/A-18F aircraft that had been in the air when the Enterprise went down. These twenty-four aircraft were all that remained of an air-wing of over seventy aircraft that had been on the Enterprise. The rest of the aircraft had either all gone down with the carrier, or been destroyed in the effort to protect her.

The surviving aircraft, ships and personnel would not have to wait long for the chance to avenge their compatriots. Their enemies would be bringing that chance to them.

**July 12, 07:30 EDT**

**Situation Room, Laurel House  
Camp David, Maryland**

President Weisskopf soberly contemplated recent activities and events as he prepared to open the National Security Meeting. It would be the last National Security Meeting here at Camp David in what had become known as the "Situation Room", but was really the Executive Conference Room at the Laurel House. The President and the Congress had insisted as a matter of national resolve and as an indication to their enemies of the nation's commitment to victory, to rebuild the White House and the US Capitol building housing Congress as rapidly as possible. Now, four months after the initial attacks, the portion of the White House that had been savaged in the attacks in March was repaired and rebuilt to the point where the President could again take up residency and conduct the nation's business there. The U.S. Capitol would not be complete for another six months as it was being almost completely rebuilt ... and ten months represented a phenomenal feat if it could be achieved. In addition to the new buildings (whose entire understructures were now constructed of hardened steel), the entire Washington DC area fairly bristled with defenses.

A new Theater Missile Defense (TMD) Aegis cruiser was stationed in the Potomac just outside of Washington DC, the first on the east coast. Ultimately a second would join it on permanent station to defend the nation's capitol against any further ballistic missile attacks, either conventional or nuclear. Each ship would carry a double load of the TMD enhancement to the Standard missile, with reloads immediately available from shore facilities. In addition, eight batteries of Patriot Missiles, employing the latest Block updates to those missiles, were now deployed around the capitol to strengthen the anti-missile and anti-air defenses. A Combat Air Patrol (CAP) of no less than twelve F-22 Raptor fighters was in the air at all times, 24X7, over the city with an entire squadron of attack aircraft in reserve. An entire division of U.S. Marines was deployed around the White House and Capitol buildings proper, with another U.S. Army infantry Division deployed in a buffer around the Washington DC metro area. It was felt that these defenses would be sufficient to counter any foreseeable threat from the nation's enemies, either by direct attack, or by terrorist activities.

The President had returned early from his third "road trip" when he received news of the engagement in the Indian Ocean and the sinking of the Enterprise. All three of the road trips had been the result of his wife's suggestion in April.

"Actually, 'suggestion' was not the term for it. More like insistence," thought the President.

"And she had been right ... dead on the money," he continued in thought while reflecting back on those trips. Under heavy security he had spent a week on the road each trip. Three speeches a day, taking conference calls and conferring in video-conferences on Air Force One at night and whenever necessary. The trips had been a rousing success and the effect had energized the public and raised their level of commitment to the war effort. The President had visited forty different cities and a total of more than ten million Americans had come out to see and hear him. Tens of millions more had heard his message over the television, radio or internet. Over and over again, he had scorned their enemies, spoken directly regarding the challenges that lay ahead and offered consistent encouragement against the backdrop of what seemed like endless disappointments and tragedies filtering back from overseas.

Now was the time for the political and military leadership to address more of those setbacks. Now that everyone had arrived and the chief of staff had closed the doors, the President began.

“Okay, everyone. Please be seated and let’s get started.

“We have four critical overseas issues to discuss from a military perspective and then we can move on to the status of our diplomatic relations with our allies and neutral countries, as well as those nations moving into the enemy’s camp. I’d like to start with the disaster in the Indian Ocean and then move to Israel, Turkey, Panama and, finally, the status as we know it on Taiwan. I want to discuss Taiwan last, after a special report that WNN is airing at 9:30 AM which we shall all view.

“Secretary Crowler, please proceed with General Stone and brief us on the current situation in the Indian Ocean, Israel and Turkey.”

George Crowler had recently been nominated, and quickly confirmed, as the Secretary of Defense (SECDEF). He replaced Secretary Tim Hattering in that role. Hattering had been killed on March 15<sup>th</sup> in the attack on the White House that had also killed the Vice President and the Director of the Central Intelligence Agency on the same day. Before his nomination by the President, Admiral George Crowler had been the Chief of Naval Operations and as the Naval Chief had worked for General Jeremy Stone who was the Chairman of the Joint Chiefs of Staff. Now General Stone was answering to Admiral Crowler, a reversal of roles.

“Mr. President, given my recent position, I will brief this group on the Indian Ocean situation and General Stone will brief the group on the situation on the Arabian Peninsula and in Turkey.”

“I will be direct. We have suffered a horrific tragedy in the Indian Ocean. The USS Enterprise, our first nuclear carrier and a mainstay of the entire fleet has been sunk with a tremendous loss of life. In addition, we have lost the Aegis cruiser USS Monterey, a Perry class frigate, the Kaufmann, the attack submarine USS Tucson, and the fast replenishment ship USS Bridge. All of these vessels were sunk by Indian forces deploying an aircraft delivered version of supercavitating devices that savaged our forces in the Pacific in March.”

There were audible intakes of breath at this news from those who were as yet unaware of it. The Secretary of State, Fred Reisinger, spoke up.

“Indian employed supercavitating weapons? This is extremely disheartening. We had hoped that India would continue to avoid direct hostilities with us despite what must be tremendous pressure, but this dashes those hopes. Exactly how far have the Chinese been able to proliferate these devices?”

Secretary Crowler was prepared for this question, even though he did not have a direct answer.

“Mr. Secretary, the answer is that we do not know exactly how far they have proliferated. But, if the Indians have them, then we must presume the GIR has also acquired them and, by extension, that we could face them anywhere. The fact that supercavitating weapons appear to be in the hands of more of our enemies than we had believed is news that we must pass on to our allies given the planning for other operations, particularly the pending and imminent Panama operation.

“What is perhaps even more critical is the method in which these weapons were delivered. As you know, due to the efforts of the USS Jimmy Carter, our third Sea Wolf class attack submarine, we have a significant amount of data gathered on these weapons. To date, they have only been delivered by two methods. One is a long-range launch where the weapon approaches its target area under conventional power and then acquires and attacks targets in a supercavitating mode upon reaching a pre-determined area of operation. As you know, our 7th Fleet was decimated in the first such deployment of these weapons on March 15<sup>th</sup>.

“The other method has been one in which these weapons are “pre-deployed” in an area of operation that our enemy expects our vessels to transverse. They lay there passively and quietly until a vessel approaches, whereupon they activate their rocket engines and attack by surprise from relatively short range in supercavitating mode. The Japanese fleet was decimated in this fashion. We have since experienced attacks in the Pacific in which both methods were used against us. In addition, due to the efforts of the Jimmy Carter, we have developed fairly effective initial strategies for combating both. Although not perfect by any means, and although we are developing better methods, these strategies have allowed us to avoid the large percentages of losses we had experienced. The 5th Fleet was employing these strategies when they were attacked yesterday and they failed.

“The reason they failed is that the Indian engineers have apparently devised and deployed a third method. It is really nothing new ... it is a method that was employed to good effect by our enemies and by our forces in World War II. The Indians have mated these systems to heavy bombers and are using them as torpedo bombers, coming in low and launching from eight to ten miles out. The Indians staged a massive conventional air raid against our forces that we were forced to respond to with significant carrier air assets. Then, a much smaller group of TU-22M aircraft came in from a completely different direction, very low to the water at supersonic speed and penetrated close enough to launch their weapons before most of those aircraft were shot down. Our AWACS was caught out of position, covering the leaker missiles from the larger assault.

“The situation now is that the damaged ships have made for Diego Garcia where our Marine Expeditionary Unit has now arrived and is setting up defensive positions. We have strong naval, air and ground forces on and around Diego Garcia. It is a position we cannot afford to lose ... it would

drive us entirely out of the Indian Ocean and dash any hope for continued influence in the Persian Gulf. Stacked up against our defensive position on Diego Garcia are the entire resources of India and significant GIR and probably Chinese resources as well. They will certainly play an attrition game against us as they have done against the Republic of China. If they gain sea control around the island, the outcome will be inevitable without a significant allied task force to destroy their naval assets and impose our own sea control. Until we negate the supercavitating threat in a much more effective way, the chance of successfully fulfilling the sea control mission are not good."

The entire room was quiet and sobered by this direct analysis. Admiral Crowler was a staunch proponent, and defender, of American naval power. His optimism when it came to the employment of that naval power was well known in this circle. For him to make such a bluntly foreboding statement indicated that the situation was indeed grave.

The President, who had put a lot of thought into the situation since he became aware of it in the early morning hours, spoke.

"Admiral, err, Secretary Crowler. Pending review by this group., proceed as we discussed this morning. Let me quickly review for the benefit of everyone here and to open it up for suggestion.

"If the replenishment ships with their significant supplies of materiel not directly related to the defense of the island can get out of there under good escort and if they can be protected from Indian air attack until they are out of range ... have them do so. Send one of the Aegis ships with them along with whatever other escorts are necessary. Insure that any non-combatants go with those ships. Keep two of the Aegis ships inside the anchorage where they will be most protected from any supercavitating threat and then have those Marines, the US Navy and the US Air Force defend that island with everything they have. Formulate a plan for evacuation should the situation get hopeless, but plan to keep it from getting that way. Use whatever forces we can muster to keep that island from being completely cut off by sea, to help defend it and to re-supply it.

"By God, if it is a fight these Indian SOB's want, they shall have one. And one way or another, the destruction of the Enterprise and all of those good men and women will be paid back in kind ... in fact, many times over. Fred, I know it is not your style, but craft a message with a direct quote from me to the Indian President and their Parliament to that effect. We will not rest until those involved in the decision to attack us are brought to justice. I will complete my discussions with the congressional leadership early this afternoon and will address the nation late this afternoon, once war is declared.

"Secretary Crowler, if there is no other suggestion at this time regarding the overall plan as I have outlined it thank you for the briefing and the direct assessment regarding the Indian Ocean. General Stone, please proceed with the briefing on Israel and Turkey. What is the latest status?"

Jeremy Stone was happy that Admiral Crowler was the new Secretary of Defense. Timothy Hattering, God rest his soul, had been a very effective Secretary, knew the Washington ropes and was very hawkish and capable of advancing the President's agenda. But, in wartime there was nothing quite like having a proven, steady hand who had "been there and done that" in combat by your side. George Crowler was all of that and more. He possessed all of the administrative capabilities and political seasoning that Tim Hattering had brought to the table as well.

"Mr. President, the XVIII Corps crossed the Jordanian frontier this morning, to the north and west of Tabuk. They are under much heavier Israeli and US air cover now and should reach their defensive staging area tomorrow afternoon just to the south of the Dead Sea. They will form a defensive line from the Red Sea to the Dead Sea against the GIR Army groups, which have been pursuing them across Saudi Arabia. Those groups are now staging well to the south and consolidating with the Chinese expeditionary force that has crossed over the Red Sea from the Sudan.

"With the large Syrian GIR forces dug in and strengthening around Damascus, with the larger GIR forces combining with the Chinese south of Jordan and with the Libyan, Chad and remaining Chinese forces approaching from the west in Egypt, the handwriting is on the wall for the Israelis. It is just a matter of time now. We expect a declaration of war from the Israeli Knesset within the day. It will be directed against the GIR and against The People's Republic of China.

"In the meantime, we are continuing to funnel large numbers of men and materiel, as are the British, across the Mediterranean into Israel and Egypt. The British and the remaining loyal Egyptians are formed up along the Nile with strong fallback position along the Suez Canal. As I said, our XVIII Corps will form the defensive line between the Red Sea and the Dead Sea, and the Israelis will defend along and to the east of the Jordan River to the Golan Heights and then across to the Mediterranean. They are strong positions and if we can keep the supply routes open, we should be able to maintain them until an opportunity for counterattack arises.

"The escape of the bulk of XVIII Corps is the good news. The bad news is the critical situation at Qatar. Marine Expeditionary Brigade One (MEB-1) is trapped there with stray elements having been cut off as XVIII Corps retreated with a number of allied forces. Over 45,000 personnel became trapped there several weeks ago. They had been receiving assistance from the Enterprise and Diego Garcia. With the loss of the Enterprise their position is desperate and they are down now in effective strength to under 30,000. The situation is almost hopeless, Mr. President, with their choices ranging from fighting against overwhelming odds until they run out of ammunition and then surrender to an

enraged foe who is apt to slaughter them, or not surrendering and ultimately facing the same slaughter. When your captor does not take prisoners, it leaves you little choice but to fight to the death.”

President Weisskopf, no stranger to command decisions that involved life and death considerations of hundreds of thousands of personnel, spoke directly. There was no room for equivocation, no time to mince words and this was no place for politicizing. The likely sacrifice of life and blood demanded that nothing but respect, honor and honesty be afforded to those in such delicate decision-making positions.

“General, this is not easy ... it is a horrific decision, but one that has been forced on us by our enemies. Every one of those people out there is someone’s son ... and a few daughters. Their safety and their service to our nation has been entrusted into our hands. The safety and liberty of this nation in this time of war is also entrusted to us as well. Sometimes we are forced to make terrible choices to balance those considerations. I wish to God I were there commanding that Brigade rather than making this decision ... but I am not. And you are not.

“As I stated earlier, if we have any hope of overcoming this aggression in the near future, we must hold at Diego Garcia. In order to do that, we are going to have very little to offer in defense of those forces still in Qatar. It is simply too far and too cut off. We will make the effort ... but the priority MUST be Diego Garcia and the forces there. They are also in danger of being placed in the same position. At the risk of appearing callous, we must consider the long-term effect of the defeat of our forces on Diego Garcia versus supplying protection to those still in Qatar. Diego Garcia represents a make or break position for us. Despite having to make painful choices as regards the protection of our forces elsewhere, there can be no half measures taken in defense of Diego Garcia.

“We must tell General Wilcox to rally his troops and hold on as long as he can, inflicting as severe casualties on the enemy as possible. Perhaps, if Providence smiles on us, our efforts at holding at Diego Garcia will be successful and we can accomplish that in time to relieve Qatar. If not, then the General will ultimately have to make the final decision, balancing the horrendous considerations you mentioned ... as long as he does his best to fulfill my orders to hold as long as possible and inflict as many casualties as possible.

“I will issue those orders myself. Arrange the communication so that I can speak directly to Greg. Let me know when that has occurred and break in on whatever else I am doing.”

Turning to the Chief of Staff, President Weisskopf said, “Talbot, make sure that is noted. Break in on whatever I am doing, at whatever time, when General Stone brings word that this communication channel is open.

“Now, General Stone, please continue. What of Turkey?”

If the President were any other individual except Norm Weisskopf, General Stone would insist on delivering the orders himself, or having them passed down the chain of command. But the circumstances and the background of this particular President made that insistence unnecessary. The fact was, Norm Weisskopf had “been there”, and he also knew Greg Wilcox better than General Stone did. No one would feel slighted by this President issuing any such order directly.

“Yes, sir. The situation in Turkey is very direct. We have successfully evacuated our forces from the vicinity of Izmir. The situation became untenable two weeks ago with a GIR breakthrough on the northern portion of the defensive perimeter occupied by Turkish forces. Once that breakthrough occurred, evacuation was inevitable. It is that evacuation operation that has gone so smoothly ... right under the nose of the enemy, thus avoiding the loss of many personnel and their equipment. The success was made possible by the rear-guard action of one company of the 10<sup>th</sup> Mountain Division, and by a brigade of Turkish troops. I can go into detail later, but those men literally sacrificed their lives so that many tens of thousands of our troops and allied troops from Germany and Canada could escape. We must remember their action accordingly.

“Further north, the situation has stabilized and is holding on the narrow front near Uskundart, across the Bosphorus from Istanbul. We have a defense in great depth there and are steadily building our air forces up to deny the GIR any air superiority. At the present time we do not enjoy air superiority ourselves, but with the influx of more and more NATO equipment, and with Italy now firmly in the mix, we expect to gain air superiority over the Bosphorus soon. Other than contact with resistance forces in the interior with whom we are trying to plan some operations, and except for the area immediately to the east of the Bosphorus, all of Turkey has now come under GIR control.

“That concludes the briefing material. It provides an accurate SITREP, as we would say in the military, as of early this morning.”

With the conclusion of the briefing, the President opened the meeting up to comment, discussion and recommendation by the entire National Security team. The give-and-take went on for almost an hour as considerations of ongoing and currently planned operations were discussed for the Mid East and Asia in light of the most up-to-date information. In addition, potential new operations were considered and brainstormed, particularly regarding the relief of Diego Garcia.

Then, at 9:26 AM the President raised his hands and interrupted the meeting.

“This has been a good discussion. But right now we need to break off so we can watch the WNN presentation regarding Taiwan. We understand some new video footage from the island will

be shown. After that special news presentation, we will discuss the ROC and the ramifications of its fall, as well as our intelligence regarding their involvement in a number of violent internal conflicts on the mainland. After that, we will conclude the military briefing by discussing the situation in Central and South America in general, and Panama in particular, before turning the meeting over to Secretary Reisinger for a review of the diplomatic situation around the world.

**July 12, 09:27 EDT**

**WNN Broadcast Studios**

**New York, New York**

David Krenshaw prepared himself for the presentation. The material on Taiwan and China was astounding and he knew that his audience ... both in America and around the world ... would agree. It was also information that was in the sole possession of WNN, having arrived just yesterday by special courier. It was information of which he was fully prepared to take abject advantage on behalf of WNN ... and on behalf of himself. By unilaterally presenting it in this fashion, David was certain that the worldwide news ratings for WNN would jump significantly. And, since he was the President of Worldwide News at WNN ... well, his own position would be enhanced accordingly.

"Amazing how that works out," he mused as the final countdown began for the broadcast.

David was also certain that he could use the information, along with other discreet information he received on a weekly basis to continue to increase his influence and standing within the Council on International Relations, or the "CIR" as it was commonly referred to. Most of the members of that body of influential and powerful individuals viewed the growing war as a tremendous impediment to their goal of creating a worldwide economic and political "governance". It was to be a governance based on open trade and true international controls ... controls that superceded, whenever necessary, the sovereignty of what the CIR deemed as "nation states". It was a goal toward which that body had been working for decades and one toward which they had made significant progress. The progress had been made possible as a result of the tremendous influence the CIR was able to exert on either side of almost any issue through its prestigious members. Such influence was used to convince world leaders, particularly in the United States, to fill the leadership positions within their administrations with CIR members of their own "bent." The result had been that, since the Eisenhower administration of the 1950's, the Presidency itself and every major cabinet position had been filled almost exclusively by CIR members with few exceptions.

One of the notable exceptions to that decades-old precedent had been the current Weisskopf administration. His election had come as a surprise to everyone. He was popular and an old "war horse", but he was also a true "outsider" ... and he had filled his cabinet with outsiders. As a result, his administration was viewed as a "bump in the road" along the path to true "global" governance by the CIR. But with the outbreak of hostilities, and with China and the Islamic states not tracking to the economic or diplomatic norms that the CIR expected, that "bump in the road" was now viewed as necessary. This was because Weisskopf was recognized as possessing the wherewithal to defeat the monumental impediment that war with the CAS and GIR represented to CIR goals.

David viewed the war as anything but that. He viewed current events as just another path to the same goals, but a path where his own ambitions and prominence would experience a meteoric rise. He just had to finesse his unique position and influence to manage the CIR in the same manner that it managed the direction of world events. And he was experiencing some success. A number of prominent CIR members, particularly those with European Union ties, were listening to and seriously considering his carefully stated views. Views he already knew that Jien Zenim found acceptable.

Simply stated, those views were that an ideology such as that represented by the "three Wisdoms" of the CAS could be the vehicle to the global governance they all desired ... but only after a meaningful and acceptable peace had been negotiated. Such a peace would allow for four global spheres of influence working together for the very goals the CIR embraced. Those four spheres would be the CAS in Asia, the GIR in the Middle East and Africa, the European Union in Europe and the United States in the Americas.

"If I can be the moving force behind building a consensus for this in the west," thought David, "then President of Worldwide News at WNN will pale in comparison to the potential opportunities that will open up for me."

For David, today's "special" was really just another step along the path to those opportunities.

The red "On Air" indicator came on.

"Good Morning. This is David Krenshaw at WNN News with a Special News Report. We are interrupting our normally scheduled programming to bring you material we received yesterday out of Taiwan and mainland China.

"As our viewers may be aware, the Republic of China on the island of Taiwan, viewed as a "break-away" province by the People's Republic of China, was invaded on July 9<sup>th</sup>. This occurred after over three months of heavy missile and air attack against the island. It also occurred after the government on the island rejected every peace overture that the PRC offered. Ultimately the air and sea defenses on the island, without American assistance that had been earlier driven from the area,

were weakened to the point that they were unable to stop the physical landing. That landing occurred at dawn on July 9<sup>th</sup> at several points along the western shore of the island. Large numbers of soldiers were landed by amphibious assault, supported by airborne paratroops landing further inland. The landings are continuing as the PRC builds up its forces on the island as we speak. The fighting between the armed forces has been severe, particularly in Taipei. Surprisingly, a number of civilians on the island have sided with the PRC forces, in some cases welcoming them as “liberators”.

“Coincident with that landing, major internal upheaval and fighting broke out in Southern China near Guangzhou, at Fuzhou and near Shanghai. Of even more concern to the PRC, heavy fighting also broke out in the suburbs of Beijing. A limited scale civil war has been occurring on the mainland resulting in significant damage, injury and death ... death for which the beleaguered government of the Republic of China has claimed credit.

“We have received video footage, smuggled out of Taiwan and off the mainland, that bears vivid testimony to the nature of the fighting, both on the island and the mainland. We warn our viewers in advance of the graphic nature of what you are about to witness. Viewer discretion is advised.”

**July 12, 09:58 EDT**

**The Situation Room, Laurel House**

**Camp David, Maryland**

As the video presentation ended and David Krenshaw wrapped up the Special Report, the President’s National Security team sat in silence for a moment. The new Vice President, and former National Security Advisor to the President, John Bowers, broke that silence.

“Mr. President, I have three observations:

“1. The last we heard through our own channels from the ROC was that their operation “Purity” was coming off on the 9<sup>th</sup> and we understood the nature of that operation but had received no specifics regarding the location of their sleeper cells. We also had no indication or information regarding how extensive their overall network had grown. We have received no further official information since the invasion ... just rumors and the analysis of intelligence reports and electronic intercepts. This video footage and this information from WNN is significant. We could exploit the situation and support the rebellion with Air Force and Navy assets if we had more specific information and could contact those forces fighting the PRC.

“2. The situation on Taiwan is worse than we anticipated. Clearly, if the video footage of the fighting and landing is accurate, the ROC government has taken to the mountains and most of the fighting will be centered there as whatever forces are left to the ROC attempt to hold out. Almost 70% of that island is very rugged and mountainous and we know the ROC has prepared for this eventuality for decades. Their network of tunnels, caverns and facilities built into those mountains would make the Japanese fortifications on Okinawa or the Al Qaeda fortifications in Afghanistan look like child’s play. Despite losing the coastal cities and major urban areas, the ROC defenders led by their President will hold out for some time.

“3. Finally, with the video of cheering throngs welcoming the PLA soldiers, I believe that WNN is engaging in abject propaganda to the benefit of our enemies. I am appalled by this blatant attempt. I have spent quite a bit of time on the island of Taiwan and have many friends there. No way would those people “cheer” the Chinese troops as we saw in those films. The vast majority of civilians would fight to the death and the government emergency plans called for arming them to do just that. Either those people were coerced, or the Chinese are staging their own “warm welcome” with their own people after occupying those portions of the ROC. I believe this propagandistic sham needs to be investigated ... I would also like to know the source of the WNN videos. I smell a big rat and it is frankly making me very sick to my stomach.”

There were several assents from members of the National Security team as the consensus for what the Vice President had said regarding potential propaganda from their enemies spread around the room and was voiced. The President allowed it go on for a few seconds and then interrupted.

“Alright, I agree that there is a window of opportunity here for support of the rebelling forces on the mainland. But, before we discuss that, I want to insure that we follow up on the source of this information to WNN. I have had difficulties with their reporting for some time as it relates to our policies in general and to the war effort in particular. Fortunately, that is something in this nation that we must not only put up with, it is something that we all are defending ... their right to report the news as they see fit. I will not besmirch or attack their sincere efforts in that regard. It is a distinguishing factor in our free republic. However, I do want a discreet investigation regarding the sources. If there are any irregularities, or worse, if there is any influence by our enemies in this reporting ... I want it found out and rooted out. Any willing involvement in that regard will be prosecuted in the most severe manner. Let us hope it is nothing like that. I will have Attorney General Hull look into it.

“Now, returning to the matter at hand and the rebellion on the Chinese mainland. Obviously, before we render those rebelling forces whatever direct support we can muster, we are going to require a lot more information about the disposition of those forces and their location. I believe we may have some help in that regard.”

Turning to the new Director of the CIA, Robert Ballard, who had been confirmed to that position in the same timeframe as Admiral Crowler had been confirmed as SECDEF, the President asked.

“Bob, I believe now is the time to brief the team regarding the hard human intelligence (HUMINT) we have out of the People’s Republic on this?”

The new Director referred to his notes briefly. While he had served ably as the Director of Operations, he had not expected to be nominated as the Director of the Agency. His history was one in which he had risen through the ranks as a capable field operative after having served eight years in the US Army. Throughout his field service with the CIA, he showed increasing operational management capabilities and was accordingly given more and more responsibility. Ultimately, those skills, coupled with his own field experience, had made him a natural for running Operations.

But he was definitely not political. Results, a passionate desire to maintain the liberty of his country and a concern for the welfare of his people are what drove Robert Ballard. His outspokenness about these issues, irrespective of political implications or considerations for his own personal “success ladder”, were legendary at the Agency. Unknown to Ballard, the former Director, Mike Rowley, who had been killed on March 15<sup>th</sup> in the fateful attacks on America of that day, had spoken highly of him and positively referred him to other members of President Weisskopf’s staff on several occasions. Those referrals, followed by the President’s own review, had led to the nomination and appointment. Through that appointment, as was the case with many others before him, Bob Ballard learned that this President valued above all else the very willingness to set aside political and personal ambitions for the good of his country ... no matter whose feelings or career was affected by it. In short, the President sought to fill executive decision-making positions with people exactly like him.

“Mr. President, two things regarding this. First, we have had limited knowledge of the ROC’s capability in this area for some time, though we had no direct knowledge of operational considerations. These sleeper cells have been in place and growing for decades. Their existence occurred in a masterful way and involved the families and closest relatives of the operatives themselves who were left behind for this specific purpose when the free Chinese fled to the island of Formosa, now more commonly referred to as Taiwan. These “cells” assimilated so well in the confusion following the communist victory and played their roles so naturally, that their existence was unknown to the PRC. Many of the individuals involved rose to positions of some prominence in the military and the communist party.

“It has been the ROC’s most closely guarded secret, one we came upon only as a result of a member of our own field personnel’s family being directly related to members of one of the cells. It has taken literally years to garner the limited information we have and this has occurred without any contact with the ROC over the issue. As a result, we have guarded the information equally well ... even through the nineties when so much information was leaked and given away to the PRC. During that time, knowledge of what the ROC referred to as “The Breeze of Purity” was limited to two individuals, that operative and his controller. It was completely compartmentalized to ensure its security. The lives of literally tens of thousands depended on that security. Today, outside of this body, there are only three people aware of even this level of detail regarding the operation. More specific details are not something I am at liberty to discuss any further.

“Having said that, the best information we have concerns the activity in the vicinity of Shanghai and Fuzhou. I believe we have enough information in those areas to mount support operations.”

The President considered carefully what Director Ballard had divulged. When personally interviewing Bob for the position, and upon his acceptance, he had already shared this level of information with the President. There was no doubt in the President’s mind who the two people that were aware of this critical information had been during the dangerous period of time in the nineties. Clearly it had been Ballard himself and the operative whom he controlled, the agent who was related to one of the cells. Now, the new Director of Operations was personally controlling that same agent. Into this brief pause, Admiral Crowler interjected.

“With all due respect, Bob, knowledge of this type should have been made available much sooner to people on the National Security Team. We may have missed an earlier opportunity to influence the ROC to activate the operation at a more opportune moment for the conducting of this war. How dare you hold such vital information so close to your vest!”

The President was not surprised, and expected there were others who felt the same. It was time to reign those feelings in before they produced a split in his team.

“George, Bob did not keep this to himself. I was aware of the information weeks ago. It was shared with me during the interview process. I will not go into details, but your beef here would not be with Bob, it would be with me. Given the level of information that we possessed before the operation was implemented by the ROC, we could not have acted. Now is the time to act, and I pray those actions available to us can make a difference.

“Bob, you mentioned two things. What is the second?”

The new Director of the CIA was thankful for the President’s words. He had been concerned about the reaction of others on the President’s staff when they found out about his prior knowledge of this matter. Heck, he probably would have reacted similarly. He respected greatly the way the

President had handled it and taken it on his own shoulders. As time went on, he was discovering what he had already felt and hoped was true: this President was an exceptional leader.

“Yes, Mr. President. There is another critical concern. The day before yesterday we received information from one of our people working in the shipyards near Tianjin regarding a “breakthrough” by the PLA with their supercavitating weapons. Given this operative’s position, and given the abject efforts by the PRC to discover a way to counter the damage we are inflicting on their shipping with our attack submarine, the USS Jimmy Carter ... we believe this “breakthrough” deals with efforts in that regard. It could be directed at the Jimmy Carter specifically, it could be directed at the Sea Wolf class in general, and it could be directed at both the Sea Wolf and Virginia classes. We do not have enough detail to know specifically at this time. But our analysis clearly indicates that it deals with the PLA efforts to counter our most advanced submarine technology and they are moving it rapidly into production and deployment. It is vital that we take this into serious and careful consideration when planning and implementing any naval operations.

“Let me close by saying that transmitting this information to us has placed our operative there in great danger. We must act on the information, but when we do it is likely that this operative will immediately be suspect ... and we have no way of extracting him once that develops.”

This information was sober news to everyone attending the meeting, particularly those involved in the direct military chain of command. Everyone in the meeting was aware of, and optimistic about, the general success of the Jimmy Carter to date, and hoped it would continue. It was one of the few bright points thus far in the war. The chain of command was particularly concerned about this new revelation because an operation that would place another Sea Wolf class boat and the new USS Virginia in the western Pacific theater together for an offensive was already in final planning.

“Thanks, Bob. That is sobering but very timely and critical information.”

Turning to the Chairman of the Joint Chiefs, the President then issued his orders.

“General Stone, based on the information Bob has provided, I want you and General Livingston to have your people work with the CIA to come up with an operation to support the ROC rebellion on the mainland in the Shanghai and Fuzhou areas if possible.”

Then, referring to the new Chief of Naval Operations (CNO), who had replaced Admiral Crowler when he became SECDEF, the President continued.

“In addition, you will certainly want to review current operations involving the Jimmy Carter or our other attack submarines with CINCPAC in light of this information.”

“Okay, let’s take a short break and then move on to the diplomatic front. Fred, we’ll meet back here in five minutes for your briefing on the current diplomatic situation and status with our allies, the neutral countries and the extent of the enemy’s support.”

**July 14, 18:58 CDT**

**Apartment 14D, DOD Housing  
Ft. Worth, Texas**

Cindy listened intently as her friend spoke to her over the cell phone. Despite having used them for so many years now, she nonetheless found it amazing that she could simply carry around a phone on her person or in her car, dial a number and speak to someone half a continent away ... or on the other side of the world for that matter.

“The marvels of modern technology,” she thought as her friend spoke on.

Of course, of late, the option for telephone conversations to the “other side of the world” was “out” in many areas. Then Cindy responded to her friend.

“Yes, he’s still somewhere overseas. I get letters from him two or three times a week, but he can’t say where he is.”

Cindy listened with some emotion as her friend expressed her own concern for Jess.

“Of course Liz, I’m always worried ... I’m just trying my best to view this like any other duty assignment in his career ... but with the attacks here on our own soil and the casualty lists each week it’s real hard to do. Heck, I’m trying to do my part by working in a defense plant here in Ft. Worth ... but it’s just almost impossible not to worry. Keeping busy 14-16 hours a day does help though.”

As Liz expressed dismay over the fact that Jess had been called out of retirement, Cindy’s response was impassioned.

“Now Liz, you know good and well that we had certainly hoped for that. In any normal condition with his retirement and reserve duty he could have avoided any serious duty assignments short of war. Jess sure loves working our ranch. But this is war and these are not ordinary or normal circumstances. Jess and I both believe and agree that our very survival as a people is at stake here ... just like our parents and grandparents faced in World War II ... even more so.

“... yes, Liz, even more so. These people have killed tens of thousands of our citizens. They’ve taken captive tens of thousands more who were simply on business or vacationing when hostilities broke out. I can’t tell you how many friends of ours have brothers, sisters, fathers or other relatives who are simply missing in Asia. They haven’t heard a thing.”

At this, Cindy's friend indicated that she and her husband also knew some people who had relatives that were now missing overseas.

"See ... you know many of them too"

What Cindy heard from her friend next was extremely surprising and disconcerting.

"... my goodness! You're kidding, You were that close? Thank God, you were kept safe! I'd heard on the news about that attack in the Boston area but just presumed that you and Joseph were well away from it in New Hampshire.

"I tell you Liz, I believe these animals are willing to enslave or kill as many of us who will not comply with their ideology as they can. They showed it to us on March 15<sup>th</sup> ... just like the terrorists did years ago on September 11<sup>th</sup>. And they have continued to do so with the attacks on our malls, our airports, our bridges ... and those missile attacks out of Panama on our coastal cities here on the Gulf coast have been terrible!"

The dismay Cindy's friend expressed was not uncommon. Americans were not used to warfare being conducted on their own soil. A few sporadic terror attacks, even some of them as large as 9-11 were one thing ... prolonged, multiple attacks that did not let up were another thing entirely.

"I have no idea. I am sure something is planned ... but the announcement of the losses in the Arabian Sea means we have to be even more careful with our military forces. My heart goes out to the families of those folks! I can empathize with them, now that both Jess and Billy are involved.

"The news is full of speculation about how we're going to defeat these new weapons ... these new "super-torpedoes". ... We just have to have faith that our people will come up with something and then the plans to use them. Liz, I have that faith ... and I know Jess does."

At mention of her son Billy, Liz asked about him.

"Billy was here over the fourth. ... It was great ... really good to have him here in his Marine uniform. I can tell you the people around here are sure behind our armed forces. I can't tell you how many hi-fives, pats on the back and compliments and well wishes he got as we walked around before the fireworks. He looked so good ... reminded me of his Dad."

Liz asked Cindy if she wasn't worried sick for the safety of her son.

"Of course I am! What mother wouldn't be? He's shipping out next week. Going to fly helicopters like his father. He can't say exactly where, but he told me he'd be in the Pacific Theater somewhere. I'm going to miss him and I am going to worry ... I don't know what else to do but put it in God's hands. I know He will use Billy as He sees fit."

When Liz agreed and asked God's blessings on them, Cindy responded with feeling.

"Thank you so much for that, Liz. ... How's Joseph's work?"

"It always amazes me what is being done with that. The potential of that project is a bright light for all of us ... it's just a shame that funding and resource for such a hopeful effort are suffering as we defend ourselves against those who would destroy it all ... but I am thankful we have the means to defend ourselves. I know Joseph's efforts on that project will pay off. I know how proud you are of him and you have every right to be ... and how's Patricia?"

Her friend lost no time in explaining her pride in her daughter Patricia and from the description of her achievements at college Cindy could tell why.

"Liz, that's just great! 4.0 you say at Rutgers? You have every reason to be a proud mother ... and from the work Joe is accomplishing, a proud wife too. Just keep that in mind and everything will work out for the best ... I know it will."

After expressing her thanks for Cindy's compliments and faith, her friend indicated that she had to hurry and finish cooking dinner for Joe.

"Okay, Liz. It's great to talk to you. I miss you. Let's talk again in a couple of weeks. Bye."

As Cindy hung up the phone she paused for a moment and considered her good friend Elizabeth Trevor. They had known each other since High School. She and her husband, Joseph, along with their daughter Patricia, had moved to the northeast over ten years ago. They lived outside of Boston in Nashua, New Hampshire. Joseph was a senior research scientist working on the Genome Project. Patricia, who was a year and a half older than Billy, had graduated from High School up there and gone on to college at Rutgers, majoring in communications.

Cindy and Elizabeth had kept in touch the entire time, generally writing or calling every two to three months. Now, with the outbreak of war and its impact on everyone, and with the Trevors knowing of Jess's and now Billy's involvement with the military, the frequency of contact had increased to every couple of weeks. Cindy was glad it had. It was good to keep in touch with your close friends in such times. Cindy was grateful for that friendship and hoped she could be as much a comfort and help to Elizabeth as Elizabeth was to her at this time. She knew Elizabeth understood.

### **July 14, that same time**

#### **Trevor Residence**

#### **Nashua, New Hampshire**

Elizabeth Trevor was having similar thoughts about her friend Cindy after she hung up her telephone. In fact, Cindy's decision to work in the defense plant and her experiences in doing so

while her husband was away had inspired Elizabeth. Although her husband wasn't "away" in the sense that he was overseas fighting, he was extremely involved in his work and spent many hours away from home as a result. With the war and the decrease in funds and resources, his "all work and little play" situation had only been exacerbated.

Elizabeth understood and respected her husband's dedication to the work with which he was involved. But ever since Patricia had gone off to school she had been feeling both of their absences acutely. It was a painful combination of the typical "empty nest syndrome" and Joseph's additional hours spent away from home, both occurring at such a perilous time, that added to Elizabeth's sense of "unrest" and aloneness.

Oh, she had tried a couple of hobbies ... but nothing had really captured her attention and her commitment. She had talked with Joseph and at first he had a hard time understanding.

"Haven't I provided a good living Liz?" he had asked. "You can have anything you want."

When she had broken down and started crying, finally sharing her feelings of loneliness, and confessing that what she really wanted was for them to have more time together ... he had understood. And he had made adjustments. But Elizabeth didn't want him to sacrifice his efforts. She believed in what he was doing. She wanted his understanding ... she wanted whatever effort was available ... and she wanted his support in finding something outside the home, and outside of her church involvement, to which she could devote herself during the long daylight hours.

Liz shared Cindy's experience with Joseph and indicated that she wanted to do something either in direct support of his work, or in support of the war effort. After a lot of talk, they had decided that she would look for a position on the outskirts of Boston, in either New Hampshire or Massachusetts. Joseph was familiar with a number of firms who were supporting the development efforts arising from the research on the Genome Project with which he was involved.

It had been immediately after an interview, while she was walking back to her car in the parking lot of the Raythone facility in Salem, New Hampshire that Elizabeth had heard what she thought at first were some firecrackers going off nearby. The sound had come from the direction of one of the metro stops just up and across the main thoroughfare from her. When the crackling had gone on ... and when the sounds had approached closer and closer to the parking lot where she was standing, it became apparent to Elizabeth that the sounds were not firecrackers at all ... they were gunshots.

Elizabeth had quickly crouched down behind her car and watched in horror as several men with hoods on their heads and carrying rifles ran into a parking lot directly across the street from her. There they took up positions amongst the cars there and began firing at those pursuing them. Then, a larger number of other men, some of them dressed in business suits, had surrounded those first men and shouted for them to surrender. The other men ignored the demand and kept firing. She watched as several of the men in the larger group were hit, clearly seeing the crimson on their clothing from where she sat. Elizabeth heard distinctly the ricochet of bullets off of the pavement and off of cars close to her as the shooting continued and while she crouched ever closer to the pavement, praying.

Ultimately, more and more civilians with guns had arrived along with several police cars and what looked like National Guard vehicles. By the time the National Guard vehicles arrived however, the issue had already been pretty much resolved. Very little fire was coming from that first group of men, although they still refused to surrender. Within another couple of minutes all of the firing had stopped and Elizabeth had cautiously looked over the hood of her car and seen the soldiers, officers and civilians carefully examining the place where the first group of armed men had taken cover. Two of them were apparently wounded and were taken away in ambulances, but only after four civilians who had been wounded were attended to first. There were a total of eight civilians and six of the others covered with sheets and laying on the ground around the area.

A police officer had come over and briefly interviewed Elizabeth regarding what she had seen. When she had finished giving him her statement, and after she had calmed down enough to collect her thoughts, Elizabeth had gotten back in her car and called Joseph on her cell phone. He had told her to stay right there while he got a friend to immediately drive him over. He arrived at break-neck speed within twenty minutes and, after consoling her, had driven her home.

It was this experience that Elizabeth had briefly relayed to Cindy. It was an experience she would never forget. It was an experience that had also firmly established in her mind an acceptance and approval of the President's initiatives regarding firearms in the hands of citizens. Up to that point, Elizabeth had viewed such a proposal with some concern for public safety, but no more. Elizabeth did not want to think about what that first group of men could have done had there been no one around to stop them when they first started firing at the bus stop down the street. Perhaps they had wanted to attack Raythone, where components of the Patriot missile were made ... but they had never gotten the chance. Elizabeth had experienced firsthand how citizens could stop such a terror attack and keep the terrorists occupied with something other than killing defenseless citizens.

As a result, Elizabeth made a decision about the location of her employment. Until Massachusetts passed laws similar to New Hampshire's which were in full support of the President's initiatives, Elizabeth had determined that she would be working in New Hampshire in any case. New Hampshire was one of forty-three states that had already passed such laws. In fact, New Hampshire

had been very close to the conditions adopted by the President before all of this had happened. Massachusetts was one of only seven states holding out with their now proven to be outmoded “common sense”, “tougher” gun legislation. Elizabeth hoped that the events she had witnessed, which had occurred on the outskirts of Boston, would help tilt the scales in Massachusetts and get the President’s initiatives adopted into state law there as well. But until they did, she would not work or spend time in a place that was an “open range” for terrorists like those who had attacked in Salem.

The conversation with Cindy had brought those memories of the terror attack back into Elizabeth’s mind and crystallized the truth in Cindy’s words: “These animals are willing to enslave or kill as many of us as they can.”

“But, enough of that,” she thought. “It’s past 8 PM and Joe will be home soon and I still have to get those potatoes on for dinner.”

**July 14, 8:34 PM, EDT**

### **Along Route 128**

#### **The Commonwealth of Massachusetts**

Joseph guided his late model Lexus through the traffic on Route 128. He had made the mistake a number of times of calling it I-95 when he first arrived in the Boston area ten years ago. He had quickly learned that the local inhabitants still referred to it by its old name, Route 128, and that calling it I-95 pretty much established him as a “newcomer”. Route 128 was what he now called it himself.

One thing about working late hours was that the traffic was much more bearable at this hour of the evening. Rush hour traffic here could be brutal, bumper to bumper stop and go. He was glad he did not have to put up with that. Just the same, this was later than normal and he had just called Liz to let her know he was going to be even later than expected. While talking, the disappointment in her voice was evident and after the call he had vowed to himself again, for the umpteenth time, to make sure that he didn’t disappoint her like that again. She was such a loyal and good trooper!

In Joseph’s religious faith, he honestly believed that he and his wife would be together forever. To them marriage had always meant something more than “‘til death do you part” ... to them it meant “for time and all eternity”. It was one of the reasons, on average, that marriages amongst those of his faith tended to hold together well above the national average ... but not always. Joe honestly hoped he could live to warrant an eternity with his devoted and loving wife, but he knew his long hours and commitment to his career sometimes got in the way of his desire to be with her and nurture that relationship. It was a situation he longed to address ... but sometimes felt powerless to adequately do so due to the drive behind his commitment to “the project”.

Joseph Trevor was a senior research scientist and director working on the Human Genome Project (HGP), a US Department of Energy (DOE) led international scientific collaboration that was researching and detailing the genetic blueprint of the human species. Such research and the understanding that it provided were expected to produce significant medical and physiological benefits for all of mankind. It was a tremendously complex and delicate project, one that ranked with the Manhattan project and the Apollo lunar landings in the pantheon of major scientific projects undertaken by the United States, and one that was perhaps an order of magnitude more complex and difficult than either. As he drove towards home, Joe reflected on the path that had led him to his current position on that project.

After marriage and completing his undergraduate degree in physics at Brigham Young University in Utah, Joe and Elizabeth had moved back home to Texas to work there and to raise what they had hoped would be a large family. While there, Joseph had completed his Masters degree in Physiology and his Doctorate in Biophysics. The completion of his formal education had occurred while working for Talbott Laboratories in the Dallas area between 1983 and 1992.

In 1986 after several years of trying, their first child, a daughter they named Patricia, had been born. She was the first of what Joseph and Elizabeth hoped would be several naturally born children. But their hopes and aspirations in that regard were cut short after Liz tragically experienced a miscarriage and a still birth with the two following pregnancies. A genetic disorder that had led to the failed pregnancies was discovered within Elizabeth, a disorder that meant that there was only a one in ten chance that any pregnancy would be successful. As a result, they always considered Patricia to be their “miracle” baby. But she was a miracle baby afflicted with the same disorder as her mother.

A natural and understandable desire to comprehend this disorder and hopefully correct it drove Joe into further research and the study of biophysics. This desire led to Joseph’s doctorate in Biophysics and ultimately led him to complete significant research on human DNA while working at Talbott Labs. His papers were extraordinarily well researched and insightful. They were published and became well read throughout the entire biomedical scientific community. Several of them led to breakthrough understanding of the genetic links to cellular development and senescence.

Joseph’s research and his publications ultimately captured the attention of leading researchers and administrators throughout the country. In 1992 this notoriety led to an offer from the Director of the National Center for Human Genome Research for Joe to lead a human genome research effort in the Boston area for the National Institute of Health. In that capacity, the envisioned research center

would be an auxiliary and compliment to the three major DOE genome research facilities at Lawrence Berkeley, Lawrence Livermore and Los Alamos National Laboratories.

Professionally and personally it was an offer Joseph could not refuse. As the Director and lead research scientist at the facility, Joe would be in a position to “make the difference” that he longed for. It was also an offer Elizabeth prayed would lead Joe and his staff to discover cures for others suffering from the same types of genetic problems that had led to her failed pregnancies. She held onto a personal hope that perhaps it might also occur in time to help her and Joe with their goals for a larger family. As the years had passed, it became apparent that a breakthrough of that nature would not come in time for Elizabeth, but the personal hope naturally shifted, for both Joseph and Elizabeth, that it would come in time for their daughter Patricia.

Now, years later, as Joe neared the exit to Route 3 which would take him to Nashua, he once again experienced the renewal of the inner drive that had moved him over the years. It was a welcome renewal, particularly during this war-torn time when resources and personnel were in short supply. Joe was saddened that such efforts for good had to be impeded by the evil that had been brought upon them ... but he knew it was necessary lest the entire effort he was involved with be destroyed, or hijacked and misdirected by that same evil. Such a consideration was intolerable to Joseph and he therefore supported the war effort completely, despite its impact on his own efforts.

That impact was nonetheless leading to longer work hours on his part, even longer than his normal ten-hour workdays. Joe hoped Liz would continue to understand. He resolved in his mind to discuss it in detail with her this evening and see. He also wanted to share with her some of the hopes he was having regarding a particular line of research with which he was currently involved. Even though things were very premature, he found that sharing things like this at an early stage with Elizabeth and hearing her creative feedback and thoughts often stimulated his subconscious towards very fruitful follow-up lines of research. Elizabeth was not nearly as formally educated as Joe, but he sometimes believed that her natural “intuition”, common sense, and ability to analyze a situation or circumstance were worth far more than many college degrees, scientific or otherwise. This “collaboration” was their own personal “secret”, of course set within the bounds of any company or national confidentiality that Joe was honor bound to keep. Their ability to collaborate where they could was another reason that Joe honestly felt that his talents with respect to the project, along with his relationship to his wife, were both gifts from above. Still, the tradeoffs and the competing requirements on his time, were sometimes very difficult to resolve, even more so now, and he wanted to make sure he did all he could to allow for his wife’s feelings and needs.

“I’ll just have to keep at it,” he thought as his path on Route 3 crossed I-495 on the way to Nashua. “If the good Lord, Elizabeth and myself all know I am trying ... it will work out for the best in its own good time.”

After Elizabeth’s experience with that terrorist attack while she was in the Raythone parking lot over in Salem, New Hampshire a few weeks ago ... Joseph definitely hoped it would work out for the best sooner rather than later. Apparently that very interview had gone very well and they were asking Elizabeth to come back next week. Joe hoped it would lead to the opportunity she was looking for.

Joseph also hoped it would be “sooner” with regard to the particular line of research with which he was personally involved at work. For the last several days, while running pilot research studies on a more detailed examination of the protein coding instructions of genes that are transmitted indirectly through intermediary RNA molecules, Joseph had been using prototype atomic force microscopes and enhanced mass spectrometric analysis. These were recently developed methodologies using even newer prototype equipment. They were very unproven but they held great promise for allowing a much more thorough and detailed analysis of the protein coding instructions themselves. The result of the initial analysis was looking very promising in that regard. The promise of providing a much more thorough understanding of the coding itself and a concomitant understanding of its transmission through RNA appeared very real. But all of that would require more research, testing and analysis. In order for it to be duplicated and verified independently, it would also require the development of more refined and procedure-oriented methodologies involving the new equipment and approaches.

As exciting and potentially productive as that analysis was, it was not the issue that he wanted to share and talk about with Elizabeth. In addition to the initial results of the analysis of the coding instructions and their concomitant transmission through RNA, Joseph had noticed the slightest hint of something more basic-something that appeared to be underlying the whole DNA/RNA/Protein structure itself. Something in the sub-molecular or even in the atomic range that was barely perceptible to the new equipment and methods he was employing. Something with the faintest glimmer of electrical and physical characteristics that implied an even more rudimentary level to the entire basis for the coding instructions themselves, and for the entire transmission mechanism of those instructions. Something phenomenally complex that the entire DNA structure itself might rest upon ... something as yet never noticed, never studied ... never even imagined.

“Maybe I am just focusing or concentrating too hard ... maybe I am making something out of nothing,” he thought.

“These are some fantastic potential conclusions ... based on such small shreds of evidence and totally new and unproven methodologies,” he continued. “But still, there’s, there’s just a “feeling” to it ... there’s something there. I’m sure of it.”

Joseph resolved to review it all in much more detail over the next couple of weeks and make more observations. He knew he would need much more solid and compelling data before even considering mentioning it to anyone at the Center.

“I’ll *certainly* have to have my ducks in a major row before going to National Institute of Health’s National Human Genome Research Institute (NHGRI) or the JGI (Department of Energy’s Joint Genome Institute). The people there will simply tear into any such notion of a more rudimentary structure with a vengeance. They will simply not want to believe it after all the research that has already been done. The idea that this could have been missed, even without the new methods would be too great a leap,” he thought.

“I have to admit myself that it is almost too phenomenal to even consider, and I am the one finding evidence of it. Well, its going to take a lot more of that evidence and a much more documented and detailed description before it goes anywhere ... but it sure is interesting ... and I just *know* that there is something to it.”

As Joe came up on the exit off of U.S. Highway 3 and took it towards his subdivision in Nashua, he looked forward to dinner and the discussion with Elizabeth before they retired for the night. He was anxious to set her mind at ease and share his feelings. He also looked forward to sharing his initial thoughts and findings on this new data and hearing what were sure to be her “out of the box” and very creative thoughts on the matter.

“We’ll just have to see where it leads,” he thought.

At the time, Joe could not comprehend where his research on this matter would lead or what impact it would ultimately have on his and Elizabeth’s lives ... or the even more dramatic impact it would have on world events.

## Chapter 17

*“Get wisdom, and with all thy getting, get understanding.” – Proverbs*

**July 18, 10:15 EDT**

**The Rose Garden, The White House**

**Washington, D.C.**

Looking out over the assembly of reporters, journalists, administration officials, congressional and senatorial representatives, state governors and other U.S. and international VIPs assembled for the official opening, the President could not help but think back to the attacks that had made today's meeting necessary. So many had sacrificed so much. His own Vice President, the Secretary of Defense and the Director of the CIA had been amongst the first Americans to die in the fateful attacks back in March ... and they had died right here. He and his wife had barely escaped alive as they arrived at the White House that day and had been whisked immediately away in Marine-One by his Secret Service detail and by the Marines. Even more than his own earlier combat experiences, he would never forget those tense moments, moments made even sharper than any of his prior combat experience because his wife had been with him and because so much more had been at stake.

“Thank God they had not used nukes,” thought the President ... “If they had, I would not be here ... and neither would that half of the world.”

But today, a little more than four months later, while so many more Americans were sacrificing their all to maintain the Republic, the White House was reopening. A much stronger White House both structurally and representatively. Structurally because of the Herculean construction efforts that had gone into rebuilding and shoring it up with hardened steel, representatively because of the great awakening that was occurring in the nation despite the circumstances.

America was at war, was embroiled in perhaps the most deadly and dangerous war in her history.

“And that war is not going very well,” thought the President.

“But despite the setbacks and defeats, the people are rising to the challenge ... I have seen it ... I have felt it!” he continued in thought as he prepared to approach the podium and the people gathered there, the nation and most of the free world.

“Now if we are just granted the time to rise completely, we will shake off the complacency and moral equivocation that have beset us and that helped lead to this mess. We'll defeat these tyrants and free their peoples once and for all ... and we will never allow ourselves to be in this position again!”

The ceremony was being held in the open, but under the strictest of security. Contrails circled and lazily floated overhead from two flights of F-22 aircraft standing vigil. The beat of helicopter rotors could be heard in the background, where Blackhawk helicopters full of troops and Apache and Comanche attack helicopters hovered. As he approached the microphone the President knew that Stinger missile teams, Patriot missile batteries and the Aegis cruiser in the Bay were alert and ready for any contingency. Here in the Rose Garden there was a triple-sized section of Secret Service, and just beyond the bushes and fences there were hundreds of U.S. Marines armed and ready.

Looking into the cameras, seeing the “on air” light brighten, the President began.

“My fellow Americans, we are gathered here today to open the White House and again conduct the nation's business from its traditional seat of government for the executive branch. We made every effort possible to hasten this day. We did this for two reasons. First and foremost as a message to the aggressors ... to the criminal leaders of those nation that so dastardly and viciously attacked us in March. That message is straightforward.

*“You have not won. We are earnestly committed as a people and with our allies. As surely as we have rebuilt this house that you damaged and nearly destroyed, we will rebuild the world you are attempting to destroy, and it will be a world in which you do not exist!”*

The President had to wait a moment as thunderous applause and a chorus of affirmative yells rang out in response to these opening words. When the noise died down, the President continued.

“The second reason is to remember and commemorate those who have fallen, both here and across the world, for the sake of liberty and freedom. We shall never forget, we shall always remember their sacrifice for our Republic and for the principles upon which it stands. We shall never forget their loved ones who have been left behind. We shall continue this fight until it is won! Until once and for all the world is again safe for the principles of liberty and free determination for which we fight, and protected from the abject tyranny and oppression of those against whom we fight ... *against whom we will most certainly prevail!*”

Once again a thunderous ovation broke out, mixed with shouts of support of what the President was saying. Again he waited a moment or two for the noise to die down.

“As surely as we quickly assembled the resources and the materiel and the manpower to rebuild this building, our nation, along with the other free nations of the world, will quickly produce and bring together the resources, the materiel and the manpower to successfully prosecute this war effort. I will

not equivocate or mince words. We are in a dangerous position while our enemies are continuing to gain ground. Many of our very best are fighting, sacrificing, and dying to buy us the time to do what America has always done ... to out produce, to out think and to overcome the specter of tyranny.

"We shall not fail in this our calling. I call on all of the American people to redouble your efforts, to volunteer more of your time, to offer up more of your abilities in helping realize these goals. They are essential goals to the survival of our way of life, to the survival of our nation and to the perpetuation of liberty. I urge and beseech each of you to do this ... but we shall do it with or without you as individuals. I have absolute faith in this. Let me share with you a couple of reasons why.

"First, I have seen it in your faces and in your eyes as I have traveled around the nation. Our enemies have grossly miscalculated and continue to do so. They fight against our technology, our equipment and our munitions that are rightfully recognized as the best in the world. They fight against our young men who are recognized as the best trained and most capable in the world. But these things are merely an outgrowth of something much deeper and stronger. They are a representation of the inner strength of our citizenry, of that very thing I have felt and seen in so many of you. The people of America have faith in themselves and in their God-given rights as individuals. We are free. We are not ignorant, indoctrinated masses committed to an ideal preached to them by others. We are the most intelligent and most free people of the earth and we have tasted for ourselves what a liberty granted to us by the Creator can mean-and we have no intention of letting it be extinguished. Once aroused, this liberty and this individualism will produce technology and equipment and materiel in quantities and quality that shall astound the world and shall completely overwhelm our enemies. Have no doubts regarding this ... let's just be about it!"

Again the roar came ... and not just there in the Rose Garden. It was heard on the streets surrounding the Whiter House from the tens of thousands of those gathered and watching the proceeding over closed circuit TV. It was heard around the nation in the homes, businesses, taverns, gathering places and on the street as scores of millions listened in. It took longer to die down this time, but when it did, the President continued.

"This commitment, this faith has been well evidenced by our citizens as they have stood up by the tens of thousands to the acts of terror continuing amongst us. Our enemies have had people placed here for decades. But they are losing them ... and they will lose them all. Our initiatives at the borders where we have placed two full divisions of troops on our southern border and one division to the north to interdict illegal aliens crossing those borders have virtually shut off the supply. Those left are being confronted by our own armed citizens who are answering the call we made to arm themselves and interdict terror. Both these common citizens and our growing Home Guard initiatives are making a huge difference. Attacks are stopped and snuffed out before they can attain their aims.

"While we do not know overall numbers, our intelligence efforts indicate that those enemy terrorists and collaborators left amongst us are getting desperate. Their increasingly desperate condition may translate into increasingly desperate tactics. We are by no means finished with this business here within our own borders, but we are making great progress and we are thwarting the aim of our enemies. They want to frighten us, they want to paralyze us, they want to keep us from mobilizing so we can defeat their aggression in so many far a distant places around the globe-but they shall fail. I urge you as citizens to continue your efforts. You are our first line of defense in such a war and I commit myself to providing you with the tools and enabling legislation to insure that you can stand against our enemies wherever they are found.

"In that regard, I am proud to announce today a bipartisan agreement in the House and Senate regarding our firearms initiatives. In both bodies, legislation will be introduced tomorrow morning entitled "*The Firearms Restoration Act*". We have the votes to pass it quickly and Congress will do so. All but seven states have already passed similar legislation. I urge those remaining state Governors and legislators to join with us and pass similar acts for your states. The longer you delay, the greater the danger to your people. Arm your conscientious and law-abiding citizens and let them protect themselves and their loved ones. Do not provide a haven or a killing zone for our enemies.

"For the benefit of the public, I have included the final draft of the legislation that will be introduced tomorrow. For those of you watching TV, it should appear in a separate window on your screen. For others, it will be published in most major newspapers tomorrow."

## **THE FIREARMS RESTORATION ACT**

### **Section 1**

All prior laws, regulations and acts that in any way restrict, regulate, permit or license the sale or ownership of personal firearms to legal, lawful citizens of any of the several states or territories comprising the United States are hereby revoked and nullified.

1. For the purposes of this act, personal firearms shall be defined as any firearm that can be reasonably carried and operated by a single individual, irrespective of magazine capacity, firing rate, "look", "feel", cost, bayonet lug, folding stock, pistol grip, barrel length or any other operational or appearance characteristic.

2. For the purposes of this act, lawful citizen shall be defined as any citizen of any of the several states or territories comprising the United States who is of legal age to vote and who is not under any restriction as a result of any unfulfilled criminal conviction.
3. For the purposes of this act, any citizen sentenced to a criminal conviction who has fulfilled the requirements of that conviction (including all incarceration, probation and any other supervision required), shall have their full Second Amendment rights under this act restored. Existing restrictions or prohibitions on the Second Amendment rights of those citizens who have prior convictions, which they have fulfilled are, in accordance with this section of this act, nullified.
  1. The single exception to the restoration of Second Amendment rights cited in this section shall apply to any convicted felon whose conviction included the use of a firearm in the commission of a felonious act that willfully deprives other citizens of life, limb or property. In such cases the Second Amendment rights of citizens who are convicted of such acts shall be permanently relinquished.
4. The supremacy clause of the Constitution of the United States shall be in full force and effect in relation to this act restoring the right to keep and bear arms throughout the several states or territories comprising the United States.

### Section 2

No license, permit, waiting period, background check or other hindrance, restriction, or infringement shall be required of any lawful citizen purchasing a personal firearm or carrying a personal firearm on their person in any public place, or on, or in, their own property.

### Section 3

Any law abiding citizen in any of the several states or territories of the United States has the right to keep and bear arms in defense of themselves, their community, their state or their nation and for any other legal purpose. This right shall not be infringed for any lawful citizen of the United States outside of the conditions stated in Section 1.3.1 of this act. The only law applicable to the keeping and bearing of personal firearms shall be the Second Amendment to the Constitution of the United States.

1. The Second Amendment to the Constitution of the United States reads as follows:  
 "A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms shall not be infringed."

**NOTE:** Regarding Section 1.3 of this act: If We the People are willing to restore the liberty of an individual who has committed a crime, then we must also restore their ability to defend that liberty. Otherwise, their liberty is an illusion. For this reason, any citizen who abuses their right to keep and bear arms by committing, while armed, a felonious act that willfully deprives fellow citizens of life, limb or property, shall be subject to a permanent relinquishment of their Second Amendment rights in addition to their prison sentence.

"It may have seemed inconceivable that such legislation would ever be introduced or passed just a few short months ago ... but circumstances have proven the error of that former way of thinking. It was well and truly said many, many years ago that an armed people are a free people, that an armed society is a polite society. On my watch as your President, I commit that we in government will not drift into such complacency again nor put our nation and its people at such risk. It took criminal actions on a horrific scale to awaken us from our complacency. Once we successfully conclude the horrible business of this war effort, let us not drift back into such complacency again.

"The second reason I mentioned has to do with the tenacity of our armed forces in facing such horrendous odds and overwhelming numbers. We have suffered setbacks and I expect we will suffer more before we eventually discover our "Battle of Midway" in this war. But even while enduring these setbacks, I can report that our young people and their officers and commanders are fighting with a will and resolve that is profound and awe inspiring. Without divulging operational details, let me say that two of the many areas where our forces are exhibiting such resolve at the current time are in the Persian Gulf region: on the Qatar Peninsula and on the Island of Diego Garcia.

"My fellow Americans, in both cases our forces are facing monumental and impossible odds. They are facing well-trained and indoctrinated armies that dwarf their own numbers. Enemies who will commit the worst of atrocities against them should they fall. They are surrounded and cut-off ... and yet they still fight. They are fighting to buy us time; they are fighting for their wives, their daughters, their sons, their parents, their friends ... their way of life and their faith in Him who provided it. Please remember them in your thoughts and prayers this day and in the coming days. Pray that we may be successful in our efforts to relieve them, or, failing that, that they may be successful in purchasing time for us to throw back the aggressors. It was well said by Thomas Paine over two hundred and thirty years ago,

*"Tyranny, like hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict, the more glorious the triumph. What we obtain too cheap, we esteem too lightly. Heaven knows how to put a proper price upon its goods; and it would be strange indeed, if so celestial an article as Freedom should not be highly rated."*

“Let us all recognize the cost that is being exacted and the price that is being paid. Let us all stand and willingly pay whatever price necessary to maintain this celestial gift of freedom with which we have been endowed. Please remember our forces on Qatar and Diego Garcia.

“Now, we will begin conducting the nation’s business here in the White House immediately after the official ribbon-cutting ceremony, which will be conducted by three very special women. These are three heroines to whom our nation owes a great debt of honor. They are the widows of the former Vice President, the former Secretary of Defense and the former Director of the CIA, all killed here at the White House in March as they were faithfully performing their duties. I knew each of these men personally and can tell you all that behind each of these great men stood a truly great wife, companion and counselor. Mrs. Reeves, Mrs. Hattering and Mrs. Rowley, please come forward now and accept the continuing condolences and honor of a grateful nation.”

As the three women came forward and the cameras focused on them, President Norm Weisskopf could be seen stepping back to stand with his own wife and quietly taking her hand in his own and visibly squeezing it as they both looked on. With little fanfare and with great solemnity, the three women came forward and took hold of the yellow ribbon that had been tied around the White House. They stood at their appointed places thirty feet apart from each other. Then, at the appointed signal, each used a pair of scissors to cut the ribbon and officially re-open the White House, the symbol of the seat of the American government and the residence and work place of the commander in chief.

As the ribbon was cut, and as another thunderous roar of approval broke forth all over the nation, the microphone closest to Mrs. Reeves, wife of the former Vice President, picked up a barely audible comment that she said to herself.

“For you Alan, may God rest you, and may He bless the nation you loved so much.”

### **July 18, that same time**

#### **Presidential Residence**

#### **Beijing, China**

The picture was grainy and the audio quality was much reduced over any local or regional broadcast, but it was visible and audible nonetheless. It was being seen here by a special and very closely held arrangement. With most of the major communication satellites on both sides of the conflict down, and the others in constant danger, this feed had taken a very circuitous route to China. Through cables across the Atlantic that carried the WNN broadcast to Europe, it was boosted and repeated across Europe to Moscow. There, the presentation itself was video taped by other WNN employees and broadcast to settlements in the Ural Mountains. There, another WNN crew from India video taped it once again and broadcast it down through Central Asia to the Himalayas. High in those mountains, three separate crews once again picked up the signal and boosted and repeated it to Tehran, New Delhi and Beijing, where it was finally being watched here in the Presidential residence and at the alternate and more secure facilities for the Politburo.

Jien Zenim, President and absolute leader of the People’s Republic of China and the Chairman of the larger coalition of Asian States, sipped on his Earl Grey tea and watched his principle adversary preside over ceremonies at the White House. Turning to two of his long time friends and allies, Chin Zhongbaio and General Hunbaio, who had come here specifically to view this broadcast in the privacy of the President’s quarters, Zenim commented on the broadcast they were watching.

“Encouraging and inspiring words for his people. Despite his age, the man remains a vibrant leader and therefore a danger, however remote, to all of our plans. His words alone will not change the fact that his forces and those of his allies are in retreat all across the Mid East and Asia and across the Pacific ... those words alone cannot build factories overnight that no longer exist. Still his inspiration and leadership can produce unpredictable results ... in fact he is promising to do so.

“As our influence spreads across this portion of the world, we need to ensure that our people benefit from the success we are experiencing. We also need to ensure that those who collaborate with our forces, or those of our allies ... and those who freely join us similarly benefit. We have an opportunity with our production capabilities intact, with capturing the Japanese, Singapore, Malaysian and Philippine factories intact, to create a high-tech mass production capability unlike anything ever seen on earth before. Irrespective of the American’s confidence in their future ability, we have the opportunity make such capabilities a reality now. I want to make sure that we do not squander it.

“I also want to implement our plans effectively to block the growth of any American capability. The activities of those assets that the Islamics and our allies on the Cuban Island have sponsored have been effective, but I believe the Americans are going to achieve the upper hand. In this regard, I believe that we should proceed earlier than scheduled with the preliminary planning for our military operation, “Hong-Lu-Dung”, against the Americans and the activation of our own internal assets inside America as a build up to it. In that regard, I want to see the elimination of Weisskopf and his obvious leadership capabilities in rallying and strengthening the American people. Chin, do you believe we have the necessary Politburo support for this, and the necessary assets to carry it off?”

Chin Zhongbaio was the Chief Executive Officer of Chinese Ocean-going Shipping Company (COSCO), which had grown to be the largest commercial shipping company in the world before the

onset of hostilities. With the destruction or capture of most of the Korean and Japanese shipping, there was no entity that could now compare. In addition, Chin was one of the most influential members of the Politburo where it was universally accepted that his knowledge of how to “do business” in the western world exceeded that of every other member of that body. And Chin had the experience and the balance sheet to prove it. He had also made the greatest contribution of almost anyone, outside of Jien Zenim, to the current planning and execution of the war. The new aircraft carriers, the large amphibious assault ships and the ballistic missile arsenal ships that had all been converted from COSCO container ships were all credited to Chin. In addition, the thousands of very capable and mass-produced landing craft that were ferrying troops and materiel all across the growing Chinese sphere of influence were a monument to COSCO planning, engineering and manufacturing. These innovations, and others like them from other quarters, were the gears and teeth to the mechanism Jien Zenim had envisioned and then implemented.

“Mr. President, with the success we are having economically, militarily and socially ... there is no member of the Politburo who would stand in the way of this plan, particularly given our successes against the United States to date. I would only suggest that we insure that our other operations in the Pacific, particularly against Guam, and our operations moving toward Australia through New Guinea not be negatively impacted by this earlier-than-planned execution of Hong-Lu-Dung.”

Jien considered the counsel of his friend carefully. All three operations were tremendous in scope and daunting from a planning and logistics standpoint. But Jien Zenim had no doubts that the production mechanisms already in place would be more than equal to the task. This was particularly true when considered in light of the significant additional resource coming out of the occupied nations of Japan, Malaysia, the Philippines and Singapore. Rising from his plush leather chair, he walked over next to his friend, bidding him to stay seated, and placed his hand on his shoulder.

“Chin, I not only assure you that the other operations will not be delayed or negatively impacted ... I demand it. We have a growing capacity and we must use it to strike as quickly as possible so that our momentum is maintained and our enemies are kept off balance.

“Now, General, what are your thoughts on this matter? Can we maintain the advantage with our weaponry? I have read reports that concern me regarding a drop off in kill ratios with the U.S. Navy.”

General Hunbaio was the head of the Peoples Liberation Army’s weapons development efforts. He and Chin had worked together to develop the plans for mating the ships developed in Chin’s factories to weaponry that could make them effective. The LRASD weaponry that was proving so successful at sinking major ships of the U.S. Navy and keeping the rest at bay were recognized as being instruments of his creation. It had been the General’s personal idea to find and recruit the Vietnamese scientist, Lu Pham, who had perfected the design for the super-cavitating weaponry when their own people had failed to produce the necessary breakthrough. This was the same Lu Pham who had been made a Hero of the People’s Republic as a result of his years of service and that culminated recently in the success of his weapons against the U.S. Navy.

In addition, the General’s researchers, scientists and engineers had used their own technical expertise and the data and information pilfered from the West, and from America in particular, to develop many more advanced weapons. The advanced KS-2+ anti-aircraft missiles, the anti-satellite weaponry, longer ranged and more accurate ballistic missiles, improvements to Russian supplied aircraft and tank designs, all of these were products of the General’s efforts. Altogether, the General’s achievements when coupled with those of Chin Zhongbaio had provided the teeth to Jien Zenim’s overall plan of Chinese domination. And they were very sharp and powerful teeth indeed.

“Mr. President, we have, and will continue to produce and develop the weaponry to advance and accomplish the goals you have established and that have been approved by the full Politburo. I see no technical reason why we should not proceed with Lu Dung on an advanced timetable.

“With respect to the reduction in kill ratios. The explanation for this is simple. The Americans are not engaging us in numbers. They have become most respectful and wary of the LRASD weaponry our forces are employing. While it is true that they have had some success with their advanced Sea Wolf class submarines, they only have three of these and are very careful in their deployment. Their newer Virginia class boats have similar characteristics but a smaller weapons load. In this regard, our lead engineer, Admiral Lu Pham, informs me that a solution has been worked out for the acquisition and targeting firmware on the devices for the known characteristic parameters for these submarines. That update is currently being uploaded to all existing weapons and will be included as an integral part of new devices as they come off the assembly lines. The next time one of these American submarines appears in Chinese water, or near one of our LRASD armed war vessels, they will be in for a nasty, fatal surprise.

“In addition, the airborne variant of the device was successfully transferred to our forces two weeks before our Indian allies used them on the American 5<sup>th</sup> Fleet. Admiral Pham has informed me that the necessary modifications to our own existing devices and to our production facilities are finished. The necessary modifications to three regiments of our Badger bombers and three regiments of our Backfire bombers are complete. They are ready to be employed against our enemies.”

This was what Jien Zenim liked to hear. It was information, when taken together with the report given by Chin that would allow Jien to present his proposals to the Politburo with confidence.

“Good. Then we will use this information with influential members of the rest of the Politburo to insure that the PLA planning begins and is carried forward. I will propose this in detail in our meeting tomorrow. I want initial execution as early as this fall if possible, and no later than the beginning of next year. Then, as planned, the full Hong-Lu-Dung execution occurring three months thereafter.

“Finally, let me say a something to you both regarding the recent uprising and insurrection incited by those rebellious forces on Formosa. Although it was very disconcerting and potentially dangerous to each of us, our forces handled themselves well and did their duty for the people. Now that we have contained the insurrection, I am actually thankful that it happened as it did. As bloody as some of the fighting was, it has failed and it has allowed us to root out those forces of dissent from among us. I believe it was a desperate move by the rebel forces on the Island using what they considered to be their most important assets amongst us. Our victory over those assets means that our overall victory on the island is now assured. We know that there are many of them holding out in the mountains on the island, but it will only be a matter of time before they and their president are brought to justice for their treason against the People’s Republic. I want those of their number who have escaped and set up their “interim” government in exile in the American Samoan Islands also brought to justice. I plan to order an operation for that exact purpose.

“My friends, with the victory of the Indians over the American 5<sup>th</sup> Fleet and their imminent occupation of Diego Garcia, we have achieved our preliminary plans well ahead of schedule. I salute you both and all of your personnel who have worked so hard to make this a reality.”

As Jien Zenim said this, he returned to his leather recliner chair and pressed a button that was inset into the right arm of it. When the steward he had summoned appeared, he ordered him to rewind and replay the video of President Weisskopf once again so that he could personally continue to keep a measure of the American President.

**July 20, 03:32 MDT**

### **Abandoned House on Singleton Avenue**

#### **Meridian, Idaho**

As an intensely bright flash went off with a tremendous “BANG”, the door crashed in and several men dressed in black garb with helmets and weapons drawn rushed into the living room.

“Everybody down! Everybody down! On the floor ... this is the Police.”

Alan Campbell knew exactly what was happening and he silently cursed to himself as he assumed the position on the floor of the abandoned house in which they had been meeting. He hoped to God that none of these fools had brought any crack or other drugs with them. If they did, they were all going to be in a load of trouble and he had no idea how he would explain it to his mother ... or even worse, to his brother Leon when he found out.

“Everybody just do as they say”, he yelled as one of the officers stepped over, placed his black boot on Alan’s neck and told him in no uncertain terms to shut up.

Fighting a sudden urge to push that boot off of him, Alan closed his eyes and thought about the situation and what had led up to it.

During the summer months, Alan joined the Home Guard effort in Boise based on his brother’s recommendation. After training, he had pulled patrol duty three times a week around the western approach to the Boise Airport. He carried an M-14 rifle and communications equipment and had even been sworn in as a volunteer deputy with the Ada County Sheriff’s department. He had enjoyed the training immensely and had loved the work even more.

He had taken a full time job for the summer with the City of Boise where he was doing maintenance work on the road system. It paid pretty well and he was proud of the work he did. He found it hard to believe that the former gang member from Chicago was so happy in what he would have considered to be a “honky” lifestyle just one year ago. But that was before he had learned better, before he had discovered, through his brother, the truth of how he and those like him were being manipulated. Now he could see how particular aspects of the political system were bent on buying the votes of the poor through programs that kept them down or kept people like Alan and his brother so disillusioned with the system that they did not vote at all.

Alan and his brother had broken out of all of that and moved west, and they had brought their mother with them. Leon had gone to college and ultimately joined the Marines with his friend Billy Simmons. Alan was doing well in High School and would be a senior after this summer. So what was Alan doing here with a bunch of fledgling gangers in one of their local crack houses?

Simply put, Alan, with his knowledge of the street and experience with “real” gangs back in Chicago, had tried to help these people get out of their rut. When he first came up with the idea, he had gone out looking for the local gangs and had fairly quickly found them. The largest were predominately Hispanic but they were not too picky about letting him in, despite the color of his skin. He’d found that in the intermountain west, unlike the east and west coasts, or many of the major

metropolitan areas, the gangs were not nearly as bent on remaining so ethnically “pure”. If someone wanted to join and was willing to get in line behind the leaders, they were allowed in.

At first there had been a lot of mistrust for the newcomer ... but when they found out how street-wise he was and when he helped them avoid some, from Alan’s perspective, fairly straight forward mistakes with local authorities, that mistrust had turned to respect. This was exactly what Alan wanted and he had accomplished his goal without breaking any laws himself ... although, being that the other gang members were almost always in possession of illicit drugs, just by being caught with any of them he knew he would be jeopardizing his future. But he committed himself to trying to turn these guys towards something positive and getting them out of the very trap in which he and his brother had once found themselves.

Tonight’s meeting was to have been his “play”. He had invited a number of the members here who had given ear to some of his talk about “going straight”. He had been surprised at the turnout. About fifteen members and some of their friends had shown up. Now that a “raid” had occurred, Alan was pretty sure of what had happened. Undoubtedly, some of the other members of the gang, probably the leaders, worried about Alan’s growing influence, had called the police in themselves, anonymously. He was willing to bet that was the case.

**July 20, 05:40 MDT**

**Ada County Sheriff’s Office**

**Boise, Idaho**

“Well, Alan, your story checks out ... and you’d better be grateful that it does. Two of those kids had meth on them and another was carrying a 9mm pistol illegally. Despite the new gun initiatives, which by the way I happen to agree with, it is not legal for a boy thirteen years of age to be carrying such a gun. Particularly when he has a rap sheet a quarter mile long!

“Man, what were you thinking? I’ve just read your info. You did great in Home Guard training. Your reports on duty are meticulous and outstanding, particularly for someone your age. You have a bright future Alan. Why are you risking losing it all for this trash?”

That word “trash” meant something to Alan. He’d been quiet and submissive to this point, but when he heard that word he jerked his head up and stared straight into the deputy’s eyes.

“Deputy, I did it because I used to be what you would call “trash” just like them on the streets in Chicago. I got into that group to help them and I’ve worked hard at it. That whole meeting there in Meridian was about just that. When you ever seen a meeting of fifteen crack and meth heads where no one was smokin’ and nothin’ is sitting in the ashtrays? Where no one rushed into the bathroom to flush the dope down the toilet when the man came? Check it out. That’s what happened tonight.”

The deputy saw the intensity in Alan’s eyes and he believed him.

“I’ve already read the report Alan. What you say is true and agrees with what a few of the younger kids are saying ... the older ones are keeping their mouths shut. The Meridian police are stumped, but they do have that meth and they do have that gun. I believe I can explain it to them and get them on the right track with the investigation. Until we figure out what to do overall, I would suggest that you stay away from that gang over in Meridian. The leaders are going to say it was you.”

Alan knew the gang leaders were going to explain it just that way so as to ruin Alan’s reputation and any future influence with other gang members. But Alan also knew that it was likely that the leaders themselves had called in the raid and that most of the members of the gang who had come tonight would stand with him.

“Deputy, that’s good advice, but I can guarantee that the leaders of that gang called in the police themselves. I bet I can prove it if given the chance and then their whole game would come to an end.”

The deputy rolled the words over in his mind and they helped germinate an idea.

“I tell you what. You’re already released. Your mom is coming down here to get you. Let me talk to her a moment in private when she gets here and then you can go on home with her. Just don’t do something like this again, Alan, without telling someone what you are getting into. It could have gone bad. That kid with the gun could have screwed up and people could have been killed. If that had happened, no one could have helped you avoid some serious problems.”

As the deputy said this, he got up and walked to the door. As his idea coalesced, he stopped and turned back to Alan.

“One final thing, Alan. I have an idea for some new work for you with the Sheriff’s Department, but I want to bounce it off the Sheriff first and then we’ll have to talk to your mom ... are you game to “officially” help some of these people if we set it up?”

Alan didn’t have to think but an instant.

“Yes, sir. I am. Let me know what you come up with.”

The deputy left the room and Alan had nearly twenty minutes to consider his situation. He went through the evening’s events, the risk and the parting words of the deputy in his mind. He thought of how lucky he was to not be in serious trouble. As he contemplated how the Sheriff’s office might officially attempt what Alan had tried on his own, the door opened and there was his mom.

“Oh, Alan! What you got yourself into, boy? I was worried sick drivin’ down here!”

Alan had stood up when his mother had entered the room and as she said this he met her half way across the floor where he hugged her long and tight.

"I'm sorry, Mom. I was really trying to help and things just got out of hand."

Geneva heard the sorrow in her son's voice and recognized the sincerity of it. She knew it was a sorrow based on the potential impact on her of what he had done and she was grateful that Alan's heart was good. It was what she had prayed for over and over for as she drove to the station.

"I know, son. The deputy told me the whole story.

"I want you to know something, Alan. I'm proud of what you tried to do for those kids. I do not like the risk you took, or the particular way you went about it, but God will bless you for trying to help others get out of the same hole He helped you and Leon get out of. But you got to do it the right way. You could have ruined your life and brought shame on me and Leon by going about it this way.

"But I know your heart was right and we can be thankful that no harm came of it. Let's get on out of here and go home."

**July 24, 08:40 EDT**

**Greyhound Bust Stop**

**Little Havana, Florida**

Maria had been waiting since 7 AM, a full hour before the bus was supposed to arrive. Mr. And Mrs. Rodriguez and Father Chapman had arrived together at 7:45 AM and stood with her as they waited. When the time came and passed for the arrival of the bus they had all begun to worry. In today's environment, a late plane or bus or train or ship could easily mean that terrorists had struck again. Then, at 8:15, a representative of the bus company came out and announced that the bus had experienced a flat tire and would be arriving shortly.

Maria had seen the bus pull around the corner and had run to it and along side it as it came to a stop. She could see him through the window in his uniform and he saw her. He put his hand on the window and then stood up and got in the line of other passengers moving towards the exit. She ran to the front of the bus and stood by the small crowd gathering at the door. As she waited excitedly his parents and the Father came up and stood with her. Then, he was coming down the stairs.

"Hernando!" she cried, and ran into his arms.

Their embrace went on and on. Hernando's parents watched for a moment. When it became obvious that it was not going to end anytime soon, they joined in the "group" hug welcoming their son home on leave. After another moment, Father Chapman smiled and did the same.

By the time the hug finally ended the other passengers and their relatives and friends had all left the terminal and the driver of the bus was getting back on board after checking for messages and any dispatches or packages for him to carry. Father Chapman had stepped back at that point and was looking on. The driver stopped for a moment next to the Father and spoke to him.

"That's a new record for me, Father. Fifteen years I've been driving and I have never seen a welcome home hug last until I checked my messages and was getting back into the bus to drive away. Lately, though, I've seen a lot like it, and it's real good to see, particularly in these times I'll tell you."

The driver, gazing once more at the happy reunion, shook his head and took a deep breath as he put his paperwork in his document pouch. Turning once more to the priest, he remarked, "Well Father, I have a schedule to keep and I'd best be going."

Father Chapman, who had married Hernando and Maria in February when Hernando joined the Army after the outbreak of war with the Islamic nations, was glad to hear what this driver had to say. He had experienced much the same here in Little Havana in his parish. With the horrific attacks in March and with the continuing terrorist attacks around the nation, many people were re-assessing the importance of their relationships with their loved ones and with God. It was something the Father was thankful for and viewed as one of the few positive things to come out of these very troubled times.

"Bless you, my friend," said the Father as the driver shook his hand and began to climb onto the bus, "Drive safely and thank you for sharing your observations with me. Such true feelings of love are a blessing to us all and I pray they continue to grow. As you say, it's a real good thing to see."

As the bus drove away, Maria and Hernando finally broke their embrace. As they did, they and Hernando's parents all stepped back. After looking at one another for several seconds, they all broke into laughter and more hugs as Hernando greeted each of his parents individually.

"What? No long hug for your own mama?" Mrs. Rodriguez said after a warm hug from her son.

This brought on more laughter from everyone as Hernando picked up his duffel bag and began walking with his wife, his parents and his priest toward the parking lot where Maria had parked her small compact car and where the Rodriguez's min-van was parked.

As they walked there, Hernando's father looked upon his son with pride.

"So, when will you be shipping out to fight son?"

Hernando had been given strict orders to not discuss the details of any of his stationing or deployment orders. He could only speak in generalities.

"Well, Dad, I have a one week leave and then I will be catching either a military transport, or a bus, to Texas. Once I am over there I will receive more specific orders.

“I wish I could tell you more, but two things. Number one, I don’t have the specifics. They don’t share detailed plans with the lower ranks. Number two, even if I had all of the specifics, security reasons make it impossible for me to share them. If word leaked out it could harm our nation’s plans, and with these terrorist running all over the country, it could bring harm to you. I cannot risk either.”

Hernando had always been a young man with specific dreams and solid strategies regarding how to achieve them. He had picked this up from his father. At the same time, he had always been rather carefree and fun loving and tended to not be too strict about the plans he developed, focusing more on nurturing relationships, even if it meant that schedules slipped. He got this attribute from his mother. Now, after five months of training in military discipline, Hernando had matured in his ability to stay focused on achieving the goals. In the role he now played, not keeping that focus could cost lives. It could mean the difference between success and failure of the mission, and failure of the mission could cost his nation and his family dearly. He would find a way to discreetly let Maria know of his impending combat, but without passing on any indication of when or where it would occur.

The fact was, Corporal Rodriguez knew a bit more about his next assignment than he had communicated. He knew he was going to a large staging area near Corpus Christi, Texas for an imminent major combat operation in the Caribbean. But those were details he could not share.

As they reached the cars, Father Chapman took Maria’s keys to drive the small car while Maria and Hernando climbed into the mini-van with Hernando’s parents. It was a relatively short drive to the Rodriguez home and as they turned the corner and approached the house, Hernando saw a crowd of people. The welcome home signs, the smiles on his friends faces, the many friends and relatives ... all of this brought tears to Hernando’s eyes. He knew who was responsible.

“Mom, you shouldn’t have gone to all this trouble ... but I’m glad you did.”

As Corporal Hernando Rodriguez, U.S. Army Infantryman lately trained in the use of Light Armor Weapon Systems (LAWS), stepped out of the van with his wife at his side, he was greeted with a new round of hugs, slaps on the back, handshakes and well wishes. It was a good time and Hernando was so happy to see his friends and relatives. The conversation, stories and jokes would have gone on well into the afternoon had not Hernando’s mother and father called everyone to the backyard for the lunch they had prepared. Even then, the conversation did not abate.

Most of the young men around Hernando’s age wanted to know about Hernando’s training, particularly stories and any details he could give about the weapons. Quite a few of the older men there who had themselves served in the military wanted to know how Hernando had become a Corporal so soon. Hernando simply said he supposed that despite their gruff and “in your face” demeanor, he must have somehow impressed his NCOs. The truth was that Hernando had not only impressed the NCOs, but his accomplishments had also come to the attention of the commanding officers both at Basic Training and at his MOS training that followed. Hernando had such a can-do attitude, was so punctual, was so eager to learn and eager to help his team mates ... and so successful at helping them, that he had become something of an inspiration to the other recruits and to several of the NCOs as well. The result had been a recommendation for advancement and an approval. Before he had completed his MOS training, he had been advanced to Corporal Rodriguez.

Late that afternoon the friends had left and Hernando and Maria spent some time with Hernando’s parents catching up on all of the family news and talking of Hernando and Maria’s future. Depending on how things went, Hernando was seriously considering making a career out of service to his country. His parents and his wife accepted this and encouraged him in it.

Finally, that night, back in the privacy and comfort of their own home, Maria and Hernando shared themselves with one another as only a newlywed couple who have experienced a long separation can. It was more than a physical experience. It was an emotional and spiritual experience born of saving themselves for one another alone, and of a life-long commitment to honor those marital vows come what may. Their intimacy went far beyond the physical caressing and touching; it went to the depths of their very souls in a way that only those rooted in such lifestyle can experience ... a lifestyle that both were willing to sacrifice their all to maintain. They would each maintain it with the firm knowledge that the other would be true to it, to their holy vows, and to one another regardless of what else happened. She willing to send him forth and sacrifice their time together and potentially sacrifice him ... he willing to go forth and sacrifice his time with her and potentially his own life.

That evening their love was not diminished by the news they shared with one another, it was enhanced. Maria learned that her darling was destined for combat, fighting to maintain the lifestyle and freedom they both cherished. Hernando learned that he would have more to fight for than he had imagined. For his sweetheart Maria shared with him the news that the family they had so recently created through wedlock was soon to grow into a threesome. Hernando’s sweetheart, the love of his life, was pregnant with their first child.

**July 26, 19:23 local time**

**Mountainous Retreat above the Coruh River**

**West of Rize, Turkey**

The news was disheartening. No more Allied troops in Asia. It was hard to believe despite the last six months of seeing it happen. The remaining Allied forces were pulling back across the Bosphorus and the Dardanelles, taking up a stronger defensive position on the far eastern end of the European portion of Turkey, the only portion now free of GIR occupation. The courier who had brought the news was someone he trusted, trusted with his life and so he knew it was as accurate as possible at this distance.

“You come to that,” he thought, “either you someone to trust with your life...or you lose it.”

It was not a new concept to him. It was something that had been drilled into him in training. It was something he came to accept as second nature through his many years of military service. But until you had faced combat up close and personal it was just a concept. Over the last six months he had learned to put it into practice through the hard cold truth of reality fighting with partisans and resistance forces in the remote areas of eastern Turkey.

Captain Hanson, former Commander of U.S. Air Force Security forces at Incirlik Airbase ... a command that no longer existed ... contemplated those last six months of reality.

It had started with his assignment to Incirlik Airbase just off the Mediterranean coast near the Turkish city of Adana. He had been assigned there immediately after the devastating attack on Incirlik in early November of last year when the GIR had used massive raids and paid the price of massive aircraft losses to devastate the base. They had been successful and U.S. air power had been rendered mute for the short fight over Kurdistan. With no U.S. air power to support the fledgling Kurdistan defense forces, the GIR had accomplished their aim of putting down the Kurdistan rebellion in what had been the former Iraq and thus annexing the whole of Iraq into the Greater Islamic Republic. Captain Hanson had been assigned to the base to take charge of security while the base was rebuilt and air operations were re-established.

He had gone at his work with a will and had established a very secure inner perimeter for U.S. Air Force operations, using several V-150 APC's armed with 20 mm cannon, a dozen Peacekeeper APC's armed with .50 caliber machineguns and several Avenger Anti-Aircraft HMMWVS armed with Stinger missiles. These forces were security forces however, not pitched battle forces. A Syrian Army group had been sent to their border region to keep vigil on the GIR army group in northern Iraq and insure it did not cross the Syrian frontier. When the Syrian army suddenly joined forces with that GIR group and invaded Turkey, there had not been enough time to counter it.

Captain Hanson had been left with unenviable task of trying to organize a rear-guard defense of the base with his small security detachment. It had not been enough. Once the GIR obtained air superiority over the base, using hundreds of aircraft in the process to counter the few dozen the United States had re-deployed to the base after the earlier attack, the outcome was assured. As the base was beginning to be overrun by the advanced echelon of the Syrian army group, a group that numbered over one hundred thousand personnel, Captain Hanson had ordered and led a counter attack through the advancing GIR front lines at a logistic depot that GIR forces were establishing on a portion of the base they had already occupied.

Using twenty personnel a V-150 APC, a Peacekeeper APC and one of his remaining Avenger AAW units, the Captain had achieved his aim of buying time for the retreating force, but his small force had been decimated in the process. He and only three of his team had survived, and they had been forced to retreat to the north into the hills surrounding the base.

Only later had the Captain learned that the retreating force had gotten off the base safely only to run into a much larger force of GIR airborne forces who had occupied the International Airport. A hot firefight ensued there where a portion of the retreating force made good its escape against a much superior GIR force. Only sixty-five of the over two hundred personnel involved in the withdrawal escaped. The rest were either killed in the fight or captured. Of the over one hundred personnel captured, fifteen officers and senior NCO were taken into custody for brutal questioning and the rest were summarily executed on the spot.

The Captain and his three men had escaped by the skin of their teeth, surviving by their wits and their training, hiding out by day in crevices and caves and traveling at night. They moved further north and to the east. They met up with a group of sixteen Turkish soldiers who had become separated from their unit when the GIR forces to the north overran their positions and pushed on to the east. Scavenging and keeping out of the way of the large GIR patrols and avoiding any of the largely Islamic communities, the group of twenty had slowly grown over the weeks until it numbered over sixty men. They had found some operational NATO communications gear and radios in an overrun outpost up near Goshkun that the Captain had used to contact the U.S. military. After his identity had finally been authenticated, his orders had come back.

“Perform reconnaissance, evasion and limited raids. Do not risk your command. Build a partisan network if possible to conduct harassment in the enemy's rear and disrupt logistics.”

And that is exactly what the Captain had done. He had split two of his surviving men off, both senior NCOs and had them take some of the Turkish regulars and partisans and form groups of their own, ultimately numbering over one hundred fighters each. They established courier and communication protocols. Those three groups had eventually grown to seven, and the Captain found himself commanding over a thousand fighting men within the space of four months. With those numbers and with the disruptions he began to cause, it was not long before they attracted serious attention from the GIR commanders in the area. As soon as the enemy became aware of their presence or operations, they were relentlessly hunted. But the Kurds had been playing this game for generations and were very adept at evasion and hiding.

“Boy, it’s a good thing that the GIR detection equipment is not as advanced as ours,” thought the Captain as he contemplated this. “Otherwise they would decimate us very quickly.”

But, what the GIR lacked in equipment sophistication, they made up for in numbers and ruthlessness. That was evidenced by the fact that only one of his own men was left alive. Chief Watson and Specialist Ricks had been killed, along with their entire unit, over six weeks ago in an ambush that GIR forces successfully carried out near Bayburt.

In the southern and central areas of Turkey where they had started their resistance operations, the population was not very amiable to resistance. In fact, most of the villages were welcoming the Islamic fighters unanimously. The few people who did not welcome them either kept quiet or they were slaughtered themselves, either by the GIR forces, or their own townspeople. So, Captain Hanson had moved his entire network further and further to the north and east.

As time went on, and as Allied forces fell further and further back to the west, communications became more and more sparse. He rarely had radio contact with American or any Allied forces now. Oh, they knew he was still out here, but either the range or the risk to security was too great. Most communications occurred now by courier, as this latest one had done. As he listened to the last of the courier’s message, he couldn’t help but think back on Chief Watson.

“God rest him,” thought Hanson. “He made sure he was not captured by the enemy and took as many of them with him as he and his men could.”

Now that Hanson had centered his efforts up closer to the border with Georgia and Armenia he found that more of the population was willing to resist the invading GIR forces as opposed to embracing them. In fact, Captain Hanson had made contact with some of the remaining Kurd resistance fighters in the Turkish mountains, in the northern reaches of Iraq and on the Armenian side of the border, where Captain Hanson had made two visits. There he had found some willingness on the part of the local people and even the civil authorities to support him and potentially establish a roundabout logistical route for materiel for him and his forces from Allied and U.S. forces.

Looking at the man seated with him, Captain Hanson asked, “Well Jake, what do you think?”

Chief Jake Grant was Hanson’s remaining American from his original command. Jake was an expert marksman and specialized in survival skills. The man with him was named San. San was short for Sannan. He was a Captain in the Turkish army and was Captain Hanson’s second in command or XO for their resistance forces. Over the last three months Captain Hanson, Jake Grant and every other member of the resistance group had developed deep respect for San’s leadership skills, his tenacious bravery and his fighting and planning skills. Both men had listened in silence as the courier delivered his report and as Captain Hanson had questioned him. Jake spoke first.

“Well, Cap, the way I see it this doesn’t change things too much for us. Allied forces have been falling back the entire time we’ve been out here. This message means they’ve just fallen back a little further. We have to keep on keepin’ on just like it was yesterday.”

“I still think we should develop an alternate logistic point of our own for supply along the coast. Better to have two than to put all of our apples into the Armenian thing.”

As Captain Hanson slowly nodded his understanding and agreement with the Chief’s comments, San added his thoughts.

“I agree Jake. Tactically, as far as our day-to-day operations are concerned, this does not make a lot of difference. It probably does mean that it is less likely that we will get any of the logistic support we were hoping for through Armenia, but we haven’t counted on that to date anyway.

“My concern is moral. Most of the Turks and Kurds whom we rely on for support are holding out hope that the great U.S. of A. is going to come storming back in here any day now and make everything all right. While I have my own thoughts about that, and believe that eventually your country will turn this around, this message makes it clear that such a day is not in the near future. I am afraid we may lose some of the support we rely on and we’d best prepare for that.

“Finally, I want to underscore what Jake just said about the logistic re-supply effort. I think we need to be very careful regarding the civil authorities that we have contacted in Armenia. It can surely not be long before both Armenia and Georgia feel GIR pressure to roll over. If they don’t, they will probably be invaded as the GIR seeks to get at Europe around the Black Sea. Either way, I believe that soon tremendous pressure is going to be brought to bear on those civil authorities and it will be likely that they will view turning us in, or giving leads to the GIR forces as bargaining chips of their

own. We have to take that into account when dealing with them and give them nothing to bargain with. Creating our own point on the coast would be a good contingency, Captain.”

Captain Hanson agreed. Although discussions in Armenia had gone very positively, he felt they were going a bit too fast.

“Okay guys, thanks. Jake, you take one of the platoons from our 2<sup>nd</sup> company and infiltrate to the coast well to the east of Rise and find a suitable place. San, please find someone to accompany Jake who knows that area and the people. In light of what you just said, make sure this guy understands that any local support we get has to be rock solid. He needs to be willing to bet his life on it because that is exactly what he will be doing. We need two things: a suitable cove or inlet on the coast that is remote, defensible and concealed, and a local support infrastructure that is absolutely dependable. Don’t come back with any suggestions or plans that don’t contain both.

“In the meantime, let’s get Rahib in here and finalize the planning for that raid on the GIR fuel supply depot to the west of Trabzon. My understanding is that the GIR has a full battalion over there for security and I don’t want another Bayburt debacle. We absolutely can’t afford it.”

**July 28, 03:07 local time**

**250 miles North of the Admiralty Islands**

**Southwest Pacific Ocean**

It was the largest U.S. naval strike operation in the Pacific since the March attacks and it involved the most precious assets the U.S. Navy had in theater. The USS Kitty Hawk and the USS Ronald Reagan, the only two full-deck U.S. aircraft carriers in the Pacific, were both being committed.

The USS Ronald Reagan had been temporarily stationed in the Mediterranean where the United States had five carriers operating in support of operations in the Middle East. Those carriers and their escorts had inflicted significant damage on GIR forces, but they, along with the commitment of U.S. and Allied ground forces in the area had not been able to halt the overwhelming enemy onslaught. In fact, two of the carriers, the USS Abraham Lincoln and the USS Carl Vinson along with a number of escort and support ships had themselves been damaged by massive conventional attacks requiring repairs at U.S. facilities in Italy.

The deployment of so many carriers and other military assets in the Mediterranean and the Middle East was based on decisions made at the allied summit in Iceland in February when hostilities in the Pacific had been anticipated by President Weisskopf and shared with the other Allied leaders. At that conference it had been decided to focus attention on winning in the Middle East while providing enough resource in the Pacific to hold ground against China. As a result, a number of ships and other military units normally stationed in the Pacific had been ordered to the Atlantic and on into the Mediterranean when the GIR had advanced so swiftly into Saudi Arabia.

But the conference in Iceland had not anticipated the magnitude of the conflict in either theater, or the losses the Allies and the United States in particular would sustain. Now, as a result of those losses, and for the duration of hostilities, the USS Ronald Reagan and her entire battle group had been returned to her normal duty in the Pacific. After losing three super carriers already in the war effort, the USS John Stennis, the USS Constellation and the USS Enterprise, the United States was down to nine available carriers. Of these nine, three were unavailable at present because two were in dry dock undergoing long term overhaul, including the refueling of their reactor cores, and another, the USS Nimitz, was being rushed through its final shakedown after overhaul. This left the four carriers now in the Mediterranean and the two carriers in the Pacific. It was a number that the Chief of Naval Operations was not comfortable with, given the extent of the enemy’s offensives, particularly in the Pacific. It was true that the Nimitz would rush through its trials and would be in theater around Guam within two weeks, but until that happened, he had only two carriers in the Pacific and he was afraid that even with three he was going to be shorthanded.

The Chinese were simply constructing their new vessels at far too fast a rate. They already had six of those short takeoff and landing (STOL) carriers in the water and each of them posed a serious threat to American interests and forces. Their production rate was phenomenal and it looked like they would have another four such carriers available to them by the fall if intelligence could be relied upon. The also had the Shi Liang, with its sizable air wing which was typically accompanied by at least one of the Beijing class carriers. In addition, in spite of several raids on the naval shipyards at Shanghai, the Chinese had still managed to launch and put through sea trials one of their two new full size carriers. The other had been severally damaged and its completion significantly delayed. But the new carrier, the Mao, displaced over 50,000 tons and carried a much larger compliment of aircraft than the smaller STOL carriers that were being mass produced as container ship conversions. It was against this new threat that the Kitty Hawk and the Reagan were deployed.

Intelligence indicated that the Mao and one of the new STOL carriers were sailing towards Rabaul in support of an amphibious operation landing Chinese and Indonesian troops in large numbers on Papua. According to the intelligence reports, two of the newer amphibious assault ships and literally hundreds of transports escorted by large numbers of guided missile destroyers and at least one other STOL carrier were involved in the amphibious operation. Those reports were based on

human intelligence, on over flights within the last twenty-four hours by SR-77 aircraft and by reconnaissance photos from the new unmanned, "Global Inspector" long-term reconnaissance aircraft being employed over the Pacific to make up for the loss of satellite coverage. Flying at close to 100,000 feet, equipped with thick, durable, and stealthy Mylar skins over composite structure, and able to loiter for literally days with their electronics driven by solar power while aloft at altitude, these aircraft were proving their worth.

As a result, CBT 77 had been deployed with the two carriers, the USS Essex, a Wasp class LHD vessel outfitted for the sea control mode, two Aegis cruisers, three Aegis destroyers, and four Oliver Hazard Perry guided missile frigates. In addition, four LA class attack submarines and the new Virginia class nuclear attack submarine, the USS Virginia, were also a part of the task force. With the two carriers and the Virginia deployed, literally the cream of America's naval crop was tasked with the mission of forestalling Chinese expansion in the Pacific. In addition, a number of new innovations and procedures were being incorporated into the effort.

First, an entire squadron of Joint Strike Fighters was embarked on board the USS Essex. In the sea control mode, the Essex operated as a VTOL aircraft carrier with twenty aircraft. The embarked JSF squadron was a U.S. Marine VTOL aircraft squadron whose aircraft were capable of strike and air superiority missions. In this instance, twelve of the aircraft were to be used for the inner zone airborne AAW protection for the entire task force. This would free up all of the longer range F/A-18 aircraft for strikes at sea against the Chinese task force. The JSF would be carrying a mix of four AMRAAM and two Sidewinder missiles.

The crew of the Essex was anxious to engage the Chinese. Like the USS Kitty Hawk, the Essex had been a part of the massive task force that had been sailing to the relief of U.S. forces in Korea when the Chinese had conducted their horrific surprise attack in March, moderately damaging her and killing over one hundred of her crew while injuring another two hundred. Many of her crew who had been on deck at the time had witnessed the destruction of the USS John Stennis, one of the American super carriers lost that day. They viewed the current operation as their chance to take part in some well deserved "pay back" and hoped that the upcoming operation would result in a major U.S. victory and help turn the tide of war in the Pacific.

The second innovation was aboard the Perry class frigates. They had been outfitted with a new system to help defend the capitol ships from the ravages of the LRASD supercavitating weapons. This system had been jointly developed at the Naval Weapons Laboratories at Newport, Rhode Island and Keyport, Washington and then hurriedly tested using three of the eight full sized LRASD weapons that had been recovered from the wreckage of the PLAN Guizhou. That vessel had been one of the Tactical Assault vessels the Chinese had used in attacking the U.S. mainland on March 15<sup>th</sup>. It had been sunk on that day by U.S. forces as it attempted to escape. Discovered in its wreckage had been eleven unused supercavitating LRASD devices. The twelfth had been used by the Guizhou to sink the U.S. Coast Guard cutter, the USCGS Gallatin. The Gallatin had located and attacked the Guizhou, disabling it before being sunk by the single supercavitating weapon fired by the Guizhou as the Coast Guard cutter closed on the Chinese ship. The eleven remaining LRASD weapons had netted U.S. salvage crews eight operational devices. This was accomplished when U.S. naval scientists dismantled three of the eleven devices and used them to reverse engineer the others.

The result was a new interim defensive system against the supercavitating weapons. It consisted of a line of high explosive charges that could be towed behind a frigate in lengths up to one mile and at speeds of twenty-four knots under state three sea conditions. The defensive weapons officer on the ship could vary the length, the depth (up to 50 meters) and the sensitivity of the system, which could operate either in a manual or an automatic defensive state. In automatic mode, the system itself contained both passive and active sonar sensors that were tuned to the acoustic signature of any approaching supercavitating weapon. The system would then track up to twelve approaching weapons and explode charges in front of individual threats in order to collapse their cavities. The enemy LRASD weapon then literally destroyed itself by crashing at hundreds of miles per hour into a wall of water produced by its collapsing cavity. Tests had shown the defensive system was completely successful in all three live tests that had been conducted. Computer models predicted a 94% interdiction rate for any weapon approaching an armed and activated system. It was felt that this system would be the primary defense, backed up by SH-60F Seahawk helicopters and HV-22 Osprey ASW aircraft whose Mk-50 torpedoes would then be used to interdict any "leaker" LRASD weapons that got through. It all represented a defense in depth that U.S. naval developers hoped to augment later with even more advanced and effective systems once they were developed.

Finally, the third major innovation consisted of new reconnaissance assets to make up for the almost total loss of satellite coverage. The task force was making use of the new, "Global Inspector" unmanned aerial vehicles (UAVs) that were providing reconnaissance coverage in front of the task force to a distance of 400 miles and that were able to loiter over the expected route of the Chinese task force. These high flying and stealthy unmanned aircraft were capable of relaying information to one another and back to either an AWACS aircraft or the Combat Information Centers (CIC) of all of the vessels. The information provided was capable of being directly fed into either the Aegis defense

system, or any of the Ship Self-Defense Systems employed by the fleet. The “Global Inspector” UAVs were relatively slow, but they were made of radar absorbing composite material. As an additional safe guard against radar detection, their airframe had been designed to allow the thick Mylar covering to reflect radar signals away from the enemy emitter causing the radar image of the aircraft itself to be very small, equivalent to a sparrow in size.

With this powerful force of American warships seeking a pivotal engagement with the approaching Chinese task force, Guam was left to be protected by the ground air on the island and by the tremendous force of allied surface combatants gathered there. These Allied cruisers, destroyers, frigates, amphibious assault ships and support ships were staging there for even larger action against the Chinese at a future date. This force included the bulk of the JMSDF vessels that had escaped Japan. It also included several Korean and Taiwanese vessels that had escaped the Chinese advance, and the Thailand sea control carrier, the Chakri Naruebet and her escorts that had been sent to Guam by the Thai government immediately prior to their capitulation. And it included a large number of U.S. naval vessels in the Pacific which were based there and which were re-provisioning or protecting other remaining U.S. bases in the western Pacific. In all, over eighty-five major naval combatant vessels surrounded Guam. All of them, like CBT 77 then sailing north of the Admiralty Islands, were spoiling for a fight with the Chinese sooner rather than later.

The Chinese war planners were not going to disappoint them.

**July 28, 03:07 local time**

**Combat Information Center, USS Ronald Reagan, CVN 76**

**268 miles Northwest of the Admiralty Islands**

“I’ve got a contact! Now showing what appears to be a major surface force moving out from under that cloud cover four hundred and sixty nautical miles to our west from Stratos-3.

“I’m ID’ing two Jiangwei II class frigates and two Lanzhou class guided missile destroyers.”

Admiral Ryan, the task force commander, listened as the Officer in Charge (OIC) of the four Inspector UAV aircraft announced what they had all been waiting for, for the past two days. More information about this group of ships would have to come in before they were sure that this was the prey they sought and before they announced their presence with any type of strike package. But the timing was right, and the initial disposition of vessels was in line with standard PLAN doctrine.

Admiral Ben Ryan had transferred his flag from the older USS Kitty Hawk to the Ronald Reagan as soon as she had arrived in theater ten days ago. The Ronald Reagan was one of the newest nuclear aircraft carrier in America’s arsenal. The newest was CVN 77, the George Herbert Walker Bush which incorporated quite a few of the innovations planned for CVN-78, the first of the new CVN-21 class of carriers. That new carrier, which had been slated for launch this year, had been destroyed on the ways at Newport News shipbuilding in March when the Chinese had attacked America with ballistic missiles. Admiral Ryan would never forget the briefing he gave in Washington DC late that month, after returning home from the devastation he had experienced on the high seas in the western Pacific. To see similar ruin on the ground in America, the destruction of the Capitol building, the severe damage at the White House and the carnage at Newport News had been shocking, riveting ... galvanizing.

“They had to have used GPS guidance to hit 78 so accurately,” thought the Admiral. “Probably using our own satellites at the time.”

As he reflected back on it all, he continued, “Well, hopefully in a short time, we’ll begin to give these Red Chinese SOBs the beginnings of the real payback they so richly deserve.”

As he thought this, the Admiral’s attention turned to the Captain of the Ronald Reagan who began speaking about the information that was coming in through Stratos-3, the UAV that was transmitting the reconnaissance information that had captured all of their attention.

“It’s just like we thought might be the case. Apparently they were using that storm front coming down from the Philippine Sea to cover their approach. That’s pretty thick cloud cover ... but if this is the main group, they’re coming out from under it now, hoping we have no satellites to mark them.”

As the Captain paused, the OIC for the Inspectors sang out.

“Now marking one, no two Hangzhou class guided missile destroyers! Looks like a Beijing class STOL carrier too. ... now observing at least four type SU-33 aircraft flying air cover.”

The Captain’s response was immediate.

“Okay, that ices it. Admiral, what are your orders.”

Admiral Ryan contemplated the ramifications. He wanted to wait just another few moments.

“Let’s wait another moment. We need to be sure the Mao is with this group. We need to take that big mother down too. In the meantime, start launching the package and have them gather to our north and top off. Also insure that the Essex has a maximum inner zone CAP up.”

As the Captain carried out the Admiral’s orders for the Reagan, and as the Admiral’s chief of staff relayed the orders on to the Kitty Hawk and the Essex, the officer monitoring Stratos-3 continued.

“EMCOMM on the target task force is extremely low. ... Wait! I've got a potential paint being reported by Stratos-3. Now showing active Top-Plate and Front-Dome searches.”

The new Inspector UAV aircraft carried very sophisticated imaging and electronic emission equipment. They were very capable of sensing any radar signal directed at them, or elsewhere from a targeted source. In this case, the UAV was indicating that it was being “painted” or scanned by the primary anti-air defense radar from the Chinese task force. Nobody in the CIC of the Ronald Reagan thought that the Chinese had any way to acquire Stratos-3, much less target and fire upon it. So this news, while of concern, was in no way distressing to those in CBT 77.

But, as United States Air Force Colonel Mac Mendenhall had discovered flying the SR-77 and the even more capable HR-7 over China several months earlier, it was best not to underestimate a committed enemy. The next pronouncement from the OIC of Stratos-3 got everyone's attention.

“Stratos-3 has been acquired, I repeat, Stratos-3 has been acquired. Commencing electronic warfare countermeasures and evasion.”

Seconds passed, then.

“Now monitoring a missile launch from the lead Lanzhou ... now two more launches from both Hangzhou vessels.”

Time stretched out and what was only a few seconds seemed like minutes before the flow of information continued.

“Now marking a larger vessel just coming out from the cloud cover ... one moment and we'll ID her. Azimuth and inclination are off ... this is going to take a moment ... ah, we've lost Stratos-3, I say again, we've lost Stratos-3.”

The display froze with what they had last seen. At that point, the digital map showed two Jiangwei II frigates, two Lanzhou guided-missile destroyers, two Hangzhou guided-missile destroyers, a single Beijing class carrier and an as yet unidentified and larger vessel in the center of the formation. The current course was plotted, but with each passing moment the data became more outdated.

The Admiral would not dally.

“Okay, that's the group. Order the strike package to acquire, attack and sink those carriers. Feed them the coordinates from Stratos-3 and the projected headings and potential lines of departure. At the same time assess that new missile threat. It seems obvious that intelligence failed to discover that the Chinese have a new variant of SAM on their escort vessels ... now we know. The Lanzhou and the Hangzhou class vessels just shot one of our stealthy UAV birds out of the air flying at close to 90,000 feet. I know those UAVs are limited in maneuverability and in EW capabilities, but make sure the strike package commander understands the capabilities he is going to be going up against and make sure that his EW birds and wild-weasel birds take down those emitters.”

### **July 28, that same time**

#### **Bridge, PLAN 001 Mao**

#### **380 kilometers West Northwest of Jayapura, New Guinea**

“Convey to Captain Xinhua my congratulations. That was fine shooting. He mentioned to me in April of last year the absolute need for a naval version of the KS-2+ missiles on our major combatants after he was over-flown off of Hainan Island by an American stealth reconnaissance aircraft. I concurred and passed the request to the chief of staff. The deployment of that very thing in May of this year seems to have been timely, and seems to have been exactly what Captain Xinhua required. Again, convey to him my congratulations.”

After his successful attacks on American assets in March using the new STOL carrier, the PLAN 1001 Beijing, Admiral Yao Hsu had been promoted and assigned to the new, large deck carrier, the PLAN 001 Mao as the task force commander. He had weathered the attacks on it by American cruise missiles and aircraft and seen it through to completion, launch and through its sea trials in the South China Sea. Now, he was on a critical mission for his nation, one he hoped would draw out the American carriers. By all accounts, the fact that they had just shot down that stealthy, high-flying, slow American reconnaissance aircraft indicated that the hope would be fulfilled.

Addressing the Captain of the Mao and his own chief of staff, Admiral Yao continued.

“It is assured that the Americans have located us. Take evasive action and strengthen our inner CAP with aircraft from the Shanghai. Captain, create a barrier CAP off to our east and northeast with your aircraft and insure there is adequate electronics warfare capability in the air with that group.

“Contact the regimental command of those two Backfire bomber groups stationed at Ujung Pandang on Celebes and have them immediately launch a reconnaissance in force looking to our northeast and another looking to our east. Proceed to maximum range and report any electronic emissions immediately. Have their full regimental forces ready to respond immediately on acquisition. In addition, I want four SU-33s fitted for reconnaissance flying the same general search pattern. We shall see what the Americans throw our way.

“Finally, notify high command that Operation Sea Dragon is hereby executed and that the attack on Guam can commence when we transmit the signal indicating the American attack on us.”

As the Admiral turned away to monitor the threat board and prepared to move to the Combat Control Center, he considered his flagship. The Mao and its eventual sister ship, were a more modern Chinese version of the Shi Liang, the converted Russian Varyag. Through modular and highly automated methodologies, the Chinese had started construction on two such vessels of their own and completed them in four years. One was the Mao, the other was severely damaged on its ways in Shanghai and would require months of repair before being ready to launch.

The specifications for Admiral Yao's flagship were impressive. It carried an air wing of twenty-four SU-33 high-performance, air-superiority aircraft, four SU-35 EW aircraft, four of China's new AWACS aircraft and sixteen ASW helicopters. Its weapons systems included twelve Yakhont surface-to-surface anti-shiping missiles, a battery of forty-eight KS-2+ air-to-air missiles, four 30mm CIWS guns and eight LRASD devices mounted four to the side below the main deck. The Mao was a very formidable vessel indeed and it was about to experience its combat debut against two of the very ships and weapons systems it was built to counter.

### **July 28, the next ninety minutes**

#### **The Southwest Pacific Ocean**

Over the next hour and a half, both sides implemented their plans for this confrontation. CBT 77 took almost thirty-five minutes to launch and then form a massive strike package aimed at the PLAN task force centered on the PLAN 1001 Mao and PLAN 1002 Shanghai. The American strike package consisted of thirty-six F/A-18E aircraft fitted for the surface attack role, eight F/A-18F two seat Hornets fitted for the Wild-Weasel direct radar suppression role. It also consisted of four EA-6B aircraft fitted for indirect Electronics Warfare and direct radar suppression, twelve F/A-18E aircraft fitted for air superiority and two E2-C AWACS aircraft to provide early warning and radar services. There were also three F/A-18F aircraft with buddy stores flying with the AWACS to provide additional fuel for the return trip. The AWACS and tankers would be protected by five more F/A-18E air superiority aircraft. Seventy aircraft in all.

The American carrier group launched a large CAP as well. There were twelve of the new F/A-35 JSF aircraft in the inner zone close to the carriers launched from the Essex. To the north of the group, and four F/A-18E fighters from each CVN set up a barrier CAP some one hundred and fifty miles out. To the southwest, another barrier CAP was located at a similar distance consisting of six F/A-18E aircraft. Each of the barrier CAP groups were assisted by an E-2C AWACS and an EA-6B EW aircraft. All of this left a total of fourteen F/A-18E and twelve F-35 aircraft in reserve on the carriers. Once the strike package and CAP groups were launched, there were two F/A-18Es on ready launch alert at all times on each carrier and two more on five minute launch alert on each as well.

After ninety minutes, the U.S. strike force was within one hundred and fifty miles of the expected enemy position.

While the Americans were launching their strike package and preparing their defenses, the Chinese were doing the same. Two groups of four TU-22M Backfire bombers launched from Celebes Island in Indonesia to search for the American task force. Each of these aircraft was outfitted for the reconnaissance/strike role, being packed with electronics equipment and one AS-26 supersonic sea skimming anti-ship missile. They flew as groups of two aircraft each into their respective search areas at a speed in excess of Mach-1. After ninety minutes, one group of two aircraft was on a bearing that would take it immediately behind the U.S. strike force bearing down on Mao group. Another group was within one hundred and ninety miles of the barrier CAP to the southeast of CBT 77. Of the two groups flying to the south of these first four aircraft, the northern group was on a bearing that would take it one hundred and fifty miles to the south of CBT 77 while the other group would fly almost directly over the Admiralty Islands.

These Chinese reconnaissance aircraft were the "eyes" for two regiments of TU-22M Backfire bombers consisting of thirty-six aircraft each. One regiment was armed with AS-26 Yakhont missiles. The Yakhont had a range of 300 kilometers and flew at a speed in excess of Mach-2. Its terminal attack profile was a sea-skimming approach at an altitude of less than fifty feet. It performed its own terminal guidance. Since each TU-22M bomber carried two of these missiles, the regiment was armed with seventy-two of them. The other regiment of backfire bombers was armed with the air-launched variety of the LRASD supercavitating weapons, thirty-six weapons in all. All of these aircraft were waiting for their reconnaissance to announce the location of the American task force.

While these aircraft were launching, the Mao group had launched four of its own reconnaissance aircraft. Two SU-33 aircraft were flying to the north of the incoming U.S. strike group and would be detected, but not attacked by it. The Americans correctly identified them as a reconnaissance flight and did not want to prematurely expose their own position. The other two SU-33 aircraft flew well to the south of the U.S. carriers and were some two hundred and eighty miles distant from them, to their south southwest after ninety minutes.

While all of this was occurring, the Chinese had launched four regiments of attack aircraft at Guam. These consisted of a regiment of TU-16 Badger bombers and a regiment of FBC-7 fighter-bombers from the repaired base at Kadena, Okinawa. These were armed with two Yakhont missiles

each, for a total of one hundred and forty four missiles. Another regiment of TU-22M backfire bombers was launched from the recently occupied Clark airbase on the Philippine Island of Luzon, and a final regiment was launched from Japan. These aircraft carried a mix of the air launched version of the LRASD weapon, thirty-six weapons altogether, and more AS-26 Yakhont missiles. The Backfire bombers, being much faster, but also having to approach much closer, circled far to the north to come at Guam from the northeast while the Badger and FBC-7 bombers approached Guam from the northwest. After ninety minutes, these aircraft were within three hundred miles of the island.

On Guam, the Americans had a barrier CAP up one hundred and fifty miles to the west of the island that consisted of eight F-15C air superiority fighters. Another CAP was located directly over the island consisting of eight more F-15C eagles. There were a total of twelve AV-8B Harrier aircraft also flying CAP from the Thai carrier and eight F-35 JF aircraft off of the USS Bonhomme Richard near the island. Guam had four F-16 Falcons on ready launch alert on the main airfield on the island while two E3-B Sentry AWACS aircraft were airborne, one to the west and the other directly over the island, as the Chinese strike packages approached.

## Chapter 18

### The Battle of the Southwest Pacific JULY 28

**July 28, 04:45 local time**

**Off of New Guinea, North of the Admiralty Islands and Guam**

**U.S Strike Force Approaching the PLAN Task Force**

“Tiger Lead, this is Wild Willy-1. Imperative you hold off those bandits! We’re still short the window.”

The flight leader for the American Wild Weasel package was communicating with the flight leader of the CAP group as his flight of F/A-18F aircraft approached the Chinese task force off New Guinea. He was asking the fighters flying patrol over him to make sure that the Chinese SU-33 aircraft that the CAP was currently engaging were kept off of his aircraft at all costs as he approached his attack point.

“I roger that Wild Willy-1. Bandits will not break through. We are fully engaged. Out.”

As he approached ever closer to the Chinese task force, Wild- Willy-1’s back seat announced multiple Top Plate and Top Dome radar signatures tracking his flight. These were originating from the Hangzhou destroyers and from both of the PLAN carriers in the Chinese formation. His attack profile called for Wild Willy flight to draw enemy missile fire and then to return fire with his own High-speed Anti-Radiation Missiles (HARM) at the radar emitters on the enemy ships. The HARM missiles had a top speed of almost Mach-3 and the theory called for those missiles to reach the radar emitters and guidance on the enemy ships before the enemy missiles could reach his aircraft. The newest variety of the HARM missile had a range in excess of eighty miles and would home on jam, and home on cutoff should the Chinese turn off their emitters. Wild Willy-1 wanted to get to the optimal range of fifty miles before firing, which was still almost two minutes away.

Each of his high performance F/A-18F, two-seat aircraft carried four HARM missiles, making a total of thirty-two missiles with his flight. In addition, he was accompanied by two EA-6B Prowler electronic warfare aircraft that carried two HARM missiles each. This meant he had a total of thirty-six HARM missiles to fire at the Chinese ships. The Prowlers also carried extremely powerful jamming and scrambling equipment that the enemy radar and communications would have a very tough time burning through. At least this was the theory as he got closer and closer to the enemy, and it appeared to be working.. But it was a theory and a profile that did not account for the new navalized version of the Chinese KS-2+ missile, or the advances the Chinese had made in countering America’s electronic warfare packages.

As Wild Willy-1 closed to sixty miles, the Chinese vessels launched a total of twenty-four KS-2+ missiles at his flight of eight F/A-18F and two EA-6B aircraft. With a top speed approaching Mach-4, the KS-2+ missiles were faster than the American aircraft had planned on.

Wild Willy-1’s weapons and electronic officer announced from the back seat of the aircraft.

“I have multiple missile launches from the Chinese task force. Now tracking twenty ... no twenty-four inbound missiles. Speed ... Holy Cow, speed is Mach-4!”

The flight leader wasted no time ... he had none to waste.

“All aircraft, launch, launch, launch! Then hold steady until those HARMs get their own lock.”

In the tense, pressurized situation, some communications protocol broke down.

“Tim, go to full power with your jammers!”

Very quickly another thirty-six missiles were in the air, these targeting the Chinese radar systems. It would take only ninety seconds for the Chinese missiles to reach Wild Willy flight, while it would take almost two minutes for the HARM missiles to travel the same distance to the Chinese ships. Wild Willy-1 was betting his HARMs would get a good lock well before the Chinese missiles reached his flight so he could take evasive action. His calculations and his “gut” told him he would have some time, and he was right, but not as much time as he had hoped.

With their missile warning tone and light flashing more and more incessantly, the HARM missiles finally had a terminal lock when there were only six seconds remaining before the KS-2+ missiles reached the American aviators.

“Break off, break-off! All aircraft take evasive action!”

Long hours of training over several years paid off for the American aircraft as they broke off their attack profile. Each pilot performed the “break” maneuver flawlessly and there were no mid-air collisions. The full power jamming of the EA-6B Prowler aircraft and the violent maneuverability of the F/A-18F aircraft allowed some of the aircraft to safely escape the twenty-four missiles that were targeting them. As the KS-2+ missiles bore down on the fleeing and violently jiggling aircraft, eight of the missiles were successfully diverted by the EA-6B jamming. Another ten were successfully thrown off target by the jiggling, twisting and turning maneuvers of the American pilots. But eight

missiles struck home and six of the ten American aircraft fell from the sky, one EA-6B Prowler and five F/A-18F Hornets. Wild Willy-1's aircraft was among those that were destroyed.

His wingman immediately picked up command and broadcast over the command net.

"This is Wild Willy-2. Wild Willy-1 is down! I repeat, Wild Willy-1 is down! Now conducting visual BDA of our attack."

The thirty-six HARM missiles were reaching their targets at that same moment. More KS-2+ missiles had been launched at the incoming American missiles, but with the continued jamming of the remaining Prowler and the short interval left to them for intercept, only four of the HARMs were knocked down. At this point the CIWS on the Chinese ships activated, in turn emitting their own radar signals, and another ten U.S. missiles were downed. But twenty-two of the missiles struck home, six of them diverting to CIWS radar targets at the last moment. The results were effective, but not as effective as the Americans had hoped. All of the Top Plate and Top Dome radar on both Hangzhou destroyers and on the Shanghai carrier were shredded and put out of commission. But one of the Lanzhou destroyers and the Mao were relatively untouched outside of some debris and burning fuel that had showered portions of their decks. In addition, four CIWS weapons were destroyed within the Chinese task force, one on the Mao, two on the Shanghai and one on the Hangzhou itself.

As Wild Willy-2 reported his analysis, he handed off control to the rapidly approaching F/A-18E attack aircraft entering the corridor that Wild Willy flight had cleared for them. As Wild Willy-2 made his egress, he contacted the leader of the main strike package, Venom flight lead.

"Venom Lead, the door isn't wide open, but the screen door has been blown off and there's a wide crack for you to punch through. Good shooting!"

The thirty-six aircraft of Venom flight had already been reduced to thirty as a result of eight SU-33s that had broken through the CAP and attacked the left side of the formation. Six F/A-18E aircraft had been downed before those SU-33s fell to the missiles of the pursuing F/A-18E aircraft from the CAP and to some missiles from Venom flight itself. Now, Venom flight was closing on the Chinese task force with each aircraft carrying four AGM-84C Harpoon anti-shiping missiles, or four AGM-154C Joint Standoff Weapons (JSOW). This provided for a total of 120 missiles that would soon be launched at the Chinese task force.

As the Venom flight leader approached to within seventy miles of the Chinese task force, he was informed by his AWACS controller that the Chinese were launching missiles against his aircraft. He immediately ordered his entire flight to launch their missiles and the air filled with American weapons targeting the Chinese task force. He had allocated a total of fifteen Harpoons and fifteen JSOW missiles for each carrier, fully half of the missiles available. Another eight Harpoon and eight JSOW missiles targeted each Hangzhou destroyer. Four Harpoon and four JSOW missiles targeted each Lanzhou destroyer and finally, three of each missile were targeted on the Jiangwei II class frigates.

Since these missiles were all fire and forget munitions once their target coordinates had been locked in, Venom flight immediately turned and took evasive action, using afterburners to put as much distance between themselves and the incoming missiles as possible. Despite their best efforts, the eighteen KS-2+ missiles overtook Venom flight and four more F/A-18Es fell from the sky.

The American missiles flew at just under 600 miles an hour, meaning they covered six miles every minute. The Chinese defense was digitally linked between the more modern Chinese ships, the Lanzhou, the Hangzhou and both aircraft carriers. Being undamaged from the anti-radar attack, the Mao was able to control the anti-missile engagement for the Chinese task force. While not nearly as effective as the latest version of the American Aegis system, the Chinese system nonetheless allowed the Mao to launch KS-2+ missiles from all of the destroyers and both carriers. The only automated reload capability for AAW missiles in the Chinese task force existed on the Shanghai VTOL carrier and the Mao itself. Thus, after the first two salvos of missiles, only the Shanghai and Mao were able to continue launching missiles in the effort to shoot down the approaching American weapons. Two salvos of twenty-four missiles and two other salvos of sixteen missiles were launched by the Chinese. These eighty Chinese anti-missile missiles destroyed forty-eight American missiles. Then the remaining ninety-six American anti-shiping missiles came into CIWS range. The CIWS systems on the Hangzhou, the Shanghai and the Mao were most effective. But one of the CIWS weapons on the Mao and two of them on the Shanghai had been destroyed earlier in the engagement by the HARM missiles of Wild Willy flight.

The Shanghai had twenty-one missiles targeting it when its two remaining CIWS systems activated. These two high-speed, high-capacity 30 mm gun systems destroyed six American missiles. But seven Harpoon missiles and eight JSOW missiles impacted the Shanghai raking her from stern to stern. Six of the missiles penetrated into the hangar deck creating a conflagration that could not be quenched and rapidly spread to critical munitions and fuel storage areas of the ship producing tremendous secondary explosions. The mortally wounded carrier immediately slowed and began listing to its port side where the majority of the missiles had impacted.

The Mao had eighteen missiles targeting it when all four of its 30 mm CIWS weapons activated. These weapons produced a veritable "wall" of high velocity metal that the American missiles had to fly through to get at the Mao. Nine American missiles were destroyed. But another nine missiles

impacted the newest Chinese carrier in their fleet. Six Harpoon missiles impacted the Mao on its starboard side just above the waterline along a span two hundred feet long. Four JSOW missiles impacted just to the rear of this grouping near the aft portion of the ship and higher on the hull, three of them penetrating the hangar deck and setting off large stores of munitions being gathered there for an anticipated Chinese strike mission later that day. Although not as quickly apparent, the Mao was also mortally stricken and began to slow in the water. Despite very innovative watertight designs incorporated into the modular design, and despite the use of strengthened steel within the hull, the strikes along the two hundred foot span of the starboard side let in tremendous amounts of sea water and the Mao began to list dangerously while she burned.

Commander Jim Stevens, the Air Wing commander of the USS Ronald Reagan and the Venom flight leader made a sweeping circle back towards the Chinese task force after successfully evading the Chinese KS-2+ barrage. As he observed the results of the overall attack he announced his own initial damage assessment to the USS Ronald Reagan over the command net. It was heard by all of the wing leaders, by the AWACS controllers and by the bridge and CIC officers monitoring the attack. They were words that would be repeated many times over in the following years when speaking of the battle.

“Mr. President, scratch two Chinese flattops!”

In addition to the fatal damage inflicted upon both Chinese carriers, mortal damage was also inflicted upon both Jiangwei II frigates, one Lanzhou destroyer and one Hangzhou destroyer by the American attack. The other Hangzhou destroyer, the PLAN 136 Hangzhou was moderately damaged by two Harpoon missiles that were detonated just meters away from the ship. The other Lanzhou destroyer was untouched. In addition, a Shenyang guided missile destroyers in the task force escaped damage.

As a significantly reduced American strike force departed, it left a decimated Chinese task force mostly dead in the water, listing heavily and burning. Before the day was over both Chinese carriers, two destroyers and two frigates would sink beneath the waves. Almost six thousand Chinese sailors were killed and another twenty-three hundred wounded in the attacks. The American strike force suffered a total loss of six F/A-18F aircraft ten F/A-18E attack aircraft, six F/A-18E fighter aircraft, a total of twenty-two out of seventy aircraft. The deadly exchange rate favored the U.S. Navy ... at least up until that point.

As a severely wounded Admiral Yao transferred his flag to Captain Xinhua Zukang’s destroyer and was carried on board, past the Captain he requested that the stretcher-bearers pause. When they did, he motioned for the Captain to lean close to him. When Captain Xinhua was close, the Admiral whispered to him.

“Captain, I can only hope that our part as the lure in this operation was worth the cost.”

### **Barrier CAP and Blocking Force west of U.S. CBT 77**

One Chinese reconnaissance group came upon the U.S. barrier CAP to the west of CBT 77. This CAP was located in the vicinity of a U.S. Navy Oliver Hazard Perry frigate and a Arleigh Burke class destroyer that were operating as a blocking force well out on the threat axis away from the main body of CBT 77. Sensing the presence of an American E-2C AWACS aircraft and so many fighters, and sensing the distinctive signature of the powerful Aegis radar and defense system of the Burke destroyer, the Chinese reconnaissance group assumed that they had found the main body of the American task force. Before the American barrier CAP could shoot both aircraft down, they successfully radioed in their coordinates.

Forty-two minutes later, after all strike aircraft had been launched from Celebes and were traveling in excess of Mach-1 towards the first set of coordinates, a second reconnaissance group made another contact. This was two of the SU-33 aircraft launched by the Mao. From due south of the American task force, they had proceeded to execute a search pattern that ultimately brought them within range of the E-2C flying over the main body of CBT 77. When the Chinese aircraft electronic sensors passively picked up the E-2C, they climbed to a much higher altitude and went to maximum speed along the bearing of the E-2C contact. Extended range standard missiles were launched at these aircraft as they came within one hundred miles of the task force. One was downed at eighty miles, but the second avoided the initial salvo and proceeded on towards the American vessels. Miraculously, the second SU-33 also avoided a second salvo of standard missiles and approached to within forty miles of the task force before succumbing to a combination of Standard and AMRAMM missiles launched by an American JSF aircraft and an escort in the main body of CBT 77. Although this aircraft never observed any American vessels directly, electronically it did detect significant information. Before being killed, the pilot reported back the detection of multiple Aegis vessels, another American AWACS aircraft and the launch of those AMRAMM missiles. This second contact did not go unnoticed by the Chinese controllers on Celebes. In particular, at a hurriedly called briefing, the chief of staff of the Chinese General in charge of the air attack on the American carrier task force opened the briefing.

“Alright, here’s what we have. Right now we have both regiments split into three groups and approaching Contact-1 from the northwest, from the west and from the southwest. We have a single Aegis vessel and AWACS positioned roughly here.”

As he pointed to a designated location titled “Contact-1” on his map, he continued.

“Then, a little over forty minutes later, a flight of two reconnaissance SU-33s launched earlier from the Mao, reported another AWACS contact here.”

He pointed to another position on the map, well to the east of the first and a little further north, labeled “Contact-2”.

“Before losing contact with the last aircraft, he was able to penetrate to this location here, reporting multiple Aegis contacts, strong AWACS presence and finally, American AMRAAM missile launches.”

Sliding the marker for Contact-2 to a position about forty miles north of the second contact, the General went on.

“I believe this is the main body.”

The Chinese General in charge of the operation nodded his head in agreement. Looking around at the assembly of officers, he issued his orders based on this latest information.

“Have sixteen of the aircraft from the 32<sup>nd</sup> regiment carrying Yakhont missiles continue towards contact-1 and attack. Have the other twenty aircraft from that regiment swing further to the north and then approach Contact-2 at maximum speed and altitude.

“Have twelve of the aircraft from the 23<sup>rd</sup> regiment carrying the LRASD weapons continue towards contact-1 from the south east, but have the other twenty-four of those aircraft follow the same rough course as those SU-33s and approach Contact-2 flying on the deck.”

The engagement proceeded as the Chinese General had outlined. As sixteen aircraft from the 32<sup>nd</sup> Regiment approached the western barrier CAP that were holding position over the Arleigh Burke class guided missile destroyer and the Oliver Hazard Parry class guided missile frigate, the E-2C AWACS aircraft picked them up on radar. The E-2C immediately vectored six F/A-18E fighters to intercept them. All of these aircraft were carrying the very capable U.S. AMRAAM missile for longer-range engagements. The AMRAAM had an effective range of seventy miles. This meant that the intercepting American aircraft had to approach that close to the attacking Chinese aircraft before engaging them. It also meant that the Chinese aircraft got all that much closer to the two American ships before they were attacked. With no more F14s in the fleet, and more importantly no more of the extremely long range Phoenix missiles, it was a geometric equation in three dimensional space that was to prove costly for America and opportune for the Chinese.

Almost simultaneously, approximately 200 miles to the west of the small American formation, the American aircraft locked on and fired twenty of their thirty two anti-aircraft missiles at the approaching Backfire bombers while the leading TU-22M aircraft acquired the two American ships. When the Chinese aircraft acquired the U.S. naval vessels, they began launching their AS-26 Yakhont cruise missiles. More than two minutes before any American anti-aircraft missiles arrived, all thirty-two Yakhont missiles had been launched.

The Chinese missiles leveled off at an altitude of several thousand meters and accelerated to over Mach-2. Once the general coordinates for the target had been communicated, the Yakhont was a “fire and forget”, self-guided missile. As in previous engagements, what made it so dangerous was its terminal attack profile. From several miles away, the missile would drop to an altitude of 15 to 50 feet and sea skim into the target at over Mach-2.5. This represented the latest anti-shipping missile technology available to the Chinese where the missile was now license-built. They had been specifically designed by the Russians, and improved upon by the Chinese, to penetrate the vaunted American Aegis system.

Cries of, “Vampire! Vampire! Vampire!”, rang out in the cockpits of the American aircraft and in the CIC of the two American vessels. Patched in through digital link, the Combat Information Centers of the ships in the main body of CBT 77 saw a little more dispassionately what the officers under direct attack were experiencing.

The American CAP aircraft vectored towards the Chinese Backfire bombers had expended most of their anti-air missiles in the hopes of destroying the Chinese aircraft before they launched. Even though their missiles began to take their toll of the Chinese bombers, the American pilots were now concentrating on the rapidly approaching threat to the two ships stationed here with them to protect the main body of CBT 77. Their last twelve AMRAAM missiles were launched in an effort to intercept the Yakhont missiles and the pilots then tried in vain, through the use of their afterburners, to position themselves for an opportunity to intercept more Chinese missiles with their sixteen AIM-9X Sidewinder missiles.

As nine of the sixteen TU-22M aircraft fell to the initial attack of American anti-aircraft missiles and as four Yakhont missiles were downed with the second barrage of American missiles, the opportunity passed for further interception by the American CAP. The American pilots and controllers realized that the remaining Yakhont missiles were simply too fast for the American aircraft to position themselves for any further intercept. Now it would be up to the Aegis system on the Burke

class destroyer to direct the fire of its own standard missiles and those from its accompanying Oliver Hazard Perry guided-missile frigate.

The Vertical Launch System (VLS) on the Burke virtually exploded as the Yakhont missiles came in range and it began launching missiles from its forward and aft cells of standard missiles. At a distance of over eighty miles, the Burke class destroyer began launching two missiles at each Yakhont missile and then calculating the next intercepts and doing assessment as the prior missiles reached their intercept point. With closing speeds approaching 5000 miles per hour, the first intercept occurred in just under one minute. When the Aegis system determined that the first launch of fifty-six missiles had accounted for eleven more Yakhont missiles, the system allocated another two-to-one mix and launched thirty-four standard missiles from a range of fifty-five miles.

The second salvo of American missiles resulted in another seven Yakhont missiles being destroyed, leaving ten missiles inbound. At this point the Burke had only six missiles left in its magazine and it launched all of them. Immediately, the Aegis system then began drawing missiles from the much slower rate of fire Perry class frigate, which had a single-arm launcher that had to be automatically reloaded from a below deck magazine after each launch. A seventh missile was launched with the six, and then the system began launching a single missile every four seconds from the Perry class frigate. The seven-missile barrage accounted for another two Chinese missiles. Before the Chinese missiles dropped out of the Perry's engagement envelope when they began performing their terminal maneuver less than a minute later, another two missiles had been downed, leaving six missiles approaching the ships at an altitude of 20 to 30 feet and Mach-2. Four were targeting the Burke class destroyer and two were targeting the frigate.

The American Phalanx CIWS system was an effective weapon designed specifically to target terminal phase missiles or low flying aircraft attacking a ship. But the speed and altitude combination of the Yakhont missile was purposefully designed to be on the outer fringes of the CIWS engagement capability. Upgrades to American software had attempted to offset this, but no matter how you looked at the equation, a Mach-2.5 approach pitted against a weapon with a range of only 1.5 miles determined the basic parameters. In those three seconds that the system had to react, two of the four missiles targeting the Aegis destroyer were shot down and one of the two missiles targeting the frigate was destroyed. The following explosions and fires left both ships afloat but severely damaged and burning, making slow headway back towards the main body of the task force.

Three minutes later, a new threat warning was issued and the AWACS aircraft vectored three of its last four CAP aircraft towards it. These were the twelve TU-22M aircraft of the Chinese 23<sup>rd</sup> regiment that were approaching at close to Mach-2 and flying only fifty feet off the water themselves. Coming in as four groups of three from different directions, they arrived several minutes before relief aircraft launched from the Kitty Hawk and Ronald Reagan could arrive. The CAP aircraft accounted for two aircraft each from the three groups of three, leaving a total of six aircraft approaching. The remaining standard missiles from the Perry class frigate accounted for only one other TU-22M aircraft and five Chinese bombers penetrated closely enough to launch their LRASD weapons at the damaged American ships.

Five supercavitating LRASD weapons immediately boosted to rocket power and closed on the American vessels. Three of them targeted the Burke destroyer, one targeted the Perry frigate, and the final weapon detected and targeted a U.S. submarine lurking four miles to the east of the two ships. It was the USS Virginia, the latest American attack submarine and the namesake for that new super-quiet, stealthy class of nuclear powered submarines.

In a foreshadowing of larger events that would follow, the Perry frigate was positioned well to employ the new defensive system against the attacking weapons. But the speed and electronics had been degraded by the Yakhont missile attack, and the devices targeting the Burke destroyer were not coming in abreast of one another or from the same attack vector. The system worked as advertised against two of the weapons whose line of attack intercepted the defensive line of charges, exploding them both with dramatic, thunderous explosions producing a huge volume of water that was thrown into the air at each location. But the Perry frigate itself, slowed by the damage it had already sustained, was struck by the device targeting it and literally blown out of the water amidships, breaking its back and sending it to a fiery, watery grave with all hands within two minutes.

The final Chinese LRASD device targeting the Burke destroyer was not attacking from a position that ran across the Perry defensive line, which itself was being pulled down with that stricken ship. This last device ran true and fast towards the destroyer, impacting the aft third of the destroyer just below the helicopter hangar that had been built into the latest block of Burke destroyers. As the water and debris rained down, it became clear that the aft portion of the ship had been blown apart and the stern end of the destroyer was open to the sea. As the majority of the forward portion of the crew not killed or injured by the earlier Yakhont blasts began abandoning ship, and as the helicopter assigned to the destroyer hovered nearby, the destroyer settled rapidly into the water and sank twelve minutes after being struck.

Before that happened, approximately three minutes after the Burke destroyer was hit, the survivors making their way off the ship and those already in the water had their attention diverted for a

moment to look to their west. There, a tremendous bulge in the ocean rose up and broke the surface with a boiling, foaming and bubbling caldron. None of those witnessing it at the time know what it represented. What they had witnessed, before turning their attention back to their own immediate survival, had been the death of the American attack submarine, USS Virginia, the namesake of the newest and most advanced nuclear attack submarine class in the world. Until the weapon system that destroyed it was more effectively countered, those survivors had also witnessed an end to one of America's best hopes for quickly reversing the current tide of naval warfare in the Pacific and elsewhere in the world. Lu Pham's calculations and adjustments to the targeting firmware on his LRASD inventions had just proven successful.

### **The Ordeal of U.S. Navy CBT 77**

"Mr. President, scratch two Chinese flattops!"

The words from Commander Stevens came back into Admiral Ryan's mind as the engagement off to his west ended. The euphoria of that earlier moment had been blunted by the stark realization that they were still in a serious engagement with a committed and dedicated enemy. It was an enemy who had just destroyed two extremely capable surface vessels critical to the overall protection of CBT 77 while many officers here in the main body had been celebrating.

As the Admiral weighed this against their own accomplishments of the day, he soberly pondered another piece of information that had come out of that engagement off to his west.

"We may well have lost a third vessel if those reports are accurate. We'll know soon enough, but if it's true, it may represent perhaps the most telling factor of this entire engagement."

Everything was back to all business now as Captains and air wing commanders aboard the Ronald Reagan and Kitty Hawk began assessing their assets and the positioning of them. Their barrier CAP was just now being reinforced to their west, but the surface force out there operating in conjunction with that CAP and serving as their blocking force had been destroyed. The detection by that SU-33 off to their south was ominous and portended more attacks on the task force. To counter this, another barrier CAP was being established directly to the south by applying the ready aircraft and three of the aircraft off to the north. This was occurring as the task force was in the process of recovering the aircraft from the earlier strike that had proven so successful against the Chinese task force off of New Guinea. As all of this was being put into motion, threat warnings began to sound as the barrier CAP AWACS informed the task force of an approaching raid from their north. Within five minutes, another warning was sounded regarding an approaching raid from the south.

CBT 77 was much better positioned and much better armed than the small blocking group off to the west had been. With barrier CAPS in place, with the inner zone CAP up and with three fully functional Aegis vessels, the air defense was set up to be optimum. For protection against sub-surface threats, in particular against the LRASD weapons, the battle group was as prepared as possible. Three Perry class frigates were in position with their defensive lines deployed in front of all threat axis. Six HV-22 aircraft and eight SH-60F helicopters were positioned between the Perry's and the main body to target their own Mk-50 barracuda torpedoes against any leaker devices that might get through the defenses provided by the frigates.

As the twenty TU-22M aircraft from the Chinese 32<sup>nd</sup> regiment approached from the north, a virtual repeat of conditions surrounding the attack against the two American vessels to the west occurred. The Chinese aircraft were able to penetrate deeply enough to launch their missiles before American anti-aircraft missiles could reach them. Later, these two experiences would cause American war planners to reassess their strategies with respect to placement, fueling and endurance of American barrier CAPs around aircraft carriers. They would also cause the planners to immediately recommend emergency funding for the Advanced Long-Range Anti-Aircraft Missile (ALRAAM). But none of that would benefit CBT 77. As forty Yakhont missiles flew towards the fleet, it was left to the Aegis system to use the defense in depth strategies available to it. And it worked well.

The standard missiles from the two Aegis cruisers and the two Aegis destroyers did not run out. They were able to fire four full two-to-one salvos at the Chinese missiles before they passed into the inner zone. Here, the Admiral wisely ordered his forces to not use the anti-air missiles of the inner zone CAP aircraft to intercept the remaining Chinese missiles. Instead, the Admiral ordered that defenses against the nine "leaker" missiles be shifted to the shorter range RAM and Sea Sparrow missiles available on several of the ships. These defenses downed all but four Chinese Yakhont missiles before they came into the CIWS envelopes of the individual ships targeted. One of the missiles targeted a Perry class frigate and the other three targeted the Kitty Hawk, the Ronald Reagan and the Essex respectively.

The Perry class frigate took a hit on its bow. While not fatal to the ship, fifteen members of the crew were killed and another eighteen injured and the speed of the frigate was reduced significantly. This caused the frigate and its protective defensive line to lag the formation as it slowed due to the damage to its bow.

All of the other missiles were destroyed, although the one targeting the Ronald Reagan blew up close in on the starboard side and rained fiery fuel and debris on a flight deck that was crowded at the

time with the just-landed aircraft from Venom flight. Three of those aircraft exploded on deck as fiery debris punctured their fuel tanks and set off their ordinance. The resulting explosions of aircraft and fuel killed thirty three flight deck personnel and five crew members and closed down flight operations as the fire on deck burned out of control.

While this was occurring, the twenty-four LRASD carrying aircraft of the Chinese 23<sup>rd</sup> regiment approached from the south. Coming in low to the deck and at an angle that was inopportune for a direct intercept by the barrier CAP to the south, sixteen of these twenty-four aircraft were able to penetrate beyond the barrier CAP and approach the main body of CBT 77. They were met by the aircraft and missiles of the inner zone CAP, the F-35 JSF aircraft that proved their worth in this, their first major engagement. Of the sixteen aircraft approaching at close to Mach-2 and at an altitude of only forty feet, the inner zone CAP brought down fourteen of them. Six of these were destroyed at the last possible moment as they performed braking maneuvers preparing to launch their LRASD weapons. The last two of these aircraft were the only ones that were able to launch their LRASD weapons at the main body of CBT 77. One was launched at the Ronald Reagan, the deck of which was engulfed in flame at the time, but that was operating at flank speed. The other was launched at the USS Essex that was steaming on the aft end of the formation.

Both LRASD weapons immediately ignited their rocket engines and surged forward. The device targeting the Ronald Reagan tracked along an intercept path that took it right through the defensive line being towed by one of the Perry class frigates. The defenses worked exactly as designed and, as with the attack on the Burke class destroyer earlier in the engagement, the supercavitating weapon was destroyed as an explosive charge ignited in its path and as the cavity through which the weapon was "flying" collapsed.

The LRASD device targeting the USS Essex attacked on an oblique intercept course for that vessel. On that side the Perry class frigate that had been damaged by the Yakhont missile was providing the defensive screen for the Essex. That ship had fallen behind the formation in the few moments since it had taken the missile strike and its defensive line had fallen back with it. The result was a pivotal quirk of warfare: an unforeseen, unplanned failing that by the remotest chance provides opportunity for one side or the other. In this case, that single LRASD weapon found the opportunity for the Chinese and rocketed through the hole in the defense barrier for the Essex. The pilot of a SH-60F helicopter close-in to the big Amphibious Assault vessel turned Sea Control Carrier saw the approaching threat and attempted to intercept it according to the new doctrine for "leaker" supercavitating weapons. He dropped his Mk-50 barracuda torpedo in front of the supercavitating device, but from an angle to its left.

The American torpedo tracked and exploded just behind the LRASD and did not destroy its cavity. The resulting turbulence was enough to perceptibly deflect the course of the weapon, but it was too close to cause it to miss the Essex. Towards the fore portion of the ship, immediately aft of the large "2" painted on the side of the ship behind the anchor, a tremendous waterspout and explosion erupted. Two F-35 aircraft in a ready launch position were tossed up into the air and overboard by the violence of the explosion. Many of the crew on the flight deck near that side of the ship at the time were also knocked overboard. Secondary explosions below decks began to violently shake the vessel. Out of control fires in the area of the rent made their way upward, ultimately reaching the hangar deck and fuel storage, causing further explosions. Within ten minutes, the entire forward portion of the ship, from the island forward on the port side was engulfed in flame.

The big vessel visibly slowed and ultimately went dead in the water. A Perry class frigate and a Burke destroyer stood in close by to render assistance. Twenty-seven minutes after the attack the Captain of the Essex ordered "abandon ship". Over 2200 members of the crew were either rescued from the ship itself or from the water. Over 800 died. In the dramatic last moments, as the ship settled by the bow, two F-35 JSF aircraft and three SH-60F Seahawk helicopters, the choppers packed with survivors, lifted vertically off of the deck only moments before water washed over it and the angle became too steep to allow for safe departure. Those sailors and pilots were among the very last to be rescued from the ship.

If the Battle of the Southwest Pacific had ended there, at the end of the exchange between the Chinese task force and aircraft, and the American task force, there is no question but that a significant tactical victory would have been achieved by the Americans. They had sunk two Chinese aircraft carriers, two Chinese destroyers and two Chinese frigates compared to a loss of one U.S. destroyer, one U.S. frigate, one U.S. submarine and one U.S. Amphibious Assault ship configured for the Sea Control role. In addition, the Ronald Reagan had been damaged and would spend six days in repair in the Marshall Islands. In the air, the Chinese lost almost one hundred aircraft compared to twenty-four in the air for the Americans and another eight onboard the Essex. In tactical terms it was a two for one advantage to the Americans in terms of carriers. In strategic terms, the successful use of the LRASD weapon and its new modification against the USS Virginia was a significant advantage for the Chinese that would play out over the next several months.

But, that exchange was not the end of the Battle for the Southwest Pacific. The air assault on Guam and the massive U.S. and allied shipping interests assembled there began only fifteen minutes after the USS Essex sank beneath the waves.

### **The Attack on Guam**

The Chinese employed tactics in the air strike against U.S. forces on Guam similar to those that the GIR had employed the previous November against U.S. forces at the U.S. air base at Incirlik, Turkey ... and they did it for basically the same reasons. The tactics were simple and brutally direct. *Use overwhelming numbers and do not be afraid to lose a significant portion of them to achieve the goals of the operation.* These tactics were consistent with the psyche and dogma of both the Islamic and Chinese underlying cultures, which supplied an almost inexhaustible, supply of willing adherents to serve as fodder for the tactics.

The reasoning was equally direct and straightforward. The Chinese required that Guam be eliminated as a forward staging base for American military power. It was simply too close and too strategic, and posed too great a threat of allowing the Americans to strike at the flanks of planned Chinese operations in New Guinea, in the Solomon Islands and ultimately against Australia.

In order to accomplish their goals, the Chinese planners had developed an operation designed to draw off the American carrier force known to be near Guam by presenting them with a target too tempting to ignore. The Shanghai and Mao served as the bait for this operation in much the same fashion as Admiral Ozawa's Japanese carriers had served to draw off the American fast carriers of Halsey's Third Fleet during the Leyte Gulf engagement in World War II. The Chinese war-college and their war planning specialized in the study of operations against the American military and American mentality. It sought to capitalize on what it viewed as success in that study and learn from the failures. The Chinese viewed the World War II engagement at Leyte Gulf as a classic success in tactics, but a failure in implementation.

In that engagement during World War II, Admiral Ozawa's decoy carrier group had successfully drawn off Halsey's fast carrier force from covering the Philippine Islands. In the process the Japanese carrier force was decimated. But it had served its purpose when Japanese Admiral Kurita's powerful center force had appeared unmolested off of Samar on its way to destroy the large American anchorage of transports, tankers and supply ships in Leyte Gulf. The resulting battle found Admiral Clifton Sprague's group of six escort carriers screened by three destroyers and four destroyer escorts as the only force standing between Kurita and the anchorage. Pitted at close range against Kurita's four battleships, six heavy cruisers and six destroyers, Sprague's force should have suffered a lopsided, overwhelming defeat. But that defeat was turned into a successful American containment and victory due to the ferocity of the U.S. destroyers attacking into the teeth of the Japanese battle fleet. In his recollections of one of those attacks, the commanding officer of one of the tiny destroyer escorts spoke of his men.

*"To witness the conduct of the average enlisted man on this vessel, with an average of less than one year's service, would make any man proud to be an American. The crew were informed at the beginning of the action of the C.O.'s estimate of the situation. That we were fighting against overwhelming odds from which survival could not be expected, during which time we would do what damage we could. In the face of this knowledge the men zealously manned their stations and fought and worked with such calmness, courage and efficiency that no higher honor could be conceived than to command such a group."*

After sinking two of the escort carriers, two of the destroyers and one of the destroyer escorts, the Japanese had suddenly retired having suffered the loss of three heavy cruisers in the exchange.

In analyzing that battle, the Chinese believed that the Japanese had executed their plan very ably and created a situation to their advantage. They believed the Japanese clearly had victory within their grasp, but lost heart in the face of adversity and heavy losses of their own. And, so as not to adapt that same particular page from the Japanese history book, the Chinese had trained their officers to continue to press the attack in such situations and not lose heart. This quality would be abundantly displayed in the battle over Guam as four regiments of Chinese strike aircraft attacked.

With the regiments of TU-16 Badger and FBC-7 bombers based on Okinawa attacking from the west and northwest, and two regiments of TU-22M bombers based in the Philippines and Japan attacking from the north and northeast, the Chinese were committing one hundred and forty-four strike aircraft to the battle. When combined with the three regiments committed to the attack on the American carriers, this represented the cream of the Chinese naval-air long-range strike capability.

All of the TU-16 and FBC-7 bombers carried two AS-26 Yakhont cruise missiles each, half of them the land attack variety and the other half the anti-shipping variety. The TU-22M Backfire bombers, seventy-two in all, were split half-and-half between LRASD devices and more anti-shipping Yakhont missiles. All in all, the Chinese had one hundred and forty-four anti-shipping missiles, seventy-two land attack missiles and thirty-six LRASD devices targeted on the eighty-five surface combatant vessels operating around Guam and on the main airfield and its facilities on the island

The American E-3 Sentry AEW aircraft has a longer-range radar than the naval E-2C AWACS aircraft. This allowed the F-15C fighter aircraft flying barrier CAP to the north of the island to detect and be vectored to intercept the TU-16 regiment approaching Guam from the north more quickly than the naval CAP aircraft had been able to do earlier in the day. In addition, the TU-16 aircraft was subsonic and much slower than the FBC-7 and TU-22M Backfire bombers. This gave the F-15 fighter more time to acquire, lock-on and fire at the Chinese aircraft. The results were that the northern attack regiment carrying anti-shiping Yakhont missiles was reduced in numbers from thirty-six aircraft to seventeen aircraft before they ever launched a single missile. When they did launch, all thirty-four missiles successfully fired their engines and tracked towards Guam.

To the northwest, the entire regiment of FBC-7 aircraft was able to launch its missiles before being engaged by the barrier CAP to the west of Guam. This is because these aircraft were acquired only after achieving a position making a direct intercept by the western barrier CAP impossible. Those American aircraft performed a tail chase and fired their anti-aircraft missiles just as the Chinese aircraft launched their seventy-two land attack missiles on Guam and began to turn back for their home bases. As they did so, they ran headlong into the American missile barrage and twenty of the aircraft fell to the sea far below.

As a total of one hundred and eight Chinese missiles accelerated towards Guam, from the two regiments of the seventy two Badger and FBC-7 strike aircraft involved in the attack, only a total of fifteen would return to their bases the Philippines and in Japan. The TU-22M aircraft fared better.

The barrier CAP to the north that had been pulled off to engage the Badger aircraft were out of position to engage the TU-22M aircraft that came streaking in towards Guam from the north five minutes later. These aircraft carried more Yakhont missiles and were able to approach to the appropriate range and launch their missiles before they were engaged by American missiles. Turning away after the launch of their seventy-two missiles and igniting their afterburners as they escaped, they were able to depart for their bases in the Philippines with a total loss of only four aircraft.

As the American aircraft flying CAP directly over Guam and the vessels in the area contended with almost one hundred and eighty Yakhont missiles approaching on three axis at over Mach-2, the final regiment of Chinese strike aircraft approached from the northeast. Coming in just off the waves at almost Mach-2 themselves and engaging their full suite of electronic jamming, these aircraft were able to approach to within forty miles of Guam before being positively identified. As the CAP scrambled to interdict them with what remaining anti-aircraft missiles they had, and as Patriot missile batteries on the island joined in the defense, the first group of eighteen aircraft released their LRASD weapons amongst the ships on the eastern and northern side of the island.

The second group of eighteen Backfire aircraft was intercepted as it approached the launch points against the ships on the western side of the island that had just been savaged by the Yakhont missile attack. Six TU-22M bombers were shot down before they could launch their weapons, but twelve weapons were successfully launched just eight miles from the nearest formation of ships. In all, thirty LRASD weapons were successfully deployed amongst the Allied shipping gathered around Guam. As they began to ignite their rocket engines and attack specific Allied shipping, twenty-two of the attacking Chinese aircraft retreated. Before they could get out of range, another five were shot down, leaving seventeen of their regiment, less than half, to return to their bases in the Philippines.

Of the one hundred and forty-four aircraft sent by the Chinese to attack the American shipping and air base at Guam, only sixty-four aircraft would be returning. The pilots and crews of the Chinese aircraft had been true to their training to press the attack at all costs. The results were exactly what the Chinese planners had hoped to achieve. Of the eighty-five ships anchored or on patrol around Guam, sixty-eight of them were sunk or damaged. Fifty-five ships were sent to the bottom, including two American Aegis destroyers, one of the remaining Japanese Aegis destroyers, both of Japan's new amphibious assault ships, the Thai Sea Control carrier along with two of its escorts and the USS Bonhomme Richard. The Bonhomme Richard was the American Wasp class LHD that had so narrowly survived the initial Chinese attacks four months earlier off of Japan, from which JT Samson had made his now famous video of the USS Constellation breaking in two, folding up and sinking. In addition to these losses, a number of Taiwanese, South Korean and Canadian warships were sunk along with fourteen large supply transports, four of which were new fast Roll-on, Roll-off (RORO) U.S. Navy T-AKR Sealift ships laden with significant supplies for Guam and other remaining western Pacific American outposts.

Because so many allied ships were sunk there on July 28<sup>th</sup>, the waters around Guam were christened with a new name by the surviving sailors. It was a name that would spread from navy to navy, from fleet to fleet, all around the world as word of what transpired was relayed by word of mouth. It was a name that would be spoken in hushed tones and with respect as it called up mental images of what transpired that day. It was a name that would henceforth be used when describing those waters or any maritime activity in or near them. The name was "Steel Reef".

In addition, the two main airfields on Guam, Anderson Air Force base and Agana Naval Air Station, were both seriously damaged. As the scores of supersonic missiles rained down, all of their major runways were badly damaged and significant destruction was inflicted on command and

control facilities, fuel storage areas and hangars, all of which had been precisely targeted by Chinese operatives months before hostilities had begun.

Later that night, five tactical assault ships of the PLAN approached within 1200 kilometers of Guam escorted by two Beijing class aircraft carriers and their battle groups. These ships launched new, long-range tactical ballistic missiles at the facilities on and around the main military installations on Guam. As these sixty missiles approached at ballistic speeds, a much-degraded Patriot missile defense system engaged them shooting down only thirteen of the attacking missiles. The other forty-seven missiles impacted causing major damage and killing and wounding scores more military personnel, rescue workers, repair parties and civilians. That attack ended what came to be known as the Battle for Guam and it marked the last engagement of the Battle of the Southwest Pacific.

The outcome of the battle was a pivotal and momentous victory for the Red Chinese and their allies in the CAS and GIR, and it was another stunning defeat for the Americans and their allies, despite having sunk two of China's new aircraft carriers and most of their escorts.

### **Immediate Aftermath of the Battle of the Southwest Pacific**

The losses from the Battle of the Southwest Pacific, and in particular from the Battle for Guam, were stunning and shocking to America and her allies. The defeat was as major as the surprise attack off of Japan in March and in fact resulted in more vessels sunk. After the loss of so many personnel, ships, aircraft and their provisions, America's war planners had no choice but to reluctantly recommended conceding the western Pacific to the Chinese for the time being. This was particularly true because of the obvious danger to any remaining American installations in range of the major Chinese bases in the Philippines and Japan. Under this recommended plan, America would conduct a strategic withdrawal back to a line from New Caledonia and the eastern Solomon Islands north through the Marshall Islands to Wake Island and from there north to the Aleutians.

It represented a withdrawal of over 1000 miles that the Chinese properly labeled as a retreat. In the end, America's military leaders and analysts felt that making such a withdrawal was necessary while leaving strong garrisons on the Mariana Islands, the Caroline Islands and the eastern Solomon Islands. These garrisons were commanded to slow or even stall the Chinese advance if at all possible. It was hoped that these delays and the distances involved would buy enough time for allied forces to regroup and develop effective defensive weapons systems and operational strategies to employ against the Chinese before going on the counter offensive.

The President heard of this proposal on the afternoon of July 29<sup>th</sup> when the magnitude of the losses at Guam were still being analyzed. Despite what was viewed as a tremendous victory off of New Guinea, a victory that would be widely proclaimed in the press, it was clear that America had suffered a drastic blow and would not be able to maintain its forward line of defense against the Chinese. At its current position, such an attempt would only invite potentially catastrophic losses worse than those already suffered. On the morning of July 30<sup>th</sup>, after an all-night war council that included the National Security Council and all of the Joint Chiefs of Staff and many of their major commanders, the President reluctantly gave the necessary orders to implement the withdrawal.

After speaking with the Secretary of Defense and the Chief of Naval Operations, the President also ordered a major command change. Admiral Ben Ryan would be promoted to CINCPAC effective immediately. Admiral Richard Sullivan, the individual who had held that position up until that point was ordered to spend two weeks transitioning Admiral Ryan into his new command before reporting to Washington DC to lead strategic naval war planning at the Pentagon. To date, almost every successful counter-attack and assault on the Chinese onslaught in the Pacific, as few as they had been, had involved operations under Admiral Ryan's command. The Commander in Chief and his military advisors felt that it was time for a spirit and mantle of success, such as it was, to infuse and re-invigorate the overall Pacific Theater command. President Weisskopf, his Secretary of Defense, the Chairman of the Joint Chiefs and the Chief of Naval Operation all felt that Admiral Ben Ryan was the man to get that job done. It would be many months before the opportunity to achieve their aspirations in that regard would present itself.

## Chapter 19

*“The end of a matter is best understood well after it is completed.” – Ancient Buddhist Proverb*

**August 3rd, 21:49 EDT**

**The Oval Office, The White House**

**Washington, D.C.**

“Mr. President, WNN is airing a live feed from Qatar!”

President Weisskopf looked up from his conversation with the Attorney General, as his Chief of Staff, who had interrupted the meeting, continued to hold the door to the Oval Office open.

“Okay, let’s see what WNN says is happening over there. Dean, we’ll continue our discussion after we view this. Talbot, you’d best inform any other members of the cabinet, particularly the national Security Team and have them stand by. I may call a meeting after we see the feed.”

The President already knew that the situation in Qatar had gone from bad to worse. Admiral Crowley, the former Chief of Naval Operations who had become the Secretary of Defense, and the Chairman of the Joint Chiefs of Staff, General Jeremy Stone, had discussed the situation as they knew it in some detail with him last night. As of day before yesterday in their last direct communication with General Wilcox, who commanded the allied troops there, the situation was grim.

The GIR had been constantly bombarding the American and allied troops from the air, from their artillery positions near the neck of the peninsula and from the sea for several weeks. It was clear that they were preparing themselves logistically for a final assault. With the all out effort to hold Diego Garcia, there had been literally nothing America or her allies could do to relive and assist the forces in Qatar. General Wilcox, himself dug in deeply to a network of buried bunkers and tunnels thirty-five miles behind the front lines in the middle of the most rugged terrain on the peninsula had informed his command chain that an enemy breakthrough was imminent. He had been down to less than twenty thousand effective troops at that point from an original contingent of almost forty-five thousand. Conditions for the wounded were atrocious as virtually all critical medical supplies had been depleted.

“The fact that those troops had held out so long was nothing short of a miracle,” thought the President as the TV in the oval office came on.

General Wilcox had followed the President’s direct, personal orders to the tee. He had held on and held on, his forces subsisting on less and less rations, inflicting significant attrition on the enemy and holding in place a very large force that otherwise would be put to use somewhere else by the GIR against the allied effort. Estimates ranged up to 250,000 GIR troops involved in the siege.

But there had been no news since that communication two days ago. A HR-7 over-flight had occurred yesterday and prompted the meeting last night with the Secretary of Defense and the Chairman of the Joint Chiefs. Imagery provided by the National Reconnaissance Office had clearly shown the breakthrough that General Wilcox had feared. A large armored column was thrusting deep into the peninsula and was pointed directly at General Wilcox’s command headquarters.

Then the image of David Krenshaw from WNN appeared on the screen.

“This is David Krenshaw at WNN News. We are about to air a semi-live scene from the fighting on the Qatar peninsula in the Persian Gulf. The broadcast is being made available to us by our own confidential sources who have remained in the area at great risk. The transmission is going through a roundabout feed to arrive here in our headquarters in New York City and technicians inform me that there is actually about a four minute delay from real time. Again, this is a WNN exclusive from the war front on the Qatar Peninsula where I am informed the GIR has just forced the surrender of allied forces in the area. Viewer caution and discretion is advised.”

As looks of disbelief and shock passed between the President and the Attorney General, and as the stunned National Security Advisor stood in the doorway watching, the scene shifted to a desert location. There, thousands of soldiers could be seen standing off to the left of the screen, circling around out of view. In the center of the view were eight to ten GIR officers accompanied by thirty security personnel standing over the prostrate forms of twelve U.S. Army and U.S. Marine personnel who were being held down on the ground by other GIR soldiers. Behind those twelve, were row after row of American and allied troops, also lying prostrate on the ground, their arms outstretched.

“My, God,” whispered the President, “That’s General Wilcox on the ground there.”

As they watched and as more of the President’s cabinet arrived in the room, General Wilcox could be seen lifting his head and staring defiantly into the eyes of the GIR General addressing him. Arabic was spoken to the American General and then translated into heavily accented English by one of the personnel attending the GIR General.

“You and every one of your people will confess to the rape of Islamic lands and the flaunting of Islamic law! This is not a request, it is a . . .”

General Wilcox his head lifted from off the ground, his eyes staring defiantly, answered before the translator could complete his sentence.

“You, sir, can go straight to hell!”

Apparently the GIR General needed no translation. Walking resolutely over to the American General, and as General Wilcox strained to avoid it, the GIR General placed his foot firmly on General Wilcox’s head and ground his face into the sand with the heel of his boot.

A U.S. Marine Captain, being held down by two GIR soldiers behind the General, struggled with his captors and was able to free himself. Rising to his feet in an instant, he quickly charged the GIR General in an attempt to bodily knock him away from his commanding officer. Before he could reach his objective however, a volley of shots rang out and the Marine Captain fell dead next to his commanding officer.

A general melee ensued where hundreds of the U.S. and allied forces lying in the background rose up and attacked their captors with their bare hands yelling their outrage. Shots rang out and the firing rose to a fevered pitch for a few moments. It was a slaughter and when it was over, after the dust and smoke cleared, the GIR General, his service pistol drawn and smoking, still stood over General Wilcox who now lay unconscious at his feet. Several dead American and allied soldiers who had also tried to reach the form of their commanding officer lay dead near the GIR General who himself was surrounded by his own security forces, their assault rifles smoking.

Hundreds of dead and wounded allied soldiers lay about with a few score of GIR soldiers whom they had been able to reach. GIR soldiers were now in the process of scavenging the bodies and the uniforms of the dead and wounded allied soldiers. A large mass of huddled and standing allied prisoners were being hustled away at the point of bayonets while five living officers with General Wilcox were dragged to their feet and forced to carry the form of their commander from the scene.

“Turn that damn thing off,” commanded the President. “I don’t need to see any more and I certainly don’t need or want to hear the WNN commentary.

“This disgrace and atrocity shall not go unanswered!”

“Dean, I want to know exactly how WNN was able to get that live video. I do not, I cannot, believe that this airing was either coincidental or done without the knowledge and approval of those GIR forces present. Get with Director Ballard and apply whatever overseas assets necessary from your own agencies and from the CIA that may be required to add this to your ongoing investigation. If necessary, I will sign emergency findings to help obtain court orders to search WNN facilities.”

**August 12th, 19:36 local time**

**SH-60 Medivac Helicopter**

**Southwest of Diego Garcia, Indian Ocean**

Drifting in and out of consciousness, the IV drip constantly pumping sedatives and plasma into his ravaged body, Lance Corporal Leon Campbell was reliving bits and pieces of the long weeks of combat on Diego Garcia.

After the return of the remnant of the USS Enterprise battle group almost exactly one month ago, the entire force on the island took on a much more urgent and intense demeanor. To read about American aircraft carriers being sunk was one thing, to have the one defending your patch of land in the middle of the ocean be sunk is quite another. It had shocked the entire garrison.

In his mind, in his semi-conscious state, a memory was recalled. He could see it now, as if though it were happening again, as clearly and distinctly as when it had actually happened and he and those in his squad had personally experienced it. It was a day or two after the return of the surviving ships from the Enterprise battle group. Early in the morning, while they were out working on their positions, a flight of B1-B bombers had flown over the island on their way to do battle with the enemy still lurking somewhere out there, over the horizon, to the north and east of the island. Leon saw himself and those with him stand up and cheer and cheer until they were hoarse. And they had not been alone, virtually the entire garrison on the island had done the same thing. He would never forget the look of those beautifully sleek and deadly aircraft as they streaked across the island at low level and continued on out to sea. He could see them now, winging their way north and east ... the sun glinting off their wings as they made a precision turn a mile or two off shore.

For several days he remembered those flights had continued, sometimes with aircraft from the island taking off in large numbers and accompanying the bombers as they made their way towards the enemy, holding them at bay somewhere out there in the vast tracks of featureless water. But over the space of those several days, the numbers of American bombers flying out to meet the enemy began to decrease and the numbers of aircraft that were landing back on the island after such missions were even less. As they feverishly worked day-in and day-out to dig deeper into the island, to zero in their weapons, to establish kill zones and to place obstacles at any possible site for troop landings, the men talked about the decreasing number of aircraft returning from those missions. He remembered most of all, in the still, hot and humid evenings discussing what those decreasing numbers meant to them.

There was little doubt what it would eventually mean to Leon’s position on the only appreciable rise in elevation on the island. There, some thirty feet in elevation over the surrounding terrain, Leon and his squad could observe most of the rest of the island. From their positions at the military crest of the small rise that ran for over a kilometer along this end of the island he and his team could observe

virtually the entire island and the sea approaches leading to it. Leon and his team had constructed carefully concealed and fortified sniper positions from which they could control a wide area to their front and left. Behind them were a number of supply depots, some hardened bunkers and the designated spot where their command intended to conduct the final defense of the island should the need arise to be evacuated from the island ... should they be able to evacuate the island.

As he feverishly turned in the webbing they had him attached to in the helicopter, Leon relived the day when the first live air raid siren sounded its shrill note across the island. Leon watched the air above as he ran to his pre-assigned bomb shelter. Contrails from American aircraft above them moved rapidly off to the northeast where Leon could see many contrails approaching from that direction. He remembered noticing both of the Aegis ships in the harbor erupting on both their fore and aft ends as literally dozens of anti-aircraft missiles shot up from each and their smoke trails rapidly led up and off in the direction of those approaching contrails. More aircraft were taking off and Leon watched as a pair of F-15 Eagles rocketed off the runway to his north and immediately went vertical in a climb to gain altitude and do battle with their enemies. Once in the bunker, they had all distinctly felt the many "THUMPS" from strikes impacting the island. When they had come out of the shelter fifteen minutes later after the "all clear" signal had been given, thick black smoke was rising from the vicinity of the airfield and the ship repair facilities to the north and blowing towards them. As a groan escaped his throat, he could almost smell and taste that thick acrid smell again. Two ships in the harbor had been down by the bow and burning furiously when they looked across the anchorage from the vantage point of their position, while other ships moved about, some staying in port and others heading out to the open sea.

From that day forward, very rarely did flights of U.S. strike aircraft pass over the island. No, now it was GIR and Indian strike aircraft coming to the island and attacking Leon while the decreasing number of U.S. aircraft remaining at Diego Garcia contended with them in an attempt to hold back the tide. At that point, instead of counting how many U.S. aircraft returned from raids on the enemy, the Marines were counting how many aircraft were left on the island. It was a decreasing number, despite occasional replacement aircraft that were ferried in.

Finally, on July 22<sup>nd</sup>, there came the largest air raid on the island to that date. It left the airfield terribly damaged and left no American aircraft in the air. The raid went on and on as the enemy aircraft used up all of their ordinance in the uncontested moments available to them. Finally, when the Marines had come out of their shelter they saw the destruction off to their north around the airfield and the island administrative and command and control facilities with many fires raging out of control. There were no longer any ships afloat in the harbor. They had all either been sunk or had withdrawn to safer waters now far to the south and southwest. Leon also remembered seeing the many areas where single plumes of thick, black smoke rose high into the air, marking the final resting place for aircraft that had been shot down, both GIR and American.

They also observed something new. One of the senior NCOs had motioned for Leon and the other snipers on the ridge to come with him. They had marched for maybe two hundred yards through thick undergrowth until they came to an area that allowed them to look out to their north and northeast on the opposite side of the narrow and curving island. The sergeant handed Leon some binoculars and pointed there off to the north. What Leon saw had chilled him to the bone and it did so now once again as he relived it in his mind. There, many, many miles in the distance were many ships' masts, just visible above the horizon. The enemy fleet had arrived off of Diego Garcia.

For several days a period ensued where America's military made a courageous but vain attempt with aircraft arriving from distant bases, to prevent the Indian CAS forces and increasing GIR forces from establishing air superiority and ultimate air dominance over the island. Tremendous air battles were fought, the island was bombed and shelled almost continuously. Leon remembered wishing, after one particularly intense eighteen hour period, that the enemy would just land their forces and get it over with. Everyone could see that the Indian carriers and their aircraft were there, right off the island along with many ships whose guns and missiles could now target the American airfield and other installations at will. In addition, the Indian and GIR air bases were much closer than any comparable American facility. It was a simple math equation involving weapons loads, distances, fuel supplies and time. It was an equation with but one answer at that point ... and that answer had come on August 6<sup>th</sup> with the first Indian landings on the far northeastern end of the "U" shaped island, across the harbor from the main American installations.

Being several miles away, it was impossible for Leon's weapons to reach those enemy ships, soldiers and vehicles as they came ashore. But American artillery behind Leon had fired hotly and accurately. The Indian forces had not taken such counter fire lightly. Almost immediately, aircraft buzzed over those areas where American counter fire had originated. Some were shot down by the few remaining stinger missiles and the few Avenger AAW system available ... but most targeted and destroyed the American heavy weapons positions one by one.

For six days the American Marines and other personnel had fought a pitched battle as more and more Indian forces were poured into the northern end of the island. On August 9<sup>th</sup> the Indians had crossed the harbor directly and stormed the major facilities, most of which were already nothing but

burned out shells of buildings. More and more personnel straggled back behind the final perimeter on the hill as the Indians slowly made their way southward. Sometimes the rate and duration of the firing was almost surreal, almost unbelievable unless you had actually heard it and understood its language. It was the language of flesh and blood and death.

American planners had not rested or sat back during these tense days. A plan was feverishly put together to evacuate the garrison. It was a risky plan, but one that had to be attempted to avoid another Qatar. On August 4th two days before the initial Indian amphibious landings, the USS Abraham Lincoln and its battle group had departed the Mediterranean and sailed at flank speed through the Straits of Gibraltar and around the Horn of Africa. On August 11<sup>th</sup> the ships had arrived undetected two hundred and fifty miles to the south and east of Diego Garcia. Unbeknownst to Leon or the other lower ranking Marines with him, a massive air support mission was planned that would clear the way for the evacuation of the remaining men by helicopter. This very morning, the morning of August 12<sup>th</sup>, the evacuation plan was carried out by American forces. It occurred during the major Indian assault to annihilate the Marines or drive them off the island.

Leon remembered those final events most vividly and was reliving them again. The massive assault by the Indians, the constant firing of his .50 caliber sniper rifle as he targeted and "took out" Indian officers directing the attack. He had always watched in fascination as he had seen war movies and read novels that indicated how time seemed to slow down during intense moments like those he experienced this morning on Diego Garcia. Now he knew that the perception was true. Those life or death hours and minutes replayed themselves before his mind's eye. He remembered vividly the sudden appearance of American fighter and attack aircraft over the battlefield. He recalled the intense fighting on the ground and in the air, and the almost innumerable waves of Indian soldiers that just kept coming ... kept coming! It seemed he shot a thousand of them himself and they kept coming!

Finally, the helicopters, scores of them, had arrived as the American F F/A-18E aircraft gained the upper hand in the air over that end of the island temporarily. He and Private Jacobs, his security man, had continued firing as one by one the others in their line ran to the rear to be evacuated. He could feel the intense heat of rocket pod fire erupting almost directly over his head as Cobra gunships worked with him to hold the enemy back from the rally points behind him on the beach. After covering the retreat of all others, he and his senior NCO had been alone on the hill, being flanked by hundreds of enemy soldiers despite the air support. The NCO had taken a hit in the upper torso and another in fleshy area under his thigh and gone down.

Leon seemed to swing left, right and forward, like an automaton, firing until first one and then another clip were emptied. He picked up two more, rammed them home and continued to shoot. The enemy, climbing over the bodies of their own dead to get at him with an animal like intensity just kept coming. Private Jacobs went down, shot through the pelvis and writhing in agony.

"Leon, get the hell out of there!"

The shouted words had come to him almost like a dream, as if though from another world outside of the one he now knew and *lived*. It was like he had never known any other world, so warped had become his sense of time and proportion during those moments of intense combat. But that voice had come and he remembered slowly turning his head and looking down the slope to his commanding officer, standing at the base of the hill with an SH-60 behind him and five Marines providing security. It was the last helicopter in view.

Somehow that voice and the view of the CO and the helicopter had cut through to his rational mind and Leon had known what he had to do. Emptying his last magazine into a group of approaching Indian soldiers some fifty yards away, Leon had then thrown his empty rifle down and reached down with one hand and grabbed the NCO's pants at the waist. With his other hand, he similarly grabbed private Jacobs and then began to drag *both* men towards his CO and the helicopter. He had gone no more than ten yards when he felt a tremendous yank on his right leg at the calf and he collapsed to one knee on that side. Summoning all his strength and somehow ignoring the pain, he stood erect and kept coming. After a few more yards another tremendous jolt hit his back and he stumbled forward, almost falling but in the end retaining his footing. As he continued forward, he watched the Marines below him, now only thirty yards away, firing past him at figures appearing on the ridgeline behind him. He kept going but looked down and noticed the crimson on his chest, the ragged hole in the front of his fatigues and the ragged flesh ... his flesh ... surrounding the wound.

He somehow remained erect and kept moving down that small hill, both the NCO and Private Jacobs still in tow. Three of the five Marines were down now and being loaded into the helicopter. His CO and the other two Marines kept up a steady covering fire, joined now by a door gunner on the helicopter using an M-60 machine gun to stitch rows back and forth along the ridge. As he approached within five yards of the CO, Leon summoned up the strength and with an almost superhuman surge, he hurled both the NCO and Private Jacobs forward to the waiting arms of two corpsmen who had come forward from the helicopter. Just as they took the men from him, there was an incredibly bright flash to his rear and Leon had felt himself thrown forward.

He had been in and out of consciousness ever since, reliving events of the last weeks every time he drifted off and as he felt his body weakening from the damage inflicted upon it. Now, as he relived

that last experience of escaping the Island, and as the helicopter landed on the deck of the USS Abraham Lincoln, a light much more intense and bright than the one that had erupted behind him shined down on him in his mind's eye. All of a sudden he felt himself lifted and it was like he could see himself lying there in the helicopter as crew on the deck of the carrier frantically unstrapped him from the webbing and loaded him on a gurney to carry him across the deck. But the light above had turned incredibly warm, soothing and *penetrating*, more comforting than anything he had ever experienced. He found himself giving into its call as he lost site of the carrier deck and he felt as if his world was disappearing into the substance of that total light.

**August 17th, 20:26 MDT**

**Along Route 78**

**South of Pagosa Springs, Colorado**

The weather was perfect, not a cloud in the sky. Humidity extremely low, air very dry and hot. Yes extremely hot, even at this high an elevation of almost 3000 meters the temperature was still over 100 degrees Fahrenheit, almost 40 degrees centigrade!. And the wind ... well the wind was the most perfect thing about it. Sustained at forty to fifty kilometers per hour directly out of the south, the wind was drawing a continual supply of hot, dry air all the way from the waists of Mexico and funneling it right up here along the western side of the continental divide.

Manuel Mendoza had waited all summer for these conditions. It had been a relatively dry summer, but there had been regular systems coming in out of the Gulf of Alaska providing a constant re-charging of the atmosphere and producing sporadic rains throughout the American west. Such conditions were not desirable for the operation he had been tasked with. But over the last three weeks a huge high pressure system had moved in from the Pacific Ocean to the south of Los Angeles and it had parked itself directly over the central portion of the United States, between Dallas, Texas and Oklahoma City, Oklahoma.

This was what Mendoza had been told to watch for. Ever since that last operation in Dallas, he had been living and working with friends in these high mountains of northern New Mexico and southern Colorado. He was doing manual ranch and farm labor, like all of the other "migrant" workers he was with. Many of whom had been living and working on these same ranches for years. So they had a good relationship with their employers who were anxious to avoid the many costly requirements of the labor laws in the United States and who gladly paid an honest wage to these hard working compadres from south of the border. But the "friends" with whom Manuel was staying were far more than just ordinary migrant workers.

The forecast called for the high pressure system to strengthen and actually build back to the west for the next two to three weeks. Hot, dry and windy was the forecast, and it held true from the Edwards Plateau of Texas, across to the Grand Canyon in Arizona, with that hot, dry Mexican air being funneled to the north all along that line ... all the way to the Canadian border in many places. And this afternoon was the time to take full advantage of it. Manuel had given the "execute" order yesterday afternoon, and sent the confirmation this morning. He had sent this to the ten lead members of the teams and to Miguel Santos back in Dallas.

Thinking of Dallas had reminded him of the operation in Dallas. How brilliant of Miguel to execute such an operation against his own headquarters. Actually, Manuel knew that the idea and planning really originated with Hector, but that was supposed to be a tightly guarded secret, with complete compartmentalization. There were supposed to be no ties between Hector and any operation, and the only direct tie to Miguel was Manuel. That was also supposed to be "forbidden", but a very strong bond of trust had been forged over the years between Miguel and Manuel. Over a fifteen-year period doing various work projects for Miguel and FTA Trucking, they had come to know one another as brothers.

Manuel's knowledge of Hector had not come through his friend and compatriot Miguel. Miguel was completely unaware that Manuel knew of Hector's association with all of the "wet" operations. Manuel had happened upon it by chance three years ago. He made his discovery at Miguel's house one afternoon when Miguel had taken his wife and children to Six Flags over Texas, leaving Manuel to watch VHS video movies at home. Behind Miguel's entertainment center, Manuel had happened upon a secret chamber which had opened as he had hit a hidden switch while searching for a Mexican gold piece which he had been flipping it into the air when watching one of Miguel's movies. The gold piece, which Manuel carried around for luck., had fallen underneath the lower shelf of a bookcase. While he was reaching underneath this, his fingers had felt a recessed indentation under the shelf, right up against the wall. Within the indentation was a metal toggle switch that Manuel had flipped, opening the chamber behind the entertainment center. In that chamber had been an entire library of audio and video recordings. These recordings had been of every major, clandestine meeting that Hector had held with Miguel regarding the "true" nature of FTA. It was a nature Manuel knew somewhat about already as he was involved with operations at Miguel's bidding. But he had never realized how vast the planning and goals were, or of who all was involved. He had spent the day watching videos all right, but not the ones Miguel had envisioned. After carefully putting everything

back exactly as he found it, Manuel had been there when Miguel came home and had never mentioned it to him.

Nor would he ever. Despite how close he and Miguel had grown in the intervening years, Manuel knew that such information could be fatal if either Miguel or Hector ever felt the security of their operation had been breached. Manuel understood this, it is exactly the way he would view it.

But now, here he was on Route 78, ready to execute his portion of the plan. Ten American SUV vehicles, four men to the vehicle, spread out between South Fork and Mancos, Colorado. Each vehicle had its own twenty mile route to "run" early this evening. Each team consisted of one driver, two "security" men armed with AR-10 semi-automatic assault rifles and one team member to work the window. In his team, the window man was Manuel himself. He looked next to him in the center seat of the Chevrolet Tahoe that they were driving. There, stacked in twenty boxes of ten to the box, were his two hundred large-stick matchboxes. Each had a short eight-inch stick firmly glued to the bottom and sticking out like a handle, with the heads of twenty or thirty matches sticking out of the box and the box covered in tissue paper. One swipe of a match would produce a brightly blazing device that would burn hot for more than enough time to toss into the high grass and dry timber all along the north side of the route they would be traveling this evening.

When his digital watch indicated exactly 8:30 PM, Manuel leaned forward and patted the driver on the shoulder and they pulled onto the road. Next to the driver, one of the other men held his AR-10 low and at the ready. He had two twenty round clips loaded and taped together, with one of the clips already inserted into the rifle. He was "locked and loaded". In the rear seat, was the other security man. They had removed the rear window of the Tahoe so he had an unobstructed view out the back."

Traveling at forty to fifty miles per hour, Manuel began lighting and throwing a device out every one tenth of a mile as called off by the driver. Ten devices to the mile, two hundred devices in twenty miles. They were traveling a remote paved highway with few vehicles. As they proceeded, a line of quickly growing fire was spreading to the north behind them, each small blaze quickly joining with that of the one before. There was only one difficulty that arose on their entire "run", and it involved two local citizens. After driving about seven miles a pickup truck passed them going the other way and must have figured that their vehicle was somehow creating the growing conflagration. That truck had turned around and quickly caught up with them. Two cowboys were waving their hands out the window wildly as they approached and the driver began blowing his horn as they got close. When they were close enough, the man in back had shot the driver in the face and the truck had crashed on the side of the road. Manuel had ordered his driver to stop and they had gone back and insured that both cowboys were incapable of ever identifying them or reporting on what had transpired.

After twelve miles they could see the smoke rising from the fires being set by the team to their west. As they came to the end of their "run", Manuel threw the last device out the window and watched as the fire it started raced to the north with the wind, trying to catch the fires that had been started five hundred feet to the west almost twenty minutes ago. Seeing that the operation was producing the desired results, Manuel and his team turned at an appointed crossroad and circled back on a gravel road to Juanita, Colorado before dropping into northern New Mexico where they spent the night with "migrant" friend outside of Lumberton.

In the mean time, an inferno was advancing northward through the mountains along an almost unbroken front two hundred miles wide, racing through the dried grass, fur and pine trees of southern Colorado. By sunset, the sky to the south of South Fork, Wolf Creek, Pagosa Springs, Durango and Mancos was brightly lit by the advancing fires. Already, many outlying homes and buildings had been destroyed. There simply wasn't time to perform a full evacuation as the fires advanced rapidly into these towns. In a desperate attempt to evacuate the many hundreds of people at the resort of Fairfield Pagosa, a massive traffic jam was created on U.S. Highway 160, which itself lay directly in the path of the advancing firestorm that had now created a life and an atmosphere of its own. Hundreds of those people died in their cars as the fires swept over the road and continued on unabated.

Hundreds of campers all along this beautiful stretch of southern Colorado were trapped that evening. Some burned in their tents, some suffocated when taking refuge in streams. A few were able to escape the path by either being along one end of the two hundred mile firestorm front, or by having massive outcroppings of rocks or mountains provide a lee in which to survive. Dawn came with the towns of South Fork, Pagosa Springs and Mancos lying in smoldering ruins. A valiant effort was made and succeeded in saving much of Durango, the largest town in the immediate path of the blaze and located in a fairly deep canyon, which provided natural protection from the flames.

Nonetheless, the flames continued on towards central Colorado and some of the most rugged and beautiful terrain on the continent. The towns of Wagon Wheel Gap, Vallicito, Tacoma and Stoner were next in the path of the blaze, along with uncounted numbers of vacationers, hikers and campers in the backcountry. Many of these people were unaware of the seriousness of the situation until they saw the advancing wall of smoke by day, or light by night stretching from horizon to horizon.

Mendoza was oblivious to these specifics as he slept that night near Lumberton, New Mexico. He was also oblivious to the fact that two large holes had been created in his "front" when two of his teams had been halted in the completion of their assignments. In one of those instances, local

cowhands saw the occupants in the SUV purposely tossing burning material into the dried grass along the side of the road. These cowboys made no attempt to “flag” the offending SUV down, particularly when weapons were brandished. The terrorists in that instance found it was they who died under a hail of gunfire from local cowboys who shot first and asked questions later in such circumstances.

In the second instance, a local Sheriff’s deputy saw the car pass and turned around to follow it, keeping his distance fearing just the sort of reception the terrorists had in store. He radioed in the report and assistance arrived twelve miles down the road in the form of two State Highway patrol cruisers and another County Sheriff who had formed a road block and were waiting with their own assault weapons. In the shoot out that ensued, three of the four terrorists were killed while two deputies were wounded.

**August 18th, 09:15 MDT**  
**Local Coop Feed and Supply Store**  
**Lumberton, New Mexico**

Manuel walked into the Feed and Supply store intent on filling the order for his foreman “friend” on behalf of the rancher his friend worked for. Upon walking into the store he saw a group of ranchers and farmers raptly watching the news about the fire on TV. He listened briefly to the grave status report of current conditions and a report that two “teams” of terrorists involved in the setting of the fire had been interdicted in their efforts to start portions of the fire and that many of them had been killed. The newscaster was reporting that according to initial investigations, up to eight other “teams” of terrorists had not been spotted or interrupted in their arson.

“They sure put that together fast,” thought Manuel as he turned from the TV and began gathering the order of feed and wire he had been sent to purchase “on account”. He decided he would hurry and fill the order and get back to the ranch where his friend could assign him and his compatriots to some high country fence-mending task at a remote line cabin. Some place where he could spend several weeks out of sight and out of harms way. But he would never get the chance.

What Manuel did not see was what followed the report regarding the stopping of his two teams. In stopping them, local civilians and law enforcement had killed six of the terrorists and captured two others. Following that report had been the report from a fisherman who had been out on Route 78 the evening before and had observed another car full of terrorists making their attack. The angler had the presence of mind to use his digital camera and take pictures of what he saw. When he heard the approach of a vehicle along Route 78 he looked up to the roadway and watched the SUV approach. He had clearly seen burning material being tossed out regularly and seen the line of fire trailing behind the vehicle along the road into the distance. He immediately removed his digital camera from its pouch and used it to take pictures of the vehicle and its occupants as it passed above him. One of the pictures showed a clear profile of Manuel as he tossed one of the burning devices out of the window. The picture had been made into a “Most Wanted” poster and was being prominently displayed on the TV in the Coop Feed and Supply store.

Several of the ranchers did a double take when they saw the picture on the TV. They immediately began looking around them for the individual they had just seen walk into the store who matched the picture on the TV so perfectly. They spotted Manuel several aisles over and they began speaking amongst themselves regarding him. One discreetly talked to the store manager who immediately went to his office and armed himself, asking his office manager to immediately call the police. When the store manager came back onto the store floor with his .44 magnum revolver he was joined by two local ranchers who had retrieved rifles from their pickup trucks. As Manuel turned a corner with his shopping cart full of the material he had been sent to purchase, he was confronted by three armed men blocking his path, each of whom had already drawn down on him. Turning to look around, he found four other large American ranchers blocking his path to the rear.

When the local constable arrived, Manuel Mendoza was already lying on the floor, hog tied.

**August 28th, 16:15 local time**  
**In the Knesset**  
**Tel Aviv, Israel**

“The old fool is at it again,” thought the Prime Minister as he listened to his rival drone on about seeking an audience with Sayeed and about “reasonable discourse”. But what he heard next from Isaac bin Ammon almost caused him to fall out of his seat.

“We have waited for a year, we have prepared militarily for a year. Our people have suffered and their social welfare needs have been neglected as we have followed the council of the Prime Minister and his coalition and prepared for that which has not happened. Uncounted monies have been spent. Even with the influx ... some are calling it an invasion ... of over one hundred and fifty thousand American troops, some of them crossing our borders through Jordan, the “vile” enemy that the Prime Minister has portrayed has never once threatened our nation.”

In stunned disbelief, Benjamin Netanyahu listened as the opposition leader continued.

“It is time for a change. It is time to put more weight, much more weight on diplomacy. I call for a vote of confidence here in the Knesset! I propose that we establish a new coalition government formed under the leadership of the Labor Party. I propose a mandate to meet with the leader of the GIR, Hasan Sayeed, and negotiate a lasting peace between Israel and a united Arab coalition, a coalition that perhaps now, with a unified voice, can seek the peace we have desired for so long.”

The Prime Minister wanted to stand up and wring that old fool's neck! But he held off as an uproar ensued. Despite knowing that Ammon was a “dove” who would negotiate Israel into a position of abject weakness, he was also a shrewd politician. He would not make such a proposal out in the open like this unless he was confident that he could win ... and this shocked the Prime Minister.

“Could I be that out of touch?” he asked himself. “Could I have missed a swing in the people's attitude of this proportion while preparing for the terrible storm that must soon come upon us?”

Such a vote of confidence, if not immediately challenged and defeated, would occur within a day or two. This would give Isaac time for the proposal to be floated in the court of public opinion, to potentially gain traction there and even worse, to give their enemies a view of dissension and weakness in their resolve. That could not be allowed.

Casting any further doubts aside, the Prime Minister stood, raising his arms until order was restored and the members there in assembly waited for him to respond.

“We have heard these proposals from the distinguished leader of the opposition before ... we have listened to them over and over. In the last year, need I remind you all what has transpired?”

“We now face a fundamental Islamic state of vast proportions. It is a state that believes it is led by its own Messiah. Do you plan to go and negotiate with the Islamic Messiah Isaac? Do you believe he is such? I do not ask this rhetorically. Unless you believe those things, or, unless you at least act like you believe them and carry yourself accordingly ... there will be no negotiations.

“Sayeed has set himself up in the eyes of these hundreds of millions to be their holy leader. Isaac, he is on a mission ... an errand from Allah to transform this entire region into a unified Islamic state ... ultimately he will desire to do so to the entire world and that is when his understanding with the Red Chinese will come to an end.

“But long before that happens, he will have disposed of us.

“Look around you. Our friends, the Americans and we too were caught unprepared. The Americans have consequently been driven completely off of the Arabian Peninsula and out of Turkey. Did negotiating help them? No it did not!

“Where are the nations of Kuwait, the United Arab Emirates, Turkey, or any of the other “moderate” Arab states today? Did negotiating help them? No it did not!

“If this Sayeed was willing so ruthlessly to invade, conquer and plunder these Arab nations in order to bring them into his fold, just what do you think he has planned for Israel? I'll tell you what he has planned. It is the same that every major Arabic leader has had planned since the 1940's ... to annihilate us or drive us into the sea!

“Isaac, your proposals are not only foolish, they are dangerous. We cannot, we must not grovel at the foot of this monster. Look to our east. Just what do you think the GIR Army over beyond Damascus intends? They number in excess of 350,000 combat ready and combat hardened troops. Look to our south. Just what do you think is proposed with the GIR Army group assembling in Jordan? The same Army group that drove the U.S. XVIII Corps off of the Arabian Peninsula. That Army now numbers over 400,000 combat hardened troops. And to the south and west, massing to assault the allied positions along the Suez, another GIR Army made up of over 300,000 troops.

“Isaac, what do you suppose all of these armies that number over one million intend? Will they stop at our borders while you talk? Will you return to us with a piece of paper like Chamberlain did to England before World War II? Will you further weaken us with your words while Hasan Sayeed continues to reinforce his armies that surround us, that have conquered the entire Arab world?”

“Our own intelligence service indicates that large number of troops are being brought down from Turkey to reinforce the Syrian group near Damascus. Another 250,000 men! In addition, out of Iran, Pakistan and Turkmenistan a large Army group numbering over 400,000 men is moving towards the Kuwait frontier for transit into Saudi Arabia. We have reports of large numbers of Indonesian troops being ferried across a now uncontested Indian Ocean into the Red Sea to reinforce the GIR Army in Jordan ... another 400,000 men! Another one million men at arms moving towards us.

“No, the time for talk is long past. It is time for action. This same Knesset took strong action a little over a month ago and declared war on the GIR and on Red China. I know you voted against that proposal, Isaac. Just like you voted against the show of strength back in late 2002 that finally ended the intifadah the Palestinians had prosecuted against us as a result of the utter failure of the Oslo accords. Do you remember those accords Isaac? You should, you helped institute them. They were a disaster and their failure became one of the lasting legacies of the administrations that negotiated them, both the Americans and our own. Ultimately, in order to put an end to the legacy of terror that they spawned, we had to cut against the grain of many of our own allies and the entire Arab world and institute the “Golan Doctrine”. Do you remember that doctrine Isaac? Do you remember the ultimate outcome? Let me remind you and everyone here of it.

“We were under an assault of terror like none witnessed in the history of our nation. A people, living amongst us and a situation fueled by our enemies and by foolish attempts and accords that tried to placate that which could not be placated. An entire generation of Palestinians had been raised to hate us and to destroy us with their own young bodies, blowing themselves up amongst our precious mothers, wives, daughters and sons. All of the negotiations, all of the appeasement did not quench their blood lust. Ultimately, we adopted the “Golan Doctrine”. It was direct and simple. It was the embodiment of the reasons we have held onto the Golan Heights all of these years, and always will.

“We informed the Palestinians and the world, that for every terror attack after that date, Israel would move our borders one kilometer forward on the West Bank and in the Gaza strip. Not occupy, not negotiate over ... we would *own* that land and never give it back. And that is exactly what we did. After the borders moved some twenty kilometers and after hundreds of thousands of Palestinians were displaced into a smaller and smaller area, the Palestinians themselves solved their own terror problem and it has not recurred since. And what was the end result? Do you remember? Can you look around you today and see why we do not have a Gaza Strip or West Bank problem anymore? The result was that very moderate Palestinians came to power and they joined with us. Not two states, no desire any longer by the Palestinians to push us into the sea. It is why we are a unified nation today. At that point we were willing to negotiate, and we did. The only thing we had to give was something that already existed. We simply agreed to allow them the freedom to practice their religion in the former occupied areas so long as they did not attempt to proselyte or spread it. We then gave those who so desired a rigorous process whereby they could become Israeli citizens, while those who did not were bought out and deported. Those were terms both they and we were willing at that point to accept, and I need not remind you that few were the number of those former Palestinians who sought deportation.

“This did not occur by weakness. This did not occur by giving in to, or negotiating with abject aggression. It came by resolutely acting on our strength. We had already seen what the other path produced. It would produce the same on a much more horrific scale today. If we follow that path, then we are all fools and fully deserving of the lot of beggars, for that is what we would become.”

“Therefore, I move for an immediate vote on Isaac’s proposal for a vote of confidence. I move that we immediately invoke the parliamentary ratification procedures as outlined in our constitution. I know that such a vote of confidence is usually played out in the public eye, but if that can be avoided, it would be best for our people and best for either future course of action with respect to the GIR. I move that we take this vote on that parliamentary ratification now, immediately.”

Robbed of the opportunity to take his emotional plea to the press, and spurred on by the rousing words of the Prime Minister, the motion for a vote of confidence failed in the Knesset by a significant margin during the parliamentary ratification vote. As a result, the Prime Minister pressed his advantage and before the Knesset adjourned at 2 AM the next morning, more funding was approved whatever defensive and offensive operations were necessary to preserve the nation.

Walking from the meeting, the Prime Minister turned to his long time ally and friend, Jacob Keshet, who was also the Defense Minister and

“Jacob, pass onto General Olsen our success in obtaining the funding necessary to further augment our forces with more Comanche helicopters. Though I am certain the Americans will make effective use of their own, aircraft I believe that helicopter was designed with Israel and our unique terrain and geographical considerations in mind. If not in the mind of the designers themselves, then in the mind of Him who gave them their ideas.

“Also, please pass on my compliments to that American Major ... no, I believe the Americans have promoted him haven’t they? In any case, pass on my personal compliments to Colonel Simmons. He has done a magnificent job and deserves to be recognized by us as well. Soon now, we are going to need every bit of what he has helped to develop, and all that we have worked long years in preparing our nation and our people to face.”

**CINC Personal Quarters**

**Gavank, Siberia, The Russian Federation**

He awoke with a start, perspiration running down his face and the memory of the dream fresh in his mind. It was the same dream, one that had been plaguing his sleep for months now. He had been so affected by it, and it had given him such strong feelings of foreboding, that he had sent his wife back home to St. Petersburg to live and wait for him there. Another year and he would be free of this thankless and disturbing assignment ... another year and he could finally retire.

Despite the thoughts of his wife and retirement, General Andrei Nosik could not shake the thoughts associated with the dream. He recognized the incessant flashing lights from his dream as the flash of artillery fire, artillery fire that was very close at hand. Whether directed at him or at someone else he could not tell. In any case, it went on and on, almost a constant reverberating light in his dream. But where there should have been the constant roar of the gunfire, there was only silence. Where there should have been the intense heat coming off the barrels, there was only intense cold.

Sometimes he could almost see the individual barrels in his dream. Hundreds and hundreds of them, canted at a steep angle. Large bore... if he could just get closer, he could tell whose they were.

Always in the dream, when he got to that point, it was as if he was lifted high into the atmosphere and transported from wherever he had been back over his home. From far above he could see the *Rodina*, from Volograd to Moscow to his own home city of St. Petersburg. What he saw, even from so great a distance, was frightening. Hundreds of thousands, no, millions of people ... refugees ... streaming to the east by foot, on roads, following rivers, across country ... any way they could. And no one to help them. It was at this point that he always woke up ... in a cold sweat, shaking.

"Well, it has awakened me once again," thought the General as he arose. "No sense in letting good time pass by. I'd best prepare now for that call with Moscow at 6:00."

Thinking about that call caused the General to reflect once again on his circumstance here in Siberia. He kept requesting more resource and he kept being denied. The Indians had found another oil field not thirty kilometers from Gavank and they had received permission from the Russian government to exploit it. Minister Gavanker, "Not Doctor Gavanker anymore," thought the General, had put together a plan to rapidly exploit the find and have it in production before the hard winter weather set in. It would mean another 15,000 workers and the new Minister had quickly put together the formal request to the Russian government and it had been just as quickly approved.

"I have to say," he thought, "making Gavanker a 'Minister' had cleared up a lot of red tape."

Simply said, what that meant was that it allowed both the General and the Minister to more effectively do their jobs. But being effective in getting things approved for the Indians did not necessarily mean that they were effectively implemented, particularly from a security standpoint. Another 15,000 workers was a significant security concern for the General.

Similarly, the Chinese had made two new mineral discoveries and were bringing in a total of 25,000 more workers to exploit them. Moscow rapidly approved access to Siberia by those workers over growing concern from the General. The addition of the three sites and the 40,000 new workers would mean that he would have the same 8,000 personnel to secure a work force now totaling 75,000. As a result of the Chinese growth in particular, Colonel Propov, the General's second in command and the officer in charge of security in the Chinese sector, had been literally begging for more support.

The situation was similar in all the sectors in the Economic Development zone created in Siberia. It seemed that in all of the sectors the Chinese and Indians had made significant new discoveries that required more and more workers. The General was very leery of it and had mentioned his concerns to his command chain in Moscow on many occasions.

"I think we must be very careful of how many of these people we bring into our country. This work force consists almost exclusively of young men of fighting age and their supervisors carry themselves more like military NCOs than construction, mining or drilling foremen," was the message he had communicated on several occasions.

"Well, what would you expect Andrei?" his commanding General had replied to these concerns from his plush offices back in Moscow.

"The Chinese and the Indians want to exploit these resources and are paying us handsomely to do so. Of course they are going to use strong young people to accomplish it... and they are going to have to keep them in line. No, you are seeing wolves where none exist. All three of our nations are profiting and benefiting tremendously from the Siberian Economic Development Treaty we all signed last year. Let's not create conditions that would reduce profits or productivity. Keep me informed."

To date, all requests for increased manpower, increased weaponry and for increased logistical support had been denied. Now the General was ready to speak directly to the Defense Minister, requesting an audience when he last discussed the situation with his commander back in Moscow. At the time, that commander, a ranking General who had climbed the political ladder and was ten years General Nosik's junior, had warned him that while such a request was sure to be honored, it would not bode well and might reflect negatively on what was otherwise a sterling career.

"What do I care," had been Andrei's frustrated response. "In one year I will retire and you and the younger breed will have the full weight of the concerns on your shoulders without this old war horse around to throw stones at your glass palaces. Until then, I must keep faith with my duty to protect the Motherland."

He knew he shouldn't have worded it that way to the "pup"... but it was exactly how he felt, and he was finding more and more as he aged that there were certain types of administrative fools he could not suffer. He was going to raise the concerns to the highest level to ensure that those in the real decision making positions had all the information available to them when reaching those decisions.

Now as he finished reviewing all of the various facts and figures regarding worker age, worker physical condition, organizational structure for the workers, crime rates, ratios and his own force readiness, he felt he was prepared to speak passionately and factually with the Minister of Defense. He intended to make a compelling case for more security. Somehow, he knew he must convince the leadership in Moscow of that imperative as he saw it out here in the field. As the need for that imperative weighed heavily on his mind, the General could not help but have his thoughts wander to his wife, Natalia, and what she was doing right then.

### **November through February in the Mid-East**

Through the fall and winter the GIR set about building up massive forces in Syria, on the Saudi Arabian-Jordanian frontier, and in Egypt for the encirclement and ultimate assault on Israel. There were many pre-emptive air attacks targeting the GIR forces massing around Damascus and in Egypt by Israeli, U.S., and UK aircraft. At first these were very effective in destroying armor and disrupting the logistical framework the GIR was putting in place to sustain their large forces. Through the fall, though never able to obtain complete air dominance, allied forces did have strong air superiority and were thus able to inflict significant damage. But as the number of GIR aircraft increased, and particularly with the importation and deployment of KS-2+ missile batteries around GIR forces, and as the New Year dawned, the allied air superiority dwindled to air parity. By the end of February the GIR had amassed over three million personnel around Israel and amassed over 3500 aircraft, 5000 tanks and tens of thousands of artillery pieces prepared for their operations against Israel.

All the while, as Israel called up its entire reserve, American and English troops were entering the country. Over one million Israelis were armed and formed up by the first of the year. They were supported by 350,000 U.S. soldiers and their equipment and over 150,000 British troops. The allied forces numbered just over one and a half million and were supported by over 2000 high performance military aircraft, over 3000 tanks and the largest Naval force assembled since World War II. That force, sitting offshore in the Mediterranean, consisted of American, British, Canadian, Italian, Spanish and German vessels. Notably absent from those forces were the strong French carrier battle groups as France had yet to become actively involved, providing only logistical and materiel support, and reluctantly at that. As the New Year came and went, the world watched with bated breath as the millennia old enemies, Jewish and Islamic, squared off against each other in the relatively small confines surrounding the nation of Israel. It was the largest concentration of military power ever assembled in so small an area in history. Should they clash, as appeared all but certain by February 1<sup>st</sup>, the people of the world, despite the war raging across four other continents, knew that the outcome of that conflict would be pivotal to the future of the entire world.

In Turkey, a stalemate had been reached across the Dardanelles and the Bosphorus. Frequent air attacks and artillery duels by both sides harassed the large forces arrayed across those narrow waters. But neither side could dislodge the other. While this was happening, the GIR reached an agreement with Armenia in late September guaranteeing their security while granting permission for peaceful passage of GIR forces through Armenian territory. Georgia refused a similar treaty offer and was promptly invaded on October 16<sup>th</sup> by over 150,000 GIR forces from the south, and another 100,000 entering from the east through Armenia. Though the fighting was sharp, Georgia fell to the GIR before the end of November. Once consolidated, a combined GIR force of over 350,00 troops set poised along the Caucasus Mountains by New Year's Day, where they took up defensive position along the Russian border, waiting for their orders.

Through the CAS, and through Jien Zenim specifically, Hassan Sayeed of the GIR requested that the Russian Federation allow passage of GIR troops through Russia in an attempt to circle the Black Sea and proceed against Europe from that direction. The request had been made in the utmost secrecy and confidentiality. President Vladimir Putin was placed in a perilous position by the request. It was a decision he could not, he dared not make alone. When he put the question to the members of his cabinet on the Russian National Security Council, a heated debate developed. Russia was already involved in a very profitable relationship with the CAS in Siberia and no one wanted to threaten that. On the other hand, their military neutrality in the current conflict was considered sacrosanct and under no circumstances would the Russian leadership risk seeing their entire western border become a hostile with the west. Russia still remembered well, over sixty-five years ago when that very border had erupted into what became known as the Great Patriotic War in which over twenty million Russians lost their lives.

The issue became an international crisis when word of the request and the potential deal spread to the Russian parliament due to a leak from one of Putin's cabinet members. From there it rapidly went public as the media picked up on it and it was first reported on February 18<sup>th</sup>. The ramifications of that report, and the international debate it generated would ultimately endanger the entire world.

### **November through February in Asia and the Pacific**

The Indian victory over Diego Garcia and its occupation secured the trade lanes for the GIR and the CAS from the Persian Gulf back to India and the Far East. Fuel, commodities, materiel, shipping, munitions, and troops all began to flow regularly and with little disruption. Occasional patrols by English and American attack submarines successfully sank a few ships, but this was almost always accompanied by the sinking of the attacking submarine by an LRASD weapon from a Chinese, Indian or GIR escort vessel. The allies were therefore very reluctant to commit their expensive vessels to such operations. This would remain true so long as these devices continued to rule the waves, unless a significant advantage could be obtained by the engagement and unless it could be shown that there

was a very high degree of probability that the attacking vessel could escape. The Chinese name for these weapons, like the Japanese name of "Long Lance" for their long range torpedoes during World War II, began to be used by forces on both sides of the conflict, that name was "the Dragon's Fury".

In Asia, the CAS and GIR consolidated their gains. There was little disruption outside of Cruise Missile and bomber attacks against key infrastructure, particularly for the CAS. With the addition of KS-2+ missiles and radar detection capabilities, particularly with significant improvement on stealth detection techniques, these unavoidably long-range attacks by the allies became less and less effective. The numbers of B-1B and B-2 bombers available for such missions were just too meager. America had never built them in sufficient numbers for a prolonged, multi-theater war. The policy and conclusions of the planners had indicated no need of it, that no military could develop the technology to stand against the small number that were procured and that therefore attrition due to enemy action would be negligible. They had been wrong.

So, throughout Asia, the sub-continent of India and the Middle East, production picked up. With the resources of all of Asia and the Middle East to draw on, aircraft, shipping, armor, artillery and the small arms and munitions required to wage war began rolling of production lines in large numbers.

The large numbers of Yunana II landing craft and increasing numbers of large Amphibious Assault vessels ferried huge numbers of Chinese and Indonesian troops into New Guinea and the Solomon Islands. Port Moresby fell on December 30<sup>th</sup> to a combined force of over 200,000 enemy soldiers and their supporting aircraft and equipment who crossed the Owen-Stanley Mountain range from Morobe. Guadalcanal fell on January 14<sup>th</sup> as over 50,000 Chinese and Indonesian troops landed. The U.S. Marine and Australian force of 8000 on the island was simply overwhelmed. In the end they had little naval support as a large Chinese task force, backed by their own LRASD weapons and those carried by two full regiments of TU-22M Backfire bombers now flying out of Port Moresby and Rabaul drove allied naval vessels from the area. On the evening of January 13<sup>th</sup>, littoral vessels from Australia (two of their Canterbury hydrofoil amphibious vessels), supported by U.S. submarines and two frigates, safely evacuated over 5,000 remaining Allied troops off the island. But Guadalcanal was lost, and the United States was forced to fall back to the Santa Cruz Islands and to New Caledonia.

The door for the invasion of Australia swung open. On February 16<sup>th</sup> the Australian government firmly rejected a CAS proposal to either join the CAS as a provisional member or face war. After the rejection, it was clear that the Australian military, supported by U.S. British, Canadian and an expeditionary force of Brazilians, were simply too thinly spread to cover the entire northern coast of Australia to cover all of the possible landing sites available to their enemies. On February 18<sup>th</sup>, over 250,000 Chinese and Indonesian troops crossed the Timor Sea from Timor and landed near Anson Bay between Darwin and Port Keats. Resistance in that area was light, which allowed the Chinese and Indonesian forces to rapidly establish a strong beachhead. After doing so, they immediately set out to the south to attack Port Keats, which they took on February 20<sup>th</sup>. While that was occurring, a force also moved to the north towards Darwin, which was somewhat further away. The Australian government immediately began ferrying troops and equipment by air into the interior to the town of Bird and then transporting them down the highway that ran to Darwin. By the end of February, and advanced force of 45,000 Chinese troops was only 70 kilometers to the south of Darwin facing 25,000 Australian, American and Canadian troops.

On February 21<sup>st</sup>, in a completely unexpected move, a large task force of vessels that had set sail from Calcutta, India a week before, landed over 150,000 Indian troops on Eighty Mile Beach south of Broom. Other than a few coast watchers and light local patrols, there was no resistance to this invasion and the Indian forces consolidated their positions quickly. An advance force of 25,000 troops moved quickly to the north towards Broom and on the February 26<sup>th</sup>, occupied the city after defeating the local National Guard forces that had been called up to try and stop them.

As more and more Chinese, Indonesian and Indian troops landed in western Australia, the allies began focusing on where to establish their line of defense. The government called up every able bodied man between the ages of seventeen and fifty in the Western and Northern Australian territories. The problem was, both territories were so sparsely populated, that every able bodied man in those specific areas threatened by the growing enemy forces amounted to less than half of the enemy forces. The Brazilian expeditionary force of 25,000 was transported into Perth along with several small forces representing other Asian governments in exile. These forces included Japanese, Taiwanese Malaysian and Thai military units that had escaped before the fall of their nations. In total, the forces from these four nations added another 20,000 troops. In addition to these 45,000 troops, over 150,000 Australian troops were staging in Perth for a move north to counter the enemy before they could move down along the far southwestern coast.

Larger Australian, American, British and Canadian forces began to stage in the vast tracks of central Australia north of Alice Springs. This would develop into the primary countering force to anticipated offensive moves by the enemy. As more and more reservist were called up, and as more and more citizens joined in what was justifiably deemed to be a fight for Australian survival, the CAS issued a new ultimatum on the last day of February. Cede over the entirety of the Western and

Northern Australian provinces, or face the loss of the entire continent. The Australian government was given one week to respond.

While all of this was occurring in and around Australia, events in the Pacific Ocean continued the trend of Chinese victories. Guam and Saipan had fallen after the Chinese invaded with a large Amphibious force escorted by four of their STOL carriers and by three regiments of their Maritime strike aircraft. As a result of particularly severe resistance by American forces on the islands and by the local populations, the occupation and pacification of the islands was particularly brutal. Scenes similar to those experienced in Japan and Taiwan were common place. After those victories in October, the Chinese consolidated their gains in the Mariana, the Caroline and the Solomon Islands. Remaining wary of the “Dragon’s Fury” LRASD weapons, and waiting for an effective counter, American naval vessels rarely approached in strength, preferring to reconnoiter and assess growing Chinese troop strength and disposition.

In late November, the U.S. military finally acted and removed a small thorn from their side south of the Marshall Islands at Tarawa. The Chinese had been allowed to occupy the island and take over the lease of the island itself and the American-built satellite tracking and communication facilities in the 1990’s. This had occurred as a result of a highly controversial initiative implemented between the Chinese and American administrations at the time. Many surviving veterans of World War II who had fought the bloody and costly battle to liberate that island from the Japanese had strongly protested the move. But the protest and the acquisition by the Chinese had gone largely unreported in the press, and the Chinese had now had ten years to consolidate their holdings there.

Too far away from major bases for the Chinese to amount an effective support or re-supply effort, and too involved with other operations to mount any major defense, the Chinese garrison of military personnel and scientists on Tarawa was defeated on November 20<sup>th</sup>. U.S. Marines stormed ashore on November 19<sup>th</sup> in a scene very reminiscent of World War II Tarawa glory. The resistance at the beach was minimal, but the fighting inland around the tracking and communication facilities was sharp. Billy Simmons flew an AZ-1W Viper helicopter in a close air support role that day in his combat debut. There were very few strong enemy concentrations to target, though he did fire two Hellfire missiles into one particularly well built building from which a squad of Chinese marines was making a particularly spirited defense. That night, in a journal he was keeping, the young Lieutenant wrote that his initial impression of combat was that it was “fairly anti-climatic”. He would have ample reason to amend that impression later.

Throughout December, January and February, the Chinese and Indians continued to exploit their natural resource sites in Siberia. Both India and China had promoted their primary managers in the area to full Minister status, increasing their authority in dealing with the Russian federal government and the Siberian provisional government. Logistical and legal issues were expedited in order to exploit the huge amount of natural resources that were mined and pumped from the ground as huge payments of currency flowed into the coffers of the Russian Federation. All of this necessitated the influx of more Chinese and Indian workers, despite the misgivings and warnings of General Nosik, warnings that were largely ignored in light of what was deemed the excellent terms of the exchange the Russians were realizing from the Siberian Economic Compact.

### **November through February in the Caribbean and South America**

The large American force staging near Corpus Christi, Texas set sail early in October. An indirect route to the area of operation was established for the convoy and its escorts. The first leg consisted of sailing eastward in the Gulf until the convoy was off Gulfport, Mississippi, where it was joined by more escort vessels and more troop laden transports. Then the entire group formed into a task force and moved south into the Gulf of Mexico before turning back to the west and making a high speed run through the Yucatan Channel between Cuba and the Yucatan Peninsula of Mexico. While transiting the channel, notice could not be avoided and the task force turned due south off of Cancun and continued at high speed to Trujillo, Honduras where over 50,000 U.S. troops were landed to help Honduras and Costa Rica train and prepare their growing armies.

Another 100,000 U.S. troops, including the young Corporal Hernando Rodriguez, set sail from Honduras on November 15<sup>th</sup> into the Caribbean Sea. They were escorted by two Aegis cruisers, two Aegis destroyers, six Oliver Hazard Perry Frigates carrying the LRASD defense system and three Sea control carriers upon which were embarked more new squadrons of F-35 JSF aircraft. Initially it had been planned to have this significant force join up with the substantial Brazilian task force two hundred miles south of Jamaica for an invasion of Panama. But with the loss of the USS Enterprise and the losses at Guam due to the air-launched version of the Dragon’s Fury weapons, a decision was made to delay the Panamanian operation until a more secure defense against those devices could be developed and deployed.

This meant the task force would conduct its alternate plan of engaging in a multiple front invasion of Venezuela. In order to accomplish this according to the planned timetable, the task force proceeded across the Caribbean to San Juan, Puerto Rico. While in route, the sailors and soldiers of the task force were subjected to their first combat operations as a flight of eight TU-22M bombers

flying out of Panama located the task force and attacked with Yakhont missiles. Of the sixteen missiles launched, two made it through the anti-missiles defenses and struck one Perry class frigate and one of the transports carrying men and equipment. Hernando witnessed the strike on the transport, which was sailing two miles off the starboard bow of his ship. The tremendous explosion, the ship going dead in the water was a shocking sight. Then the ultimate abandonment of that ship with great loss of life brought home to Hernando and every other sailor and soldier in the task force the brutal reality of the war, that death could come to any of them with little or no warning.

Ultimately the entire task force arrived off San Juan. An original execute date of December 13<sup>th</sup> for the operation was delayed. Then, due to weather, logistical and diplomatic reasons, the operation was delayed again and again. Finally, on February 12<sup>th</sup>, it was decided to reschedule the entire combined operation for the middle of May. An urgent need had developed in Costa Rica when Chinese troops invaded from Panama on February 10<sup>th</sup>. It was anticipated, that without help, the Chinese would break through the Costa Rican and American defenses and take San Jose. As a result, half of the forces, including Hernando, remained on Puerto Rico while the other half were transported back to Honduras where they would be airlifted into Costa Rica.

At the same time, a combined Panamanian and Chinese force had invaded Columbia from the north, while a large Venezuelan force had entered that country from the east. Both invasion forces were performing a pincer movement on Medellin and were making steady progress towards it. Standing in their way were two Colombian divisions that had been deployed near Medellin for drug interdiction and security, assisted by two companies of U.S. Army Rangers who had been acting in a advisor role. That role quickly changed to active combatants as the Chinese, Panamanian and Venezuelan forces were engaged. At Bogota's urgent request, Brazilian forces earmarked for the original invasion of Venezuela were re-deployed to help with the defense of Columbia. Over 100,000 troops were airlifted into Bogota to establish defenses there and to ultimately attempt a counter attack down the Magdalena River to flank the invading Venezuelan forces.

Elsewhere in South America, Brazil was on a full wartime footing and now had troops deployed in Colombia, along its own borders and in Australia. Manufacturing plants had been converted over to war time production and the population had been prepared for, and largely adjusted to, the austere conditions that would prevail through the duration of the conflict. The border with Argentina, in the narrow corridor between Paraguay and Uruguay, which had been tense for months, exploded into full combat at the same time Venezuela and Panama invaded Colombia. The Argentine government honored its Coalition of South American States treaty with Venezuela as soon as Brazilian forces entered Colombia to fight.

On February 23<sup>rd</sup>, a large Argentine force moving from Mercedes crossed the border and took the Brazilian town of Itaquí after a sharp battle with Brazilian border forces there. The Argentine forces continued their advance towards Santa Maria where they were met by three divisions of Brazilian army regulars 50 kilometers west of town along the Uruguay River. Throughout the last week of February and into March, a general engagement raged that was drawing more and more forces from both nations into it.

### **November through February in Europe**

In Europe, throughout the remainder of the year, the European Union was in tatters. Disagreements between the various countries regarding their role in the world war that was raging almost everywhere outside of Europe caused all economic, diplomatic and military arrangements for the EU to be put on indefinite hold. The United Kingdom, Spain, Italy and Germany were all actively involved fighting the GIR and the CAS. France, Austria, Switzerland, the low countries and all of Scandinavia were teetering on official neutrality. Russia was involved in the Siberian economic compact with the CAS and had officially declared its neutrality. Greece declared its official neutrality in late November. Romania, the Czech Republic, the Ukraine and Poland on the other hand were all providing direct economic, military and logistical help to the allies, though none of them declared war.

The report that the GIR was attempting to make a diplomatic agreement with Russia allowing for massive numbers of troops to cross the Russian frontier and circle the Black Sea sent shock waves through all of Europe. To that point in the conflict many European nations thought ... or perhaps wished ... that the stalemate along the Dardanelles and the Bosphorus would continue indefinitely and that Europe would be spared any direct conflict. The announcement in the Russian press destroyed that illusion and made it clear that the GIR had intentions of crossing into Europe and defeating the Turks completely. Old primeval fears based on the invasion of Muslim armies in bygone millennia filled the hearts of the people with dread as the reports of how these modern armies were treating the conquered came in. By March 1<sup>st</sup>, active measures in the parliaments and legislatures of several countries that had been teetering on neutrality were leading them to warn the GIR directly about any pursuance of invasion plans. The Scandinavian countries and Greece did not take part in this posturing, but France and the low countries became more insistent in their diplomatic messages.

## November through February in the United States

The large fire in central Colorado burned until it was extinguished by snowfall in the late Fall. Over two million acres of land were burned. Almost fifteen hundred people were killed and more than two hundred thousand others were made homeless as the fire reached more inhabited areas and burned through several resort areas, including Aspen. The results were an even greater strengthening of the Home Guard program that was coordinated by the Department of Homeland Security, the State National Guards and the local Sheriff's offices.

A significant positive side of the terrible fire was the capture of Manuel Mendoza. A positive identification had been made and the FBI was slowly making his connections. By October the Federal authorities had established a definitive tie between Manuel and Miguel. Unfortunately, upon seeing Manuel's picture on national TV, Miguel immediately left the country with all of his family. A search of Miguel's home and offices produced nothing while a "shocked" Hector Ortiz scrambled to replace his executive over American operations and claimed shock and outrage at the "despicable activities" of the former executive. While Hector continued to secretly communicate with Miguel on his Hacienda in southern Mexico, the FBI requested help from the Mexican government to find and extradite him. The lip service and lack of concrete actions on the part of the Mexican administration began to strain relations between the two nations late in the year.

A more significant break would occur later in the Fall when the FBI came across an important lead regarding Manuel and the attack on Foothill Mall near Denver Colorado.

By November more than four million men and women had signed up, received training and been assigned to local infrastructure for three four hour watches per week in the Home Guard program. These watches were now extended to roving patrols all over the forested lands of the nation as more and more people signed up. Local citizens, trained, armed and deputized were watching over America. Armed with .30 caliber M-14 rifles and equipped with the latest in field radio technology, these teams were interdicting terror all over the nation. When coupled with the 250,000 National Guard troops stationed along the southern border with Mexico and the 75,000 troops patrolling the Canadian border, the opportunity for terror decreased dramatically. The source for new terror cells crossing the border was cut off by the National Guard, and the numbers of those already in the country dwindled as they were interdicted and either killed or captured.

In the production area, Americans were finding they were having to wait to do the work necessary to help the war effort. Steel factories, assembly plants, fabrication facilities, mines, new wells, refining and processing facilities had to be built first, all of them to replace production capabilities long since moved "off-shore" but now urgently required "on-shore". It would be a race to determine if these facilities could come online quickly enough to replace America's dwindling strategic reserve in so many areas. It would be a close race, and the very need for the race itself was being paid for in terms of lost ground and American lives.

Despite this ... or perhaps because of it ... Americans were answering the call in terms of their life styles and work habits. Many housewives, retired individuals and other individuals whose personal wealth freed them from the necessity of work, were volunteering for tasks of all types. Some worked to increase production capabilities of existing factories, while many others signed up on waiting lists for the hundreds of factories that were under construction. Others went to work for the oil and gas companies working towards the nation's goal of complete energy independence, searching for, extracting and refining oil and gas products from known reserves off the coasts, in Alaska and through the processing of petroleum from oil shale or tar sands. Others worked in areas to apply enhanced methods to extract more oil from existing wells. Like Cindy Simmons and Elizabeth Trevor, Americans everywhere were anxious to "do their part for the war effort".

And it was helping. The Newport News, Virginia and Pascagoula, Mississippi shipyards were repaired and rebuilt ahead of schedule. After close examination, both the first CV-21 CNN-78 Aircraft Carrier and the new DDX ships that had been hit so hard in March were scrapped entirely. The damage was simply too severe to repair the ships, or to do anything other than salvage what could be salvaged from them. New ships were laid down and components that could be salvaged off the damaged ships were applied to the new construction. The result was that by the middle of November, both ships were taking shape rapidly in a rushed effort to get them out. As a result of work in the weapons development laboratories, new firing ports were added into the hulls below the waterline of each ship. The firing ports were for anticipated hypervelocity, supercavitating defensive system for each ship class. It was expected that these innovations would be available by the time the ships launched, the first DDX in May and CVN-78 in September of the next year. While those shipyards were being repaired and those ships built in them, construction was started on nine new shipyards all around the country. Three of these would be capable of building full size aircraft carriers, three more would be devoted to submarines and four more would be dedicated to the construction of the smaller surface vessel varieties. The first of these shipyards would begin construction in the summer of the next year and hundreds of thousands of Americans were already signing up to work in them.

The President, the Vice President, the Secretary of Homeland Security and the Attorney General formed an executive “bolster” committee and began rotating their travels around the nation. In spite of a still dangerous terror threat, these leaders began speaking at parades, sporting events, on holidays and at special wartime rallies all over the nation. Their speeches were direct, not seeking to hide the gravity of the situation or the extent of some of the losses America and her allies had, and were suffering. But they were also uplifting and encouraging. They exhorted the people to stand their ground, to unite, to defend their nation, their way of life, and to defend their liberty through whatever trial and hardship. The trips and efforts were a great success and the people continued to pull together. The President never missed the opportunity to inform people of his wife’s part in the formation of the American Bolstering Effort ... or “ABE” as it came to be referred to. On some occasions, when she traveled with him, he had her speak and she never failed to deliver an address that was as rousing and patriotic, if not more so, than that of the “main” speaker. To all observing, this clearly only increased the President’s pride in her and the love and esteem which he, and now the entire nation, held for her.

The result of all this was, that in spite of significant and continuing military setbacks, the American people were rallying. Thanksgiving, Christmas and New Years passed. They were holidays celebrated in sorrow in so many instances. Sorrow for the civilian and military lives lost in the fighting, sorrow for the literally tens of thousands of American citizens that were simply “missing” overseas in the belligerent and occupied nations. But, with the sorrow, there was hope. Not one major terror attack was successfully conducted during those holidays. Several attacks by Islamic fundamentalist and Mexican/Spanish based terror groups were attempted, particularly during Christmas and New Year’s, but they were all either discovered and thwarted by the FBI, or they were interdicted at their onset by the Home Guard units and local citizens who had armed themselves in response to the President’s initiatives. Those initiatives regarding firearms in the hands of citizens had been turned into Federal and State law throughout the entire nation. After the incident outside of Boston, the state legislature in Massachusetts had quickly moved to adopt the President’s initiative and been followed by the other hold out states before the holiday period. Despite continued nay saying on the part of a few politicians and anti-gun lobby groups, the public could see the successful results and those results proved to be an irrefutable argument.

However, all of this was occurring before the advent of the initial stages of the Chinese operational plan, “Hong-Lu-Dung”. An operation where for the first time Americans would feel the presence and strength of the Chinese “sleeper” cells located throughout the country. By the end of February, the planning and preparation for this operation had reached its final stages and the Chinese were ready to begin implementing it. Like many Chinese operational plans, it was laced with misdirection and deception. It was a plan that was as large in its scope as it was in its daring and audacity ... and it would begin in America on a day that would come to many as no surprise.

**March 15, 06:29 EDT**

### **Overlooking Stevenson Dam**

#### **Housatonic River, Connecticut**

Harry Wu watched with his 10X50 binoculars for the small panel truck to make its way across the dam on Highway 34. Every few minutes he would look at his watch. It was almost 6:30 in the morning and the action upstream at the Shepaug Dam on Lake Lillinonah would be starting in just a moment. By 6:35 the large assault team upstream should accomplish its primary mission which would trigger Harry’s portion of the operation.

Harry worked at a small Chinese diner over in New Haven. He had worked there for over twelve years, having come to America in the hold of a COSCO merchant ship in 1995. Upon arrival, he had been set up with a “friend of the family” in his position as an assistant cook at the diner where he had toiled in that position ever since ... waiting for his activation signal. His training had prepared him for this long wait, but now it was about to pay off.

The day before yesterday, Harry had hired two local boys from Oxford to drive the panel truck over to Botsford and unload it. Their path would take them across the Stevenson Dam. It was two young men that Harry had used often over the years to hire for his front “Jim’s Overland Freight” company. Every few weeks he would hire them to haul fifty-five metal tables and three hundred and fifty metal chairs to Botsford where they would be unloaded in a warehouse. They would then sit there for two weeks before he hired two other young men in Botsford to haul them to a similar warehouse back in Oxford. He would then repeat the process a few weeks later, varying the interval by as many as five weeks on occasion. The Home Guard unit controlling highway access across dam, and the one watching the dam from their position on the other side of the valley were all familiar with this delivery. Over the last year, they had seen it done at least eighteen times. They would see it again this morning, but there would be a big difference. This time, loaded in the center of the truck, underneath the tables and chairs, was a powerful directed charge.

“Ah, there they are,” Harry muttered to himself, “right on time.” His watch showed 6:31 AM.

**March 15, 06:32 EDT**  
**On Highway 34 on the Stevenson Dam**  
**Housatonic River, Connecticut**

Pete eased the truck onto the highway that ran across the dam. He was anxious to get over to Botsford and unload this stuff for Jim's and get back home to Oxford. Today was the big commemoration. Oxford was holding a parade and service at noon like every other town and city across the country to commemorate the horrific tragedy of March 15<sup>th</sup> last year when the nation had been attacked. Pete didn't want to miss the activity.

"Boy, old Jim was all business today, wasn't he?" Pete asked as they proceeded across the dam.

"Yea, he sure was," replied Pete's partner, Dave. "But who can blame him? Everyone from the President on down to the mayor is warning to be on the lookout for trouble today."

Pete knew that Dave was right, everyone was antsy, but he felt there wasn't too much chance that anything would happen, particularly with the Home Guard Units and the military all over the country.

"Well, despite what's going on overseas, I think we have them on the run here ... and it's not going to be long before we do the same with those SOB's overseas as well."

As Pete completed his sentence, and just as the truck got about halfway across the dam, there was a sudden and loud, "PLANK"

Pete was quick to react as the engine seized up and the truck slowed, "What the? What was that? I'm losing oil pressure!"

"BANG, BANG"

With the two loud bangs, the truck lurched a little forward and to the side as first one, and then the other front tires blew out.

"Blow outs?" yelled Dave as he looked at Pete incredulously.

As the truck came to a complete halt, it immediately began to create a traffic jam on the dam. Highway 34 was well traveled and was a primary connector route between Interstate Highway 84 and Interstate Highway 95 in Connecticut. Within a minute or two, there would be dozens and dozens of vehicles backed up on the dam.

Pete and Dave both got out of the truck to inspect the problem. Both tires looked to have blown out completely. But why? Neither young man could understand. The tires were almost new. Pete was the first to take a look at the front of the truck where a lot of steam and smoke were rising from under the hood. Hot oil and water could be heard hitting the pavement underneath the truck.

"Engine must have blown," thought Dave as Pete reached to raise the hood.

"Holy cow ... Dave, you better get over here and look at this." Pete said before he even raised the hood and as he stood looking at something on the driver's side quarter panel.

When Dave got there, he saw exactly what Pete was looking at. There in the side of the truck, just above and in front of the wheel well, was a neatly punched hole, right through the side of the vehicle into the engine compartment.

"Man, oh man," Dave uttered as he breathed out and began looking around. "Someone shot us!"

As he said this, a Jeep Cherokee with flashing blue lights came driving up and Jim, the head of the Home Guard detail on the Oxford side of the dam got out and hurried towards them.

"What's going on here? Pete, you have to move this truck the heck off this dam and you have to do it now! We have a major terrorist attack going on at Lake Lillinonah right now and can't..."

That was as far as he got. As his voice was cut off in mid sentence, another neat hole appeared, this time on the right side of Jim's head. Immediately the left side of his face blew out showering that side of the panel truck with blood, bone fragments and brain tissue.

As it dawned on Pete and Dave what was happening, the both dove for cover as Jim's lifeless body hit the pavement. The other member of the Home Guard team that had driven out with Jim to see what the problem was, quickly got out on the other side of the vehicle with an M-14 rifle, scanning down stream for where the shooting was coming from. As he did so, he spoke into his radio.

"All units, this is Stevenson East. I have a man down and gunfire! Need assistance on the dam!"

The response was almost instant, and terrifying.

"Stevenson East, GET OFF THE DAM! ... GET EVERYONE OFF THAT DAM! Shepaug Dam has just been completely blown and there's a fifty foot wall of water coming down stream!"

**March 15, that same time**  
**Overlooking Stevenson Dam**  
**Housatonic River, Connecticut**

Hary was done shooting. He had received the "click" signal on his own hand held two-way radio that indicated the dam upstream had been blown. He had really hoped not to have to shoot anybody, but that Home Guard unit had responded too quickly and he couldn't take the chance that they would figure out what was going on and move the truck. Now they would be too worried about gunfire to check the truck for another few minutes, and it would be over long before then.

As Harry took one more look through his binoculars, he could see the two young men he had hired and the other member of the Home Guard Unit racing both direction along the line of cars on the dam, animatedly gesturing to the drivers to get off the dam.

"They must have gotten the word," Harry thought as he watched his watch very closely now. "Just another four or five seconds."

As the second hand on his watch got to the appointed moment, Harry activated his detonator.

Out on the dam there was a loud "BOOM" which literally lifted the panel truck up into the air a good five feet as a cloud of dust and smoke enveloped it. Harry briefly watched the dam below the truck through his binoculars. He could almost swear he saw the beginnings of a crack just below the truck and extending several feet down the face of the hundred foot tall dam.

"That's good enough," he thought as he disassembled the rifle and then let the individual parts slip down the side of the canyon wall. He was not worried about anyone seeing them or trying to retrieve them ... that would not be possible in another few minutes.

Harry's part in the operation was complete and he made his way to his parked car, got in and drove away along Highway 34 back towards New Haven. As he did, a number of emergency, law enforcement, and National Guard vehicles passed him going the other way towards the dam. Harry dutifully pulled over like all the other cars going his way to let them pass.

Back at the dam, the cloud from the explosion cleared as people continued to run to the safety of the canyon walls, most of them exiting their cars to do so. Ten miles up stream, at the head of Lake Zoar that was formed by Stevenson Dam, a wall of water still over forty-feet high pushed into the narrow lake. It had come the eight miles down stream from the destruction of the larger Shepaug Dam on Lake Lillinonah, sweeping away the towns of Berkshire Estates, Riverside, and Lakeside with it. Now, as it entered Lake Zoar it created a hydraulic pressure wave in the lake itself that was transmitted downstream to Stevenson Dam.

The Chinese mathematicians had done their work well. They had calculated that the hydraulic pressure alone would be sufficient to breach Stevenson Dam if a rapid enough release of the tremendous pressure represented by Lake Lillinonah was achieved. It was. But the Chinese planners had left nothing to chance. The directional charge in the panel truck was meant simply to weaken Stevenson dam in its center and insure that the pressure wave breached it. It did.

As a number of people were still trying to make their way off the dam, there was a thunderous "CRACK" as a two hundred foot section in the middle of the dam simply blew out, almost one hundred feet on a side from where the panel truck had detonated. Concrete, the panel truck, Jim's body and the empty cars on those sections of the dam fell into a cauldron of raging water, over eighty feet high. As it burst from its confines, the water pressure was too much for the weakened sides of the dam. Within five seconds, the rest of the dam failed and was swept away to within just a few feet of each end of the dam. The hapless thirty-one people still racing for the ends of the dam disappeared with their cars into the raging waters. Pete and Dave, who had both reached safety, stood on the side of the now ruined structure and stared in shock at one another.

**March 15, 07:00 EDT**

**Along the lower Housatonic River  
Derby and Shelton, Connecticut**

A wall of water some sixty feet high now rushed to the southeast down the confined valley of the lower Housatonic River at a speed of almost fifty miles per hour. It was a seething, churning, destructive wall that was filled not only with water, but with concrete chunks the size of houses, vehicles, turbines from the hydroelectric plant below Stevenson Dam, large trees uprooted by the water and all manner of other debris. The heavier objects, rolling and churning along the front of the wall of water, literally pounded into rubble anything in their path. Homes, businesses ... people. Ten minutes later and eight miles down stream, the wall of water slammed into the towns of Shelton and Derby. Although the word had gone out, there simply was no time to move so many people so early in the morning. Tens of thousands died in their homes.

Two miles southeast of the confluence of the Housatonic and the Naugatuck Rivers in the center of Derby, the now larger Housatonic River valley opened up considerably and the river made a hard bend to the south, towards Stratford. Here, the energy behind the wall of water bled off considerably as the water spread out and the raging torrent, now only twenty feet high, slowed to forty miles an hour. By the time it covered the five miles to Stratford it had slowed to thirty miles an hour and was fifteen feet high. But this was more than the Chinese planners had hoped for as their "weapon" approached its main target.

**March 15, 07:20 EDT**

**Sirsky Assembly Plant  
Stratford, Connecticut**

Earl and Lloyd had exited the plant when their shift ended at 7:00 AM as they had done every work day for the last ten years. They were close friends and they liked their jobs and the people they

worked with, particularly during these times. The two of them were machinists on the assembly line for the MH-53 Sea Dragon mine warfare helicopter manufactured for the U.S. Navy here at Sirsky's plant in Stratford. It was the largest helicopter manufacturing plant in the free world and it manufactured many other military helicopters in addition to the Sea Dragon. These included the Navy's SH-60 Sea Hawk, the Army's S-60 Black Hawk, the Army's RAH-66 Comanche, the Marine's CH-53 Super Sea Stallion and the Coast Guard's Jay Hawk helicopters.

As they had done at the end of almost every shift for the past ten years, Earl and Lloyd sat down on the tailgate of Lloyds pickup truck to drink some coffee and share some stories before they drove home. As they were doing so, siren's began blaring in town and a loud warning buzzer began going off at the plant over one hundred yards away.

"What do you think that's all about?" Earl asked as he stood up and looked past the Sirsky Bridge on Route 53 to the Housatonic River about four hundred yards upstream from where they sat.

"I don't know, but whatever it is, its got people exiting the facility. Look over there!" Lloyd responded to his friend as he too stood up and pointed to the hundreds of employees exiting the manufacturing facility.

As they watched for a few seconds, both men became aware of a dull roar that had just started to register on their consciousness. With ever passing second it got louder and louder and soon it became clear that it was approaching from upstream on the river.

"I sure don't like the sounds of that Earl, hop in the truck, we'd better get out of here."

As both men walked toward the pickup, Earl was brought up short as the sound grew perceptibly louder and he saw what was coming downstream on the river through the spans on the bridge.

"Sweet Jesus have mercy on us," he murmured as a slow motion image of cars, telephone poles, large fragments of reinforced concrete, parts of buildings, corrugated sheets of metal, bodies and frothing water came towards them.

After no more than two seconds, the two friends looked at one another and raced to their doors, got in, and Lloyd started the truck. Tires screeching, Lloyd pressed hard on the accelerator and headed for the plant entrance. He wasted no time on trying to use the clearly marked exit path, or the clogged entry and exit gates. Lloyd simply slammed the truck into low gear and rammed right through the barbed wire topped fence onto Main street and headed for higher ground. Lloyd and Earl were among the last to leave that parking lot alive.

The churning wall of water, fifteen feet high and traveling at thirty miles an hour, came barreling through the Sirsky facilities, sweeping all before it. The main buildings themselves stood for several minutes as water inundated them, but the cars, people, guard shacks and helicopters that were out in the open were swept up into that awful grinder on the front end of the wall of water. As more and more large objects struck the sides of the buildings, and as their foundations weakened, ultimately, one by one, the manufacturing facilities themselves were torn down. All but the heaviest pieces of equipment were swept along the sides of the river towards Long Island Sound at the mouth of the Housatonic. Ten minutes later, the first wrecked and ruined hulk of a CH-53 Super Stallion fresh off its assembly line was pushed roughly out into the mouth of the Housatonic River towards Stratford Point. As it floated for several minutes against the beat of incoming waves in the Sound, back in Stratford the Sirsky Bridge, assaulted by the same forces that tore down the Sirsky manufacturing facilities, slowly collapsed into the river below. When it did, it spilled several dozen cars and over one hundred people that had been trapped on its spans to their fate in the swift flowing and debris filled water that was maintaining a level of fifteen feet above flood stage.

### **March 15, 17:20 EDT**

#### **Situation Room**

#### **The White House, Washington, D.C.**

It had been another hair raising and horrendous day.

"Just like last year," the President thought as he sat with his Homeland and National Security Team in the situation room and reviewed the damage assessments.

With the word of several simultaneous attacks, the President had been rousted out of his living spaces along with the First Lady as they prepared for the noon meeting commemorating last year's attacks. Marine-One had flown them to Andrews Air Force Base in a repeat of the route they had taken last year on this same date. There, they had boarded Air Force-One and flown the randomly selected and pre-designated security route for the President that day. It had taken them out over the heartland of America where they were protected by empty space, long distances, and no less than twenty F-22 and F-15 fighter aircraft.

But, there had been no missile attacks and no large surprise military attacks in other theaters. The only shooting and real "military" action had occurred for the first few moments early that morning in several different locations around the country. All eight of the attacks had dealt with asymmetrical type warfare where small groups of enemy terrorists had used America's own infrastructure against it. When this had become clear, the President had ordered Air Force-One to return to Washington where he could meet with his Cabinet and military leaders.

Before the end of the meeting, the President was appraised of what was known. There had been eight attacks, six of them against dams and two to create landslides. Of the five attacks against dams, four had been unsuccessful due the efforts of local citizens, Home Guard units and local law enforcement. In those cases large firefights had erupted as the attackers were discovered either before they reached their target, or while they were preparing to destroy the dams they had picked. In one case the planned attack was prevented due to prior FBI infiltration and interdiction very early that morning before the attackers approached their target. While reporting on the successfully interdicted attacks, the Secretary of Homeland Security, Stewart Langstrom, delivered this sobering message.

“Mr. President. Each of the recovered bodies of terrorists in these attacks, and every captured terrorist appears to be of oriental descent. We have only positively identified two of the twenty-two subjects, but both of those are Chinese who have been here for many years. One is an illegal, the other a nationalized American.”

The President soberly took this in before commenting.

“Stewart, run it down with Dean. I’ll need more to go on than that, but it is certainly within their capability and something else we will have to look at in our immigration and naturalization policy. Continue, how bad is it in Connecticut?”

The review of the attack in Connecticut showed it to be a successful enemy action against the nation of horrific proportions. Over thirty-five thousand people were feared dead along the Housatonic River, most in the towns of Derby, Shelton and Stratford. Analysis indicated that the attack was significantly enhanced, and the destructive force of the flood maintained, by having multiple dams fail along the river to sustain the force. Analysis indicated that every one of the attacks on the dams had sought to achieve this.

In addition, it was clear that in each case an important military target was a prime reason for the respective attack. In Stratford, Connecticut, the Sirsky manufacturing facilities that built many of America’s most important helicopters had been completely destroyed, along with dozens and dozens of newly manufactured helicopters that were awaiting flight trials.

The planting and detonation of large demolition charges above two facilities in the Rocky Mountains had also resulted in significant destruction. The worst of these had occurred near Boulder, Colorado, where an avalanche was created high on a mountainside above a slide area that emptied near a sensitive electronic component fabrication facility. That facility manufactured sensitive chips used in target acquisition circuitry for virtually all of America’s armor units, from tanks to infantry fighting vehicles, including every HMMWV outfitted with TOW missiles.

The slide coming down the mountain emptied into a wash over eight hundred yards from the facility. A massive concrete wall had been built there to insure that any of the occasional rock slides or snow slides were contained. But it had not been designed for the millions of metric tons of material that had come down the mountain side this morning and literally buried the facility and everything surrounding it. An entire shift of skilled laborers and scientists appeared to have been killed and all of their equipment destroyed. It would be weeks before heavy equipment could recover all of the bodies or any salvageable equipment. This resulted in what the military defined as a “mission kill” for the other two shifts at that factory. A mission kill was when essential infrastructure, logistics disruption, or other non-fatal damage resulted in a military unit being rendered useless, without having to actually destroy it. That is exactly what occurred with the other two shifts of skilled laborers and scientists. They no longer had the facility or the equipment with which to do their job, so they were effectively dead for the time being.

At the conclusion of the reports and initial damage assessments, before discussing probable responsibility and response, the President sourly commented.

“They couldn’t reach us with their own bombers, they can’t get close enough with those “Q” ships of theirs and they dare not launch intercontinental missiles at us. So, these sorry bastards resort to this type of attack.

“Well, there’s a reckoning coming ... by God I warn you all now that I am considering a limited nuclear strike on the PRC and the GIR ... daring them to try and respond and to invite the full dose. With them killing thirty-five thousand of our citizens at a time, as far as I am concerned that equals a Weapon of Mass Destruction, however they achieved it”

Several members of the National Security Team nodded their heads in grave understanding, some looked up in shocked amazement. The President continued, turning to his Secretary of State.

“Fred, I don’t care how you do it. Front channels, WNN, clear air broadcast, or back channels. You get the message to Zenim and to Sayeed and you do it today ... any more massive U.S. citizen casualties, I don’t care from which source or how they do it. Any more such attacks will result in a response in kind with whatever tools and resources we have available. Spell it out clearly to them, I know I am emotional right now but I want them to understand this ... I will NUKE them back into the Stone Age. If they want to up the ante on that ... you tell them I’m willing because by God this is going to STOP!

“Fred, you’ll need to share the same information with our allies. Do it right after you send the message to Zenim and Sayeed. Let them know in fact that I am going to include the basis for this policy in my address to the nation tonight.

“Now, because of past policies we know that, like the other terrorist groups we have been dealing with, that it is likely that the Chinese have a lot of them here in the country. A lot of these “sleeper” cells. My guess is we’ll have to deal with them as they pop up just like we have done the others. Today we showed that our Homeland Security efforts through the Home Guard program and through arming our civilians can effectively do this, but that we don’t get them all. Let’s deal with these attacks as they come, by let’s also document the policy I just described regarding the massive attacks. I will not move off of it. Call it the Weisskopf Doctrine on Massive Terror Attacks ... we will view massive casualties as the use of Weapons of Mass Destruction no matter how they are inflicted and respond accordingly. Something of that nature, something worded that straightforwardly is what I want to announce to the nation in my address tonight.”

As the meeting continued, and then later as the President prepared to address the nation, the Chinese received the President’s message and moved right ahead with their own plans. Some of their “sleeper cells” would be active again, but not in a way that the President or his cabinet contemplated.

**April 6, 04:30 EDT**

**Trevor Master Bedroom**

**Nashua, New Hampshire**

Joseph listened to Elizabeth’s deep rhythmic breathing as she slept. While he was glad she was sleeping peacefully, he couldn’t rest. Since receiving the notification his head had been spinning.

“Has it really been nine months?” he thought as his mind attempted to grasp the enormity of it.

“Nine months since that initial discovery and discussion with Elizabeth ... since Elizabeth, with her creativity and intuition had pointed me in that direction that I otherwise would not have gone.”

He could remember her words as he had explained the faint electrical traces emanating from that underlying structure, that infinitely delicate but complex under girding he had now come to know so well. When he spoke to her about that hint of electrical characteristics, she had simply said.

“Electrical? Isn’t that the same type of thing that drives the brain and the nervous system?”

So, when he could find the spare time in the midst of his work projects dealing with the communication sequences and codes that RNA provided between DNA and proteins, he directed his research on the new structure in that direction. That avenue of research communicated to him by his wife led to discoveries for which the word momentous seemed almost inadequate

When Joseph had turned to the new analytical methodologies involving atomic force microscopy and enhanced mass spectrometric analysis methodologies he was developing for his DNA research to brain cells and the nervous system, what he had discovered was nothing short of a breakthrough in modern science. There, teaming in incomprehensible detail was the same underlying structure he had seen, only multiplied by several orders of magnitude. Every code, every signal from the brain transmitted through the nervous system seemed to be channeled and controlled by this structure.

“Electrical, Elizabeth?” Joseph reminisced, “Oh yes, electrical current in minute, almost undetectable quantities, but in a pattern and a coding unlike anything ever observed!”

For weeks Joseph had observed, tracked and recorded those electrical signals, which defined intricate paths infinitely finer and more delicate than nerves and synapses. It became evident that progress in understanding this discovery was a task far more than he could handle alone. Before he announced his initial findings and before he requested funding and resources, he had decided to do some other comparisons and some destructive testing. For this he choose some of the higher primate samples available to him. It was then that the truly astounding nature of his discovery became apparent. The structures were not apparent in the primates. Upon further testing, he discovered that the structures were not evident in any other mammalian or other tissue. It appeared that this unbelievable delicate and complex sub-molecular structure was unique to man!

From there Joseph had proceeded rapidly to make his initial findings and requests for a team. Those initial findings showed how the structure was most apparent and most abundant in the nervous system and particularly in the brain. Testing indicated that human messaging and coding of all types, including the genetic coding and sequencing were channeled through this structure. In man, it occurred in parallel to the overlaying DNA/RNA/Protein structure already discovered, but it occurred in a complexity almost impossible to fathom. Logically, since all mammals shared similar DNA/RNA/Protein structures, the function of this underlying structure must lay outside of the biological processes currently know to man, or mankind still had a lot to learn about those processes.

“So what is the primary function of this sub-molecular structure that I have discovered?” he asked himself one evening five months ago as he was almost ready to submit his findings. In one of those rare moments when somehow the doors to higher order discoveries are opened to the intuition and the mind of man, Joseph’s mind had somehow grasped onto a piece of pure knowledge. It was a thought that he instantly recognized as the truth, though he currently had no way of proving it.

“Man’s ability to reason...his self awareness...his capacity for insight as opposed to pure instinct are associated with these structures!”

The words had blurted out vocally as his mind caught hold of the thought.

Later that particular evening, Elizabeth had agreed and caused him to think of more religious and theological roots for the structures. As interesting and believable as that was for him, he knew he would have to stick to his scientific methods to gain funding and a team. Two days later, almost five months ago, he had submitted his initial findings and recommendations.

Things had moved quickly from there. The National Institute of Health and the DOE were intrigued. Joseph had meticulously documented his findings and presented a logically compelling hypothesis to explain his data. Within six weeks he found himself on a plane to Washington DC with a “commission” from both the NIH and the DOE to work in conjunction with the National Academy of Sciences to verify his original findings. Working with as bright and gifted a team of people as Joseph had ever been associated with, in eight weeks Joseph’s NAS program had indeed reproduced and confirmed the earlier results and the findings were published internationally to the free world.

What had come yesterday in the mail had been the shocker. Surely people at the NAS, NIH and DOE must have known. If they had, they had not shared their knowledge with him. What he had received was an official notification that he had been nominated for a Nobel Prize...which he would in fact be rewarded and presented in Stockholm later that year. The nomination, coupled with his continuing thoughts and theories on what was being tentatively called the “Human Reasoning Structure” (HRS) was what was keeping him awake.

What Joseph Trevor didn’t know was that his finding and its verification and attendant Nobel Prize were only the beginning of the impact of his research. The greatest impact was still well in the future...yet to come, and from a quarter wholly unexpected.

**May 1, 14:43 local time**

**Secure Conference Facilities**

**Srinagar, India**

The three leaders of the greatest military and economic alliance the world had ever known sat together drinking tea as their summit neared its conclusion. Together the three of them, Jien Zenim of the Peoples Republic of China, Hasan Sayeed of the GIR and President KP Narayannen of India, controlled over half the surface of the earth, and a good deal more than half of its population. Over one billion Muslims in the GIR, over one billion Hindus in India and well over one billion people, mostly of Buddhist background, in China...not to mention the hundreds and hundreds of millions of people that they had now conquered. All three felt that their collective time, and that of their peoples, had come. Those peoples, who had typically been labeled as “third world”, now controlled the largest military in the world, the third largest nuclear stockpile in the world and the greatest amount of natural resources in the world. With the addition of so many nations into their collective fold over, they also controlled the largest, most modern concentration of manufacturing resources in the world.

For the first two days the talks had centered on their economic ties and issues. Issues of production, quotas, delivery and pricing. As it turned out, much of the pricing was handled almost in a bartering fashion... so many hundreds of thousands of barrels of oil a day for so many hundreds of aircraft and the like. Economic and diplomatic methodologies were discussed for using their collective wealth to influence other nations and use them in their quest to defeat their enemies who were led by the United States.

Then, for the final two days, the talks had turned to matters of a more strategic and military nature. Those last two days amounted to a “war summit” as they were intended. It was a war summit held in historically one of the most war torn areas on the planet, an area that was not without its own dangers. For decades the Indians had fought Muslim insurgents near here in the Kashmir, insurgents supported by Pakistan. There were still those who hotly contested the region, despite the Aswah issued by Imam Sayeed concerning it well over a year ago when Pakistan had become a part of the Greater Islamic Republic. In that statement of faith, Hasan Sayeed had indicated that the faithful should allow Allah to handle the Kashmir in His own time and in His own fashion. The sword of the faithful was no longer required in the Kashmir. That had ended most of the contention.

But events in the years before that, when Pakistani intelligence had assisted insurgents in the Kashmir in attacking the local Indian Provincial Capital and the Indian Federal Parliament in New Delhi had left a lingering bitterness in the minds of many. Those attacks had left the two countries teetering on the brink of war at the time, a war that could well have become nuclear. As it was, other nations had mediated and war had been avoided. But the lingering bad taste remained in spite of Hasan Sayeed’s recent directive. To insure that these ill feelings were finally entirely put to rest, President Narayannen had called the meetings in this beautiful Indian city near the contested area.

The meetings, both economic and military, had been a great success. The three leaders were now recapping their summit and reviewing their military achievements and ongoing plans. They were reminded that a new dialog had been broached, in light of ample Mid East oil now exclusively controlled by the GIR. This new initiative involved a proposal for the GIR to share more directly in

the bonanza that China and India were experiencing in Siberia. It was agreed that China would carry the request forward to Russia with an offer of very cheap oil reserves from the GIR and a significant amount of cheap labor from India and China. While the topic had turned to Russia, the request to Russia regarding passage around the Black Sea had been brought up. There was much consternation expressed by all three leaders, but more particularly by Sayeed and Zenim that the request had been made public. Contingencies were planned and discussed for the possibility that the request would be denied now that so much pressure was being applied to the Russian Federation concerning the matter.

"I am not concerned with their threats to the GIR," commented Sayeed. "We are at war with Turkey, they all know it, and we will take whatever measures are necessary to defeat our wayward cousins. They are just afraid that we might extend our influence further towards them once we do ... and that is a very understandable concern on their part."

The review had proceeded from there to include a final overview regarding the current disposition of their forces around the world. The GIR controlled virtually the entire Middle East outside of a very narrow strip of land that represented Israel. Regarding this, Hasan Sayeed indicated to the other leaders that with the several million men surrounding them, Israel was contained. With several million men and the large amounts of military equipment he had staged all around Israel, he assured the other leaders that he had situation well in hand and that he could literally deal them when "the time was right" according to decisions made earlier at the summit.

India held the entire sub-continent, Sri Lanka, the strategic base at Diego Garcia and parts of Laos, Thailand, Malaysia, Bangladesh, Nepal and parts of Laos. President Narayannen reviewed how India's major "thrust" now lay in gathering more land on the Australian continent where it could relocate some of its masses to better conditions and where it could further expand its influence. The timing for the realization of this goal was discussed in light of the GIR's goal to eliminate Israel and Turkey, and in light of Jien Zemin's plans for the PRC.

China had made the most dramatic gains. All of the "Asian Tigers" and their modern production capabilities now belonged to China. The sphere of the PRC's direct influence had blossomed in a year to include Japan, the Philippines, Taiwan, Malaysia, Singapore, New Guinea, the Mariana Islands, the Caroline Islands and the Solomon Islands, including Guadalcanal. It also included a growing area of Central and South America that had embraced the CAS. This included Panama, Venezuela and Argentina, which had let to severe fighting in Colombia and along the Argentine border. But an important facet remained. Jien Zenim was addressing it now with his final remarks.

"So, gentlemen, what's next?" asked Jien Zenim rhetorically, "Shall we heed the Germans and Italians? Shall we ignore America's blatant attempt to influence us through nuclear blackmail?"

"... and oh, by the way, I am Weiskopf is capable of it."

Waiting for a brief moment for the import to be driven in, the President continued.

"So, again I ask, should we give-in? The answer is no! Instead, we shall influence them like we did a few weeks ago on their anniversary commemorating our initial attack. Our plans have progressed just as we'd hoped. Our goals to secure our resources and to punish the Americans are well advanced and already being implemented as we have discussed.

"All three phases of "Hong-Lu-Dung" will be implemented, the first of which has already begun with our attacks on America in March of this year. Those attacks resulted in significant death, power loss and military facility loss to America. We will continue lower grade attacks in the weeks and months to come and we will ultimately release the coded order to have the most important and final piece of phase one accomplished. As phase two and three are implemented, the operational goals will require us to not only control the skies, but to take land from our enemies and hold it.

"If the operations are successful and I have no reason to believe that they will not be, we will shock the world yet again in the coming months, and tear down another myth. It is another myth of American invulnerability. We have already shown in so many ways that they are not invulnerable, particularly through our "Dragon's Fury" weaponry. In fact, despite the respect we must hold for their technology and nuclear weapons, they can be defeated. Notice how Weiskopf sends us a message. Notice how he condemns us loud and long, and threatens us with his nuclear fire if we do not change our ways. If he was the strong leader that I thought, he would have simply sent us the message on the tips of those missiles...it is what I would have done had the positions been reversed. But he did not, and once our enhanced KS-3 missiles are in place, we will not fear his threats in that regard.

"In summary, we have done well ... far beyond our expectations. We shall continue to do so until our enemies lay down their arms and accept the new order that we have instituted. I have highly placed and powerful contacts within their countries that indicate a belief that they soon can be brought to that realization, even among the Americans. Their cause is futile and we must allow the American people and those still looking to them, or holding out hope concerning them, to realize just how futile their aspirations are. "Hong-Lu-Dung", when fully implemented will do this. It is an ambitious and an audacious plan, but it is really a straightforward plan that focuses on what we all know is important.

"By the time a year has passed and we meet for next year's spring summit, I believe we will have much more to discuss in terms of territory and resources. I also believe we may well be discussing what terms we will offer the Americans and their allies for their surrender."

## Chapter 20

*“For every action, there is an equal and opposite reaction.”—Newton’s 3<sup>rd</sup> Law of Motion*

**August, 23, 7:15 AM, CDT**

**Convalescent Care Unit, Private Room 1012A**

**U.S. Military Medical Facilities, San Antonio, Texas**

Almost imperceptibly, the all-enveloping light slightly faded. To anyone not accustomed to that bright and penetrating light, the fading would have gone unnoticed. But to Leon, who had been totally consumed by the light for what seemed to be many, many hours, the fading was noticeable and dramatic. The surrounding landscape, which until this time he had only perceived as gently rolling and too wondrous to adequately describe, came into better focus. The face of the figure that had been sitting with and speaking to him since he had realized he was in this place also came into view. Funny, although he was aware the man had been gently and calmly speaking to him and comforting him, he couldn’t remember exactly what had been said. Now, out of the glare of that comforting, penetrating light, the face became recognizable. It was the face of his deceased father.

“Dad! Is that really you? Where are we...how can...am I?”

His father’s understanding smile seemed to penetrate his heart and soul. It was a smile that he had not seen in many, many years...at the same time, it had a quality about it that he had never seen.

“Yes, son, it is really me...and if you are asking me whether or not you are dead, I can tell you that you are as close as one can come without it actually being so. But it is not your time to remain here in this realm—there is much more for you to accomplish before that time comes. The time has come for you to go back, and when you do, you will forget most of this experience. One thing you will not forget, though, is something I am grateful for—that you have seen me. Tell your mother and your brother that I am fine, and that I love them.”

Leon, despite the training and the hardness drilled into him by Marine NCOs, could not hold his tears back. They streamed down his face as he felt the warmth...the comfort...the love that this place exuded, and that was conveyed in his father’s voice which penetrated his very soul.

“But where are we? Why do I have to go? Dad, I have so much to ask and so much to tell you!”

His father’s eyes bored into Leon’s as he spoke. “It’s okay, son...I already know. One day you will, too...but not now. Remember, I am so proud of you!”

As his father said this, the light dimmed further, and the very elements in the atmosphere surrounding him seemed to coalesce and envelope him. Then, those elements appeared to circle around him like some kind of swirling gray cloud, blocking off the view of the realm he had just been in. A feeling came over him as if he were falling, and involuntarily his eyes closed and his mind drifted. As it did, he heard the voice of his commanding officer back on the island of Diego Garcia.

*“Leon, get the hell out of there!”*

Those shouted words came to him as if from a dream or from another world—a world outside of the one he had just known and *lived* so thoroughly. It was almost as if he had never known a world other than the one he had just visited. But the voice of the officer had cut through all of that. He found himself slowly turning his head, and looking down the slope to where his commanding officer was standing at its base. There, with its blades slowly rotating, was the SH-60 helicopter standing behind his CO where five Marines were providing security. It was the only helicopter in view.

Somehow that voice, and the view of his CO and the helicopter, had reawakened in Leon the knowledge of what he had to do. Turning quickly, he emptied his last magazine into a group of approaching Indian soldiers who appeared about fifty yards away. Throwing the empty rifle down, he reached down with one hand and grabbed his wounded NCOs pants at the waist. With his other hand, he grabbed the wounded Private Jacobs, and then dragged *both* men towards the helicopter.

Again he had gone no more than ten yards when he felt again that tremendous yank on his right calf, and he collapsed to one knee on that side. Summoning all his strength and ignoring the pain, he stood erect and kept going. After a few more yards, another tremendous jolt hit his back and he stumbled forward, almost falling but somehow retaining his footing. As he continued forward, he watched the Marines below him, now only thirty yards away, firing past him at figures appearing on the ridgeline behind him. As he trudged on, he looked down and noticed the crimson on his chest, the ragged hole in the front of his fatigues, and the ragged flesh—his flesh—surrounding the wound.

Inexplicably he remained standing and kept moving down that small hill, both the NCO and Private Jacobs still in tow. Three of the five Marines were down now and being loaded into the helicopter. His CO and the other two Marines kept up a steady covering fire, joined now by a door gunner on the helicopter using an M-60 machine gun to stitch rows back and forth along the ridge. As he approached within five yards of the CO, Leon again somehow gathered the strength and with an almost superhuman surge, he hurled both the NCO and Private Jacobs forward to the waiting arms of two medics who had come forward from the helicopter. Just as they took the men from him, there was

an incredibly bright flash immediately behind him and Leon's eyes opened wide as he was violently thrown forward.

**August, 23, 7:18 AM, CDT**

**Convalescent Care Unit, Private Room 1012A**

**U.S. Military Medical Facilities, San Antonio, Texas**

She had been there all night, like every other night for the last several months, keeping her vigil. Alan would help out in his off-hours during the afternoon and evening, then she would come and sit with Leon through the night until Alan could return. It was a cycle that she and her youngest son were intent on maintaining until Leon's condition resolved itself.

Late last year, when Leon had finally been transferred back to the United States and the hospital near Washington, D.C., Geneva and Alan had both taken time off to be with him. After the severe injuries he had sustained on Diego Garcia last August when the U.S. Marines retreated and were evacuated from the island, the prognosis had not been good. From the time he lost complete consciousness on the flight deck of the U.S.S. Abraham Lincoln, Leon had remained unconscious and in a comatose state. His injuries had been severe, with a bullet wound to his leg and back, his head and back torn by shrapnel from a mortar round, the trauma of a severe concussion and significant trauma to his medulla.

But, over time, most of those injuries had healed, though Leon was still unable to breathe on his own, due to a continued loss of function from the injury to the medulla portion of his brain. The unconsciousness and comatose state resulting from those head injuries showed no signs of improvement. He had been in that state for over a year now. Many experts had tried to gently warn Geneva that he might never regain consciousness...that perhaps she should consider having the life support equipment turned off. It was something that Geneva would never consider, and Alan supported her 100 percent. They would stand vigil until Leon either regained consciousness, or until he passed from this world.

And they had the support of the public and the President in this decision. The President had been briefed on Leon's heroics soon after the fall of Diego Garcia. In an environment where America desperately needed every bit of good news it could find, and where the people needed to know of every inspirational and heroic event, the President had responded positively and quickly to the recommendation that Leon be awarded the Congressional Medal of Honor. Moving swiftly, Congress had approved the award. In a nationally televised event in the middle of May—almost nine months after the action—the President had presented Leon the Medal of Honor here at his bedside, with a promise to have him to the Oval Office as soon as he regained consciousness and recovered.

Geneva would never forget the pride she felt as the news media focused on Leon's life, and how he had improved himself and lifted himself out of the gangland environment of Chicago to make something of himself. Leon's story of study at night in the city library, passing his proficiency and GED tests on his own, his acceptance to Boise State University, his study there, and finally his enlistment in the United States Marine Corps and subsequent actions were an inspiration to all Americans. They were particularly an inspiration to those still involved with the gangs Leon had forsaken. The talk on the street from the young men now was a desire to become like, or be compared to, "L.C.", and many were taking the initiative to do just that.

The feelings that filled Geneva's heart when the President had referred to all of this during his presentation, and when he had turned to her and thanked her and her deceased husband for instilling in Leon the values that made all of it possible, were something she could never put into words. Her respect for the President for recognizing Leon's upbringing, and making note of it to the nation, was something that magnified her respect for her him tenfold over. As she thought about all of this, a flicker of movement in her peripheral vision drew her attention to Leon's face.

"Did his eyelid just move?" she asked herself as she intently stared at her son's face.

He seemed to be peacefully lying there in his comatose state, when she witnessed his left eye move under his eyelid, and then both of his eyelashes began to flutter. She put her hand to her mouth and stifled a gasp as Leon suddenly opened his eyes in an intelligent and surprised stare.

"Captain!...Captain?" he muttered through his breathing apparatus as his eyes focused and he became aware of his immediate surroundings.

"Leon! Son, it's okay. Don't try to talk. I'll get a nurse," Geneva said to him as she leaned over him, held him by the shoulders, and looked into his clearing and more comprehending eyes.

She pressed the call button for the nurse, who arrived within a few seconds and began examining Leon, checking his pulse and looking into his eyes, checking the irises that now showed the abrupt and pronounced change of her patient's condition. The first nurse immediately called other nurses, who made calls to the staff physicians on duty. In the meantime, Geneva, according to long-held agreements between herself and Alan, called him on her cell phone and announced the good news, never taking her eyes off her son, who stared back at her just as intently.

"Alan! Oh, Alan! He's awake. Praise the good Lord, he is awake! Come quickly!"

**August, 23, 12:30 PM, CDT**

**Convalescent Care Unit**

**U.S. Military Medical Facilities, San Antonio, Texas**

"Leon appears to be remarkably alert, Mrs. Campbell. We were able to take him off the assisted breathing almost immediately, and he is anxious for you and Alan to come back into the room so he can share some things with you. His ability to converse is nothing short of astounding, and while I want to stress that my current impressions are nothing more than preliminary, he's a tough young man and I'm hopeful about the possibilities for his improvement.

"Now, there is no reason for me to keep you from going back in there and picking up where you left off. We performed a thorough exam and disconnected some of the life support and assistance equipment he had required up until this point. Don't be put off by the fact that the equipment is still in the room. We will keep it there as a precautionary measure in case there is a relapse. I personally believe that the chances for such a relapse at this point are remote, but we want to be safe."

As the doctor finished speaking, both Geneva and Alan thanked him, and entered Leon's room. As they did so, Geneva turned to the doctor. "Doctor, could you work with the folks here and the military, and make sure the reporters are held off for at least the rest of the day? I know they'll be wanting to get the story out, and I know it will be important and positive news for so many folks around the country who have taken a liking to Leon...but I would like him to not have to put up with all of that for a little while yet."

The doctor smiled knowingly and nodded. "Mrs. Campbell, don't you worry. The Colonel has already taken care of it. The news will be announced late tonight, and there will be no press allowed in Leon's presence for at least another forty-eight hours. Doctor's orders. The military public relations people will handle things during that period, although you and your son will most certainly be asked for interviews by the networks. How you respond to that is entirely up to you."

Geneva again thanked the doctor and entered Leon's room.

**August, 23, 12:32 PM, CDT**

**Convalescent Care Unit, Private Room 1012A**

**U.S. Military Medical Facilities, San Antonio, Texas**

Upon entering the room, she found Alan already sitting on the side of Leon's bed. Leon was propped up on the bed with pillows, and the two of them were just completing a brotherly embrace. Both had tears streaming down their faces. As she walked over to the chair next to the bed where she had spent so many nights, her cheeks glistened as well.

When she sat down, she was surprised to see Leon reach out his own hand, which had laid still for so many months, and weakly seek the touch of hers. Looking at her, with tears running down his face, he said, "Mom...I...I saw Dad! I don't know how...I can't explain it...but I saw him. He talked to me for the longest time, but I can't remember much of it...but he wanted you and Alan to know how much he loved you and how proud he was...how proud..."

At this point Leon broke down and sobbed openly. His memory of that experience and the feelings were simply overwhelming. Both his mother and his brother embraced him as they cried too. Geneva was amazed at Leon's declaration and wanted to ask him about it. But she knew that such questions could wait.

After a few minutes, Leon regained his composure and continued in his hoarse and tentative voice. "It seemed like only a few hours since I blacked out. The last thing I remember from the battle was landing on that aircraft carrier, and being taken off the helicopter...then nothing...except for the warm light and then Dad. It only seemed like hours...but it's been over a year? Where is everyone? How are the guys from my unit? What's happening with the war?"

So began a five-hour conversation where Geneva Campbell and Alan brought Leon up to date as on events that had transpired in the world over the past year since he had been wounded.

They informed him of all they knew of his unit. The senior NCO who had been with Leon on that hillock, and who was one of the two wounded men Leon had carried down the hill, had not made it, dying the very afternoon that they landed on the U.S.S. Abraham Lincoln. Although Leon was disheartened and saddened by that news, he was elated to hear that Private (now Corporal) Jacobs, his security man, had survived, and had visited him often until he completely recovered from his own wounds and was shipped back to their unit. He had earned a Silver Star as a result of the action.

The CO whose voice had pulled Leon away from the combat had been wounded by the same explosion that had thrown Leon forward. It was the CO, wounded as he was, who had ultimately carried Leon to the helicopter as they made good their escape. The CO had recovered quickly, and was himself back with their unit in the field. He, too, had earned a Silver Star for his efforts that day on Diego Garcia. Both the CO and Corporal Jacobs wrote often and called on occasion to check up on Leon. They would be elated to hear that he had regained consciousness. They were both stationed somewhere in the Mediterranean, but their exact location or disposition was of course a matter to which neither Geneva nor Alan were privy.

With respect to the overall war effort, there had not been much good news in the last several months. The GIR had gathered a massive and still-growing army of over five million men around Israel. The United States, the United Kingdom, and the Canadians had valiantly kept the Mediterranean sea lanes open to assist Israel. Together they had all built up significant defenses in depth, even expanding the Israeli perimeter to include the southern valleys and coast of Lebanon and half of Jordan. Those two lines of defense were anchored in the center by the Golan Heights facing Syria. To the south, the Sinai Peninsula between the two arms of the Red Sea provided sound defenses that were anchored to the west along the Suez Canal. The canal itself was long since closed to all shipping due to the intense fighting that flared up around it very regularly.

In all, the Allies had 2.5 million regular troops and two million more citizens organized into citizen defense forces arrayed against the growing GIR force. Geneva and Alan were convinced that ultimately, a pivotal battle of gargantuan proportions was going to take place in that confined area. Leon knew they were right and that the GIR would carefully choose the time and place for it to begin... though he hoped Allied forces could build up enough men and materiel to pre-empt the GIR attack and counter their aims.

All of Northern Africa from Morocco to the Nile was under the control of the GIR. Italy and Spain had made valiant, combined force efforts to establish footholds along the coast in order to open up a second front and threaten the rear of the GIR force massing in Egypt, but they had failed and the GIR was consolidating its positions. Until the crisis around Israel was resolved, it appeared that little progress would be made in Africa.

This was because the rest of Europe was focused on another GIR threat, and this one was in Europe proper. The GIR had amassed an army of almost two million men in Georgia and had marched north along the coast of the Black Sea. After a surprising new expansion of the Siberian Economic Treaty to include the GIR, in exchange for tremendous access rights to Mid East oil and deep port anchorages along the Indian Ocean, the Russian Federation had ultimately agreed to transit rights for the GIR forces around the Black Sea.

In addition to severe protests to this move in Russia, particularly amongst the Orthodox Church, the outrage in Europe was extreme, and it had led to severe strains on diplomatic relations between all of the Allies and the Russian Federation. There had been talk of war, but in the end, the desire to avoid adding the strength and numbers of the Russians to that of the GIR and the CAS had wisely led to cooler heads prevailing. Instead of war and military conflict, diplomatic and economic sanctions were threatened and negotiations had begun... while the GIR approached Europe from the East.

The European Union had come together to meet this threat. Germany, France, Italy, Spain, and the low countries had all marshaled their forces and created a Unified European Defense Force (UEDF) which dispatched a large army to interdict the approaching GIR forces. Geneva and Alan explained that news reports indicated that the two forces would come together some time soon northeast of the Black Sea.

At about the same time, another threat to Europe became evident as the GIR pulled off a surprise airborne and amphibious crossing of the Dardanelles in late July. This occurred coincident with a shocking announcement by the government of Greece that would be forever remembered as the "Greek treachery," where it abandoned its neutrality and proclaimed solidarity with the GIR and CAS. This announcement was accompanied by a vicious surprise attack by the Greeks on Allied forces on the western side of the Dardanelles, the forces which were stationed there in order to defend the last remnants of free Turkey. In addition, large Greek attacks occurred on Cyprus, which to that point had maintained itself clear of GIR forces. The GIR had cemented the treacherous deal with the Greek government by promising a wholly controlled Greek Island of Cyprus and a promise to cede over of all Turkish lands on the Western side of the Dardanelles to Greece once Turkey was defeated. It was a deal the Greek regime was completely corrupted by, despite the protest of a large minority of its population. The protests were ruthlessly put down and written off as part of the fighting.

Those Allied forces were now on the verge of defeat as the Greek and GIR forces continued their relentless attacks from both sides, and as they consolidated their new front line well to the west of Istanbul, along the Greek border with Bulgaria. The newly organized UEDF was scrambling to respond to this new threat as local Bulgarian, Yugoslav, Romanian and Hungarian forces mobilized. Faced with thrusts from two directions, there was an almost panicked sense of urgency to fully mobilize European continental forces that had tried to avoid the menace of war for over a year.

In Asia, the picture was no more positive. Chinese, Indian, and Indonesian forces were consolidating and fortifying their gains in Malaysia, the Philippines, Japan, New Guinea, the Indian Ocean, and several major island chains in the western and southwestern Pacific. The Chinese had announced that all resistance in their newly "re-liberated" Province of Formosa had ceased, though through clandestine communications the Allies knew that there were still Republic of China resistance forces holding out in the mountains of Taiwan.

In addition, and of utmost concern to the Allies, large Chinese, Indian, and Indonesian forces were making steady gains in Australia where the entire western coast and the highly populated southwest coastal areas had fallen. From these positions, three large CAS and GIR thrusts were now

proceeding well into the interior to the east. It was clear that the CAS and GIR intended to conquer and occupy the entire continent. The Allied forces that had gathered around Alice Springs, as a planned large counterattack force, were now digging in as the main defense line against literally millions of CAS and GIR forces being funneled into the western side of the country. Reserves were attempting to stage along the eastern coast, but the numbers would have to grow substantially before any counterattack would be feasible.

The warfare in Australia was brutal and bloody. It was a war of survival as the aims of Indian, Chinese, and Indonesian forces to ultimately repopulate the whole of the nation with their own bulging masses was clear. In fact, according to western news sources, they were already doing just that in the western portions of the country. There the former inhabitants had the stark option of life as little more than second class serfs, or death as their lands and possessions were simply confiscated and used as the new owners saw fit.

Leon was shocked at the extent of the enemy's gains. He knew his good friend Billy Simmons, a Marine helicopter gunship pilot, was serving in the Pacific Theater of Operations, and he was concerned for him.

"Have either of you heard anything about Billy?" he asked as the thought crossed his mind.

Alan answered, "Back in June he was here in the States on leave. He spent a week with his Mom at their home near Fort Worth, and then they both came over here for several days to visit you, bro. He looked fine and said he had seen some combat...but he shipped out at the end of June somewhere in the Pacific. We get a letter or email from him, addressed to you, every couple of weeks. I got 'em all back at the apartment and'll bring them over this ev'nen, Leon. That's one good honky friend you got there, I got to say."

After a few more comments regarding Billy and some questions regarding his Mom and Dad, and after finding that nobody knew very much about Billy's father, Jess, due to his prolonged deployment somewhere in or around Israel, they continued to bring Leon up to date on events.

In South and Central America, bitter fighting raged in Columbia, northern and southern Brazil, and Argentina. From the reports, it was difficult to ascertain what progress, if any, was being made. In fact, it appeared that the fighting ebbed and flowed with little overall progress on either side. It was bloody, intense jungle warfare in many areas. American forces had massed with Allies for an invasion of Panama, but they had not been able to pull it off. The priority for resources in the Pacific, the Middle East, and Europe, as well as defense of the U.S. itself, delayed the force from "jumping off," although it had come close several times.

The supercavitating weapons continued to pose considerable threat. Despite many innovations and procedures that had been developed to counter and mitigate them, the Chinese and Indian engineers continued to produce their own innovations for the weapons. Paralleling the war effort itself, the struggle over the use and effect of this technology was a raging conflict in itself, and it was one the Allies had not successfully contained. This meant that large Allied task forces were committed to the sea in only the most extreme cases, and such a limitation was a severe handicap for the Allied cause as the CAS and GIR continued to expand.

In the United States itself, production levels were steadily climbing and more ships, aircraft, weapons, and materiel were pouring out of newly built or refurbished U.S. factories and shipyards. But the effort was not building quickly enough for the Allied war planners, and so their enemies continued to gain ground. Part of this was attributable to the rampant outsourcing efforts that had occurred in U.S. industry throughout the 1990s and early 2000s. Firms had been tempted by the cheap labor and favorable economic conditions offered by the very countries now fighting the United States and her Allies, and by the short-sighted plans and philosophies of those who saw the increased profit and reduced tax liabilities as ends unto themselves.

As a result, large international U.S. firms, and all too often the U.S. government itself, spearheaded the headlong plunge to move more and more operations off shore. By 2005 a large percentage of U.S. manufacturing and engineering capability had been moved to, and was now owned by, the very nations who would be seeking to defeat America and her allies just a few years thereafter. Overcoming this lack of production capability was taking longer than anticipated, but progress was being made as the nation approached that task with a determination to survive, and a will to prevail.

But that progress itself was also being hampered by the continuing terror attacks on U.S. soil. Literally tens of thousands of American citizens had been killed. Billions of dollars of capital equipment, infrastructure, and property had been destroyed. Although the nation was now on a full wartime footing, overcoming these attacks interfered with efforts to ramp up. The President's initiatives on the Second Amendment, pushing and passing legislation at the national and state levels that eradicated most gun laws, had helped immensely. Citizens became the front line of defense and interdicted terror attacks as they developed. Coupled with this citizen activism, the state-coordinated and nationally-supported Homeland Security measures, particularly the local sheriff-operated Home Guard units, were proving very effective.

All across the nation, infrastructure ranging from critical to low level facilities, was guarded twenty-four hours a day by these volunteer units who served four six-hour shifts per week. Armed

with weapons and communications equipment procured from the government by their local sheriff's departments—equipment that became the property of the local citizens—and trained by a combination of local, state, and federal agencies, these individuals were the front line against terror attacks aimed at local infrastructure. Each individual unit was able to communicate with their sheriff, whose lines of communication went to the state and the national level if resource from those levels was necessary. It was an effective use of resource, and many older citizens gladly volunteered to watch their local areas.

Even so, attacks conducted by Hispanic, Oriental, and Muslim terrorists continued. Agents who had infiltrated the nation over many years, taking advantage of a lax immigration policy and porous borders were activated, to simply implement plans of long standing. Winning these destructive and deadly battles on the home front was critical to the hopes for victory in the overseas theaters.

In an effort to stop the flow of new terrorist combatants into the nation, and in addition to measures that Geneva and Alan explained regarding the Second Amendment and Home Guard, the Weisskopf administration implemented military-controlled borders. Several divisions of troops were deployed along the southern border of the United States, and a national buffer zone had been implemented on both sides of the southern border with Mexico, five miles deep into Mexico and one mile into the United States. In a vast operation, those areas on the U.S. side had been cleared of structures, businesses, and housing. The inhabitants and workers had been relocated and the Federal Government had given vast areas of former Federal Lands to duly and richly compensate those citizens so displaced – deeding over to them lands upon which the rebuilding of their business structures and dwellings was subsidized.

In the buffer zone, a national border fence was constructed comprising two well built fences 20 yards apart, topped by razor wire and having rolls of concentrine wire all along its length fifty meters to either side of the fence. Only designated, regular border crossings allowed legal residents, visa holders, or immigrants in, as well as those legally doing commerce across the border. The military patrolled the border heavily and the entire operation was seen as excellent training for forces due to rotate to either the Middle East, and later Africa. In fact a four to six month rotation for many troops became the norm, where their ROEs allowed them to forcibly stop anyone who attempted to illegally cross the border. UAVs and electronic devices augmented the patrols which occurred regularly using the roads which had been built on the US side of the fence.

In addition, due to the extreme nature of the attacks and the threat, internment camps had been established within the remote, intermountain areas of the American West. Similar in nature to those established in World War II for Japanese-Americans, these camps had one vast difference: no U.S. citizen was interred. U.S. citizens' constitutional rights were respected. Only foreign aliens found to be residing in the United States illegally were automatically interred. Legal aliens from the affected belligerent nations, where there was no proof of hostile involvement, were simply given the option of being returned to their respective nations as quickly and efficiently as possible, or they were interred for the duration of hostilities. Avoidance of compliance or dishonesty was rewarded with immediate internment. The internment policies were a direct reaction by the Weisskopf administration to rampant homeland terrorism, and they were completely supported by Congress. They were also controversial, but only to the most die-hard social and liberal proponents of "open" immigration. In the new, harsh reality, the numbers of those dissenting were few, and the vast majority of Americans approved and assisted in the effort.

Any American citizen suspected of, or found to be actively engaged in, the support of terror combatants was tried in the American court system, and sentenced accordingly when found guilty. Punishment for active involvement by U.S. citizens was similar to that meted out to the terrorist themselves...and generally required the invoking of the death penalty. Leon could see that his country had been transformed by the crisis, and he had to admit that he was pleased with the transformation. He could feel that the changes were leading to more honesty, more serious contemplation of the value of liberty, and the responsibilities associated with maintaining it. They also led to more willingness to work hard, and a greater trust in moral principle and the source of those principles than ever before.

As a Marine and as an American citizen, Leon knew that these changes, despite the horrific conditions that made them necessary, were for the good. They were changes that had America returning to its roots. He also knew from personal experience that they were absolutely necessary if the people of the United States—and the rest of the free world—were going to prevail against the implacable enemies whose goal was the eradication of such liberty—and all people who loved it.

## Chapter 21

*“For every action, there is an equal and opposite reaction.”—Newton’s 3<sup>rd</sup> Law of Motion*

**August 27, 22:37 PST**

### **Personal Study**

#### **Pacific Heights Subdivision, Palo Alto, California**

Sandra watched the data as it marched across her flat screen display. There was a lot of it, it was very technical and it was arriving over her T-1 connection from over seven thousand miles away. After arrival, the data would be decompressed and run through the analysis programs that she had written to search for specific information in her line of research. It was research where any study of the physical specimens themselves were forbidden by Presidential Directive and U.S law.

"But what I am doing is not illegal," thought Sandra, "No, not illegal in the least," she continued, quite contented with her progress and satisfied that she had found, developed and perfected a method for her continuing research in her chosen area of expertise.

Sandra Eleanor McPherson held a doctorate in biology, specializing in the area of fetal anatomy. She held a tenured professorship at Stanford University and had been a member of the faculty for over twenty years. She was well published in the field of fetal development and believed with all of her heart that fetal tissue held the key to overcoming a multitude of ailments that afflicted mankind. Unfortunately, for the last several years, ever since the Presidential elections of 2000, the pursuit of fetal tissue research had become increasingly difficult in the United States, up to the point where it was illegal to possess any such tissue for research purposes.

"Short-sighted, moralist fools," thought Sandra.

Couldn't they see that such research was going to go forward in any case in other areas of the world? Despite this damnable, nonsensical war, and despite efforts in the United States to the contrary, Sandra knew the research was continuing elsewhere and that it would ultimately produce results. She had considered moving to Europe where the inquiry was ongoing and very active, but her ties to California and her position here would not allow it. Besides, she was determined and convinced of the correctness of her position, so she had pressed forward with finding a way to continue her research in spite of increasingly difficult conditions.

And her perseverance had paid off. With her own programming and analytical capabilities and with the continuing technology explosion in communications, processors, memory and graphic computing, Sandra had simply made use of technology to carry on her studies via modeling and simulation in a virtual laboratory of her own creation. With a high speed internet connection and with secure channels across the web to friends and researchers in Europe, she was able to make use of their physical data, model it, and analyze it as if though it were present in California. As a result, officially she was just receiving digital data from Europe to assist in her fetal anatomy studies...unofficially, she was leading one of the most advanced fetal research teams on the planet.

"Not bad for a fifty-two year old, fully tenured, senior researcher and professor," she thought as her program automatically continued its analysis. "With the Dean's help, and the Chancellor's support, perhaps I can achieve the breakthrough we are all hoping for."

She and her team were studying several forms of cancer and some severe genetic disorders...but her personal area of research was centered on AIDS. Sandra considered AIDS to be a disease that had the potential of becoming the worst scourge in the history of mankind, in fact, in some areas of the world, it was already considered such. Sandra was personally committed to making sure it never attained that status world-wide, and she had very strong personal reasons for that commitment to go along with her professional ones.

At fifty-two, Sandra had never married and honestly felt at this point that she never would. Oh, she dated and had the occasional affair with men she was attracted to. But after Stephen, she knew she would never consider making the commitment, or suffering the distraction from her professional goals that she knew such a relationship would require.

"Oh, Stephen...how I miss you to this day," she allowed herself as she briefly contemplated those events over eighteen years ago.

That summer Sandra had already obtained her masters degree and was working on her doctorate while teaching at Stanford. Stephen was a social sciences professor in the College of Humanities. They had met at an activist event protesting a local "Right to Life" organization's attempt to picket a local abortion clinic. They had met there on the sidewalk, shared their own philosophical feelings regarding that particular protest and then had dinner together that evening after the event. Things had proceeded rapidly between them from there.

Never had Sandra met anyone so kind, so gentle, so sharing...and with what Sandra considered the perfect complimentary intellect to go along with her own. To that point, all of her other relationships had ultimately stumbled on that point. Sandra demanded intellectual stimulus, and she

could not maintain a close relationship for long with anyone who could not provide it in a way that stimulated her own. No matter the physical attraction, no matter the close friendship, Sandra knew she would never marry anyone who could not only keep up with, but who could also challenge her intellectually. Stephen did all of that and more. The next three months had her head spinning for the first time in her adult life...and had her recklessly falling in love. So close did they become, so wrapped up in their feeling for one another, that their relationship proceeded in an unguarded fashion mentally, intellectually, emotionally and physically into the fall of that year.

Perhaps it was the serious discussions of marriage that had caused it. Sandra did not know the reasons at the time, but Stephen became more and more reflective. The unguarded turned guarded. Oh, they continued to enjoy one another's presence and continued to revel in their intellectual compatibility, but Stephen was clearly distracted. Sandra took it simply as serious contemplation over the prospect of marriage, but she would never forget that night in early November.

"El, we have to talk," he had simply said over the phone. She had never heard him sound so serious or so guarded. After a few more words, she had immediately driven over to his apartment.

Stephen had sat next to her on the couch in his apartment and held her hand as he talked. He told her how much he loved her and wanted to always be with her.

"Now, I need to share with you some things about me, some things I have done, that I have kept from you. I was afraid ... I didn't know how to tell you. But now, as I examine my true feelings for you, I must tell you. I hope darling, that you will understand ... that you will still have me.

"Up until the time we met I played around a lot, I mean *a lot*. Relationships were a thing to me for fun and gratification. Oh, in the back of my mind I toyed with the idea of a serious long-standing relationship some day ... but I wasn't acting like it ... and I certainly wasn't seeking it.

"Honey, what I was seeking was fun and experimentation. And I did ... to the max. And I did not exclude anything or anyone. To put it bluntly, I was bisexual in my activities. I was not serious about it ... but I did it and I reveled in the fact that I could."

As the shocked expression on Sandra's face conveyed her surprise, Stephen hurried along.

"That all changed when I met you. I want you to know ... I *need* you to know that I have been completely loyal and true to you since the day we met."

Then, leaning closer to her, Stephen continued in an even more serious note. But it was his eyes that told Sandra that the worst was yet to come.

"There's more.

"I suppose my folks would say that there are consequences for such a life style and I suppose there are. Because some of the people I fooled around with were very at risk, I have had blood work done every three months. I wanted to be sure, I wanted to somehow prove I had not been at risk myself. But, the latest results are in ... and El ... I ... I don't know how to say this ..."

Tears were streaming down Stephen's cheeks as he made the awful revelation.

"It came back positive ... I am HIV positive."

The look of shock and disbelief that Sandra had shown at Stephen's earlier revelation were nothing compared to what she felt and displayed now. After a few seconds pause, she exclaimed.

"You *WHAT?* You ... you mean all this time you knew? My God what have you done!"

Stephen, weeping openly, wanted her to know that he loved her, that he wanted to spend the rest of his life with her and that he had been true to her since their first meeting. But he had also wanted, no *needed*, to share this past with her...and the consequences in the hopes they could face it together.

But Sandra was appalled. She wanted to hear nothing of it. How could he? How could he really love her and put her at such risk with their unguarded relationship? She got up and fled, not listening to his pleas to stay. Her heart had been crushed and she drove home and locked herself in her apartment for three days. She had called in sick, had ignored his phone calls. She had longed to call her mother and father, but they had died three years earlier and they had not been on good terms when they did. Now, when she needed them, they were not there.

Shock and anger had given way to sadness and depression. In that depression, she had thought about nothing but herself. Naturally, after her three-day seclusion, she had emerged and gone and gotten a blood test herself. Until the results came in, she had kept to herself and been ultimately relieved to find that she was not HIV positive. That relief broke through the depression and she began to think about Stephen. He had put it all on the line for her, truly sorrowful and thinking of her as he had made his revelation. After realizing this, she had called his apartment, only to get the answering machine and a vague message about a vacation. She had gone to the University and found he had taken a leave of absence. She became desperate and ultimately tracked down the whereabouts of his family. Funny, up until that point she had not considered them. They lived in the mid-west and she called and found Stephen was there with them. She had traveled to the small town in Indiana to see him and found a very traditional, very conservative household that had opened their arms to their son and older brother. He had shared his plight with them and they had, despite their differences with his lifestyle, opened their hearts to him in a display of their unwavering Christian faith.

Sandra had witnessed the miracle of love, family love as it was poured out, as it was meant to be. They did not approve of what he had done to himself. Their own religious upbringing, and

Stephen's, taught them that dire consequences followed such life styles and behavior. But despite all of that, he was their loved one, he was in need of their help and they were there for him out of that love and out of the same religious upbringing. It had caused Sandra to long for her parents and wished she had reconciled with them before they had died. In a way, she shared it now as Stephen's family bent every resource, sought every avenue to restore him to good health.

It had all been in vain. Somehow Stephen had been acutely sensitive to the disease. Very quickly it had developed into full-blown AIDS and within eight months, he had died taking his family's hopes, his keen intellect and gentle ways. . .and Sandra's heart and dreams with him.

She had returned to Stanford from her own leave of absence with a new purpose and dedication, a dedication to finding the secret to the killer disease of AIDS through whatever means she could acquire. She had made good progress in the intervening years, but any type of breakthrough had eluded her, as it had all of the AIDS research. Then, in 2000, with a new administration in Washington, her progress had been more and more stymied by new laws and by new administrative rulings. Her own conviction and drive had helped her find ways around most of the obstacles, but the outbreak of war almost eighteen months ago had created new obstacles, particularly to funding. It was frustrating and she wished the whole "War" would just go away.

But now, despite all the obstacles, Dr. Sandra Eleanor McPherson began looking at the first results of the analysis being performed on the latest digital samples of fetal tissue from Europe. What she saw confirmed her theories on the study she was performing. But what she needed was a sub-molecular, an almost atomic analysis of these samples, and she thought she knew where she could obtain it. It would take a lot of work, but she was certain the relatively new physical techniques she had in mind could be replicated digitally to allow for the level of analysis she desired.

"In fact, what I'm considering will be revolutionary in itself, and perhaps worth of a Nobel in its own right," she mused, "but first I must work on the algorithms and virtual tools."

**August 29, 00:37 local time**

**Combat Information Center (CIC), U.S.S. Kitty Hawk, CTF 77**

**Southwestern Pacific Ocean, Between New Zealand and Australia**

Admiral Ben Ryan contemplated the sweeping revolution in naval warfare that the last 18 months had wrought as he looked at the various threat displays. The impact of that revolution was evident in the composition of the very Carrier Strike Group (CSG) that he was commanding. It was not often that CINCPAC was seen outside of the Hawaiian Islands, but Admiral Ben Ryan believed in leading from the front whenever practicable.

The naval "front" in this case was right here with CTF 77 between New Zealand and Australia. Here, this CSG had one super carrier, the Kitty Hawk as flagship, and a new "jeep" or "Sea Control" carrier in support. Four O.H. Perry class frigates were sailing in the inner circle acting as "Killer Whale" shields to the capitol ships. One Aegis Cruiser and one Aegis Destroyer in the inner group provided close in and area coverage for anti-air. Two Surface Action Groups (SAGS) attached to the CSG and stationed out on the two principal threat axis consisted of two Arleigh Burke Aegis Destroyers and an Perry class Frigate. Six HV-22s were on patrol at all times in the inner circle as additional "Killer Whale" defense and new programming for the ASROC launchers had been added to all combat ships to assist in the destruction of attacking supercavitating "Killer Whale" weapons.

The harsh new reality meant that a sizable portion of this CBG was dedicated to defending the carriers against the continuing threat of these Chinese developed supercavitating weapons. Even then it was not always enough. Four U.S. super carriers were on the bottom of the ocean over the last year and a half of combat, leaving only eight currently operational. The U.S.S. Constellation, the U.S.S. John Stennis, the U.S.S. Enterprise and just two months ago, the U.S.S. Harry Truman.

The Truman was sunk in the Mediterranean as it operated in support of a major task force ferrying men and materiel to Israel. It had been a shocking confirmation that their enemies had been able to not only proliferate the weapons into that theater of operation, but also to enhance them with new innovations. The Truman had not been sunk by devices launched from other vessels in the area, or by devices launched from attacking aircraft. The Truman had been sunk by devices that appeared out of nowhere using attack profiles heretofore unseen by the Allies. Those devices were apparently a modification of the stationary devices, seeded in the anticipated path of Allied task forces that had been seen in the Pacific. But their attack profile was completely different. Instead of igniting their rocket motors when sensing a targeted vessel from a standoff range and attacking horizontally at a depth of just a few meters, these devices had come up from underneath the Truman, from very deep. In so doing they had avoided all efforts to interdict and intercept them, either from escort vessels trailing reactive lines, or from ASROC launches from other ships or from torpedo launches from patrolling aircraft. The resulting three explosions on the Truman had broken her back in three places and sent her underneath the waves in a phenomenally short time. Only forty-two seconds after impact, no major portion of that mighty vessel remained above the waves. Only fifteen of her crew had been saved. Three other vessels in that task force had suffered similar fates.

The Pacific Ocean, the Indian Ocean and now the Mediterranean Sea had all been the sites of successful and devastating attacks by the Chinese, Indian and now GIR supercavitating weapons against U.S. Navy aircraft carriers. Attacks in the South Atlantic had also occurred against allied shipping, but no U.S. carrier had been lost or damaged there to date.

"Only in the North Atlantic is there any demonstrated safety ... and that is probably simply because there has not been an opportunity yet," thought the Admiral.

"Well, now there is an opportunity," he thought and he prayed to God that the enemy was not aware of it. As his Task Force plowed the waves of the far Southwest Pacific there between Australia and New Zealand, in the far north Atlantic the newest and most modern American carrier was undergoing sea trials under the tightest security and heaviest defense imaginable.

"They're conducting those trials for the Shanksville up there because it's the farthest area of operations away from the enemy, because of the extremely rough seas and difficulty associated with finding her there...and because we've experienced no attacks there to date," the Admiral reflected. "Dear God, please don't let there be one now."

The U.S.S. Shanksville, CVN 93, named for the town near where Flight 93 had crashed to earth in Pennsylvania during the terrorists attacks of September 11, 2001, had been miraculously completed ahead of schedule and hurried into trials. Three more just like her were already taking shape on the ways at U.S. shipyards constructed for those purposes over the last fourteen months.

Once termed the CVN-21, and all but destroyed in the initial massive surprise attacks by the Chinese in March, the U.S.S. Shanksville had risen like a Phoenix from those shipyards and had been completed well ahead of schedule. That early completion and deployment was a monument to American know-how, ingenuity and perseverance in the most demanding times imaginable.

"And what an inspiration it's entire life has been to date," thought the Admiral of the new carrier. "Starting from the naming and the special dispensation to change the hull number to match Flight 93."

As the Admiral reflected on this, his heart swelled up with pride as he tried to imagine those American citizens who attacked and defeated their hijackers on that fateful day of 9-11. In fact, many key policy makers and planners looked back and considered that day as the real starting point for the third World War. With the passage of time, it was more and more clear that the even more horrific events that had started this war with China had been a natural and horrendous culmination of those events, when the world truly realized what 9-11 foreshadowed.

"I believe that the events of 9-11, up until that last struggle aboard Flight 93 will foreshadow this whole ugly and terrible affair," continued the Admiral to himself.

At least five passengers, and maybe more, had risen up and attacked the terrorists on that flight. Their struggle and victory was indicative to many of the predominance of the American spirit over the indoctrinated and radical spirit of their enemies. A stewardess, a woman traveler and three American businessmen, thrust into events more horrible than they could contemplate, had taken matters into their own hands when it became clear what the terrorists had in mind.

"They fought them with scalding hot water, their fists and anything they could lay their hands on. A model of the ability of liberty to win out over compulsion and tyranny," thought the Admiral.

"Truly it was the first victory in this struggle, and it ended that day with hope, after saving the lives of hundreds, perhaps thousands. There isn't a more fitting name for that new vessel up there in the North Atlantic than one that honors the sacrifice and commitment of those American heroes. They were like a first band of citizen's militia who took these people on head to head...and emerged victorious, thwarting those animals in their designs and ending them in a smoking crater in the Pennsylvania countryside, instead of the Capitol Building or the White House. I just pray that their example and victory will foreshadow the life of this new carrier," the Admiral concluded, "and that the Shanksville will get that opportunity."

The new carrier would deploy with a host of new technical innovations and equipment. These included new electromagnetic catapults, a much more automated logistics system, the latest phased array radar and AEGIS battle management systems, and a more layered defensive system. The new defenses included four Rolling Airframe Missile (RAM) stations along with four Close in Weapons Systems (CIWS) that U.S. Navy super carrier normally carried. There were provisions for four directed energy weapons as well, as soon as that technology was perfected. This was made possible by the tremendously efficient nuclear reactors that operated the carrier, providing almost 200% of the electrical power over former designs.

But, most importantly from Admiral Ryan's perspective, she mounted the new Submerged Threat Close in Weapons System (SUBT CIWS).

The SUBT CIWS had been designed specifically for countering the enemy's supercavitating weapons. Mounted on underwater turrets, partially recessed along the sides of the vessel, the SUBT CIWS shot projectiles along the path of an approaching threat, just like the above deck CIWS did at approaching missiles. With an underwater range of just under 1000 yards and shooting smart, explosive munitions at hypervelocity speed, the SUBT CIWS projectile was a supercavitating weapon itself, designed to destroy other supercavitating weapons by collapsing their cavity so that they impacted a literal wall of water at very high speed. The SUBT CIWS could also destroy conventional

torpedoes and mines as well. The U.S.S. Shanksville mounted four such turrets along each side, eight in all. And they would be tied directly into the overall AEGIS battle management system.

The big question was whether the new system would work against the Chinese "Killer Whales". Could they react quickly enough and score an intercept at an underwater object approaching at almost 600 knots. Added to that, was the question that if they did, would they be able to intercept them at a range significantly far enough away from the ship to avoid pieces of the wreckage that might reach the intended victim, in this case a U.S. Navy aircraft carrier. The designers and engineers indicated that the new system would accomplish all of this, and they based it on preliminary tests of the system when mounted on the U.S.S. Thorn, a Perry class frigate outfitted for weapons research. Now the U.S.S. Shanksville was going to final testing of the premise in the rough waters of the North Atlantic.

If even nominally successful, the U.S. Navy was already looking at the logistics of rotating current capitol ships (meaning Aircraft Carriers, the big Amphibious Assault ships and the AEGIS ships) into dry docks for retrofitting the turrets and weapons systems. All new vessels from frigate size on up were being designed to accommodate the SUBT CIWS.

Admiral Ryan already knew that the U.S.S. Kitty Hawk was fifth in the rotation and could not expect her dry dock refit until early next year. Until then, she would be out here with the U.S.S. Ronald Reagan, third in that same rotation, attempting to support the defense of Australia and New Zealand against the CAS juggernaut that had moved so quickly across Asia and the Pacific. The Ronald Reagan was supporting combat operations in Australia and could be augmented by the Kitty Hawk group as required. The Kitty Hawk was stationed as a blocking and interdiction force between Australia and New Zealand, where the Allies were already building up a significant contingency force and logistical base in the event conditions in Australia continued to deteriorate.

As all of these thoughts passed through his mind, he noticed his staff officer over intelligence approaching and the Admiral realized it was time for his 0100 intelligence briefing. When he was within a few feet he pulled up and saluted. Returning the salute, the Admiral spoke.

"Okay Commander, what do you have for me?"

"Admiral, G2 indicates that the enemy is keeping its capitol ships west of Australia under their own heavy air cover to protect the massive influx of troops and equipment that China, India and Indonesia are pouring into Australia. There are no less than four enemy carrier groups there covering dozens of convoys. Coast watchers behind enemy lines in Australia and New Guinea report increasing numbers of strike aircraft flying into western Australia.

"The Ronald Reagan is reporting probing air assaults, but nothing major. Our own barrier CAP has interdicted two CAS reconnaissance missions in the last fourteen hours, but no other threat has been detected to date. We are expecting a NRO Pervador flight tomorrow afternoon and the 30<sup>th</sup> Air Wing, 2<sup>nd</sup> Space Launch Squadron indicates a launch window for the latest attempt at maintaining a KH-12C satellite over the southwest Pacific out of Vandenberg. The Titan IV B is fueled and on the pad and the package is one of the ADCAP birds with the new thrusters and sensors...they believe they'll be able to detect and avoid any Chinese attempts to bring it down with kinetic weapons."

The Admiral contemplated this. He longed for the days when the US Air Force "eyes in the sky" were the trump card for U.S. Navy operations. But the last year had shown the futility in depending too heavily on such assets not directly under your own control, and lacking multiple redundancy.

"Thank you Commander. We will proceed as planned. Inform the Task Force Commander and the battle group commander to join me in my quarters. We must ensure that our own reconnaissance birds are up according to plan, particularly the UAVs. We will take whatever advantage we can gain from the Pervador over flight and the satellite...but we cannot afford to count on them. I'll brief them and then we'll cover all of this in staff meeting at 0400, update me with any new information just before that meeting."

**September 3, 14:41 local time**

**Outside Turkish Presidential Quarters**

**Istanbul, Turkey**

The noise was incredible, as well it should be with over one hundred thousand troops surrounding the presidential complex witnessing the ceremony. As the surrendering Turkish President, President Ahmed Sezir, approached General Talabari, Captain Abduhl Selim contemplated the many experiences that had led him to this point. The selection of Hojjatolesla Hasan al-Askari Sayeed as an Ayatollah Ol Osam for the Shia Muslim faith and a recognition of Sayeed as the overall Imam for all of Islam. The creation of the Greater Islamic Republic by the Imam soon thereafter and the inclusion of his home country of Turkmenistan into that Republic in the summer of the same year, when Abduhl was still seventeen. Abduhl's joining the great Army of the GIR and his training throughout that summer and into the fall. His deployment to the former state of Iraq to be a part of the GIR forces that were to put down the Kurdish rebellion when the people of Iraq voted overwhelmingly to become a part of the growing GIR. His introduction to combat that fall and his witnessing the might of the United States Air Force in their failed attempt to support the fledgling state of Kurdistan in its short three month history.

“Funny, the euphoria of that moment, when the Kurds were defeated and then spared humiliation by the Imam as they joined the GIR was not unlike this moment,” he thought. But there was much more feeling to this moment, even though the din of the celebration was similar. Since the defeat of the Kurds and their American air support, much more had happened in the intervening two years.

The GIR and Syria had staged a classic bait and switch operation along the Turkish border and then together invaded Turkey. The last eighteen months of Abduhl's life had been spent fighting his way across Turkey with GIR forces and ultimately crossing the Dardanelles when the Greeks had sided with the GIR, conducting a surprise attack from the west, aimed at the Turkish capitol, Istanbul.

In that time Abduhl had seen much, had experienced much...had lost much as friends and his boyhood were completely swallowed up by the raging war. He had fought hard against what he considered were the corrupted Turkish armies, but which were comprised of fierce and ruthless fighters. He had faced the might and superior technical capabilities of the Americans and had been driven from the field by the U.S. 82<sup>nd</sup> Airborne Division. He had also conducted a direct assault into their flank as he retreated which bought time for his comrades in other Companies and Divisions on that day. Slowly, inexorably, the GIR forces had pushed their way forward throughout Turkey until they had pushed the corrupt Turks and infidels off the main landmass of Asia, across the Dardanelles into Europe, well over a year ago. Then the months of sporadic fighting, repelling attempted Allied counter attacks and then finally themselves crossing the Bosphorus and the Dardanelles for the final assault only a few months before.

Through the long months, Abduhl had fought well, and had been recognized and promoted as a result. From Private to Corporal, from Corporal to Sergeant as his own NCOs fell. From Sergeant to a battlefield officer's commission to Lieutenant after the American counterattack was finally repelled outside of Cicekdag, and now to Captain. When it came to leading men in combat, when it came to understanding and inspiring his brothers in arms, no one excelled like Abduhl Selim...and his superiors knew it and made good use of it. His upbringing by his father in his native land and his teachings of the principles of Islam had figured heavily into making Abduhl what he was.

“I can see that now,” he thought, “although at the time back then, as a young boy before I came to truly depend on Allah, I would never have guessed or admitted to it.”

But, as it does to many, combat had caused Abduhl to reflect more and more on his upbringing and on his faith, and he had come to a firm commitment to the cause of Islam. That cause as Abduhl saw it, and as the great Imam Sayeed taught it, was to unite all of Islam while purging the corrupt and unfaithful, and then to humble the infidels. At the same time, or perhaps as a result of it, he had also come to be a natural leader of men. Now, at twenty years old, with an intense but distant look in his eyes, Captain Abduhl Selim stood with his Company of soldiers, most of them older than himself, and witnessed the final surrender of Turkey to the GIR.

### **September 3, that same time**

#### **Turkish Presidential Review Stand**

#### **Istanbul, Turkey**

The noise was over powering as President Ahmed Sezir approached the GIR General and his staff. Looking out over the masses of soldiers gathered in the courtyard and the surrounding grassed areas. He could not help but notice the sentinel soldiers on many of the surrounding rooftops and the camera crews located strategically throughout the crowd.

“There must be well over a hundred thousand enemy soldiers here,” he thought. “And they are going to make the most of the humiliation for their propaganda purposes. Well, they will get no humility and cowed spirit from me.”

As the President thought this, his emotions got the best of him and he cursed himself for his failure to defend what he deemed to be the most progressive and secular Islamic nation on earth. He cursed his allies and particularly the Americans for not being up to the task of helping him, for having themselves succumbed to so many of the allurements that had weakened them.

“... what I wouldn't give for a small tactical nuclear device right now,” he thought as he approached the podium where his conquerors stood.

As he did so, he determined to play his role to the tee, but to show no humility and no downtrodden spirit. He may surrender his nation's colors, but he would do it with his head held high. As he reached the appointed spot, he knelt to one knee and held out his nation's flag, rolled up, to General Talabari, the overall Commander in Chief of GIR forces in the Middle East.

“On behalf of the armed forces of Turkey and on behalf of the people of Turkey, I officially surrender to the combined forces of the Greater Islamic Republic,” he said. As he did, the crowd of soldiers erupted into a mind-numbing roar, and the flag was taken from him by one of General Talabari's aides. President Sezir then made his way solemnly over to a table that had been prepared for the purpose, and signed his name to the official surrender documents which secured what he deemed to be the best conditions for his people given the circumstances. When he was finished, he stood by the table as General Talabari approached.

**September 3, that same time**  
**Turkish Presidential Review Stand**  
**Istanbul, Turkey**

"Just listen to them," thought General Talabari as he prepared to officially execute the agreement and accept the Turkish surrender on behalf of the GIR.

"And they deserve it," he thought as reflected on the many long months of combat and the many, many casualties that had resulted in this moment.

He immediately signed the documents and then motioned for the now former President Sezir to join him at the podium facing the crowd. Raising his hands for silence, the General began.

"Today marks a critical day in the history of all Islam and the world. Today, for the first time in hundreds of years, all of Islam is united!"

The crowd of soldiers and civilians behind them erupted at this in a monumental roar of approval. It took several minutes for the General to get them quieted back down before he continued.

"According to our great Imam's vision, today we have completed a task dreamed of for over a millennium. From the isles of the Pacific in Indonesia, through the former Pakistan over to Persia, across the entire Fertile Crescent down through the Arabian Peninsula and into Africa, a united Islamic nation of over one billion souls now stands forth."

Again the crowd went wild as the signal was carried by local transmission to WNN affiliates outside of the actual occupied area. When things were again quiet, the General continued.

"But our work is not yet done. We yet have brothers and sisters in Europe and America living under the corrupt moral decadence of those societies. Our Imam has made our task and goals clear. Purge and punish the unfaithful... the humble and vanquish the decadent infidel

"Here before us stands a leader of the unfaithful who has just surrendered to us."

General Talabari looked into Ahmed Sezir's eyes. There was not a shred of humility, regret or fear in them. The General wondered if that would change as an aide approached and handed him an object sheathed in scarlet cloth which he proceeded to unwrap as he spoke.

"Today we show to the world what becomes of unfaithful nations and their leaders. Islamic law is clear, those who turn against Islam having once accepted it..."

The General quickly raised and pointed the 9mm automatic pistol he had produced from the cloth directly at the former President's head. The pistol was loaded with special sub-sonic hollow point bullets. Seeing the shock and recognition registering in Ahmed Sezir's eyes, but still no fear, the General pulled the trigger.

**BANG**

"...must die! *DEATH TO THE UNFAITHFUL!*"

The image of the Ahmed Sezir's corpse falling to the floor of the review stand with a slight red mist hanging in the air over where he had stood flashed around the world at the speed of light. As it did so, the crowd went wild with approval once more. The General let them go on for some time.

**September 4, 13:45 EST**  
**Situation Room, The White House**  
**Washington, DC**

For the third time President Norm Weisskopf watched the replay of the death of his friend, the President of Turkey, Ahmed Sezir. A rage at the callousness of it filled his soul, it was a rage he could scarce contain. When their copy of the broadcast ended with the noise of tens of thousands of soldiers yelling their approval, the President himself turned off the display and sat in silence for a few seconds with his security council.

"We have known for many months that we were dealing with barbaric animals, but this film has confirmed it once more to our hearts and minds. Ahmed was a good ally of this nation and a close personal friend. This atrocity and the loss of his nation will be deeply mourned...and they *will* be avenged in the only way one can deal with monsters who commit such acts."

As he finished speaking the President looked around the room. What he saw in the eyes of those in attendance, he approved of. There was certainly shock and revulsion at the murderous act they had just witnessed, but underlying that there was a steely conviction, forged and hardened by months of stress, trials, and defeats. It was a conviction to win at any cost, to destroy this brutal enemy...perhaps, thought the President, the most despicable and murderous the world had ever seen.

The President turned to his Director of Central Intelligence, Robert Ballard.

"Robert, we all know who Talabari is and his record of betrayal and murder. What can we do about this, how can we respond?"

Robert Ballard was seething just like the President. He did know of General Jabal Talabari. Talabari had once been the head of the Patriotic Kurdistan Front (PKF) and an American ally. Some of the best agents in the CIA had worked with him over the years to help bolster the Kurds against the regime in Iraq and against the Iranians. Later, when Hasan Sayeed came to power and created the GIR, the individual Ballard considered the Agency's best field operative and a close personal friend,

Tony Davis, was sent into the Kurd area to begin working and planning directly with Jabal for the defense of the Kurd people. Operating under the assumed name of Will Peterson, the plans for the defense of the Kurdish homeland had gone active several months later after the GIR's occupation of the former Iraq following a vote by the Iraqi people to join the GIR. Those same GIR forces then invaded the Kurd autonomous region when the Kurds voted to declare their independence.

After a quick, decisive battle, where the U.S. Air Force was driven from the skies over northern Iraq by overwhelming numbers of GIR aircraft, the Kurds had surrendered. When the GIR leader, Hasan Sayeed, announced his intentions to travel to the short-lived Kurd capitol to personally negotiate the final surrender, Tony had been given National Command Authority (NCA) approval to act with extreme prejudice to interdict the leader of the GIR along the road outside of Irbil.

During that operation, according to the after action report of Riley Adams, the second in command of the CIA team who was somehow able to escape, Jabal had personally killed Tony as he prepared to carry out his duty. It was a betrayal the United States would never forget, and it had vaulted Jabal Talabari into the lime light of the GIR military command. Ultimately, he had risen to be the Commander in Chief (CINC) of all GIR forces in the Mid East and had masterminded the current offensive. It was an offensive that had defeated Saudi Arabia, the Gulf states, all U.S. forces on the Arabian Peninsula and now Turkey and all allied forces defending her.

"Mr. President, we are making progress in our Electronic Intercept (ELINT) capabilities as they relate to the GIR, and specifically as they relate to the movements of the GIR CINC there in the Mid East, specifically General Talabari's command headquarters. We believe that within a few weeks, short of some type of drastic change on the enemy's part, that we will be able to predict with some degree of accuracy, his movements."

President Weisskopf respected Ballard's professionalism. He knew that Robert Ballard had a personal axe to grind with Talabari, but he was not letting effect his planning or his assessments.

"Good, Robert. Please continue with that effort and report to us as progress is made. In connection with that effort, please take into consideration Operation Swift Eagle.

"Now, General Stone, we'll have your report followed by Secretary Crowler's. Please proceed."

Robert Ballard was relatively new as the Director of the Central Intelligence Agency. Before his appointment due to the death of the former Director, Mike Rowley, during attacks on America by the Chinese, Robert Ballard had run operations for the Agency. Now, he could scarcely believe what he had just heard from the President. He scanned the other faces and found John Bowers, the Vice President staring right back at him, knowingly. Apparently the comment about Operation Swift Eagle had passed right over the heads of the others...no, no, now he was certain that he had caught a glance from both Secretary of Defense Crowler during a pause in his presentation and from General Stone, the Chairman of the Joint Chiefs.

"They know," he thought. "They know what the President just told me to do."

Operation Swift Eagle was the U.S. Army Air Corp operation during World War II that had been mounted to track down and kill Admiral Yamamoto of the Imperial Japanese fleet. It had been a successful operation when the U.S. Navy, as a result of breaking the Japanese code, had determined the exact time and place the Admiral would be traveling. On April 18<sup>th</sup>, 1943, eighteen specially configured P-38 long-range interceptors from Henderson air base on Guadalcanal caught up with Admiral Yamamoto's G4M Betty bomber and its six fighter aircraft escort over Bougainville Island and shot it down, killing all on board. Now, the President had just conveyed to his Director of the Central Intelligence Agency a clear desire to conduct a similar operation against General Talabari.

It was a task that Ballard would be happy to plan and execute. It would also be monumentally difficult to achieve. But Robert Ballard had just the agent in mind to put together the operation and pull it off. Trouble was, that individual was currently involved in another operation of critical importance in South America and there was another one of even greater importance planned after that one. It would be late October or November before Ballard could have him prepared for what he had in mind for Talabari.

"That's okay," thought the Director. "If we're going to do this, we will just have to afford the time to do it right and to make sure we use the right team."

**September 4, 18:40 PST**

**2 Miles East of Launch Complex 2E, 30<sup>th</sup> Air Wing Operations**

**2nd Space Launch Squadron, Vandenberg AFB, California**

Johnny Chen watched the lines connecting the gantry to the massive Titan IV B booster sitting on the launch pad as they slowly fell away. Perched atop the booster was America's latest and most advanced KH-12 satellite. Johnny knew that this rocket could not be allowed to successfully launch.

He slid the missile launcher forward from behind and next to him. It was a shoulder launcher for the FIM-92B Stinger missile that he also carried. The launcher had turned up missing from the California National Guard over five years earlier. The American authorities had searched and searched for the launcher and the three FIM-92B missiles that had disappeared with it, but had been unable to find any trace of them. Like the several hundred other pieces of ordinance that turned up

missing each year from America's domestic arsenal, when no trace was found, the Government Office of Accounting (GOA) ultimately wrote it off, thinking its disappearance was simply due to accounting error. But, like so many of the hundreds of other pieces of missing ordinance, it wasn't.

Vandenberg Air Force Base was large and it was devoted to Space. There were miles and miles of rough terrain all around its perimeter. All of it was well patrolled and under constant surveillance, particularly in wartime. But before the war, Johnny had literally spent years developing his access to the base. He had dug three different entry and escape routes under the perimeter fencing and carefully concealed their entrances and exits, which were all well over two hundred yards away from the perimeter itself. . He had also prepared four observation positions overlooking four of the major launch sites. Each of these observation positions had been dug meticulously with an escape route extending underground for fifty yards, exiting on the opposite side of the hill that they were dug into.

It had all been arduous, painstaking work. It had also been dangerous work with the constant threat of discovery and capture. But Johnny had been trained very well before being "inserted" into America those many years ago in the early 1990's. That training had taught him patience and the art of slow steady progress towards a goal expected to be achieved many years in the future.

Johnny's route into the United States, like many others, had taken him over the southern border as what the Americans termed an "illegal alien". This was as opposed to the use of COSCO container ships delivering personnel directly to American harbors that so many others had used during those years. If he had been caught while crossing, he would have been lumped into the early statistics of what the Immigration and Naturalization Service (INS) called OTMs, or "Other Than Mexicans" and returned to Taiwan where his meager paperwork indicated he was from. But Johnny had not been caught, and it turned out that getting into the United States had been ridiculously easy.

In northern Mexico he had hired the best "Coyote" money could buy by laying down enough "front" dollars to ensure a guided tour across the border for him and him alone. It had been expensive, but it was critical to the overall plan. Johnny thought back to the satisfaction on the Coyote's face as he had been paid in full with hard U.S. currency. Johnny had paid the man after they were well across the border and ready to part. He remembered how the satisfaction on the Coyote's face had turned to shock and brief agony as Johnny had quickly used a concealed ice pick and expertly placed a lightning thrust between the appropriate ribs into the man's heart. That Coyote's body was long since molding in the grave where Johnny had buried it deep in the desert well north of the border.

From that border area in eastern Arizona, Johnny had made his way to his target, Lompoc, California, and met up with his "family" there. He had been hired to work in the dry cleaning business that they operated. He had worked there ever since, patiently sorting clothes and saving his pay for his own personal needs. The "real" work he had accomplished on Vandenberg Air Base had been completed on weekends and in the evening hours during the week. He had never established any type of pattern and had been extremely careful.

As progress was made, the status was relayed back to his superiors in Beijing through a carefully established system of blind drops and completely compartmentalized personnel whom he had never met or seen. There had never been a problem, even after China and the United States had gone to war. No suspicion, no apprehension. His cover as a Nationalist Chinese who came over from Taiwan and who was very loyal to America had never been questioned, even to this day. He helped ensure it by attending all of the patriotic events in Lompoc, waving flags and even attaching a bumper sticker to his Toyota pick-up that said, "America, Love it or Leave it!"

Now his long preparations and training were going to be put to the test. His "observation" post was about to turn into an attack position.

"Hopefully, there won't be any complications," he thought. "I'll just fire the missile, retreat through this tunnel and make it to the holding room before they can even respond to the smoke trail that will lead them to this place."

The holding room Johnny thought of was a small earthen room built into each of his escape tunnels that was stocked with enough provisions to maintain Johnny for up to two weeks. He planned to use every bit of it to wait out the intense search he knew would follow the downing of the booster. After that, he would carefully make his way off the base and then return to work after he recovered from his "illness". It was a flu-like bug that had suddenly taken him a few days ago after getting the information and orders regarding the launch. It was an illness from which he would return voicing his own anger and incense at the attack on his beloved and adopted America.

Johnny had practiced his set up, firing and egress countless times. He knew he would fire and forget the Stinger missile and make his way to the back of the tunnel in seven seconds, only a couple of seconds after the missile hit the rising booster. Then, it would take him another three minutes to get across the small meadow and into the gully that led to the opening to his escape tunnel. Once in the gully, he would have dense coverage to shield him from the view of any helicopters that might have arrived. From there, another four minutes would put him into his escape tunnel of choice where he would pull down the covering and get to his holding room in another three minutes. Less than seven and one half minutes to get to his escape tunnel, less than ten and one half minutes for him to be where he would wait out the search.

To protect him from the very well known American forensic capabilities, Johnny had special, ultra-light sneakers on, with no traction or tread pattern whatsoever. He also wore a single piece, very light synthetic jump suit that was impervious to tearing or snagging while he escaped and would therefore leave no fibers for the Americans to analyze. The suit extended to the gloves he wore. Finally, he would be carrying the launcher with him. All they would have to go on was whatever rocket and exhaust residue they could get from the cave. That residue would have to come from soil samples as Johnny had built a self-destruct, cave-in mechanism into each firing position that he would manually activate on his way out. The cave-in mechanism was made entirely of natural material.

All of this ran through Johnny's mind as he intently watched the launch pad and the Titan booster sitting on it. His communication had indicated that the launch would come early this evening and he had been here waiting and preparing since just after midnight. As he watched he saw the first tell-tale signs of exhaust begin to rise from underneath the booster. Long before the first deep rumblings of sound reached him, the quantity of exhaust smoke rose dramatically and the booster itself began to rise off the pad. As the rocket rose on a tremendous gout of flame from the Titan IV B's three massive solid-rocket motors for stage "O", Johnny brought the Stinger launcher viewer up to his eye and targeted the slowly rising rocket. He held the acquisition dot on the rocket waiting for the tone that would indicate the seeker head on the Stinger missile had locked on.

"Come on, come on," Johnny whispered as he waited two seconds. "There!" he quietly exclaimed as a clear tone sounded when the missile acquired the signature of the Titan IV B.

Immediately Johnny squeezed the trigger and a loud *WHOOSH* sounded in the confines of Johnny's position as the missile shot forward toward the rising rocket and as exhaust gasses shot behind him down the tunnel. Immediately, carrying the Stinger launcher with him, Johnny scrambled back out of the tunnel, which he exited in five seconds, already ahead of schedule by two seconds.

### **September 4, that same time**

#### **30<sup>th</sup> Air Wing Operations, 2nd Space Launch Squadron**

#### **Space Launch Complex 2E, Vandenberg AFB, California**

In the command facility for the insertion of the KH-12 satellite into orbit, the launch of the Titan IV B was being monitored and reported on by Air Force ground control personnel. As the rocket slowly rose, the range safety officer monitored the vehicle's trajectory.

"All systems are nominal. Down range tracking has telemetry. Stage "O" separation and Stage 1 ignition in forty-five seconds, on my mark. Wait...what the! Hold...where did that come from?"

Into the view of the slowly rising booster, a small missile flew at a very high rate of speed and impacted the booster, on the nearest exhaust nozzle. A small explosion occurred which quickly spread through the solid fuel of the "O" stage and ruptured both tanks of the "burn on contact" UDMH and N2O4 liquid propellants, igniting the liquid fuel of Stage 1 in a second spectacular explosion. Immediately, the Titan IV B lost momentum and the upper portion of the rocket turned over and began falling to earth.

The ground crew and a number of the security personnel watched in mesmerized shock as the remains of the space craft struck the ground less than a mile and a half west of the launch facility and burst into a tremendous explosion. The explosion totally destroyed the booster and its precious cargo, the latest KH-12 satellite. It also totally destroyed the prospect of overall Allied satellite coverage of the Southwest Pacific for the next several months. As the burning pieces of wreckage and burning fuel fell to earth for hundreds of yards all around the impact area, a large brush fire ignited that would hamper all initial recovery and investigative efforts at the crash site for some time.

Not all of the personnel were shocked and mesmerized into immobility by the attack. Some reacted exactly as their had prepared them to do. The duty officer in the security station recognized immediately what was happening and followed the smoke trail of the missile back to where it originated. Upon seeing that point, he immediately reported over the command circuit.

"This is Security One, I have the launch point for the attacking missile identified. That location is approximately two miles to the east of Complex 2E on the side of Hill 345. . I am declaring a stage three security alert. We are under attack, I repeat, we are under attack. Dispatching Monitor-1 and Security Team-2 now."

Within ten seconds of the duty officer's report, an Air Force Bell Ranger patrol helicopter rose from behind a hill to the north of the complex and immediately sped towards the destination reported by the duty officer. A puff of smoke still hung in the air above the end of the smoke trail from the Stinger missile's path. That puff of smoke was clearly visible and made an easy target for the destination of the patrol helicopter. Just over three minutes after the launch of the attack, the Air Force patrol chopper was circling the hill and reporting back.

"Command, this is Monitor-1. I have arrived at the designated area and am circling. No joy on any tango's at this local. I will widen my radius and conduct an Able-2 search."

By the time the first helicopter arrived and began reporting, Johnny Chen had already entered the gully behind and to the North of the hill and was protected from sight by dense brush and tree coverage. In the intervening minutes, he had cut another ten seconds off his anticipated escape time.

As a result, he was not observed by the Air Force helicopter, having made it across the small meadow behind the hill and into the gully eight seconds before the helicopter's arrival.

Within two minutes, a Black Hawk helicopter arrived at the site of the Stinger missile launch. Eight Air Force Special Forces personnel attached to the security detachment for the base quickly rappelled down ropes onto the hilltop. Upon landing, they quickly set up a perimeter around the hill and began searching. All they could see of any consequence was the smoldering smoke coming out of the collapsed launch position and on the other side of the hill from the collapsed escape exit. The team leader immediately deduced the meaning and dispatched three of his personnel to the east on a line away from the position marked by the launch position and the smoldering exit. They were accompanied by one of the helicopters, flying low and scanning the terrain for any sign of an intruder. But they didn't find any trace of the individual who had fired the missile.

As that search proceeded, the security team leader radioed in the status, wondering if the attacker had perhaps been buried in a cave-in of his firing position. By that time, Johnny was already in his escape tunnel, had already pulled down the concealed covering and was approaching his "holding room". It was a place he would come to know very well over the next two weeks while the most intensive search ever conducted on Vandenberg Air Force Base was underway above him.

### **September 9, 17:35 Local Time**

#### **Presidential Offices**

#### **Tehran, GIR**

Hasan Sayeed watched his General, the Commander in Chief of all his Mid-East forces, closely. They had been in deep conversation and planning for the last three hours and were approaching the end of the meeting. At this point, all of the aides had been dismissed, the Defense Minister had been dismissed and it was just the Imam and the General. Sayeed knew that his other General's and political appointees within the military establishment were wary of Talabari. The CINC in the Far East, who himself was experiencing unparalleled success had mentioned it directly to him. The Imam knew that the Defense Minister was concerned and had taken what he deemed to be appropriate and confidential actions to protect his own interests. Such unilateral and self-serving action could not be permitted and later tonight, in a personal meeting with the Defense Minister this would be made clear.

Still, the great Imam, the spiritual, political and military leader of all of Islam had to admit, he was partial to Talabari. No other General had been as successful, no other military mind understood the western enemies as well, and no other General had saved his life in the manner that Talabari had. On that day in the Kurdish area of the former Iran, before their fledgling "capitol", Hassan Sayeed had sensed the danger, had seen the glinting light off of gunmetal and had known he was in the hands of Allah when the shot rang out. But that shot had come from the barrel of Talabari's pistol and it had ended the life of a very capable U.S. CIA operative. An operative who, to that point had been Talabari's ally of long standing. An operative sent there to end the Imam's life, his life, before he could begin to realize the great goals and missions that Allah had prepared and trained him for his entire life.

"Well, the American's failed," he thought, "and in failing they created an adversary in Jabal Talabari that has haunted them ever since."

Looking up from the planning documents for the next six to twelve months of operations, Sayeed gazed firmly into General Talabari's eyes and spoke.

"Jabal, these plans are extraordinary. What you propose, if successful, will not only end once and for all the Zionist occupation of Palestine and annihilate the American and British support for them, it will also cut into the heart of Eastern Europe and force a quick settlement with the European Union. After your worthy and bold display with the corrupt Turkish President of the fate awaiting the unfaithful, I am sure their leaders are considering their options much more carefully.

"I am inclined to approve your plan immediately as presented. The realization of these goals is certainly that tempting. But, before I do, I must do two things. I wish to consult with the leading Ayatollah's and Mullahs, and I must contemplate it in light of what I know of our allies' operations that are about to be implemented in Asia and in North America

"I will accomplish the latter before the former. Tonight, after my meeting with the Defense Minister and before I retire to my personal quarters, I will contemplate the overall situation and seek Allah's guidance. Then, on the 12<sup>th</sup> I will present the results to the leading clergy for their agreement. There is no doubt regarding that agreement, but Allah requires it all the same.

"Until then, please enjoy your stay here, General. All communication facilities are open to you. We will meet again and finalize short-term plans after that meeting on the 12<sup>th</sup>. I trust that every convenience and requirement you and your staff have has been met."

General Jabal Talabari returned his Imam's stare steadily and with solid conviction in his eyes. He was overjoyed at the reception he always received and the deference given him by his military and spiritual leader. He was constantly amazed that events had taken the course they had and that his own faith and confidence in the will of Allah had been reborn in the form of this man, this servant of Allah. All of his cynicism, all of his floundering in the faith and all of his connection to the infidels had been washed away in that moment on the bluff overlooking the road to Irbil. The bloodshed there had been

like an ancient sacrifice, and it had washed the film from his eyes. In the same manner, he had continued the cleansing wherever necessary with respect to the unfaithful and the infidel in the many months since. The latest example of this had been the death of the President of Turkey only a few days ago, and to which the Imam had just referred.

Like the majority of well over one billion Muslims, he now considered Hasan Sayeed to be the Mahdi of Allah, the one who would unite all of Islam and prepare the world for the coming of their Messiah. Islam was united, and now the General considered himself to be on a holy quest to help Sayeed prepare the world. They would prepare the world by vanquishing all of their infidel enemies, and, as it related to their "allies" by rendering them safe and available for their Muslim faith.

"Yes, my Imam. My needs have been well attended to. I will enjoy a pleasant stay here before returning to the field. Thank you. Allah Ahkbar and may Allah always be with you."

Sayeed knew that these words were spoken with truth and conviction. The sure, unequivocal feel of that loyalty was one of the things that he liked most about Talabari. He looked forward to the day when Talabari could assume the duties of the overall defense minister and handle all internal security as well. But that time would come when Allah willed it. Right now, Talabari was far too critical in the field using his evident genius to face the enemies of Allah. Sayeed himself, along with his other most trusted personnel, could handle any lacking in his other generals and administrators. In fact, he enjoyed doing so and playing them off against one another as he advanced the will of Allah.

With that in mind, he would prepare to do just that in the upcoming meeting with his Defense Minister that evening. A good man, and a loyal man, but far too concerned with his own influence. That was something that would begin to be addressed tonight.

After that, there would be two or three hours of contemplation, meditation, prayer and review of the overall global situation before retiring to his personal quarters. Then, the hours with his newest wife before he fell asleep would be pleasurable and would allow for his mind to experience the intuition and creativity he knew would come when he wasn't focused directly on the problems at hand.

"Study, contemplate, pray to Allah for direction, and then distract the mind," he said to himself as the General left the room.

He had found over long years of experience that such a method would very often allow Allah's will to be manifest to him personally. He had also learned, that whenever he had the opportunity, the best distraction from these serious matters could be found in the arms of one of his young wives.

Sayeed had three wives. The wife of his youth who was a close confidant, mother to six of his children, four of them boys, and was now almost thirty years old. The 2<sup>nd</sup> wife he had taken soon after he was named the great Imam from a prominent family of faith in Tehran. She had born him two children in the intervening two years and was now sixteen years old. His 3<sup>rd</sup> wife had been carefully selected and given to him by her faithful parents from Islamabad only three weeks ago. She was thirteen and as beautiful a flower as he had ever set eyes upon. She waited for him now in his personal quarters. He found that the excitement and the enthusiasm of youth in all the activities associated with his marriages stimulated him and helped open his mind. From intellectual debate, to discussions of the arts and culture, to their intimate moments, Hasan Sayeed took great pleasure in the challenge, the adoration and the enthusiasm his young wives gave to him.

Of course, the Imam, like so many others so wholly dedicated to the traditional Islamic faith, would never allow himself to contemplate how the adoration and manners of such young wives might change if they were ever given their own choice in the matter. No, should the day ever come when they discovered or realized that they had a choice in the matter, the enthusiasm shown to the great Imam would almost certainly disappear in a moment. In fact, it was out of the absolute conviction to never allow such an opportunity on the part of individuals like these young girls that the great Holy War was being waged against the secular, the unfaithful and against the infidel. This was particularly true with America, where such choice was their very way of life. Allowing for such freedom and its risk of vice was why much of Islam considered America to be the "Great Satan".

In Imam Hassan Sayeed's rendition of the will of Allah, such choices could never be permitted.

**September 12, 09:55 Local Time**

**Presidential Office, Executive Complex**

**New Delhi, India**

The Indian Foreign Minister, Rahmish Patel, listened as the President, KP Narayannen, droned on and on to his executive council about the successes their nation was enjoying.

"And he has every reason to crow about current events," thought the Foreign Minister, "even though I pushed him into the attack that made it possible when he really didn't want to. I can sense and smell it on him now, even after the successful completion and the very positive results."

Minister Patel was referring to the successful operation that had been mounted against the American 5<sup>th</sup> Fleet in the Indian Ocean and against the American base at Diego Garcia almost fifteen months ago. In a swift attack by GIR and Indian forces, the U.S.S. Enterprise had been destroyed along with much of its Carrier Battle Group. A large conventional attack from the north had drawn off a large part of the carrier's defensive air cover and then a second prong of Indian bombers carrying

the air-launched LRASD supercavitating weapons had come in and devastated the carrier and its inner ring of vessels. Afterward, in a month long operation that had cost over ten thousand Indian lives, the largest Indian Navy Task Force to ever put to sea carrying over 125,000 Indian soldiers, had worn down and ultimately defeated and occupied the Island of Diego Garcia.

Now, for the last year, the tides of war had continued outward and India had been able to consolidate the trade routes between the rich Persian Gulf oil area of the GIR, India, Indonesia and China and its newly acquired territories including Japan, the Philippines, Taiwan. Trade with the new territories of western Australia was growing as that area was consolidated into the expanding sphere of the GIR and CAS. Many more hundreds of thousands of Indian troops were now there in Australia fighting ... the number had recently gone over one million in fact. And they were being successful.

The result was nothing short of an economic boom for all of India. Coupled with the continuing rich resources being developed and brought into the nation as a result of the Siberian Economic Development Pact, there had never been a more prosperous time for India in all of its long history.

"I should have let him stub his toe," continued Patel as the President touched on just these issues. "It would have been better to have delayed our occupation of Diego Garcia and allowed a more powerful leader to come to power. A leader like me."

As it was, the President had thoughts of his own. He was uneasy about the continued warfare against the west. He knew that America, despite the striking setbacks she had suffered, was capable of astonishing feats and he hoped a negotiated settlement could be achieved before that came about. His allies in Beijing and Tehran felt that they just might defeat the United States before that time, but KP was not so sure. Nonetheless, India had fared well to date and was prospering beyond all expectation and forecast. Nepal, Bangladesh, a large part of Burma, Sri Lanka, Diego Garcia and the island chains to Madagascar were now all a part of the great Indian Republic. Their shipyards were producing fine destroyers and new aircraft carriers. The Indian Ocean was firmly in the control of the Indian Navy and multiple layers of defense had been established. The trade routes were open and protected except for the occasional U.S. or United Kingdom submarine attack. Invariably these attacks damaged convoys and commerce, but with the supercavitating weapons, they almost always sent the offending vessel to the bottom of the sea.

In fact all of India's major combatants were now equipped with the latest LRASD innovations, as were all of the wings of their maritime strike aircraft. They devices were now being license built in India and India's allies were license producing the air launched variety that had been engineered and developed in India last year prior to the attack on the U.S.S. Enterprise.

Still, the words of the American President, who the Indian President held a great deal of respect and esteem for, continued to haunt him.

*"Mr. President, if and when you get this communiqué, know with absolute certainty that the lives of our sailors on the Enterprise and her accompanying ships, and the lives of our Marines on Diego Garcia will be avenged. We will hold the leaders of your nation, you Mr. President, personally accountable for this atrocity."*

KP Narayannen knew that Norm Weisskopf meant what he said...literally. So, he hoped that either his own wishes of a negotiated settlement came about, or that his allies were successful in their direct attacks so that the threat was never carried out. Either way, Narayannen also knew of Patel's ambitions and was committed to keeping him from the absolute power he craved.

"That one would be as bad as Hitler if he ever gains the control of this government," thought the President, "I can see it in his eyes. He would commit the same types of atrocities as those barbaric Islamic are doing...just like that General, what is his name? Talabari, yes, just like Talabari."

The President had appointed this Foreign Minister out of political necessity and because he believed he could control the ambitious young politician. Now, much later, he saw his mistake. He could not be rid of him because his political power had grown, and because of his own concern for the welfare of his nation.

"As if though I myself have not opened us up to the possibility of the most dire circumstances," he thought. "Despite the prosperity, I have embraced the evil and it owns me."

What really worried the President the most was that most of the people, in the glow of the prosperity, were assenting to that same evil. An evil that was causing the sacrifice of almost every principle on which their republic had been established.

The recently completed invasion and occupation of Madagascar and the ongoing operations in Australia were prime examples. Both operations had the enthusiastic support, the almost wild support of the people. Many were petitioning the government for the prospect of "free" lands there. Both operations had also been approved and vigorously supported by the President in the hopes of averting a political collision with the Foreign Minister, and to date they had been successful. The President was convinced that once those objectives were complete, that India's military offensive involvement in World War III would also be complete. He hoped he could reign in the desire for further adventure and he would do all in his power to that end. They would then simply maintain and consolidate what they had taken, bring the west to the negotiation table or see them defeated, and then let the years of peaceful immigration to those areas do the rest.

“With India's population and growth rate, in not too many years those areas recently occupied would be, in the term popularized by American science fiction . . . assimilated.”

As the President explained his long-term policy in this regard to his cabinet, he could see that a majority of the Security Council agreed and was relieved to hear it. He could also see in Patel's eyes that he rejected such a notion, but that he was resigned to having to live with it at the moment.

#### **Israeli Defense Force (IDF) positions**

#### **The Golan Heights, Israel**

Colonel Jess Simmons couldn't believe that this day had finally arrived. After more than two years of extended duty here in Israel, with not one trip home, he was finally going to get home to Texas and his wife. It would be a one-month leave, with a duty assignment to follow. Jess figured he would be right back here in some capacity, probably dealing with one of the American units employing the RAH-66 Comanche helicopters he had trained the Israeli Defense Forces (IDF) to use here on the Golan Heights.

“... and Abe has done an extraordinary job integrating these birds into their operations up here,” mused Jess as he walked with his friend, Colonel Abraham Eshkol in a final review of the defensive systems and spotting equipment that had been established specifically to enhance the Comanche squadron attached to the IDF forces here.

“Well, things look about as ready as they can be,” Jess said as he stopped and looked to the west and north towards Damascus and the enemy. “Any GIR forces attempting a massed attack on this position will pay a steep price in blood and equipment.”

Abraham Eshkol contemplated his friend's words as he gazed out across the rolling hills and plains leading into Syria. From this vantage point they could see the dust clouds out on the horizon from GIR patrols. They were patrols in strength.

Over the last several months, as the situation in Turkey had deteriorated, Israel faced encirclement by the increasing numbers of GIR forces that had consolidated their positions and dug in all around them. Israeli patrols had clashed on numerous occasions with the probing elements of GIR forces. Although not in the chain of command, the American Colonel's tactical input and advice had proven invaluable. Not one Comanche helicopter had been lost and they had destroyed many of the enemies scout vehicles. Some of the Israeli's older helicopters had not fared so well, but despite those losses, the IDF was performing very well in this sector. But the GIR was continuing to build and was becoming increasingly aggressive in their probing. Each successive thrust included greater numbers attack helicopters, fighters, mobile SAM units and personnel and Colonel Eshkol knew it was just a matter of time before they began a general offensive.

“You're right Jess, I just hope that we have enough hardware and men to weather the storm when they do come. You are going to be sorely missed my friend. You've shown us much to blunt their probes and you helped turn at least two of those battles. I hope and pray that our officers have learned well the lessons we've taken from these engagements.”

Jess thought about this. He knew of which events Abe was speaking. The most recent one had occurred less than two weeks ago right off there to the northwest, just over the horizon. What had begun as a small skirmish between two small patrols had escalated into a major confrontation. For several minutes here in the command post buried deep into the solid rock of the Golan Heights, both Colonels had thought that perhaps the general offensive was beginning. The artillery and rocket barrage had begun and then intensified, for about fifteen minutes. Then, the fighting had ebbed, the fighter aircraft and helicopters had returned to base and the patrols had disengaged. Thirty-five minutes after it started, it was over and the ground lying between them and their enemy was again quiet. In that thirty-five minutes, the IDF had lost two fighter aircraft, two attack helicopters and three scout vehicles. Fifteen personnel had been killed and another twelve injured. The enemy losses had been significantly higher. Eight of their aircraft, four of their attack helicopters, and twelve of their BDM-2 assault vehicles had been destroyed, along with over forty of their soldiers.

In the minutes right after the artillery barrage struck the heights, when the confusion was highest, Jess had kept his cool and calmly suggested that the observation posts on the side of the heights being hit by the barrage be re-manned despite the danger. Specifically, after reviewing the order of battle in his mind and looking at the terrain, he had requested a specific observation along a particular low ridge off to the west. A flanking maneuver by the GIR forces, supported by mobile SAM launchers and attack helicopters had been discovered there just before it could engage IDF forces in that area. By quickly informing the IDF commander on the ground and by dispatching a flight of four reserve Comanches to that position, the surprise attack had been broken up with heavy loss to the GIR force. It had been a near thing, and it had cost the lives of two Israeli spotters on the heights, but Colonel Eshkol understood that Jess's suggestion had been vital in thwarting the GIR attack.

“I believe they have Abe. I just came up with an idea - your guys did the work. Anyway it won't be too many weeks before we get the opportunity to sit back in that Italian cafe back in Tel Aviv and swap stories once I return. I have a strong feeling that I will be right back here.”

Abraham Eshkol knew that his friend was being modest, and it was one of the things he liked most about him. Jess Simmons was there to win, and he didn't have to see his name in lights to do it.

"I hope what you say is right Jess, and that you are back with us soon. I believe that in the near future we will need every friend and ally like yourself that we can muster. In the mean time, we will miss you and your input, which we both know was somewhat more critical than you admit.

"Be that as it may, may the God of Israel be with you in your travels home and as you meet with your dear wife. I and my wife, Ruth, both feel like we almost know her and we look forward to the day when we can all sit down to some fine cuisine after this horrible business is concluded."

As Colonel Eshkol completed his statement, a vehicle approached and stopped right next to them. Colonel Simmons ride had arrived. The two friends shook hands, embraced briefly and then Colonel Simmons climbed in the vehicle and it departed for the Air Base and his trip home.

**September 19, 18:30 CST**

**Hyatt Anatole Hotel Lobby**

**Dallas, Texas**

Curt Johnson sat in the deep upholstery of the couch as he waited for the two individuals who were going to meet him here. He was apprehensive. He found it odd, that a long time conservative like himself would meet to discuss strategy with two individuals he had always considered to be abject liberals, whose policies were harmful to the America he wanted for his children and grandchildren.

"Well, difficult times breed strange allies," he thought as he contemplated this. "Those differences pale in comparison to the task I believe we have before us."

Curt had been, up until March of the prior year, the Director of FEMA for the Weisskopf administration. At that time, he had tendered his resignation over the President's blatant disregard for the statutes and laws passed by Congress as they pertained to the 2<sup>nd</sup> Amendment of the U.S. Constitution. Claiming that many of those laws violated the Constitution and endangered the public in this war which had come to their very homes, the President had simply ordered his staff, the heads of the agencies reporting to him, to not enforce those laws. Curt would have nothing to do with it. He had told the President so to his face in front of his cabinet. The Director of the FBI at the time, Ross Sessions, had agreed with Curt and had also spoken out boldly and forcefully against what the President proposed. Both had resigned that very day.

Johnson was a moderate conservative who favored basically smaller government over what the other side of the aisle promoted, the side he would be meeting with tonight. He had been very successful for two sessions in the U.S. Senate from his home state of Iowa in promoting that very agenda before his appointment by the President. Before that, he had pursued a very successful legal career, first in his personal law practice, then as a local District Attorney and finally as his State's Attorney General. He had always believed that there were several areas in which professional governmental agencies were superior to the "private sector". In those functions he felt the "common" citizen had no place. Defense - whether civil or personal - was one of these areas in Curt's way of thinking and in his view gun rights pertained to sporting and hunting alone. The private citizen was at best a hindrance to the professionals in these matters. Curt had always supported gun laws consistent with this position and he therefore could never support what the President had recommended.

Despite Curt and Ross's resignation and their outspoken criticism afterward, the President's recommendation had been accepted. In fact, the Congress and all fifty states had passed the policy into law in the urgency of the events. Citizens were now combating the enemy at home, but Curt believed that tremendous long-term harm had been done to the balance of power between government and the people, and he intended to do something about it. That was the purpose of this meeting.

As he reflected on these things, he regretted that Ross Sessions had declined his offer to join him. Ross was out of politics now, but was involved locally with the war effort in helping to finance and manage one of the many new factories that had been built. He felt his services were more important there and had no desire to get involved in what he termed a "political slug fest" in wartime.

"If he feels that way then he shouldn't get involved. This effort is going to require full commitment and perseverance," thought Curt as he saw a middle-aged woman and a well-dressed black man approach. They came towards him, and then upon recognizing him, hurried over. Curt stood and shook both their hands.

"Senator...Mr. Woodson, so good to see you. I hope your flight was comfortable."

Both individuals indicated that the private flight into Love Field on Woodson's personal Lear Jet had been fine and they exchanged greetings and pleasantries. After a few minutes, Curt touched the Senator's elbow and announced,

"Look, I've reserved a meeting room on the second floor. If you don't mind, why don't we go there and get started. I have arranged for drinks and appetizers. We can eat dinner at your leisure."
